CYCLOPÆDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA,

Commercial, Industrial and Scientific:

PRODUCTS OF THE

MINERAL, VEGETABLE AND ANIMAL KINGDOMS,

USEFUL ARTS AND MANUFACTURES;

EDITED BY

EDWARD BALFOUR, L. R. C. S. E.,

DEPUTY INSPECTOR GENERAL OF HOSPITALS, MADRAS ARMY,

CORRESPONDING MEMBER OF THE IMPERIAL GEOLOGICAL INSTITUTE, VIENNA.

SECOND EDITION.

VOL. II.

MADRAS:

PRINTED AT THE ASYLUM, THE SCOTTISH AND FOSTER PRESSES.

1871.

Copyright.

D.

DABUL.

D. This English letter has letters with corresponding powers, in the Arabic, Persian, Hindustani, Sanskrit, Hindi, Mahrathi, Guzerathi, Bengali, Urya, Telugu, Karnata, Tamil and Malayalam. In all these tongues, however, there is also a softer sounding D: The English compound Dh, also, the Tamil tongue excepted, has corresponding letters, simple, modified, or compounded, with both soft and hard sounds: d, and r, in several of the Indian tongues, are moreover, so pronounced as to be difficult for a European ear to catch their niceties and d and r are therefore frequently confounded. d and r are not used by the Chinese. *Wilson. W. W. Hunter.*

DAB OR KOOSHAH, HIND Poa cynosuroides, the sacred grass of the hindoos, is generally applied only to the first shoots of the Koos grass, it is called Dubsa, in Rohilcund and is made into rope in North Western India.

DAB. Hind. of Kuhat, a moist soil.

DAB. Hind of Delhi, Anatherium muricatum,

DAB. POL. Quercus. Oak.

DAB or DOOB. BENG. Xyris indica.—*Linn.* See Graminaceæ.

DABAR a river of Gwalior.

DABBA CHETTU, TEL Citrus medica, *L.*

DABCHICK see Colymbidæ.

DABEE BENG. also Doobee, BENG. Xyris Indica.

DABI A Prince of Junagurh.

DABLING pass leads from Chinese Tartary to Kunawer.

DABOU, a small weight of Masulipatam, equal to 191 grains.

DABUL OR DEBUL. A sea-port town on the Malabar Coast, eight miles south of Severndroog. This port was burned about 1508, by the Portuguese viceroy Almeyda. He came to India, in 1505, the successor of Dias, Vasco-de-Gama and Cabral. On his arrival, he concluded a defensive treaty with the King of Vijianuggur, but the Venetians who up to that time had monopolized the trade with India, jealous of the growing power of the Portuguese, instigated the king of Egypt to oppose their progress. He accordingly sent a fleet under Mir Hukum, who in conjunction with the fleet of Guzerat, bore down upon Lorenzo, son of Almeyda and defeated him in 1508, Lorenzo falling in the fight Almeyda, to avenge his son's death burnt the port of Dabul, and defeated the enemy in the harbour of Diu, and then concluded a treaty.

DACCA.

DACCA, there are two towns of this name, one Dacca Jelalpur to the North of Ballargunj and Dacca proper between Dacca Jalalpur and the Megna River. Dacca yields rice, pulse, millet, maize, cotton, safflower, indigo, sugar, ginger, coffee and capsicum, but only cotton and safflower may be considered as staples peculiar to the district. The indigenous cotton of Dacca has long been celebrated for its superior quality. It is cultivated along the banks of the Megna from Feringybazar to Edilpore in Backergunj, a distance of about forty miles; on the banks of the Brahmaputra creek (the ancient channel of the river of the same name) and along the Luckia and Banar. It presents different shades of quality, the finest of which is named *photee*, and is the material of which the delicate muslins are made. It is described by Roxburgh as differing from the common herbaceous cotton plant of Bengal in several particulars, but chiefly in having a longer, finer and softer fibre than it. Safflower (Carthamus tinctorius) now so extensively used for dyeing silks in England and France, is one of the most valuable agricultural products of the district. Next to fine muslins, and embroidered fabrics, silver-filigree work is that for which Dacca is most celebrated. This art is also practised in great perfection at Cuttack, and in Sumatra, and China. The articles usually made at Dacca are ladies' ornaments, such as bracelets, earrings, brooches, chains, necklaces, &c. and *Attar-dans* and small boxes for natives. The design best adapted for displaying the delicate work of filigree is that of a leaf. The apparatus used in the art is exceedingly simple, consisting merely of a few small crucibles, a piece of bamboo for a blow-pipe, small hammers for flattening the wire, and sets of forceps for inter-twisting it. The drawing of silver and gold (*i e.* silver covered with gold) wire, used as thread in embroidery, is extensively carried on here. Benares is also celebrated for this art. There are several varieties of silver and gold-thread (*badla*) made at Dacca, as *kalabatoon* for the embroidery of muslins and silks; *goshoo* for caps and covering the handles of chowries; *sulmah* for turbans, slippers, and hookah-snakes; and *boolun* for gold lace and brocades. Some of it is drawn almost as fine as a hair. In the time of Aurungzebe a quantity of this article was made yearly for the Court at Delhi. A hundred sticks covered with it, and plain gold, and silver *badla* to

the amount of £2,000 in value, appear among the items composing the *Mulboos Khas Nuzr*, which was annually sent to the emperor. The manufacture of the exceedingly fine Dacca muslins, is slowly dying out. There is now no demand for those of the finest quality—the *ab rowan* and *shubnam*. The native nobility of India do not patronize the finest sort, and there is no market for them elsewhere. About the year 1850, there was only a *single* family of weavers in Dacca who could manufacture the very finest quality; and it took them six-months to make up one piece, but even for that piece they got no orders. Besides, the particular kind of cotton, *kapas*, supposed to be finer than the finest new Orleans staple, from which alone the thread was spun, is now never grown. Amongst mahomedans, the name of Dacca was Jehangirnuggur See India; Inscriptions.—*Dr. Taylor.*

DACCA JELALPUR and and Dacca Proper two districts in Bengal, their chief towns Faridpoor 115 miles and Dacca 150 miles, distant from Calcutta.

DACHRA a river in the Monghyr district near Hybatganj.

DACHZIEGEL. GER. Tiles.

DACOITY. An Anglo-Hindi legal term for a system of robbery by gangs of people of the country. It is derived from the hindustani term "daka," the verb being "daka parna" to plunder. In India, Thugs or Dacoits who have been tried and convicted as having belonged to a band of thug murderers or dacoits, but who, having made a full confession of their crimes (in some individual cases amounting to the murders of as many as eighty persons) and having denounced their associates, receive a conditional pardon. Originally in the criminal Code of India, "Dacoity" was applied to the armed bands who plundered, but it and the term Thug are now applied to several well-defined classes. Amongst these are the Bhuduk of the Nepal Terai, the Dasadh of Behar who make frequent predatory excursions into Lower Bengal. In the North West, are the Bind of Ghazepore the Nuth or gypsey, the Ahir, Boria, Kurmi and a host of low castes. In the Panjab, dacoity generally assumes the form of cattle-lifting. The Meena are the most active and energetic and are concerned in most of the dacoities of Northern India. And in the S. W. the Sonthal with his club, long bamboo spear and terrible Sonthal battle-axe, often sweeps down on the plains of Bheerbhoom, Hazaree bagh and adjacent districts, and the flare of their torches or light of the burning huts, give the first warning.

DACRYDIUM CUPRESSINUM is the Rimu or Red Pine timber tree of New Zealand.

DACSHA. See Daksha. Yavana.

DACTYLIS. A grass that occupies barren soil. See Graminaceæ.

DACTYLOPTERUS ORIENTALIS CUV. a fish of the Indian seas of the order Acanthopterygii and family Loricati.

DAD. PER. HIND, Literally a gift; a postfix and prefix much in use, as Khudadad given by God, the Theodotus of the Greeks; and Dev-Dutt of the hindus, Dad-khah a plaintiff for justice.

DADA. HIND. Grandfather.

DADA. H. Cedrus deodara, deodar or Himalayan cedar, see Diar.

DADAP TREES. See Coffee.

DADAR, a valley and town separated from the great plain of Cutch Gandava, by a line of *jabbal* or low hills. Dadar is excessively hot and a Persian couplet runs "Ai Allah! dozakh ki sakhti, chon Dadar hasti, Oh Lord! why did you make hell, when you have Dadar?

DADDA, H. of Salt Range, Acacia eburnea.

DADI. IT. Dice.

DADIMA. TEL. SANS. or DADIMA PANDU. TEL. Punica granatum. Pomegranate.

DAD-MAREE BENG. Ammannia vesicatoria.

DAD MURDAN. HIND. BENG. Cassia alata.—*Linn.*

DADOS. SP. Dice.

DADRUGNA. SANS. Cassia alata.

DADRU HIND. of Hazara and Murree; Rhamnus virgatus. R. persica.

DADU a Vaishnava ascetic teacher who instituted a Byragi sect. According to Wilson, Dadu was a cotton cleaner of Ahmedabad who lived in the beginning of the 17th Century and established a monotheistical worship. see Dadu Panthi, Hindu, Vairagi.

DADUGA TEL, also Botta ganapa and Pasupu kadimi. Nauclea cordifolia, *R.* i. 511; a large tree common in the mountainous parts of the Coromandel coast. The wood is extremely beautiful resembling that of the Box-tree but lighter.—*Ainslie's Mat. Med. p.* 218.

DADUNGAWU, a tutelary spirit of the Java hillmen.

DADU PANT'HI. A Vaishnava sect of hindus, whose tenets are derived from Ramanand after whom its founder is said to be the fifth spritual guide. Their worship is restricted to the "Japa" or repetition of the name of Rama, as the deity negatively described in the Vedanta theology. They have no temples or images. Dadu was born at Ahmedabad. They carry a rosary, have no frontal mark nor *Mala*, but wear a round or

four cornered hat. They are said to be numerous in Marwar and Ajmir. Their chief place is Naraina, 40 miles from Jaipur. They are classed as (*a*) *Virakta*, who go bareheaded and have but one garment and one water pot. The (*b*) *Naga* who carry arms and serve hindu princes making good soldiers. The (*c*) *Bhistu Dhari* who follow the avocations of ordinary life. They burn their dead at dawn—*Wilson* See Dadu. Hindu ; Dadu Panthi ; Vairagi.

658 DAEE JUNNAEE. Hind. An accoucheuse : a midwife.

DAEE. A mahomedan sect who reside at Gajer, Mekran, Kej and Turbot, formed out of several Brahui tribes. They are a Scythic tribe associated with the Massagetæ. See Kelat.

DAEJA. Literally lamp-holders ; the term applied to the handmaids who invariably form a part of the Rajpoot *Daeja, or Dower Tod's Rajasthan* Vol. I, p. 628.

DÆMIA EXTENSA *R. Brown*,

Syn,

Cynanchum extensum. Jacq	Cynanchum bicolor, And.
Cynanchum cordifolium Retz	Asclepias echinata Roxb.
Chagal-banti Beng.,	Vela parti Tam.
Ubrun. Duk	Utamani ,,
Sagoani Hind	Jutuga Tel.

This plant is used medicinally. Its fibre is known commercially as Ootrum fibre and is a promising substitute for flax. It is soft, white, silky, and strong : it can be procured in considerable quantities in Southern India, the Dæmia extensa being a common creeper belonging to the Asclepiadaceæ,—*M. E. Jur. Rep.*

DAENDELS, Herman William, born at Hattem in Guilderland 21st October 1762 died at New Guinea 1818. He was Governor-General of Dutch India, and formed the great military road of Java.—*Max Havelar.*

DAENY or DANIE, in lat. 24° 57½' N. Long. 52° 25' E., an island 1½ miles long, on the south side of the Persian Gulf.—*Horsburgh.*

DAEZAJEE. a silver coin of Persia of value Rs. 1½. *Simmonds.*

DAF Hind. A hand-drum, a tambourine.

DAFFADAR, Pers. Hind. An officer in the native irregular cavalry.

DAFILA ACUTA. Linn. Pin-tails.

DAFTAR Pers. a record book : Daftar-Dar also Daftari ; a record keeper.

DAGGER, one of a particular shape is the official weapon in modern Indian courts. A drawing of the dagger of ministry is given in the last volume of Duff's History of the Mahrattas. *Hind. Theat. Vol. II. p.* 249.

DAG. Hind of Kuhat, land cultivated only once in three years.

DAGH, Turki. A hill, a mountain, Alajah Dagh or variegated mountain, near Ararat.

DAG'HA. Guz. DHAGA. Hind. Thread.

DAGHESTAN, see Persia.

DAGING, Malay. Flesh meat

DAGOBA or DHATUGARBHA. Sansc. A buddhist bone or relic receptacle. The ancient edifices of Chichen in Central America, bear a striking resemblance to the Topes of India. The term is from Datula relic, Garbhan a shrine. Those of Ceylon end in a terminal Tee, in the form of a cube supporting a pointed spire,.

DAGON. Burmese. A corruption of the Talain name, Ta-Kong, the Shooay Dagon buddhist temple of Rangoon, which rises magnificently from the summit of a scarped hill to a great height. See Rangoon ; Shooay Dagon.

DAGOOTHA, Burm.? Crooked timber, in Tavoy and Mergui, floats in water, and used for building boats, for planks of houses, ladders, &c., but is liable to attacks of worms and dry rot.—*Captain Dance.*

DAGSHAI, 30°53' 1, 77°2'2, a military station S. S. W. of Simla. The cantonment is 6,025 feet above the sea. G. T. S.

DAH, Pers. Hind. Ten. Dah'm, the tenth : in the Panjab, Dah-mahi-dar, Hind. farm servants hired for 10 months.

DAH. Hind in the N. W. Himalaya, a clod crusher, a flat beam of wood dragged over the fields to smooth clods, It is the Sohaga of the plains.—*Powell.*

660 DAH. a heavy weapon made use of by the Bhot and Burmese races, as a sword in war, and in peace for felling trees or cutting up firewood; consequently the friction on the handle is very great. Notwithstanding, the gum which fastens it adheres for years, except on the edge or end of the handle, where the wood itself becomes less or more worn.—*Bonynge, America, page* 158.

DAHAK. Egypt. Colocynth.

DAHIR See Acre.

DAHIR, Desput or lord of Debeil, from Des, 'a country,' and Put, 'the head'

DAHISTAN a country separated by mount Taurus from Chorasan : See Koh.

DAHLIA, an ornamental flowering plant originally from Mexico, now largely cultivated in India.

DAHNAJ Arab, a stone alluded to by Abu Zaid as resembling an emerald.

DAHU, Hind Artocarpus integrifolia, jak-tree.

DAHYA, Hind Trophis aspera.

DAI, Pers. Hind, a wet nurse ; an

accouheuse, a midwife: the English in India use theword Ammah.

DAIMACHAS, an ambassador sent by Seleucus or by his son Antiochus Soter to Bimbasara son of Chandragupta. He was regarded by Strabo as the most lying of all the Greek historians of India. See Vindusara.

DAIMIO a hereditary prince of Japan.

DAIN. HIND. PERS. Debt.

DAIN. BURMA. league, 2, miles and 2 furlongs.—*Simmonds.*

DAIR, a town north-west of Basorah, remarkable for a colossal tower of beautiful structure. Ibn-ul-Wardi in the Khassila-ul-Ajaib says, that strange sounds are occasionally heard to proceed from its interior. Great antiquity is attributed to this minaret by all the natives of the country.—*Mignan's Travels P.* 239.

DAIRI, until 1869, amongst the Japanese, the ecclesiastical head of the government, who resided at Miako, See. Kio. Kobo.

(3094) DAISY, the little perennial plant called *Bellis perennis* by botanists. In India, this plant and its varieties are cultivated as a "souvenir" of home.—*Jaffrey.*

DAITYA, an ancient hindu term used in various ways but generally to designate a different and hostile race. In the Mahabharata, they are spoken of as aborigines; also others of them as having power on the sea coasts: In other places, the term is applicable to the buddhists: and the wars of the Daitya against the Devata, are supposed to be their hostile operations against the Aryan race. The wars, between the immigrant Aryan and the Daitya, were changed in the course of years into mythical wars between gods and demons. *Wh. II. of I.*

DAITYA. HIND. a demon, a goblin, See Viswakarma.

DAIVA, HIND. holy. See Hindu.

DAIWUZEE, on the borders of Bajour. See Kush.

DAJJAL, ARAB. HIND. PERS. Antichrist. The mahomedans believe in Antichrist whom they term Al-Dajjal.

DAJIL, a town in Cutch Gandava. see Kelat.

DAJKAR, HIND. Flacourtia sepiaria.

DAK. HIND. TAWAL, TAM. the post, mail: to travel by dak meaning as fast as the post, and is performed in palankins or in carriages, or on horseback. Also the mail or postal arrangements of India, where railroads, carts, horses, and men-runners, are employed to carry the mails.

DAKA, a town of Jelalabad.

DAKAR HIND. of Cis Sutlej, low-lying stiff clay land.

DAKAUT ALSO DAKAUTIYA, HIND. hindus born of, or descended from, a brahman father and goalin mother. They subsist on alms collected on a saturday and are astrologers.

DAKH. HIND. Vitis vinifera, Grapes, especially the wild vine; also raisins.

DAKKABIJ HIND. also D. papri HIND. Butea frondosa.

DAKHAN SHABAZ-PUR an island at the mouth of the Megna.

DAKHILAH. AR. PER. HIND. In accounts, an entry, also a receipt for money.

DAKINI. HIND a witch, a female goblin.

DAKOOA, a small town inside the Straits of Babel-mandel, See Okelis.

DARKA. A poisonous root of Nepal made up with grain into balls, and so employed to poison elephants.

DAKSHA. In hindu mythology, was an avatar or appearance of Brahma upon earth in a human shape. He was the father of Sati, the consort of Siva; whose son, Vira Badra (produced from the jatta or locks of Siva), cut off his head for treating his father with indignity and causing the death of Sati (See Parvati.) On the intercession of the gods, Daksha was restored to life; but his head having, during the battle, fallen into the fire and been burnt, it was replaced by that of a he-goat, in which form he is pourtrayed.—This is the account of Coleman and another account makes him father of Aditi, wife of Kasyapa but Wilson says Daksha was the son of Brahma and father of Sati, whom at the recommendation of the Rishis or sages, he espoused to Siva, but he was never wholly reconciled to the uncouth figure and practices of his son-in-law. Having undertaken to celebrate a solemn sacrifice, he invited all the gods except Siva, which so offended Sati, that she threw herself into the sacrificial fire. To avenge her fate, Siva created Virabhadra and other formidable beings, and sent them to the scene of action, where they disturbed the rites, beat and mutilated the assistants, and even maltreated the gods, till Siva was appeased, and arrested their excesses. Daksha, who had been decapitated in the scuffle, was restored to life, but the head of a ram was substituted for his own. Sati was born again as the daughter of the mountain Himalaya, and was again married to Siva. From this, second birth, she is called Parvati the mountaineer, or Girija the mountain-born. The disturbance of Daksha's sacrifice was a favourite legend with the hindus. *Coleman Hind Myth. p.* 6 *Hind. Theat. Vol. II P.* 263. *See,* Brahmadicas, Chandra. Surya vansa.

Parvati Surya, Vira badra.

DAKSHINA, Sansc. the right hand.

DAKSHINA OR BHAKTA. See Right and Left Hand Castes, Bhakta, Chalukya. Hindoo. India.

DAKSHINACHARI. S. One who follows the observances (achàrà) of the right hand tribe or caste-practisers of the purer forms of the ritual, as opposed to Vàmàchari.—*Wilson Gloss.*

DAKSHINAPATHA. The Sanscrit name for the Dekhan.—*Prin. Ind. Ant.*

DAKUNI. The witch of India. After a battle in which Bugtea, a Rahtore chief charged through Abhye Singh's army, the Rajput poets sang of his deed, is it the battle cry of Kali, the hissing of Shesnag, the denunciation of Kalispur or the war-shout of Hanowanta ? Is it the incarnation of Nursing, or the darting beam of Surya ? or the death-glance of the Dakuni ? or that from the central orb of Trinetra ?—*Rajasthan Vol. II p.* 111.

DAL. HIND, any split pulse, hence Turka-Dal, Mung ka Dal Phaseolus radiatus Cytisus cajan. It is greatly used as food by all the better classes of natives, and many Europeans also like it, generally mixed with rice.

DAL. HIND, a bough : a basket of leather or twigs.

DALA HIND ? Valeriana Wallichiana.

DALADA. SINGH., the sacred tooth of Buddha kept at Kandy in Ceylon. The original was destroyed by the Portuguese in A. D. 1560. That was probably the tooth of a man, but the object now shown, is a piece of discoloured ivory, almost 2 inches long, less than one in diameter and resembles the tooth of a crocodile rather than that of a man.—*Tennant.*

DALAKI, a town of Persia near Abu-Shahr. See Iran.

DALAMBANG. See Gluga.

DALAN. HIND. PERS. a spacious and lofty hall with an open front used by mahomedans of rank as a reception room.—*Ouseley's Travels.*—VOL. II p. 11.

(3095) DALBERGIA, a genus of Plants belonging to the natural order *Fabaceæ* Dr. Wight gives Dalbergia frondosa, latifolia, ; marginata, ; Oogeinensis reniformis, ; rimosa, ; robusta, scandens, ; stipulata, and tamarindifolia ; Dr. McClelland mentions that in Tenasserim there are four kinds of *Dalbergia* all *Black woods*, Yindike, *Burm*, all yielding a heavy timber which will not float, similar to Sissoo. These trees are very plentiful in the Tharawaddy and Hlaine districts, also in the lower parts of the Tounghoo district. The timber seldom attains a very large size and is generally found of a girth of three or four feet. Wood, black.—(*McClelland.*) One of the genus Dalbergia, is known in Tenasserim as the Chisel-Handle Tree. It is a common forest tree produces a hard, fine-grained woodwhich the Karens call the egg-tree,and the Burmese the chisel-handle tree, its wood being much used for chisel handles. Mr.Mason has not seen the flower, but the fruit identifies it with Roxburgh's genus. There is another large timber tree of the genus Dalbergia found throughout the Provinces, sometimes wrought into canoes, which he thinks is a species of dalbergia, but he has never seen it in flower. It is the tree of which, according to Burman geography, there is an immense specimen growing on the Great Eastern Island.—*Mason. McClelland.*

DALBERGIA ACUMINATA, *Ains.*

Sissa. CAN. | Sisso. HIND.
Sissu tree. ANGLO-HIND |

Dr. Ainslie describes this as growing in Oude, Bahar and Canara, as furnishing a valuable wood, employed for the knees and frames of ships.—*Mat. Med. p.* 210.

DALBERGIA ALATA ?

Tsouk-yoa. BURM.

A tree of Moulmein. Used for tool handles.—*Cal. Cat. Ex.* 1862.

DALBERGIA ARBOREA. WILLD. RHEEDE. Syn. of Pongamia glabra. Vent.

DALBERGIA ARBOREA. HEYNE, Syn. Dalbergia frondosa. Roxb.

DALBERGIA FRONDOSA, *Roxb.* ; *W. & A.* ; *W. Ic.*

Dalbergia arborea, *Heyne.*

Erra pachchari. TEL. | Pedda sopara. TEL.

In Ceylon, not uncommon in the central provinces and elsewhere up to an elevation of 3, 000 feet. Grows in the Godavery forests and in the Circars ; also in Pegu where it attains a girth of four feet and upwards, is taller and straighter than the Sissoo, and furnishes a strong useful timber.—*Fl. Andh, Captain Beddome, Dr. Mc Clelland, p.* 10, *Thw.*

DALBERGIA LANCEOLARIA, *Linn. fil.*

Nedon. SING. | Nendoon. SING.

Described as growing in the western and southern provinces of Ceylon, and its wood as employed in buildings and for furniture. A cubic foot weighs 56 lbs., and it lasts from 60 to 80 years.—*Mendis.*

DALBERGIA LATIFOLIA, *W. & A. Roxb.*

Sal. HIND.	

This tree grows in the peninsula and northern parts of India, in more or less abundance; in the Godavery forests, the Circar mountains, in Coimbatore, Malabar, Canara and Sunda, the S. Konkan, on the banks of the Kali Naddi river, in the Southern Mahratta Country, the N. W. Provinces, in Bengal, the Khassia hills, and in Assam: and, on the Coromandel and Malabar Coasts. It grows to an immense size, the trunk sometimes measuring 15 feet in circumference, exclusive of the bark. In Coimbatore, it is less abundant than the catty maram, perhaps from being more sought after as yielding more valuable timber; it is, there, a very dark, heavy and strong wood, sustaining a weight of 515 lbs. Everywhere, in Southern India, this valuable wood has risen much in price, the two indents from the Madras and Bombay Gun Carriage Manufactories amounting, in 1858, to 5,000 cubic feet. In Canara, this tree was formerly given to applicants at 3 Rupees each; but that practice has been disallowed. There is not much blackwood remaining in the Anamallai Forest, but there is a considerable quantity in the escheated forest of Channat Nair, and it is abundant in Wynaad and Coorg. In consequence of its increasing value instructions were given, in 1858, for an experimental sowing at Nellumboor, with what result is not known. In Canara and Sunda, it is abundant and large at the north end of Dandelee forest; scanty elsewhere. It is rather common in most of the Bombay coast forests, particularly in ravines of the hills and under the Ghats, also on the ghats; but, there, it never reaches the great size which it attains in Malabar. It is also often crooked. The wood is extensively used for cabinet work, knees of vessels, agricultural implements, combs, &c. It appears, in density of grain and endurance, to be much superior to the Sissoo of Hindoostan: The wood of the centre of the trunk and large branches, is greenish or greenish black, often mottled, or with light coloured veins running in various directions. It is close grained, admitting of the finest polish, and is employed for furniture of every description, and, in the Madras Gun Carriage Manufactory, for light field beams, cheeks, axle cases, braces, perches, poles, splinter-bars, waggon perches and framing, light field spokes and felloes. For gun-carriages it is so valuable that large plantations have been formed in waste places of the North-western provinces of Hindoostan. In Malabar, it is the magnificent tree from which the well known Malabar blackwood is obtained, and planks 4 feet broad are often procurable, after all the external white wood has been removed: it is heavy and close-grained, admitting of fine polish and is very much used for furniture. It is one of the most valuable woods of the Madras Presidency.—*Drs. Roxburgh, Wight, Gibson and Cleghorn, Voigt, Flor. Andhr., Captain Beddome.*

DALBERGIA MOONIANA, *Thw.: Moon's Cat. p.* 51; *folios* 5-8,

D. Lanceolaria, *Linn. fil.*

Nadoong-gass. SINGH.

A great tree, which grows in the southern and central parts of Ceylon, at no great elevation.—*Thwaites' Enumeratio Plantarum Zeylanicæ, Part II. p.* 93. *See* D. LANCEOLARIA.

DALBERGIA OOATA ??

Tsouk yo. BURM.

A tree of Moulmein. A tough wood: much used for tool handles.—*Cal. Cat. Ex.* 1862.

DALBERGIA OOJEINENSIS, *Roxb. W. Ic.*

Tevus. MAHR.	Manda motuku. TEL.
Temnus. ,,	Nemmi chettu. ,,
Tumnus ,,	Tella motuku. ,,
Ati muktamu. TEL.	

A tree 30 feet high, grows in the valleys of the Himalayas, the Kheree jungle, Dehra-Dhoon, Kamaon, Sirmore, in Oude and the Godavery forests. Found both in the Konkan and inland Bombay forests, especially common in some parts of Kolwan, Khandeish, and the Satpoora Hills. It is a wood of great strength and toughness, especially applicable for cart-building, ploughs, &c., seldom reaches a size sufficient to give a plank of 9 inches. The wood of that which grows on the Godavery is valuable, but the tree is rather rare there.—*Voigt, Fl. Andh., Useful Plants, Dr. Gibson, Captain Beddome.* (NOTE.—Is this the "Thevus" of Nagpore? See above).

DALBERGIA PANICULATA, *Roxb.*; *W. & A.*

Patchalaywood. ANGLO-TAM.	Porilla. sapara TEL.
Phassie. MAHR.	Tella pachchari. ,,
Putchalai maram. TAM.	Tella patsaroo. ,,
Pachchari. TEL.	

This tree grows in Moulmein, Assam, Oude, in the Nothern Circars, in the Godavery Forests, Coimbatore, at Courtallum, in the Mawul districts, and above the Ghats. In Coimbatore, it attains a considerable size, and the timber is said to be strong, and fit

for many purpose. It is rather common in most of the Bombay forests, both of the coast and inland. The wood there is light yellow, strong, compact, and fit for many purposes in house building, agriculture, &c. But, Captain Beddome tells us of Porilla sopara. (Godavery) Tella patsaroo (Circars) *Tel.* Dalbergia paniculata, that the wood is perfectly useless—it is arranged in rings with softer substance in between the layers. Voigt tells us that it is white and firm but less useful than some of the other species. The character of the wood would thus seem to vary according to locality.—*Drs. Wight and Gibson, Voigt, Captain Beddome.*

DALBERGIA ROBUSTA, *Roxb.; W. Ic.*
Dalbergia Krowee, *Roxb.*
„ latifolia, *Gibson.*

This tree grows in Nepaul, Assam and Pegu, where it is very abundant, and attains a girth of four feet and upwards, and is taller and straighter than Sissoo.—*Voigt, Dr. Mc Clelland, p.* 10.

DALBERGIA SISSOIDES, *Grah.*

Rose wood. ENG.	Biti maram. TAM.
Black wood „	Vitty maram. „
Eatty maram. TAM.	Kar-utti „

Dr. Wight says that this is perhaps the best known, in the Coimbatore jungles, of the trees yielding blackwood, but there are several others as good or perhaps better. It abounds in the Palghaut forests, but, in 1850, was rarely to be met with of great size; when it and its congener Dalbergia latifolia are carried to Madras it becomes one of the rosewoods of the furniture shops. It is a smaller tree than D. latifolia, but more common in the forests. Both yield a black wood, and in Madras are indiscriminately called "Rosewood." The wood contains much oil, which unfits it for receiving paint. Mr. Rohde says that this, the blackwood or East India Rosewood, is one of our best woods for plain furniture, though at Madras it is said to cast about a good deal; by experiment he found it to be one of the strongest timbers we have in the Circars, he is inclined to believe that the wood imported from the Western Coast is not equal in strength to the smaller but closer grained wood of the Circars, and the appearance of the latter is more veined and he thinks closer in the grain than that of the Western Coast—the wood contains much oil which renders it unfit for receiving paint—logs are almost invariably faulty in the centre: as a tough strong wood it will be found useful whether curved or straight. Dr. Gibson does not recognise this as a species distinct from Dalbergia latifolia.—*Dr. Gibson, Mr. Rohde and Dr. Wight in Cat. of Ex. of* 1851, *Dr. Cleghorn in Madras E. J. R.*

DALBERGIA SISSOO, *Roxb.*
Pterocarpus sissu, *Roxb.*

Sissoo wood. ENG.	Yerra Sissoo. TEL.
Sissu. HIND	Sissowa. URIA?
Fali PANJAB.	

This tree grows in Bengal, Nagpore, Guzerat, in the hills about Nagotnah, and Kennery jungles. It is a native of Bengal and the adjoining provinces to the northward where the timber is much prized. Sissoo is scarce in the hills of Ajmeer, but more abundant in Kotah. There is a large forest of Sissoo and olive about ten miles from Kohat, on the Hangu and Meranzai road, which might yield a considerable supply of timber, though not of large size. It is the most valuable hard wood in the Punjab. In Nagpore, logs of it are procurable from 10 to 15 feet long, and 3 to 2½ feet in girth at 6 annas the cubic foot. But it is said to attain a great size in Chandah. It is there employed in ornamental work, domes of gharries, &c. It was introduced into the Madras Presidency from Bengal at the recommendation of Dr. Wallich, and has been planted on the banks of the Toomboodra, where it is said to be thriving wonderfully; it is growing extensively in the cantonment of Masulipatam, as an avenue tree, and has been planted in some places on the banks of the Kistnah anicut. The trees thrive well at Masulipatam, and from their appearance, Mr. Rohde thinks it would thrive well in the Madras provinces. Its rapid growth recommends it for avenues, for the tree attains perfection in 28 years, it is propagated and reared with facility, and early attains a good working condition of timber. The wood is greyish brown with darker coloured veins, very strong, but said to be not very durable. It is used in Bengal for gun carriages, and furnishes the Bengal ship-builders with their crooked timbers and knees, being remarkable strong, but not so durable as could be wished: it answers well for various other economical purposes. Captain Macdonald tells us that, in Ganjam and Gumsur, it has a circumference of 4½ feet, with height from the ground to the intersection of the first branch of 15 feet, and furnishes the material of which tables, chairs, couches, book-stands and other articles of furniture are usually made in that part of the country. It is not so plentiful as it was, being in great request. In the Dekhan, the wood is used principally, from its strength and natural bend, for native hackeries: when it can be procured long and straight, it makes good shafts for buggies. The wood of the Ajmeer tree is

very dark and beautifully veined, like rose-wood. Upon the whole there is scarcely a tree which deserves more attention; for, when its rapid growth in almost every soil, its beauty and uses, are taken into account, few trees can be compared with it. Major Campbell's estimate of the value in practice, of this wood, is 96, being higher than that of the best specimens of teak. Wood hard, strong, tenacious, and compact, whilst its great durability combines to render it one of the most valuable timbers known. Dr. Wallich and others have recommended it for plantations, showing the probable return. Flowering time, the beginning of the hot season: the seed ripens about the close of the year.—*Voigt, Captain Macdonald, Mr. Rohde's MSS. Dr. Irvine's Gen. Med: Top. of Ajmeer, P.* 203. *Drs Riddell, Cleghorn, and Roxburgh, Captain Sankey.*

DAL BULLOO GEERA. CAN. A tree of Canara and Sunda, on the elevated plateau between Gungawalee and Black river, does not reach a great size. Wood very strong and tough, and sought after for agricultural implements.—*Dr. Gibson.*

DALCHIKARA. HIND. See Dal-Shikara.

DALCHINI. PERS. Cinnamon.

DALCHINI BERRIES. ANGLO-HIND. Cassia Berries.

DAL-DAL, the name of the horse of Ali, son-in-law of Mahomed.

DAL-DAL HIND. Bog, quagmire.

DALECHAMPIA: of this genus of plants Wight gives Capensis, 1881; Indica, 1882; velutina, 1881.

DALECHAMPIA BIDENTATA, BLUME. D. *Indica* Wight, D. *velutina*,, Wight, Grows at Gonagama, on the Lower Badulla road from Kandy; but is not common.—*Thw. En. pl. zeyl. p.* 270

DALECHAMPIA POMIFERA.

Douk-ya-mad. BURM.

Scarce, but met with on the banks of streams in the Pegu Valley, particularly in the Pommah Choung. The trees are from three to four feet in girth. Wood, red or dark brown, and adapted for cabinet-making —*Dr. Mac Clelland.*

DAMAUN, a town on the Concan coast.

DALHOUSIE, James Andrew Broun Ramsay, tenth Earl and first Marquis of, was born on the 22nd April 1812. His father was a general in the army, employed in the Peninsular war and at Waterloo, was for a time governor of Canada, and commander of the forces in India from 1828 to 1832. James was the third son by the heiress of the Brouns of Colstoun in Haddingtonshire. He was educated at Harrow, and subsequently at Christchurch, Oxford, where he was fourth class in classics (1833), and graduated M. A. in 1838. By the deaths of his elder brothers he became Lord Ramsay in 1832, and in 1834 he strove for a seat in the House of Commons, contesting Edinburgh against Sir John Campbell, afterwards Lord Campbell, and James Abercrombie afterwards Speaker of the House of Commons and Lord Dunfermline. He was unsuccessful then, but in 1837 he was returned for the county of Haddington. In 1838 on his father's death, he was called to the House of Lords, where he showed great attention to business details, but did not distinguish himself as a speaker. He first entered official life in 1843, during the ministry of Sir Robert Peel, to whom his business habits had recommended him. He was appointed Vice-President of the Board of Trade, and in 1844 became President of the same department. In these offices he actively investigated all the details of the railway system, made himself acquainted with the financial and practical management of railways, and framed regulations for the conduct of the numerous bills that were pressed upon Parliament during the Railway mania of 1844-45. His reforms and improvements in the Board of Trade had been so extensive and so judicious, that on the accession of Lord John Russell to Office in 1846, Lord Dalhousie was requested to retain his position, with which request he complied.

Towards the close of 1847, Lord Hardinge was re-called from India, and the governor-general-ship of that country was offered to Lord Dalhousie. He went to India with a plan of action already formed on certain principles, and to those principles he firmly adhered during the eight years of his government. He felt that the pacific policy of his predecessors had not succeeded, and that situated as India was, it required to be ruled by a firm and uncompromising hand. When he entered on the government of that country, peace prevailed. On reaching Calcutta, Lord Dalhousie lost no time in proclaiming his policy: "We are lords paramount of India, and our policy is to acquire as direct a dominion over the territories in possession of the native princes, as we already hold over the other half of India." Soon after his arrival, news was brought that British officers were murdered at Mooltan, and that Moolraj was in in revolt; Lord Dalhousie marched a force into the North Western provinces, defeated the Sikhs and annexed the Punjab to the British dominions in the East. When little more than two years were passed, the government

of India found itself involved in hostilities with Burmah, where British traders had been insulted by the officers of the king of Ava. Remonstrances proving useless, Lord Dalhousie despatched an expedition against Pegu, and in a few weeks the entire coast of Burmah was in his hands. Finding that the king of Ava still refused their just demands, he ordered the British troops to occupy Pegu and incorporate it with their dominions. This was effected at the close of 1852; from that time to the end of his administration the Indian empire enjoyed comparative peace. The rich districts of Nagpore, Sattara, Tanjore, the Carnatic, Behar, and Oude were severally annexed to British possesions by Lord Dalhousie, either in consequence of failure of rightful heirs among the native dynasties, for the payment of Contingents, or else to put an end to the cruelty and oppression which those princes exercised towards their own subjects. It is almost needless to add that the social condition of each of the annexed provinces has proportionably improved.

During this time, great changes were effected by Lord Dalhousie in the government and civilization of India, and in the development of its resources. A yearly deficiency in the revenue was converted into a surplus until the years 1853-54 and 1854-55, when, chiefly in consequence of the vast public improvements undertaken, there was a deficiency of nearly half a million. The shipping of India doubled its tonnage, a Legislative Council was organized, the civil service was thrown open to competition, the annual accounts were expedited, and prison-discipline was improved. A system of uniform and cheap postage was also introduced by Lord Dalhousie; a portion of the peninsula intersected by railway, and all the large towns brought into immediate connection by means of the electric telegraph, laid down by Dr. O'Shaughnessy, 4,000 miles having been constructed and placed in working order between November 1853 and February 1856. The manufacture of salt, the production of cotton, tea, and flax, the breeding of sheep, and the improvement of agricultural implements all received Lord Dalhousie's attention. The development of the resources of the country in iron, coal, and other minerals was a matter on which he bestowed peculiar care; and measures were also taken for the preservation of the forests, and for making their produce available. At the same time a new and uniform survey of the districts was commenced, and the limits of subject states accurately defined. Irrigation on a large scale was attended to in Sind, Madras, and Bombay; the navigation of the Ganges, Indus, Nerbudda and Burrumpooter was improved, grand trunk roads were carried to Delhi, through the Punjab, and to Patna, and others made in Pegu and Sind. A road was also constructed from Hindustan to the frontiers of Thibet commencing from the plains of the Sutlej and another put in progress from Arracan over the Youmah ridge to Pegu. The most stupendous work however which signalized his government was the Ganges canal carried out by the skill and energy of Sir Proby T. Cantly. Under his vigilant authority also the department of public works was reformed throughout and colleges founded to train young men specially in civil engineering. Schools and colleges were established and placed under government inspection. The most strenuous efforts were at the same time made for the eradication of the systems of suttee and thuggee, and the practice of infanticide. The condition of the European soldiers was likewise greatly improved. Provision was also made for both Protestant and Roman Catholic worship, on equal terms and extensive changes were made in matters of criminal and civil justice. Lord Dalhousie also required the government of each Presidency, each Lieutenant-governor, and the chief officer of every province to send in to the governor-general an annual report of the chief events that occurred within their several jurisdictions, in order to test the progress made by the nation at large. For his success in the Punjab, Lord Dalhousie was raised to a marquisate in 1849: and on his return to England in May 1856, with shattered health and a broken constitution, the East India Company settled on him a pension of 5,000*l*. a year. He had previously been appointed to the wardenship of the Cinque Ports on the death of the late Duke of Wellington. He died on the 19th.....186?

DALI HIND. basket of fruit or vegetables.

DALIAH. HIND, a branch of a tree.

DALIM OR DARIM. BENG. HIND. Punica granatum.—Linn, pomegranate tree.

DALIMBA, A hard granulated coarse stone, of Cuttack, very common, and worked into utensils of various kinds—*Cat. Exhib.* 1862.

DALKISSORE, a tributary to the Hooghly running through the Pachete district, in L. 28°30' N. L. 86°34'. E. running S. E—S. S. E.,—into Hooghly at Diamond Harbour, after a course of 170 m. it can be crossed at Bancoora, 50 M. from source, and at Jahanabad by means of fords.

DAL-LA, or Giant's Peak, in Bhutan, N. of Tanong in Lat. 27° 50, N. and L. 92°

34 E. The top of the peak is 22,495 Ft. above the sea as Trigonometrically measured from Gohatti. This peak is the prominent feature in the Himalaya panorama of Central Assam *Schlag.*

DALLAH KHAFAK HIND. Skins.

DALLAL HIND, a procurer, a horse-couper. *Wilson.*

DALLALAH, HIND a courtezan, The Dalilah of the Bible.

DALMY, an island in lat. 24° 28' N. long. 52° 27' E, on the south side of the Persian Gulf.—*Horsburgh.*

DALME-KATTEA, SINGH. Wood-Moth.

DALOSINGHA OR TALOOSINGHEE, URIA ? A tree of Ganjam and Gumsur, burnt for firewood and charcoal but ploughshares are sometimes made of it. *Captain Macdonald.*

DAL-SHIKARA, A crystallized salt, brought to Ajmere from Bombay ; it is white and transparent, in small grains : it is very poisonous : is sometimes used in medicine ; but, chiefly in "rasan" or transmutation of metals : is true bichloride of mercury, or corrosive sublimate: costs one rupee per tola.—*Gen. Med. Top. p.* 134.

DALUKGAHEH-KIRE. SINGH. Euphorbium.

DAL-URUR. BEN. Cajanus Indicus, Spreng.

DALU-WANG. See Gluga.

DALYELL, N. A, and A. Gibson, joint authors of Dalyell's Bombay Flora.

DAM, ENGLISH, Anicut, Tamil, literally dam-built, a name given in Southern India to a dam or weir thrown across a river to dam up the water. The grandest is that across the Godavery river, about seven miles long, but others dam up the waters of the Kistnah, the Palar, the Coleroon, the Toomboodra and the Pennar. See Canal.

DAM. HIND. This coin in the Ayeen-i-Akberee, and consequently in most revenue accounts, is considered to be the 40th part of a rupee.

DAM. Pers. Price, Cost: Be-dam ; unpriced, priceless.

DAMA. SANSC, a house. It is domos; Gr. —*domus*, Lat. *domii*, Slav : *daimah*, Celt. *Muller's Lectures* p. 224.

DAMAHAN HIND Fagonia Cretica.

DAMAKA. SANS. Coriandrum sativum.

DAMALCHERRY a pass about 30 miles N. of Amboor leading from Mysore to the Carnatic. On the 20th May 1740, nabob Dost Alli fell, here, in action against the Mahrattas. *Orme.*

DAMAN HIND. of Kahan, Grewia oppositifolia.

DAMAN-I-KOH. Persian also Hindi, is the name given to the low hills that form the basis of the higher ranges of the Himalaya and in which such hill-states as Kotahah, and others are situated. It is also the skirt of the hills, of the region of low hills at the base of the Punjab Himalaya. The soil is indurated clay which becomes prolific when subjected to cultivation. The Derajat, the line next the Indus, is fertile and populous. *Ritchie Vol. II p.* 13. *The British world in the east. See Powell, Handbook. Econ. Prod. Punjab P.* 202. See Afghan. Indus.

DAMAN, See Damaun. Kol.

DAMARA. Wilson's History of Kashmir describes this people as a fierce intractable race, murderers of king Chakra Verma and who opposed Lalata Ditya in his advance to the north or Uttara-kuru.

DAMARA, OR DAMRU, supposed to be a small hand-drum, or rattle, usually seen in the hands of Siva or his avatars. This definition of the emblem is however doubtful, as it has more the appearance of an hour-glass, though rattles of this form are sold in all the bazaars of India, and used by religious devotees and others to attract attention.—*Cole Myth. Hind, p.* 377.

DAMARGAVA. SANS. Cucumis acutangulus.

DAMARLOUT—? A brown coloured wood of Penang used for building and general purposes.—*Col. Frith.*

DAMMARA AUSTRALIS is the kauri or yellow pine timber tree of New Zealand.

DAMAR MATA KOOCHING, Damar Daging ; and Damar Batoo, are gum-products of the Malay Peninsula and of the Archipelago. Damar-mata-kooching when mixed, with the miniak-kayoo, or wood oil, makes a durable varnish.

DAMAR PUTEH. MALAY. White dammer.

DAMAR SELO. Dammer.

DAMA SAH. A prince whose name is engraved on the Girnar rock, containing the edicts of Asoka. See Inscriptions, Junagurh.

DAM MADAR, called also *Dhummul*, is a popular ceremony with the agricultural and lower classes in India. It consists in jumping into a fire, and treading it out, with the exclamation of "*Dum Mudar, Dum Mudar* !" that is, "by the breath of Mudar, by the breath of Mudar." It is devoutly believed that not a hair of these devotees gets singed, and that those who have practised the ceremony are secure against the venom of snakes and scorpions. Budeeood-deen Shah Mudar, in honor of whom this ceremony annually takes place, was, ac-

cording to the *Mirat-i-Mudárea*, a converted Jew. He is said to have been born at *Aleppo* in 1050 A. D., and to have come to India in the reign of *Sultan Ibraheem Shurkee;* and having taken up his abode between *Cawnpore* and *Furruckabad*, and expelled therefrom an evil genius, called *Mukun Deo*, who infested the place, he gave the name of *Mukunpoor* to his residence, and was buried there in 1433 A. D. at the good old age of nearly four hundred years! The tomb, which is a handsome structure, was raised over him by *Sultan Ibraheem*. He is believed still to be alive, and hence is frequently styled Zinda Shah Mudar. The prophet Mahomed gave him the power of *hubs-i-dum*, or retention of breath and hence arose his longevity, as the number of his respirations was diminished at pleasure. There is a class of *Fukeers* called Mudarea, after his name. They generally wear black cloth and are much addicted to the use of intoxicating drugs. *Elliot. Supp. Gloss. See Mudarea.*

DAMASCUS. This city is about two miles in length, is surrounded by a fortified inclosure in very bad repair, dating back to the time of Selim I., and which was built on the site of the old walls raised by the Arabs in 650. It has eighteen gates, the most curious of them being that called bab-i-Paulous, or the gate of St. Paul. The streets are narrow and winding, but are provided with a footpavement on each side. The houses, built of earth and brick, are simple externally, but fitted up within with great magnificence. Damascus contains 60 places of worship; the largest and finest is that dedicated to St. John the Baptist, and which is always closed in moments of danger or on a sign of alarm. It is one of the finest buildings erected by the christians, and its noble proportions, handsome dome, and elegant minarets, are objects of general admiration. This religious monument was thoroughly repaired by the caliph Walid in the year 86 of the Hijira; its doors, contrary to oriental custom, are of bronze and beautifully wrought. A mahomedan tradition says that at the end of the world St. John the Baptist will descend into this building, while Jesus Christ will come to the temple of Omar at Jerusalem, and Mahomed, the prophet of God, to the temple at Mecca. The other monuments of the city are, the great bazaar destined to receive the caravans, and in which from 1,200 to 1,500 camels may assemble; the seraglio, or palace of the pacha; the khan in 1860 possessed by Azad Pacha; and that of Sulaman Pacha. The commerce of the city also possesses thirty-one khans and large entrepots of merchandise. The coffee-houses of Damascus form one of its curiosities; they are 150 in number, and are regarded as the finest in the east. Damascus is the general rendezvous of from 40,000 to 50,000 pilgrims who assemble there from all points of Ottoman Europe and Asia, and even from Persia and Turkistan, in order to go with a caravan to Mecca. The sacred caravans encamp on a piece of ground to the east of the city, at about five hundred yards from the christian burial ground. Near the spot may be seen the remains of the sanctuary built in memory of the conversion of St. Paul. Independently of the great caravan which leaves at the end of the month Ramadan, there are three others; one which goes three times a year to Bagdad, another every fortnight to Aleppo, and the third every three months to Cairo. Damascus was formerly celebrated for its manufacture of sword blades; but its industry now consists in making soaps, stuffs of cotton, and silk, tobacco, saddlery, and cabinet work. There are in the city 750 dealers in stuffs called damask; 200 in handkerchiefs and fancy articles; 98 fringe-makers; 70 printers on stuffs; 185 dyers; 72 saddlers' shops; 78 tobacco manufactories, and 48 for pipes. The population of Damascus amounts to 180,000, 130,000 mahomedans, 30,000 Christians, Greeks or Latins, and 20,000 Jews. The schismatic Greeks have a church of their own, but the catholic Greeks have not, and perform their religious duties in the three Latin monasteries, viz. the Holy Monastery, that of the Lazzarists, the successors of the Jesuit missionaries, and that of the Capuchins. The Armenians and the Syrians have each a particular sanctuary, and the Jews have three synagogues. Damascus is the chief town of a pachalic of that name, the residence of a first class mollah, and of the Greek patriarch of Antioch, who has 42 arch-bishops and bishops under him. The pacha of Damascus bears the title of Prince of the Pilgrimage, because he was formerly charged to accompany the caravan to Mecca. The plain of Damascus is covered with magnificent gardens, planted with orange and lemon trees, cedars, fig and apricot trees and shrubs of all kinds. The Baradi, a pure and limpid river, divides itself into seven branches, and waters the town and its fine gardens. The two points by which Damascus is placed in communication with the sea are the ports of Beyrout and Saida."—*Ladies' Journal.* See Jews. Kalifa. Khhalif. Nicolo-di-Conti. Semitic races.

DAMASCUS SWORDS present on their surface a variegated appearance of watering. The blade is formed by mixture in

nearly equal proportions of the celebrated wootz and soft iron which being welded together and repeatedly doubled gives the desired appearance. Daggers and sword blades thus formed are common among the retainers of the hill-zemindars in the Northern Circars of the Peninsula of India, the handles of which, formed of iron, are frequently damascened in silver.

The famous Damascus blades, so renowned in the time of the crusaders, are made in Damascus no longer. The art has been lost for three or four centuries. Old swords, of the true steel, are however occasionally to be found there. They are readily distinguished from modern imitations by their clear and silvery ring when struck.

Atkinson (Oriental Western Siberia pp. 120 and 121) says that Colonel Andsoff, at Zlatavust has succeeded in manufacturing valuable Damascus blades, weapons combining edge and elasticity. The water was a succession seemingly of small bundles of almost parallel lines, occupying the whole breadth of the blade; the ends of the bundles crossing and mingling at the point of junction. They are however, a series of minute curves, forming together lines disposed in bundles articulated together and dividing the length of the weapon into many sections. They have not the regular articulation of the articulated Khorassanic blade, their lines are infinitely finer. *T. W. Atkinson Oriental Western, Siberia* P. 120-1 *Rohde M. S. S. Taylor Saracen* P. 130.

DAMASK,
Teladamaschina, It.
Damaskwerk, Dut.
Venise, Fr.
Damasten Tafelzeng, Ger.
Kamtschatnua, Salfftki, Rus.
Tela adamas cada, Sp.

This is a fabric woven in a loom, with figures of flowers or other objects. The art is said to have been brought from Damascus hence the name. It is largely manufactured at Dumferline in Scotland and at Breckin in Wales.

DAMASKWERK. Duk. Damask.

(666) DAMASONIUM INDICUM, a pretty flowering plant of Macassar; the petals are of delicate white, and the long caly has its corners ornamented with fringes gathered into a kind of flounce or furbelow. It is common in some of the floods and pools.

DAMAS EN TAFELZENG. Ger. Damask.

DAMATHAT. Burm. The book containing the Burman code of laws.

DAMBADINNA, a place of buddhist celebrity in Ceylon.—*Prin. Ind. Ant.*

DAMBOOL. A buddhist temple and rock, near Matellæ in Ceylon, in which is a rude cave with carvings. The Makara, a monstrous idol, with the trunk of an elephant, the feet of a lion, the teeth of a crocodile and the ears of a pig, is a prominent figure there. Some of the statues of Buddha are upwards of 40 feet in length, The Dambool temple contains an admixture of emblems of brahmanical and buddhist worship. It was first endowed 86 B. C.—*Tennant.*

DAMBU TAGH, mountains of the province of Iran, have the topaz, boryl, schorl and gold. See Iran.

DAM-DUM, A venemous fly in the Phangan pass the bite of which causes severe irritation.

DAMGHAN, a town in Khorassan, described by modern travellers as a mass of desolate ruins, in a vast gravelly plain, with a wretched vaulted lane of mud-built huts for a bazaar.—*Markham's Embassy* P. 102.

DAMMAJI GAEKWAR, styled Shamsher Bahadur the first of the Gaekwar family, who founded the dynasty in A. D. 1720. He was an officer under Khandi Rao Holkar. The Gaekwars ruled until the treaty with the British of 1802. See Maharatta Governments in India.

DAMMAPADAN, a work, in Pali, containing moral precepts.—*Hyder's Eastern Monachism* p. 435.

DAMINNE. Singh. A tree of the eastern provinces of Ceylon. A cubic foot weighs 44 feet and it is calculated to last 40 years. Its wood is used for gun-stocks and common house buildings.—*Mendis.*

A resin in very general use throughout Eastern and Southern Asia, and the several sources from which it is obtained may be noticed:

The "*Dammers*" of the Madras Presidency are obtained from trees of the genera Vateria, Canarium, and Shorea or Vatica. The two former viz. Vateria and Canarium, yield by far the largest part if not the whole of the dammers produced on the Western coast of the peninsula, whilst the Shorea or Vatica genus yield the greater part of that collected in the northern and eastern districts.

They may be briefly arranged as follows:—

Dammer of the Western Coast is the Black Dammer, Canarium strictum, the carpoo coonghilium of Ainslie, the Dammara nigra legitima of Rumphius and the Canari of the Malayala. This occurs in large stalactitic-shaped masses, of a bright shining black color when viewed from a distance, but translucent and of a deep reddish brown when held in thin laminæ between the eye and the light. It is perfectly homogenous, and has a vitreous fracture. Its shape appears to be due to the fact of the balsam having exuded in a very fluid state and trickled down the trunk of the tree, where it gradually hardens by exposure to the sun, the fresh resin continuing to flow over that already hardened, gives rise to the stalactitic appearance of the huge lumps of resin, the outside of which much resembles the guttering of wax caused by placing a lighted candle in a draught. It is insoluble in cold, but partially soluble in boiling alcohol on the addition of camphor: when powdered it is readily soluble in oil of turpentine. Powdered and burnt on the fire it emits a more resinous smell and burns with more smoke than white dammer. The size of the lumps of this resin, together with its color and the peculiarity of shape already mentioned, suffice to distinguish it from other Indian resins.

White Dammer is the Piney resin of the Vateria indica and allied species of Linnæus and Wight. Choloroxylon Daupada of Buchanan and Ainslie, the Doopada resin of Mysore, and the Payanee or Piney of the Malabar people.

Variety 1. Compact Piney resin or first sort white dammer. This occurs in large lumps of all shapes and varying in color on the outside from a bright orange to a dull yellow, bearing evident marks of having adhered to the bark of the tree. It has a shining vitreous, fracture, is very hard and bears a great resemblance to amber. Its color, (internally), is of all shades from a light green to a light yellow, the green tint predominating in the generality of specimens. It is more soluble in alcohol than black dammer and burns with less smoke and a more agreeable odour. It is easily distinguishable from all other Indian resins by its superior hardness, its colour and amber-like appearance.

Variety No. 2 Cellular Piney resin, or second sort white dammer. This occurs either in small lumps or in large masses, generally of a shining appearance and balsamic smell. Has a very cellular structure, which is attributable partly to the mode of collection, and partly to the age of the tree. Notches being cut in the trunk of the tree sloping inwards and downwards the resin collects in the cavity and is either permitted to dry on the spot, or is collected and dried by the application of heat. It is of all shades from light green to light yellow or white and is usually translucent. Specimens are sometimes seen in which from the dessication having been improperly conducted the resin is more opaque, of a dull green color and full of air-bubbles, presenting the appearance of having undergone a partial fermentation. This resin may be recognised by its cellular appearance and balsamic smell—but the balsamic smell, which is due to the volatile oil it contains, is gradually lost by long keeping or constant exposure to the air. On splitting open old and decayed trees, portions of a dark-colored resin are often found having the solid consistence of first variety, but the inferior quality of the second.

Dammers of the northern and eastern Districts. Variety No. 3. Saul tree dammer, Shorea robusta and other species. This occurs in sticks much resembling in shape the black dammer, but differing widely in colour and consistency. In colour it varies from a light yellow to a dark brown, the two colours being very frequently blended in the same lump and giving it the appearance of having a regular "grain". It is friable and differs from the white dammer of the western coast in its inferior hardness its opacity and its peculiar form, and from the black dammer in its color. There are extensive tracts of Googulam (*Vatica*) jungles in the Goomsur and Cuttack provinces. The Khond and Uria races living in and near these jungles, wound trees in several places. The resin issues and is collected when sufficiently solid. The dammer collected from the decayed parts of the tree is of a dark color, the tree is called "Guggilam" in Telugu and "tala gotso" in Urya. The Khoond and Urya races make the leaves into the plates from which they eat their food, and also roll up tobacco in them to smoke like a cheroot. In time of famine the above tribes live on a soup made from the fruit of this tree.

The Vatica tumbugaia grows also to a limited extent on the west coast, but yields little if any of the dammer collected there.

As will have been seen from the above, dammar is a commercial term, and is the resins of various trees, in different localities. Shorea robusta; Shorea tumbugaia of India, exudes an amber-colored resin. The Piney dammar of the Vateria Indica, is also amber-colored, and known as the white dammar of Malabar, and as Indian copal. The

black dammar of Malabar is from Canarium strictum. The white dammar of Singapore is the product of Dammara orientalis and the Australian dammar, or Kaurie or cowdie gum, or Australian copal, is obtained from the Dammara Australis. Dammar in the Rhio Lingga Archipelago is obtained from the Meranti (*dammar Vatu*), the Meranan (Dammar-Kruyong) and Balon trees (Dammar-marakuching.)

In Borneo also, dammar is produced by many kinds of trees quite different from Marsden's Dammara orientalis; the white Dammar is used for the same purposes as gum-copal, 'Dammar mata kuching,' or the cat's eye Dammar; is the least common, and most valuable, being beautifully transparent. 'The Dammar daging,' or flesh-like dammar, takes its name from its veined appearance, which causes it to resemble some kinds of agate. Marsden tells us that in Sumatra some of the trees producing dammar, yield valuable timber. The *dammar laut* tree not mentioned by Rumphius, is employed at Penang for the frame timbers of ships, beams, and knees. *Kamuning* (Camunium, Roxb. Chalcas paniculata, Lour.) is a light coloured wood, close, and finely grained, takes an exquisite polish, and is used for the sheaths of krises. There is also a red-grained sort, in less estimation. The appearance of the tree is very beautiful, resembling in its leaves the larger myrtle, with a white flower. The 'langsani' likewise a handsomely veined wood is employed for cabinet and carved work. Besides these the kinds of wood most in use are the madang, ballam, maranti, labon, and marakuli. The variety is much greater, but many, from their porous nature and proneness to decay, are of very little value, and scarcely admit of seasoning before they become rotten.

The Dammara Australis or Kaurie tree of New Zealand also yields Dammar. *Marsden's Hist. of Sumatra. P.* 162.

DAMMARA AUSTRALIS the Kawrie or cowrie tree of New Zealand. Its wood contains a considerable quantity of resin and appears to shrink little. The mean girth of the tree is from 3 to 6 feet and it is from 90 to 100 feet high. It is a close even and fine grained wood of a very uniform texture, its colour is a light yellowish brown, the lustre silky, the annual rings marked by a line of deeper tints of the same colour; It is used for masts and yards of ships, and seems admirably adapted for internal joiners work. It unites with glue. *Tredgold* 1853, p. 284.

DAMME, OR DAMMA, in the Arafura Sea, is a high large island 70 miles N. N. W. from Sermattan; the island is 15 miles long N. & S. and at its N. E. extreme has a volcano, with hot springs.—*Horsburgh.*

DAMO, SEE Damon AND Pythias.

DAMON AND PYTHIAS, the two followers of Anaxagoras, are supposed by Major Cunningham, to be the sanscrit Dharmma, virtue or practical morality, and Buddha, wisdom. Even the word Pythagoras seems derived from πυθας, or Buddha, and αγορευω to expound or announce. He is said to have married Theano (sanscrit Dhyana, devout contemplation) and by her had a daughter, whom he named Damo (sanscrit Dharmma, virtue or practical morality,) and who became a most learned Pythagorean.

DAMONU. URIA. Grewia tiliæfolia; used for fishing rods: abundant at Palicondah.

DAMOODAH, a river, tributary to the Hooghly. Rises in the Ramghur district in L. 23°55' N. L. 84°53' E. and runs S. E., to Burdwan; S., to Diamond Harbour.—Its length, is 350 m. The Damoodah has often burst its banks and devastated all round. It runs through a rich country, which has suffered since many years with a terrible fever epidemic that spread in 1868 into Beerbhoom. The Damodah valley; is rich in coal, which is very largely extracted. See Coal.

DAM-UL-AKHWAIN. ARAB. Dragon's Blood gum from Calamus draco.

DAMOSONIUM INDICUM. See Hydrocharidaceæ.

DAMPARA. TEL. also Gumpena chettu; Odina wodier.—*Roxb.*

DAMPEL. BENG. HIND. TEL. Stalagmitos pictoria. Xanthochymus pictorius. Roxb.

DAMPIER STRAIT, called Gamon or Gemi by the Dutch, is formed by Battanta island on the south and that of Waygiou on the north side, and is about 72 miles long from Cape Mabo, to Point Pigot. It affords a good channel for vessels passing from the Moluccas to the Pacific, and is very generally selected. *Horsburgh; Journal of the Ind. Arch. June* 1852 *P.* 308.

DAMRA SHAMA. Beng. Oplismenus frumentaceus.

DAMRI. HIND a small copper coin.

DAMRI MASJID A pretty little mosque, near the fort of Ahmednuggur. It is said to be a miniature copy of one at the celebrated Tajmahal which Shahjehan, erected over the remains of Noor Jehan, at Agra. *Postans Western India Vol. I* p. 272.

DAMUL or Dabur a river near Bhilsa in Gwalior.

DAMUN. MAR. Grewia tiliæfolia.

DAMUNI. HIND. the churning-rod.

DAMWAST. HIND. An inferior tribe of

rajputs in the Benares District.—*Wilson's Gloss.*

DAN. HINDI. " An-Dan-Khan" is an expression, which comprehends the sum of sovereign rights in Rajasthan, being allegiance, commercial duties, mines, &c.

DAN, SANS. PERS. Gift. Knowing, or Standing, a postfix and prefix to many compound words in India: Dan-pun, Charity: Kalmdan, inkstand. Na-dan, ignorant.

DANA. SANS. Artemisia Indica.

DANA, SANS. from da, to give. See Veda.

DANA HIND. Wise. Danai wisdom: Dowlat-i-Hindo, Danai-O-Fering, is a Persian phrase meaning give me India for wealth, but Europe for knowledge.

DANA HIND. grain, a grain weight.

DANAÆACEÆ. See Ferns.

DANADHOL, HIND Polynisia viscosa.

DANAGA. Kar, A cow-herd, a shepherd.

DANAKIL tribes occupying the low lying waterless region between Abyssinia and the sea, trackless and uncultivated. See Semitic races.

DANA KHANDA, SANS. from dana, a gift and kanda, a piece.

DANAVA, an inhabitant of the hindu mythological Mount Meru. See Avataram. Meru.

DANCING, in India and S. Eastern Asia, is not practised by the Arian races. The Non-Arian peoples, the Bhil, Ho and others often dance.

DANCING GIRLS. This, amongst the British in India, is a term in general use to indicate the hindu women devoted to the service of the hindu idols in the temples as also the bands of hindu and mahomedan women, who practise singing and dancing for hire. Exodus xxx ii. 19. alludes to the dancing, and dancing before the hindu idol takes place at almost every hindoo feast. It is also noticed 2 Samuel vi. 14 where David is said to have danced, and dancing is considered a religious ceremony among the hindoos. When the Rev. Mr. Ward asked a brahmin, what, of a religious nature, there could be in dancing? he replied it was an act of devotion to the god. As observed by the Abbe Dubois, the temple dancing girls, are known to the public by a much coarser name. Their profession, requires of them to be open to the embraces of all castes; and, although originally they appear to have been intended for the gratification of the brahmans only, they were, in some parts of India obliged to extend their favours to all who solicit them, though consecrated in a special manner to the worship of the gods of India. Every temple, according to its size, entertains a band of them, to the number of eight, twelve, or more. The service they perform consists of dancing and singing. The first they execute with grace, though with lascivious attitudes and motions. Their chaunting is generally confined to the obscene songs which relate to some circumstance or other of the licentious lives of their gods. They perform their religious duties at the temple to which they belong twice a day—morning and evening. They are also obliged to assist at al the public ceremonies, which they enliven with their dance and song. They are reared to this life from their infancy. They are taken from any caste, and are not unfrequently of respectable birth. It is nothing uncommon to hear of pregnant women, in the belief that it will tend to their happy delivery, making a vow, with the consent of their husband, to devote the child then in the womb, if it should turn out a girl, to the service of the pagoda. And in doing so, they imagine they are performing a meritorious duty. The infamous life to which the daughter is destined brings no disgrace on the family. These women were, until very recently, the only hindu females in India who might learn to read, to sing, and to dance. Such accomplishments belonged to them exclusively; and were for that reason, held by the rest of the sex in such abhorrence, that every virtuous woman would have considered the mention of them as an affront. These performers are supported out of the revenues of the temple, of which they receive a considerable share. They are now very generally retained as kept-women by the wealthier hindu men. There are however temples in some solitary places, where the idol requires to be honoured with the most unbounded licentiousness, and there are towns filled with them. (*Dubois' India, quoted in Cole. Myth. Hind. p.* 378.)

Hindu girls of certain castes are dedicated to some of the temples, and brought up to the profession of dancing. They do not marry but are permitted to live in professional concubinage; such practice in no way degrades them from the right to caste-privileges, provided they do not form intimacies, or cohabit, with out-castes. *Dasi* dancing girls, are either the daughters of such, among whom, like other hindu castes, the profession descends by hereditary succession; or, should these women have no children, which is more frequently the case, they adopt girls of a tender age. All girls intended for the profession of dancing are connected with some, hindu temple, to which they dedicate their persons; and, in confirmation of the same a nominal marriage ceremony is carried out for the marriage of the girls to the presiding deity of the temple.

Sometimes hindus vow in sickness or other affliction, to give one of their daughters to some particular temple to be brought up as a dancing girl and the vow is scrupulously kept at the proper time. In the selection of girls for adoption in this profession, good-looking, well-made girls are chosen, and they are taught to dance at the early age of five. Older girls, when they adopt the profession, are also taught to dance. The lessons in dancing are given daily, two hours before daylight in the morning, one of which is devoted to singing and the other to dancing. In the evening after 4 P. M., the same number of hours are devoted, so that each girl has to practise for four hours daily, and in about three years she is supposed to have mastered the arts of singing and dancing.

There are generally reckoned six chief kinds of dancing:—

1. Audo girathoo. 2. Ananecum. 3. Lenchenee Nateum. 4. Moodeiydoo Cirathoo. 5. Hereacoothoo. 6. Colu Auteum; and the art of dancing or *Abĭnayam* is said to be exhibited in six different ways during these performances 1. By the movements of the eyes and 2. action of the features, and 3. attitude of the breast and chest, and 4. position of the hands, and 5. action of the feet, and 6, by tumbling, performing somersaults, &c.

By commencing their studies at the early age of five, these girls are able to make their appearance at about seven or eight years of age, very rarely earlier than that, and they continue practising dancing till they attain thirty or forty years of age, if not previously rendered unfit by disease or premature old age. When attached to pagodas, they receive certain sums as wages the amount of which is dependent on the worth, sanctity and popularity of the particular temple which they have joined. The money salary they receive is nominal, seldom exceeding a few annas, and sometimes a rupee or two a month. The chief object in being paid this sum as a salary is to indicate that they are servants of the temple; in addition to this, one or more of them receive a meal a day, consisting merely of a mass of boiled rice rolled into a ball. They are required to dance six times a day, at the temple, before the deity, while the priests are officiating, but this duty is performed by turns. Dancing girls attached to pagodas are generally wealthy, and when they appear before the public are well covered with the usual gold ornaments—if poor, tinsel is used, or golden ones are borrowed from others. Their toilettes are costly and tawdry, whilst their heads, ears, nose, neck, arms, wrists, fingers, ankles and toes

are overdecked with jewels, and their hair frequently with flowers. The hair is divided in front along the centre, combed back and plaited into a single plait, resting loose on the back like a tail, averaging from two to two and a half feet in length, and always ornamented with jewels and flowers. Their dancing dress comprises usually the short jacket or *Cholee*, a pair of ravake or string drawers tied at the waist, termed *pyjama*—or pavaday and both these are generally of silk—and a white or coloured muslin wrapper or *saree*:—One end of the saree is wound round the waist, and two, three, or more feet, according to the length, is gathered and inserted into the portion encircling the waist, and permitting of a folding fringe or gathering of the cloth in front, while the other end, taken after the usual native fashion over the left shoulder, descends towards the waist where the end, or *moonthanee*, is opened out and allowed to drop in front, one end of it being inserted in the waist on the side and the other left free. This portion of the *saree* is usually highly ornamented with golden thread, tinsel, &c;—the free end descends to the middle or lower part of the thighs, the other free end of the *saree* hanging down towards the legs is now caught hold of, passed between the legs and fastened to the tie around the waist at the back, and the whole encircled by a gold or silver waist belt. By this mode of dress a fold of the muslin *saree* forms a loop round each leg, and descends nearly down to the ankles, whilst the gathering hangs in the front between the legs free. At home they wear the *cholee* and *saree* with a petticoat or *pavaday*—this, in fact, is their usual dress, except when about performing they exchange the *pavaday* for the *pyjama* or *sherai*. The *pavaday* is made of chintz or silk, according to the means of the individual. A string of small brass bells, known by the name of *shullungay* or *jedjum* is tied around each leg immediately beneath the ankles. The dancing girl-caste have peculiar laws for adoption and inheritance, a dancing girl can adopt a daughter with the permission of the authorities of the pagoda to which she belongs, but she cannot adopt a son for the transmission of property, it being immaterial whether she have a son or not. The adopted girl cannot share her mother's property during her life-time, and although she may be the heiress she is not bound by the laws of caste to support her brother's widow. Among dancing girls property descends in the female line first, and then to males as in other castes. In the failure of issue, the property of a dancing girl goes to the pagoda to which she belongs. A simple recognition on the part of a dancing girl of a child as her

daughter, in the presence of one or more individuals, is sufficient to constitute her claim to adoption. Dancing girls are respected by the several castes or sects of hindus, and are allowed to sit in the assembly of the most respectable men, such honour not being accorded to their own wives and daughters. As a rule, it is seldom that these women have children of their own, unless, perhaps, they had lived in continual concubinage with some single individual, consequently they are always anxious to adopt girls, not only to become their successors in the temple, but that they may inherit their property likewise. Formerly a large trade was carried on by kidnapping good-looking girls from large towns and remote villages who were sold to these women. The practice of selling minor girls still obtains largely under suppression. The recent famine in Ganjam, Orissa and Bengal, was taken advantage of, not only by abandoned characters, but also by immoral native princes, for the basest purposes. During a recent Criminal Session in Calcutta two women were sentenced to seven years' imprisonment each, for having purchased a girl under sixteen years of age, for one rupee ten annas. In some stations there are said to exist two kinds of dancing girls—the dancing women differing from the pagoda dancers. The latter are said to live in concubinage as a rule; they are a privileged class under the *Aylah Santanam*, or descent by the daughter's children, or in the female line, and the law of *Dhya* applies to them, *Dhya Dhiya Baga*, or division by favour, *Merasi* heritage of right to official emoluments, operates as an inducement. These women are recognised as "*Dasi*" and "Deva Dasi." The *Dasi* or dancing women belong for the most part to itinerant bands, and are frequently made up of women of low caste, who practise their professional accomplishments and prefer living in concubinage. The "Siva" temple of the *Sourmamookie* (Kalastry) a zemindary in the North Arcot district, maintains a large establishment of what is termed *deva dasi* or pagoda dancers, forming a distinct community there—(*Audapapalu*) who exclusively live in concubinage. Their sons who know no father, pass by the appellation of *Nagari Kumarada*, or sons of the country and are slaves to the zemindar. Of the daughters, after supplying the vacancies in the pagoda staff, the remainder are brought in the list of drudges of the palace. The dancing master or teacher receives from fifty to five hundred rupees with other presents, for teaching a girl the usual dances. This generally forms a contract which is greatly dependent on the wealth and position of the parties. The dancing girls

when about to perform are accompanied by two men singers, termed "*Nathuvan*" and "*Padowen*" who while singing, also play the cymbals—these instruments are of two kinds and sizes. While the cymbal is played with the right hand, the left hand open, is generally applied to the left ear while they sing, bowing their bodies forward as well as from side to side, contorting their faces in like manner and making grimaces. In singing they scream as loud as their voice and lungs will admit; one or more old women join in the song, and frequently clap their hands during the performance, and are generally dancing girls who have given up the profession from age or other causes. Some of these girls are very good looking, handsome, with open countenances, large sparkling eyes, regular features, and intelligent pleasing appearance. They are perfectly self-possessed in manner, verging on assurance, staring at one with their large intelligent looking eyes. Notwithstanding, they possess a vast deal of courtesy and polish, tempered with languid grace and serene self-possession, whilst their manners are courteous and their bearing unembarrassed, possessing all the teaching which experience of the worse side of human nature gives, and they know but one form of pleasure, vice, in which their lives are spent:—frequently their lives are truly vicious, when their countenances assume a sodden, pale, and unwholesome aspect. The majority possess some natural gifts. As to conversational powers, they seldom possess any beyond the usual laugh and giggle, and monosyllabic replies given to common place questions. Some of the Telugu girls are very handsome; of a light pale colour, somewhat yellowish in tinge, with softness of face and feature, a gentleness of manner, with a peculiar grace and ease, which one would little expect to find among them. A lady-like manner, modesty and gentleness, such beautiful small hands and little taper fingers, the ankles so neatly turned, as to meet the admiration of the greatest *connoisseur*. They can generally read and write their own language pretty correctly, some two languages, one girl at Conjeveram wrote three: the third was English, in which she wrote her name in a fair round hand, and spoke the language with some fluency. Tamil and Telugu were the other two languages, which she wrote tolerably well. She was said to have received her education in a Mission School at Madras; notwithstanding all this she did not appear ashamed of the profession she had adopted. The girls learn either Tamil or Telugu, one or more verses of some of their songs, they wrote on the spot with the greatest

readiness. Their songs generally comprise praises in honour of their several idols, filled with repetitions and unmeaning expletives. These songs are often vulgar and lewd, and sung before assemblies of men, and before the deities, but they time the quality of their songs to suit the place and audience before which they have to appear. These *nautches* are given on all occasions of marriage ceremonies, feasts, and other public occasions. Among rajahs, zemindars, and others, they are almost things of daily occurrence. A few of these girls can play the native guitar or violin tolerably well, and some of their songs have a mournful and melancholy tune, the harsh grating of the songs of the attendants and the rattling of the wind instruments and tom-toms are however too much for European ears, though they charm those of the natives. When their services are demanded outside the temple, larger sums of money have to be paid for them, the charge being increased according to the renown and position of the girl, as some few will not give their services, to any one unless a Rajah, or some big person. Some travel to other districts when their services are needed by petty rajahs or zemindars, and they are contracted for as many days as they have to perform in addition to being well paid. Should they please the master of ceremonies, they frequently receive valuable presents, in money, shawls, gold bangles or rings which are bestowed on them during the performance. Every village of importance has a temple with a few of these women attached to it and in some of the large towns, possessing temples of repute for sanctity, these are filled with them. Instead of looking on this profession as an evil, the natives generally consider it an acquisition; it forms the chief magnet of hindoo society. The appearance of these women draws all eyes on them, to the utter distraction of every thing else for the time being, whilst they themselves are under the impression that they have taken to a very honorable profession, by following which they are honoring their deities and are appreciated by them. It is perhaps one of the worst institutions connected with hinduism, from the recognition and support it receives from all classes of idol-worshipping devotees, the women being the victims of such a system recognised and patronised in every part of India, where hinduism predominates. These poor creatures are taught to read and write their own and other languages, with a view to be better able to master the lewd immoral songs; whilst their own wives the mothers of the children are deprived of learning of any kind, and are carefully shut out from society, not even allowed to appear in public before any assembly of men, and are allowed further to grow up in the greatest ignorance and superstition. This is carried to such an extent, that the few enlightened educated heads of families are unable to cope with such superstition and bigotry on the part of their women, and the little light they themselves have imbibed is rapidly quenched in consequence. To some extent female education and enlightenment are now penetrating the masses, and the natives themselves are seeking enlightenment and intelligence from which their own mothers, wives, and daughters have hitherto been secluded.—*Memoir by Dr. Short, read before the Anthropological Society of London. Vol. III.* 1867-68. *Article XIII. quoted from Madras Mail of 26th April*, 1870.

DAND, Hind. a rod, an oar, a staff or wand. Hence, Dandi, an oarsman, *Wilson.*

DANDA. Sans. Originally imports a staff, and amongst the hindu ascetics it figuratively signifies moral restraint, exercised especially in three ways in the control of speech, body and mind, or in word, deed and thought. A joint reference to the literal and figurative sense of the term has given rise to the religious distinction termed Danda Grahanum, the taking up of the Staff, or adopting the exercise of the moral restraints above mentioned, and carrying as emblematic of such a purpose either one, or as in the Tridandi, three small wands or staves. Tridandi designates both these characteristics of the order.—*Wilson.*

DANDACA described in the Ramayana as a forest anciently covering the south of the Peninsula of India and occupied by Rakshasha. It is now the territory of the Marava and Kollari, whose features are often like those of the baboon, hence the origin of Valmiki's monkey army. See India.

DAND GRAHANUM, See Danda.

DANDAN DANA Hind. seeds of Ricinus communis.

DANDASA Hind. Astringent barks of Juglans regia and other trees.

DANDA SINA, a Sowrah chief of Kimedy.

DANDASULU. Tel. Village watchers?

DANDAWAT. Sans. DANDAM. A hindu salutation, bow, obeisance, prostration, performed amongst hindus to each other, and is daily seen from a hindu of inferior caste to a brahmin or higher caste. It consists in joining the hands with the tips of the fingers pointed upwards, and raising the hands so joined, to the forehead. It seems the same as the Anjali (Sansc.) hindu form of respectful obeisance. The head is slightly bowed, the palms of the

hands are brought together and raised laterally to the middle of the forehead, so that the tips of the thumbs only are in contact with it.—*Hind. Theat. Vol. ii v.* 108. See Ashtanga danda.

DANDELION. See Coffee.

DANDH, or "Kolab," in Sind, a tract of low land flooded by the inundation, partially or totally dry during the cold season, and at all times a hot-bed of miasma.—*Burton, Sindh*, p. 377.

DANDI, Hind. a boatman, from Dand, an oar, a wand ; a staff.

DANDI. Hind. A hindu sect who worship Siva and represent the fourth, Asrama, or mendicant life, into which the hindu is to enter after passing through the previous stages of student, householder and hermit. He shaves his hair and beard, wears only a cloth round his loins and subsists on food obtained ready-dressed from the houses of brahmans, once a day only. Any hindu of the first three classes, of student, householder and hermit, may become Sanyasi or Dandi. Indeed, in these days, a hindu of any caste may adopt the life and emblems of this order. These constitute the Dandi, simply so termed, and are regarded as distinct from the primitive members of the order, to whom the appellation of Dasnami, is also applied, and who admit none but brahmans into their fraternity. But the brahman can pass from any one of the first orders to the last at once. He becomes a Sanyasi, abandoning all sensual affection. The Dandi is distinguished by carrying a small *dand* or wand with several knots on it, and a piece of cloth dyed with red ochre in which the Brahminical cord is supposed to be enshrined and attached to it. The original ascetic mendicants were classed according to the pupils, with ten tribes, hence the term *Dasnami* or the ten named, but now-a-days, there are only three and part of a fourth who are still regarded as Sankari's Dandi, these are sufficiently numerous in and about Benares. The other 6½ members of the Dasnami class, are called Atit. They have abandoned the staff, the use of clothes, money, and ornaments, prepare their own food and admit members from any order of hindoos: they are often collected in Maths as well as the Dandis, but they mix freely in the business of the world, carry on trade and often accumulate property, and they frequently officiate as priests at the shrines of some of the deities. Some of them even marry and are then styled Sam-yogi. The Dandi are to the Saiva sect, what the followers of Ramanuja are to those of the Vaishnava faith.—*Wilson.* See Hindoo. Sanyasi.

DANDUMARI, See Hindu.

DANG, A hill, or precipice ; the summit of a mountain, as Lal-Dang. In Dehli, and generally in Upper India, the word is used to signify the high bank of a river. It is provincially corrupted into Dhang and Dhayung, the forest or Jungle tracts in the Syhadri range are so called. *Elliot.*

DANGA—? See Curcuma longa.

DANGA-GURGUR, Beng. Coix gigantea.

DANGAH. In Persia, a custom exists of dividing fields, villages, whole districts and even the water for irrigating the fields, into six parts, which are further sub-divided into two unequal parts ; the one containing four parts, *char-dangheh*, and the other two parts *do-dangheh.*

DANGAH Hind. Pers. rebellion,

DANGAR, See Dhangar. Hindoo : Mahratha Government in India,

DANGAREE, a coarse cotton cloth in use in India for coarse common towels.

DANGEREE a river near Ramgurh in the Sabathoo district.

DANG-KAR, a town in the Spiti valley.

DANRI H. of Gujrat, Cajanus flavus,

DANIEL. Mr. Layard says his tomb was preserved amongst the ruins of Susa, or in a valley of the Bakhtiyari mountains. We have no other mention of its existence at Babylon. The Arabs made no opposition to Baron de Bode entering the chapel in which the coffin of *Daniel* is said to be deposited, on learning that Christians, as well as Mahomedans acknowledge him to have been a prophet. *Baron C. A. De. Bode's Travels in Luristan and Arabistan* Vol. II. p. 190. *Layard Nineveh. Vol. I. P.* 252 See Susa.

DANIEL-I-AKBAR, a name of Susan or Sushan on the Karan river. See Luristan.

DANIMASHA. Sansc. Phaseolus mungo.

DANIMMA CHETTU: Dadima, S. Dalimba chettu, Punica granatum, *L.—R.* ii. 499.—

DANISHMUND Hind. Pers. a wise man,

DANKALU, Guz. Branch of a tree.

DANKI BURA Tel. Briedelia scandens, *Willd.* A doubtful name, resting on Roxb's authority only.

DAN KOTTI. Jav. Phyllanthus niruri.

DANCORA, Beng.—Sapindus danura.

DANTI Hind. A sickle ; from dant, a tooth ; or perhaps a corruption of Durantee, *Elliot.*

DANTI CHETTU. Tel. Celastrus montana, *R.* i. 620. 501 ; *Ic.* 382.

DANTI. Hind. Croton tiglium.

DANTI. See Varma, Inscriptions p. 390.

DANT-JATHI. Hind. Combretum.

DANT SAGO or SAGO NAR—? Sanseviera Zeylanica.

DANT-TINKA Hind. holding a straw in the mouth and standing on one leg, to denote submission.

DANUK, a low tribe in Bahar and the upper provinces of India, hunters, also predial slaves. *Wils.*

DANUSHA, the unerring bow, the 11th article produced by churning the ocean. See Kurma.

DANUSHA, See Kurma.

DANXA. Maleal. Syn. of Coriandrum sativum.—*Linn.*

DAO MURDEN; Hind. Cassia alata.

DAONA MUSTARU, also Marwa, Guz. Hind. Wormwood.

DAOOD-PUTRA. A mahomedan tribe who trace their descent to the kaliph Abbass. It is however supposed to be from Daood, the first of the family who acquired a name. They are, also said to be Sindian Beluchi changed by a long residence in Sind. They moved from Bahawulpore and seized land on the Sutlej reducing the remains of the ancient Lungga and Johia, and introducing the Sind system of canals of irrigation. Daoodpatra is, however, a name applied both to the country and to its possessors, "the children of David." Daood Khan is said to have been a native of Shikarpoor, west of the Indus, who drew upon himself the arms of Candahar. Unable to cope with his opponent he abandoned his native place, passed his family and effects across the Indus, and followed them into the desert. The royal forces pursued, and coming up with him at Sootialloh, Daood destroyed his families who impeded his flight, and faced his foes; They, appalled at this desperate act, deemed it unwise to attack him, and retreated. Daood Khan, with his adherents, then settled in the kutchee, or flats of Sindh, and gradually extended his authority into the *thul*. He was succeeded by Mobarik Khan, who deprived the Bhatti of the district called Khâdâl, and settled in their chief town Derrawal? founded by rawul Deoraj in the eighth century; Derrawal was at that time inhabited by a branch of the Bhatti, broken off at a very early period, its chief holding the title of rawul, and whose family since their expulsion have resided at Gurialah, belonging to Bikanér; The Daood Putra are to be met with in various parts of Sindh. *Tods, Rajasthan. Vol.* II. p. from 321 to 324. See Bhawulpore. Jut.

DAORA. Mar. Conocarpus latifolia.

DAOSE a river near Munglee Serai in Purneah.

DAÆ-PATE LUTA, Hind. Ipomœa-pes-Capræ. *Sweet.*

DAPHNE a genus of plants several species of which grow in India. They are of the natural order. Thymalaceæ. A Daphne grows in the Cashmerian mountains allied to Daphne gnidium and Daphne oleoides. It is essentially different from Daphne cannabina, from which, in Nepaul, a paper is manufactured, according to the Chinese manner. *Bengal Disp. p.* 531.—*Honigberger. p.* 268. See Daphne cannabina. Thymelæ, Evergreens. Edgeworthia chrysantha. Edgeworthia Gardneri.

DAPHNE BHOLUA. See Daphne cannabina. Thymalaceæ.

DAPHNE CANNABINA. Wall.

D. Papyracea. Wall.

Niggi Hind. Mahader ka phul. Hind.

A small evergreen perennial shrub, somewhat like a laurel, which bears poisonous berries. It grows, in Nepaul, in Sikkim, in Kamaon at 5000 to 9000 feet the N. W. Himalaya generally, at from 3,500 to 8,000 feet, Cleghorn mentions that paper is made from its bark in Kumaon, &c., large quantities are manufactured from the purple-flowered variety.

But it is with this shrub that the Nipal paper is made. The bark is boiled in a metallic pot, with oak-ashes, which are highly alkaline. The softened bark is then pounded with a mallet in a stone mortar, till reduced to a pulp like dough. This pulp is churned with water into a very thin paste, until it lose all trace of fibre, and will diffuse and settle smoothly. In this state it is poured into a coarse sieve placed over a frame, with a cloth bottom floating on water. The sieve stops the coarse pieces, allows the fine emulsion to pass through, and then by agitation this is smoothly deposited over the cloth. Removing the frame, the water filters away and the pulp dries rapidly by placing the frame before a fire.

The paper is subsequently polished by friction, with a shell or piece of hard wood, sheets have been made many yards square: it may be purchased at Katmandhu at 17 annas sicca for 3 seers. Bricks of the pulp are sold from 8 to 10 annas for 3 seers. The greater part of the paper is made by cis-Himmalayan Bhoteeah, east of the Kali river. The manufacture seems to have been introduced from China, about 500 years ago — This unsightly paper is much over rated. But it is tough when kept dry, can be used like cloth, for wrapping up dry substances in; and it can be used after having been saturate with water, provided it be carefully dried

within a reasonable time after it has been wetted. The dried bark, may be substituted for D. Mezereum. The bazar mezereon is almost always inert from age.—In Chumba, the flowers appear to be hung up as offerings in temples. *J. L. Stewart M. D. O' Shaughnessy, p.* 531. *Beng. Phar. page* 279. See Daphne. Daphne cannabina. Thymlæ, Daphne mezereum. Nepal Paper Plant.

DAPHNE GNIDIUM. Honigberger says that the bark of the Spurge-Flax introduced into the ears produces a serous discharge; macerated (steeped) in vinegar for about an hour before using it and afterwards applied (renewing it in winter once, in summer twice a day) is said to produce a local serous exudation without excessive irritation or blistering and is recommended chiefly in chronic rheumatism gouty affections, paralysis, &c. In France and Russia it is used in opthalmia. May not Sunnerkat from Cashmere have similar properties ?

DAPHNE MEZEREUM.

Mazriun, Arab.	Mezereon, Eng.
Adada, „	Spurge, Olive. „
Iskhes, „	Mazriun, Pers.
Kameela, Gr.	

The berries are brisk but unsafe cathartics. Fresh bark is counter-irritant and external stimulant; the dried bark is a stimulant alterative in syphilitic, rheumatic, and scrofulous maladies. It is frequently combined with sarsaparilla, as in the Lisbon diet drink. *O'Shaughnessy page* 530. See Daphne cannabina. Thymelæ.

DAPHNE ODORA. See Daphne cannabina. Thymelæ.

DAPHNE OLEIOIDES. Schreb.

D. Mucronata Royle,

Paper shrub. Eng. Kutal Hind of Hazara, Kaghan.

Grows in the Punjab and is used medicinally and said to be used in paper making, is in great abundance from a little above Kawai to Kaghan. The pretty red berries are not unfrequently eaten, but are said to be apt to cause sickness. *J. L. Stewart, M. D. Cleghorn.*

DAPHNE PAPYRACEA. Cleghorn ?

Paper Shrub, Eng. | Jeku Punjabi.

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 5000 to 8000 feet. Paper prepared from the bark. *Cleghorn Punjab Report p.* 67.

DAPOO. Beng. Polypodium proliferum.

DAR. Per. Hind. in the Persian, from dashtan, to hold, a possessor, a place of abode. Used as a prefix and postfix to many compound nouns, as dar-ul-fana the perishable abode, i. e. the world ; dar-ul-baka, the permanent abode, i. e. eternity : Amildar, a tax-gatherer : Abdar, watery. A water-cooler.

DAR Pers. a door, hence in hindi, darwan, a door-keeper, dar-waza a door, a gateway. Most cities in India have their gates named from the chief town to which they lead. Thus the Delhi gate : The Meccah gate.

DARA, a king of Persia son of king Darab, overcome by Alexander the Great.

DARAB, king of Persia son of Kai Bahman Ardashir Daraz-Dast, Artaxerxes longimanus.

DARABJIRD, one of the five ancient divisions, circles or departments of ancient Fars.

DARAKH. Guz. also MOWAGE. Guz and Hind. Raisins. Grapes.

DARAKHT, Pers. Tree.

DARAKHT-I-AZAD. Pers. Azadirachta Indica,

DARAKHT-I-MUQUL. Pers. tree producing Bdellium.

DARA MAZAR, Dara Nur and Dara Pech, towns occupied by the kafir race. See Kafir.

DARA a town near the valley of Cabool with many sepulchral topes.

DARANA Hind. a scare crow, from darna Hind. to fear.

DARAQ. Arabic. Shields.

DARAUN Hind. buckwheat; Fagopyrum polygonum,

DARBHA Hind. Poa cynosuroides, *Retz.* —*R.* i. 333.

DARBAR, Hind. Pers. a general reception by a ruler in British India, or by any servant.

DARBOJI, Tel. Cucurbita citrullus.—*Linn.*

DARCHIL Hind. Chamba, Pinus excelsa; lofty pine.

DARCHIKNA Hind. Corrosive sublimate.

DAR-CHINI. Hind. barks of Cassia lignea. Cinnamomum : iners. *Rein.* and Laurus cinnamomum : Cinnamomum albiflorum.

DARD. A race lying along the Indus, to the westward of Ladak, who speak three distinct dialects. They use the Persian character in writing Dardu, the three dialects of which are called Shina, Khajunah and Arniya. The Shina dialect is spoken by the people of Astor, Gilget, and lower down in Chelas Darel, Rohli and Palas on both banks of the Indus. The Khajuna, by the people of Hunza and Nager and the Arniya in Yasan and Chitral. Astor has an area of 1,600 square miles, on the left bank of the Indus. Gilgit, in Thibetan Gyilgyid, has an area of 2,500 square miles on the right bank of the Indus. The Dard or Durd are supposed by Vigne to be the Dadicæ (Δαδίχαι) of Herodotus, and the people who now occupy the country called Dardu. The Kashmiri has decided affinities with the Dard tongue. *Dr. Latham Vigne.*

DAREGA, The round shield used by the fair red-haired Tonareng race in northern Africa. See Semitic races. Tonareng.

DARENGRI HIND, an astringent leaf used in Kashmere in dyeing,

DAR-FILFIL. ARAB. Pepper. Long pepper, Piper longum or Chavica Roxburghii.

DARGAH PERS. a mahomedan saint's shrine.

DARHALD HIND. Berberis lycium, B. Asiatica. B. aristata.

DARI. See Ervum lens.

DARIA-I-RAZA. The Arian Palus of the ancients, a lake formed by the accumulation of the waters of the Helmund at the southern extremity of its course and called the lake of Zarrah by Europeans. This is a contraction of Zarrenj, the ancient capital, and this again represents the Zarangi or Drangi of the Greeks. In old Persian books "it is called Daria-Reza or little Sea," the present inhabitants of Seistan call it Meshila -I-Rustum, also Meshila-I-Seistan. Meshila merely means, in Arabic, a muddy swamp. The ordinary name of the lake is Hamún or the expanse.—*Ed. Ferrier's Journ.* See Helmund, p. 428-9.

DARI GUMMADI, TEL. Pueraria tuberosa, D. C. W and A. 642, Hedysarum tuberosum R. iii. 363.

DARIM, HIND. Darimba, SANS. Punica grantum. Darimesar, HIND. its seeds; Darimpatra, HIND. its leaves; Darim-pushpoo, its flowers.

DARIUS, Persian kings of the Kyanian dynasty, are so designated but doubts as to their era exist. The first seems to have been Darius Hystaspes, whose name is said to be derived from hysna to neigh and aspa a horse. His persian name was Gushtasp, his admiral Scylax reported so favourably of the wealth of India, that Darius invaded India, and annexed the provinces bordering on the Indus. His Indian possessions were the most valuable of his twenty satrapies, and are supposed to have included the Punjab, but there is no testimony to this beyond the authority of Herodotus, (Lib iii, 100) and the doubtful voyage of Scylax down the Indus. The nations subject to him are engraved on the inscription at Naksh-I-Rustum. Bunsen gives the following dates of the reigns of the kings Darius:

Darius son of Hystaspes, B. C. 521 to 486.

Darius Nothus B. C. 423 to 405.

Darius iii surnamed Codomannus B. C. 335 to 332 *Hist, of Panjab Vol, p.* 45. See India, Susa, Zoroaster.

DARJILING, in L. 27° 3′. 0; N. and L. 88° 15′3 E. in Sikkim, is a large station and sanitarium. The top of the observatory hill is 7, 168 feet above the sea. This hill Darjiling-ridge, however, varies in height from 6,500 to 7,500 feet above the level of the sea; 8,000 feet being the elevation at which the mean temperature most nearly coincides with that of London, viz., 50°. To the north-west, towards Nepal, the snowy peaks of Kubra and Junnoo (respectively 24,005 feet and 25,312 feet) rise over the shoulder of Singalelah; whilst eastward the snowy mountains appear to form an unbroken range, trending north-east to the great mass of Donkia (23,176 feet) and thence south-east by the fingered peaks of Tunkola and the silver cone of Chola, (17,320 feet) gradually sinking into the Bhotan mountains at Gipmoochi (14,509 feet.)—Darjeling has a mixed population of the Sikim, Nepaul and Dharma Bhoteah also Lepcha and Pahari. Dr. A. Campbell tells us of the enormous increase of population that had taken place under British rule, from a few scattered tribes in 1853 to upwards of 60,000 at the present time. Brahmins and Rajpoots, few in number, with a sanskritic tongue, and an Indo-European physiognomy, are confined to Nepal. The Rhu, Majar and Goorvong, a mixture of hindoos and Mongolians, with features of a type belonging to the latter, comparatively free from caste-prejudices and speaking the Parbutta dialect. They are short and squat highlanders, and make good soldiers. The Bhooteah Lepcha, and Moormi are Buddhists, and speak the Thibetan language. They are strong and active and incline strongly to the Mongolian race. The Limboo, Sunwar and Chepang possess a small Mongolian type, strongest in the Limboo, and their language is referable to either the Thibetan or Indian standard. The Mechi, Dhimal and Gharow are lowland tribes with a Mongolian physiognomy, but are neither hindoos, buddhists nor mahomedans. The Tharvo and Dhunwar are buddhists or mahomedans with fair and barely Mongolian features. The Bahir, Kebant, Amatti, Maralia, Dhanook and Dom are not Mongolian, but a dark race speaking Hindee or Bengalee. The Koch or Rajbungsi are a race of dark hindoos inhabiting the Terai of Nepal and Sikhim, but who have spread into British territory. Darjeling is the dampest of all the Himalayan regions. In the plains below, the usual features of a tropical vegetation are observed, especially in the Terai or bands of jungle which skirt the base of the mountains, where however plants from the high land begin to appear. About 2,000 feet of elevation forests of gigantic trees of Magnolia,

cedrela, subtropical oaks, mingled with Acanthaceæ, Melastomaceæ, &c., occur. Here, Dr. Hooker says, "the gullies are choked with vegetation, and bridged by fallen trees, whose trunks are richly clothed with Dendrobium Pierardi, and other epiphytical orchids, with pendulous Lycopodia, and many ferns, Hoya, Scitamineæ, and similar types of the hottest and dampest climates." Convolvuli and Vixi are very common, and those rope-like plants, which form a remarkable feature in the forests of the Indies, are here observed in great abundance, throwing their cable-like stems from branch to branch; they belong chiefly to the genera Bauhinia and Robinia, among the Leguminosæ. The diversity of this aspect of the Flora is increased by scandent trumpet flowered Bignoniaceæ, and slender Araliaceæ (Ivies) and Dioscoreæ nearly allied to the Smilacenaceæ, Peppers, wild plantains and many species of bamboo are common, the latter a useful article to the ingenious Lepcha. There are climbing palms of the genera calamus and plectocomia, along with the Phœnix acaulis. The other palms of the Sikkim mountains are Wallichia oblongifolia, Areca gracilis, Caryota urens, and Licuala peltata. Here too grows the tree fern, Alsophila gigantea, extending from 2,000 to in some cases 6,500 feet of elevation on the mountains near Darjeeling, and probably indicating here, as its congener in the Andes does, the upper limits to which the cultivation of Cinchona might be caried with success. To these may be added the Cinchona gratissima and C. Pinceana of Wallich, now made by some botanists a separate genus, under the name of Lucuala, true natives of these mountains, whose forests are enlivened by the gorgeous colors of their flowers. Above Darjeeling, oaks and chesnuts occur abundantly, with rhododendrons, and the English yew; pines however, from the humidity of the atmosphere, are rare on the outer range. English fruits, grains and potatoes are cultivated near Darjeeling; and, in the valleys below, many varieties of rice, with Indian corn. The geological structure of the mountains of Sikkim is very uniform, the rocks being principally varieties of micaceous shale and gneiss. The soil is generally formed by the disintegration of these rocks, and is covered in some places with vegetable mould.—*Indi. Anna. Medi. Science, page* 264. *Hooker, Him. Journ. Dr. Thomson in Eth. Soc. Journ.*

DARKHASTAN PERS. to request: hence Darkhast HIND. PERS. a request, a petition.

DARL. HIND or darli, Hind. This name is given on the Sutlej and Beas, to the Cedrela toona, *var.* serrata, also called hill toon.

DARMA a race occupying the Darma pass, leading into Gurhwal. They are said to be the descendents of a body of Mongols, whom Timur left behind him in Kamaon. They practise divination, taking their omens from the warm liver of the sacrificed sheep. They eat the yak and the cow. They inter their dead for a time and then, in the month Kirtik, they exhume and burn them. *Cunningham's Ladak. Latham's Ethnology.*

(3118) DARNING (*rafu-gari*) is a branch of the sewing art which, though in Europe applied to the most homely purposes, requires the greatest skill in the East, where a defect in a costly shawl is to be made good, or a coarse thread is to be picked out of a piece of a muslin into which it has been accidentally introduced. So skilful are some of the *rafugar*, that they can extract a thread twenty yards long from a piece of the finest muslin, and replace it with one of the finest quality. They are principally employed in repairing the muslins and calicoes that are injured during bleaching, in removing knots and joining broken threads; also in forming the gold and silver headings on cloths."—*Taylor. Royle Arts &c. of India. page* 505.

DAROGHAH HIND. a superintendent.

DAROO. HIND. The general term for ardent spirits and equivalent to the Araq of the Arab and Persian. Daroo distilled from the Mawa flower is produced in great quantities in all the jungles of the upper Godavery. But the distillation is carried on, from rice and various other substances, and from sugar.

DAROOR a fortress in Nagpore surrendered 4th February 1851.

DARRAH ARAB. PERS. HIND. a valley.

DARSANA, a school of philosophy amongst the hindus, Of their schools of ancient philosophy, the hindoos have classified six,—including amongst them the Mimansa of Jaimini which is little more than a Vedical essay. See Veda.

DARSHISHAN. ARAB. Kiliurum Bark.

DARSINI. ARAB. Cinnamon.

DARU. GUZ. HIND. Ardent Spirits. Gunpowder. See Daroo.

DARUDI, from Darud, PERS, Benediction: one who repeats benedictions at a tomb or public building.

DARUKA, in hindu mythology, a female Asura, who according to Colonel Vans Kennedy, was the leader of a host of Amazonian Asura, with whom the gods were afraid to engage in battle, from an apprehension of incurring the sin of feminicide. They in consequence applied to Siva, on whose solicitation Parvati produced from herself the form of Kali, having in her hands a trident

and a skull. On beholding her, the affrighted gods ran away: Kali alone attacked Daruka and her hosts, and destroyed them. —*Cole. Myth. Hind. p* 378.

DAR-UL-KARAR, a rhythmical addition to Candahar. The words mean the abode of quiet or City of stability. Throughout the east, mahomedans often employ this kind of alliteration. To Choki, a chair, they will add Choki-oki. To Bachah a child, is added Bach-kach. To Hyderabad, Farkhoondah baniad.

DAR-UL-KARAR or city of permanence is allegorically applied to the future world, as opposed to this, the Dunya-i-fani, the transitory world.

DARUN. Beng. Hind. Punica granatum.—*Linn.*

DARUN-AJ-AKARBI. Doronicum scorpoides a kind of fern, the root and leaves of which come to Ajmeer from Arabia viâ Bombay: considered as a tonic: four to six massa are a dose: one tola costs two rupees.—*Gen. Med. Top. p.* 133.

DARVESH, from Dar a door and Vihtan to beg, is the persian term synonimous with the Arabic and Indian Fakir, a mahomedan religious mendicant. Originally there were 12 orders, viz.

Rafai	Maulavi	Jalwati
Sadi	Kadiri	Khalwati
Sahravardi	Nakshbandi	Bedawi
Shibani	Vaisi	Dassuki

There have been many branches and at present, there are said to be 60 orders. Jalal-ud-Din, Rumi, the author of the Masnavi-i-sharif, founded the Mawlavi order. In European Turkey, the Darvesh have formed somewhat prominent communities, and about sixty different orders each named after its founder are supposed to exist there. The Batashi, of Constantinople, are said to be quite atheistic, not attached to the principles of the Koran, nor firm believers in mahomed as a prophet. They are generally of the sect of Ali, therefore Sufi, or mahomedan spiritualists. The Rafai darvesh, so common in Turkey, inflict on themselves great self-torture. Some of the wandering Indian fakirs travel so far west as Hungary, to visit the shrine of a santon, Gul-baba, and travel into Tenasserim and Burmah. One whom we recently met near Hingolee, in the Dekhan, was a native of the Punjab, but had been to Ceylon, Mergui, Tavoy, Rangoon and Moulmein.

DARWAZ, a chieftaincy in the valley of the Oxus, the chief claims a Grecian descent, like the mir of Badakshan, and the chiefs of Chitral, Gilgit, Iskardo and others. See Kabul, Kush.

DARWAZAH, Hind. Pers. a door, the gate of a town or fortress. All great mahomedan cities name their gate-ways, generally, as leading to other cities, such as Meccah-darwazah, Dihli-darwaza.

DARWAZAH-I-IRAK, the western gateway of the town of Horat. The suburbs extend a great distance beyond that.

DARWAZYE, one of the Hazara states, the chief of which is of the Tournoulee.

DARYA Hind. Pers. the sea, Darya-i-Kulzum, the Caspian sea.

DARYA KA SHEKHRA. Duk. Whiting Fish.

DARYAI-I-NAREL Hind. Lodoicea Seychellarum.

DASA Hind. Sansc: a slave, usually written by the British, Dass, or Doss, is a common termination to hindu names of men, especially among the Bania tribe, Narayan Doss, Bhagavan Dasa, Krishen Doss, for instance, signify the slave of Narayan, Bhagavan, or Crishna; similarly bo Abid Ullah, the slave of God, among the mahomedans. Ramdas is, in like manner, the slave of Rama. Dewa Dasa are hindu temple women, common women. There are vast numbers and varieties of slaves in British India, and in Eastern, and Southern Asia. The illegitimate sons of the Rana of Mewar are called das, literally 'slave' they have no rank, though they are liberally provided for. *Bussee* signifies acquired slavery in contradistinction to "*gola* a hereditary slave". The gola can only marry a golee; the lowest Rajpoot would refuse his daughter to a son of the Rana of this kind. The Bussee can redeem his liberty: the gola has no wish to do so, because he could not improve his condition nor overcome his natural defects. To the bussee nothing dishonourable attaches: the class retain their employments and caste, and are confined to no occupation, but it must be exercised with the chief's sanction. Individuals reclaimed from captivity, have in gratitude given up their liberty: communities, when this or greater evils threatened, have done the same for protection of their lives, religion, and honour. Instances exist of the population of towns being in this situation. The greater part of the inhabitants of the estate of Bijolli are the bussee of its chief, who is of the Pramara tribe: they are his subjects. The only badge denoting the bussee is a small tuft of hair of the crown of the head. The term interpreted has nothing harsh in it, meaning 'occupant, dweller, or settler.' The numerous towns in India called *Bussee* have this origin. Famine in the regions of Rajasthan is the great cause

of loss of liberty: thousands were sold in one great famine. The predatory system of the Pindari and mountain tribes aided to keep it up. The mahomedan slave girl is called Bandi, Londi, but when associating with their master is one of the Harm.—*Tod's Rajasthan.* See Haram; Hareem.

DASAGRIVA, or the "Ten-necked" a name of Ravana. See Ravana.

DASAHARA or "Ten Removing," a name of Ganga. See Ganga, Ganges, Dussera.

DASAHARA, or DASHARA, Sans. The tenth of Jeth Shukhl Paksh, which is the birthday of Gunga: also described as the tenth of Asin Shukl Paksh, Asoj or Ashwin shud, on which, after the worship and religious ceremonies performed during nine nights, the hindus throw the images of Devi into the river. On this day, Rama marched against Ravana. The day is celebrated with great pomp by the mahrattas and hindus of northern and western India. The festival occurs about the first days of October. It is supposed to relate to the autumnal equinox or the breaking up of the S. W. monsoon. The nine days preceding the Dasara are the Naoratri, or "nine-nights" during which a brahman is engaged to read the praises of Durga, and, on the tenth, perform the homa or fire-sacrifice, in which rice and ghee are poured into the fire. Bania women keep up a dance called Garbha. See Dussera.

DASALATHAN, the Pali pronunciation of the name of Dasaratha, who lived about the time of Agathocles in Bactria and of Maha Sewa Suratissa in Ceylon. See Inscriptions.

DASANA also Japa pushpam, Tel. Hibiscus rosa-sinensis.—*L.*

DAS-ANNA, a class of the Garo tribe.

DASARAT'HA, according to Wilson, the son of Aja and father of Rama, a distinguished prince of the solar dynasty. Buchanan supposes him to have lived in the fifteenth century before the christian era. According to Wilson the sons of Dasaratha were Rama, Lakshmana, Bharata, and Satrughna. At the time that Sita was married to Rama, Urmila, the other daughter of Janaka, was given to Lakshmana, and the two other brothers were married to Mandavi and Srutakirtti, the daughters of Kusadhwaja, the sovereign of Sankasya, or, according to the Agni Purána, of Kási or Benares, and brother of Janaka, *Hindoo Theatre*, Vol. I, p. 288-289. See Avataram, Inscriptions, p. 382. Polygamy.

DASARATHA KUMARA. See Inscriptions, p. 377.

DASA, an order of Vaishnava devotees.

DASAWRI, Hind. Barley.

DASHRI of Panjab, Ficus glomerata, *Roxb., Willde.*

DASHT-I-BE-DAULAT is an elevated valley or plain, situated to the N. E. of Moostung, at the head of the Bolan pass. Its diameter is from 15 to 20 miles, and of its boundaries some approach the Bolan pass. It has no towns or villages, but is occasionally dotted with the toman of the Kurd tribe. Some portions of it are cultivated in the spring and summer months; but during the winter it is a bleak, howling wilderness, destitute of trees, or any shelter; the snow lies deep on it and cold winds whistle over its frozen surface. It is subject to the depredations of the Kaka tribe of Affghans, and caravans are frequently plundered by them. In the summer it is clothed with the fragrant Terk plant, and its surface diversified by fields of waving grain. It has no streams, but one or two wells have been dug and water obtained with some difficulty; the cultivators are dependent on rain and heavy dews, for the success of their labours. See Kabul, pp. 487, 491 and 493.

DASHT-I-GURAN, a plain south of Chappar, inhabited by the Sunari, a branch of the Jehri tribe of Jhalawan. It was once occupied by the Zigger Minghal, but their increasing numbers compelled them to migrate. See Kelat, p. 491.

DASHT-I-KAPCHAK. Kapchak is a Turkish word, and Dasht means a wide uncultivated plain. *Markham Embassy*, p. XXXIV.

DASI, Beng. Barleria cœrulea.

DAS-NAMAH. A hindu sect, worshippers of Siva, also called Dandi. Sankara Achayra was their founder. They take this name from the words "Das" ten, and "namah," a class, because there were ten orders amongst them. See Dandi, Hindoo, Sankara, Sanyasi.

DAS PADSHAH-KI-GRANTH. This and the Adi-Granth form the religious writings of the Sikh sect. See Sikhs.

DASRAT RAMA, a name of Rama Chandra. See Rama.

DASRE, Tel. Cucumis utilissimus.

DASSERA, or Navaratri. See Dussera, Hindu, Kalasa.

DASTA, Nep. Spelter.

DASTAH, a kalliyon, a small hand-hookah, from Dast, the hand.

DASTANE, DASTE, Hind. Gloves.

DASTUR, a high priest of the Zoroastrians.

DASTUR, Pers. Hind. Custom; hence, dasturi, a customary fee, perquisites paid by a dealer to servants when their master makes purchases.

DASTUR-UL-AMAL, a revenue work prepared in the time of Akbar.—*Wils.*

DASYA, a name mentioned in the Sanscrit writings to indicate a race or races who, along with the M'hlecha, opposed the advancing Arian race. It is probable that they were the prior occupants of the new countries, and were all reduced to subjection or slavery, the word being either from Des a country or from "Dasa" a slave. The Aitareya Brahmana says most of the Dasya, are sprung from Visvamitra, and Sanscrit writers applied the term Dasya to all the aborigines from the Naga of North Eastern Bengal, throughout all India, to the indigenous castes of Ceylon, to wit, the Koli-Sarpa, Serpent Kol or snake races.—*W. W. Hunter.* See India ; M'hlecha.

DASYAULUS, *Thwaites.* Several species of this genus of trees occur in Ceylon, all middle-sized trees, viz., D. fulvus, at Hewessee in the Pasdoon Corle : D. microphyllus, in the south, but rare : D. moonii, at Caltura near Ratnapoora : and D. neriifolia, "Gang mee," *Singh.*, common on the banks of rivers and streams in the warmer parts of the island. The last is the Bassia neriifolia of Moon's Cat.—*Thwaites.*

DASYLOMA BENGALENSE and D. glaucum, *D.C.* plants of Bengal.

DASYLOPUS, a genus of birds of the Phœnicophainæ, 4 gen. 1 sub-gen. 19 sp., viz., 1 Dasylophus superciliosus, *Cuv.* 3 Phœnicophaus : 5 Zanclostomus : 1 Rinortha : 4 Taccocua : 5 Centrophus. See Birds, p. 475.

DATA, a mode of address among fuqeers.

DATA, Sans., a giver, from da, to give.

DATCHANA. See Hindu.

DATE PALM, Eng. The date tree is met with in almost every part of the South of Asia : in the peninsula of India, it shoots up in every dip of ground, and it is common in portions of the Dacca, Mimensing and Sunderbund districts. When not stunted in its growth by the extraction of its sap, it is a very handsome tree, rising to 30 or 40 feet in height, with a dense crown of leaves spreading in a hemispherical form on its summit. The leaves are from 10 to 15 feet long, and, composed of numerous leaflets or pinules about 18 inches long, the fruit is only about one-fourth the size of the Arabian variety, no doubt to be attributed to the neglect of its improvement. In India, it is used solely for the palm juice extracted from it. The process of tapping and extracting the juice goes on all the year round, but in Bengal it is continuous from the 1st November to the 15th of February. Some days previously, the lower leaves of the crown are stripped off all round, and a few extra leaves from the side of the tree intended to be tapped. On the part thus denuded, a triangular incision is made with a knife, about an inch deep, so as to penetrate through the cortex and divide the sap vessels, one point of the triangle downwards, into which is inserted a piece of grooved bamboo, in order to direct the sap into an earthen pot suspended underneath it by a string. The pots are suspended in the evening, and, when sugar has to be made, are removed very early the following morning, ere the sun has sufficient heat to warm the juice, which would cause it immediately to ferment, and destroy its quality of crystallizing into sugar. The cutting being made in the afternoon, in Bengal next morning the pot is found to contain, from a full-grown tree, 10 seers of juice, the second morning 4 seers, and the third morning 2 seers of juice ; the quantity exuding afterwards is so small that no pot is suspended for the next four days. The boiling apparatus consists of a hole of about 3 feet in diameter, sunk about 2 feet in the ground, over which are supported by mud arches four thin earthen pans of a semi-globular shape, and four inches in diameter ; the hole itself is the furnace, and has two apertures on opposite sides for feeding in the fuel and for the escape of the smoke. The fire is lit so soon as the juice is collected and poured into the four pans, which are kept constantly supplied with fresh juice as the water evaporates, until the whole produce of the morning is boiled down to the required density. As the contents of each pan become sufficiently boiled, they are ladled out into other earthen pots or jars, of various sizes, from 5 to 20 seers of contents, according to the local custom, and in these the boiled extract cools, crystallizes into a hard compound of granulated sugar and molasses, and is brought to market for sale as goor. By subsequent processes the goor is deprived more or less of its molasses and impurities. A Persian poem celebrates the date palm and its 360 uses. A recent writer has supposed the date to be the conical figure, on the top of the thyrsus of Bacchus. This fruit, according to Pliny, was consecrated to the worship of almost every heathen divinity, and the date palm is the sculptural emblem of all that is dignified, beautiful and good, and entered largely into the ornamentation of temples. See Dates : Phœnix.

DATE-PLUM or China. Diospyros kaka.

DATES.

Dattes, Fr.	Khurma, Guz., Hind., Malay, Pers.
Datteln, Ger.	Khajur, Hind., Pers.
Dateri, It.	Datiles, Sp.

The best dates are the fruit of the Phœnix dactylifera, dried in the sun. They have a shrivelled appearance, and a pleasant subacid taste. They are brought to Bombay

from the Arabian Gulf. The districts of Multán, Dera Ghazi-Khan and Muzaffargarh, produce dates in large quantities from the P. sylvestris, but of an inferior kind to those of Arabia: they are, however, preserved, either by being dried or else by being boiled in oil and water, and then dried: when about to ripen, a piece of matting is put over the cluster to prevent the ravages of birds, &c. A gum is obtained from the P. sylvestris palm-tree, called "huckmchil." The date trees on the coast of Oman form a continuous grove to Khorfakan, a distance of one hundred and fifty miles, and the Arabs have a saying that a traveller may proceed the whole distance without ever losing their shade. Dates form the principal export from Oman, large quantities being taken to India, where a considerable share is consumed in making arrack. The middle classes of the mahomedan and hindu population are very partial to them. The best are brought from Basrah and Bahrein, those from Oman being classed next in excellence. There are several methods of preserving them; some are simply dried and then strung on lines: others, which is the usual plan, are packed in baskets. Notwithstanding their great number, every tree has its separate owner, and disputes between the relations of those who die intestate, are, in consequence, very frequent.—*Wellsted's Travels., Vol. I., p.* 188. *Fraser's Journey, p.* 74. *Burton's pilgrimage to Mecca, Vol III., p.* 405. *Powell's Hand-book of the Punjab.*

DA-THA-LWON, Burm. Moringa pterygosperma.

DATILES, Sp. Dates.

DATIRA, Mahr. Ficus t'siela, *Roxb.*

DATISCA CANNABINA,

Ik'l-bir, Hind.

Grows in Cashmere, Kanawur, Nepal and the Himalaya: its bark and the woody portions of the root are much esteemed in the Punjab for dyeing silk of a yellow colour. The bark also contains a bitter principle, like quassia. Root exported to Amritsir as a dye stuff.—*Drs. J. L. Stewart, M.D. Cleghorn, Punjab Report, Kullu* and *Kangra*, p. 80. *Cal. Cat. Ex.* 1862. See Dyes.

DATOKE—? Grislea tomentosa.

DATOO, a petty chief in Sumatra.

DATTA, Tam. Dungaree.

DATTA JAYANTI, a hindu festival held in honour of a deity named Datta.

DATTELN, Ger. Datteri, It. Dattes, Fr. Dates.

DATTUR, Hind. Datura stramonium.

DATUS, Malay. A governor under a sultan.

DATUNI. The root of the Croton tiglium, brought to Ajmere from Delhi and Pali: it is a very powerful purge, much used in prescriptions: one seer costs four rupees. —*Gen. Med. Top., p.* 133.

DATURA, a genus of plants common in India, both wild and cultivated, the colours of the flowers are white, yellow, purple and blue. Wight figures D. fastuosa, D. metel and D. stramonium.

DATURA ALBA, *Rumph.*

D. metel, *Roxb., Rheede.*

Humata, Humatu, Maleal.	Tella umati, ,,

D. alba (sada dhatura) and D. fastuosa (kala datura) similarly to D. stramonium, are used to stupify a person where robbery is intended. Bishop Heber thus notices this plant in his "Walk in Bengal,"

"While to the cooler air confest
The broad datura bares her breast
Of fragrant scent and virgin white,
A pearl around the locks of night."

DATURA FASTUOSA, *Mill., Rox.*

Datura metel, *W.*

Dhatura, ,,	Kalu uttana, ,,
Krishna dhatura, ,,	

This is very common over both of the peninsulas of India. The seeds are given with sweetmeats to stupify, and the effects have been known to continue for two days, and still recovery take place; cold affusion and strong stimulant emetics constitute the most effectual treatment. The vision often continues obscured long after the general recovery takes place. This state is best remedied by blisters to the temples or nape of the neck, and by cold affusion. If given while the stomach is empty a much smaller dose may induce all the preceding symptoms and prove fatal. This is well known to the Indian poisoners, who suit the time of administration according to the purpose they mean to serve. Both the single and double-flowered varieties of this species may be often seen near Burman houses, and children not knowing its poisonous character, sometimes eat the fruit, with very serious effects. Its large tulip-shaped white flower is sacred to Mahadeva.—*O'Shaughnessy, Gen. Med. Top., p.* 133. *Cat. Exh.* 1862. *Mason.*

DATYA, in hindu mythology, brahmins who were slain by the gods. Brahminicide, is the sin of killing a brahmin. The Datya, according to the hindu mythology, were brahmins, and were slain by the gods: but were resuscitated by Sukra, their guru, and attack-

ed the gods in Swerga, from which the gods fled in various disguises ; Indra as a peacock, Yamuna as a crow, Kuvera a lizard, Agni a pigeon, Nairat a parrot, Varuna a partridge, Vayu a dove, &c. Indra thus lost his heaven : but he afterwards slew Vitra, the datya, and committed the crime of brahminicide, for which he had again to leave heaven and do penance. This myth seems to be an account of one of the ancient wars between the Arian brahmins and a race with whom they came in contact, or a relation of the suppression of the vedic naturalism.—*Cole. Myth. Hind., p.* 376.

DAUBENTONIA PUNICEA, flowering plants brought from South America, grow well in a sandy loam.

DAUCUS CAROTA, *Linn.*

Cultivated all over India ; *O'Sh. page* 3.,

DAUGHTER, from duhitri, SANS., milking.

DAUD-KHANI, HIND. A white wheat.

DAULA, HIND. White sugar-cane, the best kind.

DAULATABAD. See Dowlatabad.

DAULI : at Dauli, in Cuttack, are two separate local edicts, the remaining edicts corresponding with those at Girnar in Gujarat. They are in the old Lat character, in old Pali, of the third or fourth century before Christ, probably B. C. 306 ? Devanampiya, the young prince of Ougéin is named "the beloved of the gods ;" the king is probably the father of Asoka, who was regent at Ougéin. Both edicts appoint two tupha, or colleges for meditation and the propitiation of heaven. The question of atheism in ancient buddhism is set at rest by these edicts, which repeatedly speak of this world and the world hereafter ; and the people are expressly commanded to propitiate heaven, and to "confess and believe in God, who is the worthy object of obedience," or more literally, Him, The Eternal, ye shall propitiate by prayer.—*Vol.* iv, *p.* 442.

DAUNDAN-I-FEL, PERS. Ivory of elephant teeth : properly, Dandan, Pers., a tooth.

DAUNICHA. See Dhunchi.

DAUNKISTSJIL.—Cajaputi.

DAUNLACCA, MALAY. Lawsonia alba, Lawsonia inermis.—*Henna.*

DAUPHINE DU GANGE, *Cuv.* Platanista gangetica. See Mammalia.

DAUP-YAN, a Tavoy wood, used for building.—*Col. Frith.*

DAUP-YAT. In Amherst, a timber employed for rafters ; it is a beautiful yellowish-white compact wood, but has a tendency to split. The leaves are used as a dye.—*Captain Dance.*

DAURIAN, a Tungus race dwelling on the Upper Amur, all well made, especially the women. The secretaries of the mandarins who are sent to this part, are privileged by a letter from the khan to select any women or young girls whom they may fancy, whenever love prompts them. Mr. Ravenstein says that he frequently was present when the best-looking were taken away in a cart. Some men whose wives had been selected in this manner consider it a special favor to have such fine gentlemen as brothers-in-law. Others, though discontented are compelled to conceal their chagrin for fear of punishment and disgrace.—*Ravenstein's Russians, p.* 365.

DAUSS, in lat. 25° 9′ N., long. 53° 1′ E., one and a half mile long, is a bare volcanic island on the N. side of the Persian Gulf.—*Horsburgh.*

DAVAIIDARUM, Erythroxylon arcolatum. Sethia Indica.

DAVA-DATSI, TEL. Vitis vinifera.

DAVALLIA, an elegant fern, very plentiful in the neighbourhood of Maulmain, characterised by the fructifications being in roundish separate spots near the margin.—*Mason.*

DAVANAMU, TEL., also Naga-davana Artemisia vulgaris—*L. R.*, iii, *p.* 420.

DAVARADANGI CHETTU, TEL. Acacia speciosa.

DAVARAJPUTNAM, a table-land bounding the Neilgherries to the north. See Korambar.

DAVERSOLABETTA, a Peak, in L. 11° 27′ N., L. 76° 43′ E. in the Neilgherries, two miles north of Ootakamund is 8,380 ft. above the sea.

DAVETTE, SINGH. Carallia zeylanica, *Wight's Ill.*

DAVID ELLIAS. See Karund.

DAVID, king of the Jews, B. C. 1028, reigned 41 years.—*Bunsen.*

DAVIE, Major, commandant at Kandy of the British forces that were destroyed on 24th, 25th and 26th June 1803, he was taken prisoner and kept a prisoner till his death in 1810.

DAVOLIA, HIND. Eragrostis cynosuroides.

DAVOU, SANS. Wood or Timber.

DAWA, AR., HIND., PERS. A claim. Ladawa, no demands. Madda'a, a claimant. Madda-alei, a defendant.

DAWA, PERS., HIND. Medicine :—properly dowa.

DAWADAR, DUK. Erythroxylon arcolatum.

DAWA-I-ATSHAK, HIND. Gentian root

DAWA-I-MUBARAK, HIND. Clerodendron siphonanthus.

DAWA-I-PECHISH, HIND. Ophelia elegans.

DAWALKARANDA, SINGH. Cassia bark. Cinnamon.

DAWANIYA, SINGH. Grewia tiliæfolia, *Vahl.*

DAWANUM, TEL. Southern wood.

DAWAR, known in old times as the "Bilad-ud-dawar," and by the modern inhabitants as Zamin-i-dawar. A large province, contiguous to Rukhkhaj, Bust and Ghor, and the opening of the latter to Sijistan. Elphinstone says on the right bank of the river Helmand lies the rich country of Zamindawar, which has the Parapomisan mountains on the north, and some hills connected with that range are found within its limits. This fine country extends for forty or fifty miles to the west of the Helmand.—*Elphinstone's Cabul, 4to., p.* 122. *Reinaud, Mem. sur l'Inde, p.* 173.

DAWARICA. See Dwarka; Kattyawar.

DAWATA GAHA, SINGH. Carallia lucida, *Roxb.*

DAWI, HIND. Grislea tomentosa.

DAW-NEE, BURM. Eriolæna, *Species.*

DAWODHAR.—See Porcupine.

From the remotest times, amongst the Chaldeans, Egyptians, Arabians, Hindus, Greeks and the nations of northern Europe, there has been a hebdomadary division of the month. In general, the days are commenced by the day of the sun, followed by the moon, and the five planets Mars, Mercury, Jupiter, Venus and Saturn.

The following origin of the ancient names has been suggested in connexion with astronomical science: the planetary arrangement of Ptolemy was thus :— Saturn ; 2, Jupiter ; 3, Mars ; 4, the Sun ; 5, Venus ; 6, Mercury ; 7, the Moon ; each of these planets was supposed to preside, successively, over each hour of the 24 of each day, in the order above given. In this way Saturn would preside over the first hour of the first day, Jupiter over the second hour, Mars over the third, the Sun over the fourth, and so on. Thus the sun presiding over the fourth, eleventh and eighteenth hours of the first day, would preside over the first hour of the second day, and carrying on the series, the Moon would preside over the first hour of the third day, Mars over the first hour of the fourth day, Mercury over the first hour of the fifth day, Jupiter over the first hour of the sixth day, and Venus over the first hour of the seventh day. Hence, the names of the days yet used in the learned professions throughout Europe.

The present English names are derived from the Saxon :—Tiw, Wooden, Thor, and Friya, were deities of the pagan Saxons. Thor was the god of thunder, as well as the ancient Jove, and Friya was a goddess, the wife of Woden.

The hindus, however, reckon by the light and dark halves of the moon which they designate kista (or krishna) and sakla paksham, though they, too, have a weekly arrangement. The Rajput names of the day, the Sooraj-war, or Adit-war, is Sunday, and the days of the week are from the other planets, Mangala is one of the oldest names of the hindu Mars, Kumara, to whom the Wodens-day of the North-men, the Mardi of the French, and the *dies martis* of the Romans, are alike sacred. *Mangala* also means happy, the reverse of the origin of *Mongol* said to mean 'sad.' *Vris'hut-pate*, is he who rides on the bull ; the steed or vahan of the Rajpoot god of war, and Sucra is a Cyclop, regent of the planet Venus.

The manner of reckoning the days by the ancient Jews, and which subsists amongst that people at the present time, is, to commence the day at a certain hour of the evening, and to finish it on the next evening at the same hour. Thus their sabbath begins on the afternoon of Friday, and is completed on the afternoon of Saturday. The Roman Catholic church also commences its festivals in the evening ; and this custom is retained in Britain in some of the popular observances, such as the eve of St. John and Christmas eve. The English names of the days of the week are derived from the Saxons, who had partly adopted their names from the more civilized nations of antiquity. The civil day of Britain now commences at 12 o'clock at midnight, and, lasts till the same hour of the following night. The civil day is distinguished from the astronomical day, which begins at noon, and is counted up to 24 hours, terminating at the succeeding noon. This mode of reckoning the day, is that used in the Nautical Almanac, and it sometimes leads to mistakes with persons not familiar with this manner of computation : a little consideration will obviate the difficulty. Thus January 10, fifteen hours, in astronomical time, is January 11, 3 in the morning civil time. In France and most of the States of Europe, as with the British, the hours are counted up to 12, from midnight till noon, and from noon till midnight. In parts of Italy, and of Germany, the day is held to commence about sunset, and the hours are counted on till the next sunset. This mode is very inconvenient to travellers, as the noon of the " Italian hours" at the summer solstice is 16 o'clock, and 19 o'clock at the winter solstice.

The division of the day among *mahomedans* is chiefly subservient to the stated time of performing their devotions, and is not generally very accurate. They begin their account at sunset, reckoning twelve hours from thence to sunrise, whether the night be long or short, from sunrise to sunset they also reckon twelve hours, and consequently a night hour is longer in the winter than an hour of the day, and in summer the hours of the day are longer than those of the night. At the equinoxes alone, all the hours are of equal length, and then they coincide with those adopted by the British, French and Germans, in commencement and duration, differing, of course 6 hours in enumeration, so that six o'clock of Britain is their twelve, seven is their one, &c. At other periods of the year, also, their six o'clock coincides with our twelve, but every other hour differs more or less from those of Britain. The time of sunrise, and, consequently, the length of the day, being known, the length of each hour will be easily found by division, and the period of any given hour determined. Thus, if the sun rise at 7 o'clock, the length of the day will be 10 hours (of 60 minutes each) and that of each hour 50 minutes. One o'clock, mahomedan reckoning, will then be at 50 minutes after 7, two o'clock 40 minutes after 8, and three o'clock will be half-past 9, and so on of the others. When the sun rises at 5 o'clock, the first three hours of the day will be completed, severally, at ten minutes after six, twenty minutes after seven, and half-past

eight. In every case six o'clock arrives exactly at mid-day, which, in India, is called "do pahar or the second watch." Mahomedans in India, also, reckon part of a day for the whole; thus what they mean by three days, is the day on which an event happens and the two following. The mahomedans reckon the sidereal day, in their time, from sunset to sunset, differing thus from the European civil day, midnight to midnight, or, solar day, midday to midday.

Though the Gothic and Scandinavian nations have, in the cases of Tuesday, Wednesday, Thursday and Friday, given the names of Scandinavian deities, Tuisco, Woden, Thor, Friga, to four days of the week,—most of the northern nations have preserved the Latin names as in

French—Mardi, Mercredi, Jeudi, Vendredi.
Spanish—Martes, Miercoles, Juenes, Viernes.
Italian—Martedi, Mercoledi, Giovedi, Venerdi, while for Saturday they have taken the Sabbatical word.—*Tod's Rajasthan, Vol. I., pp. 232 and 595. Bowring's Siam.*

DAYAK is the name given to all the wild tribes of Sumatra and Celebes, but is particularly applied to those of Borneo where they are most numerous, some are wild savages but others have fixed habitations, large barrack-like huts, containing many families. They are ignorant of any written character. In their wars they clothe in prepared skins, their arms are the sword and spear and blowpipe. The Kayan Dayak are idol worshippers, keep their dead for some days, and inter in a coffin made of the hollow trunk of a tree. See Dyak.

DAYAL BIRD. See Robin.

DAYAMUR, a magnificent peak in the Bara Lacha or Western Himalaya, visible from Ramnagur in the Punjab.

DAYG, a large, or Dayg-cha, a small copper caldron; from the Arabic degh and degh-cha.

DAY-LILIES, the genus Hemerocallis.

DEAD. The remains of the several races in South Eastern Asia are variously disposed of. One of the most ancient of the races, the Parsee or Guebre, the followers of Zertusht or Zoroaster, expose their dead bodies on iron bars over a deep well enclosed in a circular tower. The buddhist Tibetans allow the dead to be dragged in an unseemly manner to a distance and then exposed. The dead of the buddhist Burmese, of rank, particularly of the religious phoongee, is laid in honey for a year, and then conveyed, seemingly with much rejoicing, to the burning place and burned amidst fire-works. The Chinese revere the dead and make pilgrimages to their ancestors' graves. Their dead are placed in coffins made of great logs of wood and lodged in chambers above ground in the manner of the ancient Jews. Some of these log coffins are valuable, and it is usual for the rich Chinese to keep their coffins ready for their own use. The Saiva hindu, the Jangam or Lingadari, the pariah or outcast races and the five artizan classes of India, all inter their dead with their faces to the north. The artizan dead are seated facing the north. The vaishnava hindu who die of ordinary diseases are burned on a funeral pyre, and it was not unusual amongst the burning classes of the Rajputs and hindus of the Mahratta country and northern India, for their widows to place themselves alive alongside the bodies of their deceased husbands. Amongst the Balinese, the widow and slaves of the deceased great are burned along with the deceased. But with the vaishnava hindu, unmarried persons or such as have died of small-pox or cholera are burned, and their ashes thrown into water. The mahomedan dead are all buried, and visits are paid to their graves. Dr. Livingstone describes the practice of the Balonda of S. Africa to be, to abandon the spot where a favorite wife has died.—*Livingstone Travels.* See Burial.

DEAD SEA, called now Bahr-ul-Lot, or the Sea of Lot, is the largest lake in Palestine, being 40 miles long with an average breadth of 9 miles and at places 200 fathoms deep. It occupies the valley of Siddim, in which were the cities of Sodom, Gomorrah, Admar, Zeboim and Zoar, which sunk by some convulsion of nature. The Dead Sea has been known by several names. It is called the Sea of the Plain, Deut., iii. 17; the Salt Sea, in Deut., iii. 17; Josh., xv. 5; from the extremely salt and bitter taste of its waters, which hold two lbs. of salt in a gallon, and the East Sea in Ezek., xlvii. 18; Joel, ii. 20, from its position with respect to the Judæan mountains. Josephus and the Roman writers call it the Lake Asphaltites, from the abundance of the bitumen found in it. The more familiar name, the Dead Sea, is in allusion to the ancient tradition, erroneously but generally received, that no animal could exist in its salt and hydrosulphuric waters. It is 1,300 feet below the general sea level, and 4,000 feet below Jerusalem, but the general slope of the intervening district is so regular that from the spires of the city and the Mount of Olives, one can look down directly upon its waters.—*Taylor Saracen, p. 63; Maury's Physical Geography, p. 186; Robertson's Travels, Palestine and Syria, Vol. i, pp. 61, 68.*

Thin fir planks much used in carpentry, formed by sawing the trunk of a fir tree longitudinally.—*Faulkner, McCulloch.*

DEEARA, OR DEWARA, HIND. Alluvial soil, or an island formed in the bed of a river.—*Elliot.*

DEA-PHUL, BENG. Artocarpus lakoocha.—*Roxb.*

DEAR-KA-TEL, HIND. Cedar tree oil.

DEATH'S HEAD MOTH, the Acherontia satanas of Ceylon. See Acherontia. Insects.

DEB, BEN., URYA. A cognomen appropriate to brahmans, as Chandradeb.

DEBAL, a part of Sind, famous in ancient times, but site now unknown: supposed by Burnes and Burton, to be the modern Tatta. Tatta is still styled Debal or Dewal (temple), by the Arabs and Persians. Mr. Elphinstone and M. Reinaud point to Karachi, and Dr. Burnes and Mr. Crow indicate a site between Karachi and Tatta. Mr. Thomas gives Karachi as the ancient Debal. The temple was probably on the promontory now occupied by Fort Manora, and was occupied by a pirate tribe called Tangamura.—*Elliot's Hist. of India.*

DEBANSHAB, PERS. Ocymum basilicum.

DE BARROS AND DE CONTO, two Portuguese writers who, in concert, gave a history of the Portuguese in Asia. Joao de Barros held at Lisbon the office of Custodian of the records of India. He was a contemporary of Albuquerque and died in 1570. He published three decades, his fourth being posthumous, but in these he celebrated the achievements of Albuquerque, to whom he stood in the same relation as Orme, the English historian does to the English conqueror Clive. His companion writer was Diego de Conto, and their book was entitled Da Aria dos Feitos que as Portuguezes fozeram no descubrimento e conquista das terras e mares do Oriente, Lisbon, 1778. DeBarros was born in A.D. 1496 and died in 1570. The first decade of his work was published in 1552; the second in 1853; the third in 1563, and the fourth after his death in 1777-8.—*Tennent, Bikmore.*

DEBDAREE, BENG., HIND. Guatteria longifolia. Mast tree.

DEB-DHANYA—Sorghum vulgare.

DEBKI, the dance of the Arabs, resembles in some respects that of the Albanians, and those who perform in it are scarcely less vehement in their gestures, or less extravagant in their excitement, than those wild mountaineers. They form circle, holding one another by the hand, and moving slowly round at first, go through a shuffling step with their feet, twisting their bodies into various attitudes. As the music quickens their movements are more active; they stamp with their feet, yell their war cry, and jump as they hurry round the musicians. The motions of the women are not without grace; but, as they wrap themselves in their coarse cloaks before they join in the dance, their forms, which the simple Arab shirt so well displays, are entirely concealed.—*Layard Nineveh, pp.* 119, 120. *Baron de Bode's Travels.*

DE BODE. See Baron de Bode.

DEB-RAJAH, the temporal ruler of the Bhot, from Deo the deity.

DEBRA TABOR, a town in Amhara in Abyssinia, formerly a small village. It was afterwards a place of considerable size, and the residence of the emperor Theodore.

DEBUL. See Dabul. Debal.

DEBURAH, HEB. In the Scriptures, are several Hebrew words which in the English version have been translated, fly, viz., Oreb, Zebub, Deburrah, Tsira, Sarabim, Bak, Cinnim. The Orov or Orob, Heb., a swarm or assemblage, is translated in Ps. cv. 31, swarms of flies, but Exod. viii. 31, also Ps. lxxviii. 45, is supposed to allude to the musquito. The Hebrew Zenon, of Ecc. x. 1 and Is. viii. 18, is not known. Flies are undoubtedly very troublesome at some seasons in tropical Asia, but an infusion of quassia sweetened with sugar, on a plate destroys them. See Fly.

DECAISNE. Messrs. Cambessedes and Decaisne, issued a volume on some of the plants of Jacquemont's voyage.

DECAISNEA, a very remarkable plant, which Dr. Hooker saw in flower in the Lachen valley and is called "Loodooma" by the Bhoteea, and "Nomorchi" by the Lepcha. It grew on the ridge near Tumloong and the Ryot valley at 7,000 feet; it bears a yellow fruit like short cucumbers, full of a soft, sweet, milky pulp, and large black seeds; it belongs to a new genus, allied to *Stauntonia*, of which two Himalayan kinds produce similar, but less agreeable edible fruits the "Kole-pot" of the Lepcha.—*Hooker Him. Jour., Vol.* ii, *p.* 198.

DECANDOLLE, author of Prodromus Systematis Natur. Vegetabilium.

DECAPODA MACROURA, a division of the Crustaceæ. See Crangonidæ, Crustaceæ. Shrimps.

DECASCHISTIA CROTONIFOLIA, syn. Girardinia leschenaultiana, exhibited by Mr. Jaffrey at the Madras Exhibition of 1855, appears to yield a good fibre.

DECCAN, a great table land, south of the Nerbuddah river. The name is derived from a Sanscrit word, meaning the right hand, and, metaphorically, the south, because a hindu when facing the east, has this region on his right. The boundaries of the Deccan terri-

tory have never been fixed authoritatively, but the countries in the Peninsula have been distinguished by this name from the earliest times. The term signifies the south; as Poorub does the east, when applied to Bengal and its dependencies. But, at the present day, the term is generally applied to the Hyderabad and Dowlatabad provinces lying between Berar and the Kistnah, and from the Syhadri or western ghauts, eastwards to Telinganah. The British in northern India, however, make the Deccan more extensive and regard it as including all the southern table-land, supported as it were by a triangle formed by the Sautpoora or sub-Vindhya on the N., the Syhadri or western ghauts on the west and the eastern ghauts on the E.; the Sautpoora range constituting the base of the triangle. The length, from the Sautpoora range to Salem, is about 700 miles; breadth from Mahabaleshwar to Sirgoojah about 700 miles. But if Choota-Nagpore be considered as part of this great table-land, it may be said to extend nearly 250 miles farther in a north-easterly direction, or about 950 miles in all. Its highest parts are those nearest the W. ghauts, and in the centre of Mysore. Mahabaleshwar in L. 18° N., and L. 73° 45' east is 4,700 ft. The source of Kistnah, 4,500 ft. Source of Godavery, 3,000 ft. Poona, 1,823 ft. Source of Manjera, 3,019 ft., and the rivers rising in ravines between spurs of the W. ghauts, wind their way through E. ghauts across the Deccan, the slope being in that direction. Plains of Nagpore, 1,000 ft. slope to S. E. drained by Wein-Gunga, which falls into the Godavery. Hyderabad, is 1,800 ft. Secunderabad, in L. 17° 26', N. L. 78° 33'; E. is 1,837 ft. Beder, in L. 17° 53', L. 77° 36'; E. is 2,359 ft. From the Wein-Gunga the surface rises towards N. E., where Rypoor, 21° 12', 81° 40', is 1,747 ft. Source of Mahanuddy, 2,111 ft.; and Koukar, 20° 16', 81° 33', 1,953 ft. Nundydroog, highest in Mysore, 4,856 ft.; slope from hence on all sides, S. to Bangalore, 3,000 ft.; E. to plains of Carnatic-Chittoor, 1,100 ft.; N. to plains of Gooty, 1,182 ft.; and those of Bellary plains, 1,600 ft. Gooty plains 1,182 ft.; Cuddapah town, 507 ft.; and E. part of Cuddapah district 450 ft. Hypogene schists, penetrated and broken up by prodigious out-bursts of plutonic and trappean rocks, occupy by far the greater portion of the superficies of Southern India. The central part of the Deccan is composed of waving downs, which, at one time, present for miles a sheet of green harvests, but in the hot season, bear the appearance of a desert, without a tree or shrub to relieve its gloomy sameness. Colonel Sykes has described the great volcanic outburst of green-stone rock which covers all Berar from the Nerbuddah to Bombay and southwards through Nirmul to Naldroog through many thousand square miles. Between Naldroog and Beder and for a hundred miles to its north and south are great hills of laterite. The area covered by Deccan trap, in the peninsula of India cannot be little less than 200,000 square miles. Except the hollow of the Loonar lake there is no trace of any crater in this volcanic region: twenty miles to the east of Nirmul, and a few miles south of the mountains, hornblende slate occurs, resting on granite and quartz rock. The countries through which the Gutpurba and the Malpurba run, and the lower course of the Kistnah, Bheema and Tumbudra and all about Kalladgee, Kurnool and Cuddapah are formed of strata of limestone and clay slate, the granitic platform of the Deccan, which intervenes between the Kistnah and the Godavery, intersected by numerous green-stone dykes (sometimes of green-stone porphyry), having for the greater part a direction from S. by E. to N. by W., and not very different from that of several of the ranges of basaltic mountains to the north. The seaward face of the table-land towards the W., though abrupt, is not precipitous, but consists of a succession of terraces or steps. On the Coromandel side the slope to the sea is gentle, exhibiting the alluvial deposits borne down from the higher portions of the table-land. The inhabitants of this great region are nations speaking Gondi, Mahratta, Telugu and Canarese, and for 120 miles north west from the town of Sadasheepet running on through Beder and Dangapura these three languages join, and the villages are styled si-bhasha-basti, three-tongue-towns. The British rule over the Ceded Districts of Bellary, Cuddapah, Kurnool, the southern Mahratta country, and part of ancient Dowlatabad, they have assigned to them all Berar, and their officers rule over Mysore: the Nizam holds Hyderabad and a few small chiefs rule near the Kistnah river. It was not till A. D. 1471, that the mahomedans of the Deccan extended their arms to the Northern Circars. At this time the Oria rajah of what is now the Ganjam country, died without issue, and his adopted son Mungul Roy, and his cousin Humner (?) became competitors for the succession. During Mahmoud's time (in 1512), the Bahminee dynasty was dismembered, and five Deccanee kingdoms set up. The country now known as "The Northern Circars," fell under the dominion of the Kutub Shahee state, whose capital was Golcondah near Hyderabad. That portion south of the Godavery became tributary without difficulty. Wistna Doe or Gaji-

putty, a powerful prince of Orissa, who ruled in Rajahmundry and Chicacole, withheld submission, and it was not till A. D. 1571, that his pretensions were lowered. The Northern Circars was occupied by the British in 1766. The central outburst of granitic rocks in the peninsula can be traced from north of the Godavery, in latitude 19° north, through Hyderabad, the Ceded Districts and Mysore to Ceylon, these rocks and the green-stone form the prominent parts of the Dekhan, clay, slate, mica, chlorite and hornblende schists, sandstones and limestones with fossils of a post-oolite age being the stratified rocks. The greenstone is supposed by some observers to decompose into a deep black earth, light when dry, and cracked and rent by the sun in the hot season, but forming a tough, deep, tenacious soil in the rains, rendering marching almost, if not wholly impracticable. It is called "regur" in the Dekhan, and is the "cotton soil" of Europeans, by many of whom it is regarded as indicating an unhealthy locality. It is very fertile. The granite rocks, on the other hand, decompose into a red sandy soil, which is generally hard, and as it allows a rapid percolation of water and quickly dries, it is less fertile, but is considered more favorable to health. It may be doubted, however, if there be any facts to prove that the one soil is more favorable to health than the other.—*Elliot, Annl. Ind. Adm., Vol.* xi, *p.* 243. *Rennell's Memoir.* See India, Sykes.

DECIUS. Ephesus, the chief town of Ionia, in Asia Minor, 45 miles south of Smyrna, was famous for its temple of Diana and amongst the mahomedans of the east, its story of the seven sleepers is continued, through the Koran. When the emperor Decius persecuted the christians, seven noble youths concealed themselves in a cavern, which was then blocked up with stones. They immediately fell into a deep slumber, which lasted for 187 years. At last the slaves of Adolius, removed some of the stones for building materials, on which the seven sleepers were aroused, and despatched Jamblichus, one of their number, to the city, to procure food, on which the altered appearance of Ephesus, the age of the coin he presented to the baker, and his long beard led to a discovery of the marvellous adventure. The bishop of Ephesus, the clergy and magistrates visited the cavern, and after conversing with the somnambulists, they quietly expired. James, a Syrian bishop of the fifth century, devotes a homily to its praise; and the seven sleepers are found in the Roman, Abyssinian and Russian calendars. Mahomed introduced the tale in his Koran, as the companions of the cave, and says God caused them to turn over occasionally from right to left to preserve their health.—*Milner's Seven Churches of Asia, p.* 171. *Sale's Koran, p.* 219.

DECKANI HEMP, Eng. Hibiscus cannabinus. See Ambari.

DECOITS are gangs associated for the purpose of plunder, who assemble by night, fall on an unsuspecting village, and kill those who offer resistance.—*Elphinstone's History of India, p.* 377.

DE CONTO. Diego De Couto, who died at Goa in 1616, brought down to his own time, the history of the Portuguese in India, commenced by De Barros. See De Barros.

DEDES, Jav. Civet. Musk.

DEDHAN or Devdhan, Beng. Andropogon saccharatum.

DEDH, a race in Cutch, who are tanners, and who speak a dialect of the Cutchi. The word seems a modification of the term "dher." See Kach.

DEEB-KANCHUM, Beng. Bauhinia purpurea.

DEECHIT, Hind. A brahman tribe, also a rajput tribe in Benares, Azimghur and Gazipur.

DEED, Pers. A mahomedan sufi worship, the viewing or beholding of the deity, pointed out by the moorshid or teacher.

DEEGA, a form of marriage amongst the polyandrist Kandyans in Ceylon, in which the wife dwells in her husband's house.

DEEH, Hind. of Benares, a deserted village.

DEELEN, Dut. Deals.

DEEMROUT, Hind. A Pal of the Mewati race, who have twelve sections or Pal.

DEEN, Arab., Hind., Pers., is applied by mahomedans to their own mahomedan religion. They sometimes call it Din-i-Islam, the Faith of Salvation. The arabic term mazhab relates to the sectarian part of the Deen. Thus a mahomedan is of the Din-i-Islam, but of the shiah or sunni mazhab. Deen is everywhere used as the mahomedan war-cry, Deen! Deen! for the faith! for the faith! The principles of the koran generally, but in particular the text in chapter which inculcates war against non-mahomedans, and death in the contest as the surest passport to heaven, have established amongst mahomedans an intimate connexion between the spiritual aspiration and political convictions. Hami-ud-Din, Defender of the Faith.

DEENAR, a Persian coin, in Hindoostan equivalent in value to two and a half rupees.

DEEP, Pers. A bear.

DEEPDAN or DIPDAN, Hind. In E. Oudh and Benares is land assigned to brahmins on the banks of rivers to deprecate river

encroachment. The word is derived from "Deep," Hind., an island, and Dan., Hind., a gift.—*Elliot.*

DEEP-DAN, HIND., derived from deepa, a lamp, is applied to a hindu ceremony observed for ten days after the decease of a relative. It consists in suspending from a pipul, or some other, tree, a lamp, for the purpose of lighting the departed spirit on the dark road to Jumpooree or Yamapuri, the abode of Yama. This place is declared in the sacred books to be the general rendezvous of the departed from all parts of the world from which they proceed in a body with a proper guard, composed of the servants of Yama (Pluto) to Dharmapuri.—*As. Res., Vol.* x, *p.* 145—*Elliot.*

DEEPIKA, SANS. A light.

DEER, ENG. A general term used by the British in India to designate several bovine animals, distinguishing them as the barking-deer, hog-deer, rib-faced-deer, sambur and spotted deer. There are, however, frequent minglings of names, as there are a variety of scientific and vernacular synonyms. These animals are all eagerly pursued as game by Europeans who often refer to scientific men for their true names.

Giana of Tibet, Nepaul and Saul forests, is the Cervus Wallichii of Cuvier.

Barah-Sinha, or Buraiya of Bengal, Eastern and Northern skirts of India, is the Rucervus Duvaucelli of Cuvier.

Sung-nai or *Sungraee*, of Munipore and Malay Peninsula, is the Panolia acuticornis and P. Eldii of Gray ; the Cervus or Rusa frontalis of McClelland, and the Cervus Eldii of the Cal. Jour. Nat. Hist.

Sambur of the Mahrattas ; *Sambara*, Sanscrit, an inhabitant of the Deccan, Southern Mahratta country, of Sumatra, Borneo and Banka, is the Rusa equina, of Cuvier and Gray ; the Cervus equinus of Cuvier, the Cervus or Rusa hippelaphus of Elliot, Rusa etam or Rusa Kumbang of the inhabitants of Sumatra.

Samber of Hodgson, a dweller in the forests of (northern) India, is the Rusa hippelaphus of Cuvier and Gray, the Cervus hippelaphus of Gray.

Jarai or *Jerrow* of the great forests of India and of Ceylon is the Rusa aristotelis of Cuvier and Gray, the Cervus aristotelis of Cuvier.

The Spotted deer Chitra, Sanscrit; and Chittal, Hindi, of Continental India and Southern Mahratta country and of the Malayan peninsula, is the Axis maculata of Gray, the Cervus axis of Erxleben and Elliot.

The Hog deer of Continental India and Assam which is called by the vernacular names "Para," "Khar," "Laghuna," and "Sugoria," is the Hyelaphus porcinus of Sundeval ; the Cervus porcinus Zimmerm and the Axis (Cervus) niger, Dr. Buch. Ham.

The Muntjak of the Sundanese, Kidang of the Javanese and Kijang of the Malays of Sumatra which is found in Banka, Borneo, Java and Sumatra, is the Cervulus vaginalis Bodd. and Gray, Cervus muntjak of Zimmerman.

The Barking deer of Europeans, which is the Rib-faced deer of Pennant, and which dwells in the plains of India, is the "Baiker" or "Bekra" of the Mahrattas according to Sykes and Elliot : the "Ratwa" and "Kaker" of the Indian Continent of Hodgson, Cervus muntjak of Sykes, Stylocerus Ratwa of Hodgson.

Paddy-Field deer of Ceylon is Axis oryzus of Kelaart.

DEERGA KARAVALLI, SANS. Momordica charantia.

DEERGAVARTAKA, SANS. Brinjal.

DEER-SKINS. See Leather.

DEES and GOEY are rivers near Sindwah in Holkar's territory.

DEESA, a town and military station in Guzerat ; about 350 feet in height above the sea : its rainfall is 12 and 14 inches, and the thermometer ranges from 50° to 110°. It is surrounded by a desert of sand.

DEEWARGIRI, HIND. Tapestry, or cloth for adorning a wall.

DEEYAPARA, SINGH. Wormia triquetra, *Rottl.*

DEG, HIND. A large copper cauldron or globular vessel, a cooking pot. Deg-cha, a small pot.

DEGAR, HIND. Ficus oppositifolia.

DEGCHA, HIND. A pot.

DEGOT : Smola : shitkaja, RUS. Tar.

DEH, PER. A village : hence Dehgan, a villager, a cultivator. Dehi, pertaining to a village.—*Wils.*

DEHA, SANS., from dih, to collect or increase.

DEHAR, a river near Tootagong in Gowhatty.

DEHAVILLAND. Colonel Thomas Fiott deHavilland, eldest son of Sir Peter deHavilland of Guernsey, was born in 1776 ; he received a commission as Lieutenant in the Madras Engineers at the age of 16 ; was present at the taking of Seringapatam and received 5,000 Rupees prize money ; was taken prisoner by the French at sea, but was soon released ; joined and remained with his corps till 1812 ; then retired to Guernsey and built Jerbourg barracks ; returned to Madras, where he planned and constructed the Mount Road, built St. George's Church now the

Cathedral ; also St. Andrew's Church, or the Scotch Kirk, which was long considered the perfection of architecture in Madras, and of which the steeple is still the tallest piece of masonry and its dome the finest in Madras. When the affairs of the Military Fund were in confusion, he was called upon to set them right, which he did very satisfactorily. He retired from India finally in 1825, and up to within 10 years of his death, lived a most active and useful life in his native island, he died at his seat, DeBeauvoir the Ræquettes. By his first wife Martha deSaumarez, Col. deHavilland had three sons and two daughters. His first wife's body was the first to be interred in St. George's Church burial ground.

DEHGOPA, a corruption of Sanscrit words signifying relic-receptacle, and by some supposed to be the source of the word Pagoda. It is also known by the Sanscrit word "chaitya." Dehgopa is a buddhist shrine enclosing or protecting some sacred relic, but by some they are supposed to be shrines built over the remains of persons of the buddhist faith and consecrated to their saints.—*Prinsep's Antiquities by Thomas, p.* 154.

DEHI, Sing. Limes.

DEHKANI, Pers. A villager or cultivator.

DEHLA, Hind. Capparis aphylla ; also Vitis Indica.

DEHRA, Hind. A tent, and, amongst the Afghan, an encampment ; also a town as Dehra-Ismael Khan, Dehra Fatteh Khan.

DEHRA DOON, is situated in latitude 30° 18′ north, and in longitude 78° east ; it is about 60 miles in length from east to west ; and 16 miles broad at its widest part. It is bounded on the south by the Sewalik range of hills, and on the north by the Himalaya proper, which are here nearly 8,000 feet above the level of the sea. On the west it is open to the river Jumna, and on the east to the Ganges, the distance between these rivers being about 60 miles. Its average height is about 2,000 feet above the level of the sea ; cut off from the Doab of the Ganges and Jumna by the Sewalik hills. It has been largely occupied with tea plantations, and many Europeans reside in the town of Dehra. Dehra, used here, seems a corruption of Darrah or Tarrai, a valley, or amongst the Maharattas "therri" as Bheema therri, Seena therri.

DEHRA GHAZI-KHAN. The town of Dehra Ghazee-Khan on the Upper Indus is a manufacturing place, and it leads to the commercial towns of Mooltan and Bhawulpore, which adjoin it, and now furnish many articles for the Cabul market. It is about equidistant from Umritsur and the opulent town of Shikarpoor in Sind. There is, near, another position, which at first sight appears the most favorable of all the towns on the Indus, Mittuncote ; viz. at the confluence of the Indus, with the five rivers of the Punjab, about two miles from the Indus on an elevated spot, but the country around is flooded by the inundation, and either under water or a marsh for half the year, when it is both hot and sickly. Mittun is a small town with a population of about 4,000 souls.

DHERA-ISMAEL KHAN, has an advantageous position, and is, besides the market town of the Lohanee merchants. It is a small place and subject to alteration from the inundations of the river, which a few years ago swept away the entire town. It is nearer to the great commercial city of Umritsur than any of the other places on the Indus, and lies on the road between it and Cabul. This tract, however, is not much frequented, except in the extensive export of the native fabrics of Jung and Meengana, which consist of coarse white cloth, European goods are not in general sent by this road ; for the merchant besides avoiding the desert tract between the Jelum and Indus, derives the supply of goods for Cabul and Toorkistan from marts below Umritsur. Dehra-Ismael Khan covers the road from that city and must yet be considered one of the most eligible sites on the Indus. *Bengal As. Trans., Vol.* viii., *p.* 250.—*Papers, East India, Cabul and Affghanistan, pp.* 103, 104, 105.

DERAJAT, Arabic, plural of Dehra, the country on the right bank of the Indus, below the Salt Range and to the point where that river is joined by the waters of the Punjab. It is so designated from the two principal towns, Dehra Ghazee-Khan and Dehra-Ismael Khan. The lower part bears the local name of Sind from bordering on the Indus, and the upper that of Daman from its bordering on the Suliman mountains. The country is flat and in many places fertile, but to the westward of the river there are no wells. The Derajat is about two-thirds of the narrow strip of land, which lies between the Indus and the Suliman mountains, and extends from the hills and valleys of the Kohat district to the Sind frontier. A thin fringe of cultivation and jungle extends along the bank of the great river, and terminates as you advance into the interior, in a flat desert country where a precarious supply of water from the hills affords a poor cultivation in the vicinity of the thinly-scattered villages. Lower down, the hill streams become smaller, and the aspect of desolation still greater, so that for miles not a human being is visible, nor can a drop of water be procured to quench the thirst produced by these scorching plains. The Pathan and Baluch tribes who inhabit the hills, have

the same attachments to their chiefs, internal hereditary feuds, dislike to combination and predatory habits, which distinguish so many mountain races, but have withal a martial bearing and love of independence. The scarcity of water limits cultivation, and their wealth consists in their herds which find a scanty pasturage at the foot of the hills; amongst the mountains occur a few fertile patches: the country being traversed by footpaths known only to themselves, the hill tribes were accustomed to issue from it in raids on their wealthier neighbours in the plains, hurrying their cattle and retreating in safety to their impracticable mountains. To stop this, in the beginning of 1857, after one of such inroads, the Punjab Government sent an expedition to reduce the Bozdars, from amongst the troops of the Punjab Irregular Force, and names known to fame, in the Indian mutinies, Chamberlain, Coke, Nicholson, Hodson, Probyn, Watson, Wild, and Green, were all trained in this school of warfare, involving severe marches, incessant fights and exposure to all the seasons of the year. The hills are inhabited by predatory Pathan and Belooch tribes, who cultivate little fertile patches, called *kuchee*, lying within the mountains. The tribes, from north to south, of the Derajat frontier come in the following order:—

Pathan Tribes...	Ahmedzye, Othmanze, Muhsood, Buttunee.	Wuzeeree.
	Sheorance,	
	Usteranah or Oosteranee.	
Beloochee	Kusseranee.	
Pathan	Khetran.	
Belooch Tribes...	Bozdar.	
	Loond.	
	Khosah.	
	Lugharee.	
	Goorchanee.	
	Muzaree.	

The Muhsood Waziri have three large divisions. A Beluch contingent was maintained for the defence of the Derajat frontier and the Beluch chiefs were held responsible for its passes. (*Medley's year's Campaigning, pp.* 1 to 21.) The Bozdar are a border tribe with about 2,500 fighting men, west of the Derajat. They dwell in the hills opposite Mungrota, about 50 miles north of Dehra Ghazi Khan, and were given to make troublesome inroads on the plains. After a series of such, a force was sent against them in March 1857 through the Mahvi and Mungrota passes, and, after seeing their green crops destroyed, and seeing the Oosterani, a small but warlike tribe, join the British, one morning the Bozdar chiefs rode into the British camp and sued for peace. They were received in solemn Durbar, and "for every man they had slain in their forays 125 Rupees were paid, and 50 Rupees for every wounded man, this being the regular price of blood in the hills." A few months afterwards, they furnished a contingent to protect the frontier, when the troops were sent to quell the mutiny. This Beluch tribe occupy the mountains and the low country, and have the following sections, Seharni, Suwarni, Gulamanni, Jelalani, Chandiah and Shahani. From the Kusranee limits the hills of the Bozdar tribe extend along the British Frontier for about 15 or 20 miles. The range is intersected by some nine passes leading into the plains, the chief which is the Sungurh Pass, through which there is considerable traffic with Candahar and the Punjab. Opposite these hills lies the Sungurh low-land (forming the upper portion of the Dehra-Ghazee Khan district and cultivated by several peaceful tribes) and very much at the mercy of the Bozdar. There is only one Bozdar village in the plains, but there is much scattered cultivation belonging to the tribe. Almost the whole tribe and their chiefs live in the hills. They can muster 3,000 or 4,000 fighting men, some portion of whom are horsemen. They were probably the most formidable robbers in this part of the frontier. Under the Sikh regime they repeatedly carried fire and sword into the Dehra-Ghazee Khan district. The Dehra Ismail Khan district formed one of the governments of the Dooranee rulers. When Elphinstone passed through the town in 1803, within a hundred yards of the Indus, it was enclosed by a large wood of date trees. It had a ruinous wall of unburned bricks, about a mile and a half in circumference. The inhabitants were chiefly Beloochee, with some Afghans and Hindoos: but the country people were Beloche and Jut, resembling those on the opposite bank of the Indus. The Dehra-Ismael district is divided into two halves by a range of hills running at nearly right angles from the Suleemanee range to the Indus. The passage from one part of the district to the other is through the Peyzoo and Mulezye passes which intersect the range. Above the passes there is the valley of Bunnoo occupied by the Bunnoo Wuzeeree. The Bunnoochee themselves were a vicious race. They cultivate with some industry; and are well affected to the government. Below the valley, and immediately above the range is Murwut. The Murwutee are a fine race of striking appearance, loyal to the British, and both willing and able to check the depredations of their hill neighbours. In Murwut stands the fort of Lukkee. In the hills near the Peyzoo pass dwell the Buttanee: they were, once, a rob-

ber tribe, but have reformed since annexation. Their co-operation against the Muhsood Wuzeeree could be reckoned upon. Below these, is the Dehra-Ismael Khan district, are two important families, namely, the Gundapoor of Kolatchee, and the chiefs of Tank. These two tracts are exposed to attack from the Sheoranee and Wuzeeree. The revenues of Kolatchee amount to between Rupees 8,000 and 10,000. Of this the Gundapoor receive 25 per cent. on condition of good service in defending the tract. The Tank chief holds a lease of the revenues of that tract; he makes the collections, which amount to Rupees 65,000 per annum, and receives one-third for himself and the establishment he maintains. This lease is conditional on good service in defence of the fief. The chief is a Puthan of good family. The nawab of Dehra-Ismael Khan, belongs to the princely race of Suddoozye. South of Dehra-Ismael Khan lies the large tract of Dehra Ghazee-Khan, which extends as far west as the mountains and along the Indus to Sind. Its principal chiefs have usually behaved well, even at times when their brethren of the hills were in a state of hostility against British subjects. The plain tribes are the Nootkanee, Loond and Dreshuk, all of them well conducted; they had a certain number of fighting men, but they were victimized by such tribes as the Bozdar and Goorchanee. The Dehra Ghazee-Khan district has the Dreshuk, and Muzaree.

Adjoining the frontier of Dehra Ghazee Khan district are the Khutran, Kosah, Lugharee, Goorchan, Murree and Boogtee.

Dehra Ismael Khan district—Bunnoochee, Murwutee, Butanee Chiefs of Tank, Chiefs of Kolache, Chiefs of Dehra-Ismael Khan, Nootkanee, Loond.

Adjoining frontier of Dehra-Ismael Khan district are Sheoranee, Oshteranee, Kusranee, Bozdar.

Adjoining frontier of Kohat district.—Buzotee, Sepah, Orukzye, Zymoosht Affghans, Tooree.

Adjoining frontier of Kohat and Dehra-Ismael Khan districts—Wuzeeree.

The Derajat or *Hist. of the Panjab, Vol.* i, *p.* 24. *Aitcheson's Treaties.* See India, p. 336; Khyber, pp. 512 to 518.—*Papers, East India (Cabul and Affghanistan)* 1859, *p.* 22. *Elphinstone's Kingdom of Cabul, p.* 29. See India, p. 336. Khyber, pp. 512, 514, 518. Kelat, Tajik.

DEHVEH SAMANI, Turk. Hedysarum alhaji.

DEHWAR, Pers. A villager, a farmer. The Tajik race on the northern borders of Affghanistan are called Dehgan. The Dehwar residing with the Babi, at Kelat, are supposed to be descendants of Tajik from Balkh. They are an agricultural, hard-working, poor people, who dwell in villages and do not migrate. Their language is nearly pure Persian.—*Dr. Cooke in Bombay, Medical Transaction, No.* vi, *New Series*, 1860.

DEHWAR, also written Dewar or Deehwar in northern India, the village deity, the deity under whose care the village is placed—the "genius loci" to whom, at each harvest, a portion of grain is set apart. The corresponding term in the North-West is T'hanaputee (the lord of the place.) In Bundlecund, "Gram Deota" or "Gramma-deva." In Saugor he is styled Miroyea, from the fact of his being the guardian of boundaries. The Deewar is very commonly,—and even where these local names prevail, styled Bhoomia from Bhoom, land. The occupation of the Deewar is very much like that of the Roman Lares Rurales

"qui compita servant,
"Et vigilant nostrâ semper in urbe Lares."

The Dehwar deities have various names, such as Kutesuree, Burnaichu, Hunwut, Bhoom Sen, Chanwur, Casheenath, Munsa Ram, Hurdour, Rutnoo, Huree Ram, Jharkhund Eesoor, Kall Sen, Bisharee: oft-times they are the spirits of good men, of brahmins or village heroes, but who, when they become objects of worship, come to be generally considered very malicious devils; and oft-times they are nothing but mere epithets of the Dii Majores. In some places their images are of male; in others of female, figures. In many places the villagers, for fear of misrepresenting their Gramma Deota, erect a stone without form or feature; like the si Deo si Deæ of the Romans, which ambiguous expression was addressed to their tutelary gods, to obviate all chance of mistake. The worship of these village gods is fixed to no stated day. In some places, it occurs on the 14th of every month; in others, on the full moon of Cheyt; at others on the full moon of Katik, and so on. The unshapen stone or log of wood is a common form of the village deity of the peninsula, but Hanuman is a frequent form between the Nerbudda and the Kistnah rivers, and to the south is the Ai, the Amman or Amma or some hero. It has been supposed by Doctor Stevenson of Bombay, that these Deewar, or Grama Deota, are the remnants of the ante-brahminical religion; but the supposition cannot be received as correct regarding the N. W. Provinces, though it may be conceded with respect to the gods of the South of India that there are many circumstances of their worship which are not of hindoo origin.—*Elliot, quoting Bombay Literary Transactions, Journal R. A. S., Nos.* ix *and* x. *Buchanan's Eastern India,*

Vol. ii, *pp.* 138, 352, 478; *Wilson's Hindu Theatre, Vol.* i, *p.* 21, *and Vol.* ii, *p.* 64.

DEIFIED WARRIORS, are largely worshipped in the peninsula of India. Rama, one of these, was the leader of one invasion of the southern part of the peninsula of India and of Ceylon. On that occasion he advanced into the forests of Danda Cāranya, scattering the prior inhabitants, as he advanced, whom he described as Rakshasha and demons, driving some of them into the forests and mountain retreats, where they still reside in a barbarous freedom, and reducing others to the state of predial slavery, in which the Pariah, the Pallar, Cherumar and other humbled races are now dwelling in the plains. To such invasions is owing the circumstance that each province in India has its own peculiar helot race; and each range of mountains and each forest tract, its own tribes of wild savages either wholly independent or partially subject to their more civilized neighbours in the open country. We may instance the Pahari of the Rajmahal hills on the banks of the Ganges, and from their locality westwards through all the races in the Vindhya hills, the Meena, the Mhair, the Bheel, the Koli, southwards through the races in Bustar and Gondwana. Amongst the Sonthal, the Gond, the Koud, Chenchwar, Souriah, the Yanady, the Irular, the Kurumbar, the Beder, Kallar, to the Malayali or mountaineers in the south; an infinite succession of races and tribes with customs and speaking languages, differing greatly from the inhabitants in the plains; besides whom are numerous migratory races, as the Korava, Wadawar, Yerkalwar and Pardi. The ancient Sanscrit writers give other names of ancient races with whom the Arians came in contact in their advance to the Ganges, some of which cannot now be traced.

DEIG, a town and fortress in Hindostan. A battle was fought and won, here, by the E. I. Company's troops under Lord Lake, on the 13th November 1804, and on the 23rd December 1804, the fortress of Deig was taken. See Battles.

DEIGWUR, a town in Hazareebagh.

DEIR, a town of Mesopotamia.

DEITY, see Deo; Deva. Hindoo.

DE KOROS, Alexander Csoma, a Hungarian, who travelled on foot from Hungary to Tibet. See Csoma.

DEIN, Hind. Oryza sativa.

DEKHANI BROWN HEMP, Bombay. Crotalaria juncea.—*Linn.*

DEL, Singh. Artocarpus hirsuta, also A. pubescens.—*Willde, Lam.*

DELA, Hind. Jasminum hirsutum.

DELADHA, the reputed tooth of Buddha, in the Malegawa temple at Kandy, is the most devoutly worshipped relic of their religion, which is possessed by the buddhist nations of the East. Long before the christian era it was adored by the buddhist sovereigns of Orissa, and was originally deposited in the great temple of Jagganath, then a buddhist foundation. Its first deposition in Ceylon was in the fourth century of christianity. The buddhists of Ceylon have a tradition, that whoever can succeed in retaining it must of necessity become the sovereign of the country. The Chinese traveller, Fa-Hyan, mentions amongst the precious relics worshipped in the fifth century by the buddhists of Ladak *a vase in which Buddha had spat*, and one of his *teeth*; another tooth was similarly cherished by the king of Nakia, in Affghanistan, eastward of Ghuzni. In an adjoining monastery the monks preserved the cuttings of his hair and nails. Fa-Hyan also describes a *shadow* of Buddha, which was shown to him at Nakia, but admits his inability to describe the process of its preservation.—*Tennent's Christianity in Ceylon, p.* 239. See Buddha.

DELEMI, the Amir Azan, Delemi, built the dam called Band-i-Amir, the Bend-Amir of Europeans. See Bendamir.

DEHLI. About 15 centuries before the christian era, the town of Indraprestha was in existence on the Jumna, in the vicinity of the site occupied by the modern Dehli. At present, the only remnants of Indraprestha, are the Negumbodghaut and the Puranah Killa or Indrapat, but it was one of the five "pat" or "prastha," viz., Panipāt, Sonpat, Indrapat, Tilpat and Baghpat, which Dhritorashtra gave to the Pandu. Now, however, Purana Killa and the Negumbodghaut on the Jumna are the only places which can be pointed to as probably connected with the ancient Indraprestha, and the ghaut seems to have been a sacred place of pilgrimage, even before the Pandu family settled there. The

people still call Puranah Killah, Indrapat, though Hamayun new named it Din-Panah and Sher shah, styled it Sherghur. In Puranah Killah is the Keelar Kona mosque, which was commenced by Hamayoon and finished by Sher shah. It has five horse-shoe arches, decorated with blue tiles and marble. Indraprestha was about five miles from ancient Dehli. Thirty princes of the line of Yudishthira succeeded him on the throne, but only their names are known, and the last of them was Kashemaka, who was murdered by his minister, Viserwa, whose line of fourteen princes held sway for five hundred years. The Goutamah line of fifteen princes succeeded, it is said, by Mahraj murdering the last of the Kashemaka, the last of them being Ultina, and were succeeded by the Maurya. In the times of Buddha, of Alexander, of Seleucus, no allusion occurs to the existence of Indraprestha. The last of the Maurya was slain by the rajah Kemayoun styled Saka-ditya, or, chief of the Saka, who subsequently fell before Vikramaditya, and Avanti or Oojein became the capital. Dehli was then in existence, because Vikramaditya was described as possessing it,—"Dilli-pat-kahayo" became king of Dehli.

The origin of the name of Dehli is obscure. Ancient Dehli was five miles distant from Indraprestha on a rocky hill, to the S. W. in the interior, and the site is eleven miles from the modern Dehli. It is surmised that on the removal of the capital to Oujein, the cities in that locality lay waste and desolate for eight centuries. Fa-Hiang A.D. 400 and Hwen Thsang, who travelled in the eighth century (A. D. 750), make no mention of Dehli, nor is it mentioned in the time of Mahmoud who sacked and plundered both Muttra and Thanesur. In 1052, however, Anangpal re-built it.

The oldest of all the monuments in Dehli is the edict column of Asoca. The Lat of Ferozshah, in the Kotila, is an edict column of Asoca. It is supposed to have been brought from Shrughna, in A.D. 1356 by Feroz Shah, to have been brought on a truck to Khizrabad and thence by water to Dehli, then called Ferozabad, and set up in the court-yard of the palace of Feroz. Its head is now bare, but so late as A. D. 1611, when William Finch was there, it had a golden pinnacle, which gave it the name of Minar-i-Zarin, or golden minaret. It is a single shaft of pale pink sandstone, and like all Asocas pillars is 42 feet 7 inches high, of which the upper 35 feet are very highly polished. The next in point of antiquity is a solid shaft of mixed metal upwards of 16 inches in diameter, and about 60 feet in length. The greater part of it is underground, and that which is above is 22 feet high. The ground about it has marks of a recent excavation, said to have been carried down to 26 feet without reaching the foundation on which the pillar rests, and without loosening it in any degree. The pillar contains about 80 cubic feet of metal and would weigh upwards of 17 tons.

The iron pillar standing nearly in the middle of a grand square, records its own history in a deeply-cut Sanscrit inscription of six lines on its western face. Antiquaries have read the characters and the pillar has been made out to be 'the arm of fame (Kirttibhuja) of raja Dava.' He is stated to have been a worshipper of Vishnu, and a monarch who subdued a people on the Sindhu, called Vahlika, probably the Bahika of the Punjab, and that he obtained with his own arm an undivided sovereignty on the earth for a long period! The age in which he flourished is, therefore, concluded to have been about the year B.C. 319, the initial point of the Balabhi or Gupta era. The most widely prevalent tradition attributes the iron pillar to the Pandoos, of whose heroic age it is believed to be a token. Major Archer heard that 'as long as the pillar stood, so long would Hindoostan flourish.' Mrs. Colin Mackenzie says, that 'as long as this pillar stands, the raj or kingdom has not finally departed from the Hindoos.' The Kutub Minar is at present 238 feet, 1 inch high above the ground, but tradition says it was once 300 feet, and in 1794 the measurement was 250 feet 11 in. The base of this minar is a polygon of twenty-four sides, altogether measuring 147 feet. The shaft is of a circular form and tapers regularly from the base to the summit. It is divided into five stories, round each of which runs a bold projecting balcony, supported upon large and richly-carved stone brackets having balustrades that give to the pillar a most ornamental effect. The exterior of the basement story is fluted alternately into twenty-seven angular and semi-circular faces. Up to the third story the Minar is built of fine red sandstone. From the third balcony to the fifth, the building is composed chiefly of white Jeypore marble. The hindoo architect has not failed to record his undertaking without the usual hindoo invocation, Sri Viswakurma prasade rachita 'built under the auspices of Viswakurma,' the celestial architect of the hindoos. The object is at once apparent to the spectator that of a Mazinah for the Muezzin to call the faithful to prayers. The Kootub seems to have been commenced in about A. D. 1200, and finished in 1220. The mausoleum tomb of Hamayun, with its white marble dome is a conspicuous object for miles around. It cost 15 lacs of

rupees and was erected by his widow Hamida Banu begum, who is also interred near.

Bhoot Khana. In Pirthiraj's capital, were twenty-seven hindoo temples, of which several hundreds of richly-carved pillars still remain to attest both the taste and the wealth of the last hindoo rulers of Delhi. The Bhoot Khana is a colonnaded court-yard, the materials of which were obtained from the demolition of the hindoo temples.

The *Alia Durwaza*, built by Ala-ud-Din, A.H. 710, A.D. 1310, is a beautiful specimen of Pathan architecture.

At the S. W. corner of Siri or Shahpur is the Roushan Charagh built by Feroz Shah as a shrine to the memory of a famous saint

The fortifications of Toghalaqabad form a stupendous structure.

Inside Delhi is the Jumma Musjid close to the Chandni Chouk.

The Shalimar gardens were made by the emperor Shah Jehan at a cost of a crore of rupees.

The Zinat Masjid called also the Kumari Musjid, was built by Zinat-un-Nissa, the spinster daughter of Aurungzeb.

During the rebellion of 1857, the Delhi massacre occurred on the 11th May 1857. Delhi was assaulted on the 14th September 1857.

From the 14th to the 17th of September, the Church, the Kutcherry, the College, the Kotwallee, the Magazine, and the Delhi Bank House were one after the other carried and recovered. On the 18th the line of communication between the magazine and the Cabul gate was completed. On the 19th the Burn bastion, near the Lahore gate, was taken possession of by a surprise. This bastion is so called from Colonel Burn, who with a handful of men made a most memorable defence of Delhi in 1804 against an overwhelming army of Holkar and the cannonade of a hundred and thirty guns. Sir D. Ochterlony, then Resident, wrote of this defence that it cannot but reflect the greatest honour on the discipline, courage and fortitude of British troops in the eyes of all Hindoostan to observe that with a small force they sustained a siege of nine days, repelled an assault, and defended a city ten miles in circumference, which had ever before been given up at the first appearance of an enemy at its gates.' The 20th of September was the day of the final capture of Delhi. On that day the imperial palace was entered and found deserted. The main picket of the British forces was at Hindoo Rao, on the top of the ridge that is to the north-west of the city. The chief efforts of the rebels were directed against this post of the besiegers. From the 8th of June 1857, until the fall of Delhi, it had had to sustain twenty-six attacks. The heavy siege guns arrived in Septembe when five batteries were constructed and some fifty pieces of artillery opened their fire upon the doomed city. The 14th of September was the great day for the storming of the city of Delhi, and the attacking force was divided into four columns, with a reserve. The gallant party fixed upon to blow open the Cashmere gate consisted of Lieutenants Salkeld and Home, Serjeants Carmichael, Burgess and Smith, Bugler Hawthorne who accompanied the party to sound the advance when the gate was blown in, and eight native sappers under Havildar Madhoo to carry the bags of powder.

The inscriptions on the pillars at Delhi and Allahabad, and on the Tirhut pillars at Mathiya, Delhi and Radhiya, have long ago been deciphered and translated by the remarkable ingenuity of Mr. James Prinsep. The inscriptions on the rocks at Junagiri in Gujrat, and at Dhauli in Kuttack, were also interpreted by him. A supposed third version of the rock inscriptions (but in the Ariano-Pali character), which was found at Kapur-digiri, near Peshawur, has been carefully collated with the others by Professor Wilson. Many short inscriptions from Gaya, Sanchi and Birat, as well as from the cave temples of Southern India, have also been published at different times, but, with the single exception of the edicts in the Rock Inscriptions, which contain the names of Antiochus, Ptolemy, Antigonus and Magas, the inscriptions in the able work of Major Cunningham are of greater interest, and of much higher importance, than all that had before been published.

The highest population of Delhi was two millions in the time of Aurungzebe that of Rome having been three millions, and that of London being now somewhere between the two numbers. Three years before the mutiny the number returned was upwards of 150,000. Delhi is a city of great antiquity, from which, from pre-historic times, much of India has continued to be ruled. One dynasty, the Pandava, ruled there from B. C. 1120 to B. C. 610. Delhi is in L. 28° 38′ 9″, N. L. 77° 13′ 1″ E. and 825 or 827 feet above the sea. It is on the right bank of the Jumna, 120 miles above Agra, which is also on the right bank. The river washes the east face of the city, forming the chord of an arc of which the rest of the city wall is the perimeter. The length from north to south is about two miles, the extreme breadth from east to west, about three miles: the area enclosed within the walls probably four square miles. The walls are built of stone and lime, entirely surround the place, and consist of long curtains with bastions at different intervals, the whole

DELHI.

defended by a ditch and a good glacis. The bastions were of modern construction and capable of mounting twelve to eighteen guns each. There was, however, only a musketry parapet along the connecting walls, there being no terreplein behind the curtains for guns. The king's palace was on the river side, and was a native fort of considerable size, with high walls of red sandstone, flanked by round towers and defended by a ditch. Close to the palace and connected with it by a bridge over an arm of the river, was an old native fort the Selim-ghur. From the centre of the city rises the Jumma Musjid, and prior to the mutinies of 1857, the Church, the Delhi Bank, and the Ordnance Magazine, were all within the walls. The breadth of the Jumna at Delhi is about 1,000 yards, the river there is very winding and shallow, with numerous sand banks, the deep channel being very narrow. Of the famed budd'hist antiquities of India, there is a column at Delhi, another at Allahabad, one at Mattiah and one at Radhiah. The inscriptions are the same on all the columns. No images of Buddha, no temples or relics, are mentioned. But Dharma (the doctrine) is to be taught under the sacred tree. The chief object is the interdict of the slaughter or destruction of any living creature, of the abolishment of torture in punishments, of the punishment of deaths for criminals, and exempting animals from work on 8th, 14th and 15th of the moon, which days do not quite accord with modern Budd'hist practices. The name of Buddha, Gotama, or Sakya Muni, is not mentioned; but the expression, Sukatam Kachhato, which Mr. Prinsep supposes is intended for Sugatam Gachhato, or Sugato, (welcome) a name of Buddha; and the inscriptions have frequent references to the acts to be done under the holy fig-tree, Buddha's Ficus Indica. The inscription opens in the twenty-seventh year of the king, Devanampiya Piyadasi's anointment. Asoka distinctly says, the object of his doctrines is to increase the mercy and charity, the truth and purity, the kindness and honesty, of the world. The king, says he, prays for those of every creed that they, with him, may attain eternal salvation.

The language of the inscriptions is Pali, but of an old character, between Pali and Sanskrit, possibly the original of both. By the Mahawanso, the fourteenth year of Asoka's reign corresponds to the 232nd year after the death of Buddha, and therefore to B. C. 311 and the inscription being in the 27th year of his reign, the date is B. C. 298. The Dipawanso says, Asoka was inaugurated 218 years after the death of Sakya, therefore B. C. 325. The character used in the inscriptions is the Lat, or oldest form of Deva Nagari, which latter is deducible from it, letter by letter through successive ages, excepting the new or additional Sanskrit letters. The religion mentioned is buddhist, of this there can be no doubt, from the injunctions to teach "*Dharma*" under the sacred tree, and turning the wheel of the law, the mention of the ascetic disciples; certain dogmas, and the observance of the three holy days, monthly, mentioned by Fa-hian, preachings, &c., and Babhana (brahmans) are to be converted, and kindness and condescension shown to brahmans and sramans. The king mentioned is Piyadasi, or Asoka, emperor of all India, identified as Asoka by the Hon. Mr. Turnour, from the Pali Dipawanso, which states that he was the grandson of Chandagutto, and viceroy of Ougein.

The Iron Pillar at Delhi has an inscription in Sanskrit, no date, but scarcely earlier than A. D. 800, the character looking more modern than Kanouj Nagari. Of the character used in the inscription, many letters agree with the Kanouj Nagari, but the general aspect is more modern. The religion mentioned is the Vaishnava, but no invocation or names of gods. The king mentioned is prince Dhava, an usurper, at Hastinpura. This inscription is punched upon the iron pillar, and the only thing remarkable in it is the mention of the Bactrians, called Vellakha, being still in Scinde. From the compound letters used, the inscription must be long after the fifth century.

The Stone Pillar at Delhi has an inscription in Sanskrit of date, Samvat 1220, or A. D. 1163. The character used is almost modern Deva Nagari and the religion mentioned is hindoo. The king mentioned is Vesala Deva. This inscription was cut upon one of the old lat, or buddhist columns, to record Vesal's victories, but not against the budd'hists, because they were gone.

In A. D. 1191, Prithiraj, a heroic king of Delhi, utterly routed Mahomed Gori, at Tiruri, 14 miles from Thaneshur, and compelled him to recross the Indus. But in 1193 Mahomed re-entered Hindoostan with a mixed Turk, Tartar and Affghan army, defeated the hindoo chiefs, murdered the king of Delhi, took Ajmir and returned to Ghazni. He left his general, Kutub-ud-din, his slave, in command, who conquered Merut, Coel and Delhi, which last now became the seat of the mahomedan government in India. In 1195, Mahomed returned with a large force, and between Canouj and Etawah defeated and slew Jye Chandar, a Rajput king of Canouj, and the oldest hindoo monarchy was then overthrown. Bakhtiar, a Ghilji, one of Kutub-ud-din's generals conquered Behar, and after-

wards overran and conquered Bengal, and from this time for five centuries and a half, Bengal was under mahomedan rule. Delhi, was conquered by Shahab-ud-din A. D. 1200. In A. D. 1219 the dominion was extended by Kutub-ud-din Aibek, whose successors were Aram shah and Altamsh. Altamsh conquered Multan, and died A. D. 1235. From this year, till A. D. 1246, there were five successors, viz., Feroz Shah, Rukn-ud-din ; the princess Razziah-ud-din ; Bahram Shah ; Masud Shah Ala-ud-din and Mahomed Shah Nassir-ud-din ; the last made great conquests in India, and was succeeded by Ala-ud-din, who was alive in A. D. 1317. In A. D. 1398, sultan Mahamud was reigning, and it was this emperor whom Timur conquered in that year. From that time till the revolt of 1857, the Timur dynasty continued to be connected with India. But from Timur until Baber's time, the connection was not close. Baber in A. D. 1526 conquered sultan Ibrahim Lodi, and died four years afterwards A. D. 1530. Humayun succeeded and died A. D. 1556. Akbar ruled till A. D. 1605, and of all the descendants of Timur he was the most illustrious. His three sucessors, Jehanghir, died 1627, shah Jehan died 1658, and Aurungzebe who died 1707, retained great power, but it was bought at the price of endless crimes, and from the death of Aurungzebe in 1707 the Great Moguls fell into insignificance, escaping by submissiveness, the whirlwinds of Nadir Shah, of Ahmed Shah, and of the Mahrattas. Bahadoor Shah died at Lahore in February 1712, Jahandar Shah and Farraksir ruled until A.D. 1719 ; Raffi-ud-Durjat, Raffi-ud-Dowlah and Mahomed Shah till 1739, when Tamas Kuli Khan took and sacked Dehli and retired to Persia.

The defeat of the Delhi sovereigns and Nadir's entry into the capital, took place on the 13th February and early in March 1739 respectively, but were not known in London until the 1st of October. The emperor shah Alam entered Delhi with the Mahrattas on 22nd December 1771. He continued a mere state prisoner in the hands of the Mahrattas till 1803, when he was released by Lord Lake, and brought under the protection of the British Government. All the territories and resources assigned for his support by the Mahrattas were continued to him, and a pecuniary provision was granted in addition, fixed at Rupees 60,000, but afterwards increased to Rupees 1,00,000 a month. Shah Alam died on the 19th November 1806, and was succeeded by Akbar Shah, who was succeeded in 1837 by his eldest son Bahadoor Shah. He was restricted to the neighbourhood of Delhi, he was not allowed to confer titles or to issue a currency, but he had the control of Civil and Criminal Justice within the palace. When the mutiny of 1857 broke out, the mutineers in Delhi took possession of the town. fort and stores and applied to the king. Bahadoor Shah put himself at the head of the movement. At first his conduct was most vacillating, but he subsequently identified himself with the rebel cause. After the fall of Delhi on the 20th September 1857, he was captured and tried on the charges of, 1st, aiding and abetting the mutiny of British Troops ; 2nd, encouraging and assisting divers persons in waging war against the British Government ; 3rd, assuming the sovereignty of India ; 4th, causing and being accessory to the murder of Christians. He was convicted on each charge on the 9th December 1858, and sent to Rangoon, where he died in 1862, and this, after nearly five centuries of sovereign power, the Timurides ceased to reign. Of all the countries over which the members of this family once ruled, India alone has made any advance in material prosperity, since the days of their power. Samarcand, the capital of Timur, is a desolate heap of ruins ; Andecan, the beloved home of Baber, is in the possession of Uzbek savages. The once rich and opulent Herat, the abode of learning, the brilliant capital of Shah Rokh and Hosein Mirza, the native land of poets and historians, is now the ruinous fortress of an Affghan. Shiraz, the beautiful city, made immortal by the songs of Sadi and Hafiz, where Ali of Yezd wrote the life of the mighty Timur, is reduced to the condition of an impoverished provincial town, in the kingdom of the Kajar kings of Persia. Lahore and Delhi are noted for their gold. woven fabrics and light silk muslin fabrics interwoven with gold threads, as well as for all kinds of work in tinsel or kalábatun.—*Markam's Embassy, p.* 1, *Vol.* iv. *Cunningham's Sikhs, Rennell's Memoirs, p.* 1, *Vol.* vi. *Elphinstone's History of India, p.* 37, *Vol.* ii. *Count Bjornsterna's British Empire, p.* 98. *Aitchison's Treatises, Vol.* i, *pp.* 1 *to* 4 *and* 285. *J. DELPHI, a natural cave in the earth at the town of Delphos in Greece, where was an ancient oracle and place of worship. Delphi is synonymous with the hindoo Yoni.

DELPHINIDÆ, a family of mammals of the order Cetaceæ, or the whale tribe, which live in the ocean. Amongst them are the whales, the largest of creatures now existing; also the dolphins, the porpoises, and the dugong. They have fin-like anterior extremities, the posterior extremities being absent, or rather their place supplied by a large horizontal caudal fin or tail. They have no hair on their skin, have no outer ear, and the bones of the neck are so compressed as to leave the animal without the appearance of a neck. Some of them eat plants, or are phytophagous; some are zoophagous, or animal-eaters. Seven new species of cetaceans have been described from the Bay of Bengal, six of the family Delphinidæ, the seventh belonging to the sperm whales, Physeteridæ, to be called Physeter (Euphysetes) simus. The order of the Cetaceæ or whale tribe, consists of 2 Families, 8 genera and 21 species,

A dolphin of the Indian Ocean.

Phocæna communis.

Phocæna Rondeletii, *Willoughby.*	Delphinus phocæna, *Linn.*
Common Porpoise.	Porpesso.

Grampus Sakamata.—Schlegel.

Sakam Kuzira. JAPAN.

Found off the Coast of Japan.

Grampus Sieboldii.

Naiso Gata. JAPAN.

A native of the Coasts of Japan.

Grampus macrorhynchus.—Black fish of the south sea whalers. It inhabits the south seas.

Delphinapterus Peronii.

Right whale Porpoise of whalers.

It is found on the Brazil bank, off the Coasts of New Guinea and the higher southern latitudes. It lives in large shoals, and its flesh is esteemed a delicacy. It is black, but the beak, the pectoral fins and underpart of the body are white.

Delphinus. Sea-faring people call the species of this genus, bottle-nose, bottle-head, flounder head, grampus, porpoise, porpesse, or porpus, sometimes even whale, and give the name of dolphin to the Coryphæna, a scomberoid fish which changes colour when dying. There are several species of Delphinus recognized.

Delphinus delphis. The Dolphin, attains a length of 9 to 10 feet. Greek legends make it the friend and companion of man.

Delphinus phocæna. The porpoise, attains a height of 5 or 6 feet.—*Hartwig.*

Delphinus Orca. The Grampus, measures 25 feet in length, and is 12 or 13 feet round. It is the most voracious of all the Dolphin tribe.

Delphinus Heavisidii. The Hastated Dolphin, inhabits the south sea and Cape of Good Hope.

Delphinus obscurus. The Dusky Dolphin. Inhabits the southern ocean andCape of Good Hope.

Delphinus Abusalam. Inhabits the Red Sea.

Delphinus Eutropia. Inhabits the Pacific Ocean and Chili.

Delphinus Novæ Zealandiæ. The New Zealand Dolphin. Inhabits New Zealand and Cape Gable.

Delphinus Forsteri. Forster's dolphin, inhabits the Pacific Ocean between New Caledonia and Norfolk Island.

Delphinus Sao. inhabits Madagascar.

Delphinus longirostris, the Cape Dolphin inhabits the seas about the Cape of Good Hope and the Southern Ocean.

Steno Malayanus.

Dolphinus plumbeus *Dussumier. Cuv.*	Delphinus Malayanus, *Lesson* apud *Cuv.*
Param puan, Maut, Malay.	Dolphin Ventre Roux of Paris Museum.

Inhabits the Malabar Coast and coasts of Penang. It is numerous and rather heavy in its movements, but is rarely captured, except by chance in the stake nets. It eats small fishes, Clupea and Glyphisidon cœlestinus.—*Cuv.*

Steno frontanus, inhabits the Indian Ocean and the Pacific.

Platanista Gangetica.—Gray.

Delphinus Shawensis of Blainville.	D. Gangeticus, *Roxb.*
Platanista of Pliny.	Sou-sou of India.
Dauphine du Gange. F. Cuv.	Susa of Buffon.

Inhabits the Indian seas, the Ganges and Irawaddy.—*Cat. Mam. Mus. E. I. C. Hartwig.*

DELPHINIUM, a genus of plants of the natural order Ranunculaceæ, of which several species, D. ajacis, D. Brunonianum, D. consolida, D. glaciale and D. oliverianum occur in India and the south of Asia—*O'Shaughnessy, Voigt.*

DELPHINIUM AJACIS.

Larkspur, ENG. | Na-furman, HIND.

is cultivated in gardens in India during the cold season. The properties of the seeds agree with those of the stavesacre kind.—*Drs. O'Shaughn, p.* 169. *Roxb, Royle, Voigt.*

DELPHINIUM BRUNONIANUM.

Musk plant, ENG. | Nepari, PUNJABI.

Grows in the Sutlej valley between Rampur and Sungnam at an elevation of 14,000 feet. Smells powerfully of musk.—*Cleghorn's Punjab Report, p.* 67.

DELPHINIUM GLACIALE, of East Nepaul, is one of the most alpine plants in the world, growing at an elevation of 17,000 feet. It is abundant in the valley of the Chomiochoo near Tungu, in Thibet, and exhales a rank smell of musk ; it very closely resembles *D. Brunonianum* of the western Himalaya. The latter plant smells powerfully of musk, but not so disagreeably as this does.—*Hooker's Him. Jour., Vol.* ii, *pp.* 95 *and* 269.

DELPHINIUM PAUCIFLORUM.

Judwar, Hind. of Bombay? | Nirbisi, Hind. of Himalaya.

A tuberous root in Sirmoor, without poisonous properties. The best comes from Lahore.—*O'Shaughnessy, pp.* 167 *and* 168.

DELPHINIUM STAPHISAGRIA, the Stavesacre or Louse-wort, a biennial plant, native of the Levant, Teneriffe and Asia Minor. The powder taken internally acts as a violent cathartic and emetic ; it is made into an ointment used for destroying vermin in the hair. The seeds intoxicate fish.—*O'Shaughnessy, p.* 168.

DELPHINUS MALAYANUS, *Lesson* apud, *Cuv.*, syn. of Steno-malayanus.

DELPHINUS MELAS, *Terns.* syn., of Neomeris phocenoides.—*Gray.*

DELPHINUS PHOCÆNA, *Linn.*, syn. of Phocæna communis. See Delphinidæ.

DELPHOS, a town in Greece where was an ancient oracle and place of worship in a cave of the earth called Delphi, the word Delphi being synonymous with Yoni. See Delphi, Yavana ; Yoni.

DELTA of the Ganges and of the Irawaddy. See Ganges, Irawaddy.

DELUGE, tradition of the. See Avatar.

DELUNGHIDI, SING. Pomegranate.

DEMATUR. See Yavana.

DEMAVEND, a high road leads from Teheran by the town of Demavend to Ask, the capital of the district of Laurijan. The hot baths of Demavend, are situated in this locality. They are two in number : one, the tepid bath, is situated within 100 yards of the town of Ask, on the right bank of the river. It rises in an oval basin, measuring about 30 feet by 20, and about 3 feet in depth, formed by deposit from the spring, which gushes up with great force in the centre of the basin, together with a considerable amount of gas. The water is composed of sulphur, iron, soda, and magnesia. The other spring, which is situated about 2 miles further down the valley, and on the mountain of Demavend, is so intensely hot that the water has to be conducted through canals for some distance before it is collected in an artificial basin, in which the patients bathe. The water is also composed of magnesia, iron, and sulphur ; but the latter is in much larger proportions, and naphtha in great quantities, also forms one of the ingredients. Near Ask there is also a spring of cold water, strongly impregnated with iron. From Ask a road leads down to the town of Amil, but it is extremely dangerous, lives being lost annually from mules and their riders falling over the precipice, along the face of which it runs. Demavend bears N. 65° E. of Teheran, about 40 miles distant, and its pale lofty summit forms a magnificent pyramid as it shoots up from the high range of El-burz. The cone of Demavend is doubtless of volcanic origin, and appears to have been formed partially by having been forced up above the level of the mountain by some subterranean agency, but more by the debris and lava thrown out from the summit when the volcano was still in activity. From a distance it appears to be nearly smooth, and to slope evenly at an angle of about 45° from top to bottom. On a nearer approach, however, it becomes evident that the cone consists of a number of ridges, which run from the summit to the base, leaving between them deep ravines filled in general with snow and ice, beneath which lies a mass of debris fallen from the upper part of the mountain. By observations of the height of the mountain it was ascertained to reach the enormous height of 21,520 feet. The cone of Demavend terminates in a crater about 85 yards in diameter, which is nearly surrounded by jagged rocks.—*Chesney, p.* 15. See Ararat.

DEMER-HINDI, TURK. Tamarind.

DEMETRIUS, Grecian kings, successors of Alexander, rulers in Syria, there were three of this name :

Demetrius I, surnamed Soter, B. C. 162.

Demetrius II, surnamed Nicator, B. C. 147.
Demetrius III, surnamed Eucærus, B. C. 94.

DEMOCRITUS. There is authority for believing that Democritus went to Egypt and Babylon, but his more distant travels to India are legendary.

DEMODURA, a variety of the Saligrama. See Salagrama.

DEMOLE, a light wood, which is made into planks and employed where durability is not much required.

DEMON-WORSHIP is everywhere observed amongst the non-Arian races in India, but is perhaps carried out to its fullest extent and most openly amongst the Shanar people in the south of the Peninsula. This worship has little or no similarity to the hindoo cultus, being mostly directed to appease the malignancy of evil spirits, the shades, or as they are called "saya", of persons who have recently died. In some parts of India there is a mixing up of some parts of demon and spirit-worship with that of the hindoo deities. In the Dekhan, the deified sage Vithoba and his early expounders are largely worshipped as local divinities. Byroba, the local deity of herdsmen, is largely worshipped in the Dekhan, as also is Kandoba, the deified hero of shepherds. Outside almost every hindoo village in the Dekhan, is a circle of large stones, sacred to Vetal, the demon-god of the non-Arian races. Amongst the evil genii of all India, is a being called Rakshasa, of giant bulk, terrible teeth, who feasts on dead bodies. The bhoot, acknowledged all over India, more resembles the ghost of Europe. The Rev. Dr. Caldwell in his work on the Devil-worship of the Shanar, has shown how continuously the people of India are making new deities or demons. On the left bank of the stream at the village of Assaye at which Scindiah's artillery was posted during that battle, is a tree, beneath which is the tomb of an officer who fell during the battle, and his spirit is punctually worshipped by all the people of Assaye and the neighbourhood. Sir Bartle Frere mentions that he accidentally found an order in existence at Government House, Dapoorie, handed down by each non-commissioned officer, for the native sentry on guard to present arms if a cat or dog, jackal or goat, entered or left the house or crossed near his beat during certain hours of the night, because it was a ghost of a former governor who was still remembered as one of the best and kindest of rulers. The rajah of Wanparty, one of the Reddi race, who have founded small principalities along the banks of the Kistnah river, died in 1868 at Hyderabad. He had led a turbulent life and retained to the last much of the spirit of his youth. At the close of that year, an outbreak of cholera occurred in that neighbourhood, which the people attributed to the spirit of Wanparty, and they made a clay image of him, riding on an elephant, and placed near him the clay image of a Brinjari and worshipped all with the Maha Bali sacrifice. In India the Jan, the Gin of the Arabian nights, is only known amongst the mahomedans. In Scinde, the Jan resembles the Pwecca or Puck of Britain. The Jan of the Baluch hills is wayward and often morose, but not necessarily malignant. He is described as dwarfish with large eyes, and covered with long hairs, and often changes to the form of a camel, goat or other animal. On meeting a Jan, it is essential not to be alarmed, to use civil language. The Jan can become the servant of man and work hard.

The Cobra or hooded-snake, is often personified in Indian story. In many parts of western India, after killing a cobra, the non-Arian races give it all the honors of a cremation, assuring it with many protestations that they are guiltless of its blood; that they slew it by order of their master, or that they had no other way to prevent its biting the chicken or the chickens.

In Ceylon is a class of demi-gods, who, under the name of Yakshyo are supposed to inhabit the waters, and dwell on the sides of Mount Meru, and who are distinguished not only for gentleness and benevolence, but even by a veneration for Buddha, who, in one of his earlier transmigrations, was himself born under the form of a Yakshyo. The malignant spirits of Ceylon are the Yakka, who are the authors of indefinite evil, and the Singhalese have a demon or *Sanne* for each form of disease, who is supposed to be its direct agent and inflicter, and who is accordingly invoked for its removal; and others, who delight in the miseries of mankind, are to be propitiated before the arrival of any event over which their pernicious influence might otherwise prevail. Hence, on every domestic occurrence, as well as in every domestic calamity, the services of the *Kattadia* or devil-priests are to be sought, and their ceremonies performed, generally with observances so barbarous as to be the most revolting evidence still extant of the uncivilized habits of the Singhalese. Especially in cases of sickness and danger, the assistance of the devil-dancer is implicitly relied on: an altar, decorated with garlands, is erected within sight of the patient, and on this an animal, frequently a cock, is to be sacrificed for his recovery. Another kind of demon-worship in Ceylon is a debased form of hinduism, where the priest or Kapua is the performer.

Mr. Forbes in the Ras Mala (p. 378) says the bhoot and pret reside, it is said, in the place where funeral piles are erected, in trees which are not used for sacrificial purposes, such as the tamarind and the acacia, in desert places, at the spot where a death has occurred, or at cross-roads,—for which reason people set at these places food for the use of the bhoot. He is most at a loss for water to drink. The pipe of his throat is, it is said, the size of the eye of a needle, and he is continually thirsty enough to drink twelve gallons of water. The watchmen of Wuroon Dev, however, are stationed wherever there is water, to prevent the bhoot from drinking, and the thirst is therefore as continual as it is intense. The bhoot feed upon all kinds of refuse. The goblin of the best class, he, that is to say, whose funeral ceremonies have been duly performed, but who has been debarred from liberation by his own intense affection for earthly objects, is called a "Poorwuj Dev," and resides in his own house or in a sacred fig-tree. The Poorwuj Dev, like the Etruscan Lar, or the Grecian hero, is regarded as hovering about his former abode, averting dangers from the inhabitants and bestowing blessings upon them. He frequently appears in the character of a serpent, and is then treated with great respect by the inmates of the house near which he resides. It is a common belief in Goozerat that serpents are always to be found wherever a hoard is buried, and that these are the bhoot of the deceased owners who have remained upon earth from affection to their wealth. The Arabian Jin also frequents cross-roads; and the fairies of the Scottish low-lands carry bows made of the ribs of a man buried where three laird's lands meet, as in A Midsummer Night's Dream, (*Act* iii, *sc.* 2 :—)

"damned spirits all,
"That in cross-ways and floods have burial."

"Desert places," in Goozerat, correspond exactly with the "dry places," (*αυνδραν τοπαν*) assigned to the evil-spirits in Matthew, xii. 43; Luke, xi. 24. The custom of placing food for spirits is very general throughout the world. In the dialogue of Dives and Pauper, printed by Richard Pynson, in 1493, among the superstitions then in use at the beginning of the year, the following is mentioned :—'Alle that take hede to dysmal dayes, or use nyce observances in the newe moone, or in the new yeere, *as setting of mete or drynke by nighte on the benche to fede alholde or gobelyn.*' The powers which the bhoot and pret exercise are the following :—They take possession of a corpse, and speak through its mouth; they exhibit themselves in the form which they possessed when living; they enter into a living man, and cause him to speak as they please; sometimes they afflict him with fever, or various other diseases; sometimes they assume the forms of animals, and frighten people by suddenly vanishing in a flash of fire; sometimes, remaining invisible, they speak in whispers. A bhoot has been known to come to fisticuffs with a man, and to carry a man off and set him down in a distant place. It is even said that women are sometimes found with child by bhoots.

The Jain shâstras teach a different doctrine in regard to spirits from that which is taught by the Poorâna. They assert that there are eight kinds of Vyuntur Dev, and eight of Wan-Vyuntur Dev, who reside below the earth. Each of these has two Indra, or sovereigns, ruling respectively the northern and southern regions, and who are in colour black, white, or blue. The Vyuntur and Wân-Vyuntur Dev appear upon earth, where they possess the bodies of men, exhibit themselves in various shapes, and perform many strange feats, whence their common name of Kootohulee (or surprising) Dev. Below them reside the Bhuwunputee Dev, who, also, sometimes appear on earth. Below them again are the Nârkina or infernal spirits. Above this earth, in the atmosphere, five kinds of "Devs of splendour" reside :—the sun, moon, stars and others. Above them, in twelve Dev-Loka, the Dev who ride in chariots dwell; these, sometimes drawn by their own desire, or compelled by charms, appear in the world; but they do harm to no one. Above them are nine classes of Grivek, and five of Unootur Veemâni. They are of great power and never visit the earth. Men who have lived a life of austerity and righteousness are born again in these classes of upper or lower Dev, but the sinner is not born in them. Of old, a man who had performed the rite of "Uthum" by fasting for three days, acquired the power of calling the Dev to him, but now, it is said, these Dev never visit the earth at any one's call.

Trees.—It is customary in Guzerat, where people wish to prevent the removal of a jungle tree, that they should paint a trident upon it with vermillion, or, if that be incovenient, that they should collect a number of stones and throw them down at the root of the tree. Whoever, after this, passes by, is sure to add a stone or two to the heap, believing the place to be the residence of a Bhoot. Some, however, throw without taking heed to what they are doing. If the place be one where stones are not easily procurable, a bit of old rag is thrown so as to adhere to the tree, and every one who passes by follows the example once set. They call the spot the "Rag-uncle's." In places where trees are scarce these uncles

are very common, and people are much annoyed with the dread of touching them. The name "uncle" is given to the bhoot by women as a term of respect. Men are less superstitious. Similarly, whenever in any place there is a hillock or mound upon which a few stones have been piled one above the other, every passer-by considers himself bound to add a stone to the heap, considering that the spot is the residence of some Dev, and that if any one raise a little temple there, his house will flourish. Such monuments are also set up in places where a person has been slain or wounded. "Cairns" of this kind are frequently connected with the dead—

"On many a cairn's grey pyramid,
"Where urns of mighty chiefs lie hid"

—*Râs Mâlâ Hindoo Annals, Vol.* ii, *pp.* 379, 380, 386-87. *Brand's Hindoo Annals, Vol.* ii, *p.* 378.

DEMPO OR GUNUNG DEMPO, a peak of a high mountain, in the interior of Sumatra, which was ascended in 1817, by Mr. Presgrave, other two peaks are named Lumut and Berapi.

DEMUKH, a very brave, ancient and independent race of Arab origin; considered as the militia of the district of Persia through which Ouseley travelled.—*Ouseley's Travels, Vol.* i, *p.* 255.

DENAR, a coin of Turkish Arabia. It is the "denarius;" of the Romans: *dirhem* is the *drachma*, and *felus* (in the singular) is the *follis* of the Romans.—*Ouseley's Travels, Vol.* ii, *p.* 490.

DENDENG. The Malay name for the jerked beef of commerce, that is, of animal muscular fibre, preserved by drying in the sun, nearly the only mode of curing flesh in the Archipelago. Dendeng is made of the flesh of deer, oxen and buffaloes, and by the Chinese of that of the wild hog. It is a considerable article of native trade.—*Crawfurd's Dict., page* 120.

DENDLU, HIND. Hypericum perforatum.

DENDRACITTA, a genus of birds of the section A. Magpies, in which are 4 gen., 9 sp., viz., 3 Pica; 4 Dendracitta; 1 Crypserina; 1 Temnorus.

DENDROCALAMUS, a genus of bamboos. D. balcooa prized for its solidity and strength, grows in Bengal. D. strictus, of the peninsula is used for spear shafts, and D. tulda is the common bamboo of Bengal. See Bambusa.

DENDROCYGNA, a genus of water-fowl, known in India to sportsmen as the "whistling duck." They are common to the northern and southern hemispheres. See Aves; Birds.

DENDROPHIS, a genus of reptiles, commonly known as "Tree-snakes," the name being from the Greek dendron, a tree, and ophis, a serpent. They are very numerous in India, where they are called whip-snakes, D. rhodopleuron, *Schlegel*, is a snake of Amboyna, and D. pictus of *Gmelin* is found all over India.—*Mason.* See Dendrophidæ, Reptiles.

DENDROBIUM, a genus of air-plants, of the natural order Orchiaceæ, which occur in south-eastern Asia and Australia. Dr. Wight in his Icones, gives thirteen, Dr. Voigt names twenty-five species, and on the Tenasserim coast there are 15 or more species.

Their names will suffice here:—

album.	densiflorum.	macrostachyum.
aggregatum.	denudans.	paxtonii.
alpestre.	filiforme.	pendulum.
aureum.	formosum.	pierardi.
barbatulum.	flavum.	pulchellum.
bicameratum.	gibsonii.	pumilum.
cambridgeanum.	graminifolium.	purpureum.
candidum.	heterocarpum.	ramosissimum.
calceolus.	heyneanum.	secundum.
cœrulescens.	humilis.	stuposum.
clavatum.	jenkinsii.	sulcatum.
crumentatum.	jerdonianum.	teretifolum.
chrysanthum.	longicornu.	

Of the air plants on the Tenasserim Coast, the most interesting is a dendrobium," the flowers of which are white, with a yellow lip, three or four inches in diameter, and exquisitely fragrant. The plant blossoms in March, but it flowers to the close of October, and may be seen whitening under the emerald foliage of the groves nearly six months of the year. The Burmese call it the "silver flower."—*Mason.*

DENDROCALAMUS BALCOOA, *Voigt*, syn. of Bambusa balcooa, *Roxb.*

DENDROCALAMUS STRICTUS, *Voigt*, syn. of Bambusa stricta, *Roxb.*

DENDROCALAMUS TULDA, *Voigt*, syn. of Bambusa tulda, *Roxb.*

DENDROCITTA RUFA, the pleasingly coloured rufous tree-magpie, Dendrocitta rufa.

DENDROPHIDÆ, a family of harmless snakes; consisting of the following genera;

Gonyosoma oxycephalum, *Boie*, Andamans, Assam, Pegu, Mergui.
" graminеum, *Gunth.*, Khassya.
" rœnatum, *Gray*, Khassya.
Dendrophis pictus, *Gmel.*, Bengal, Assam, Andamans, Arabia, Pegu, Malacca.
Rhodopleuron, *Schl.*, Amboyna.
Chrysopsoelea ornata, *Shaw*, Shanghae, Malacca.
See Reptilia.

DENDROPHILA, a genus of birds of the Family Certhiadæ, viz.

Sub-fam. Certhinæ, 1 gen., 3 sp., viz., 3 Certhia.
Sub-fam. Sittinæ, 2 gen. 1 sub-gen., 6 sp., viz., 1 Trichodroma; 4 Sitta, 1 Dendrophila. See Birds.

DENDROSAURA. See Chamelcons.

DENDRU, HIND. Lonicera quinquelocularis.

DENGI AND PUNSUI. The Dengi is the

common passage and ferry-boat on the river Ganges. It is a comfortless ricketty-looking boat and dangerous to travel in. Caught by the bore even in the middle of the river, if crowded, the dengies are swamped. The "Punsui" is a light and fast boat, longer, broader and sharper than the Calcutta Dengi and more comfortable.

DENGOOYA-KHARA, Beng. Amarantus lividus.

DENISON, Sir William, an officer of Engineers, of the British Army, Governor of Madras for five years and temporarily Viceroy of India, after Lord Elgin's sudden death; his short rule was mainly remarkable for studied inaction, obt. Jan. 1871.—*Thurlow's Company and the Crown, p.* 9.

DENKENACOTTA, a forest, the finest in the Salem collectorate of the Madras presidency. It contains sandal wood and acha wood.—*Cons.*

DENMARK, on the 22nd Feb. 1845, for £125,000 sterling, ceded, by treaty, all its Indian possessions, at Balasore, Tranquebar and Frederick's Nagore, or Serampore.

DENTELLE, Fr. Lace.

DENTHAR, Hind. Callicarpa incana, *R.*

DENTURU, Hind. Hyoscyamus niger, Phytolacca decandra.

DENWAR, a name given by Mr. Hodgson to a border tribe between Nepaul and the Bhot country. See Chepang, Haiyu.

DEO, Deva, Dewa, Sans. A god, a deity: hence Dewalai or dewal, a house of idols, a temple, a pagoda. Diu, Dev, Deo, or Deu, are synonymous with Deva. It is the zeus of the Greeks and deus of the Romans, and is possibly the original of the name of Siva, often called Seo or Sheo or Shev, or Sheb; Devi is a goddess. Deo, is also used to designate a demon, an idol, genii giant, a spirit or shade or ghost and a hobgoblin. See Deva.

DEODAR, Hind. Cedrus deodara, *Loud.*, also the Cupressus torulosa; Juniperus excelsa, and Chickrassia tabularis. The word is also spelled Dewdar, also Devidar, and is most usually applied to the Cedrus deodara. The Conservator of Forests, in his report of 1864 on the Deodar forests in the Jummoo and Kashmir territory, allowing 5,000 first class trees for the Liawa and Uj divisions, estimated the amount on the Chenab with the Bhutna at 35,000, the Marru Wardwan at 32,000, the Jhelum, below Baramula, at 5,000, and for the Kishen-gunga nearly 40,000, an aggregate of 117,000 fine trees, almost as many as the whole number at present available in the Punjab forests in British territory, or leased elsewhere by the Punjab Government.

The mean results of experiments have been

Description of Timber.	Dimensions.			Breaking weight.	Weight reduced to units of			Weight in lbs. ⅜ cubic foot.
	In.	In.	In.		L. 1 ft.	B. 1 in.	D. 1 in.	
Chenab deodar	18	1½	1½	1,348 lbs.	599 lbs.			28·62.
Ravi deodar .	18	1½	1½	1,821 lbs.	808 lbs.			35·75.

DEODAR or Shemanathu oil is an empyreumatic medicinal oil from the Erythroxylon aræolatum.—*Pioneer, M. E. J.R.—Cleghorn's Punjab Report, p.* 137. See Cedar, Cedus deodara, Cupressus torulosa, Diar; Juniperus excelsa. Kelon.

DEODARA of Kulu and the Beas, Cupressus torulosa, twisted Cypress. Duk. Sethia indica, *DC.* Hind., Erythroxylon areolatum.

DEO-DHUNGA, a peak north-east of Kathmandu, in L. 87° E., upwards of 29,000 feet high, and consequently the loftiest yet known peak of the Himalaya. Its name, Dévadhúngá, means holy hill. Déodhúngá and Mount Everest are both "about 100 miles N. E. of Kathmandu;" both are midway between Gosainthán and Kangchun.—*Beng. As. Soc. Jour., No.* v. *of* 1856.

DEOGARH, was once ruled by a Gond dynasty, and was described by Sir R. Jenkins, in his report on the Nagpur province, which contains an outline almost all that is known of the history of these obscure hill tracts before they were annexed by the Mahrattas.

DEOGHUR or Byjnath, a small town in the zillah of Bheerbhoom. It is famous for its temples which are annually visited by thousands of pilgrims from the N. W. of India. Copper, lead and iron-ores are found near. See Bheerbhoom.

DEOGIRI, now called Dowlatabad is about 12 miles from Aurungabad, in the Dekhan, is a scarped rock of considerable height with a road-way leading up through the rock. Its position is commanding, and it has from the most ancient times been a stronghold of the rulers in that part of India. The name seems to have been sometimes written Deoghur. It was the capital of Ram Deo, a prince of so great power that the mahomedans looked on him as king of the Dekhan. Alla-ud-Din, nephew and general of Feroz, in A. D. 1294 swept across the Nerbuddah and captured Deoghur, and besides money and jewels obtained the cession of Ellichpoor and its dependencies, and the raja was further to pay tribute annually. On his return, he was met by his uncle Feroz, whom he assassinated, as he patted him on the cheek, and then ascended the throne. Subsequently he invaded

and conquered Guzerat and took its beautiful queen, Komala Devi, into his household. About A. D. 1300, he repulsed an invasion of the Moghuls under Katallagh Khan. In A. D. 1303 he captured the fort of Chittore but was immediately recalled to check an invasion of the Moghuls whom he repulsed a third and fourth time in 1305 and 1306. In 1306 he sent Malik Kafur, his general, a eunuch, and who had been the slave of a merchant at Cambay, to chastise the rajah of Deoghur which Kafur effected and also subdued the Mahrattas. In A. D. 1309, Malik Kafur captured Wárangál, then the capital of Telingana. In 1310, he reduced Belal-Deo, the rajah of the Carnatic, with whom the Belal dynasty ended. He over-ran the whole of the eastern provinces, as far as Ramisseram, opposite Ceylon, where he erected a mosque to commemorate his victories ; and in A. D. 1311 he returned to Delhi, laden with plunder. In 1312 he despatched Kafur a second time to punish Ram Deva, king of Deoghur and son of the former Ram Deo, who was put to death, and the kingdom annexed. He next carried his arms over all the Mahratta territory and the Carnatic, and soon after died.—*Brigg's Nizam.* See Dowlatabad.

DEOGUR, known for its copper mines, and argentiferous ores. See Copper.

DEO KANCHANAMU, TEL. Bauhinia acuminata.

DEO KANCHANAM, TEL. ? Batatas paniculata.—*Choisy. ?*

DEOKHADIR, HIND. Mimosa rubicaulis.

DEO KORA, the household god of the Garrow race. It is a small bell-metal dish with embossed figures, hung up in the house and worshipped and sacrifice offered.

DEO MUNNI ? Sacred beads of Assam.

DEOOA OR DEPPHUL, BENG. Artocarpus lacoocha.

DEOOLA TEMPLES, sacred to Jugunnat'ha, rise from the foundation in a gradual slope like a sugar-loaf, with an iron image of Guroora on the pinnacle. These temples made of brick, are ascended by a flight of steps, and contain only one room.

DEO PATTAN, a district in the S. W. of India, in which was the temple of Somanath taken by Mahmood of Ghazni, in 1024. See India, p. 334.

DEORA, is the tribe of the Sarohi princes, chiefs of Aboo and Sirohi. It is a branch of the Chohan rajpoots whose cradle is said to be on the summit of Aboo, whence they spread over the regions skirting the Aravalli to Ajmir, establishing many minor principalities, as Nadol, Jhalor, and others, long before the Rahtor of Jodpoor had set foot in Maroo, but were yet enjoying all the pomp of royalty in the splendid city of Kanouj. Sarohi, Aboo and Chandravati, then appertained to the Pramara race, nor was it until the thirteenth century that the uncle of Kana Deo, prince of Jhalore, treacherously obtained possession of the former with its dependencies, by the slaughter of the Pramara race. The city, now the residence of the Deora princes, is comparatively of modern date, the ancient Sarohi lying behind a second range of mountains. The Rahtor and Deora are the bravest of the rajput races. Achilgurh, or the immovable castle, is the name of the fortress of the Deora. —*Tod's Travels, p.* 61, *Rajasthan, Vol.* ii, *pp.* 39 *and* 57. *Annals of Mewar, p.* 334. See Khengar, Sidraj.

DEORHI, HIND. A threshold, a household ; the household of a person of rank, generally of a mahomedan noble.

DEOSHI, the sacrificial priest of the Kooch.

DEOTA, HIND. A deity.

DEOTSA, a small plateau or table-land adjoining that of Balti. It and the Balti table-land, form a territory 60 miles long and 36 broad, and are part of the territory of Balti. It is a plateau between Kashmir and Tibet, 13,000 feet above the sea level. It is high above the forest line or birch region, and tenanted only by the marmot, with a few dwarf willows and herbaceous species as its plants. It is a thinly-inhabited steppe between Skardo and Kashmir, belonging to Bultistan.—*Vigne.*

DEPALPOOR, a town of the Panjab.

DEPATTY NUSANTARA. See Banca Islands.

DEPHAL, BENG. Artocarpus lacoocha.—*Roxb.*

DEPHAL DAMPEL, BENG. Xanthochymus pictorius.

DER, HIND. of Chenab and Chota Lahaul, Cedrela toona, *var.* serrata ; Hill toon.

DERA. See Dhera.

DERA BULLU, a small territory in the Kuen-luen valley, in Turkistan, the valley of the Yarkand river, near this, is 16,883 feet above the sea, in L. 35° 49′ N., & L. 77° 31′ E.

DERABAND, a British district, near the Khyber.

DERBEND-I-BAZIAN, a pass near the Karadagh mountain.

DER of Chenab, Panjab. Cedrela toona, *var.* serrata.—*Royle.*

DERBENT, a town in the province of Shirwan, in Lat. 41° 51′ N., on the shore of the Caspian. Its walls are carried into ten feet depth of water, to prevent any one's passing that way : its length, from east to west, is nearly five wersts ; but its breadth is not proportionable. The town is divided into three distinct quarters : the castle, on the top of the

mountain, the foot of the mountain and the lower town. The Dar of the words Derial and Derbent, means a gate, door, or narrow pass.—*Porter's Travels, Vol.* i, *p.* 72. *Malcolm's History of Persia, Vol.* ii, *p.* 5.

DEREACHTE and Bakhtegan (also called Niriz) salt lakes in the neighbourhood of Shiraz. See Fars.

DEREAH, HIND. Bhera, MAHR. A wood of the Nagpore forests : though of great strength, it cannot, from the small size the tree attains, rank as a building material : the average logs are from 6½ to 10½ feet long and from 2 to 3 feet in girth. It has a winding and, as it were, netted grain, from which, as well as the extraordinary toughness of its fibres, butchers invariably use it for chopping blocks ; the sharp edge of the knive apparently having no effect on it.—*Captain Sankey.*

DERI, the modern Persian tongue. It is derived from the Parsi, which displaced the rougher Pehlevi, though Pehlevi is still used in the sacred writings at Sherwan. See Iran.

DERISANA, TEL. Acacia serissa.

DERSANA, a hindoo school of philosophy.

DERVISH, the darvesh of the Persians, Turks, and Egyptians, and fakir of India, religious mendicants, notorious for idleness and vice. The Nakshbandi Dervish or painters, illustrate their theology with pictures. See Darvesh.

DES, HIND., PERS., literally country, is a term applied in Rohilcund to cleared villages on the borders of the Taraee. In the Deccan it is used to signify a champaign country. Of the words derived from it and its other applications, "Des," is a native country. Desmukh and Despande, are Mahratta revenue officers. Desai, a superintendent of a district ; Par-desi, a foreigner.

DES (a Jouer). FR. Dice.

DESA, a name of Orissa.

DESARATHA, king of Ayodhya, of the solar race, a potent sovereign in ancient India, and father of Rama. See Dasaratha, Mahabharata, Vishnu.

DESATIR, or sacred writings of the ancient Persian prophets, published by mulla Feroz bin Kaus at Bombay in 1818, in 2 vols., 8vo. —*Dr. Buist's Catalogue.*

DESAVALI PENDALAM, TEL. Dioscorea purpurea.—*Roxb.*

DERMESTES, a genus of beetles in the E. Archipelago.

DESCENSUS AB UTERO. See Aka Podwal. Anandraver.

DESCHU ? Juniperus recurva.

DESERT OF KHARAZM, OR REGAN, from June to September, is liable to destructive hot winds in which man and beast perish, even the hardy camel perishing miserably. The Beluchi call it Julot or Julo, the flame, also Bad-i-Simoom, or the poison wind. There is great heat of skin quickly ending in death. The approach of the wind is ushered in by an oppressive calm in the air, and a degree of heat that affects the eyes ; the precaution then adopted by travellers, is to cover themselves over, and lie prostrate on the earth. A curious fact is established by this custom, that any cloth, however thin, will obviate the deleterious effects of the Bad-i-Simoom on the human body.—*Pottinger's Travels in Beloochistan and Sinde, pp.* 136-7.

DESERT OF GOBI. The great highway between Pekin and Europe, from time immemorial, has been the caravan tract from the western end of the great wall across this desert. The route issues from the western end of the great wall, and moving through the Kiayu Pass, has to traverse N. W. 500 miles, of a desolate sand tract to reach the city of Khamil. At this town the road bifurcates, the upper branch leading through Barkul, Urumchi and Kurkur-usu into Dzungaria; the lower through Pijan, Turfan, Karashar, and Kuchu to Aksa in Eastern Turkistan. While Chinese rule prevailed, Dzungaria and Eastern Turkistan formed the province of Ili. The belief that wildernesses are haunted places, is a very old and general one. Our blessed Lord himself in a very solemn passage (Luke xi. 24), adopts the Jewish phraseology as to this belief. Pliny says (vii. 2), that in the deserts of Africa phantoms in human shape appear to travellers and immediately vanish again. But the belief is especially prevalent among the nations of Central Asia. By them "deserts .....and the like, where nature shows herself in vast forms and in all the terrors of her influences, are held to be the especial headquarters and rendezvous of malignant spirits... hence the wildernesses of Turan, and particularly the great sand-waste of Gobi have from hoar antiquity had an evil fame. The Turks have a saying that evil spirits play at ball in desert places ; both Fa Hian and Marco Polo allude to the evil genii of the deserts of Central Asia, and Rubruquis tells of a frightful defile, where the demons were said to snatch travellers off their horses. The Affghans believe each of the numerous solitudes in the mountains and deserts of their country to be inhabited by a lonely demon, whom they call the Ghol-i-Biaban, or spirit of the waste, a gigantic and frightful spectre which devours passengers.—*Schmidt, p.* 352 ; *Yule's Cathay., Vol.* i, *p.* 157.

DESERT OF CENTRAL ASIA, extends from the Atlantic to the Yellow Sea. A strip of rich vegetation occurs in its centre, where

the Tigris and Euphrates and their affluents enrich the country. To the westward of it are the seas of sand of the Arabian and African wastes, seldom raised above, often sinking below the level of the ocean. To the eastward of the rich tract in Persia, Kerman, Seistan, Chinese Tartary and Mongolia, the desert consists of series of plateaux, having from 3,000 to nearly 10,000 feet of elevation.—*Rawlinson, Vol.* i, *p.* 1.

DESERT OF INDIA. Water is at an immense distance from the surface throughout the Indian desert, which, in this respect, as well as many others, differs very materially from that portion of the great African desert in the same latitudes. Water at twenty feet, as found at Mourzook by Capt. Lyon, is, in the Indian desert, unheard of. At Daismok'h, near the capital, the wells are more than two hundred cubits, or three hundred feet, in depth; and it is rare that water fit for man is found at a less distance from the surface than sixty feet, in the tracts decidedly termed *t'hul* or 'desert,' though some of the flats, or *oasis*, such as that of Mohilla, are exceptions, and abundance of brackish water fit for cattle, is found throughout at half this depth, or about thirty feet. All the wells are lined with basket-work made of *p'hok* twigs, and the water is generally drawn up by hand-lines. Water is sold, in all the large towns, by the *malli race*, or gardeners, who have the monopoly of this article. Most families have large cisterns or reservoirs, called *tanka*, which are filled in the rainy season. They are of masonry, with a small trap-door at the top, made to exclude the external air, and having a lock and key affixed. Some large *tanka* are established for the community, and this water keeps sweet for eight and twelve months' consumption.—*Tod's Rajasthan, Vol.* ii, *p.* 202. The Bíkaneer region is but little known to Europeans, by whom it has hitherto been supposed to be a perfect desert, unworthy of examination. And its deterioration, within three centuries since the Rajpoot supplanted the Jit, almost warrants our belief of the assertion that these deserts were once fertile and populous. The princes of Bíkaneer used to take the field at the head of ten thousand of their kindred retainers; to other causes than positive sterility must be attributed the wretched condition of this state. The commercial towns of Chooru, Rajgurh, and Rinne, as *entrepôts*, supplied the country with the productions of Scinde and the provinces to the westward, or those of Gangetic India; the same cause affected Jessulmeer, Bíkaneer, and the more eastern principalities, the Maldote of Jessulmeer and the Larkhani of Jeypoor, were as notorious as the Beedawut of Bíkaneer; and to these may be added the Sahrâ, Khosa and Rajur, in the more western desert, who, in their habits and principles, Tod describes as demoralized as the bedouins of Arabia. The line of greatest breadth of Bíkaneer extends from Poogul to Rajgurh, and measures about 180 miles, while the length from north to south, between Bhutnair and Mahajin, is about 160 miles: the area may not exceed twenty-two thousand miles. Formerly they reckoned two thousand seven hundred towns, villages and hamlets scattered over this space, one-half of which are no longer in existence. The tract to the north-west of Jaetpoor in Colonel Tod's time was perfectly desolate, and nearly so from that point to Bhutnair: to the north-east, the population was but scanty, which observation also applies to the parts from the meridian of Bíkaneer to the Jessulmeer frontier; while, internally, from these points, it is more uniform and equals the northern parts of Marwar. A census of the twelve principal towns, may furnish a tolerably accurate approximation on this point:—

Chief Towns.	*Houses.*	*Chief Towns.*	*Houses.*
Bíkaneer	12,000	Mahajin	800
Nohur	2,500	Jaelpoor	1,000
Bahaderan	2,500	Beedasir	500
Rinne	1,500	Ruttungurh	1,000
Rajgurh	3,000	Daismookh	1,000
Choorú	3,000	Senthal	50

It was estimated that there were 1,200 villages and 107,856 houses with a total of 539,250 souls, giving an average of twenty-five to the square mile. Three-fourths of the people are Jit; the rest are their conquerors, descendants of Beeka, including the Sarsote brahmins, Charuns, Bards, and a few of the debased classes, whose numbers are not one-tenth of the Rajpoots.

The Jit are the most wealthy as well as the most numerous portion of the community. Many of the old Bhomia land-lords, representatives of their ancient communal heads, are men of substance.

Sarsote, properly Sarasvati, brahmins are found in considerable numbers throughout this tract. They aver that they were masters of the country prior to the Jit colonists. They are a peaceable, industrious race, and without a single prejudice of the order; they eat meat, smoke tobacco, cultivate the soil, and trade even in the sacred kine.

The Charan are the sacred order of these regions; the warlike tribes esteem the heroic lays of the bard more than the homily of the brahmin. The Charan are throughout reverenced by the Rahtore, and hold lands, literally, on the tenure of 'an old song.'

Malli and Noé, gardeners and barbers, are important members of every Rajpoot family, and to be found in all the villages, of which they are invariably the cooks.

Choora and Thaori were, in Colonel Tod's time, actually castes of robbers: the former, from the Lakhi jungle, the latter, from Méwar. Most of the chieftains had a few in their pay, entertained for the most desperate services. The Bahaderan chief had expelled all his Rajpoots, and retained only Choora and Thaori. The Choora are highly esteemed for fidelity, and the barriers and portals throughout this tract were in their custody. They enjoy a very singular perquisite, which would go far to prove their being the aborigines of the country; namely, a fee of four copper coins on every dead subject, when the funeral ceremonies are over.

The Rahtore of Bíkaneer are unchanged in their martial qualifications, bearing as high a reputation as any other class in India. The Rahtore of the desert have fewer prejudices than their more eastern brethren; they will eat food, without inquiring by whom it was dressed, and will drink either wine or water, without asking to whom the cup belonged. They would make the best soldiers in the world if they would submit to discipline, as they are brave, hardy, easily satisfied, and very patient; but in the inordinate use of opium, and smoking intoxicating herbs, are said to exceed all the *Chatees rajcula*, the thirty-six royal tribes of India. The *piálá*, or 'cup,' is a favorite with every rajpoot who can afford it, and is, as well as opium, a panacea for *ennui*, arising from the absence of all mental stimulants, in which they are more deficient, from the nature of the country, than most of their warlike countrymen.—*Tod's Rajasthan, Vol.* ii, *pp.* 196, 202.

Bhutnair, which now forms an integral part of Bíkaneer, was anciently the chief abode of another Jit community, so powerful as at one time to provoke the vengeance of kings, and at others to succour them when in distress. The Bhatti annals confirm what might have been assumed without suspicion, that to a colony of this race, Bhutnair owes its name, though not its existence. The whole of the northern part is called Nair in the ancient geographical nomenclature of Maroost'hali; and when some of the Bhatti clans became proselytes to mahomedans they changed the vowel a to u, to distinguish them from the parent stock, viz., Bhatti for Bhutti. In all probability the Yadu-Bhatti is the original Yuti colony from Central Asia; and the Jit prince of Salpoor, was the predecessor of these very races. Bhutnair has attained great historical celebrity from its position, being in the route of invasion from Central Asia to India. It is more than probable that the Jit race who resisted the advance of Mahmood of Ghizni in a naval warfare on the Indus, had long before that period established themselves in the desert as well as in the Punjab; and as we find them occupying a place amongst the thirty-six royal tribes, we may infer that they had political power many centuries before that conqueror. In A. D. 1205, only twelve years after the conquest of India by Shahab-ud-din, his successor, Kootub, was compelled to conduct the war in person against the Jit of the northern desert, to prevent their wresting the important post of Hansi from the empire; and when the unfortunate and intrepid queen Razzia, the worthy heiress of the great Feroz, was compelled to abandon her throne to an usurper, she sought and found protection amongst the Jit, who, with their Scythic brethren, the Ghiker, assembled all their forces and marched, with their queen at their head, like Tomyris of old, to meet her foes. She was not destined to enjoy the same revenge, but gained a glorious death in the attempt to overturn the Salic law of India. Again, in A. D. 1397, when Timoor invaded India, Bhutnair was attacked for "having distressed him exceedingly on his invasion of Mooltan," when he "in person scoured the country, and cut off a tribe of banditti called Jit." In short, the Bhutti and Jit were so intermingled, that distinction was impossible. Shortly after Timoor's invasion, a colony of Bhatti migrated from Marote and Phoolra, under their leader Bérsí, and assaulted and captured Bhutnair from a mahomedan chief.

The Desert of India is known on its borders as Maroost'hali, the region of death from mri, Sans., to die; and st'hali, arid or dry land, but is also known as the desert of Rajpootanah. Maroost'hali is bounded on the north by the flat skirting the Garah; on the south by that grand salt-marsh, the Rin, and Kolíwarra; on the east by the Aravulli; and on the west by the valley of Scinde. It covers an area of 70,000 square miles. But for the Aravulli, which run N. E. & S. W., dividing Rajpootanah into two equal parts, Central India would be submerged in sand; nay, lofty and continuous as is this chain, extending almost from the sea to Dehli, wherever there are passages or depressions, there floating sand-clouds are wafted through or over, and form a little *t'hul* even in the bosom of fertility. Whoever has crossed the Bunas near Tonk, where the sand for some miles resembles waves of the sea, will comprehend this remark. Its western boundary is alike defined, and will recall to the English traveller,

who may be destined to journey up the valley of Scinde, the words of Napoleon on the Lybian desert : "Nothing so much resembles the sea as the desert, or a coast, as the valley of the Nile." This desert has small scattered spots of fertility with great arid portions called t'hul, denoting tracts particularly sterile, and therefore the converse of the Oasis of the Greeks and each with a distinct name as the t'hul of Kawur, the t'hul of Goga and others. A tradition exists to the effect that in remote ages, it was ruled by Powar or Pramara rajpoot princes, from nine fortresses, viz, Poogul, Mundore, Maroo, Aboo, Kheraloo, Parkur, Chotun, Oomarkot, Arore and Lodorva. From Bhalotra on the Looni, throughout the whole of Dhát and Oomra-i-Soomra, the western portion of Jessulmér, and a broad strip between the southern limits of Daodpotra and Bíkaneer, there is real solitude and desolation. But from the Sutlej to the Rin, a space of five hundred miles of longitudinal distance, and varying in breadth from fifty to one hundred miles, numerous oases are found, where the shepherds from the valley of the Indus and the T'hul pasture their flocks. The springs of water in these places have various appellations, ter, par, rar, dur, all expressive of the element, round which assemble the Rajur, Soda, Mangulia and Sehrai, inhabiting the desert. A traveller proceeding from the "Khuchee" or flats of Scinde to the east, sees the line of the desert distinctly marked, with its elevated teeba, or sand ridges, under which flows the Sankra which is generally dry except at periodical inundations. These sand-hills are of considerable elevation, and may be considered the limit of the inundation of the 'Sweet-river,' the Meeta Muran, a Scythic or Tartar name for river, and by which alone the Indus is known from the Punjnud to the ocean. The whole of Bikaneer and that part of Shékhavat, north of the Aravulli, are comprehended in the desert. Jessulmeer is nearly in the centre of what may be termed entire desert, is in fact an *oasis*, but the largest oasis of the desert, everywhere insulated by immense masses of *t'hul*, some of which are forty miles in breadth. The rock on which the castle is built has three peaks, or tri-cuta, Westward from this, from 400 or 500 miles, with one or two hundred miles in breadth, are little scattered oasis, on which the shepherds of the desert have their huts.

The whole of the Bíkaneer principality, with the exception of a few isolated spots, or *oases*, scattered here and there, consists more or less of sand. From the eastern to the western boundary, in the line of greatest breadth, it is one continuous plain of sand, though the *teeba*, or sand hills, commence in the centre of the country, the principal chain running in the direction of Jessulmeer, and shooting forth subordinate branches in every direction ; or it might be more correct to designate this main ridge, as originating in the tracts bordering the eastern valley of the Indus, and terminating its elevations about the heart of Bíkanér. On the north-east quarter, from Rajgurh to Nohur and Raotsir, the soil is good, being black earth, slightly mixed with sand, and having water near enough to the surface for irrigation ; it produces wheat, gram, and even rice, in considerable quantities. The same soil exists from Bhutnair to the banks of the Garah. The whole of the Mohilla tract is a fertile *oasis ;* the *teeba* just terminating their extreme offsets on its northern limit : being flooded in the periodical rains, wheat is abundantly produced.—*Tod's Rajasthan, Vol.* i, *p.* 19 & ii, *pp.* 199, 211-12, 290.

Schedule exhibiting the Fiefs of Bíkaneer.

Names of Chieftains.	Clans.	Places of abode.	Revenue.	Retainers.		REMARKS.
				Foot.	Horse.	
Berí Sal ...	Beekoo ...	Mahajin ...	40,000	5,000	100	One hundred and forty villages attached to this fief, settled on the heir of Raja Noonkurn, who consequently forfeited the *gudi.*
Abhé Sing ...	Benirote ...	Bookurka ...	25,000	5,000	200	The first of the chiefs of Bikaner.
Anóp Sing ...	Beeko ...	Jessanoh ...	5,000	400	40	
Paim Sing ..	Do ...	Baie ...	5,000	400	25	
Chyn Sing ...	Benirote ...	Sawoh ...	20,000	2,000	300	
Himmut Sing...	Raot ...	Raotsir ...	20,000	2,000	300	
Seo Sing ...	Benirote ...	Chooru ...	25,000	2,000	200	
Omed Sing Jaet Sing	Bedawut	Bedasir Saondwa	50,000	10,000	2,000	One hundred and forty *koties* (families, lit. *Chambers*) of this class.
Bahader Sing Sooraj Mull GoraunSing Athie Sing	Nanote	Maynsir Teandesir Kattur Kootchore	40,000	4,000	500	

Names of Chieftains.	Clans.	Place of abode.	Revenue.	Retainers.		REMARKS.
				Foot.	Horse.	
Shere Sing ...	Narnote ...	Neembaje ...	5,000	500	125	
Davee Sing, Omeid Sing, Soortan Sing, Kurrni Dan	Narnote	Seedmook, Kurripoora, Ajeetpoora, Beahsir	20,000	5,000	400	
Soortan Sing ...	Cutchwaha...	Nynawass ...	4,000	150	30	These two fiefs are held by foreign nobles of the house of Amber, and the ancient Pramara, (*vulg.* Powar.)
Puddum Sing...	Powar ...	Jaetsisir ...	5,000	200	100	
Kishen Sing ...	Beeko ...	Hyadesir ...	5,000	200	50	
Rao Sing ...	Bhatti ...	Poogul ...	6,000	1,500	40	The fief of Poogul was rested from the Bhattis of Jessulmeer.
Sultan Sing ...	Do ...	Rajasir ...	1,500	200	50	
Lukteer Sing ...	Do ...	Ranair ...	2,000	400	75	
Kurnie Sing ...	Do ...	Sutasir . .	1,100	200	9	
Bhom Sing ..	Do ...	Chuckuna ...	1,500	60	4	
4 Chieftains, viz:						
1 Bhonni Sing ..	Bhatti ...	Beetchnok ...	1,500	60	6	
2 Zalim Sing ...	Do ...	Gurrialah ...	1,100	40	4	
3 Sirdar Sing ..	Do . .	Soorjerah ...	800	30	2	
4 Kaet Sing ...	Do ...	Rundisir ...	600	32	2	
Chund Sing ...	Kurrumsaut.	Nokho ...	11,000	1,500	500	Twenty-seven villages dependent on this family from Jodpoor, and settled here 11 years.
Sutti Dan ...	Roopawut ...	Badilah ...	5,000	200	25	
Bhom Sing ...	Bhatti ...	Jangloo ...	2,500	400	9	
Kaitsi ...	Do ...	Jaminsir ...	15,000	500	150	Twenty-seven villages.

Kullian Sing ...	Do ...	Naineah ...	1,000	40	2	
Total...	....	... .	331,400	43,572	5,402	

The Jhalore tract is one of the most important divisions of Marwar. It is separated from Sewánchí by the Sookri and Khári, which, with many smaller streams, flow through them from the Aravulli and Aboo, aiding to fertilize its three hundred and sixty towns and villages, forming a part of the fiscal domains of Marwar. The important fortress of Jhalore, guarding the southern frontier of Marwar, stands on the extremity of the range extending north to Sewanoh.

Sewanchi is the tract between the Looni and Sookri. Macholah and Morseen are the two principal dependencies of Jhalore. Beenmal and Sanchore are the two principal divisions to the south, each containing 80 villages. Bhadrajoon, a fief of Jhalore, has a Joda chief and Meena population. The T'hul of Goga is very thinly inhabited with many sand-hills, t'hul-ka-tiba. The t'hul of Tiruroe lies between Goga deo and Jessulmeer. The t'hul of Khawar is between Jessulmeer and Barmair in the most remote angle of Marwar. Barmair t'hul, also called the Malli-nat'h-ka-t'hul, is occupied by cattle-breeders. The Kherdur or land of Kher, and Nuggur Gooroh on the Looni are the chief t'hul.

The Chohan rajpoot of the desert has, on the N. and E., the above tracts of Marwar, to the south of Koliwarah and the Runn, to the west the desert of Dhat. The sterile ridge which passes through Chotun to Jessulmeer passes west of Bankasir on to Nuggur Parkur. The wells are 65 to 130 feet deep. The Sehrai, Khossa, Koli and Bhil inhabitants are predatory races. The Chohan rajpoot does not wear the zonar and does not much respect the brahmans. The Pit'hil and Bania are farmers and traders.

The Runn or Rinn, is a remarkable feature of the desert. It is a salt marsh, 150 miles broad, into which the Loni or Looni or salt river enters and then runs on to the sea. The Looni rises in the Aravulli. In Marwar it separates the fertile land from the desert, afterwards runs through the Chohan territory, dividing it into the eastern part called Raj-Bah or Sooi-Bah, and the western part called Parkur or "beyond the Khar or Looni." The Caggar rises in the Siwalik Hills, flows under Bhutnair walls and once emptied itself between Jessulmeer and Rori Bukkur.

DESERT OF SIND lies between the frontier of Rajpootanah and the valley of the

Indus, and from Dawudputra on the north to Buliari on the Runn, 220 miles long and 80 broad or 17,600 square miles. It is one entire t'hul, with few villages and a few shepherds ; 50 miles without water, the wells 70 to 500 feet deep and the sand-hills, little mountains. It was through this tract that Hamayun sought refuge to the Dhat country and its capital, then, Oomerkote, where Akbar was born. Arore, there, is a ruined town. Oomerkote was wrested from the Soda race by the Rahtore tribe of Marwar, and since then the chiefs of the expelled clan have dwelt in Chore, 15 miles N. E. of Oomerkote. At one time, every third year brought famine. The Soda women of this desert tract of Dhatta are proverbially handsome. In this desert and in the valley of the Indus, are the Soda, Catti and Mallani, descendants of the Sogdi, Cat'hi and Malli, of Getes and Yuti, many of whom call themselves Baluch, or keep the ancient name of Numri, whilst the Zj'hut or Jut, retain their primitive appellation. Also remains of the Johya and Dahya who with the Gete, Jut or Hun, hold places amongst the 36 royal races of ancient India. The Baraha and Lohana tribes are there, the Sahrai, the great robber of the desert, the Bhatti, Rahtore, Joda, Chohan, Mallani, Kaorwa, Joshya, Sooltano, Lohana, Arorah, Khoomra, Sindil, Maisuri, Vishnavi, Jakhur, Shiag, Ashiag and Pooniah.

The origin of the mahomedan Kullora and Sahrai is doubtful, but the following professors of mahomedanism are "Nyad" or proselytes from rajpoot or other hindoo tribes : viz., Zj'hut ; Ragur ; Oomra ; Soomra ; Mair or Mer ; Mor or Mohor ; Baluch ; Lumria or Looka ; Sumaicha ; Mangulia ; Baggreah ; Dahya ; Johya ; Kairooee ; Jangurea ; Oondur ; Berowee ; Bawuri ; Tawuri ; Chrendea ; Khossa ; Sudani ; Lohana. These converts are ferocious and intolerant.

The *Soda* is scattered over the desert, some are mahomedans : the Sumaicha is a mahomedan proselyte from the Soda.

Kaoorwa, a peaceable nomade race, chiefly in the t'hul of Dhat, rear cattle.

Dhote or *Dhatti*, like the Kaoorwa, a pastoral race of Dhat, their cows give 8 or 10 seers of milk daily.

Lohana, numerous in Dhat and Talpoora, they are scribes and shop-keepers.

Arorah, a thrifty race, tradesmen and farmers.

Bhattiah, formerly martial, now traders and like the Arorah, and both these have commercial agencies all over India.

Brahman, Bishnuvi, cultivators and graziers, numerous in Dhat, some in Chore and in Oomerkote, Dharnas and Mitti.

Rebarri, a race who in Hindustan, profess mahomedanism and rear camels, here are a tribe who rear camels, or with the Bhatti, steal them.

Jakhur, *Shiag'h* and *Pooniah*, harmless, industrious, in the desert and the valley, are denominations of the Jit race, but most of these sections have become mahomedans and call themselves Z'jhut.

Sahrai, is the most numerous of the mahomedan tribes of the desert, of which he is the terror. The Khossa is a branch of the Sahrai, whom in habits he resembles, plundering on camels, but they are cowardly and faithless.

Sumaicha, converts to mahomedanism, from the Soda race, some are pastoral, some are plunderers. They are dirty, and never shave.

Rajur, a convert from the Bhatti, cultivators, shepherds and thieves and evil-livers.

Oomra and *Sumra*, are converts from the Puar or Pramara race, have mixed largely with mahomedans.

Kullora and *Talpur*, Scinde tribes, which furnished the last two ruling dynasties. The Kullora trace their descent from the Abbasside Kaliphs, and the Talpuri from Mahomed, but both seem to be Baluch, which are essentially of Jit or Gete origin. The Talpuri ("Tal" or "Tar," Borassus flabelliformis or palmyra, and "pura," a town) amount to one-fourth of the population of Hyderabad which they call Lohri or Little Scinde. There are none in the T'hul.

Noomri, *Loomri* or *Looka*, all of which mean fox, a sub-division of the Baluch race.

Z'jhut, *Jut* or *Jit*, dwell in Scinde, from the sea to Dawudputra, but not on the t'hul. They are the oldest of the proselytes to mahomedanism.

Mair or *Mer*, of Bhatti origin.

Mor or *Mohur*, do.

Tawuri, *T'hori* or *Tori*, dwell in the t'huls of Dawudputra, Beejnote, Noke and Noakote and Oodur ; they own and hire out camels, but like an Bawuri and Khengar are great thieves, and are called "bhoot" or evil spirits and sons of the devil.

Johya, *Dahya* and *Mangalya*, once rajpoots, are now mahomedans, are few either in the valley or desert, as also are the Baluch, Bairowi, Khairowi, Jangria, Oondur and Baggria, descended from the Pramar and Sankla rajpoots.

Dawudputra, founded by Dawood Khan from Shikarpore.

The intense heat and cold of deserts is explicable as follows : Among crystalline bodies, rock crystal, or silica, is the best conductor of heat. This fact accounts for the steadiness of temperature in one set dis-

trict, and the extremes of heat and cold presented by day and night on such sandy wastes as the Sahara. The sand, which is for the most part silica, drinks in the noon-day heat, and loses it by night just as speedily. The influence of the hot winds from the Sahara has been observed in vessels traversing the Atlantic at a distance of upwards of 1,100 geographical miles from the African shores, by the coating of impalpable dust upon the sails.—*Tod's Rajasthan, Vol.* i, *p.* 19 ; *Vol.* ii, *pp.* 289 *to* 330 ; *The British World in the East* ; *Ritchie, Vol.* i, *p.* 7 ; *Mignan's Travels, p.* 32 ; *Curiosities of Science, p.* 165.

DESH DARRANG, a district in Assam.

DESIDERI. Pere Desideri, a missionary, started from Goa in November 1713, and passing through Delhi and Kashmere into Baltistan, arrived at Leh, or Ladak, on the 25th June 1714, and remained there for an entire year. From thence, he continued his journey, in the autumn of 1715, to Lassa, by a route of extreme elevation and great cold, which occupied from August 1715 to March 1716. Desideri found the temporal sovereignty of Lassa in the hands of a Tartar prince (a Sifan), who had recently conquered the country.—*Prinsep's Tibet, Tartary and Mongolia, p.* 15.

DESHASTH, a term by which, the Mahratta brahmins of Mahrashtra are designated. They are described as a class, of sedentary habits, extremely fond of their native place, very fond of display, and fond of rich and splendid clothes. On occasions of marriage and other festival ceremonies they are lavish.

DESHASTHA, brahmins have acquired some literary celebrity and have been largely employed under the several Governments of India, chiefly in the revenue departments. The few prakrit poets that have made their appearance are Deshasth such as 'Wamon,' 'Moropant,' and 'Jagnath.' Deshasth brahmins are better featured than the Konkanasths, and the Konkanasth brahmin is fairer.

The social and political life of the Konkanastha brahmins has undergone a complete change during the last 1½ centuries. Before that they were solely an agricultural class of people, visiting towns only on very unavoidable occasions. They possessed a good knowledge of the Vedas and Shastras, and were liberally rewarded on that account by the patrons of those branches of learning. They rarely held offices under government or in mercantile houses, on the advent of the British they were compelled to look out for employment, and they at once spread all over the extensive table-land of Sahadri, called the desh, every department of government contains Konkanist brahmins, and they have shown themselves active, intelligent, liberal-minded men.

The Deshasta from time out of mind have been in the possession of the rich table-land, and been zemindars, deshmukhs, deshpandies, &c. They have never been distinguished for their knowledge of the Vedas or the Shastras. Once they were in sole possession of government offices, but they have been greatly thrown into the background by the Konkanasth. All the lower class of offices such as village accountants, &c., are, however, still in their hands.

DESI, indigenous, belonging to the country Par-desi, a foreigner, a stranger, a native of northern India.—*Elliot; Wilson.*

DESI GOKRU, Hind. Tribulus alatus.

DESIMA, the commercial site occupied by the Dutch in Japan, it stands upon and wholly covers a little artificial fan-shaped islet, about 600 feet in length, by 240 in breadth. And is joined to the island and town of Nagasaki by a small stone-bridge, at the end of which was a strong Japanese guard-house.—*Mac-Farlane's Geo. and His. of Japan, p.* 54.

DESMANTHUS, a genus of plants of the natural order Fabaceæ, of which D. natans, D. triquetra, and D. punctatus are known as native or introduced into India.

DESMANTHUS CINEREUS, *Willde*, syn. of Caillea cinerea., or Dichrostachys cinerea.—*W. and A.*

DESMANTHUS NATANS, *Willde.*
Floating Desmanthus. Eng. | Sunday kiray. Tam.

This sensitive plant floats in the tanks of southern India, the leaflets and pods are eaten by the natives.—*Jaffrey, Voigt, Thwaites.*

DESMER, Dan. Musk.

DESMODIUM, a genus of small trees and bushes of the natural order Fabaceæ, of which Voigt enumerates 28 species in India. Dr. Wight in Icones gives figures of D. cephalotes, collinum, congestum, diffusum, Gangeticum, gyrans, latifolium, patens, polycarpum, quinqueangulatum, recurvatum, rufescens, strangulatum and triflorum.

The bark of two Panjab species, "Kalanchi" and "Moorub," are stated by Dr. Cleghorn to furnish a paper-stuff, and Dr. Stewart says, according to Dr. Cleghorn, that the barks of D. argenteum and D. tiliæfolia of the Panjab are of similar use.

The leaves of D. gyrans have a singular oscillating movement.

Dr. Stewart says that the bark of D. argenteum of the Panjab ("sambar," "pri," "muss," "chiti," "mort," "murtan") is steeped in water and made into ropes which, when as thick as the wrist, bore a heavy strain

when English rope snapped. The bark of D. tiliæfolia is also made into rope, and its leaves are the Shal-purni of the Panjab bazar. Dr. Cleghorn says the Desmodium, paper shrub, is exceedingly plentiful in the districts of Chota and Bara Banghal, and in the Ravi valley ; the plant having a wider range, and the bark being more easily stripped off, the fibre will be available in the plains at less cost than that of Daphne papyracea.—*Drs. J. L. Stewart, Panjab Pl., Voigt, Riddell, Cleghorn, Panjab Report, p.* 113.

DESMODIUM ARGENTEUM. Múss of Kunáwar. Chiefly on the Sutlej. Very strong temporary ropes made from its bark.

DESMODIUM TILIÆFOLIUM.

Chamkat of Murree. | Kalanchi of Panjab.

Grows to a large size in the Panjab, wood of a pale whitish yellow and close-grained. Its bark is made into paper.—*Powell's Handbook.*

DESMOSTEMON ZEYLANICUS, *Thw.*

Wal-kakunu-gaha. SINGH.

Central province of Ceylon, up to 4,000 feet. Timber used for ordinary work.—*Wright, Fergusson.*

DESMUKH, a hereditary native officer under the Mahratta governments, exercising chief police and revenue authority over a district.

DESPANDYA. The hereditary revenue accountant of a district.

DESSAH, JAV. A village.

DESYADES, PUNJABI. Land beyond the influence of inundation.

DETARA, BENG. Lipeocercis serrata.

DETARDANA, HIND. Seed of a species of Desmodium : also Uraria picta, not Hedysarum.

DEUS, HIND. Deutzia staminea. The Aruchi of Bassahir.

DEUTZIA, a genus of plants of the Natural Order Philadelphaceæ. The leaves of D. scabra of Japan are so rough that they are used for joiner's work.

DEUTZIA STAMINEA.

Phul kanri of Hazára. | Sai of Chamba.
Phurili of Kashmír. | Arúchí, deús, of Bassahir.

A small sized Panjab wood, white and close-grained.—*Powell.*

DEVA, S. *Dewa, Dev, Delb,* or *Deo,* a title of a god, as Devi is of a goddess. Maha-Deva, a name given to Siva by the saiva sect, the means great or supreme god, as Maha-Devi, name of Bhavani or Parvati, means the supreme goddess. Deva however may equally, by the vaishnáva, be Vishnu. The word may also denote an idol, a man of high rank or sovereign, or a brahmin; as a cognomen suited to brahmans. Amongst the compounds of this word are Dewal or Deval, a hindoo temple, a house of God. Déva-Sêna, from déva, a god, and séna, a soldier. Dévajanee, from déva, a god, and jaya, a wife. Dévarshee, from déva, a god, and rishee, a sage.

DEVA, SANS., from div, to play.

DEVA-DATA or Deo-dat, a man's name, literally god given.—*Theodotus.*

DEVADHUPA, SANS. Benjamin.

DEVADIGAR, KARN. A man of a low caste, who performs menial offices in the temples of the south of India.—*Wils.*

DEVAGIRI or Deoghur, was at one time held by the Yadava race. In Mysore we find the Bellala, a Yadava dynasty, reigning at Dwarasamudram, the modern Halibidu.

DEVA-KANCHANAMU, HIND. Several species of Bauhinia, viz., Bauhinia variegata, *L.* ; also B. candida, B. purpurea and B. tomentosa.

DEVAKI, sister to Kansa, king of Mathura, and the wife of Vasudeva. Devaki and Vasudeva were the mother and father of Krishna, who was their 8th child.

DEVAL, HIND. A hindoo temple.

DEVALA, a brahmin attendant on idols.

DEVA-LAYA, SANS. From deva a god, and, alaya, a house, a temple, the House of God.

DEVANAGARI, an alphabet in use in India. It was introduced into Thibet form Kashmir in the first half of the 7th century of the christian era. Devanagari is the ancient alphabet of India, inscriptional, in capitals, and is a modification of the inscriptional and monitary Pali. The alphabets of the various languages allied to the Hindi, are modifications of the Devanagari alphabet. It is the character in which Sanscrit is usually written.

DEVANGANA, amongst hindoos, the celestial minstrels who perform before Maha-deva. They are also called Gandharva, also Apsarasa. Their instruments are the tambourine, cymbals, castanets, lute and violin.

DEVA-DEVI, an island in Bombay harbour, known to sailors as Butcher Island. The native name, properly Deva-dwipa, means the "Island of the gods, or Holy Island."

DEVAGURH, a town on the western coast of India ; this and Sedasheghur are the boundaries of the Concan.

DEVA-LOKA, SANS. The habitations of the Deva ; in hinduism, there are six celestial worlds between the earth and the Brahma loka.

—*Hardy's Eastern Monachism, p.* 435.

DEVANAGA-VADU, TEL. A weaver.

DEVANAMPIYA PIYADASI, a name of Asoka. See Inscriptions, p. 381.

DEVA-PUTTUN, a place of great sanctity in hindoo estimation. See Krishna, p. 545.

DEVA RAJA, a name of Indra. See Inscriptions, pp. 380, 393.

DEVA PAL DEVA. From a copper tablet discovered at Monghyr, raja Deva Pal Deva appears to have reigned in the ninth century as far as the Carnatic and Thibet.

DEVA-DARA, HIND. Cedrus deodara, *Loud.*

DEVADARA, SANS. Erythroxylon areolatum ?

DEVADARAM, TAM. Sethia indica, *DC.* Guatteria longifolia, *Wall.*

DEVA-DASA, SANS.

Basava. TEL.	Dancing Girls. ENG.
Jogin. ,,	Temple ,, ,,
Murali. MAHR.	Bayadere. FR.
Hierodulæ of Babylon.	Balladeiras. PORT.

To the temple of Venus in Asia, and in later times in Greece, large bodies of "hierodulæ" were attached, who were, at once, prostitutes and ministers to the goddess. The daughters of the most illustrious families in Armenia passed from the service of the goddess Anaitis into matrimony with those of equal rank, and no stain adhered to them from their former mode of life. We find traces of the same usage in the distant settlements of the Phœnicians, on mount Eryx, and at Sicca Venerea in the Carthagenian territory. In Babylon, no woman of whatever rank could escape the obligation of once prostituting herself in the temple of Mylitta. This debt once acquitted, as the necessary preliminary to marriage, they were ever afterwards faithful to its obligations, with whatever price they might be tempted. In hindoo mythology the deva-dasa, are the courtezans of swarga, the heaven of Siva. The earthly deva-dasa women or dancing girls, in attendance at the temples of the hindoo deities, by their name of deva-dasa, call themselves the servants or slaves of the god. Next to the sacrificers, the most important persons about the temple, says the Abbé Dubois, are the dancing girls. Their profession, indeed, requires of them to receive all comers although originally they appear to have been intended for the gratification of the brahmans only. Every temple, according to its size, entertains a band of them, to the number of eight, twelve or more. The service they perform consists of dancing and singing. The first they execute with grace, though with lascivious attitudes and motions. Their chaunting is generally confined to the obscene songs which relate to some circumstance or other of the licentious lives of their gods. They perform their religious duties at the temple to which they belong, twice a day—morning and evening. They are also obliged to assist at all the public ceremonies, which they enliven with their dance and song. They are bred to this life from their infancy. They are taken from any caste, and are not unfrequently of respectable birth. It is nothing uncommon to hear of pregnant women, in the belief that it will tend to their happy delivery, making a vow, with the consent of their husband, to devote the child then in the womb, if it should turn out a girl, to the service of the pagoda. And in doing so, they imagine they are performing a meritorious duty. The infamous life to which the daughter is destined brings no disgrace on the family. The eldest daughter of every family of the weaver caste at the small town of Tiru-kalli-kundram in the Chingleput collectorate is devoted to the temple. Till lately, temple girls were the only hindoo females in India who might learn to read, to sing, and to dance. Such accomplishments belong to them exclusively ; and for that reason have been held by the rest of the sex in such abhorrence, that every virtuous woman has considered the mention of them as an affront. These performers are supported out of the revenues of the temple ; of which they receive a considerable share. But their profession is productive. There are temples in some places, where the divinity requires to be honoured with the most unbounded licentiousness. The manufacturer commonly destines his youngest daughter for this purpose, and sends her to the pagoda before the age of puberty, where dancing and music-masters are provided. The morlidar girls of the Mahratta country correspond to the Basava of the Teling race. The Basava women are usually devoted to the god Siva, and become prostitutes. They are called Linga or Garudu Basava, according as they are devoted to one or other. They are called also Jogin also Morli, and are married sometimes to a knife, sometimes to an idol. In making female children over to the service of a temple, a girl, generally an infant, is taken and dedicated for life to the service of some idol by a ceremony called "Shej." A *khunjar* or dagger is put on the ground, and the girl, who is to undergo the ceremony, puts a garland on the knife. Her mother then puts rice on the girl's forehead. The officiating Bhutt then weds the girl to the knife, just as if he were uniting her to a boy in marriage, by reciting the 'mangalashlok,' or marriage stanzas, a curtain being held between the girl and the dagger. The girl thus becomes a Bhavin, dedicated to the service of the temple. She lives by prostitution. In many parts of the south of India, the non-Aryan races thus devote their young women, in order that they may follow prostitution openly, under the cloak of a religious rite. It is not easy to trace the

origin of this custom, but at the Myletta festivals, which were connected with the worship of Baal or Moloch, the women, as slaves to the goddess, were obliged to purchase exemption from being sacrificed by prostitution. Almost all the Jewish prophets down to Jeremiah complain that this service was carried on in the high places, by the Jews. In general, throughout the Dekhan, southwards to Cape Comorin, devoting a female child to the gods is deemed disreputable.—*Kenrich's Phœnicia, pp.* 307, 314; *Dubois' India, quoted in Cole's Hind. Myth., p.* 378; *Sonnerat's Voyage, p.* 29; *Bunsen, Vol.* iv, *p.* 210. See Dancing girls.

DEVARAM, a famous saiva poem, part of the so called Tamil Veda.

DEVASTHANAM, the superintendence of hindoo temples, conducted by trustees called Dharma Karta.

DEVATA, a divinity, a spirit, a demi-god. The Devata are benign spirits, governed by Indra, properly the inhabitants of the North Pole; for the Devata are said to have day, when the Daitya have the night, and vice versâ. Vide Suras.--*Warren's Kala Sanhita.*

DEVATADI DHETTU, TEL. Lipracercis serrata, TRIN. Andropogon serratum. —*Roxb.*, i, *p.* 253.

DEVATA-DHANYAMU, TEL. Sorghum saccharatum, PERS. Andropogon sacch. Also wild rice.—*Roxb. p.* i, 271.

DEVATA-MALLE or Nalla kakasi, TEL. Randia uliginosa, *DC., W. and A.*, 1230; *Ic.* 397. Gardenia ulig., *R. Cor.* 135; Posoqueria ulig.—*Roxb.* i, *p.* 712.

DEVATHARAM, TAM. Erythroxylon areolatum?

DEVAYANAI or Devasena, one of Subhramanya's wives.

DEVEDAH, PORT., TAM., MALAYAL, the name of a wood, known to Europeans by those of the Cedar Libanus, or Spanish cedar. This tree is to be found from Cape Comorin, in the south of Malabar, to the north part of Canara. It grows to a large size, from eighteen inches to two feet and a half in diameter, and from thirty to forty feet high. This may be considered a good wood, and might be found useful with the heavy woods in ship-building. The texture of some trees is hard, and might be converted into good plank. It is much used by the natives for house-work and furniture. It is imported into Ceylon, and to the coast of Coromandel, from Pegu and Rangoon, and named Chittagong wood.

There is also is the Vela Devedah, or white cedar, which grows in the forests of Cochin and Travancore. It may be had in great quantities, and is said to be useful and durable. It is a tough wood for boards, and planks for boats and vessels, for which purpose it is generally used, as well as for house-work. It grows to about two feet in diameter, and from thirty to thirty-five feet high: its grain resembles the red cedar, but it is closer grained and heavier.—*Edye, Mal. and Can.*

DEVENDRA, the king of the Deva. See India.

DEVER, the honorific or titular designation of the Marawa race in Ramnad and Tinnevelly. It seems identical with the Telugu Dewara or Devera, a respectful mode of address to a superior. See India, p. 332.

DEVI, SANS. The feminine of deva, a god or a goddess. It is one of the names of the hindoo goddess Durga, also known as Kali. See Chandra; Dasahra or Dashara; Kali Kerari; Linga; Lustral ceremonies; Mahadeva; Mahadevi; Parvati; Sacrifice, Sata-rupa; Serpent, Vishnu; Yavana.

DEVI MAHESHASURA. See Inscriptions, p. 382.

DEVICOTTA, frequently changed hands during the contests between the British and French in the 18th century.

DEVIL BIRD, the name of a bird of Ceylon, which Mr. Mitford supposes to be a goat-sucker, a cuckoo or a black bird. Its ordinary cry is like that of a hen just caught. Its screams like those of a youth in agony.

DEVI, a goddess, more especially used for Parvati

DEVIDIAR of the Chenab and Ravi. Cupressus torulosa, *Don.*: of Panjab, Juniperus excelsa, *Bieb.*

DEVIL GOAD.

Bhatamkusam. SANS.	Croton oblongifolium, R.
Bhutala Bhairi. TEL.	iii. 685.

The Telugu name signifies "demon-driver" or "devil goad"—and sticks made of this tree are carried as a protection against evil spirits.

DEVILS AND DEVIL DANCERS. The ordinary word in use, to designate a devil, is Paisacha, or Pisacha, and the temple raised to a Paisacha is a Pekoil, but the former seems rather to be an evil spirit, and the latter a temple to an evil spirit. All the arian and non-arian hindoo and budd'hist races of India, and all the races in the Malaya and the eastern archipelagoes, recognise the existence of spirits both good and bad and the whole series of ceremonies from the date of the demise of a hindoo until the demise of his son are instituted from the belief that the spirit of the deceased is present and can accept oblations, and there are even instances where contracts have been entered into or renewed with the spirit of a deceased owner. The hindoos have a hell, "narakam," and a devil, but the non-arian races seem to refer to evil spirits.

DEVILS AND DEVIL DANCERS.

In their belief if any good man die, his spirit may occupy a tree or stone or other locality and be an evil spirit: may even take possession of one of his votaries, in which event the screaming and gesticulating of the possessed person are attributed to the spirit in possession, and in the Urdu tongue, the phrase would be "saya uske ang bhara" the shade has filled his body, and the possessed person prophesies. In their belief every malady may be the infliction of an evil spirit. To dispossess the spirit, wild music and dancing are had recourse to, and the possessed, generally a woman, exhausted by her pythonising falls down utterly exhausted or goes into convulsions. The non arian races are constantly recognising new spirits, from amongst deceased natives of India or Europeans, particularly from amongst those whom death or accident have suddenly cut off, and they have introduced the deities of the hindoos as demons: but the "ammun" or earth-deity, is in every village throughout Southern India, and the worship of all these demon gods is by blood-sacrifices and ardent spirits. Amongst the Shanar race in the South of the peninsula of India, the belief is that sometimes demons are content with frightening the timid without doing any real harm. Failures in trade or in crops, are attributed to demons. People hear a strange noise at night; and immediately they see a devil making his escape in the shape of a dog as large as a hyena, or a cat with eyes like two lamps. In the dusk of the evening devils have been observed in a burial or burning ground, assuming various shapes one after another as often as the eye of the observer is turned away; and they have often been known at night to ride across the country on invisible horses, or glide over marshy lands in the shape of a wandering, flickering light. In all their journeyings they move along without touching the ground: their elevation above the ground being proportioned to their rank and importance. Dr. Caldwell has known a village deserted and the people afraid even to remove the materials of their houses, in consequence of the terror caused by stones being thrown on their roofs at night by invisible hands. Demons more malicious still have sometimes been known under cover of the night to insert combustible materials under the eaves of thatched roofs. Even in the daytime, about the close of the hot season, when the winds fail, demons may often be seen careering along in the shape of a whirl-wind, catching up and whisking about in their fierce play every dry stick and leaf that happens to lie in their path. In short, writes Dr. Caldwell the demons do much evil, but no good. They often cause terror but never bestow benefits, or evince any affection for their votaries. They must be placated by sacrifice, because they are so mischievous; but there is no use supplicating their favour. If in any case the hope of obtaining a benefit seem to be their votary's motive in worshipping them, further inquiry proves that it is under the supposition that the demon's malignity stands in the way of what would otherwise be obtained as a matter of course. And it may be said to be the object of the worship of all the non-arian races to avert from themselves the evils which the demons could inflict, for gratitude for good received, or resignation to the will of a Supreme, are not parts of the ammun or spirit-worship. A similar superstition respecting goblins and demons exists all over India. Every hindoo work containing allusions to native life, and the dictionaries of all the hindoo dialects, prove the general prevalence of a belief in the existence of malicious mischievous demons, in demoniacal inflictions and possessions, and in the power of exorcisms. The chief peculiarity of the superstition, as it exists amongst the Shanars, consists in their systematic worship of the demons in which all believe. In every part of India, innumerable legends respecting goblins and their malice are current; but scarcely any trace of their worship in the proper sense of the term, much less of their exclusive worship, can be discovered beyond the districts in which Shanars, or other primitive illiterate tribes, are found. In travelling down to Tinnevelly from the north, the first village which is found to be inhabited by Shanars, Virduputty, about 30 miles south of Madura, is the first place where Dr. Caldwell observed systematic devil-worship. In like manner in Travancore, devil-worship appears to commence with the first appearance of the Shanar race in the neighbourhood of Trivandrum; from whence it becomes more and more prevalent as you approach Cape Comorin. The demon worship of the Shanars and few other illiterate tribes is a degradation beneath which the human mind cannot descend. The places in which the demons are worshipped are commonly termed "Pé-cóil," or devil temples; some of the temples, especially those erected to the sanguinary forms of kali, are small, mean, tomb-like buildings, with an image at the further end of the cloister. But the majority of the devil-temples are built neither with stone nor brick; the roof is neither terraced nor tiled, nor even thatched; a heap of earth raised into a pyramidical shape and adorned with streaks of white-wash, sometimes alternating with red ochre, constitutes both the temple and the demon's image; and a smaller heap in front of the temple with a flat surface forms the altar.

In such cases a large conspicuous tree—a tamarind tree, an umbrella tree, or even a palmyra, whose leaves have never been cut or trimmed, will generally be observed in the vicinity. This tree is supposed to be the devil's ordinary dwelling place, from which he snuffs up the odour of the sacrificial blood and descends unseen to join in the feast. Turnour mentions that an ordinance of one of the kings of Ceylon commanded that a devil-dancer should be provided for every ten villages. Budd'hists of Ceylon still resort to the incantations of the devil dancers in case of danger or emergency.—*Dr. Caldwell on the Shanar.* See Demon, Peygel, Pisacha.

DEVIL'S PEPPER, Eng. Capsicum.

DEVIL'S SALEP, Eng. Cicuta virosa, also Conium maculatum.

DEV-KANCHUN, Beng. Bauhinia purpurea.

DEVKHADIR, Hind. Mimosa rubicaulis

DE VRIESE, author of various memoirs on Malayan Island plants and of a monograph of Marattiaceæ, a work of great labour.

DEVUTTARA, Sans. From deva and ootara, belonging to

DEW.

Shabnam, Hind. Pers. | H'nung. Burm.

Some one has ventured the remark that at full moon, near the equator, more dew falls than at new moon, and to this are ascribed the moon heads (man hoofden), which, however, Jansen had but once seen, during all the years which he had spent between the tropics. —*Jansen in Murray's Physical Geography, p.* 146.

DEWA, a divine being, whether resident upon earth or in a dêwa loka.—*Eastern Monachism, p.* 435. See Deva.

DEWADHARI, or damsels of wisdom, &c.

DEWADURIO, Sing. Fennel seed.

DEWAK, Hind. Termes. White ants.

DEWAL, the hindoo temple, in which the idol is placed, is called, as temples generally are, Dewál, or Devál, from Deva, a deity ; and aleiya, a house, or literally a house of god. The British and other people call it pagoda, a word unknown in India beyond the reach of European colloquial instruction, but which has been derived from Butkhana two Persian words, meaning the ghost house. It may however be from Paigudi, a devil temple also from Dahgopa, a budd'hist relic shrine.

DEWAL, the principal port in Sind, with tall spires and huge domes ; Dewal is supposed to be the modern Tattah. It was called "Dewal," or "Debal," from its celebrated dewalya or pagoda and the Arabs and Persians still know it by no other name. Arore, or Alore, was the capital of Sind in remote antiquity, but a bridge over the stream which branched from the Indus, near Dura, is now almost the sole vestige of the capital of the Sogdi of Alexander. On its site the shepherds of the desert have established an extensive hamlet ; it is placed on a ridge of siliceous rock, seven miles east of the insular Bukkur and free from the inundations of the Indus. The Soda tribe, a powerful branch of the Pramara race, has ruled in these countries from remote antiquity, and to a very late period they were lords of Oomra Soomra, in which division was Arore, According to Burton, however, the site of Arore is four miles east of the Indus at Sukker and Rori. Sehl and his capital, Arore, were known to Abul Fazil, though he was ignorant of its position, which he transferred to Deba, or Dewal, the modern Tatta. This indefatigable historian thus describes it : "In ancient times there lived a raja named Sehris (Sehl), whose capital was Alore, and his dominions extended north to Cashmere and south to the ocean." Sehl, or Sehr, became a titular appellation of the country, its princes, and its inhabitants, the Sehrai. Alore appears to have been the capital of the kingdom of Sigertis, conquered by Menander of Bactria. Ibn Haukal, the Arabian geographer, mentions it ; but a superfluous point in writing has changed Arore into Azore, or Azour, as translated by Sir W. Ousely, D'Anville also mentions it ; but, in ignorance of its position, quoting Abulfeda, says, en grandeur "Azour est presque comparable a Mooltan."—*Tod's Rajasthan, Vol.* i, *p.* 42 ; *Burton's Scinde, Vol.* i, *pp.* 128, 166.

DEWALA DEVI, daughter of Kamala devi. On the fall of Nerwalla, the ancient capital of Guzerat, Kamala Devi was captured and taken into the harem of Ala ud Din ; but her daughter Dewala Devi escaped with her father. She had been asked in marriage by the son of Ram Deo, the rajah of Deo-giri (Dowlatabad), but her father, proud of his rajpoot origin, had refused to give her to a Mahratta, even though a prince. Kamala Devi, however, having expressed to Ala ud Din a wish to be joined by her daughter, Ala ud Din sent a strong army under a general to bring Dewala Devi to Delhi. In this extremity, her father accepted the Mahratta prince, and sent off his daughter under an escort, but the escort was overtaken, the fair maiden seized and carried to Dehli where she was married to Khizr Khan, son of Ala ud Din. A few years after the death of Ala ud Din, the throne of Delhi was filled by Kafoor, a converted hindoo, who put out the eyes of Khizr Khan, filled the capital with hindoo troops, put to death all the survivors of Ala ud Din's family, and

transferred Dewala Devi to his own zenana. See Camala Devi.

DEWALI, properly Depawali, SANS. from Dipa a lamp and Ali, a row, ; a hindoo religious festival held about the end of October, on the new moon of Kartik, in honor of the goddess Kali and of Lakshmí and the destruction, by Vishnu, of the demon Taraki. The hindoos, after bathing in the Ganges, or other river, anoint with oil, put on their best attire, perform a sraddha, and at night worship Lakshmí. On this festival of lamps all hindoos propitiate Lakshmí, the goddess of wealth and fortune, by offering at her shrine. In Rajasthan, on the Amavus, or *ides* of Kartic, every city, village and encampment, exhibits a blaze of splendour from lamps. Stuffs, pieces of gold and sweetmeats, are carried in trays and consecrated at the temple of Lakshmí, to whom the day is consecrated. The rana of Mewar dines with his prime minister, and this officer and his near relatives offer an oblation by pouring oil into a *terra cotta* lamp, which the sovereign holds ; every votary of Lakshmí tries his chance of the dice, and from their success in the *Dêwali*, foretell the state of their affairs for the ensuing year. On the first day of the Dewali, the whole population of an Indian city bear branches of the Sami, Tulsi and other sacred trees, in procession ; and walk round all the temples in the neighbourhood, offer salutation and prayer to their country's gods, in their several incarnations. —*Postan's Western India, Vol.* ii, *pp.* 177 *and* 178 ; *Tod's Rajasthan, Vol.* i, *p.* 70. See Leviticus, xxiii. 40.

DEWAN, AR., PERS. In India, the chief officer of the second rate sovereigns. In Persia, a Court of Justice or of other business. A reception room, is generally called the Dewan-i-Am, or public reception hall. The Dewan Khana, is the office room of the dewan, and the Dewani means pertaining to the dewan. The Dewani Adalat under the E. I. Company was a Court of Civil and Revenue jurisdiction.

DEWAN, PERS. A collection into one volume of the entire odes of an author, whether in the Persian or the Hindustani tongue. In bringing them together, they are arranged alphabetically according to the letters in which the verses terminate. The Dewan-i-Sadi and Dewan-i-Hafiz are generally known.

DEWANAGI-WANLU, TEL. Religious mendicants in southern India, who accept charity only from one or other of the goldsmith castes. See Poitu, Zonar.

DEWANI is the civil department, in contrast to the foujdari or criminal. Dewan-i-am, a privy council chamber.

DEWAN KHANA. That part of the house of a mahomedan where the master receives his visitors, and in which the men servants reside.—*Rich's residence in Koordistan, Vol.* i, *p.* 83.

DEWA POOJAH, or worship of the implements in use as the means of subsistence, observed by all the Kait caste at the Dewallee and Hooly festivals.—*Malcolm's Central India, Vol.* ii, *p.* 167.

DEEWAR, Diwar, perhaps more correctly Deehwar or Dehwar, is the god under whose special care a village is placed : the genius loci, for whom a portion of grain is always set apart at each harvest.—*Elliot.*

DEWAS, a chieftaincy in Malwa, held by a Mahratta, whose ancestors came to Malwa with the first Baji Rao. The revenue of the State is Rupees 4,25,000 ; the area 256 square miles ; and the population 25,000 souls. The chiefs have each received a sunnud guaranteeing to them the right of adoption. The chiefs are equal in rank and have an equal share in all receipts. Each receives a salute of fifteen guns.—*Aitcheson's Treaties, Engagements and Sunnuds, Vol.* iv, *pp.* 334 *and* 335.

DEWASIS. See Rajmahal.

DEWATA GASS, SINGH. Carallia lucida.—*Roxb.*

DEW-GHUR, an ancient name of Dowlatabad. See Deo-ghur,

DEWUDAR, HIND. Sethia indica.

DEWUL, SINGH. Feronia elephantum.

DEYA-DANGA-GASS, SINGH. Spathodea rheedii, *Sp.*

DEYAMIDDELLA, SINGH. Barringtonia racemosa.—*Roxb.*

DEYNGAN, HIND. Cordia macleodii.—*Hooker.* Syn of Hemigymnia macleodii.—*Griff.*

DEYRA DOON and Himalayan valleys, to moderate elevations, in climate correspond with the Mediterranean region. See Dehra.

DHA, BURMESE., the bill, in various forms, is the inseparable companion of every man among the hundred forest tribes of Trans-Gangetic India. Among the civilized Burmans, however, it is more confined to the lower orders, the peasant and boatman, except as a weapon of war. The Burman dha is a weapon about three feet long, with a slight uniform curve from end to end. About three-sevenths of this length is helve, the rest blade. The blade is generally about an inch and a quarter wide with an obtuse point. It serves every purpose that a cutting weapon can serve, from making a toothpick to felling a tree ; or killing a pig, or an enemy in battle. Very long and heavy dhas are worn by officials of the Búrmese Court.—*Yule's Embassy, p.* 158.

DHA. Hind. Grislea tomentosa.

DHABBAR. Hind. Anagallis arvensis.

DHAE, Hind. A nurse. In Rajpootanah the *Dhabhae*, or 'foster-brothers,' often hold lands in perpetuity, and are employed in the most confidential places; on embassies, marriages, &c.—*Tod's Rajasthan, Vol.* i, *p.* 278.

DHAE, Beng., also DHAI, Grislea tomentosa.

DHAGOBA. See Buddha, Topes.

DHAHIMA, a tribe of Rajpoots recorded amongst the 36 royal races. They were the lords of Biana, and bore a high name for deeds of chivalry. Colonel Tod considers the tribe to be extinct, but they have three or four villages in Baghput. There are also Dhahima Aheer and Dhahima Jat in the same neighbourhood.—*Annals of Rajasthan, Vol.* i, *p.* 199.

DHAI? Duk. Sterculia colorata.—*Roxb.*

DHAIL, a river in Jeypore.

DHAING. See Kush or Cush.

DHAITI of Bombay. Grislea tomentosa.—*Roxb.*

DHAK, Hind. Butea frondosa, also called Pulas, is a plant generally diffused in India, found near many villages, forming their tracts of jungle-like land, which is the place of pasturage for their cattle. The Dhak yields firewood, and its bark and roots a fibrous matter, which is used as cordage, called Bukel, or beaten to a kind of oakum and used for caulking boats, and it is used, also, by the natives for agricultural and domestic purposes, as it is possessed of a good deal of strength. It is also used for paper-making. A ruby-coloured gum, called *Butea kino*, Pulas gond, exudes from incisions into the bark, it abounds in astringent matter, but is difficult to apply to the tanning of leather, though its colouring matter is powerful and permanent. The Dhak tree is highly ornamental and its large red flowers called *teesoo* and *keesoo*, yield a beautiful dye, which is likely to come into extensive use. From this plant, and from these flowers the name of the Pelasgi has been supposed by Mr. Peacock, in his 'Greece in India' to be derived. Its wood is valued for coating wells, and it is also much sought after for the purpose of making a hom, or sacrificial fire. The Taleef-i-Shareef says, that "when the white flowers are found, and any one shall eat the seeds, his heart will be cleansed, his understanding increased, and he shall be endowed with supernatural knowledge."—*Royle's Fib. Pl., p.* 297; *Elliot's Supp. Gloss.*

DHAK also DHAUL, Hind. Erythrina arborescens.

DHAKA, 23° 42′·7″; 90° 20′· 3″, in Bengál, on the Bura Gánga, 150 miles N.E. of Calcutta, written Dacca. It is about 72 feet above the sea.

DHAKARA, a tribe of Rajpoots who hold a few villages in K'hundoulee in the Agra district, Juleysur in Muttra, and Dehli Jak'hun in Etawa; and are scattered over other parts of the Central Doab and Rohilcund.

DHAKUN, the *Jigger Khor* or liver-eater of Scinde, is the genuine vampire. An officer after a long chase in the valley of Oodipoor, speared a hyena, whose abode was the tombs, as well-known as the steed on which the witch of Ar, sallied forth at night. Evil was predicted: and a dangerous fall, subsequently, in chasing an elk, was attributed to his sacrilegious slaughter of the weird sister's steed. —*Tod's Rajasthan, Vol.* i, *p.* 74.

DHAKH of Kashmere, a red and white bean, Phaseolus lunatus, &c.

DHAK'HA, Hind. Butea frondosa.

DHAL, Hind., Tam., Tel. A shield.

DHAL, also Arhar, Beng. Cajanus indicus. – *Spreng.* Pigeon pea.

D'HALIZ K'HOONDLANA, treading the threshold, a mahomedan marriage ceremony.

DHAL-KULMEE, Beng. Calonyction roxburghii.

DHAL-PHOR, Hind. A class of the Kúrmí, or great agricultural tribe in Hindoostan; the words mean clod-breaker.

D'HAL SAHIB, a mohurrum allum, literally Mr. Shield.

DHAMA, Hind. Fagonia cretica.—*Linn.*

DHAMAN, Hind. Pennisetum conchroides. Grewia oppositifolia; G. elastica.

DHAMA-PADAM, a budd'hist sacred book of high authority, and gives the most faithful picture of the ethical spirit of Buddhas' teachings.—*Bunsen, God in Hist., Vol.* i, *p.* 343.

DHAMAR, Hind. Gum-resins of various trees, Shorea robusta, Canarium strictum, &c. See Dammar.

DHAMAYANGYEE, flat arches of stone and brick, are not uncommon, in Burmah Captain Yule discerned two of brick, in windows in the Dhamayangyee temple at Pagan, where no suggestion of European or Indian aid could have helped. There is one flat stone arch in the northern gate of the fort and another in a tomb, at Kurnool. There is one in the mediæval building of Roslin Castle, and in the magnificent Saracen gateway of Cairo, called Bab-el-Fitoor.—*Yule's Embassy, p.* 48.

DHAMEE, this old Rajpoot state became independent of Kuhlor after the Goorkha war. The state was bound to supply forty begar, but this was commuted to a tribute of Rupees 720. Revenue, Rs. 4,000; population, 2,853.

DHAMI, Hind. A follower of Prannath, a hindoo reformer who flourished in the 17th century in Bundelkhund.—*Wilson.*

DHAMIN, Hind., Mar. Butea Gibsonii.

DHAMMA, Pali; Dharma, Sansc. Law, Duty.

DHAMMAN, Hind. Grewia elastica G. oppositifolia.

DHAMMA or DHARMMA, the doctrines or sacred writings of the budd'hists.—*Hardy, Eastern Monarchism, p.* 435.

DHAMMAN, Panj. Grewia elastica, *Royle.* G. oppositifolia, *Buch.*

DHAMNA, Uria ? Grewia tiliæfolia ? A tree of Cuttack, has a reddish coloured wood, hard but pliable, strong, very plentiful in the Santhal jungles, from Raneebahal to Hasdiha or about forty miles. Used chiefly for cart wheels.—*Calcutta Engrs' Journal, July* 1860.

DHAMNI, Hind. Portulaca oleracea ? P. sativa.

DHAMNOO, Hind. Grewia elastica, *Royle.* G. oppositifolia, *Buch.* G. tiliæfolia, *Vahl.*

DHAMONI, a village in the Saugor district, situated about twenty-nine miles north of Saugor, in latitude 24° 11′ 32″ and longitude 78° 48′ 34″.

DHAMTARI, the largest and most important town in the southern portion of the Raipur district. It is situated thirty-six miles to the south of Raipur, and is the head-quarters of a tahsil or sub-collectorate.

DHAMULA, Sans. Alpinia galanga. *Swz.*

DHAMUN, Hind. Green tea, in Ladakh, also brick tea, in Kashmere. Tea in cakes, both black and green, called "dhamún," goes to Kashmere only, also Khutan silk and some brocades. Velvet used to be imported from Russia but is not so now ; the direct English imports having no doubt supplanted the trade.

DHAMUNGAON. See Sanatoria.

DHAN, Hind. Oryza sativa, unhusked rice or paddy, also growing rice.

DHAN SAFAID, Grislea tomentosa.

DHAN, Hind. Buchanania latifolia.

DHAN, Hind. Wealth ; Tan, Man, Dhan, body, mind and substance.

DHAN MARRI, Tel. A rice field.—*Wils.*

DHANA. The Gond portion of a village which is always separate from the rest. Also applied generally in the north-west as Wuzra, Nugla or Poorwa.—*Elliot's Suppt. Gloss.*

DHANADA. See Inscriptions, p. 383.

DHANANJAYA, Sans. From dhana, riches and jee, to conquer. See Inscriptions, p. 374.

DHANAPATTI and Srimantoo, a romantic hindoo tale of adventures of a father and son, wealthy Bania merchants of the Ganges who travelled to Coromandel, Ceylon, Java. Both of them were imprisoned in Ceylon.

DHANATTAR, Hind. Clitorea ternatea.

DHAN DHAUTA, Hind. ? A tree of Chota Nagpore with hard, white timber.—*Cal. Cat. Ex.* 1862.

DHANDORA, Hind. Proclamation by beat of drum.

DHANDUR DHANDOSU, a town twenty-five miles south of Bhutnair.

DHANGA. Coriandrum sativum.

DHANGAPHUL, Beng. Grislea tomentosa.

DHANGAR, Hind. A people in India, who claim to be of the vesya caste, who are dairymen. The *Dhangar* of the Mahratta and Telugu countries are theKuru-buru orCurumbar of the Canarese districts. The Dhangar, in Telingana, are in twelve tribes, who do not eat together nor intermarry. In the centre of the Peninsula, they are shepherds and wool-weavers, kitchen gardeners and labourers. In the hill country of Ramgurh and Chota Nagpore, there is a tribe of this name, some of whom descend periodically into the plains for labour. The Dhangar, in Calcutta, are labourers. Mr. Hodgson describes the Dhangar as of Mongol origin. He bids us look steadfastly at any man of an aboriginal race, an ubiquitarian Dhangar for instance, and say if a Mongol origin is not palpably inscribed on his face ? There are 8,059 of these in Oomraoti. But it is not known whether, as in Ramgurh and Chota Nagpore, they are a hill people ; in Telingana, they are cultivators ; in the south of India, they are shepherds and weavers in wool. Many of the Dhangar are settled in the towns of the south of India, occupied as labourers, kitchen gardeners and dairymen ; and the Dhangar in the south of India arrange themselves accordingly. The Tiling Dhangar are milkmen and weavers of coarse woollens ; the Mahratta Dhangar graze cattle and sheep and clarify their butter into ghee ; the Bangar Dhangar are purely shepherds, as is indicated by the term "Ban-gar," wild man or forest man. The Dhangar sheep farmer race of the Peninsular Dekhan, are of two sections, the Kota Pullia Dhangar who keep sheep, and the Barji Hatkar or "shepherds with the spears." The latter still hold much land on the borders of the Nizam's territory and, until the British domination were notorious for pugnacity and rebellion, and they still continue a quarrelsome and obstinate race. They are supposed to have come from Hindoostan in twelve tribes, and been impelled by the Gonds towards Hingoli and Bassim, which locality got the name of Bara Hatia, or the twelve tribes. They now oc-

cupy the hills on the north bank of the Pyn Ganga. To die in the chase or in war is deemed honorable, and the Hutkar who are so killed are burned. The Hutkar are fine, able-bodied men, independent but arrogant: many of them never shave or cut the hair of their face. The Ramgurh and Chota Nagpore Dhangar come periodically into the plains for employment, and some of them are engaged as labourers and scavengers. In the Peninsula, they are dark, almost black men of slender and spare forms, they are quite dissimilar from the Gaoli, in personal appearance, and all the sheep (kuru, Karnatica, a sheep) are under the Kurubaru or Kurumbar race. They are also wholly distinct from the Ydayan or Yadava Tamulian cowherd race, who are known in all the Tamul country as 'Pillai' or son, and in all probability, the dispersed Kurumbar of the Peninsula of India, some of them in towns and others almost nomade, are the fragments of the great shepherd race who held sway in the Arcot district in the early centuries of the Christian era.

The Golla employed as a cashier is said not to be a cowherd.

The Mirda are a caste of migratory shepherds in the south of India.

The cowherd and barber are of the better of the servile tribes, but the Kurumbar or Dhangar, and the Gaola dairy men, keep aloof from each other.

The Ghoonkur or Dhankur or Dhungur in the Lukti territory bordering on Udipur and Sultanpur, are a tribe of short but muscular and able-bodied men who speak a separate language. The tribe is confined to Chota Nagpur and the adjoining districts. They do not follow hindoo rites, and they have no temples, but set up near their villages a stone with some rude carvings, which they worship in times of famine or sickness or calamity. They bury but sometimes burn their dead.—*C. J. P. C. R., pp.* 6 *and* 7 ; *Campbell, p.* 33.

DHANGUR. See Kaiyu ; Chetang.

DHANI RANG, Hind. A full green colour. A person of consideration.—*Wils.*

DHANIA, Guz. Dhaniyalu, Tel. Coriandrum sativum, *L.* Coriander seed.

DHANJI. See Malwa.

DHANK, an ancient name of Mongy Pyttun or Mongy Puttun in Saurashtra. The present chief is of the Balla Rajput race.

D'HAN KE KHILIAN, Hind., also K'hoee, swollen parched rice.

DHANKUR, Doonkur or Dhungur, in the Lukti territory, bordering on Udipur and Sultanpur, a tribe of short but muscular and able-bodied men who speak a separate language. The tribe is confined to Chota Nagpur and the adjoining districts. They do not follow hindoo rites and they have no temples, but set up near their villages a stone with some rude carvings which they worship in times of famine or sickness or calamity. They bury, but sometimes burn their dead.—*C. J. P. C. R., pp* 6 and 7.

DHAN-LUNKA-MURICH, Beng. Cayenne-pepper ; Capsicum ; Capsicum fastigiatum.

DHAN-MARRI, Hind. Artificially irrigated rice fields.

DHANNEE, Tam. A dark-coloured wood of Travancore, specific gravity 0·733. Very strong, but knotty, used for common buildings. —*Col. Frith.*

DHANNIA, Guz. Coriander seed.

DHANSRI RIVER. See India, p. 311.

DHANUK, Hind. A bow-man. Dhanuk from the Sanscrit, a bow, and Danusha are the names of a race in northern India, but numerous in Bahar, employed as archers, fowlers and house guards, also in several menial occupations both of the house and field wherever they reside. The females are specially in request as mid-wives. The Dhanuk, tribe of fowlers and archers of Bahar and Hindoostan, live on their prey ; they are employed as house guards, and Dr. Buchanan describes the Dhanuk of Bahar, Bhagalpoor and Puraniya as engaged in agriculture like the Kurmi. Many of them however are agricultural slaves. The Dhanuk are descended, according to the Padma Purana, from a Chamar and a Chandal woman. From the Danuk have proceeded Aherya, who are said not to eat dead carcases, as the Danuk do.

There are reported to be seven sub-divisions of the Danuk, Loungbusta Mut'hurea, Kut'hurea, Jyswar, Magahi, Dojwar and Chhilatya. These do not intermarry, or even eat or smoke together. They mix indeed so little with one another, that an individual Dhanuk is seldom able to mention more than two, or at most three, of these names as belonging to his fraternity. There are several Dhanuk in Delhi, and they are scattered over the North-western Provinces ; but Bahar is the country in which they most abound.—*Wils. Glos. ; Elliot's Suppl. Gloss. ; Postan's Western India, Vol.* i, *p.* 167. See India.

DHANWANTRA, the physician produced at the churning of the ocean. Tâkâjiea-coond, or "fountain of the snake-king," is about two miles east of Naoli, near the boundary of Bhynsror and Bhanpoora. The road, through a jungle, over the flat highland or Pat'har, presents no indication of the fountain until you suddenly find yourself on the brink of a precipice nearly two hundred feet in depth, crowded with noble trees, on

which the knotted "koroo" is conspicuous. The descent to this glen is over masses of rock; and about half-way down a small platform, are two shrines; one containing the statue of "takshac," the snake-king; the other of "Dhunwantra," the physician, who was produced at the 'churning of the ocean.' The "coond" or fountain is at the southern extremity of the abyss. Dhanwantra is the Esculapius of the hindoos, but has not an attendant serpent like his brother of Greece; "the health bestowing Dhanwantra, the celestial physician, arose from the sea when churned for the beverage of immortality." He is generally represented as a venerable man with a book in his hand.—*Rajasthan, Vol.* ii, *p.* 718; *Colem.'s Hind. Myth., p.* 383; *Moore, p.* 342. See Images, Kurma, Serpent Vidiya.

DHANYA-BHEDAM, Tel. A variety of wheat.

DHANYAKA, Sans. Coriander seed.

DHANYALI, Hind. Adelia serrata.

DANYALU, Tel. Coriandrum sativum.

DHANYA-ROOPA, Sans. From dhana, rice; and rōōpa, form.

DHAO of Kangra. Conocarpus latifolia.—*Roxb.*

DHAO, Hind., or Dhon, rock containing magnetic oxide of iron in form of sand.

DHAO KA GOND, Hind. Gum of Grislea tomentosa.

DHAOLA DHAR, or outer Himalaya or White Mountain, from *Dhavala*, Sanscrit, white; a precipitous range of hills between the Byâs and Ravi in the outer or sub-Himalayas to the north of Kangra. The whole length of the outer or sub-Himalaya, nearly 300 miles from S. E. to N. W., is pierced by the Ravi, the Chenab, the Punach, and the Jehlam rivers, which divide it into separate districts. The snow-line is about 16,000 feet in height. Dhaola Dhar, is called by several names in our maps, Mani Mahes ki Dhar, or the mountains of the holy lake of Mani Mahes, and Hugel calls it Palam Kidar and Chamba Kidar. The rocks are clay and mica slate.—*Cleghorn's Punjab Report, p.* 97.

DHAR, a river near Kaisla in Baitool.

DHAR, Hind. A hill.

DHAR, 22° 35'; 75° 21', in Málwa, 33 miles W. of Mhow. The level of the railway, 1,850 ft. Dhar town, is about 30 miles S. W. of the Indus river. The Puar family was one of the most distinguished in the early Mahratta history and Anund Rao Puar is usually considered as the founder of the principality of Dhar, which with some adjoining districts and the tribute of some Rajpoot chiefs was assigned to him by the first Bajee Rao, Peishwa. For twenty years before the British conquest of Malwa, the Dhar state was subjected to a continued series of spoliations chiefly at the hands of Sindia and Holkar, and was preserved from destruction only by the talents and courage of Meena Bai. Anund Rao Puar died in 1807 and was succeeded by his posthumous son Ramchunder Rao Puar, on whose mother, Meena Bai, the administration devolved. Ramchunder died early, but Meena Bai with the consent of the neighbouring chiefs, adopted her sister's son under the name of Ramchund Puar. The Dhar state rebelled in 1857 and was confiscated, but it was subsequently restored to Anund Rao Puar with exception of the Bairsea pergunnah. The area of the state is estimated at 2,091 square miles, and the population at about 1,25,000 souls. The revenue is rupees 4,37,000. One company of the Bhopal levy is maintained at the expense of the state to garrison the fort. Dhar pays an annual contribution of Rupees 19,656-0-4 for the maintenance of the Malwa Bheel corps. The chief receives a salute of fifteen guns, and has been granted the right of adoption.—*Buch., Hamilton, Treaties, Engagements and Sunnuds, Vol.* iv, *p.* 325.

DHARA, Hind. Corchorus olitorius.

DHARAPATTAH. See Inscriptions, pp. 375,376.

DHARA SENA. See Inscriptions, p. 375.

DHARI. Grislea tomentosa.

DHARI, name of a waterfall near the Hirnphal, or Deer's Leap, on the Nerbuddah.

DHARICHA, Hind. Second husband of a widow.

DHARINJO, Uria. A tree of Ganjam and Gumsoor, extreme height 60 feet, circumference 4 feet, and height from the ground to the intersection of the first branch 8 feet. Tolerably common. No use seems to be made of the wood. The bark is used medicinally by women after child-birth; the juice of the leaves is supposed to cure itch.—*Captain Macdonald.*

DHAR KARELA, Hind. Momordica dioica.

DHAR KI KARER, Hind. Cæsalpinia sepiaria.

DHARMA or DHARMA RAJA, or Yudhishtira, the eldest of the five Pandava. See Hindoo, Inscriptions, pp. 374, 381, 386, 390; Karli, Vedas.

DHARMA, Hind., Sans. Charity, law, virtue, morality. Dharma-kari, a judge. Dharma-das, a temple servant. Dharma-karta, a temple manager. Dharma-swama, literally faith (dharma), to his lord (swama.)

DHARMA DEVA. See Inscriptions, p. 389.

DHURMA-BHANOO, Sans. From dharma, religion; and bhanoo, splendour.

DHARMA PASS. See Kunawer.

DHARMA-RAJAH, the title of the spiritual ruler of Bhutan, literally king of virtue. He succeeds by incarnation.

DHARMA-RAJAH, SANS.
Shinje, TEL. | Choigyal, TIB.

From dharma, justice ; and rajah, a king. A name of Yama in his benificent form. He is the king of justice, whose countenance the virtuous only see: the wicked see him as king of the infernal regions. In the hindoo religion, he is the god of eternal justice. Antaka is an attribute of Yama or Dharmaraja, in the character of the destroyer.—*Cole's Myth. Hind., p.* 379. See Inscriptions, p. 353. Yama.

DHARMSALA. A building devoted to some religious or charitable purpose. A house for the accommodation of travellers or pilgrims or for the reception of the sick or poor. The dharmsala, or temples of the Sikhs, are in general, plain buildings. They are built by rich men, or by several uniting to defray the expense. They have a flat roof, and are sufficiently capacious to accommodate a multitude of attendants, who sit or stand during worship. Images are banished. The bunga, or temples, at Amritsur, surrounding the holy tank, are fine buildings ; each missul, or association of Sikhs, has a separate bunga. The forms of prayer and praise are simple. Portions of the Adi Grant'h are read or sung ; the priest says, "Meditate upon the Book," and the people reply, "Wah, Guru ! Wah, Guru ki Fatah !" Guru Govind not only introduced the worship of Doorga and the sword, but, it is said, offered sacrifices at her festivals. In the Dasama Padshah ki Grant'h, Durgah is represented as the tutelary goddess of war. In the common form of a hindoo temple, the adytum containing the object of worship is invariably covered with a "shikur," or bell-shaped spire ; the mundup, or ante-chamber, is open, and contains in temples of Siva a figure of the attendant bull, Nandi: Vaishnavite temples, especially, have frequently two ante-chambers, in which case the first is open and the second closed. These, as also the temples of the Jain religion, have occasionally three spires, the centre one rather higher than the other two. The temple is surrounded by a Dharamsâla, or house of accommodation for attendants and worshippers. The surrounding structure is, however, still, sometimes, especially in Jain temples, formed of numerous small spire-covered shrines, and the lodging-houses are in that case detached, but the whole mass of buildings is frequently encircled by a fortified wall. A large temple presents, in fact, the appearance of a village ; the auxiliary buildings look like substantial private houses, but are more liberally adorned with carved wood-work ; and sometimes nearly the whole exterior of them is covered with rude paintings, representing marriages or other domestic festivals, or more frequently the achievements of the gods. Small reservoirs of water called koond, circular wells, and more imposing wâv or bowlee, and sometimes majestic tanks are the more or less indispensable accompaniments of places dedicated to the religion of the hindoos. Like the Christian churches of the middle ages, the hindoo temples of Goozerat are usually placed in situations highly favoured by nature. The awful gloom of the grove, the romantic beauty of the mountain glen, the brightness of the river's bank, the wildness of the cloud-enveloped peak, or the solemn calm of the ocean bay, are accessaries of which the religions of Siva and of Adinâth know full well how to avail. The officiating priests are, in the temples of Siva, usually Gosâee ; in those of Vishnoo, Brahmins or Virâgee ; in temples of Devi low caste Brahmins or Gosâee—sometimes, as in the case of Boucherâjee, even mohammedans. The priest in a Jain temple may be of any caste, with the curious provision that he be not a Shrâwuk, or layman of that religion. Low caste brahmins, especially the class called Bhojuk, are frequently employed. The *Cosâee*, are members of a monastic order which follows Siva. They wear orange-tawny clothes ; and the *teeluk*, or sectarian mark upon their foreheads, is horizontal. The *Virâgee* is a vaishnavite monk, and wears a white dress and a perpendicular teeluk. Those who are servants of the Dev add to the teeluk a *châudlo* or red spot, made with a preparation of turmeric. The Jain monk is commonly called a *Jati*, but the general name applying to all these orders is that of *Sunyâsi*, or ascetic. The Sunyâsi are often persons who have lost their property, or have been deprived of their children, or suffered some other calamity, against which they have not had resolution to bear up. The intended recluse having arranged with a *guru*, or monkish dignitary, for his reception into the order, and having ascertained the favourable day by astrological calculation, breaks the sacred cord, if he be of the regenerate classes, removes the hair of his head, assumes the monastic dress, and with alms and prayers receives initiation. The Sunyâsi are, however, sometimes consecrated at an early age ; a person who despairs of having children not unfrequently vows to consecrate one son, if two be granted to his prayers ; and among the Jains, when disciples are scarce, as they

frequently are, the monks purchase children for the purpose of initiating them. The markings which hindoo sects place on their foreheads, are alluded to by Moses: "Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you: I am the Lord."—Leviticus, xix. 28. Bishop Patrick notes that this imprinting of marks or signatures was understood to be fixing a badge or characteristic of the person's being devoted to some false deity.—*Forbes' Râs Mâlá or Hindoo Annals, Vol.* ii, *pp.* 311 *to* 313; *History of the Punjab, Vol.* i, *pp.* 123 *and* 124. See Mat'h.

DHARMSALA, is a sanatorium with a soldiers' garden, containing many introduced Himalayan trees of great interest. Box, ash, and various conifers as well as many European fruit trees are adapted to this hill station; it has perhaps the only collection of indigenous Alpine trees in the Punjab.

DHARMA SASTRA, the hindoo law, the Code of Manu.—*Wils.*

DHARMA SUTRA, a term sometimes given to the Samaya charika rules.—*Müller.*

DHARMIKA SENI. See Inscriptions, p. 384.

DHARMMA, Sans. In budd'hism, both faith and practice; Practical virtue and morality. See Damon and Pythias.

DHARMA SETOO, Sans. From dharma religion, and Sétoo a bridge, or dam.

DHARMA THAKOORU, Sans. From dharma, religion; and t'hakooru, a lord.

DHARNA or Dhurna, Hind. Dharna baithna, literally to sit "Dharna," was a practice put in force in several parts of India by creditors who sat down before the doors of their debtors so as to close all exit unless over the sitter's body and thus compel a payment of their claims. The practice was formerly familiar at Benares, and may be translated "caption or arrest." It was used by the brahmans to gain a point which could not be accomplished by any other means; and the process was as follows:—The brahman who adopts this expedient for the purpose mentioned, proceeds to the door or house of the person against whom it is directed, or wherever he may most conveniently intercept him. He there sits down in dharna, with poison or a poignard, or some other instrument of suicide in his hand, and threatening to use it if his adversary should attempt to molest or pass him, he thus completely arrests the debtor. In this situation the brahman fasts; and by the rigor of the etiquette, which is rarely infringed, the unfortunate object of his arrest ought also to fast and thus they both remain until the institutor of the dharna obtains satisfaction. In this, as he seldom makes the attempt without resolution to persevere, he rarely fails; for if the party thus arrested were to suffer the brahman sitting in dharna to perish by hunger, the sin would for ever be upon his head. This practice has become almost unheard of in late years, but formerly even the interference of British courts often proved insufficient to check it, as it had been deemed in general most prudent to avoid for this purpose the use of coercion, from an apprehension that the first appearance of it might drive the sitter in dharna to suicide. The discredit of the act would not only fall upon the officers of justice, but upon the Government itself. The practice of sitting in dharna was not confined to brahman men. It was had recourse to by Benu Bhai, the widow of a man of the brahminical tribe, who had a litigation with her brother-in-law, Bal Kishen, which was tried by arbitration, and the trial and sentence were revised by the court of justice at Benares, and again in appeal. The suit of Benu Bhai involved a claim of property and a consideration of caste, which her antagonist declared she had forfeited. Originally it was practised by brahmans, but was prohibited by Res. 7 of 1820 of the Bengal Code. In the south of India it is done before idols for obtaining the object of desire. It is an ancient practice: Genesis xxiv says 'I will not eat until I have told mine errand,' and a brahman sometimes goes to a house, sits down, and refuses to eat till he has obtained the object he has in view. The *Englishman* newspaper relates that about 1850, a man named Chutterbhooj, son of a well known and respectable Charan of Oodeypore, carried to the late chief of that state certain grievances which he considered himself to be suffering in connection with his village. Failing to secure redress by ordinary measures, he took the unusual course of intruding on the chief without permission, for which breach of etiquette he was forbidden to enter the palace again. Accordingly, being under a sense of degradation, ill-feeling and annoyance, engendered by the prohibitory order, he indulged in satires and phillipics against his chief, who thereupon confiscated his village. Upon this, Chutterbhooj proceeded to Suloombur, which at that time, was at enmity with the chief of Oodeypore, and this step only incensed the chief all the more against him. Here he appears to have been provided for, but subsequently wandered about from place to place trying to obtain redress, but without being able to secure either the forgiveness of his chief or the restitution of his village. In this state of feeling he appears to have given way to the superstitious

idea, still prevailing amongst the Rajpoots, that the shedding of his own blood or the blood of his family would bring destruction upon those who had offended him if it did not secure a ready attention to his real or imaginary wrongs. In 1859 therefore, whilst travelling through the jungle with his two wives, two slave girls and a servant, together with a party of the Meena, who were his retainers, he one day dismounted and gave his horse in charge to the servant and began to smoke. Then advancing a little distance he suddenly killed the servant, and called upon the Meenas to dismount the woman. His orders were obeyed. One slave girl fled away with her boy to a neighbouring village and escaped, but the three other women were killed. The slave girl informed the villagers of what had occurred, and they went out and saw the dead bodies, and carried them away, and burnt them. The slave girl died the next year, and Chutterbhooj never turned up for six years after the offence had been committed. He then came in and confessed to having murdered the women and servant. Accordingly he was tried and convicted of murder, and the Viceroy was fully of opinion that the man deserved hanging, but that, considering the number of years which had elapsed, the prevalence of superstition, and the lawlessness which prevailed in that part of Rajpootana at the period in question when many such acts were committed with impunity, His Excellency commuted the sentence to transportation for life. The inviolability of a brahman, and the sin attached to causing the death of one, in any way, is inseparable, and to this, according to Sir William Jones, may be traced "the practice of dharna.

DHARPOSH, Hind. Saxifraga ligulata.

DHARUKU, or Dharana, Sans. From dhree to hold.

DHARUVA SENA. See Inscriptions, p. 389.

DHARUR, Hind. Dioscorea deltoidea.

DHARWAR, a town in the Southern Mahratta country in the Belgaum collectorate of the Bombay Presidency.

DHAS. See India, p, 346.

DHASAN, a river near Saugor cantonment.

DHASHT-I-KAPCHAK, The Sahara of Asia. See Dasht; Desert, Kalmuk; Khiva; Kelat.

DHASRA, religious mendicants in Southern India, who hold an iron worshipping lamp in their hands and perform on the Jangata, Tarte and Sinku. They walk before a corpse when being carried to the funeral pile.

DHAT, an isolated and now dependant chieftainship of which Oomerkote is the capital. It separates the Bhatti race from the Jareja race. Its prince is of the Pramara race and Soda tribe, ancient lords of all Sind.

The Dhote, or Dhatti, is the Rajpoot tribe, inhabiting Dhât, and in no greater numbers than the Kâorwâ, whom they resemble in their habits, being entirely pastoral, cultivating a few patches of land, and trusting to the heavens alone to bring it forward. They barter the ghee or clarified butter, made from the produce of their flocks, for grain and other necessaries of life. Rabri and Chauch, or 'porridge and butter-milk,' form the grand fare of the desert. A couple of seers of flour of bajra, jooâr, and kajri, is mixed with some seers of chauch, and exposed to the fire, but not boiled, and this mess will suffice for a large family. The cows of the desert are much larger than those of the plains of India, and give from eight to ten seers (eight or ten quarts) of milk daily. The produce of four cows will amply subsist a family of ten persons from the sale of ghee; and their prices vary with their productive powers from ten to fifteen rupees each. This rabri, so analogous to the koonskous of the African desert, is often made with camel's milk, from which ghee cannot be extracted, and which soon becomes a living mass when put aside. Dried fish, from the valley of Sind, is conveyed into the desert on horses or camels, and finds a ready sale amongst all classes, even as far east as Barmair. It is sold at two dokra (coppers) a seer. The poora, or temporary hamlets of the Dhatti consisting at most of ten huts in each, resemble those of the Kâorwâ.—*Tod's Rajasthan, Vol.* i, *p* 45.

DHATAKI KUSUMAMU, Tel. Dhatri-pooshpika, Sans. Grislea tomentosa.—*Roxb.*

DHATUGARBHA. See Buddha.

DHATURA, Hind. species of Datura, D. fastuosa, and D. stramonium, an intoxicating and poisonous drug. The plant is well known by its white trumpet-shaped flower: safaid dhatura is D. alba.

DHATURA, Hind.? Hyoscyamus niger?

DHATUSENA. See Mahomedanism.

DHAU, a river near Burragong in Chuprah.

DHAU, Panj. Lagerstroemia parviflora.—*Roxb.* Hind. Conocarpus latifolia.

DHAUEN of Bombay, Grislea tomentosa.—*Roxb.*

DHAUL DHAK, Hind. Erythrina arborescens.

DHAULIA, a place in Cuttack, at which there is an inscription of the third century before Christ. It has two separate local edicts, the remaining edicts corresponding with those of Girnar. See Buddha, Girnar, Inscriptions, pp. 373, 385, 387.

DHAURA, Hind. Lagerstrœmia parviflora.

DHAURA, Grislea tomentosa, the scarlet flowers, dhau ka phool are considered stimulating and given to women in labour: are also used in dyeing. One seer costs four annas. The gum, dhaura or dhau ka gond, is white in colour, like the katira and tragacanth gums, swells in water: in dyeing cloth it is applied to those parts that the dye is not wished to touch; it is eaten in "luddoo;" one maund costs ten rupees.—*Gen. Med. Top., p.* 133.

DHAVALA or Dhavalha. See Inscriptions, p. 392.

DHAVANTARI, the physician of the gods who rose from the sea of milk.

DHAVES, Hind. Dhewus, Hind.

DHAWAN PHUL, Hind. Flower of Grislea tomentosa.

DHAWI KHURD, Hind. Grislea tomentosa: Sufed dhawi, Hind. Buxus sempervirens.

DHAWAR, Mar. A tribe who are smelters of iron.

DHAYA, Hind. Land on a river bank, subject only to the occasional overflow of water: also ridges along the dry course of a river, which has turned in another direction.

DHE, Hind., in the N. W. Provinces, a sub-division of the Jat tribe.

DHE, Hind, of the Cis-Sutlej, old mounds yielding saltpetre earth.

DHIMAR, a race, chiefly employed in fishing. They are, properly speaking, a branch of the bearer, or Kahar, caste; though they are sometimes said to be offshoots of mullah, or boatmen.

DHEKENAL, See India, p. 330.

DHELA, Hind. A Lahore grass, Scirpus maritima.

DHELA KATA, Hind. ? A tree of Chota Nagpore, with hard, yellow timber.—*Cal. Cat. Ex.* 1862.

DHENA, Beng. Vitis elongata.

DHENGI, a boat on the Ganges river. See Boat, Bhouliya.

DHENGUN, Hind. Cordia macleodii. —*Hooker.*

DHENKA, Hind A lever of any kind.—*Wils.*

DHENKLI, a water lever, a machine for raising water, the pakotta or yettam of the Tamil countries. It consists of a horizontal lever with a weight at one end and a bucket of iron or an earthen pot at the other, slung from a bamboo, or pole; this being lowered into the well and returned to its original place, brings up a bucket of water. The name is provincially corrupted into Dhooklee, Dhiklee, and in Goruckpoor into Dheokul. The word appears to be derived from Dhulkana to roll, to overturn. The posts which act as the fulcra are called T'hoonya; the rope, Burt; and the bucket, Kurwala. The "dhenkli" is seldom used in the Punjab proper, except for the irrigation of rice fields, and in river tracts for melons and tobacco. In the peninsula of India it is in use in all the finer garden or even in field cultivation.—*Elliot's Sup. Gloss. Powell's Hand-book; Econ. Prod. Punjab, p.* 208.

DHENRUS, Beng. Abelmoschus esculentus.

DHER, a non-Arian race, dwelling as predial slaves, in many parts of India, in the Panjab, rare in the N. W. Provinces, many in the Saugor territory. In the Nagpore territory they have acquired some consideration from their employment as Dulal or writ servers. In the Deccan they are doubtless the same as the Holiar of the Canarese, the Mahr of the Mahrattas and the Pariah of the Tamil race. In the Western Provinces, though they are not often found in any numbers, but they appear to have left the remembrance of their name, for it is common term of abuse to call a man a Bura Dher'h, or a low-caste fellow. They eat dead animals, clean skins and sell them to Chamars. In Rajpootana, the Dher'h will not eat hogs, either tame or wild: the latter they hold in great abomination, notwithstanding their Rajpoot masters look upon them as a luxury.—*Elliot's Sup. Gloss.; Journal R. A. S., p.* 224. See Chepang India, Pariah.

DHERA, Hind. A station. A tent: a hamlet.

DHERI, in Sind, a bit of stone or other such material, round which the raw wool thread is twisted. The Kambo is a long cloth thrown over the right shoulder, and so fastened round the waist as to leave a place for the lambs and kids that are too young to walk.—*Richard F. Burton's Sindh, p.* 410.

DHERWARAH, the locality outside the hindoo towns where the Dher race reside.

DHERWARA, part of the budd'hist excavations at Karli.

DHEWUS, Hind. Dalbergia oojeinensis.

Dhaves, Hind. | Dhivus, Mahr.

A timber of Nagpore, of a light colour. It is liable to be devoured by white ants, and is only procurable of a small scantling, from 12 to 15 feet long and two feet in girth. Its strength, however, is considerable, and, if found of a proper size, would doubtless be valuable. The young trees are all cut down for bandy poles. It sells at 8 annas the cubic foot.—*Captain Sankey, Major Pearse.*

DHI, Hind., Sans. Sour milk.

DHIMAK, Hind. White ants; properly Dewak.

DHIMAL, a race of 15,000 souls in the sal forest of the Terai who about the close of the eighteenth century migrated to the north and east of the Kooch from Nepaul. The Dhimal dwell between the Konki and Dhonla, between the open plains and the higher levels of the mountains, and their villages, though distinct, the people not intermarrying, are intermixed with the Bodo. The Dhimal differ from the Bodo, in their language and their pantheon. Mr. Latham considers the terms Dhimal, Kamul and Tamil to be the same. The deities Data and Bidata preside over marriage, the feast of which is prolonged through three days and costs from 30 to 40 rupees. They bury their dead. The Dhimal of the eastern portion of the Turai, are estimated at about 15,000 souls. They are intermixed with the Bodo and lie between the Kuki and Dhonla.—*Latham's Descriptive Ethnology.* See Bodo, India.

DHIMAR, are fishermen; a branch of the bearer or Kahar race, but are sometimes considered offshoots of the Mullah or boatman race. They are chiefly employed in fishing and palanquin bearing.—*Wils. Gloss.*

DHIMEREE, Uria? A tree of Ganjam and Goomsur, extreme height 40 feet, circumference 4½ feet, and height from the ground to the intersection of the first branch, 8 feet. Bandy wheels are sometimes made of the wood, but it is chiefly firewood, being tolerably plentiful. It is considered sacred and is burnt when libations are offered. The fruit is eaten: a juice extracted from the root is used in rheumatism.—*Captain Macdonald.*

DHINDAGA, Can. Pterocarpus marsupium.

DHINGANA, vulgo Dheegana (lit., a forfeit) a demand of a forfeit at a ceremony. Dhingana Budhnee, the earthen pot used on this occasion.

DHINGAN, in Purneah an agricultural slave.—*Wils.*

DHINGRA Hind. of Kangra, Cajanus indicus.—*Spreng W. and A.*

DHIRHOR, a tribe of the Ahir in Benares and Goruckpoor. They are reckoned in the Tashrih-ul-Akwam amongst the Doab Ahir.

DHIROKOLI, See India, p. 327.

DHIVUS, Mahr. Dalbergia Oojeinensis.

DHOB, Rana Jey Sing took possession of the Gadi in S. 1737 (A. D. 1681.) A few hours only intervened between his entrance into the world, and that of another son called Bheem. It is customary for the father to bind round the arm of the new-born infant a root of that species of grass called the amirdhob, 'the imperishable' dhob, the Cynodon dactylon well known for its nutritive properties and luxuriant vegetation under the most intense heat.

DHOBI, a washerman; one of the lowest castes of Hindoos. A woman is called Dhobin. In the Upper Godavery district the present population is 54,680, of whom the Dhobi are a large part.

DHOBEE'S EARTH is a native carbonate of soda. It is called washerman's earth, also called Sajji Matti in Hindustani, and Applacaram in Tamil and Telugu. Dhobee's Earth is a whitish grey, sandy efflorescence, which often covers miles of country where decayed white granite forms the surface soil; this earth begins to accumulate in the dry weather; immediately after the rains, it can be scraped off the surface to the depth of two or three inches, and by repeated boiling and the addition of a little quick lime, the alkali is obtained of considerable strength. With a little care, very clean carbonate of soda can be obtained, fit for the manufacture of toilet soap, white glass, and glazes for pottery. The Nellore, Cuddapah, Masulipatam and Chingleput districts, yield this earth in great quantities, and it is also found at Poodoocottah, Hyderabad, Bellary and Mysore. The richest in alkali is from the territories of the Nizam. The quantity of anhydrous carbonate is about 67 per cent. Repeated attempts have been made to prepare Barilla from it, for exportation, and very fair specimens have been exported at different times, but the moderate price of the carbonate of soda of England prepared from sea salt will always prevent this from being a remunerative article of export. The colored frits for bangle glass, in making which it is used, have lately however become an article of export from the Madras presidency. It exists in immense quantities in many parts of India, in Bengal, especially, in the districts of Monghyr, Purnea, and Cawnpore. It contains from 40 to 50 per 100 of carbonate of soda, traces of sulphate of soda, organic matter, clay, sand, and oxide of iron. The salt can be extracted by washing the mineral without incineration, but the organic matter is dissolved at the same time, and gives a deep brown solution from which pure crystals cannot be obtained. The firing destroys this substance, and then the solution is colorless. But care must be taken not to push the heat beyond low redness, for the alkali at a higher temperature combines with the sand and clay, and the whole runs into green glass, insoluble in water. In Europe barilla is prepared either by burning sea weeds and lixivating the ashes, the product

being termed kelp and barilla, or by decomposing common salt by sulphuric acid and then roasting the resulting sulphate with chalk, saw dust, and fragments of iron. The mass when washed gives the carbonate of soda. Southern India is particularly rich in alkaline and earthy minerals, the origin of which seems to be the decaying granites of the country, but the most common form of alkali, is the Dhobee's Earth.—*Mr. R. Reynolds in Pharmaceutical Journal*, 1853, *Vol.* xii, *p.* 517—*M. E. of* 1855 *and* 1857; *Cat. M. E. of* 1857; *Beng. Phar., p.* 360.

DHOBOO, Uria. Conocarpus latifolia.—*Roxb.*

DHOFAR or ZHAFAR, one of the now decayed ports of Arabia, on the coast of Hadhramaut.—*Yule's Cathay, Vol.* ii, *p.* 513.

DHOGREE, Kangra hill men who work at iron smelting.

DHOL or DHAL, Hind. Cajanus indicus.

DHOL. Hind. A drum.

DHOL, Hind. Erythrina stricta.

DHOLE, Hind. The wild dog. See Canis. Dog.

DHOLEPORE, a town on the banks of the Chumbul river. Lukindar Singh, better known as the rana of Gohud, was the first of the chiefs of Dholepore with whom the British Government formed political relations. The family belong to the Jat tribe, and first rose to notice under the peshwa Bajee Rao. After the overthrow of the Mahrattas at Paniput, the uncle of Lukindar Singh rebelled and possessed himself of the fort of Gwalior. During the Mahratta war which ended in the peace of Salbye, the British in 1799 formed a treaty with him. Much discussion however arose in 1803, 1804 and 1805, but ultimately the river Chumbul became the boundary between Sindhia's territories and Dholepore. Maharana Keerut Singh lived to a great age. He died in 1836, and was succeeded by Bhugwunt Singh, who rendered assistance to the fugitives from Gwalior in 1857; but his minister Deo Huns incurred the displeasure of Government by plundering villages in the Agra district. Bhugwunt Singh received the right of adoption and was declared entitled to a salute of fifteen guns. His territory covers an area of 1,626 square miles, contains a population of 500,000, and yields a revenue of Rupees 600,000. The military force of the state consists of about 2,000 men.—*Treaties, Engagements and Sunnuds, Vol.* iv, *p.* 108.

DHOLI, a Gond tribe who dwell in jungly districts and are employed as goatherds.

DHOLKEE or DHOLUK, a small drum.

DHOL-KULMEE, Beng. Ipomœa grandiflora.

DHOL-SUMOODRIVA. Beng. Leea macrophylla.

DHOLUK, a small drum.

DHOLWA of the Wagri. Aquila fulvescens.—*Gray.*

DHONEE, a fire lighted by fuqeers, over which they sit, imbibing its smoke.

DHONLA. See India, p. 337.

DHONPATTA, Hind. The leaf of latifolias, used in tanning.

DHOOA. In Bikaneer the six items of the revenue are:—Khalisa, or fiscal revenue; Dhooâh; Angah; Town and transit duties; Pusâeti or plough-tax; and Malbah.—*Tod's Rajasthan, Vol.* ii, *p.* 205.

D'HOOBA GRASS. Cynodon dactylon, flourishes in all seasons, and most in the intense heats; it is not only amara or 'immortal,' but a'khye, 'not to be eradicated;' and its tenacity to the soil deserves the distinction. —*Tod's Rajasthan, Vol.* i, *p.* 494.

DHOOB-KALA. The Indian seasons according to the Shastra, are six in number, each comprising two months. These divisions are more fanciful than real, and the common people are content to adopt the more definite division of three. Choumasa, or Burk'ha, constitutes the four months of the rainy season. The rest of the year is comprised in Seeala, Jara or Mohasa, the cold season; and Dhoobkala, or K'hursa, the hot season.—*Elliot.*

DHOOBKI, a wood of Nepaul, called Bechiacori, Sulla and Surrendhool, or Dhoobkee (on account of its resinous quality.) Its branches are used in Nepaul as torches: the fragrant turpentine which it yields is employed in sacrifices and in medicated salves, and its wood is converted into rafts for houses.—*Smiths' Five Years, p.* 67.

DHOOLIA, a civil and military station in Khandesh.

DHOOLI-BANS, Beng. Dendrocalamus balcooa.

DHOOMAVATI, Sans. From dhoomra, smoke.

DHOOMRO-LOCHANA, Sans. From dhoomra, smoke; and lochana, the eye.

DHOONA, Hind. Shorea robusta, *Roxb.*

DHOOND, a river of Jeypore.

DHOOND, Hind. A mound. Beesil-Deo, a cotemporary of Jeypal, the Tuar king of Delhi lived about A.D. 1032-1096. He seems to have become a convert to mahomedanism. There is the appearance of his subsequent expiation of this crime in the garb of a penitent; and the mound (dhoond), where he took up his abode, still exists at Kalik Jobnair, and is called after him, Beesil-ka-d'hoond.—*Tod's Rajasthan, Vol.* ii, *p.* 454.

DHOONDOOL, Beng. Luffa pentandra.

DHOON SIRIS. Panjabi. Albizzia elata.

DHOORBA, Hind. Cynodon dactylon See Graminaceæ.

DHOOP of Bhore Ghat. Canarium strictum.—*Roxb.*

DHOOS, is an expedient to hasten the compliance of a demand from a dependent. A party of horse proceeds to the township, and are commanded to receive so much per day till the exaction is complied with. If the dhoos is refused, it is considered tantamount to an appeal to arms.—*Tod's Rajasthan, Vol.* ii, *p.* 413.

DHOR, a worker in leather, a tanner, a currier. They are regarded as hindoos, and reside within the town walls, while the Dher and Chakili or Mang, reside outside the walls.

DHOR, horned-cattle ; also called gai-goru.

DHORA, Hind. One of the men required at a sugar-press.

DHOTE or DHATTI, like the Koorwa, a pastoral race of Dhat, their cows give 8 or 10 seers of milk daily.

DHOTI, Hind. Dovati, Sans. The unsewed garment with which hindoos clothe the lower parts of their persons. It is wrapped round the limbs, and by passing it through the fork, the appearance becomes that of wide or narrow trousers. The garment is passed round the waist, then between the legs, and fastened by being tucked in behind. Dhotees are waist and loin cloths, and are occasionally worn so as to fall over and cover the greater portion of the lower limbs. One of a coarse cotton commonly worn by cultivators and laborers in the field, may cost about two rupees. One of yellow silk, called putambar, is largely made at Benares. With every hindoo man of all parts of India alike, the dhotee is an indispensable garment. Should he even wear drawers or trousers, he will have a dhotee, large or small, underneath. The dhotee is a single piece of cloth, from two and a half to three and a half yards long by two to three feet broad, with ornamented ends and borders, except that the dhotee may now be somewhat broader and longer. As a general rule, there is literally no change up to the present day, from the costume of the male figures in budd'hist and hindoo sculptures of nearly two thousand years ago ; all other articles of male attire are sewn garments, cut out by tailors and made by them ; and there are, perhaps, as many varieties of vests and tunics—angréka, joobbhá, coortá, chupkun, mirzaee, and the like—as there are surtouts, paletots, cambridges, &c , fashioned in England. Many of these are worn by mahomedans and hindoos alike ; the only difference being that the hindoo ties or buttons his vest on the right side, the mahomedans on the left. Hindoo tailors are found everywhere, possibly descendants of the needle-plying handicraftsmen, who, like the weavers, smiths and carpenters, found a place in the enumeration of trades in Menu's 'Institutes' and the 'Yâgnyawalkyá.' The texture of the dhotee, saree and langhie fabrics, manufactured in Britain and sent to India, is not that required by the people ; nor what they are accustomed to. It is in general too close, too much like calico in fact, which, of course makes the garment hot, heavy in wear, and difficult to wash. Again, the surface becomes rough, and, as it is generally called 'fuzzy' in use, while the native fabric remains free. Comparatively few native women of any class or degree wear white ; if they do wear it, the dress has broad borders and ends. But all classes wear coloured clothes, black, red, blue, occasionally orange and green, violet and grey. All through Western, Central and Southern India, sarees are striped and checked in an infinite variety of patterns. Narrainpett, Dhanwar and Muktul, in the Nizam's territories ; Gudduk and Bettigherry in Dharwar, Kolapoor, Nassik, Yeola, and many other manufacturing towns in the Deccan ; Arnee in the south and elsewhere, send out articles of excellent texture, with beautifully arranged colours and patterns, both in stripes and checks.

DHOULEE of Kumaon. Hymenodyction excelsum.—*Wall.*

DHOUL PAPRI in Kumaon, Ulmus integrifolia.—*Roxb.*

DHOURA, Hind. of Kumaon and Panjab. Lagerstrœmia parviflora.—*Roxb. Fl. Ind.*

DHOUR. See Kol.

DHOURA, Hind. Chloroxylon swietenia.—*Roxb.*

DHOVA, Sans. From dhav, to cleanse.

DHOWA, Hind. Conocarpus latifolia.—*Roxb.*

DHOWA, Hind.? A whitish colored wood, close-grained and hard. Plentiful in the Santhal jungles and hills from Rancebahal to Hasdiha, a distance of about forty miles. The wood of it is chiefly used for cart wheels, beams and door posts, by the natives, also for mallets and tent pegs.—*Calcutta Engineers' Journal, July* 1860.

DHOWNA MUSTARU, also MURWA, Guz., Hind. Wormwood.

DHRITARASHTRA, an ancient sovereign. He was brother of Pandu, but was blind, and on that account was set aside from the throne but succeeded on Pandu retiring. He married Gandhari, and his sons, called Duhsasana and Duryodhana, were named Kaurava, and fell in the eighteen days' battle of Kurukshetra. Gandhari, after the battle of Kurukshetra retired with Dhritarashtra, and

his mother Kunti, to the jungle on the Ganges, where the maharajah died.— *Wh. H. of I.*

DHRITEE, Sans. From dhree, to sustain.

DHRUVA, generally the pole of a great circle of the sphere, particularly the celestial poles. Uttara Dhruva, the North Pole ; also the Polar Star. Dacshiná Dhruva, the South Pole. This term is also used to signify a constant arc, referring to the distance of a planet from the beginning of the sidereal zodiac. Dhruva means more commonly an epoch to which a computation is referred. Lastly, it is the name of the Yoga Star of the 12th Nacshatra, supposed to be the same as β Leonis.—*Captain Edward Warren's Kala Sanhita.*

DHRUVA BHUTA. See Inscriptions, p. 384.

DHRUVA SENA. See Inscriptions, pp. 375, 376, 390.

DHUB, Beng. Grislea tomentosa.

DHUB GHAS, Hind. Agrostis cynosurioides.

DHUDI, Hind. Ficus caricoides.

DHUDI of Kumaon. Holarrhena antidysenterica.—*Wall.*

DHULBHUM, called also Ghatsillah, a large pergunnah east of the Kolehan, attached to the Singbhoom district, first colonised by the Bhoomij, *Dalton, p.* 156.

DHULI BANS, Beng. Var. of Bambusa balcooa.

DHUMNAR, about 40 miles S. E. from Nemuch, but close to Chundivassa, contains budd'hist caves with a brahmanical rock temple behind. Those of Dhumnar, like the caves of Ellora, contain a strong admixture of brahmanism.

DHUMMUL KOODANA, a ceremony.

DHUMRAPATRA, Sans. Tobacco.

DHUN, Hind. A low valley at the foot of a mountain. The valley intervening between the true Himalaya and the Sewalik or outer hills, as the Dehra Dhoon, Jaswundhun, &c. The fixed gradations of true Himalaya, dhún or valleys, sandstone or Sewalik range, "bhaver" or forest tracts, and lowest of all the Tarai, which consists of arid tracts or else swamps at the foot of the mountains, which are so constant and marked in the central Himalaya, are not observable at all in the Panjab.

DHUNA, Hind. Shorea robusta.

DHUNCHI, Hind. ? Tam. Sesbania aculeata. Syn. of Æschynomene canabina.—*Konig.*

DHUNDHUMARA, is the name of a king of Oude of the solar line, properly called Kuvalayáswa, but termed Dhundumára from slaying a demon named Dhundhu, who annoyed the saint Uttanka.

DHUNIA, Beng., Guz. and Hind. Coriander seed. Coriandrum sativum.

DHUNIA, the lowest caste in the Himalaya, who employ themselves as gold-washers.

DHUNICHA, Beng. Indian flax, Sesbania aculeata.

DHUNJEBHOY FRAMJEE, a learned Parsee, of Bombay, author of a Zend and English and Zend and Guzeratti dictionary. At the commencement of the work is a comparative table of the Zend Alphabet with those of the Persian, Pehlvi, Hebrew, Cunieform, Sanskrit, Guzeratti, Greek and Roman languages. Plate second contains a comparison of the Zend orthography according to the different systems of sixteen Asiatic and European orientalists. Preliminary discourse on the origin and authenticity of the Zend language and Zendavesta. Parts 2, 3, 4, 5 and 6. The Pehlvi Alphabets published with observations on the Lapidary, cursive, and Numismatic, Pehlvi writings Tablets, Manuscripts and Coins.

DHUNNES, Hind. Buceros Tickelli.

DHUNSHA, Hind. Sesbania aculeata.

DHUNU, Hind. Pangi. Picea pindrow, the silver fir.

DHUNU, Hind. Taxus baccata.

DHUNYA, Duk. This is written Dhuneea also Dhunia, Coriandrum sativum.—*Linn.*

DHUP, also LUR, also SHUR, Hind. Juniperus excelsa. Incense. Dolomiæa macrocephala, Juniperus communis, Chalei ke dhup, Hind. Juniperus excelsa, jari dhup, dhupa, Hind. Dolomiæa macrocephala. The word is applied to many fragrant things, used for burning as incense offered to idols, *e. g.*, to the root of Dolomiæa macrocephala, to juniper or to benzoin, to Juniperus excelsa, J. arborea ; pencil cedar.

DHUPRI, Hind. of Kamaon, &c., Juniperus excelsa, J. arborea : pencil cedar.

DHURA, Hind. Ficus caricoides.

DHURA, Hind. Zura Ar., Sorghum vulgare.

DHURGONTEE. In the time of Akbar the celebrated Dhurgontee, the queen of Gurha Mundala, whose reign extended over the Saugor and Nerbudda territories, and the greater part of Berar, was a daughter of the reigning Chundale prince of Mahoba. He condescended to give his daughter only on condition that the Gond prince who demanded her should, to save his character, come with an army of 50,000 men to take her. He did so, and " nothing loth," Dhurgontee departed to reign over a country where her name is now more revered than that of any other sovereign it has ever had. She was killed about 250 years ago, about 12 miles

from Jubbulpoor, while gallantly leading on her troops in their third and last attempt to stem the torrent of mahommedan invasion. Her tomb is still to be seen where she fell, in a narrow defile between two hills, and a pair of large rounded stones which stand near are, according to popular belief, her royal drums turned into stone, which in the dead of the night are still heard resounding through the woods and calling the spirits of her warriors from their thousand graves around her. The travellers who pass this solitary spot, respectfully place upon the tomb the prettiest specimen they can find of the crystals which abound in the neighbourhood—*Sleeman's Rambles and Recollections, p.* 254 ; *Journal of the Asiatic Society of Bengal, p.* 213.

DHURJATI, a name of Siva or Mahadeva. The term means, he who weareth his hair bound about his head in the form of a tiara, in which style it is worn by the Jogi or Sunyasi devotees and other adherents of Siva.

DHURMSALA, a Sanitarium, is situated in the Kangra District of the Panjab, in E. Long. 76° 20′, and in N. Lat. 32° 13′. The houses are built progressing up the hill, so that they are at very different elevations, the lowest being at an elevation of 4,000 feet, the highest 7,000 feet. The height of the cutcherry is 4,876 feet, that of Major Fein's house and McLeodgunge Bazar, 6,180 feet. The sanitarium is on one of the spurs, running south from the great range of "Dhaoli Dhar." This range runs east and west, at a height of from 13,000 feet to 19,000 feet, and forms a great wall on the north ; it is due to this range, that the climate of Dhurmsalla is so mild and has such a heavy rain-fall. Kangra, said by Lord Canning, to be the most beautiful district in India, excepting Cashmere, is a most lovely fertile valley, surrounded by lofty mountains, interspersed with undulating hills and situated between the rivers Ravee and Sutlej. On one side it has the territories of Cashmere and Chumba, on the other the wild but romantic hunting fields of Kulloo, Spite and Ladak. "Various races of men, belonging to distinct types of the human family, and speaking different languages, are distributed over its surface. Here are hills just raised above the level of the plain, and mountain crests higher than any peak of the Andes. Every tone of climate and variety of vegetation, is here to be met with, from the scorching heat and exuberant growth of the tropics, and barren heights destitute of verdure and capped with perpetual snow. Hills dissolve into gentle slopes, and platforms of table-land, and valleys become convulsed and upheaved, so as no longer to be distinguished from the ridges which environ them. No spot in the Himalaya can compete for beauty with the Kangra valley, and its overshadowing hills, (13,000 feet) no scenery presents such sublime and delightful contrasts. Below lies the plain, a picture of rural loveliness and repose. The surface is covered with the richest cultivation, irrigated by streams which descend from perennial snows and interspersed with homesteads buried in the midst of groves and fruit trees. Turning from this scene of peaceful beauty, the stern and majestic hills above Dhurmsalla confront us. Their sides are furrowed with precipitous water-courses. Forests of oak clothe their flank, and higher up give place to gloomy and funeral piles. Above all are wastes of snow or pyramidal masses of granite too perpendicular for the snow to rest on." Dhurmsalla, stands in the bosom of those mighty hills, circular in its outline, and commanding a view unequalled in the world perhaps, of the placid and beautiful valleys of Kangra and the noble hills behind. Dhurmsalla is divided into two stations, the lower and the upper, the one the residence of the civilians and visitors from all parts of Panjab, and the other occupied by the officers' houses and lines of a Regiment.—*Dr. W. P. Dickson*, 1870 ; *India Annals, No.* 227, 1870. *Paharee.*

DHURREE, Hind. A cotton rug made at Shahabad.

DHURU, Hind. Buddleia crispa.

DHUTTEE, the clothes or dresses with which Ullums are bedecked.

DHAYK, a race in Borneo. See Dyak ; Sacrifice.

DHYALI, a pretty pied Dhyali bird of Ceylon is the only tolerably common sylvan songster worthy of notice. See Dial-bird.

DHYANA, Singh. Religious meditation, from dhyoi, to think. In this act of devotion, the worshipper of Siva for instance, closes his eyes, places his arms before him, and repeating the names of the god, ruminates thus :—His colour is like a mountain of silver, &c., &c.—*Ward's View of the Hindoos, Vol.* ii, *p.* 67.

DIACAENA TERMINALIS. Some twenty varieties of this, the Ti-plant, are cultivated in the Polynesian islands. There is, however, but one which is considered farinaceous and edible. In Java the root is considered a valuable medicine in dysentery.—*Simmonds' Commer. Product*, 355.

DIACOPE, a genus of Fishes belonging to the section Acanthopterygii and family Percidæ. Many large and beautiful species of this genus inhabit the Indian seas. Diacope octolineata, a very beautiful species, caught off the coast of the Mauritius, is of a brilliant reddish-yellow colour, shaded into

white on the belly, and is adorned with four longitudinal blue stripes on each side of the body ; these stripes are margined with black. It is about 10 inches in length. Some of the species are known to have attained the length of 3 feet and upwards.—*Eng. Cyc., p.* 323. See Fishes.

DIAGREDIUM. See Convolvulus scammonia.

DIAL BIRD of Ceylon, Copsychus saularis.

DIALA on the Euphrates, the place of the opening of a canal running to the Tigris river. See Kasra-i-shirin, Khalis, Kooffa.

DIAMANT, Dan., Dut., Fr. and Ger. Diamante, It., Port. Diamond.

DIAMACHUS, an ambassador from the Greeks of Babylon to Mitra Gupta, son of Chandra Gupta. Mitra Gupta was known to the Greeks by the name of Alletro Chidas. Diamachus was the next Greek ambassador after Megasthenes.—*Cal. Rev.*, 1868.

DIAMER PEAK, or Nanga Parbat, in Lat. 35° 14'·4" N. ; and Long. 74° 34' 5" E. in Hasóra. Top of the peak is 26,629ft. above the sea. This peak, the highest in Hasóra, is situated close to the remarkable bend made by the Indus.

The diamond is a crystallised mineral, which, on account of its lustre and hardness, is reckoned the most valuable of all gems. The form is cubical, frequently in twin crystals, cleavage highly perfect, rarely massive. The bulk of the forms are those of the octohedron ; an octohedron having six planes on the edges ; or a dodecahedron with rhombic faces. Lustre brilliant adamantine. Colour white or colourless, occasionally with tints of yellow, red, orange, green, brown or black. Transparent to translucent when dark-coloured. Fracture conchoidal, H. 10, S. G. 3·5295 to 3·55. Exhibits vitreous electricity when rubbed. Index of refraction 2·439. Becomes phosphorescent on exposure to light, and the smaller diamonds become phosphorescent by a much shorter exposure than required for those of a larger size. The diamond is carbon in its purest form, and its combustibility was ascertained by the Tuscan philosophers. About 30 per cent. of diamonds are under half a carat, and one in a thousand may be above 24 carats. Diamonds have been obtained from India, from very ancient times. Ptolemy's Geography, said to have been composed 60 years after the time of Pliny, mentions the diamonds found on the banks of the Sumbulpoor river ; also speaks of Arcati, the capital of the Soræ or Sora-mandalum from whence corruptly Coromandel, Mesolia, the district which contains Masulipatam and the river Cauvery under the name of Chabaris. Rennell supposes Punnah to be the Panassa of Ptolemy. He mentions the Sumbulpoor mines near the Boad country and quotes the Ayeen-i-Akbari as naming Biragur on the west of Boad near the Mahanuddy river, adding that there is indeed a mine of more modern date, in the vicinity of Sumbulpoor, but this whole quarter must from very early times have been famous for producing diamonds. Ptolemy's Adamas river answers perfectly to the Mahanuddy, and the district of Sabaræ, on its banks, is said by him to abound in diamonds. Tavernier visited the Raolconda diamond mines at the confluence of the Kistnah and Bheemah rivers, which were also noticed by Cæsar Frederick, and both Tavernier and Rennell notice the diamond mines of the Pennaar river and near Gandicotta, also those of Colore (Kulur ?) on the south bank of the Kistnah, not far from Condavir.

The great sandstone formations of the south and north of India, contain the celebrated diamond mines of Parteal (Golcondah), Banganapilly and Panna, and the limestones and schists associated with them, from the latitude of Madras to the banks of the Ganges, exhibit the same characters. According to Ainslie the diamonds which are offered for sale in India were generally brought from Visiapour, Gana Purtual (Golconda), Bundlecund, the sland of Borneo, and Sumbhulpoor in Orissa and were reckoned superior in transparency and purity to those of Brazil. What is sometimes called the Maturese diamond of Ceylon, or yellow Tourmalin (Kanefie Turmali), Thunberg tells us is no other than a Topaz of a greenish yellow colour, no diamonds are found in Burmah, yet it forms one of the nine gems, which, worn together in a ring, are supposed by the Burmese to protect the wearer from evil. They are the diamond, emerald, coral, sapphire, topaz, pyrope, cat's-eye, pearl, ruby. The diamond is easily crushed in a steel mortar, and, from its lamellar texture, it is capable of being split and cleaved, by which means the jewellers are enabled to work it. The first grand experiment to prove its combustibility was before Cosmo III, Grand Duke of Tuscany, when a diamond, exposed in the focus of a great lens, was entirely volatilised. It has also been consumed by Guyton in red-hot nitre, by Professor Ten-

nant by means of melted nitre in a red-hot tube, and by M. Dumas under a powerful battery, producing an intense heat. By such experiments its true nature was ascertained, and now the fact is everywhere accepted, that the diamond is nothing but crystallized carbon. M. Dumas says, "it is simply carbon – coke, in fact." It will make a mark upon paper like plumbago, for it is really nothing more than a bit of charcoal! It is popularly supposed that the diamond is always "clear as crystal;" but there were exhibited in the Great Exhibition of 1851, brilliants of an apricot colour, of a very fine pink topaz colour, of the deepest ruby ballais colour, of a lemon colour, of a cymophane (green and orange) colour, the two tints being distinctly perceptible. Moreover, there were diamonds of a chrysolite colour, a beautiful light-green, of an aquamarine (sea-green) colour, of steel colour, of deep sapphire, blue or light-blue, of milky blue, of light orange, of brown, of dusky red, of deep garnet colour, of a jacinth colour (tawny red,) of rose colour, and of a brilliant jet-black. The value of the diamond is determined partly by its size, purity, colour, and shape, but chiefly by its weight in carats. The 'carat' is an Arabic term for a small seed, against which, it is said, these gems were first weighed. A diamond of the first water, free from flaws, and well cut, of one carat, is worth from £12 to £15 sterling.

Large diamonds are usually heir-looms in great families, and almost every Royal house in Europe has one or more celebrated gems. The Court of Holland has one of a conical shape, valued at £10,368. The buttons of the silk stole of King Joseph I of Portugal were each a fine brilliant, worth about £5,000, or, in the aggregate of twenty, £100,000. George IV of England purchased a magnificent brilliant of a blue colour, which formed the chief ornament of the crown at his coronation. It cost £20,000.

The Pigot Diamond was brought to England by Earl Pigott, on his return from the Governor-Generalship of India; and as no one was found rich enough to buy it, or people were unable or unwilling to do so, and, the Earl needing money at the time, it was disposed of, in 1801, by lottery, for £30,000. It afterwards passed into the hands of one of the Portuguese princes. It weighs 49 carats and is valued at £40,000.

In the crown of France there was, and probably now is, a rich brilliant of a sky-blue colour. It weighs 67 carats and 2-16ths. Its price is estimated at three millions of francs (£40,000).

Maximilian Diamond.—The Austrian Royal family possesses theMaximilian diamond of a yellow colour and rose-cut. It has been rated at 139½ carats; its value is said to be £155,682.

The Sanci Diamond originally belonged to an eastern merchant, from whose hands it passed into those of Charles the Bold of Burgundy. Charles wore it in his cap at the battle of Nancy in 1475, where he was killed. A Swiss mercenary prowling about the field in search of plunder, found the gem, and, ignorant of its value sold it to a priest for a florin, about twenty pence of British money. The priest sold it again for 2*s.* 6*d.* After this it came into the hands of Antonia, king of Portugal, who pledged it to a gentleman named De Sanci for 40,000 francs, and afterwards, being unable to redeem it, he sold it to the same gentleman for 100,000 francs. A descendant of this gentleman having occasion to deposit the family jewel with the Federal Government of Switzerland, entrusted it to the care of a faithful servant for that purpose. The servant disappeared for a long time, but so confident was De Sanci of his honesty that he caused search to be made in his track, and found him at last murdered and half-buried. In his stomach was found the brilliant, he having swallowed it to preserve it for his master!

The Russian Diamond, a large diamond in the crown of Russia, has a noteworthy history. Some Indian, remarkable for his superstitious piety, finding the large stone, thought he could do no better than place it in the socket of an idol's eye. There it remained for a long time, until an Irish soldier, who watched his opportunity, gouged out the optic. It was, after going through many adventures, sold to the Empress Catherine of Russia in 1775 for £90,000 in present money, an annuity of £4,000, and a patent of nobility. It is of the size of a pigeon's egg, and of a flat oval form. It weighs 179 carats, or 716 grains, and is without a flaw. Besides the stone which adorns the Imperial sceptre of Russia, there is a stone among the crown jewels valued at £369,800.

The grand *Russian diamond*, is said to have been the eye of a hindoo idol. It fell into the hands of a merchant, who sold it to Prince Orloff for Catherine, Empress of Russia, for 90,000*l.* in cash, an annuity of 4,000*l.*, and a patent of nobility. It weighs scarcely 198 carats.

The Pitt Diamond.—The grandfather of the Right Hon. William Pitt, when Governor of Madras, purchased a diamond from a native for £12,500. When re-cut it was worth twelve times the money! The small laminæ, shreds and cuttings from it, were valued at £8,000. It was purchased in 1717 by the

Duke of Orleans for £135,000, and in the negotiations £5,000 were expended. In 1791 a commission of jewellers valued the stone at twelve millions of francs, or nearly £500,000 sterling. Its original weight was 410 carats.

The Persian Court, on high days and holidays, literally blazes with gems. The celebrated stones in its possession are the "Sea of Glory," and the "Mountain of Light,"—the one valued at £145,000, and the other at £34,848.

Hyderabad Diamond. A very large diamond belongs to the Nawab of Hyderabad. It measures $2\frac{1}{2}$ inches in length by $1\frac{3}{8}$ inches in breadth and $\frac{7}{8}$ths of an inch in thickness, in the rough state. The gem was found in the mud wall of a native house and was purchased for His Highness the Nizam; a small portion of the gem had been broken off one end before it was offered for sale. It weighs nearly 272 carats.

Brazil Diamond. The largest diamond known to exist does not belong to any of the great kings of Europe, but to the house of Braganza. When Don John of Portugal, arrived at theBrazils in 1808,a negro conveyed a letter to him in which he professed an ardent desire to present, *in person*, a large diamond which he had found. The Regent granted him an escort, and the negro arrived and presented the stone, the largest ever found in the Brazils. It is like a darkish-yellow pebble, kidney-shaped and oblong, about the size of a pullet's egg. Its weight is enormous —1680 carats—nearly 11 ounces! The Brazilian jewellers value it at three thousand millions of crusades, or three hundred million pounds sterling—£300,000,000 ! ! ! but it is believed to be a white topaz.

A blue diamond was lost in the French Revolution.

Koh-i-Nur ? ? The largest diamond of which we have any knowledge is mentioned by Tavernier as in the possession of the Great Mogul. It weighed originally 900 carats, or 2769·3 grains, but was reduced by cutting to 861 grains. It has the form and size of half a hen's egg. It was found in 1550, in the mine of Colone. This great diamond appears to be identical with that now known under the name of Koh-i-noor. Some doubt is thrown on Tavernier's statement of its being cut. This precious gem has seen a variety of fortunes. Its early history is mythical, but from the Great Mogul it passed into the possession of the reigning family of Cabul. When Shah Sujah was driven from Cabul he became the nominal guest and actual prisoner of Runjeet Sing, who spared no means to obtain possession of the precious gem. In this he succeeded in 1813. After the death of Runjeet the diamond was preserved for a while by his successors. It was occasionally worn by Kurruk Sing and Shere Sing. After the murder of the latter it remained in the Lahore treasury until the supercession of Dhuleep Sing and the annexation of the Panjab by the British government, when the civil authorities took possession of the Lahore treasury, under the stipulation previously made that all the property of the state should be confiscated to the East India Company, in part payment of the debt due by the Lahore government and of the expenses of the war. It was at the same time stipulated that the Koh-i-noor should be surrendered to the Queen of Great Britain. It arrived in London on the 30th June 1850, and on the 3rd July was presented to Her Majesty. Since its public exhibition in 1851 it has been submitted to the process of cutting, which has much enhanced its beauty and value.

The Nassik Diamond was sold to the Marquis of Westminster for 7,200*l.*

The Pitt, or Regent Diamond is of less size weighing but 236·5 carats, or $419\frac{1}{4}$ grains; but on account of its unblemished transparency and colour it is considered the most splendid of Indian diamonds. It was sold for 130,000*l.* to the Duke of Orleans by Mr. Pitt, an English gentleman, who was Governor of Bencoolen, in Sumatra. It is cut to the form of a brilliant, and is estimated at 125,000*l.* Napoleon placed it in the hilt of his sword of state.

The *Koh-i-noor*, or "*Mountain of Light*," the largest known diamond in the world, excepting the Brazilian stone among the crown jewels of Portugal, has lately been added to the trophies of the British sovereign. In the year 1550 this stone was discovered in the mines of Golconda. It passed in the train of conquest and as the emblem of dominion, but always carrying misfortune in its train, from Golconda to Delhi, from Delhi to Mushed, from Mushed to Cabul, from Cabul to Lahore, and from Lahore to London. When first given to Shah Jehan, it was still uncut, weighing, it is said, in the rough state, nearly $787\frac{1}{2}$ carats, which were reduced by the unskilfulness of the artist to 279. It was cut by Hortensio Borgio, a Venetian, who, instead of receiving any remuneration for his labour, was fined 10,000 rupees by the enraged Mogul; In the time of Tavernier was reduced to 186 carats but cut by Coster of Amsterdam as a brilliant, weighs 106 carats. Upon the annexation of the Panjab it was given over to the East India Company for the Queen of Great Britain and brought to London in 1850. Large as the Koh-i-noor was before its recent cutting it is computed by the best judges to have

been originally three times its present size. Tavernier states that it originally weighed 787½ carats ; its estimated value is not known. The Koh-i-noor was placed on the mill by the Duke of Wellington on July 16th, 1852, to be cut and was completely finished on September 7th, having taken thirty-eight days to cut, working for twelve hours per day without cessation !

The diamonds of Asia are found in Borneo, in the Cuddapah district, in Banganapilly, in the tract of country between Golconda and Masulipatam, in the Ellore district, on the Mahanuddi and at Punnah in Bundelcund. The earliest notice we have met with of the Punnah mines is in Dalrymple's Indian Repertory, Vol. ii, p. 471, and there described as on a range of hills situated about 42 coss S.S.W. of Kalpee. The hills are called by the natives Band Achil : they extend about 12 coss in length and about 2 or 3 in breadth, and are divided into 21 districts of which only the following nineteen names are given :—

Pirnah,	Pullu,	Rangpur,
Gurriah,	Raipur,	Cherriapuri,
Anwont Pokennu,	Etawa,	Attupurah,
	Maharajpur,	Merah,
Channú,	Rajpur,	Singupurah,
Birdu,	Kimmerah,	Mujiguah.
Kallianpur,	Gadahsiah,	

Diamonds are found in all these districts, but those of Maharajpur, Rajpur, Kimmerah and Gaddahsiah, are the largest and best.

Ceded Districts.—The mines of Cuddapah and Banaganapilly about 150 to 170 miles N. W. of Madras, have engaged the attention in succession of Dr. Heyne, Captain Cullen, Dr. Voysey and Captain Newbold. Dr. Heyne tells us that diamond mines are found in different parts of the Ceded Districts, especially in the eastern and central divisions. In the Chennur Taluk, in which Cuddapah is the largest town, there are two places called Condapetta and Ovalumpilly, where diamonds occur. In the next taluk, on the west side of this, diamonds are dug at Lamdur and Pinchetgapadu. Several mines exist near Gooty, and about fifteen gow (15 days journey) from that place a famous diamond mine exists near the Kistnah river. The diamond mines near Cuddapah are about seven miles north-east from the town, on both banks of the Pennar river, where this place washes the foot of a range of hills. The country in which they occur is bounded on the east by a range of hills which run nearly north and south for about fifteen miles, with a sharp little interrupted ridge. Opposite to Cuddapah they meet another similar ridge, stretching for about eight miles from north-east to south-west.

The second range running nearly due west, for about seventy miles, and forming the southern boundary of the district. To the westward, the country continues plain and open to a great extent : to the northward we see hills and ranges connected with the eastern mountains. The mines at Cuddapah have, it is said, been worked for several hundred years with various success. A large diamond was found, which produced a law suit not decided in Dr. Heyne's time. It was said to weigh 1¼ pagoda—70 grains, to be full of flaws, and on that account not to be worth more than 1,000 pagodas. These mines are within half a mile of the eastern range of hills and about as far east from the river and Condapetta, and on grounds belonging to a small village called Kanaperty. They are surrounded by cultivated fields, and have the appearance of heaps of stones and pits half filled with rubbish, in the middle of which we find a number of people at work in a new mine. The mines are pits of unequal extent and small depth, and usually have a four sided form. One in which people were at work and which had been opened only eight or ten days, was sixteen feet square. The Ovalumpilly mines are on the west side of the river, about six miles from Cuddapah, and three miles from the Kanaperty mines. They are situated on a gentle ascent, about half a mile from the Pennar, in a well cultivated country, and within a very short distance of three villages. They are chiefly on ground belonging to Ovalumpilly. They are of more recent discovery than the other mines and it is only forty years since they have been worked. They have rather the appearance of intrenchments than of mines. The soil of the fields surrounding them is sandy, with a small admixture of loam. It forms the surface of the ground where the mines lie, and is not more than a foot in thickness. The diamond bed, both here and at the Kanaperty mine, seems to follow the direction of the river, and is, at different parts, of unequal breadth. The diamonds found in it are in the form of small flat or round pebbles, and as far as I could learn from the miners, never occur crystalized. They are, however, said to be of a superior lustre and hardness, and much better than those found further westward. Hindoos distinguish four kinds of diamond, differing from each other in beauty and value, called 1 Bramha, 2 Chetra, 3 Vaisea and 4 Sudra,—names derived from the castes in which the hindoos are arranged. The Brahma diamond is described as of the colour of clear milk ; the Chetra, of clear honey ; the Vaisea of cream ; and the Sudra, of a frog colour, or a smoky greyish white.

The following is a list of the prices in Dr. Heynes' time of the rough stones at the mines :—

Weight.	Madras Pagodas.		Weight.	Madras Pagodas.	
1 Manjaly, ½ of a pagoda, or 2 carrats.	Bramha	10	6 Manjaly,	Bramha	150
	Chetra	8		Chetra	140
	Vysea	6		Vysea	130
	Sudra	5		Sudra	120
2 Do.	Bramha	24	7 Do.	Bramha	250
	Chetra	20		Chetra	240
	Vysea	18		Vysea	220
	Sudra	16		Sudra	200
Weight of 3 Manjaly.	Bramha	40	8 Do.	Bramha	400
	Chetra	37		Chetra	380
	Vysea	34		Vysea	360
	Sudra	30		Sudra	350
4 Do.	Bramha	80	Two diamonds of equal size, weighing both together one manjaly, are worth of	Bramha	8
	Chetra	76		Chetra	6
	Vysea	70		Vysea	4
	Sudra	60		Sudra	3
5 Do.	Bramha	100	Three diamonds of equal size, weighing altogether one manjaly, are worth of	Bramha	7
	Chetra	90		Chetra	6
	Vysea	85		Vysea	5
	Sudra	80		Sudra	4

The Madras pagoda was ten per cent. better than a star pagoda, which is equal to eight shillings.

These were prices of stones free from speck, flaw or crack. The cut stones are valued in a different way. It is often the interest of the dealer to cut large stones into a number of smaller ones.

At the time of Dr Heyne's visit many places in the neighbourhood were considered as very promising. They pointed out one place at Condapettah, close to the spot in which they were working, and another very extensive one near Currapully. From this last spot they entertained great expectations, as the diamond bed in it is about six feet in thickness, the smaller pebbles in greater abundance, and the soil of a redder colour than anywhere else in the neighbourhood. The land belonged to a pagoda or a brahmin ; and they say it is worth more than seventeen rupees a year. The proprietor offered to give it up for eighty pagodas ready money, but Colonel Munro had refused permission to work it. This circumstance will show that the country is by no means exhausted, and that abundance of diamonds might be procured should an increased demand for them arise. From the renter he understood that the usual profits on working a mine are reckoned at 5000 pagodas on an expenditure of 2000 ; and in his opinion, it cannot be less, the undertaking being considered as a lottery, in which there are blanks as well as prizes. He adds that the different places in which the diamond has been hitherto found consist either in alluvial soil or in rocks of the latest formation, and containing such a great proportion of rounded pebbles as to have rather the appearance of a conglomerate than any other species of stone. The diamonds are not scattered through the whole of the beds from the surface in the diamond mines to the greatest depth hitherto dug ; but confined to a single bed, always harder than the rest of the accompanying beds, and usually not exceeding a foot or two in thickness. The structure of all the places in which diamonds occur are similar, and the following is an account of the beds found in the mines at Cuddapah.

The uppermost, or superficial stratum, consists of sand or gravel, mixed with a small proportion of loam. Its thickness scarcely exceeds a foot and a half. Immediately under it is a bed of stiff bluish or black mud, similar to what is seen in places that have been inundated. It is about four feet thick, and contains no stones. The diamond bed comes next, and is easily distinguished from the incumbent bed, by the great number of large rounded stones which it contains. It is about two, or two and a half feet thick, and is composed of large round stones, pebbles, and gravel, cemented together by clay, in the dry seasons, it is as dry as the bed which lies immediately above.

In the Ellore district, the diamond stratum is covered by thick strata of calcareous tuff. There was pointed out to Dr. Heyne a variety of small stones in the heaps that were thrown away, which he was assured always indicated the presence of diamonds wherever they occur in beds, at some depth under ground. These stones were called the Tella bendu (in Telugu) pebbles of a white, earthy or chalk-like colour, rounded, the nucleus of which has a bluish brown or grey colour, while the outside is decomposed into a white pipe-clay. Sometimes they consist of jasper, coated in the same way : and sometimes they are species of felspar. The white decomposed crust of pipe-clay seems to be the grand characteristic. It was pointed out to him before, in other diamond mines, though not so forcibly.

In the northern diamond mines, particularly those of Partel, he found in the diamond bed a great number of fine calcedony and cornelian pebbles and garnets. The larger stones form the greatest part of the diamond bed.

The mode of working a diamond mine in the Cuddapah district was in Dr. Heyne's time as follows : After all the superincumbent beds, and the large stones in the diamond bed, are removed out of the mine, the small gravel and the other constituents of the bed are carried to a small distance, and put into a cistern about eight feet square and three deep. In this situation water is poured upon it, which separates the lighter loamy particles. The gravel and small stones, which sink to the bottom are then thrown into a heap close to the cistern,

from which they are conveyed to a smooth plain of about twenty feet square, made of hardened clay. Upon this plain the whole is thinly spread. The gravel in this position being slightly moistened, six or seven people go over it several times in succession. The first time, they pick out only the large stones ; the second and subsequent times, the smaller gravel is carefully turned over with the flat of the hand, whilst they carefully watch for the spark from the diamond, which invariably strikes the eye.

Banaganapilly.—Captain Newbold, in No. 10, Vol. III of Madras Literary Society's Journal, describes the Banaganapilly district, as about 30 miles long from North to South and 26 in breadth from East to West, lying between latitude 15° and 16° N. in the centre of the Balaghat Ceded Districts. Its Eastern and Southern part consists of a fertile plain of the regur or cotton soil, bounded on its Northern and Southern aspects by detached ridges of hills of clayslate and sandstone, which run from Kurnool towards Ghooty, Cuddapah, and Tripati, and terminate at Naggeri, North West of Madras. General Cullen also tells us in the Madras Literary Society's Transactions that the village of Banaganapilly and the celebrated diamond deposit, is situated near the base of a low range of tabular land, running about north and south, and forming the western boundary of a great field of compact blue limestone. In the year 1808, Dr. Heyne paid a visit to the diamond mines at Banaganapilly. He tells us in his Tracts that Banaganapilly is built at the foot of a low ridge of hills, on which the diamond mines are situated ; these hills run nearly east and west, and consist of distinct conical elevations from one hundred to two hundred feet of perpendicular height. The farthest east of these hills is said to yield the best diamonds, but it has been so completely ransacked on all sides, that most of the mines at present wrought are in the hill immediately on its west side. There is scarcely any vegetation on the hills, a few prickly plants excepted, which grow between the stones, and a tree or two near the first ascent. A very desultory and destructive mode of mining is followed. A man chooses a piece of ground, and if not immediately lucky, which is frequently the case, he speedily leaves it ; another person succeeds, and makes an opening at the distance of a few yards, he discovers a favourable spot, and continues to work it for a little way, but finding diminution in his earnings, soon abandons it for another ; by this method of proceeding much ground is wasted and much money lost. The undertaking is looked upon as a lottery, in which the enterprizers rather purchase than renew a ticket. The mines are scarcely anything else but deep holes, open at top ; sometimes indeed the work is carried on for some extent under the rock, which is then supported by stone pillars. He saw none deeper than twenty feet. The gallery under the rock is so low, that the people are obliged to work in it sitting, a mode of working which an Indian prefers to every other. The miners sink to the diamond bed, which is fifteen or twenty feet under the surface : this bed extends round the whole hill, and is as regular in its thickness and extent as the other unproductive beds in the same place ; it consists of a conglomerate, composed of rounded silicious pebbles, quartz, chalcedony, and jasper of different colours from white and black. This bed is seldom more than a foot in thickness, it is intimately connected with the beds both above and below it, and frequently differs from them in nothing but the greater quantity of pebbles which it contains. The nature of this bed determines the workmen either to uncover the whole, and work in open day, or to drive a gallery for a little way under the rock. This last method is had recourse to, when the diamond bed is of trifling thickness, but very productive. He adds that it is obvious that the nature of these hills is quite similar to that of the earth diamond mine described in a former part of his Tract.

The diamonds found here are of an inconsiderable size, but usually in crystals ; and he thought they would be all found crystallized if another mode of extracting them were adopted. Those found in the earthy beds are mostly large, and less frequently of a regular form. This difference seems to depend upon the local institution and we may either suppose that the diamonds in the loose beds have been so long water-worn as to have been deprived of their angles, while those in the stony bed have not been subjected to so much attrition ; or if such explanation be inadmissible, we must suppose that in one case the crystallization has taken place so slowly as to constitute regular figures, while in the other case it has been hurried and rapid, and has produced figures destitute of regularity. There is something in the crystallization of the diamond which distinguishes it from all other crystals—the faces are all curvilinear. He adds, that in no place, is more than one diamond bed found under the same surface, but this bed frequently varies in its depth within a very limited distance. Near Cuddapah it is within three or six feet of the surface. At Mallavilly and Partel, in the Masulipatam district, its depth is twenty feet ; while at Banaganapilly it varies from

ten to twenty feet in a very small extent of ground.

In the search, the mass containing the supposed diamonds is carefully cleared from the portions of the roof and floor of the mine that may be adhering to it, it is then carried to another spot of the ground, where it is broken in pieces and gradually reduced by means of iron instruments to the size of very small gravel. It is evident that many diamonds must be broken by this mode of proceeding; indeed it is rather surprising that so many are procured in this way in regular crystals: the process followed for separating the diamonds from the rubbish is almost the same as that observed in other places. The portion wanted for immediate use is wetted, spread thinly upon a piece of ground about twenty feet square, over which the workmen go several times on their hands and knees, not losing or neglecting a fragment of diamond worth a penny: the moistening of the gravel is requisite to render the diamond conspicuous. The most common figures which Heyne had seen the diamond assume were the double pyramid, the dodecahedron, and the lens. There are more places in this vicinity where diamonds are found either in a stony bed or in loose gravel. Some of these are worked or have been worked in former times. The natives do not scruple to assign periods of thousands of years since the commencement of some of these workings. At present it is customary with these miners to go to the Kishna, in the hot season, when the waters are lowest, and to spend the rest of the year in these mountain mines.

The diamonds of these places are bought up by merchants who carry them to Madras, or to other places, where they are chiefly used in cutting those of a larger size. The large crystals would, he thought, answer the European market, and might be cut into brilliants. For a carat containing five or six diamonds of the finest water, they asked seven rupees. He remarks that all the diamond mines which he had seen can be considered as in nothing else than alluvial soil. Nor is it easy to form an accurate notion of the kind of rock from which the pebbles constituing that soil originated. Among them are stones belonging to primitive rocks, and others which are peculiar to the newest floetz trap. The strong bed at Banaganapilly has some faint resemblance to amygdaloid; but the exact similarity of its constituents to the other loose beds in which diamonds occur, renders it impossible for us to consider it as a true amygdaloid. And Captain Newbold, writing twenty years afterwards, adds that the Banaganapilly diamond mines are situated in and near a low range of hills, about $\frac{1}{2}$ a mile from the town. The matrix of the diamond agreeably to the statements of Drs. Heyne and Voysey, regarding diamonds produced in the South of India, is the sandstone breccia of the clayslate formation. This Newbold found also to hold good with regard to the alluvium found at the base of the Cuddapah hills washed by the Pennar, on a visit to the diamond mines near Chinnoor and Condapettah, in the Cuddapah division. The process of mining is simply digging out the gravel, breaking up the larger pieces of the breccia, washing and sifting the fragments, and spreading them out on the ground, where the diamonds are easily detected by the practised eye of the native. He observed that many of the old heaps of rubbish had been recently sifted and re-examined; not, he was told, from the opinion that the diamond is always growing, nor that the chips and small pieces rejected by former searchers, actually increase in size and in process of time become large diamonds, as has been supposed by some; but from sheer laziness to dig fresh pits, and from its being found that stones of an inferior size and water have frequently eluded the search of former miners. He did not learn that any stones of a greater value than 3 or 400 rupees have ever been discovered here; the specimens shown him by the diamond merchants on the spot were certainly extremely poor, but from the shortness of his stay, and the duplicity and secrecy maintained by natives in matters of this sort, he considered that it would be wrong perhaps to decide that better means employed in these diamond districts would not produce better results, than has hitherto been the case.

Besides Banaganapilly, the diamond is found, according to Hamilton, at Lamdoor and Pinchetgapadoor, in the taluk next to Chinnoor. It is also found at Moonimuddagoo, in the taluk of Punchapaulum; at Ovalumpilly and Condapettah in the Chinnoor taluk—at Ramul cottah in the Kurnool territory, and formerly at Wudjrakaroor in the Ghooty division. The Ramulcottah mines are the most celebrated. These places partly furnished the diamonds, for which Golconda has been so greatly famed.

General Cullen says the sandstone of the Western and Southern chains, is of the more recent origin. Its character varies in different places from that of a coarse conglomerate to a fine grained sandstone, cemented generally by an iron shot clay. It is in strata of this kind that the diamonds at Banaganapilly are found, and from the similarity of structure in all these Western ranges, it would seem natural to look upon them as the source from

whence are derived all the diamonds found in the alluvial depositions of the plains.

He thinks that the deposition of alluvium containing diamonds at Purteal is, although rather more distant, plainly referable to the same source, from its vicinity to the Kistnah, and its little elevation above the present bed of that river: Purteal is within 4 or 5 miles of the Kistnah and not more that 50 or 60 feet above its bed. The mines at Banaganapilly are about 850 feet above the Sea; at Chinnoor, 450 feet; bed of the Kistnah, about 500 feet; Purteal, 160.

Of the mines on the North bank of the Pennar near Chinnoor, Dr. Heyne gives the three different beds of alluvium passed through in those recently opened, corresponding nearly with the appearances at Purteal. The external appearances were however very different. The mines or Pits at Chinnoor, occupied a very large space, and the size of the Pits seemed to correspond with the extent of the ground. The nodules and pebbles also were not only greatly larger, but in much greater quantity at Chinnoor, than at Purteal. In one pit at Chinnoor, rather deeper than the rest, and having been used as a well, was kept free from rubbish, the sides seemed to be a mere mass of large rounded stones, gravel, and soil, but at the bottom were apparent regular strata of greenish schist.

The diamond pits at Purteal were 7 or 8 feet deep, and 4 or 5 feet diameter. The pebbles thrown out and laying about on the surface, were all of a moderate size, seldom above that of an egg; and, of a semitransparent yellowish quartz. The corneleans, agates, chalcedonies, &c., of which there were a great variety, and some very beautiful, were probably derived from the basaltic tracts to the N. W. and the garnets, kyanite and chips of rock crystal which were also common, from the Condapillay range, where they are very abundant in the granites.

The Golcondah locality for many centuries famed for its diamond mines, is, surrounded by the territories of Her Majesty; but, by treaty, the Nawab of Hyderabad, Nizam of the Dekkan, has an exclusive right to work them. It is not, however, the fort of Golcondah, a few miles west of the city of Hyderabad, but a small town in the Northern Circars, which is thus famed. How ancient has been the fame of this diamond tract, may be known by mentioning that Ptolemy's Geography, said to have been composed about 60 years after Pliny noticed the diamonds found on the banks of the Sumbulpoor river. The history of many of the more valuable diamonds is very obscure, and thus a wide field is open for conjecture, but most of them are believed to have been obtained from the mines of the Peninsula of India. One of them, the grand Russian diamond, weighs 198 carats and is as large as a pigeon's egg. It is said to have been the eye of an Indian idol, which fell into the hands of a merchant. By him it was sold to prince Orloff for the empress Catherine, for £90,000 in cash, an annuity of £4,000 and a patent of nobility.

Tavernier alludes to a large diamond in the possession of the Great Moghul, which weighed originally 900 carats or 2769·3 grains but was reduced by cutting to 861 grains, had the form and size of half a hen's egg, and is said to have been found in the mine of Kolone; but where Kolone is, unless it be the Kalianpur mine in Bundlecund, we have no idea.

Doubts have been entertained as to the correctness of some parts of Tavernier's information, particularly as to its having been cut, or, if correct, that diamond has disappeared. The general impression is that it is identical with the great diamond, the Koh-i-Noor, the mountain of light, which, after the Brazilian stone among the crown jewels of Portugal, is one of the largest known diamonds in the world. If this be so and the stones be identical, it was in the year 1550, before Akbar the Great's rule had formed the empire that this marvellous stone was found in the mines of Golcondah. It passed in the train of conquest and as the emblem of dominion, but always carrying misfortune in its train, from Golcondah to Delhi, from Delhi to Meshid, from Meshid to Kabul, from Kabul to Lahore, and from Lahore to London. When first given to shah Jehan it was still uncut, weighing, it is said, in the rough state, nearly 800 carats, which were reduced by the unskilfulness of the artist to 279. It was cut by Hortensio Borgio, a Venetian, who instead of receiving any reward for his remuneration, was fined by the enraged monarch 10,000 rupees. The art of cutting and polishing diamonds is supposed to have originated in Asia, but at what period is unknown. The forms into which they are now cut, are called the *Brilliant*, the *Rose*, and the *Table*. The first shows the gem to the best advantage and is always set with the table upwards. In the *Rose*, which is the form used when the spread of surface is too great for its breadth and it could not be cut into the brilliant form without great loss, the entire surface is covered with equilateral triangles terminating in a sharp point at the summit, and the *Table* is given to such diamonds as are of small depth compared to their superficial extent. The Brilliant and the Rose lose in the cutting and polishing somewhat less than half the weight. Diamonds were first cut in Europe, in 1456,

by Lewis Berquen, a citizen of Bruges. The art is still retained in that neighbourhood, an extensive cutting and polishing establishment existing in Amsterdam, said to be the only great workshop in Europe and the workmen in which, were mentioned to be all of Jewish descent.

Northern Circars.—Dr. Heyne, in his Tracts, remarks that, Mallavelly, a village sixteen miles west-south-west of Ellore, is one of seven villages near which diamond mines exist. The names of the other six villages in which diamonds are found, are Gani Partala or Partal, Atkur, Burthenypada, Pertalla, Wustapilly, and Kodavetty Kallu. They all belonged formerly to a powerful zemindar, called Appa Rao. But since the beginning of the 18th century, the Nizam has taken them under his own management. The history, or rather the tradition as to their discovery, is that about a century ago, some mountaineers found at the foot of a hill, after a shower of rain, some large stones which proved to be diamonds of inestimable value. Appa Rao becoming acquainted with this discovery, immediately set people to work upon the hill, who found a prodigious number of very large diamonds. The news of this acquisition soon reached the Nizam, who despatched his peons and took possession of the villages. Since that time persons authorised by him are alone entitled to search here for diamonds. The tradition is that as soon as Appa Rao was obliged to give up his mines, large stones ceased to be found, and that the size of the diamonds extracted from the earth never exceeded that of a horse gram or chick pea, though before that period they were as large as common flints.

Another traditional account of the discovery of the diamond mine at Kodavetty Kallu, one of these seven villages, is as follows: A shepherd one day found near a ravine in the neighbourhood, some stones which appeared to him serviceable flints. He picked up several, and used them accordingly. Sometime after, the poor fellow, while at the residence of Appa Rao, took in an unlucky moment one of these stones out of his pocket, and employed it to strike a light to kindle his tobacco. The stone was observed by one of the rajah's lambadies, who knowing its value, made inquiry how it had come into the possession of the shepherd. The good man heedlessly related all that he knew. He was conducted to the rajah, who easily prevailed upon him to point out this unknown residence of Stri Latchmi, the goddess of riches. The rajah was on this occasion so condescending as to go himself to the spot, and was not a little surprised at the riches which the goddess had reserved for him. Penetrated with grateful sentiments to the invisible harbinger of his good fortune, and to the genius of the place, he immediately ordered an offering to be brought, which for more than one reason, consisted of the head and blood of the poor shepherd. His wife and children being found, upon examination, entirely ignorant of the discovery, were spared, and taken care of by the rajah as long as the mines belonged to him. Bullock loads of diamonds were found, it is said, near that nullah, until at length the Nizam, being apprized of the discovery, claimed the ground as his own, and deprived the zemindar of it for ever. But he had been so industrious, during the short time that the mines were in his possession, that all the large gems were removed, and the Nizam was able to obtain only small diamonds of comparatively inconsiderable value. These tales may be taken to indicate that the same site in that neighbourhood, did yield large diamonds and has probably not been exhausted but forgotten. Dr. Benza remarks that, in a forsaken working, one of the villages in the neighbourhood was built over a spot which he considered likely to yield a further supply.

Mallavelly is a village 6 miles North of Appurapet, and North of the Kistnah at Bezwarah. At Mallavelly the hollow flat, where the diamond pits are excavated, was a low swampy plain. Being surrounded by a bank, or rising of the soil in a circular manner, it has the appearance of having been once a lake. The banks are formed of the red ferrugineous sandy soil, prevailing all round this place; through this plain no river or rivulet flows, and the pools in its lower part dry up about the month of March; and it is then the time when the excavations may be commenced, and not before. The few hills he could see near this place were those to the north, not above two or three hundred feet above the plain, and covered with underwood, interspread with large trees. Some miles beyond these hillocks runs another range of hills, loftier than the nearest ones, having, however, the same direction. The diamond pits are in general excavated at the north end of the bank that surrounds the hollow. Judging from some which were dry, the deepest could not be more than 12 feet; and whatever their depth was, they never came to a hard mass of rock. The strata penetrated during the search are —first, a grey clayey vegetable mould, about a foot or two thick.; below this, an alluvium, composed of the following pebbles (not including the diamonds) which have evidently undergone attrition, their angles having been worn off: sandstone similar to the one already

described—quartz—siliceous iron—hornstone—carbonate of iron—felspar—conglomerate sandstone, and a prodigious quantity of kankar, or concretionary limestone. Besides the numerous pieces of this concretionary rock, scattered on the surface of the soil, and also intermixed in large quantities in the diamond alluvium, it forms regular strata, or veins we might call them, in a horizontal position, both in the vegetable earth, and in the diamond alluvium, precisely like flints in chalk. Many of the pebbles of quartz, and hornstone are not only varnished, as it were, with a ferrugineous covering, but it penetrates into their substance. This kankar contains not a trace of quartz or any other mineral; and that in strata, in the vegetable soil and in the diamond alluvium, is more friable than that exposed on the surface of the ground. It is in this alluvial detritus that the diamonds are found; his specimens were taken from a heap, on the brim of the last excavation, made five years before. From this refuse, the head-man told him were obtained as many small pieces of the gem, as might fill the hollow of the palm of the hand; no other excavation had taken place since. All the pits are of an irregular form; generally oblong; the head-man told him they were not more than ten feet deep; but this he could not verify on account of the water, with which they were partly filled. The head-man, always presides over the excavations, whether the pits are farmed or are worked on account of the Nizam. The head-man stated that the diamond is never found imbedded, or in any way attached to any of the pebbles, with which they are invariably associated in this locality. They are always found loose, mixed with the other little stones, and he said the gem was never attached to the kankar substance. On enquiring which were the pebbles most constantly associated with, and forming infallible indications of the existence of the diamond, he picked up from the heaps of detritus, the following pebbles—iron ore, hornstone and the kankar. Notwithstanding the prodigious quantity of carbonate of lime in this locality, the water did not appear to contain any traces of it; and the inhabitants used even that collected in the pits. The detritus, forming the diamond stratum, must have proceeded from the hills on the north, the only ones near this place; being probably the continuation of the sandstone range, which extends eastwardly from Banaganapilly, Condapilly and Mallavelly, in all of which localities the matrix of the diamond ia a conglomerate sandstone.—*Madras Literary Journal, No.* 14.—*Jany.* 1837, *Vol.* v, *page from* 48 *to* 49.

Purtial.—Appa Rao, of Purtial, informed Dr. Voysey, (*Dr. Voysey's Private Journal*) that the pits never exceeded 18 or 20 feet at which depth, they encountered a soft earth called Noshan. No diamond had been found in any of the villages for a considerable period.

Condapilly.—He went to the diamond mines with the kurnum, near Condapilly, but saw nothing but heaps of old stones and earth by the side of the excavations. The calcareous tuffa and the pebbles of jasper and quartz were the most conspicuous in the excavations; but he was told that there was a considerable quantity of fresh ground to the north. At sunrise on the 14th February, he went to the mines which are in obliquely elevated land about a mile from the village, and found the excavations deeper and longer than those of Purtial. The depth to the diamond bed consisted of three layers of earth occupying a space of about twenty feet. The rocks in the neighbourhood appeared to be of granite, or at least resembling it. He had not seen anything of the black soil from his leaving Mylavarum. There was a considerable quantity of ground which had not been examined, the whole ground occupies a space of a coss surrounding the whole village. He was informed that the cause of the working of the mines having ceased, was want of capital, and the disinclination of the landholders to their extension. There is a formation there common to all the diamond mines that he had seen, namely, the calcareous tuffa; the more, he remarks, that I see of this the more I am convinced of its affinity to the iron clay formation, and that it will be found passing into it. Dr. Voysey, in Vol. xv, p. 120, of the Asiatic Researches, observes that a knowledge of the matrix of the diamond has long been a desideratum in mineralogy. It has he says been hitherto supposed that this mineral was only found in alluvial soil, but it is fully ascertained that diamonds have for two centuries at least been found in a *rock*, generally supposed to owe its origin to deposition from water.

Nalla Malla.—A considerable range of mountains called the Nalla Malla (Blue Mountains ?) lies between the 77° and 80° of East longitude. Their highest points are situated between Cummum, in the Cuddapah district, and Amrabad, a town in the province of Hyderabad, North of the Kistnah, and which vary in height from 2,000 to 3,500 feet above the level of the sea. The "clayslate, formation" of the Nalla Malla mountains consists of clayslate, of every variety of slaty limestone between pure limestone and pure slate; of Quartz rock; of Sandstone breccia; of Flinty slate; of Hornstone slate and of a limestone

which he calls, Tuffaceous for want of a better name containing imbedded in it, rounded and angular masses of all these rocks. All these vary so much in their composition, and pass into each other by such insensible gradations, as well as abrupt transition, as to defy arrangement and render a particular description useless. The only rock of this formation in which the diamond is found is the sandstone breccia, but he had then only visited the rock mines of Banaganapilly, a village situated about twelve miles west of the town of Nandiala. The breccia is here found under a compact sandstone rock, differing in no respect from that which is found in other parts of the main range. It is composed of a beautiful mixture of red and yellow jasper, quartz, chalcedony and hornstone of various colours, cemented together by a quartz paste. It passes into a pudding-stone composed of rounded pebbles of quartz hornstone, &c. The miners were then content to sift and examine the old rubbish of the mines, and they are the more bent on doing this, from an opinion which prevails among them, and which is also common to the searchers for diamonds in Hindoostan and to those on the banks of the Kistnah, at Parteala, Malavelly, &c., viz., that the diamond is always growing, and that the chips and small pieces rejected by former searchers, actually increase in size, and in process of time become large diamonds. The Sandstone breccia is frequently seen in all parts of the Nalla Malla mountains at various depths from the surface. In one instance he observed it at a depth of 50 feet, the upper strata, being Sandstone, Clayslate and slaty limestone. The stratification of the whole face of the rock was there remarkably distinct, and traceable through a semi-circular area of 400 yards diameter. The stratum of breccia is two feet in thickness, and immediately above it lies a stratum of Pudding-stone composed of Quartz and Hornstone pebbles, cemented by calcareous clay and grains of sand. He thought it likely that this stratum would be found productive in diamonds, and he had no doubt, that those found at present in the bed of the Kistnah, had been washed down from these their native beds during the rainy season. In the alluvial soil of the plains at the base of this range of mountains, and particularly on or near the banks of the rivers Kistnah, and Pennar, are situated the mines which have produced the largest diamonds in the world. Among them are the famous mines of Golcondah, so called from their being situated in the dominions of the sovereigns of Golcondah, although they are far distant from the hill fort of that name, —from which the province and Kut'b Shahi dynasty took their title. They were once very numerous, about twenty in number; and Gani Parteala situated about three miles from the left bank of the Kistnah, was the most famous. They were then, with the exception of two or three, quite deserted, and the names of several of those mentioned by Tavernier are forgotten. In none have fresh excavations been dug for many years; although much ground remains unopened, and many spots might be pointed out for new and productive mines.

Godavery.—Diamonds are found in the bed of the Godavery near Budrachellum. The nullahs and small rivers which run into it near that place, have their origin in a rock formation exactly similar with those above described. Voysey thought it very probable that the diamond mines of Sumbulpoor, mentioned by Ptolemy, of Pannah, and even of Bijapur, other diamond sites of India, are situated near similar rocks. Thara and Tora are two diamond washing tribes possessing sixteen jaghire villages at Sumbulpoor. They are supposed to be of African origin.—*Emmanuel*, p. 4.

The district of the diamond mines of Golcondah, was ceded to the Nizam by the British under a special treaty and is enclosed by British territory. Purtial is about 50 miles from Masulipatam, but the mines are almost exhausted, the diamonds of small size and the searchers do not earn four or five rupees a month.

Diamond formation.—From the vast extent of the rock in which diamonds are found in India, it may, says Dr. Voysey, be assumed, that there are scarcely any limits to the search for them. Even at Gana Parteala, however, the search was confined to the rubbish of the old mines at Atcur, Chintapalli, Barthenypad and at Oustapalli, all situated within two or three miles of each other. The plain in which these villages are situated is bounded on all sides by granitic rocks, which also form its basis. The average depth of the alluvial soil is about twenty feet. Its upper portion is composed of that peculiar black earth which is called by Europeans, regur or "black cotton soil," and is identical with that found on the banks of the Kistnah in other parts of its course; on the banks of the Godavery of the Manjera; Paen-Gunga and in the plain of Nandiala, arising from the decomposition of the basaltic-trap rocks, in which all these rivers or their tributary streams take their rise. Beneath this upper stratum, it is mixed with masses and rounded pebbles of sandstone, quartz rock, jasper, flinty slate, granite and large amorphous masses of a calcareous conglo-

merate, bearing no mark of attrition from the action of running water. In this stratum the diamond and other precious stones are found. The excavations are 15 to 20 feet deep.

The mines of Ovalampalli and of Canparti on the right and left banks of the Pennar near Cuddapah, are in an alluvial soil of nearly the same nature, it is not quite so black, from the greater admixture of debris of sandstone and clayslate.

In many parts of the plain of Nandiala, diamonds were formerly sought for, but the mines have for a long time ceased to be productive.

The failure of the mines of the Dekkan may perhaps be principally attributed to the cheapness and plenty of Brazil diamonds. Otherwise from the vast extent of the rock in which they are found in India, there are scarcely any limits to the search for them. It may be assumed then ;

1st. That the matrix of the diamonds produced in Southern India, is the Sandstone breccia of the " Clayslate formation."

2nd. That those found in alluvial soil are produced from the debris of the above rock, and have been brought thither by some torrent or deluge, which could alone have transported such large masses and pebbles from the parent rock, and that no modern or traditional inundation has reached to such an extent.

3rd. That the diamonds found at present in the beds of the rivers are washed down by the annual rains.

It will be an interesting point to ascertain if the diamonds of Hindoostan can be traced to a similar rock.

Borneo.—Early notices of the diamonds of Borneo, occur in the writings of Sir Stamford Raffles. But the most recent writer is Mr. Low in his work on Sarawak who observes that the diamonds of Borneo have long been celebrated as equal to any from India or Brazil in abundance and beauty. They are found principally in the greatest numbers in Sangow, Landak, and Banjarmasin. They were also formerly worked at Sarawak, but never very extensively : a few years since, some fine ones were obtained by the chief Patingi Ali, in a large hole during a very dry state of the river. At the other three places they are worked to a small extent by the Chinese and Malays. The mines of Landak have supplied the Malays with diamonds ever since their first settling on the island ; those of Sangow and Banjar are more recent. It is said by Sir Stamford Raffles, that few courts of Europe could perhaps boast of a more brilliant display of diamonds than, in the prosperous days of the Dutch, was exhibited by the ladies of Batavia, the principal and only mart then opened for the Borneo diamond mines. The diamonds are found in a gravelly stratum, at various distances below the surface : in Sarawak the gravel in which they are found is in some places not more than six feet, in other as much as eighteen below the surface. They are found in abundance in the soil, but are generally small in size, though of the most brilliant water. Large ones are also occasionally met with, and it is said that at Sangow and Landak, diamonds of from twelve to sixteen carats are not uncommon. The diamond of the sultan of Matan is known to be one of the largest in the world. It is as yet uncut, and weighs 367 carats, so that if cut and polished it would be reduced in size to 183½ carats. Its value is stated by Mr. Crawfurd to be £269,378, being less by £34,822, than that of the Pitt diamond : its present shape is that of an egg indented on one side. Mr. Low was informed by a person, who supposed himself to be a good judge of diamonds, that the sultan possesses the real stone, which he had seen, but that a crystal is shown to strangers, as the sultan, who has been already robbed of his territory, fears that this last emblem of royalty will be also taken from him by his powerful and avaricious neighbours at Pontianak. The mines which Mr. Low had seen at Sarawak are of the most simple construction : shafts are sunk in the earth to the stratum that contains the diamonds (which varies in thickness from two feet to much more), at the distance of about twenty feet apart ; the soil is then extracted from each by the miner, who excavates it for ten feet on each side of the shaft, so that the workers in the different shafts, communicating with each other, the whole of the gravel is removed ; this is passed up in baskets and washed in troughs, as in the gold mines, or rather ditches, as the native word (parit) signifies The Malays of Banjarmasin and Landak are very anxious to work the diamonds at Sarawak, but being generally very bad characters, the government has not thought proper to encourage their immigration. Many diamonds are, however, obtained by the people, who wash for gold in the river, and on one occasion, Mr. Low saw a person get three small ones at one washing, together with a considerable portion of gold. With capital, and proper superintendence, it would probably turn out a gainful speculation if properly conducted, more particularly as gold is found in the same soil, though not in such abundance as in some other kinds of earth." The diamonds discovered on the west side of the Ratoos mountain in Borneo, are said to be associated with gold and platinum ; clearly the washings from some

higher strata. The diamonds of Borneo are small, but of a brilliant water: they have been hitherto chiefly found in districts occupied by the Chinese, but will probably be discovered in other localities. The equitorial position of Borneo and the character of its alluvial detritus afford a strong presumption that it is a country rich in gems. There is a tradition that a great diamond is in the possession of a petty chief, and that it is worth by weight £2,70,000. Mr. St. John heard of this wonderful diamond and was gravely informed that the prince who owned it would gladly bestow it on him if he would kill for him a rival chief and assist in a projected war. Mr. Crawfurd says, the diamond in Malay and Javanese is called intan, and sometimes kumala. The Diamond has been found in no part of the Asiatic Archipelago except Borneo, and even in that island only in a comparatively small part of it, a portion of its western coast. The principal diamond mines are in the district of Landak, in the territory of Pontiyanak, in the longitude of 109° east, about forty miles north of the equator, and they occur from thence as far as Banjarmasin, in such latitude between three and four degrees and longitude between 114° and 115° east. The mines are worked by the wild Dayaks and the Malays, but with far superior skill by the Chinese. The gems are found in a yellow-coloured rubble or gravel, which occurs at various depths, the greatest to which a shaft has been known to be sunk being between fifty and sixty feet. When a shaft of such a depth is sunk, six different alluvial strata occur before reaching the diamond-yielding one, which the Malays call the Areng. These strata are, a black mould, a yellow sandy clay, a red clay, a blue clay, a blue clay intermixed with gravel, called by the Malays "ampir" or "near at hand," and lastly, a stiff yellow clay, in which the diamonds are imbedded. The largest diamond found in the Borneon mines of late years was only of thirty-two carats. The prince of Matan, however, has long had in his possession a rough diamond of 367 carats, but its genuineness has been suspected. At present the Dutch Government are the owners of the diamond mines, and make advances to the miners, who are bound to deliver all stones at 20 per cent. below their market value, which is equivalent to a seignorage of twenty-five per cent. Under this management there were delivered in 1824 no more than 1,900 carats, and the quantity in the two subsequent years was still less.

South Africa.—According to the official return, in the "Standard and Mail" of the 4th January 1871, the diamond shipments from South Africa, during the years 1869 and 1870 were as under:

Year.	Number of diamonds.	Value.
		£.
1869	141	7,405
1870	5,661	1,24,910

To these must be added the Star of South Africa, and some others sent by private means to Europe, valued at £15,000.

A large number of the Cape diamonds in London at the beginning of 1871, were of an inferior description, and none of them were deemed equal to the old Golconda gems.—(*London Athenæum, 18th February* 1871.)

Ceylon.—Diamonds do not seem to be found in Ceylon, but in the southern part of the island is an extensive group of mountains rising to the height of 7,000 or 8,000 feet, which successive falls diminish till they rest on the alluvial plains of the low country. The S. W. face of this group forms a bold range, crowned at its western extremity by Adam's Peak called by the people Sri-pada or Holy foot, and at the eastern end of the range in Kirizalpota which rises in abrupt precipices to 8,000 feet above the plains. Ratnapoora, or city of gems, is in part of this range. It is about 60 miles from Colombo, and about 200 feet above the level of the sea. It is the centre of the gem producing district, which extends about fifty miles along the base of this mountain range, and in this district, comprising Safragam and the Three-Korles, the search for gems is a regular occupation of the people in the beds of streams and in the alluvial plains lying in the valleys, upon their banks. The gems found in that locality are the sapphire, the ruby and the topaz; the cat's eye, amethyst and beryl, and the spinel ruby is also found but is more rare. They are found in a layer of gravel fifteen to twenty feet deep to which they sink a pit, and if they meet with a thin hard crust of ferruginous stones or masses of milk quartz such are always favourable signs. The oriental ruby or red variety of corundum, is very rare: when pure in water and colour it is very valuable. The blue variety of corundum is the oriental sapphire, is in greater abundance but of inferior value, and its colours greatly vary, from the deepest velvet blue to the palest and almost imperceptible tint even losing all that and becoming colourless, and in that form are a very beautiful gem—remarkable for its whiteness and the absence of prismatic colours.

The yellow variety of corundum is called the oriental topaz which is of every shade of yellow and when pure it is highly value. But many stones have a milky opalescence which makes them valueless.

When the red and blue are mixed in the corundum, the stone is called Oriental Amethyst, half a stone will be red and half blue. The Ceylon ruby has occasionally a blue tint, which can be expelled by heat.

The opalescence occurs in rubies, sapphires and topaz. When such stones are cut *en cabochon*, at a certain angle to the axis, they form the star-stone showing, in a strong light a star of six rays, very pretty as a fancy stone, but of no value as a gem.

Mr. Low's statement that the rajah of Matan, in Borneo, though he has in his possession the real diamond, yet permits only a crystal to be shown to strangers, may explain satisfactorily the doubts expressed by Dr. Crawfurd, the historian of the Archipelago, when, in his recent dictionary of that region, he remarks that the genuineness of the rajah of Matan's diamond has been suspected. Mr. Crawfurd also informs us in the same work that the principal diamond mines of Borneo are in the district of Landak, in the territory of Pontianak, and occur from thence as far as Banjarmassan, and he tells us that they occur in a yellow coloured rubble or gravel which is met with at various depths, the greatest to which any shaft has been known to be sunk, being fifty or sixty feet. The strata encountered in working down are alluvial, or seemingly what Sir Charles Lyell would call his Post-Tertiary series. The first a black mould, and in succession, a yellow sandy clay ; a red clay ; a blue clay intermixed with gravel called by the Malay's *Ampir* or near at hand, and lastly a stiff yellow clay, in which the diamonds are imbedded, and to which they give the name of *Areng*. As to the yield of these mines we have no recent information. When Dr. Crawfurd wrote, the Dutch government were the proprietors and made advances to the miners who were bound to deliver all stones at twenty per cent. below their market value, which was equivalent to a seignorage of 25 per cent. Under this mode of management, in 1824, only 1,900 carats had been delivered, and the largest diamond found was only 32 carats. The Diamonds discovered on the west side of the Ratoos mountain in Borneo, are said to be associated with gold and platinum; clearly also the washings from some higher strata. Nothing is known as to the locality whence the celebrated Pitt or Regent diamond was obtained, but its history points to a Borneon origin. Mr. Pitt an English gentleman, who was governor of Bencoolen in Sumatra, sold it to the duke of Orleans for £130,000 and it was placed by Napoleon in the hilt of his sword of state. It weighs 236·5 carats or 419¼ grains. It is cut as a brilliant, and is still valued at £125,000, but on account of its unblemished transparency and colour, it is considered the most splendid of Indian diamonds. Mr. Crawfurd observes that the diamond had not been found in any other part of the Eastern Archipelago, except Borneo, and, as we have seen, even in that island, only in a very small part of it, a portion of its Western Coast. Sir S. Raffles, also, says that there appears to be no just foundation for the idea, that the diamonds of Borneo are inferior to those of Golcondah. Many of an inferior quality have no doubt found their way into the market, because there was perhaps less skill and judgment in the selection ; diamonds are not only found in the bottom of the Borneo rivers when dry, but at the foot of craggy hills and mountains. The *parit* or mines, are dug to the depth of from one to five fathoms only ; but experience has invariably proved, that the deeper they are dug, not only are the diamonds more abundant, but superior in size, shape and water. The soil which produces diamonds is known from a species of earth called by the natives *labor* or *labor-gig'gi*. This is sometimes black, sometimes white, red, orange, and green : it is a species of earth which stains the clothes of the labourer, and is distinguished by many names.

There seems to have always been a considerable traffic in this precious stone, carried on by the mercantile body, on the East Coast of Peninsular India. In Madras, up to about the year 1840, what may be called the country transactions with England, were conducted through European firms, amongst whom were the establishments of Messrs. Gordon & Co , Messrs. de Fries, and Messrs. Lowe & Co. The diamonds exported by them consisted of the small uncut stones, which were sent to London in packets called " Bulses," and the mercantile character of the Messrs. de Fries of Madras stood so high in the London market that their packets or bulses were sold there by weight, without examination. Latterly, however, Europeans have withdrawn from the export trade which has fallen into the hands of the Native community, amongst whom there is a considerable tendency to speculate on prices. The course of trade has thus been somewhat changed. Indeed, during the last thirty years prices have risen at least 20 per cent. If Europeans do now engage in the business, it is chiefly in importing, from London,

packets of cut diamonds for sale in Madras. Articles of such small value are doubtless often exported and imported without passing through the Customs Office and the values there recorded cannot form any data on which to rely, the more so as the entries of values in the export and import branches are merely declared not ascertained rates. The following information, however, may be interesting to many, as showing the declared values of the precious stones and gems passing through the Madras Custom House. Diamonds occasionally take the place of bullion, as remittances, but are not found a convenient substitute for the precious metals.—*Raffles, History of Java, Vol.* i, p. 238.

We are not acquainted with the precise terms on which the miners at Cuddapah and Banaganapilly work, but understand that all diamonds found, above a certain size, should become the property of Government, as droits. It is supposed that the large uncut diamond in the possession of the Nizam was found in the Cuddapah or Banaganapilly mines, and the same locality may have produced a diamond which within a few years, is said to have been sold for £5,000 to Messrs. Hunt and Roskall and was afterwards possessed by the empress Eugenie. The art of cutting diamonds is practiced to some extent, in Madras. A knowledge of this art, however, is not very common, as may be concluded when we mention that all Europe only possesses, in Amsterdam, one great diamond cutting establishment, filled by workmen of the Jewish race. The great diamond merchants of London, are the firm of Emanuel Brothers. In the Brazil's, diamonds and gold are found together ; and in the recent discoveries at the Cape of Good Hope, gold, diamonds and rubies have been discovered together. At the Cape of Good Hope, the diamonds seem to have been found in localities with blue and ochreous coloured clay shales, belonging to the New Red Sandstone era, capped with common blue basaltic trap or cronstone ; sometimes as at Maddelveld and Bultfontein or Du Toits pau, a thick coat of coarse sandstone is under trap and overlying the clay shales. The shale formation is often intersected and upraised and tilted by basaltic dykes. At Heyward's farm the fiery eruptions have occurred at different eras, for the clinkstone and amygdaloid have there run over the basaltic trap. At the diamond diggings below Pniel, the formations on both sides the river are similar, basaltic greenstone and quartz dykes intersecting the ground and crossing through the river from side to side. Here in a gully, about 1½ mile down the river, is an immense deposit of the underlying rock of the diamondiferous region ; it is a porphyritic gneiss, which Mr. Hübner calls

prophyritic granulite. This is the underlying rock at the diggings below Pniel, across the Vaal, the Trans-vaal and the far interior.

Tavernier in his "Travels" (pp. 135 to 149) gives accounts of the diamonds he had seen and sold, and he lays great stress on the knowledge possessed by the native diamond merchants (banya). Diamonds in the rough are unattractive pebbles. Even with those who profess to be acquainted with gems, the white sapphire and topaz occasionally pass for the diamond. Some of the "Ceylon diamonds" which the Singhalese offer for sale, are made of rock crystal ; and many of the "rubies," and other precious stones, that the Shans bring with them in their annual caravan from the north of Burmah, are made of rock crystal coloured artificially. There are heated and plunged into coloured solutions.

Diamonds.—The following are not known.

Name.	Character.	Weight, Carats.	Estimated value £ 4 where found.	Present owner.
Eugenie	Brilliant	51	£3,000 Pennar.	
Austrian	Yellow Brilliant	.....	.....	Emperor of Russia.

Regent or Pitt	Diamond	.....		
Briganza	Do.	.....		

The art of cutting and polishing diamonds is supposed to have originated in Asia at some unknown period. Diamonds were first cut in Europe in 1456 by Louis Berquen, a citizen of Bruges.

Diamond Cutting "is effected by a horizontal iron-plate of about ten inches in

diameter, called a *schiff* or mill, which revolves from 2000 to 3000 times per minute. The diamond is fixed in a ball of pewter, at the end of an arm, resting upon the table in which the plate revolves; the other end, at which the ball containing the diamond is fixed, is pressed upon the wheel by iron weights at the discretion of the workman. The diamond is cut by taking advantage of its cleavage, and also by abrasion with its own powder, and by friction with another diamond. It is a process of great labour, and many hours are spent in producing a single facet. Diamonds are cut into various forms, called the *Brilliant*, the *Rose*, and the *Table*. The first form shows the gem to the best advantage and is always set with the table upwards. In the rose the entire surface is covered with equilateral triangles terminating in a sharp point at the summit. This form is used when the spread of surface is too great for its depth, and it could not be cut into the brilliant form without great loss. The table is applied to such diamonds as may be regarded as plates, laminæ, or slabs of small depth compared to their superficial extent. The brilliant and the rose lose in cutting and polishing somewhat less than half the weight. In the formation of either a brilliant or rose-diamond so much is cut away that the weight of the polished gem is not more than half that of the rough crystal out of which it was formed. The weight and consequently the value of diamonds are estimated in carats, each of which is equal to 3·166 grains. The diamond is used for cutting glass. It is also employed for the lenses of microscopes. It has but little chromatic aberration, but the frequent irregularity of its structure is a drawback to its employment for this purpose. Diamonds are esteemed by native jewellers as the first class of jewels. The diamonds of India are classed by them as white, yellow, red, green and black; the colored ones are extremely rare, but they are occasionally found of a white color spotted with red, which are rejected as bad. They are classed by the northern native jewellers into three kinds—"Hira-ba-rang-i-nausadir" grayish or the color of sal-ammoniac; "hira makduni," of paler color; and "almas-i-hadidi." The diamonds seen in such abundance amongst the native gentry of India are almost all cut in England, and the principal gems used in India are the lapis lazuli, rubies, emeralds, opals, garnets, and the whole family of siliceous gems.

Diamonds, in Paris, during the revolution of the 18th and 19th centuries, doubled their value and of late years, small stones are much dearer, but the prices of the rarer and larger sorts continue much the same. The value rises as the square of the weight, thus if a one carat ($3\frac{1}{8}$ grains) diamond cost £8, a two carat diamond will be ($2 + 2 \times 8$) £32. But there is much of fancy pricing. The diamond is not acted on by any acid. Diamonds are weighed by the carat, 4-grains = 1 carat, 151½ carats or 606 grains 1 oz. troy. Diamonds frequently becomes phosphorescent on exposure to light. They are found crystalline and amorphous, and of all colours, white, yellow, orange, red, pink, brown, green, blue black and opalescent. Stones with naturally acute angles are used for cutting glass and sell at £10 the carat, for most gems will scratch but diamonds alone cut glass. The diamond is found in India, in the Dekkan, in the river Pennar, in the Cuddapah district and near Banganapilly, in the lower part of the Kistnah, formerly near Ellore and at Golcondah. The diamond lately sold to the emperor Louis Napoleon, for £5,000, was said to have been obtained in the Pennar or at Banganapilly. In Tavernier's time the mines of Golcondah are said to employ 6,000 persons, but the chief places are Pannah and the river Sonar in Bundelcund, at Sumbulpore on the Mahanuddy. It is also found in Sumatra, Australia, the Ural mountains, South Africa, Brazil, North America, Malacca ?, Borneo and Celebes ?

Diamonds of Brazil are found in quartz conglomerates, containing oxides of iron, also in alluvium, in loose and imbedded crystals, almost always of small size, and most frequent in company with grains of gold and platinum. Ordinary diamonds are mostly taken to Europe from the Brazils, but on an average, of 10,000 stones, there will not be one of 18 carats found.

The diamond was considered by the Romans a remedy against incubos and succabos: the ruby against poison: the jacinth procured sleep: the sapphire procured favour with princes, the chrysolite assuaged wrath. Each of the twelve apostles was symbolised with a precious stone, Peter by jasper, John by emerald, and so on. —*Tavernier's Travels: pp.* 135 *to* 149. *Sir S. Raffles Hist. of Java. Low's Sarawak. Rennell's Memoir pp.* 233-290. *Pennant's Hindustan, Vols.* ii, iii. *Heyne's Tracts. Tennant on the diamond in Ill. London News. Captain Cullen. Lt. Newbold. Dalrymple's Repository. Dr. Voysey's Private Journal. Dana Manual of Mineralogy*; *Catalogue of Great Exhibition of* 1851, (Class, xxiii.)—*Eng. Cyc., p.* 323. *Ainslie's Materia Medica. Mason's Tenasserim. Powell's Hand-book. Chambers' Journal, June.* 1868. *Tomlinson, p.* 309. *Letter of Mr. Tennant in Illustrated London News,* 31*st January* 1852, *Vol.* xx, *No.* 543. *Crawfurd's Dic., p.* 120.

DIAMOND ADDER. A serpent of Australia.

DIAMOND CANING, a mode of using coloured ratans for caning the bottoms of chairs. It was invented by Mr. Deschamp of Madras, boring the holes and putting on a first layer of rattan stripes, and a cross layer to form the diamond figures ornamented with colours and gilded, so as to imitate the splendid kinkabs of India. The colours are used, in powder, mixed with copal varnish, and the gold leaf is applied over a coat of gold size. The colour used for the sofa and chairs, above referred to is vermilion. He was the first to introduce colouring and gilding in cane-work. It has a splendid effect and being very durable owing to the peculiar hard and polished crust of the rattan but it can be applied in all sorts of rich internal decoration, as well as chairs and sofas.

DIAMOND CEMENT. See Gelatine.

DIAMOND ISLAND, in Lat. 15° 51′ N. and Lat. 94° 17′ E.

DIAMONT. Pol. Diamond.

DIANA of the Greeks, is represented in hindoo mythology, by Atavi Devi. *See* Saraswati ; Osiris ; Lustral ceremonies.

DIANTHUS, a genus of flowering plants of which several species are cultivated in the gardens of India. D. caryophyllus or clove pink clove flower, and D. chinensis are called Karnphūl : the latter is of various colours, and some mixed—they flower all the year round, and give seed immediately as it fades, and which will spring up again if sown. The double flowered varieties are much esteemed : the colours are crimson, red and white.—*Riddell.*

DIAPER.

Drel, Dut.	Tela tessuta a opere, It.
Linge ouvre, Fr.	Salfetotsschnoe, Rus.
Drell, Ger.	Manteles alemaniscas, Sp.

A fine flowered linen, used for table cloths and napkins, manufactured in the north of Ireland, Germany, and Scotland. Diapers are also made of cotton, in imitation of the linen goods bearing the same name. The "Shot Diaper" of Masulipatam, so made that it is difficult to ascertain whether it was not shot with silk, is a cotton fabric, excellent in quality and colour.—*M. Ex. Jur. Reports., McCulloch's Dictionary.*

DIAR or DEODAR, of Hazara, Kashmir and Kaghan, Cedrus deodara, *Loud.*

DIARBEKIR, a pashalik on the north west of that of Baghdad. It is the Hollow Mesopotamia. At Diarbekir, the Tigris is often 250 yards wide. The Diarbekir branch of the Tigris passes by Rodwan and Hassan Keif, before it joins the proper Tigris. The Mahallemi Koords live in caverns hereabouts, cut in the cliffs of the Tigris. There is a prodigious number of these caves, which are said to be very ancient, and cut into different apartments. Altoonsoo, the river Caprus of antiquity, is called the Lesser Zab by Abulfeda. It joins the Tigris below Diarbekir but it is an error to call the river Altoon, which is an epithet only belonging to the bridge, from what it cost, Altoon meaning gold or money. —*Rich's Residence in Koordistan, Vol.* i, *p.* 379 *and* ii, *p.* 13. *See* Tigris and Mosul.

DIASPRO. It. Jasper.

DIAZ, BARTHOLOMEW, in the reign of John II king of Portugal, proceeded with three vessels to ascertain the southern boundary of the African continent, and, driven from the land near the south Cape he ultimately regained the African shores, east of the Cape, at a Bay which they called the Bay of Cows. The men seeing the land trend easterly here began to murmur and compelled Diaz to return. As they shaped their course homewards they rounded that famous point in August 1486, to which Diaz gave the name of the "Cape of Tempests," but which John, with more foresight as to the future importance of the discovery, changed to that of the Cape of Good Hope. Diaz was the first who, in recent times, doubled the Cape of Good Hope. He landed at Calicut, about the beginning of the 16th century, soon after the discovery of America by Columbus. He was drowned in one of four ships lost by Cabral, in his voyage from Brazil to Calicut.—*Tennant's Ceylon. See* Cabral, Albuquerque, Vasco-de-Gamez, Debul.

DIATOMACEÆ. The Hasan-i-Yusuf of the Panjab, is a minute siliceous shell of a triangular form, one of the Diatomaceæ found floating on lakes and ponds in the hills of Kashmir, whence it is skimmed off and dried. It was erroneously described by Honigberger and others, as a seed.—*Powell's Hand-book, V.* i, *p.* 384.

DIB, Hind. Typha angustifolia, also Eragrostis cynosuroides.

DIBARADANE, or Divartanai or offering of fire from dipa, a lamp and aradana to sacrifice, a daily ceremony in honour of the hindoo gods, and makes the last part of the worship. The brahman who officiates holds in one hand a small bell, which he sounds and in the other a copper lamp full of ghee, he makes it pass and re-pass round the statue of the god he worships. During this time, the dancing girls or bayadere dance and sing his praises ; after which the assistants in contemplation, with hands joined, address their vows to the idol : the brahman then breaks the garland with which the idol is adorned, distributes the fragments

to the people and receives from them the offerings they have brought to the divinity. The dance before the gods during divine service, and on festival days, was a ceremony much used by the ancients. The priests of Mars, called Satii, were held in great esteem by the Romans: they were excellent mountebanks. They danced at Delos during divine service. This dance was performed in a very singular manner among the Greeks, and the Romans: they moved from the left side of the altar to the right, meaning to intimate the course of the heavens, which moves from the east to the west; they then returned from the right side to the left side, which represented the motion of the planets. The origin of this dance is very uncertain. King David danced before the Ark, when brought back from the Philistines, and no doubt made his subjects dance to his playing on the harp. We find in Exodus, that the Jews danced before the golden calf; but there never was known a people like the hindoos, who choose girls of no virtue to dance before their idols.—*Sonnerat's Voyage, p.* 157-9.

DIBI DIBI, Eng. Cæsalpinia coriaria, *Willde.*

DIB-GRASS, Hind. Cynodon dactylon also a grass or reed, Typha angustifolia.

DIBONG. See Mishmi.

DIC, in hindoo astronomy, the four cardinal points of the compass. Asta dic; the eight principal points including the cardinal ones. The Asta dic are called the eight corners of the world, over each of which a divinity is supposed to preside.—*Warren's Kala Sanhita.*

DICE,

Taarlingen. Dut.	Dadi. It.
Dés (a jouer.) Fr.	Buwah pari; d'ad'o. Malay
Würfel. Ger.	Kosti. Rus.
Passe. Hind,	Dados, Sp.

Those used in Europe are cubical pieces of ivory, bone, or ebony, marked with dots on each of their sides from 1 to 6, according to the number of the face; and used for playing games of chance. Those used by the hindoos are oblong pieces of bone or ivory. The story of Draupadi being staked and lost by Yudishthira, the eldest of the Pandava to Duryódhana is equalled by one in Ainsworth's Old St. Pauls, and another in Massy's History of England.—*Faulkner.*

DICERAS. See Chamacea: Chamidæ.

DICHHIT, according to Professor Wilson's Glossary, is a vernacular corruption for Dikshita, a name most appropriately given to brahmans, and the title of one of the sixteen branches of the Kanojia brahmans, it is also borne by some families of Maratha brahmans; and in Gazipur and adjacent provinces by a tribe of Rajputs.

DICHIPTERA RETUSA, Juss. Syn. of Rungia repens.

DICHROSTACHYS CINEREA, *W. & A.*

Mimosa cinerea, *Linn.; Roxb.*
Deshmanthus cinereus, *Willde.*

Veda-tara. „	Venuturu. „
Vadatala maram „	

A small scrubby tree or large shrub, abundant in the hot and drier parts of Ceylon, and Coimbatore and common in waste places of the inland country, in the Bombay Presidency. Dr. Gibson had not seen it near to the coast. The wood is very hard, strong and good for pegs, but too small for any other purpose.—*Drs. Wight, Gibson, Flor. Andh., Thwaites' En. Pl. Zeyl., Roxb. Cor., Pl.* 174.

DICKSONIA ANTARCTICA. See Cibotium billardieri. Ferns.

DICLIPTERA ROXBURGHII, *N. ab E.*

Kirch, of Jhelum.	Lakshmana, of Panjab.
Somni, of Beas.	

A medicinal plant, grows up to 6,500 feet in the Western Himalaya.—*Dr. J. L. Stewart.*

DICÆUM, a genus of birds of the family Nectarinidiæ, 6 gen. 36 sp., viz., 8 Arachonothera, 19 Nectarinia; 5 Dicæum; 1 Myzanthe; 2 Prionochilus; 1 Piprisoma.

DICRANOCEPHALUS ADAMSI, Pascoe, a beetle of Korea, a double-helmeted Coleoptera. It occurs also on the Himalayas.

DICRURIDÆ, a family of birds, comprising 1 gen. 5 sub-gen. 14 sp., viz., 1 Chibia; 2 Chaptia; 1 Bhringa; 3 var. Edolius, 9 Dicrurus. One of the genus Dicrurus is the Drongo shrike of the peninsula of India. Other species are D. cærulescens, D. leucopygia and D. edoliformis. See Birds.

DICYPELLIUM CARYOPHYLLATUM. See Cinnamon.

DIDDANI, Hind. Astragalus multiceps.

DIDISCUS CÆRULEUS. Australia plants, grown from seed in a light loamy soil, and the plants either reared in pots or in flower beds.—*Riddell.*

DI-DITSH:—N-GUON:—MOI;—ROMOI and Ke-moi, rude tribes occupying the mountain ranges between Tonkin and Cochin China, and between Cochin China and Kambogia.—*Latham's Descriptive Ethnology.*

DIDO. See Hindoo.

DIDRIAN. Hind. Cæsalpinia sepiaria.

DIDYMOCARPUS, a genus of plants of which Dr. Wight gives as species, D. Humboldtiana, lyrata, ovalifolia, Rottleriana, and tomentosa, D. aromaticus, is stated by Dr.

Wallich to be used as a perfume and aromatic drug, called by the natives Kumkuma and Ranigovindi.—*Royle*, p. 294; *O'Shaughnessy*, p. 448.

DIE-DU-LET. PAN. BURM. Cotton tree. Bombax heterophylla.—*McClelland.*

DIEG, at this place a battle was fought and won by Lord Lake. See Battles.

DIEGO GARCIA, one of the Chagos Islands, is about 14 miles long and extends from lat. 7° 13½′ S. to 7° 27½′ S. It is low and generally only 8 or 10 feet above high water tides.—*Horsurgh.*

DIELEN. GER. Deals.

DIEN-NEEUNG.— ? In Amherst, a timber used for rice-pounders; it is a close-grained, strong, compact, brown, hard wood.

DIER. HIND. Cocculus villosus.—*DC.*

DIER HIER. HIND. KASH. Menispermum hirsutum.

DIESPETER. See Indra.

DIE-TUK. BURM. Cotton Tree. Bombax heterophylla.—*McClelland.*

DIGAMBARA. One of the six atheistical systems of philosophy, current amongst the eastern Aryan race in India. The other five are the Charvaka, Yogachara, Sidhanta, Wai-bashika, and Madhyamica all full of indeterminate phrases and containing a jumble of atheism and ethics. The derivation of Charuvaka is from charoo, insinuating and vaka, a word. See Jains : Vidya.

DIGAMBARA. Sansc. Literally skyclad. A mendicant going about naked and a division of the Jains the members of which either go naked or wear coloured clothes in opposition to the suretambara, or those who wear white. Digambara is from dish, a point of the compass, and ambara, cloth.—*Wilson.*

DIGHI. HIND. a tank or reservoir.

DIGUE ISLAND, one of the Seychelles. It is inhabited.—*Horsburgh.*

DIG-VIJAYA, SANS. From dish, the quarters of the earth, and vijaya, conquest.

DIHONG, the principal feeder of the Brahmaputra and navigable for 3 or 4 days journey, above its junction with the Lohit. It is supposed to be the Tsan-pu of Tibet but Mr. McCosh is doubtful of this. *See* Abor; Mishmi.

DII PATRES, of the Romans, the Pitrideva of the hindoos.

DIJES. SP. also Juguetes de Ninnos. SP. Toys.

DIJLAH, a name of the Tigris.

DIKAJAKOSA, RUSS. Cervulus pygargus.

DIKAMALLEE, is the fragrant gum resin of Gardenia lucida of Roxburgh, it exudes in amber coloured transparent drops, at the ends of young shoots, and from thence it is collected. It is most useful in preventing vermin feeding in wounds and is useful in hospitals, keeping away flies from sores, by its strong aroma, and is an article in the materia of the village farrier. It deserves more attention. Dikamali, from Gardenia gummifera, is stated by D. Gibson to be produced within the Bombay Presidency, its effects in preventing the access of flies to festering wounds and running sores, is remarkable.—*M. E. J. R., Spry's Suggest, p. 67. Dr. Gibson.*

DIK'HIT. A tribe of Rajpoots inhabiting the pergunnahs of Kootea, Futtehpoor, Ekdulla, Mootour and Ghazeepoor in the Futtehpoor District, also in Oudh and Bundelkhund. —*Elliot Supp. Gloss.*

DIKSHA, S. In hindooism, sacrificial worship : initiation into sacred rites.

DIL, HIND., PERS. The heart.

DILA, HIND. Odina wodier, also Arundo phragmites, Cyperus tuberosus, Scirpus maritimus.

DILATRIS HERITIERI. See Hæmodoraceæ.

DILEMI. *See* Afghan.

Dilivaria ilicifolia, *Juss., W. Ic.*
Acanthus ilicifolius, *Linn., Roxb. Rheede.*

Paina shuh, MALEAL.	Harkūch kanta, HIND.
Koli moli cheddi, TAM.	Harkut, HIND.
Alisa, TEL.	Hakorch, BENG.
Eti chilla, TEL.	Ka-ya, BURM.

Grows in marine lagoons canals and deltas south of India. It resembles the holly; its leaves and root are used medicinally.—*Roxb. Voigt., Useful Plants.*

DILKA, or smearing with oil, is in general use by the natives of the Soudan every evening by those who can afford it, before retiring to rest; to its use is to be ascribed the entire absence of cutaneous diseases, and also their being able to resist the cold and cutting winds of winter with no other protection than a slight calico scarf or shirt.—*Egypt, the Soudan and Central Africa. By J. Petherick, F. R. G. S.*

DILL, the anise of scripture, Anethum graveolens. It is the *ανηωον* of the Greeks, and Adas manis of the malays.

DILLAET. HIND. a summons server, a peon.—*Wils.*

DILLENIACEÆ, *DC.* A natural order of handsome trees, shrubs, or under shrubs, rarely herbs, amounting to about 115 species, of which 42 belong to the E. Indies; 2 to Guinea; and 1 to New Caledonia. The Indian forms are ranged under nine genera; viz., 12 under *Tetracera*; 5-6 under *Delima*; 3 under Wormia Actinidia; 1 under *Acrotrema*; 4 under *Colbertia*; 11 under *Dillenia*; 1 under Capellia; 3 under *Acrotrema*;

and 1 under *Schumacheria*. With a few exceptions, the properties of the order are unknown.—*Voigt.*, p. 17.

DILLENIA, a genus of plants, several species of which, yielding useful and valuable timbers, grow in Ceylon, in the two peninsulas, and in the northern provinces, of India. Some, of which the timbers are described, are not yet specifically determined. The young calyces of *D. scabrella* and *D. speciosa* have a pleasant taste and are used in curries by the inhabitants of Chittagong and Bengal. The flowers of one of this genus, as it occurs in the Terai, are as large as two fists.

Dillenia augusta, Zin byewn, *Burm.* also *D. scabra*, Byew, *Burm.* and *D. speciosa*. Thab yew, *Burm.* occur in Burmah. The two first are plentiful in the forests of the Pegu district, but become scarce to the north of it, and the third species is scarce even there, but generally growing in a laterite soil. They all three have a light brown wood and afford large and good timber for house buildings. The Dillenias are not only valuable as timber trees, but for ornamental purposes. In March and April, the forests are really dazzling from the bright yellow flowers which are crowded on their leafless branches. These trees would be worth cultivation in England. A species of Dillenia always found on the borders of streams, hence called water Dillenia by the Karens, produces a large green fruit, which is brought to the bazaar and considered a favorite vegetable with the natives.

Captain Benson, says D. "ornata," D. "scabrella" and D. "speciosa, of Moulmein are very plentiful and of large girth, have strong good timber, useful for general purposes, as house and ship building. *Captain R. Benson, Deputy Assistant Commissary General.—Drs. Hooker. Him. Jour.*, p. 395; *Mason.*

DILLENIA, *Species*, Zin Pyun Nigan Burm. A tree of Moulmein, with a strong wood for any ordinary purposes. Fruit edible.—*Cal. Cat. Ex.* 1862.

DILLENIA, *Species*. Zimboon. Burm. A timber of Tavoy, used in building.—*Capt. Dance.*

DILLENIA AUGUSTA, *Roxb.* Zinbyewn. Burm. Grows in the Garrow hills, and is plentiful in the forests of the Pegu district but becomes scarce to the north of it. Its wood is of a light brown colour, and it yields a large and good timber for house building.—*Drs. McClelland, Voigt.*

DILLENIA AUREA, *Sm.* Zimbyoon. Burm. Abundant in the plains and hills and on the forests of British Burmah but more scarce to the north of it. Wood of a light brown colour occasionally used in house building, but mostly for firewood. Breaking weight lbs. 198. A cubic foot weighs 48 lbs. In a full grown tree on good soil the average length of the trunk, to the first branch is 20 feet, and average girth, measured at 6 feet from the ground, is 9 feet. It sells at 12 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex. of* 1862.

DILLENIA DENTATA ? ? Gode para. Singh. Grows in the western parts of Ceylon where its wood is used for roofs of houses. A cubic foot weighs 51 lbs. and it is said to last 40 years.—*Mr. Mendis.*

DILLENIA ELLIPTICA. THUNB. and D. Indica, LINN. are syns. of D. speciosa. *Thunb.*

DILLENIA INTEGRA, *Thunb.*

Wormia integra, H. f. et. T., I. c. p. 68, cum syn.

Said to grow in Ceylon, but Mr. Thwaites suspects some error as to four species of the large Dilleniaceous trees growing in that island —*Thw. p.* 5.

DILLENIA ORNATA, *Wall.*

Sen-bown. BURM.

Grows plentiful and of large girth in Pegu and Moulmein, and furnishes a strong good timber, useful for general purposes in house and ship building. It has large gaudy yellow flowers.—*Dr. Mason, Captain Benson.*

DILLENIA PILOSA, *Roxb.* Grows in Assam near Goalpara, on the banks of the Megna, and furnishes a hard tough wood, much used for canoes.—*Roxb., Vol.* ii, *p.* 652, *Voigt.*

DILLENIA RETUSA, *Thunb.*

Wormia retusa, *H. f. et T.* | Goda para. SINGH.

A moderate sized tree, growing in Ceylon, to an elevation of 2,000 feet, but not abundant.—*Thw. p.* 5.

DILLENIA SCABRELLA, *Roxb.*

D. scabra, *Brandis.*

Zen-Bywon. BURM. | Kulgul. CAN.
Kyet-sen-bown. BURM. | Kurmul. MAHR.
Byew. BURM.

Grows in Chittagong also in Canara and Sunda where it is most common below the ghaut. Grows large, long, and straight. Its acid calyx leaflets used in curries. Wood seems to be used for boat planks in Canara, but it is not reckoned a choice wood in the Bombay Presidency. It is plentiful in the Pegu province, but becomes scarce to the north of it, and it is, there, of large girth, furnishes a large good timber and is useful for general purposes, as house and ship building.—*Drs. Roxb., Vol.* ii, *p.* 653, *Gibson and McClelland, Captain Benson.*

DILLENIA PENTAGYNA, *Roxb. Vol.* ii, *p.* 652.

Colbertia coromandeliana, *DC.*
Wormia coromandeliana, *Spreng.*

Bjoo-ben. BURM.	Rawa-dara. TEL.
Poon spar tree. ENG.	Rowadan. ,,
Kurmul. MAHR.	Chinna kalinga ,,
Kanagalu. ,,	Ravudana. ,,
Pinnay maram. TAM.	

This is a stately forest tree, of great value, being one of those which yield the poon spars of commerce. It is common on the face of the Western Ghauts. In Coimbatore, it is a tall tree. It is a great common tree, in the Konkun and Ghaut jungles of Bombay, but never found inland. As a tree of British Burmah, it is abundant in the Eng. Forest (the forest of Dipterocarpus grandiflora) where its wood is hard and strong, and used for rice mills. It grows in Assam. A cubic foot weighs 69 lbs. In a full grown tree on good soil the average length of the trunk, to the first branch is 20 feet, and average girth measured at 6 feet from the ground is 6 feet. It is a large timber tree in Assam where it is used for canoes, its wood there being close-grained. Captain Beddome says it is a very strong, hard wood, abundant on the Indrawatty and in jungles on the left bank of the Godavery but not known on the right bank. Dr. Cleghorn says "this is believed to be the tree, which furnishes the *poon* spars, so valuable for shipping, though *Calophyllum inophyllum* has hitherto been so considered." Dr. Wight says, in Coimbatore "the similarity of native names between this and Calophyllum inophyllum leads me me to suspect some mistake here. The wood of Dillenia pentagyna is said to be exceedingly strong and very durable even when buried under ground. Since this paper was written, adds Dr. Wight, I have been informed that this is the tree that furnishes the Poon Spars, and judging from the manner of growth, I feel satisfied that this information is correct. This is a tall, the other, a short stunted tree." "I do not find" says Dr. Gibson, "that the wood is used for any purpose more important than for the loose planks used in the decks of native boats. It is not employed in house purposes. This tree is in great request by the merchants of Bombay, from the wood splitting well. Its leaves are used for roof dunnage.—*Drs. Roxb., Vol.* ii, *p.* 652, *Wight, Cleghorn, Gibson, Brandis, Voigt, p.* 18, *Captain Beddome, Cal. Cat. Ex. of* 1862, *Useful Plants.*

The large flowered Dillenia is a large and ornamental tree, hardy and thrives well in compounds. It grows in Ceylon, in the two Indian peninsulas, in Bengal, Assam, Chittagong, Java and the Moluccas. It is abundant at Kotah in Ajmere and is a native of the valleys in the Circar mountains. Mr. Thwaites says it is common in the warmer parts of the island of Ceylon, up to an elevation of 2,000 feet, being most frequent on the banks of streams. Captain Beddome says it grows in the jungles of the Godavery, and furnishes a very hard wood. Dr. Brandis mentions that it grows on the banks of the mountain streams of British Burmah, but the wood is not used. A cubic foot he says weighs 41 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 15 feet, and average girth measured at 6 feet from the ground is 5 feet. Dr. Brandis is the most recent writer, but, if the same tree, his opinion does not correspond with that of Dr. McClelland who describes the "Thabyew" as scarce in Pegu, but as affording a large and good timber for house-building, and for wood of a light brown colour. And Captain Dance describes the "Thee-bew-tha" as growing in Amherst, Tavoy and Mergui, maximum girth 3 cubits, maximum length 22 feet and the trees abundant, but widely scattered all over the provinces, here and there, inland. When seasoned, it floats in water. It yields a durable, tough, light wood, seemingly very good for helves and is used for making gun-stocks, and by Burmese for building houses and sundry other purposes. Its leaves are hard and rough and are used for polishing wood. Its flowers are very large white and fragrant. It is cultivated in gardens on account of its elegant appearance. It flowers during the hot season and beginning of the rains, the seed ripens in February. The fleshy leaflets of the calyx, when the fruit is full grown have an agreeably acid taste, and are much used by the natives, where the tree grows, in their curries. They make a tolerably pleasant jelly, the wood is both hard and tough, and is used to make gun-stocks. Roxb.—*Ovai-kai*, is the Tamil name of the fruit of this large and handsome tree, and is used by the lower class of natives in their curries, having an agreeable acid flavour ; and also in chatnies.—*Drs. Thwaites, Roxb., Vol.* ii, *p.* 650, *Voigt, Jaffrey, Brandis, McClelland, Riddell and Irvine, Captains Beddome and Benson. Gen. Med. Top., p.* 199.

DILLI, or Yemálle Mouutains, in Lat. 12° 1′ 7″ N. and L. 75° 1′ 8″ E. in Malabar,

near the sea coast is 804 feet above the sea. It is also written Dilly, and Delly. Sonnerat relates that in his time the whole surrounding district, which extends towards the north as far as Mount Delly, was inhabited by the Molandi, who lived merely by piracy. These sea-robbers are mentioned by Pliny, Arrian, Ptolemy, and other ancient authors. They united themselves to other pirates who resided on the Angedib islands, near Goa, and captured all the small vessels which sailed from Goa to Cochin. The huts in which their wives and children live, stand on the eastern side of Mount Dilly. This mountain, which he adds forms a cape or head-land, lies in the latitude of 12° 5′; and here Malabar or Malayala, properly so called, ends.—*Voyage to the East Indies*; *Grand Tri. Survey.*

DILLI. Allas, is a village on the south coast of the island of Timor, in about Lat. 9° 23′ S. Long., 123° E. The produce of the neighbouring territory, consists chiefly of bees' wax and sandal wood and is carried overland to Dilli, the capital of the Portuguese possessions, which lies on the N. W. coast of the island in a due north direction, distant about 50 miles; or to Atapoupa, a settlement of the Dutch, also on the N. W. coast, and somewhat nearer than the former. Allas gives a name to one of the mountains on Timor, said to be 12,000 feet high.—*Journ. Ind. Arch.*

Flattened elliptical seeds with brown and slightly convex backs, and pale membranous margin. Both the fruit and the plant are much used in the East Indies as condiments and articles of diet. The carpels have a bitter aromatic taste, making them useful as carminatives. The seeds are procurable in all Indian bazars. The Indian species is the Anethum sowa. *Dill* leaves are used to flavour pickles, the seed as a carminative, and is supposed to be used in the manufacture of gin: It is raised from seed.—*Faulkner*, *Jaffrey.*

DILPASAND, HIND. Citrullus vulgaris, var. fistulosus.

DILWARRA, at Mount Aboo, has been famed since a remote antiquity, and pilgrims seem to have been attracted to its temples, since A.D. 1034, though no notice was taken of it in the maps of India before the year 1806. Hindoo temples seem to have existed here in remote ages dedicated to Siva and Vishnu, but all traces of them have disappeared. Dilwarra, however, is their traditional site, and on it now stand the famous Jain temples which were built by Bimul Sah, a rich Jain merchant and others, for, in Hindoo-Jain estimation, Aboo is the holiest spot on earth.

DIN, ARAB. Faith, as distinguished from Mazhab, Arab. sect. Din! Din! for the faith! for the faith! is the mahomedan war cry. Hami-i-Din defender of the faith.

DIN, HIND. PERS. a day.

DINA, HIND. A day, considered in a great variety of ways and durations, of which the following are the principal:

1st a Savana, or Bhumi savana dina, a natural day, being the time between two sun risings;

2d a Saura dina; of these there are two kinds; and the similarity of the name tends greatly to confuse the beginners in the study of Hindoo Astronomy. First; the absolute sense of Saura, being sidereal, the Saura dina is the time between the same point of the ecliptic rising twice; or, more precisely, the time between the equinoctial points rising twice. Second, the other Saura dina, is the time which the sun takes to describe one degree of the ecliptic. It follows therefore, that strictly speaking, neither of these kind of days are equal throughout the year: yet the former, (which is also called Nacshatra dina) are supposed to be so in the first steps of several operations. Such is also the case with the latter, but this only happens when calculating the mean elements of the planets by the Vacyam process.

3d Diva dina, is equal to a sidereal revolution of the sun.

4th Pitrya dina, to a synodical revolution of the moon.

5th Brahma dina, is equal to a Calpa, or 4,320,000,000 years, his nights being equal to his day.

Yuga dina, is another word for Ahargana, meaning the number of days expired from the commencement of a Yug.—Lastly, yuga dina means the anniversary day of that on which a yug began, which is always noticed in the Kalendar.—*Warren's Kala Sanhita.*

DINAJPUR, a district and town of Bengal, the town is 261 miles from Calcutta. It lies to the south of Darjeling and is a flat country. See Kocch.

DINAR.

Denarius. LAT. | Dinara. SANS.

DINAR, a gold coin of value 5 to 10 shillings. Though sometimes applied by Ibn Batuta to an Indian gold coin, Dinar is the only name he uses for the standard Indian silver coin. Sometimes the term used by him is Dinar Diraham, which Defremery in some instances renders "Dinars of silver" and in others "Dinars in Dirhems" sometimes the term used is Dinanir fizzat.

The Roman denarius was of silver of the unit of 60 grains :—The dinara of the Sanskrit was 32 rates or 64 grains.—*Müller, Yule Cathay I, pa.* ccxlix.

DINARUM, a section of the Bakhtiari.

DINCANU GARJUN. HIND. Dipterocarpus turbinatus.

DIND. The terms *Dind* and *Khooshâli*, though etymologically the antipodes of each other, the first meaning a 'compulsory contribution,' the other a benevolence, or voluntary, have a similar interpretation in Rajpootana. *Dind* is coeval with Hindoo legislation. The bard Chund describes it, and the chronicler of the life of the great Sidraj ofAnhulwarra, "who expelled the seven *Didda*" or 'great evils,' whose initial letter was *d*, enumerates *dind* as one of them, and places it with the *Dholi* and *Dhakun* or minstrels and witches. Zalim Singh, regent of Kotah, in 1817, abolished the Dind and commanded a stone to be raised in the chief town of every district of his country, on which was inscribed the edict of perpetual abolition of *dind*, with the denunciation of eternal vengeance on whoever should revoke it. The effigies of the sun, the moon, also of the cow, and the hog, animals reverenced or execrated by all classes, were carved in relief to attest the imprecation.—*Tod's Rajasthan, Vol.* ii, *pp.* 208-570

DINDASA. HIND. Juglans regia.

DINDIGUL, a town in the south of the Peninsula, in a beautiful and fertile valley in Madura, extending along the foot of the ghats.

DINTENA, TEL. Clitoria ternatea.—*W. and A.*

DIN-UL-ISLAM, the faith taught by Mahomed, literally the faith of safety, Islam, Arabic, is from "sal'm," from which is the word "salam" or peace ; also "muslim" a person following the faith of Islam, and its plural "musulman," the usual term for a mahomedan. See Din.

DIO, HIND. Pteris aquilina.

DIOCLESIAN ERA or Martyrs era dates from A.D. 284, the year of that emperor's accession.

DIODATUS. See Greeks of Asia.

DIODON. Globe fish of the Fam. Gymnodontidæ. There are 6 Diodon ; 23 Tetrodon ; 1 Triodon of Asiatic Seas.

DIODORUS SICULUS. The first authentic account of Ceylon or Taprobane is given by Onesiculus, the Macedonian admiral, who lived B.C. 329 or 330. Diodorus Siculus, B.C. 44, gives an account of it. Strabo also mentions it, and Dionysius, who flourished A.D. 36, confirms former accounts, and alludes to its elephants. Sinbad also speaks of it in the volume, perhaps a compilation and in part a romance, as does Abdoor Razaq : Ribeiro also gives a notice of it. In the reign of Claudius Cæsar, a roman publican, who farmed the custom's duties of the Red Sea, was driven from Arabia by storms on to Ceylon, where he found a flourishing kingdom and an enlightened sovereign, whom he persuaded to send an embassy of four envoys to Rome, by way of the Red Sea, for the purpose of negotiating a commercial treaty. See Ceylon, Khetri, Megasthenes, Perim, Yavana.

DIŒCIOUS SNAKE GOURD. Trichosanthes dioica.

DIEGO, DE CONTO, who wrote the Asia Portuguesa, was born in Lisbon in A.D. 1542, and died at Goa A.D. 1616, aged 74. He went to India when 14 and remained ten years, and then returned to Europe, but after a short stay he again came to India where he lived till his death.—*Bickmore.*

DIOMEDA a genus of birds of the family Procellaridæ of 6 gen. 12 sp. viz., 4 Diomedea ; 4 Procellaria ; 1 Prion ; 1 Pelicanoides ; 1 Puffinus ; 1 Thalassidroma. The birds are known as the albatross and several species with

this name are familiar to all travellers in the southern seas, the common albatross, the Diomedea exulans of Linnæus, being very common. D. fuliginosa of Latham is also to be seen, and D. chlororynchus *Lath.* also met with. Mariners distinguish them by other names, for instance Diomedea exulans, *Linn.* is the wandering albatross. D. spadicea, is the green-bill or Nelly of sailors. D. chlororynchus, their molly-maux or yellow-bill, and D. fuliginosa, the sooty albatross. D. cauta, *Gould*, the cautious albatross; D. brachyura, *Gould*, the short-tailed albatross; D. culminata, *Gould*, the culminated albatross; D. fulginosa *Lath.* or sooty albatross; D. melanophrys, *Gould* is the black-browed albatross, and other species, D. gibbosa; D. nigripes; D. olivaceo-rhyncha and D. spadicea.

Diomedea exulans.—Linn. Is abundant and equally numerous in all parts of the ocean between 30° and 60° S. lat., but it ranges much farther south, even to within the Antarctic circle.

Diomedea melanophrys.—Temm. Is the most abundant species of the southern seas; equally numerous in every part between the 30th and 60th degrees.

Diomedea cauta.—Gould. This species was procured by Mr. Gould off the south coast of Van Diemen's Land.

Diomedea chlororhynchus.—Lath. Occurs between 30° and 60° S. lat., in both the Atlantic and Pacific Oceans.

Diomedea culminata.—Gould. Is rather abundant both in the Pacific and Atlantic Oceans, between 30° and 50° S. lat.

Diomedea fuliginosa.—Gmel. Occurs in all parts of the ocean between 30° and 60° S. lat., equally common off Van Diemen's Land, Cape Horn and the Cape of Good Hope.

Diomedea brachyura.—Temm. Found in the North Pacific Ocean.

Diomedea gibbosa.—Gould. An inhabitant of the North Pacific Ocean.

Diomedea olivaceorhyncha.—Gould. China seas (?).

Mr. Gray, in his 'Genera of Birds,' also gives *D. spadicea* as a species. He also makes *D. gibbosa* (Gould) synonymous with *D. nigripes*, Audubon, 'Biog.,' vol. v, p. 327, and adopts the latter name as having the priority.—*Eng. Cyc., p. 553.* See Albatross; Birds, p. 526.

DIOMEDES. See Greeka of Asia.

DION CASSIUS. See Polyandry.

DION EDULE. See Cycadaceæ.

DIONYSIUS. See Greeks of Asia.

DIONYSUS, a name of Bacchus, said to be Rama son of Cush who invaded India. See Bacchus, Hindoo, Vishnu.

DIOSCOREA, a genus of plants which furnish the tropical esculents called yams. It is the type of the natural order *Dioscoreaceæ*. The best account of the species is that of Dr. Roxburgh, who cultivated seventeen sorts in the botanic garden, Calcutta; others are known to botanists, but far from perfectly though the following Eastern species are generally recognized;

aculeata,	dæmona,	purpurea.
acutangula,	fasciculata,	pulchella.
alata,	glabra,	rubella.
anguina,	globosa,	sativa.
atropurpurea,	heterophylla,	tomentosa.
belophylla,	nummularia,	triphylla
bulbifera,	oppositifolia,	versicolor.
cirrhosa,	pentaphylla,	verticilata.
crispata,		

The dioscorea yam plant is universally cultivated among all the tribes in the Eastern Archipelago, and generally most so where rice is least abundant, but it no where forms the chief bread of the people, as rice, maize, or sago do. The batata, indeed, and Crawfurd thinks justly, is preferred to it. Its Malay and Javanese name, rubi or uwi, extends not only to the languages of the Malay and Philippine Islands, but to those of the Pacific, and to Madagascar. In the Philippine languages the name is identical with that in Malay; in the Tonga it is ufi; in the Tahiti eui; in the New Zealand the same as in Javanese, namely, uwi; in the language of New Ireland u, and in the Madagascar vwi. With all these varieties of pronunciation there can be no doubt of the virtual identity of the name. It is probable that several species of dioscorea are natives of the Malayan Archipelago, but that the culture originated with one people, and was directly or indirectly disseminated by them, seems likely from the universality of the name. It may be remarked, that in the language of Madagascar, a wild yam is called uvi-ala, which is, without doubt, the uwi-alas—the wild or forest yam of the Javanese, with the elision of the final consonant, conformably to the genius of Malagasi pronunciation. The word ubi, besides being applied specifically to the yam, is used as a generic for farinaceous roots. Thus the batata, or Convolvulus batatas, is called by the Malays uvi-jawa, or the Javanese yam, to distinguish it from the Dioscorea. It is not a little remarkable that while so many species are nutritious in this genus, some should be highly dangerous; but such is unquestionably the fact. *D. dæmonum* and *D. triphylla*, both ternate-leaved species, have very nauseous and dangerous tubers. Eatable sorts are numerous. In Otaheite the *D. bulbifera*, which bears small fleshy angular tubers along the stem in the axils of the leaves, is the favorite species. The Elephant-foot-yam,

a species of dioscorea with a tuber about the size and shape of an elephant's foot, is white, and often as light and agreeably as a potato, it abounds in Karen gardens but is rarely seen among the Burmese, or in the market.—*Eng. Cyc.* p. 355. *Crawfurd Dict.*, p. 448. *Mason, Voigt, W. Icones.*

DIOSCOREA ACULEATA.—*Linn. Roxb. W. Ic.*

DIOSCOREA ATROPURPUREA, *Roxb.*

Dark purple yam. ENG. | Myouk nee. BURM.

A yam with a dark purple root is one of the best yams. It is extensively cultivated both by Karens and Burmese. It is cultivated at Malacca, tubers are large and irregular, and grow so near the surface of the ground as to appear in dry weather through the cracks that they make in the soil by raising the earth over them.—*Mason* : *Eng. Cyc.*

DIOSCOREA BATATAS, the Chinese yam, was introduced into Europe about the year 1849, having been sent from Shanghai, by M. de Montigy, the French Consul. It is everywhere cultivated in China and bears the names of *Chou-yu; Tou tchow* ; *Chan-chou* ; *Chan-yo and Chan-yu*, which signifies the "Arum of the Mountain." At Nankin, it is very large and of excellent *flavour; that of the* Chou district is still better, but for medicinal purposes, the Chinese prefer that of the Hoai-king district, where the Chou-yu root is laxative and sweet. It is particularly worthy of a place in the kitchen garden, as well as in field culture, on account of its perfectly feculent flavour, and the absence of any after-taste of sweetness, acidity, or spiciness, such as is often found in other plants; as also on account of the ease with which it may be cultivated and the facility of preserving it from decay. *Agricultural Rep. to Commissioners of Patents to House of Assembly for* 1854.

DIOSCOREA BULBIFERA, *Linn.*

Karu-karinda of Bombay.	Panu-kodol. SINGH.
Bulb-bearing yam. ENG.	Malaka kaya pendalam.
Katu-katsjil. MALEAL.	TEL.

A native of New Holland, but grows in both the Concans and is cultivated on the Western Coast of India. The root is edible and is applied externally to ulcers. The leaves are used as greens.—*Voigt., Jaffrey.*

DIOSCOREA CRISPATA, *Roxb.* Myouk Kya Burm.

DIOSCOREA DÆMONA.

Wild Yam. | Ko-wæ. BURM.

There are several indigenous species of yams, which though very acrid are eaten by the Karens in times of scarcity. This one is remarkable for its large ternate leaves, of which the leaflets are sometimes nearly a foot long, and six inches wide.—*Mason.*

DIOSCOREA DELTOIDEA, *Wall.*

Dioscorea bulbifera, *L.?*

Kniss, Jhelam, Kashmir.	Tardi, Tharri, Bias.
Kriss, Kashmir, Chenab.	Kans, Gungru, Sutlej.
Tar, Kithi, Chenab.	Kaspat, Trans-Indus.
Kheli. ,,	Parwatti ,,
Kithi, Ravi.	Bazar leaves.
Dharus, ,,	Tarar pattr.

There is some doubt as to whether all these are the same plant but, if so, it grows abundantly in many parts of the Punjab Himalaya, from as low as 2,000 up to 9,200 feet, and is found Trans-Indus. The root is used in Kashmir for washing the pashm for shawls, and there and on the Chenab and Sutlej for washing woollen cloth. The root of this or a variety (?) a yam which grows to several pounds weight, after steeping in ashes and water to remove acridity is largely eaten cooked, by various classes in parts of the Siwalik and outer hills, but in other places is not used and once Dr. Stewart was told that the tongue would rot from eating it! Honigberger says that it is used medicinally.—*Dr. J. L. Stewart, Punjab Plains, p.* 229.

DIOSCOREA FASCICULATA, *Roxb.*

Karen potato. ENG. | Ka dwæ oo. BURM.

This small yam is not much larger than a kidney potato, which it much resembles both in appearance and taste. It is cultivated extensively by the Karen race, and being more like a potato than a yam, has acquired the name of the Karen potato, but is sometimes called the Tavoy potato. It is the best vegetable the Karens have, but unfortunately it can be obtained during a few months only

in the year. Dr. Mason is not aware that it is ever found wild on the Tenasserim Coast ; and it appears to him to be either identical, with or nearly related to Roxburgh's D. fasciculata, which is largely cultivated in Bengal, for food and to make starch.—*Mason, Voigt., Roxb., Vol.* iii, *p.* 801.

DIOSCOREA GLOBOSA, *Roxb., W. Ic.*

Chupri alu. BENG. HIND. | Guna pendalam. TEL.

Is the most esteemed of all the Indian yams. Its flowers are highly fragrant ; the tubers are white internally ; it has arrow-headed cordate leaves.—*Drs. Roxb., Vol.* iii, *p.* 797, *Mason, Voigt.*

Tsiagri nuren, MAL.

Used to render the Cocoanut tree toddy more intoxicating.

DIOSCORIACEÆ, a natural order of plants including the genera Testudinaria and Dioscorea.

DIOSCORIDES. See Conium maculatum : Galbanum.

DIOSCURI, the greek analogue of the Aswini. See Aswini. Hindoo :

DIOSPOLIS the present modern Lydd.

DIOPSIS, a genus of Dipterous Insects of the family Sepsidæ, and remarkable for the immense prolongation of the sides of their head. The head itself is small, and appears as if it were furnished with two long horns, each having a knob at its apex ; these horn-like processes, however, are not analogous to the parts, usually termed antennæ, but are in fact prolongations of the sides of the head, the knob at the apex of each being the eye of the insect.—*Diopsis Sykesii*, of Gray, is one of the largest species of the genus, and possesses the longest eye-stalks ; these processes in this insect are of a pitchy red colour, and the body is of the same tint. The head and thorax are black, and the wings are coloured with brown. But little is known of the habits of these insects. Colonel Sykes, collected great numbers of the above species during his residence in India, when near the hill fort of Hurreechunderghur, in the western ghauts of the Deccan at an elevation, of 3,900 feet above the level of the sea, 19° 23′ N. lat., 70° 40′ E. long."—*Eng. Cyc. Vol.* ii, *p.* 354.

DIOSPYRACEÆ, a natural order of plants, called by Ventenot and Lindley the Ebenaceæ, or Ebony tribe. They consist of trees or shrubs and include eight genera and upwards of one hundred species amongst them the genera Diospyros, Maba, Royena.

DIOSPYROS. A genus of plants, belonging to the natural order Diospyraceæ or Ebenaceæ. The species form large trees with alternate, thick, and, often, leathery leaves. They are found in the Mauritius, Ceylon, and every part of the East Indies, and are remarkable for the woods and fruits they afford. The Karens have distinct names for four different species of Tenasserim ebony trees. The salt water swamp ebony, the water ebony, the yellow ebony, and the true ebony. Dr. Mason never met with the trees in flower, so as to be able to distinguish the species but he has seen specimens of the wood in the southern provinces, not inferior to the ebony of commerce. Some of the species of these countries, the woods of which have been noticed are, as yet, not described specifically. There are 42 species of Diospyros, in the East Indies, in both peninsulas of India, and in the islands of the Archipelago, in the Himalaya and in the Khassya mountains. They

are remarkable for the hardness and the blackness of the wood of some species and for the edible fruits of others, the woods being the ebonies and iron woods of commerce. The fruits are noted for their extreme acerbity before arriving at maturity but they are sometime brought from China as a preserve. Diospyros kaki is common to Nepal, China and Japan, D. ebenaster is a native of Ceylon ; D. melanoxylon and D. chloroxylon, of the mountains of the peninsula. D. embryopteris, found with them, extends from Silhet and Bengal near to the Deyra Doon along the foot of the mountains, and D. montana to the borders of the Ruenka Lake near Nahn. D. cordifolia seems to be common in every part of India, and D. tomentosa first described by Dr. Roxburgh, from the northern parts of Bengal, extends to the Kheree jungle, and the foot of the lower hills ; the same species appears also to exist in the central range. D. Roylei, Wall. Cat. N. 4134, is a nearly-allied species, growing in abundance near Adjeeghur and the Bisrumgunge ghaut, and is interesting as an indication of the nature of the little known Flora of Central India. Wight in Icones gives Diospyros Candolleana, capitulata, chloroxylon, dubia, ebenum, glutinosa, kaki, montana, obovata, orixensis, ovalifolia ; racemosa ; ramiflora, tomentosa, (fem.) (mas.) and tetrasperma.—*Eng. Cyc., Dr. Mason* ; *Royle Ill. Him. Bot.*, p. 262 ; *Wight Icones.*

DIOSPYROS, *Species.* Kurwul. CAN. Grows in Canara and Sunda in the great jungles in the Ghats above, chiefly to the south. Ripe wood particularly good, as it has the ebony heart.—*Dr. Gibson.*

DIOSPYROS, *Species.* Muchi twikee *Tel.* of the Godavery forests Warungul. A very hard light colored wood.—*Captain Beddome.*

DIOSPYROS, *Species.* Ouk-khyin-za. BURM. A beautiful wood of British Burmah, white and black mottled, used for house posts. A cubic foot weighs lbs. 41. In a full grown tree on good soil the average length of the trunk to the first branch is 30 feet, and average girth measured at 6 feet from the ground is 9 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis.*

DIOSPYROS, *Species.* Ghoot. BURM. In British Burmah, a small tree : small quantities of black heart wood (Ebony) are occasionally found near the centre of very old trees of this and another kind nearly related to it (Tayben.) A cubic foot weighs lbs. 49. In a full grown tree on good soil the average length is 15 feet and the average girth measured at 6 feet from the ground is 3 feet—*Dr. Brandis.*

DIOSPYROS, *Species.* Moulmein ebony, —an inferior kind of ebony often seen at Moulmein, which the natives do not call by the same name that they do the trees which produce the good ebony, though evidently a product of the same genus. A similar wood at Tavoy is often denominated iron wood.—*Dr Mason's Tenasserim.*

DIOSPYROS (?) *Species* ? Rayamucha ? Used in house building at Martaban.

DIOSPYROS, *Species.* Tai. BURM. Maximum girth ½ to 1 cubit, maximum length 8 feet. Found, very scarce, from the forest in the direction of Shuay Gheen. When seasoned it sinks in water. This wood was much sought for, by Captain Dance, but could not be procured in Moulmein in sufficient abundance for it to be made suitable for any ordnance purpose.—*Captain Dance.*

DIOSPYROS, *Species,* Kendhoo. URIA ? A tolerably common tree of Ganjam and Goomsur, extreme height 60 feet, circumference 4½ feet, height from ground to the intersection of the first branch, 30 feet. A hard wood blacker than the Sisoowa. Boxes, &c. are made of it. The fruit is eaten.—*Captain Macdonald.*

DIOSPYROS ACUTA, *Thwaites.* A middle sized tree of Pasdoon Corle, in Ceylon. *Thw. En. Pl. Zeyl.*, p. 182.

DIOSPYROS AFFINIS, *Thwaites.* A middle-sized tree growing at Ooma Oya, on the lower road from Kandy to Badulla, in Ceylon ; branches sub-glabrous. The timber is suitable for building purposes.—*Thw. En. Pl. Zeyl., Vol.* iii, p 179.

DIOSPYROS ATTENUATA, *Thwaites.* A middle-sized tree of Pasdoon Corle, in Ceylon.—*Thw. En. Pl. Zeyl.*, p. 182.

DIOSPYROS CALYCINA. (Bedd.) A good sized tree, everywhere glabrous, leaves dark shining green. This very curious species of Diospyros has only been observed in the Tinnevelly district and southern portions of Madura, where however, it is very abundant in the ghat forests from the foot up to 3,000 feet elevation ; it is called Vellay Toveray and yields a valuable light colored wood, which is much in use in the Tinnevelly district.—*Bedd. Ic. Plant.*

DIOSPYROS CANDOLLEANA, *Wight, Ic.* Homedereya-gass. SINGH. In Ceylon, a middle sized tree, in the Saffragam district and Hinidoon corle.—*W. Ic., Thw. En. Pl. Zeyl.*, p. 181.

Vuckan maram. TAM.	Nalla urimida. ,,

Grows in Ceylon near Jaffna, in the peninsula of India, in Coimbatore, in the Bombay forests, and in Bengal. It yields a hard, heavy, strong wood, of a dark brown colour and difficult to work. Not uncommon in the Bombay side of India, but more in ravines and waste places than in forests. Dr. Gibson had never seen a tree that would turn out a log 4 inches square. The wood is strong and durable.—*Drs. Wight and Gibson, Thwaites, Voigt.*

DIOSPYROS CANARICA, *Bedd.* A good sized tree, glabrous, leaves oblong to obovato-oblong. South Canara, plains, near the foot of the ghats, called Kara-mara, allied to D. Arnottiana.—*Mig. in Bedd. Ic. Plant.*

DIOSPYROS CORDIFOLIA, Bān-tendu HIND. This tree furnishes a valuable astringent and styptic for fresh wounds, also occasionally used in intermittent fever. The fruits furnish a kind of a glue, used to cover the bottom of boats.—*Powell's H. B., Vol.* i, *p.* 359.

DIOSPYROS CRUMENTATA, *Thw.* A very large tree of the Central Province of Ceylon, branches glabrous, leaves glabrous, oblong, abruptly and obtusely acuminate; growing at an elevation of 2,000 to 4,000 feet.—*Thwaites' En. Pl. Zeyl., Vol.* iii, *p.* 179; *Bedd. Ic.* See D. quæsita, D. oocarpa.

This great tree, in Ceylon, yields the best kind of Ebony wood. In Ex. xxvii, 15, it is mentioned as brought with ivory by the men of Dedan and seems to have been then brought both from Ethiopia and India, though Virgil appears to have been unaware of this, for he says, (Georg. ii, 115),

——sola India nigrum
Fert ebenum.

It was highly esteemed by the ancients. In Ceylon it is found not uncommon up to an elevation of 5,000 feet, in great abundance in the north of the island, and to some extent in the Kandyan country. The great weight of the timber renders its transport very costly, unless where water conveyance can be obtained, which is seldom the case but during the rainy months, and though immense forests of this wood still exist in the island, they are, to a great extent too far from a port of shipment to be available. The exports of ebony have varied much of late years from 15,000 to 5,000 cwts. It is said to grow in the Denkencottah forest, in the Salem collectorate, and, writing in 1850, from the Coimbatore collectorate, Dr. Wight says of the Acha maram, *Tam.* that this name was copied by him from Ainslie but "that he was still uncertain whether this is the species that yields the ebony of the Palghaut jungles, as there is reason to believe more than one species contributes wood black enough to pass current for ebony. The plant produced to him, under that Tamool name, was Bauhina tomentosa, a widely different tree but having a very dark or black-heart wood." Dr. Gibson says that D. ebenum, is found near Oopenputam in Canara; also below the Woolwee Ghaut. Ebony, from this tree, of very superior quality is procurable in Madras districts as well as in the Northern Circars, where Mr. Rohde received 16 inch planks of a fine uniform black. In Nagpore, this tree, which yields a very fine ebony, has very little of the blackwood, when young: as it advances in age the blackwood increases, and eventually nothing but blackwood is found. From the ease with which the white wood bends, natives employ it in the manufacture of buggies, carriages, &c., &c., but, as it soon loses its essential oil, the unseasoned timber is preferred for such purposes. White ants attack the whitewood readily, and it is nearly always beetle bored. In strength it excels teak, yet from the above circumstances, as well as from the fact that it is very seldom obtainable of more than 6 inches square, he rejected it as a building material. It grows in the Dekhan and in the Kotah jungles of Ajmeer. Ebony is much affected by the weather, on which account European cabinet makers seldom use it except in veneer, and its use is restricted to delicate and costly cabinet work. The Atcha maram, which yields one of the ebonies of Madras, is the Bauhinia tomentosa. D. ebenum; D. exsculpta, D. Wightiana, and D. embryopteris are valuable timber trees in Southern India,

D. assimilis is perhaps only a variety of ebenum ; D. candolliana of the Nilgiris, D. dubia of the foot of the Sevagherries and Courtallum, D. montana of the eastern and western side of the Peninsula of India, D. ovalifolia throughout the western forests, D. chloroxylon, capitulata, *Wight*, and cordifolia, Eastern side, and obovata locality not given, have all been figured by Dr. Wight, D. acuta, *Thw.*, is a Ceylon tree.—*Drs. Gibson, Wight, Cleghorn, Riddell and Irvine, p.* 196, *Voigt, Thwaites, Mr. Rohde, Capt. Sankey, Tredgold, Holtzappfel ; Ainslie's Mat. Grows in Ceylon, in damp forests, towards the South of the island ; also, in the peninsula of India, in the Circars, at Hurdwar, in the Dehra Doon, all along the foot of the Himalayas, to Silhet and Assam, and is said, by Honigberger to be seen at Lahore. Its resin is dark coloured in the mass, and approximates in appearance to the black dammer but is not so vitreous in its fracture ; fruit rusty coloured abounding in a viscid glutinous astringent juice, obnoxious to insects and used by book binders, also for paying boats bottoms and also in infusion for soaking fishing nets as it contains much tannin. In Ceylon the fishermen bark their nets with this. Thwaites describes three varieties,

Var. β. atrata ; foliis membranaceis, gemmis, pedunculis calyceque nigro-pilosis

Var. γ. nervoia ; foliis brevioribus, coriaceis, utrinque valde prominentim venosis, basi rotundatis ; gemmis, pedunculis calyceque nigropilosis ; lobis calycis fructiferi erectis.

Var. α. is very abundant in the hotter parts of the island. *Var. β.* Less common, but generally distributed. *Var. γ.* In damp forests towards the south of the island. Wood of an indifferent quality and not much used.—*Roxb., Mr. Rohde's MSS. Voigt. Thw. En. Pl. Zeyl., Vol.* iii, *p.* 178.

DIOSPYROS GARDENERI, *Thw.* Kadoombaireya-gass SINGH. A middle-sized tree of Ceylon, in the Saffragam and Kornegalle districts, and less commonly near Kandy, up to 2,000 feet of elevation. It is a middling sized tree with branches terete glabrous. It yields a valuable timber for building and cabinet purposes.—*Bedd Ic. Plant ; Thw. En. Pl. Zeyl., p.* 181. See Ebony.

DIOSPYROS HIRSUTA, *Linn fil.*

Calamander wood tree. ENG.	Koul-midvie. SINGH.
Calu midiriya. SINGH.	Calamander maram. TAM.

A middling-sized tree of the forests of Ceylon in the Saffragam and Galle districts, young leaves and inflorescence ferrugineo-tomentose, leaves subcoriaceous elliptic or oblong more or less abruptly acuminate. This tree furnishes one of the Calamander woods of commerce. Its density is nearly 60 lbs. to the cubic foot. Tredgold mentions that the figure is between that of a rose-wood and zebra-wood ; the colour of the ground is usually of a red hazel brown, described also as chocolate brown, with black stripes and marks. It is said to be so hard as almost to require grinding rather than cutting ; but, this is not strictly accurate, as the veneer saws cut it without difficulty : it is a very handsome furniture wood and turns well ; Mr. Layard says that there are three varieties of it ;—the Calamander or Coromandel, which is the darkest, and the most commonly seen in England ; the Calemberri, which is lighter coloured and striped, and the Omander, the ground of which is as light as English yew, but of a redder cast, with a few slight veins and marks of darker tints. He says the wood is scarce and almost or quite limited to Ceylon ; that it grows between the clefts of rocks, this renders it difficult to extract the roots, which are the most beautiful parts of the trees. A cubic foot weighs lbs. 57, and it lasts 80 years : even in Ceylon, it is a scarce though beautiful wood, close-grained and the most valuable for ornamental purposes in that island. It is exceedingly hard, and finely veined, with different shades of black and brown. Thunberg was inclined to believe that this was the true ebony, but Koenig afterwards discovered that to be from a different tree.—*Ain's. Mat. Med., p.* 211, *Th. p.* 181, *Tredgold, Holtzappfel. Mr. Faulkner.* See Calamander ; Diospyros quæsita ; D. oocarpa. *Thw. En. Pl. Zeyl., p.* 181.

DIOSPYROS INSIGNIS, *Thw.* Gonagass. SINGH. A very large tree of the damp forests of Ceylon, growing up to an elevation

of 2,000 feet, also in the dense forests of the Anamallay's; young branches slightly pilose.—*Thw. En. Pl. Zeyl., p.* 180.

DIOSPYROS KAKI, *Linn.*

D. Chinensis, *Bl.* | Embryopteros kaki, *G. Don.*

Tay, Tee, BURM.
Tee-Tee; Tay-tee. ,,
Chinese date, ENG.
Date plum of China.
Keg fig of Japan.
Chinese fig,
,, persimon.

A tree of Nepal, Burmah, Cochin-China, and celebrated in China and Japan: specimens introduced into the Botanic Garden of Calcutta were found to be identical with others from Nepaul. The fruit is described by Dr. Roxburgh as being tolerably pleasant, is esteemed in Japan and China, where it attains the size of an orange, and is frequently sent to Europe in a dried state. The tree is occasionally cultivated by the Burmese, but it bears fruit very sparingly, and is by no means equal to a good apple.—*Mason, Eng. Cyc.*

DIOSPYROS LANCEOLATA. See Diospyros ebenus.

DIOSPYROS LOTUS. Amlok or Malok. HIND., is common in Kaghan and in the hills and gardens of Murree and Hazára. In parts of Hazára the male plant is called "gwalidar," and the female "amlok." Timber good, but the tree is only available in Hazára, where it is known and valued chiefly for its fruit, which is purple in color, and about the size of a pigeon's egg: it is eaten either fresh or dried. The tree is not uncommon in the western part of the Jhelum basin from 2,500 to 6,000 feet, and appears to be common in some part of the northern Trans-Indus hills; and one or two specimens were grown at Peshawar. It is a handsome little tree, growing generally to 3 or 4 feet in girth, the largest seen being one of 6 feet girth and 35 feet high at Jared in Kháǵán, and another about the same size on the Kishenganga. There are three trees (probably introduced by fakirs) at Juggatsúkh (6,000 feet) in Kúllú, and there called Bissahripála, the largest of which is a remarkably fine tree of 12 feet girth. Griffith remarks that the fruit is "not worthy of any notice," but when fresh or even carefully dried, it is sweet and pleasant enough, and the Affghans, &c., prize it, large quantities being brought to the Peshawar bazár from Swát, &c. Bellew mentions that it is eaten plain or with rice, or is used in sharbats. It has the appearance of a dried cherry, but darker in color. Irvine states that, in the Panjab, spirits are distilled from the fruit. See Diospyros melanoxylon. —*Drs. J. L. Stewart, Cleghorn.*

DIOSPYROS MABOLA, *Roxb.*

Diospyros discolor, *Willd.* | Cavamillea Philippensis, *Desrouss.*
Embryopteris discolor, *G. Don.*

Often called "Mangosteen" under which name it is cultivated extensively in gardens at Vizagapatam. It is a small tree, native of the Philippine Islands, wood black, very compact. The fruit, called *Mabola*, is brown, with a pink-colored, fleshy rind, about the size of a quince; its flavour is said to be agreeable.—*G. Don's Mill. Dict., Vol.* 4, *p.* 40; *Madras Ex. Jur. Reports.*

D. melanoxylon, is described and figured by Rumph, iii, 'Corom. Plants,' 1 to 46, by Dr. Roxburgh, and is the Ebony-Tree of the Coromandel coast. It is found on the mountains of that coast as well as on those of Malabar and Ceylon. It grows to be very large, particularly the male tree of which the wood is also most esteemed. The leaves, which are subopposite, oval, oblong, obtuse, and villous, are deciduous in the cold season, the new ones appearing with the flowers in April and May; as in other species, it is only the centre of the large trees that is black and valuable, and this varies in quantity according to the age of the tree. The outside wood, which is white and soft, time and insects soon destroy, leaving the black untouched. The ripe fruit is eaten by the natives, though rather astringent, as is also the bark.

It grows in Coimbatore, north Canara, in Malabar and Orissa, is the Toonkee of the Godavery and the Tookee of the Circars, and in Pegu it is found very plentifully throughout the forests, seldom, however, of greater girth than three or four feet. It is a very large tree, in Coimbatore, the outer wood being white like that of other species of Diospyros, and the inner black, very hard, heavy, and susceptible of a high polish. It is seldom obtained of great size. Its white wood is used for common purposes. Dr. Gibson says that he has not seen the tree in any of the Bombay forests, but that it is found sparingly in those of North Canara, as below the Woolwa Ghat, and near Meerjan inland. It occurs plentifully, in the Southern forests of Pegu, from fifteen to eighteen inches in diameter and fifty to seventy feet in length and might afford spars for naval purposes. The authority for the last point is Dr. McClelland's Report, but Dr. Brandis does not mention this as a Pegu tree. The fruit is called Toombee pullum,

Tam. and is eaten by the poor people.—*Drs. Ainslie, p.* 233; *Roxb, Wight, Gibson, McClelland, p.* 10, *Voigt*; *O'Shaughnessy, p.* 428; *Crawfurd's Dictionary*; *Captain Beddome, M. Ex. Jur. Report.* See Ebony.

DIOSPYROS MICROPHYLLA. *Bedd.* A lofty tree of the Anamalays dense forests up to 3,000 feet elevation; very common in South Canara, forests of the ghats and plains (Sooleya) Wynaad, trunk very straight, young branches verticellate, it has the habit of Leucoxylon buxifolium.—*Mig.*

DIOSPYROS MOLLIS Ma-kleu, BURM. one of the black-dye plants. The blossoms of the shoe-flower plant are used by the Chinese to dye leather black, the juice of the cashew-tree gives a black to linen, and the fruit of the melastoma affords a black dye. The celebrated vegetable Shan black dye, is made from the fruit of this species of ebony, which is said to grow on the mountains that separate the Province of Tavoy from the Siamese territories. Isolated plants may be seen in the gardens of Tavoy, and Maulmain, but Dr. Mason has never seen one in flower, or fruit.—*Mason.*

DIOSPYROS MONTANA.

Diospyros cordifolia, *Roxb., W. Ic.*

Kendu of Beas and Doab. | Hirek; Pasendu, PANJAB.
Teemroo MAHR. | Erra gadda, TEL.
Teemboorni, MAHR.

A middle-sized, handsome, tree of the Circar mountains, in the hills eastward from Panwell, extending northwards to Ruenka Lake, near Nahu; very common in the larger Bombay jungles, both near the coast and elsewhere, and it would be one of the most common of their mountain trees if allowed to grow; but it is generally cut off for burning material, or such like worthless purposes: It is not uncommon along the Siválik tract up to near the Rávi, and occasionally out in the plains westward from Delhi to near Sirsa. Wood dark and strong. Fitted for agricultural implements, in-door work, &c. Does not bear exposure, and could not be creosoted. Dr. Roxburgh says it is hard and durable, and is variegated with dark and white colored veins. Dr. Stewart says it ordinarily grows to about 3 feet girth, but he had seen two trees of 7 feet. The wood is used for native roofs, &c. The fruit is not eaten, and he had heard it called "poisonous." In some places it is applied to the hands for the boils, to which the bhisti are subject.—*Drs. Ainslie, Voigt, Gibson, J. L. Stewart.*

DIOSPYROS MOONII, *Thw.* A middle-sized Ceylon tree near Cultura and Pasdoom corle. Branches terete slightly pilose when young but soon glabrous.

DIOSPYROS NIGRICANS, *Dalz.* A tree of the Bombay Ghats; Arboreous, glabrous turning very black in drying, leaves membranaceous glabrous.—*Bedd. Ic. Plant.*

DIOSPYROS NILAGIRICA, *Bedd.* A middling-sized tree of Sispara ghat, Nilgiris, allied to D. Candolliana of Wight.—*Bedd. Ic. Plant*; *Thw. En. Pl. Zeyl., p.* 182.

DIOSPYROS OOCARPA, *Thw.*, Kalookadoombaireya-gass, SINGH. A middle-sized Ceylon tree of the Kornegalle district, and at Haragam, near Kandy at no great elevation. It furnishes one of the Calamander woods.—*Thw. En. Pl. Zeyl., p.* 180. See D. hirsuta and D. quæsita.

DIOSPYROS OPPOSITIFOLIA, *Thw.* Kaloomidereya-gass, SINGH. A middle-sized tree of Ceylon at Hinidoon corle, up to an elevation of 1,000 feet, leaves opposite slightly pilose when young. The timber much resembles the true calamander wood.—*Thw. En. Pl. Zeyl., p.* 181; *Bedd. Ic. Plant.*

DIOSPYROS OVALIFOLIA, *Wight Ic. t.* 1,227. A middle-sized Ceylon tree at Jaffna, in the Central province, at Hewahette and below Hapootelle, at an elevation of 2,000 to 4,000 feet.—*Thw. En. Pl. Zeyl., p.* 181.

DIOSPYROS PANICULATA, *Dalz.* A middling-sized tree, branches glabrous, leaves glabrous lanceolate, grows in Bombay ghats and in the Carcoor ghat, Wynaad at 2,000 to 3,000 feet elevation.—*Bedd. Ic. Plant.*

DIOSPYROS PRURIENS, *Dalz.* A small or middling-sized tree, young branches densely hirsute with long yellow hairs, very common throughout the Wynaad up to 3,000 feet elevation also in the Anamalays, the South Canara ghats and plains, Tinnevelly and Bombay ghats, also found in Ceylon.—*Bedd. Ic. Plant.*

DIOSPYROS QUÆSITA, *Thw.*, Kaloomidereya-gass, SINGH. A great tree of Ceylon, at Singherajah and other forests between Ratnapoora and Galle. This species produces the most valuable of the timber known as Calamander wood so much esteemed for ornamental cabinet work. Its branches are glabrous, leaves glabrous prominently reticulated, D. quæsita is nearly allied to D. crumenata, but its larger leaves and fruit, and its pentamerous flowers, well distinguish it.—*Thw. En. Pl. Zeyl., Vol.* iii, *p.* 180. See D. hirsuta and D. oocarpa.

DIOSPYROS RETICULATA, The *D. Tesselaria* of Poir, is a native of Mauritius, an elevated tree, of which the heart-wood forms ebony.

DIOSPYROS ROYLEI. Syn, of Diospyros ebenus: Diospyros melanoxylon.

DIOSPYROS SAPOTA. Syn, of Achras sapota.

DIOSPYROS STRICTA, *Roxb.* A tree of Tipperah.—*Voigt.*

DIOSPYROS SYLVATICA, *Roxb., Pl. Cor. I, p.* 38 to 47.

Soondoo Kadoombaireya-gass, SINGH. | Tella-goda Telugu.

A middling-sized tree, common in the Peninsula in many of the Western Coast forests up to about 3,000 feet, also in the forests of the Northern Division and in Ceylon, in the damp forests in the Hantani district and near Ratnapoora, up to an elevation of 4,000 feet.—*Thw. En. Pl Zeyl., Vol.* iii, *p.* 178.

DIOSPYROS THWAITESII, *Bedd.* A middling-sized tree, branchlets, young leaves and inflorescence rufo-tomentose grows in Ceylon, at no great elevation; allied to, but quite distinct from D. candolliana of Wight —*Bedd. Ic. Plant.*

DIOSPYROS TOMENTOSA, *Roxb.; W. Ic., Cleg.*

Tumal, Kiu. BENG. | Kendu. PANJAB.
Tumal. HIND. | Kaka tanduka. SANS.
Mit'ha tendu. ,, | Chitta tumiki. TEL.

This tall elegant tree grows in the northern part of Bengal, in the Panjab, in Kullu and Kangra, and is common in the Sewalik tract, westward near to the Ravi and extending to the Kherre jungle. It attains full size in 60 years. Length of trunk to first branch 8 or 10 feet, and girth 4 feet. The wood of young trees is white, but that of old trees is black, and is termed "abnus;" sap-wood soft: when the heart-wood, becomes black, it is fine, extremely hard and black, but somewhat brittle and is used by zemindars for ploughs, and for the wood-work of their houses. It carves well, and insects are said not to touch it. In and near the Rohilkund Siwalik tract handsome work-boxes, &c, are made from the wood; combs are made from it in the Ambala district; in Kangra, &c., it is used for ploughs, in house-building and for small boxes. The fruit, which is said to ripen in June with the mango, is eaten, being sweetish and astringent, and not unpleasant. Raspings of the wood called Burad-i-abnus are officinal, being given as an alternative.—*Lt.-Col. Lake, Dr. Cleghorn, Kullu and Kangra, Dr. J. L. Stewart.*

D. racemosa, *Roxb. Fl. Ind. II. p.* 536; *W. Ic* Embryopteris racemosa, *G. Don.*

Kaha-kaala. SINGH. | Tovaray. TAM.

A middling-sized tree of Ceylon, of the Tinnevelly hills, and of Silhet, glabrous, leaves coriaceous, not uncommon in damp forests, up to an elevation of 4,000 feet.—*Thw. En. Pl. Zeyl., Vol.*, iii, p. 179.

DIPA, SANS. a lamp.

DIPAWALI, Dipali or Diwali, a hindoo festival in honour of the hindoo god Kartakeya, held on the new moon of the month Kartik in September or October, when lamps are lighted by every one, after a little oil is put on the head to commemorate the killing of Narakasura by Krishna.—*Wilson.*

DIPA MALA, a Sikh festival means a garland of lights: a pillar in front of a temple, on which lights are put: Dipara dhana or Dipdan is the lamp sacrifice to an idol. In the Dipdan a lighted lamp is suspended from a tree for ten days after the death of a relative to light the spirit on its way to Yamapuri the city of Yama, the judge of the dead. Also a lighted lamp is sent floating on the Ganges and its duration is watched, as indication of a good or evil future. The Dipmal pedestal is an essential part of every large hindoo temple. It is often of great height and furnished with niches or brackets, each of which holds a lamp on festivals, especially on that of the Dewali, the feast of lamps celebrated in the autumn in honour of the hindoo goddess, Bahwani or Kali.—*Wilson*

DIPANGA, a district of Bawean whose people employ the Javanese language.

DIPHYLLEIA CYMOSA, *Mich.* A tree of Japan.

DIPLOPELMA, a genus of reptiles of the Section Bufonia, and Fam. Rhinodermatidæ.

Gen Diplopelma ornatum, *D. & B.* Goalpara.
,, ,, pulchrum, *Gunth.* Aracan.
,, Engystoma Berdmorei, *Blyth.* Pegu.
Fam. Bufonidæ.
,, Bufo melanostictus *Schn.* Ceylon, Mergui.
,, ,, Kelaarti, *Gunth.* Ceylon.
,, ,, asper, *Schl.* Mergui.
,, Scutiger Sikkimmensis, *Blyth.* Sikkim.

DIPS OR DIBS, *Ægypt.* Honey of sugar: Raisins.

DIPSADIDÆ, a family of reptiles, comprising the genus Dipsas.

Dipsas cynodon, *C. & V.* Thayetmyo, Tenasserim.
,, trigonata, *Schn.* Subathoo, Jessore.
,, forsteni, *D. & B.* Bengal.
,, nigro-marginata, *Blyth.*
,, bubalina, *Klein.*
,, multimaculata, *Schl.* Hongkong.
,, multifasciata, *Blyth.* Subathoo.
,, hexagonotus, *Blyth.* Andamans.
,, boops, *Gunth.* Bengal, Borneo.
,, dendrophila, *Reinw.* Penang.
,, gokool. *Gray.* Bengal, Penang.
,, Ceylonensis, *Gunth.* Ceylon. See Dipsas.

DIPLICUS and MIMULUS. Monkey flower.

DIPLOLEPIS. See Galls.

DIPSACEÆ. See Scabiosa elegans.

DIPSACUS FULLONUM, Teasle, or Fuller's Thistle, is, according to Royle, the *Dunsakoos* of the Indian Materia Medica.—*O'Shaughnessy*, p. 404.

DIPSAS *(Laurenti)*, Bungarus *(Oppel,)* a genus of serpents, placed by Cuvier under the great genus Coluber. Body compressed, much less than the head ; scales of the spinal row of the back larger than the others. *Dipsas hexagonotus*, BLYTH is well distinguished from *D. trigonata* by a series of broad hexagonal scales, commencing at the occiput and continued along the whole back. The lateral scales (towards the abdominal plates) are distinctly grooved. Head as in *D. trigonata* and various affined species. Colour bright ruddy-ferruginous, inclining to coral-red ; paler below, and mottled, with black bordering some of the scales of the upper parts. Head green, the throat white, and the labial plates posterior to the eye yellow : a slight blackish occipital streak. Scutæ 247 : Scutellæ 126 pairs. Rows of scales 21. Length of a young specimen 18 in., of which tail 4 in. It probably grows to a large size, and may become wholly green. *Dipsas indica*, CUVIER : Coluber bucephalus, Shaw. Black, annulated with white.—*Eng. Cyc., Vol.* ii, p. 360. See Dipsadidæ.

DIPSAS, a genus of Lepidopterous insects, the larvæ of which have several curious modes of working. Those of D. isocrates occupy the interior of a pomegranate which they enclose in a web, to prevent it falling.

DIPSACEÆ, *Juss.* The Scabious tribe of 3 Gen. 16, Sp., viz., 7 Dipsacus ; 4 Scabiosa ; 5 Morina.

DIPTERA, an order of Insects,

Sec. Athericera,
Fam. Muscidæ, comprising,

Diopsis Westwoodii, *De Haan*, Java.
„ sub-notata *Westw*, Philippines.
„ sphryracephala, Hearseina, *Westw*, Neemacha India.
„ achias, maculipennis *Westw*, Java.
„ colax variegatus *Westw*, Java. See Insects.

The " *Peepsa*"—a troublesome Dipterous insect, very small and black, floats like a speck before the eye. The bite of this leaves a small spot of extravasated blood under the cuticle, very irritating if not opened. *Journal of the Asiatic Society of Bengal, No. XXIX, p* 426.

DIPTERIX ODORATA.

Tonkin bean, Coumarouna odorata.

A native of the woods of Guiana, used as a perfume for snuff.—*O'Shaughnessy.* p. 304,

DIPTERIS HORSFIELDII and Matinonia pectinia are two ferns of Mt. Ophir in Malacca. They bear large spreading palmate fronds on slender stems six or eight feet high. *Wallace*, p. 31.

DIPTEROCARPACEÆ, the Camphor tree tribe of plants, a natural order generally of large trees, arranged in five genera and 35 species, 33 of which grow in the East Indies and Java, viz., 11 of Dipterocarpus ; 10 of Hopea ; 5 of Vatica, and 4 of Vateria. More than two-thirds of the species inhabit mountainous or hilly parts of the two peninsulas. Almost every species abounds in a balsamic resinous juice, known as dammer and piney, when hardening on exposure, and wood oil when remaining liquid. That from the genera Vatica and Vateria, hardens on exposure, but the exudations from the Dipterocarpi retain their fluidity and are the wood oils of the bazars. Some of the species produce a fragrant resin which is used as incense in the temples. Dammer is used in India, for most of the purposes to which pitch and resin are applied in Europe. Wood oil alone, or thickened with dammer supplies a useful varnish for wood, possessing the valuable property of repelling for a long time the attacks of white-ants as well as of resisting the influence of the climate. Dr. Wight observes that the trees of this order growing in Madras are all natives of the hilly tracts of the Balaghaut. In Sylhet, Chittagong and Pegu, where they abound, they occupy the plains. In Java one species, *Dipterocarpus littoralis* is found on the sea shore. The natural order abounds in Sumatra, Java, and Borneo, which are the chief sources of the dammer of commerce. The Borneo tallow is said to be obtained from the seeds of a Dipterocarpus tree, and is generally run whilst melted into joints of bamboo. It has a pale greenish tint, is very hard, and approximates nearly to a vegetable wax. Several trees of the genus Dipterocarpus produce a nut, that, when compressed, yields a fatty oil, which having been recently sent to England, has been used extensively under the names of vegetable tallow and vegetable wax. Three species of this genus are common in Sarawak, under the name of ' mencabang ;' one of them, ' mencabang pinang,' is valued for its close-grained timber, the others do not grow so large in size, but have larger leaves and fruit. The one most valued for producing the oil, is a fine tree growing on the banks of the Sarawak river ; it attains the height of forty feet ; the leaves being large, and the branches drooping towards the water, give it a very beautiful appearance : its fruit is produced in the greatest profusion about December and January, being as large as a walnut, with two long wings to the seed. These nuts are collected by the natives, and yield a very large proportion of oil, which, on being allowed to cool, takes the consistence of sperm, and in appearance very much resembles that substance. The natives at present only value this as a cooking oil ; but when the demand

for it in Europe becomes better known to them, they will doubtless increase ther manufacture of it. In England it has proved to be the best lubricating substance for steam machinery, far surpassing even olive oil ; and it has been used in Manilla in the manufacture of candles, and found to answer admirably. As it becomes more common, it will doubtless be applied to many other purposes. From the quickness of its growth, and the great profusion with which it bears its fruit, it will, should the demand for it continue, become a profitable object for cultivation, by which the quality and quantity would most likely be improved and increased. It is also found in Java and Sumatra, and a similar substance has been lately sent from China. In Borneo the oil is called by the natives indifferently 'miniak mencabang,' or 'miniak tankawan.'—*Wight, Voigt,* p. 124; *Crawfurd Dictionary,* p. 118; *Lowe's Sarawak, London Ex.* 1862.

DIPTEROCARPUS, a genus of enormous trees with erect trunks, growing in Ceylon, Assam, Tipperah, Burmah, Pegu and Tenasserim where D. turbinatus, *Roxb.;* D. costatus, *Gærtn.;* D. incanus, *Roxb ;* D. alatus, *Roxb.* and D. trinervis, *Blume,* are known to occur. They abound with resinous juices, called wood oils, which dissolve caoutchouc, and have medicinal properties similar to Copaiba. D. lævis, D. turbinatus and "*hanyee-nee*" D. alatus ? are all nearly identical and are useful for planking when not exposed to wet, extensively used in the Straits for this purpose in house-building. They are magnificent forest trees growing straight to the height of 250 feet and more ; an incision in the form of a cup is cut into the lower part of the trunk of the tree, which acting as a natural reservoir, collects the oil as it descends. —*Voigt, McClelland.*

DIPTEROCARPUS, *Species.* Doon, SINGH. Grows in the central province of Ceylon, where its timber is used in house-buildings. A cubic foot weighs 29 lbs., and it lasts 50 years.—*Mr. Mendis.*

DIPTEROCARPUS, *Species.* Kaungmhoo, BURM. A tree of British Burmah, of an immense size used for canoes. In a full grown tree on good soil the average length of the trunk to the first branch is 100 feet and average girth measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis.*

DIPTEROCARPUS, *Species.* Kyau-thoo, BURM. A large tree found in the hills of British Burmah, wood used for canoes and cart wheels. A cubic foot weighs lbs 43. In a full grown tree on good soil the average length of the trunk to the first branch is 80 feet and average girth measured at 6 feet from the ground is 20 feet.—*Dr. Brandis.*

DIPTEROCARPUS, *Species.* Kanyoung, BURM ? A tree of Akyab. Used in house-building, and sometimes for posts. This tree grows to a large size, and is not very plentiful. —*Cal. Cat. Ex.* 1862.

DIPTEROCARPUS, *Species.* The sour wood oil tree, a large tree, grows on the Karen mountains, but it produces comparatively very little wood oil.—*Dr. Mason.*

DIPTEROCARPUS ALATUS, *Roxb.*

Battee Sal. BENG.	Aing? BURM.
Ka-Nyin. BURM.	Wood oil tree. ENG.

A magnificent forest tree of Pegu and the Mascal islands, rising 250 feet in height. It is found chiefly to grow on laterite in the Tounghoo and Prome districts. Its wood is of a light brown colour. A cubic foot weighs lbs. 38. In a full grown tree on good soil the average length of the trunk to the first branch is 100 feet and average girth measured at 6 feet from the ground is 25 feet. It sells at 4 annas per cubic foot. This timber is excellent for every purpose of house-building, especially for posts. It is useful for planking when not exposed to wet and is extensively used in the Straits, for house-building : when exposed to wet, however, it rapidly decays, and canoes made of it do not last over 3 or 4 years.—*Drs. Roxb., Vol.* ii, *p.* 609, *McClelland, Brandis, Voigt, Captain Benson.*

DIPTEROCARPUS ANGUSTIFOLIUS, *W. & A.*

D. costatus, *Roxb.*	Tilla garjan, RAKH.

A large tree of Chittagong, furnishing a wood oil in the largest quantity.—*Voigt, Roxb., Vol.* ii, *p.* 613.

DIPTEROCARPUS COSTATUS, *Roxb.,* Syn. of Dipterocarpus angustifolius, *W. & A,*

DIPTEROCARPUS GLANDULOSUS. *Thw.* Dorana, SINGH. A large Ceylon tree, growing in the Saffragam and Ambagamowa districts, at no great elevation.—*Thw.*

DIPTEROCARPUS GRANDIFLORA, *Wall.*

Eng, En. BURM.	Kunnean phiu. BURM.
Ain? ,,	Large flowered Dipterocarpus. ENG.
Ain tha. ,,	

An immense tree of Burmah, Pegu and Tavoy which grows on the sandy plains near the sea-shore, and on a similar soil in the interior. This tree, in company with a few other kinds, forms extensive forests which cover upwards of 2,000 square miles in the province of Pegu. The wood is somewhat more durable than that of "Kanyin" D. alatus, and is used for canoes, house posts, planking, &c. A cubic foot weighs 55 lbs. In a full grown tree on good soil the average length of the trunk to the first branch 60 feet and average girth measured at 6 feet from the

ground is 10 feet. It sells at 8 annas per cubic foot. It grows also in Tavoy.—*Drs. Wallich, Brandis and Mason, Col. Frith.*

DIPTEROCARPUS GRANDIS? Tngtha, BURM. A tree of Moulmein, the wood of which is converted into planks for building. —*Cal. Cat. Ex.* 1862.

DIPTEROCARPUS HISPIDUS, *Thw.* Boohora-gass, SINGH. An immense tree of Ceylon, growing in the Saffragam district, at no great elevation.—*Thwaites.*

DIPTEROCARPUS INCANUS. A tree of Chittagong.—*Roxb*, *Vol.* ii, *p.* 614.

DIPTEROCARPUS INSIGNIS, *Thw.* An immense tree of the Saffragam district, in Ceylon.—*Thwaits.*

DIPTEROCARPUS LÆVIS, *Buch.*

Dipterocarpus turbinatus, *Roxb.*

Tilea gurjun. BENG.	Ka nyeen phyu. BURM.
Ka nyeen tha? BURM.	Wood oil tree. ENG.
Ka nyeen nee. ,,	Horre, SINGH.?

This majestic tree grows to a height of 250 feet. It is met with in Assam, Tipperah, Chittagong, Burmah and Pegu. Found very abundant all over the provinces of Amherst, Tavoy and Mergui, where its wood is used similarly to D. alatus. Dr. Mason says it is a very useful timber, which is sawn into boards at Tavoy and Mergui, and used in house building. Where not exposed to the wet, they answer as well as teak, and are sold at half the price; they are, however, not impervious to white-ants. But Captain Dance, who tells us that it is used for rafters and planks, adds that it is an inferior wood, by no means durable as it rots as soon as it is exposed to water and shrinks readily. He says that Dr. McClelland speaks of this wood more favourably, but thinks he must mean some other wood, as this is decidedly bad, very porous, and when kept, the oil oozes out and stands in globules over it, it warps to a great extent, and though used for cases does not last for more than about two years. In the cold weather the tree is largely notched near the ground, and the wound charred. After this the oil or balsam begins to ooze out, sometimes 40 gallons daily, a balsam that compares favourably with balsam of copaiva, maximum girth 6 cubits, maximum length 70 feet. When seasoned, floats in water.—*Roxb. Vol.* ii, *p.* 612, *Drs. Mason, Voigt, Captains Dance and Benson.* Vide No. 81, page 135 of Dr. McClelland's Report.

DIPTEROCARPUS OBLONGIFOLIUS, *Thw.* A great tree near Ratnapoora, in Ceylon.—*Thwaites.*

DIPTEROCARPUS SCABRIDUS, *Thw.* A great tree near Ratnapoora, in Ceylon.—*Thwaites.*

DIPTEROCARPUS UINER, *Blume,* A tree of Java. It yields a resin which is substituted for Copaiva like wood oil.

DIPTEROCARPUS TUBERCULATUS, *Roxb.* and D. of Chittagong, pelosus of the Muscat Islands are also known.

DIPTEROCARPUS TURBINATUS, *Roxb.*

Dipterocarpus lœvis, *Hamilton.*

Shweta-garjan. BENG.	Hora-gaha. SINGH.
Ka-nyin. BURM.	

A native of Chittagong, Tipperah, Pegu, &c., to the eastward of Bengal where it grows to be an immense tree. This tree is famous all over the Eastern parts of India and the Malay islands, on account of its yielding a thin liquid balsam, commonly called wood oil. To procure the balsam a large notch is cut into the trunk of the tree about thirty inches from the ground, where a fire is kept up until the wood is charred, soon after which the liquid begins to ooze out: a small gutter is cut in the wood to conduct the liquid into a vessel placed to receive it. The average produce of the best trees during the season is said to be sometimes forty gallons. It is found necessary every week to cut off the old charred surfaces and burn it afresh. In large healthy trees abounding in balsam they even cut a second notch in some other part of the tree and clear it as at first: these operations are performed during the months of November, December, January and February; should any of the trees appear sickly the following season, one or more years respite is given them. The D. costatus, Roxb., is a native of the coast south of Chittagong where it is called Tileagurjun. The 'D. incanus, gurjun' of Chittagong, "D. alatus" of Pegu and Mascal island, also yield the oil. At Hazaree ke hath, in Chittagong, 100 feet above the level of the sea, large myrtaceous trees are common, and show a tendency to the Malayan flora, which is further demonstrated by the abundance of Gurjun (*Dipterocarpus turbinatus*). This is the most superb tree to be met with in the Indian forests: it is conspicuous for its gigantic size, and for the straightness and graceful form of its tall unbranched pale grey trunk, and small symmetrical crown: many individuals are upwards of 200 feet high, and fifteen in girth. Its leaves are broad, glossy and beautiful, the flowers are not conspicuous; the wood is light-brown, hard, close-grained and durable, and a fragrant oil exudes from the trunk, which is extremely valuable as pitch and varnish, &c., besides being a good medicine. The natives procure it by cutting transverse holes in the trunk, pointing downwards, and lighting fires in them, which causes the oil to flow. This tree furnishes timber of great

size and strength. It is fit for any purpose for which "saul" is employed, being of the same family. It is chiefly employed for canoe and boat building. It is found in all the forest districts, except Prome, where it is scarce. It is found throughout the southern as well as all the Sitang forests, disappearing curiously enough wherever the *Acacia catechu* appears. Thus, where the latter is in perfection, in the northern part of the Tharawaddy and Prome districts, the wood-oil trees are rarely seen, and where the latter is found in perfection, as in the southern forests and throughout the forests of Tounghoo, west of the Sitang, there is no *Acacia catechu*. The wood oil tree grows in light sandy soil, near the banks of streams, and in dense forests; frequently attaining 18 feet in girth, with a proportionate height. The oil is extracted by cutting a large notch in the tree, a few feet from the ground, and occasionally stimulating the secretion by scorching the surface of the scar, which is generally converted into charcoal and gives the oil a dirty black appearance.—*Roxburgh Flora Indica, Vol.* ii, *p.* 612. *Rhode's MSS. Hooker, Him. Jour., Vol.* ii, *p.* 348. *McClelland.*

DIPTEROCARPUS ZEYLANICUS, *Thw.*

Hora-gass. SINGH.

A great tree in Ceylon, abundant up to an elevation of 3,000 feet. A cubic foot weighs 45 lbs., and its timber, which is used for the roofs of common buildings, lasts 15 years.—*Thwaites, Mr. Mendis.*

DIPUC, a supposed reversed mode of writing cupid. See Kama.

DIRISANA GUM. The *Acacia sirissa* yields a large quantity of this clear gum.—*M. E. J. R.*

DIRASANA, See Bhagavat-gita.

DIRECTION ISLAND, called by the Malays Pulo Paneekee Ketchell in lat. 0° 15′ N., long. 108° 5′ E. and 50 miles from St. Barbe.

DIRGHADEVA, See Inscriptions.

DIRGHA TAMAS, See Kakshivat.

DIRHAM. Patariya Dirhams are mentioned by Idrisi as current at Mansura and in the Malay Archipelago about A. D. 900. Mr. Thomas supposes them to be coins of the Tahir dynasty then ruling in Khorasan. Vide Weights.

DIRYA KA KEKRA. HIND., properly Daria. The Sea Crab. See Cancer.

DIRYA-KA-KAF. DUK. Bone of cuttle fish.

DISA KALU. TEL. Setaria, sp.

DISC, Aureole or Gloire encircling the heads of gods and saints signifies perfection. It was originally intended, in the Sabæan worship, to represent the solar orb, but in the course of time, the symbol was multipliedly added to and its meanings similarly increased and, in its changes, it has represented the sun, the moon, and the whole planetary system; it has been an emblem of monotheism, tritheism and polytheism, of particular local divinities as well as of those with universal dominion. In Egypt the Delta △ or triangle sign, was originally the type of Baal, afterwards of Siva or Mahadeva and was presently when placed with its apex upwards △, used to denote fire, the element consecrated to the first named god. When placed with its apex downwards ▽, it typified Vishnu or water, and there were many other meanings attached to it, some of them very gross.

DISCS of steel, from 6 to 9 inches in diameter, and about an inch of breadth of rim were worn by all Sikh soldiers. The edges are ground very sharp, and after having gained velocity by being rotated on the forefinger of the right hand they are projected to a distance of 50 or 80 yards, with considerable force, therefore, but with such want of dexterity or impossibility of regulating their flight that the bystanders are more in danger than the object of the aim. The Chakra, the *discus* of the god Vishnu, resembling a wheel or quoit, is whirled round the middle finger. The Chakra is mythologically described as a circular mass of fire, darting flames in all directions, which, thrown by the gods, slays the wicked, and then returns to the hand from which it issued. The Sikh Akali usually have several of them on their conical caps. They are expensive and are almost useless weapons. See Akali, Chakra, Hindoo, Siva, Namam, Kasambi, Vishnu.

DISCOMYCETES. See Fungi.

DISTILLATION. The principal matters distilled from, in India, are Toddy, Date, Sugar, Rice, Mahwa flowers, barks, cereals, and substances yielding perfumes. The Bombay toddy or arrack-still is a most simple and clumsy contrivance. The still consists of a large earthen jar, of the shape of that used by water carriers, but many times more capacious. The receiver is of the same form and material as the still, but somewhat smaller in size,—the former being two and a half, the latter one and a half feet in diameter. The still mouth is plugged up with a piece of wood luted with clay—a hole is cut in the side of the still near the top, and into this is fastened a wooden spout, which conveys the spirituous vapour to the cooler. This last stands on a tressle or frame of wood, placed over a pit for holding water, and cooling is effected by a man lifting successive fills of water from the well in a cocoanut ladle, and pouring it on the top of the cooler. A vessel of water with a small spout or drip is occasionally resorted to. A cocoanut tree will yield about four seers of toddy or sap a day: seventy-five seers of toddy or the produce for one day of eighteen cocoanut trees, furnish a charge for a still, yields twenty-five seers of liquor on a first distillation—on the second it affords eight seers of liquor considerably under proof. The process of distillation just described is nearly as unskilful as can be, and a third, if not a half, might be added to the returns were a little more care and attention bestowed on the matter. A strong liquor, called "Mahwah," in popular repute amongst the natives, especially the Parsees, in Western India, is distilled from the berries of the Mahwah tree, the Bassia latifolia. The berries are about the size and form of marbles. In Surat, they are first steeped or mashed in casks. So soon as they get into a state of active fermentation, the fermented liquor is drawn off and carried to the still, and more water poured over the berries, successive charges being added so long as the worts are strong enough to ferment. A sufficient number of casks, or mash tuns as they may be called, are employed in the work so as to permit a charge of the still to be supplied on each drawing off from the fermenting tuns: as it takes a couple of days to complete the process of fermentation, but worts already drawn off would sour were this to be waited for before the first run was run off. The still consists of a wooden tub, with a copper bottom, built over a surface of brickwork:—over the mouth of this is placed a huge copper saucer, the centre of the bottom terminating in a nipple. This is placed over the mouth of the tub which contains the liquor, and is fitted tight after the still has been charged: it is then filled with cold water, a fresh supply of which is poured into it from time to time as the original fill gets heated. A bamboo spout passes through the side of the tub just above the level of the liquor inside—it terminates in a flat shovel or ladle shaped dish under the nipple. Into this the spirit, condensed in the under side of the saucer, trickles down—it is run off and removed into a suitable receptacle outside. A second or third distillation is resorted to when the liquor is required to be made very strong.

The Portuguese in India for the purpose of rectification use a very neat and serviceable variety of still, by them called an Alembic. It consists of a common cooking pot as a boiler, with a cylindrical head of the same diameter, and generally about the same depth, as the boiler The bottom of this is a cone closed in at the apex, the mouth of which covers that of the boiler. Around its inner edge is a slight turned up ledging or flange, from which a pipe or worm leads off the spirit. The cylindrical portion of the top being filled with cold water, the spirituous vapour is condensed by it in the inside of the cone, and, trickling down, is caught by the flange and carried off by the pipe. This is a convenient and serviceable implement, and may be so

used to give very excellent results. In the Panjab, the first spirit that passes over is called "phul" and "ek-atisha" or once distilled. This is collected in vessels and distilled again in another still, when the spirit passes over it is called "do-atisha," or "double distilled." This is of two qualities. according to strength. The spices and flavorings, or "masalah," used in distilling, are the following:—"Sak," or bark of the kikar, which is often erroneously supposed itself to yield a spirit on distillation, it is only added to promote and accelerate the fermentation of the molasses, &c. Triphalla the three Myrobalans, mixed together as an astringent. Rose leaves; Lotus flowers (nilofar); Gaozaban. (Cacalia kleinii); Violets; Badyan, anise seed; Limes and lemon peel (sangtara); Saffron; Sandalwood, red and white; "Mundi buti" (Sphæranthus); Kashnuz (coriander); Adrak (ginger); Ilachi (cardamoms); Musli; Darchini (cassia or cinnamon); Gajar (carrots) dry and fresh; Motya (jessamine); Seb (apples); Naspati (pears); Shir (milk); Raughan, ghi; Meat, (?) Misri (sugar); Tamal patr (aromatic leaves); Taj (aromatic flavoring leaves); Bed-musk (willow flowers); Kasturi (musk): Ambar (ambergris); Khawi (Anatherium muricatum); Khas (root of the latter); Chob-chini, (Smilax china); Salep misri. Intoxicating drugs.

Distilled waters contain a little of the volatile principles of plants, and may be distilled either off the plants, or by distilling some essential oil with water.—The following waters may be obtained by using 2 lbs. of fresh or 4 lbs. dried leaves to two gallons of water; of the seeds, one pound.

Hemidesmus.	Roots, 2 lbs.....	Ununtamul.
Juniper.....	Berries	Hoober.
Musk hibiscus.....	Seeds	Hub-ul-musk.
Sandal.....	Wood, bruised 1 lb.	Sufed sandal.
Sassafras, Camphora glandulifera	Bark, 1 lb.	————
Tulsi, white.....	Fresh leaves	Sufed tulsi.
Tejpata, Cinnamomum tamala, Folia malabathri	Leaves	————

—*Powell's Hand-Book, Vol.* i, *pp.* 311 *to* 315. *O'Shaughnessy.*

DITA. A tree of Mindoro, its sap mixed with an infusion of the Abyab or rind of the fruit of the Sago palm, (cabo negro) is used by the wild tribes of Mindoro, to poison their arrows.

DITI, the wife of Daksha.

DITI one of the two wives of Casyapa (Lamech) mother of the Asura or Daitya who were destroyed by the flood.—*Taylor.* See Garuda, Sacti, Serpent.

DIT'HWUN. The *Ekadashi,* or 11th, of the bright half of the month *Katik,* is a day also known by the name of *Bodini.* On this day a ceremony is observed in celebration of *Vishnu's* return from his slumber of four months, during which he is represented to have been with *Raja Bul* in *Patal* or the infernal regions. The Mudra Rakshasha, a Sanscrit play, says,

May *Vishnu's* shrinking glance
Yield peace and joy—as waking from his trance
His opening eyes are dazzled by the rays
From lamps divine that blaze:
Those eyes that with long slumber red
Ambrosial tear-drops shed,
As pillowed on his snake-couch mid the deep
He breaks reluctant from his fated sleep.

No marriages and but few festive ceremonies have taken place in the meantime, and the *Dit'hwun* is the signal for their commencement. Houses are cleaned, and smeared afresh with cow-dung, and the fruit of the *Sing'hara, Ber* and *Chunaka-sag,* and other dainties of the season may be lawfully enjoyed.—*Elliot's Suppl. Gloss.*

DITREMA, a genus of fishes of the family Embiotocidæ, in which there are 16 species of Ditrema and 1 of Hysterocarpus.

DIU on the south coast of Kattywar, is a castle, town and district belonging to the Portuguese. The town has been repeatedly besieged by rulers of Guzerat and the Dekhan but it continues in the power of the Portuguese. Diu Head or Diu Point is the southern-most point of the province of Guzerat. Diu Island is in lat. 20° 42′ N. and L. 71° 0′E. Diu Town stands on the east end of the Island of Diu, the fort being in lat. 20° 43′ N. and long. 70° 59′ E.—*Postan's Western India, Vol.* i, *p.* 112; *Horsburgh.*

DIURNÆ, a tribe of birds, of the order Raptores, which may be thus shown:

ORDER II.—Raptores or Birds of Prey.

Tribe I.—Diurnæ.

Fam. Falconidæ.

Sub-Fam. Falconidæ, 2 gen. 2 sub-gen. 15 sp. viz., 5 Falco, 2 Hypotriorchis, 5 Tinnuculus, 3 Hierax.

Sub-Fam. Perninæ, 2 gen. 3 sp., viz., 2 Baza, 1 Pernis.

Sub-Fam. Elaninæ, 1 gen. 1 sp., viz., 1 Elanus.

Sub-Fam. Circætinæ, 2 gen. 3 sp., viz., 1 Circætus, 2 Hæmatornis.

Sub-Fam. Circinæ, 2 gen. 6 sp., viz., 5 Circus, sp. 1 Poliornis.

Sub-Fam. Accipitrinæ, 3 gen. 6 sp., viz., 3 Accipiter; 1 Micronisus and 2 Astur.

Sub-Fam. Thrasaetinæ, 2 gen. 5 sp., viz., 1 Pseudastur; 4 Spizaetus.

Sub-Fam. Aquilinæ, 4 gen. 8 sp., viz., 1 Eutolmaetus; 5 Aquila; 1 Ictinaetus; 1 Hieratus.

Sub-Fam. Buteoninæ, 2 gen. 4 sp., viz., 1 Archibutes, 3 Buteo.

Sub-Fam. Haliaetinæ, 6 gen. 7 sp., viz., 1 Pandion; 2 Pontoaetus; 1 Blagrus, 1 Haliætus; 1 Haliastur, 1 Milvus.
Fam. Vulturidæ.
Sub-Fam. Vulturinæ, 2 gen. 2 sp., viz., 1 Vultur, 1 Otogyps calvus.
Sub-Fam. Gypinæ, 1 gen. 3 sp., viz., 3 Gyps.
Sub-Fam. Sarcorhamphinæ, 2 gen. 2 sp., viz., ; Sarcorhamphus: 1 Neophron percnopterus.
Sub-Fam. Gypaetinæ, 1 gen. 1 sp., viz., 1 Gypae. tosbarbatus.

Tribe II.—Nocturnæ.

Fam. Strigidæ.
Sub-Fam. Buboninæ, 5 gen. 12 sp., viz., 1 Nyctea; 4 Bubo; 2 Asio; 2 Scops; 3 Ketupa.
Sub-Fam. Atheninæ, 2 gen. 9 sp., viz., 1 Ninox scutatus; 8 Athene.
Sub-Fam. Syrniinæ, 1 gen. 3 sp., viz., 3 Syrnium, Indrani, Sinense and nivicolum.
Sub-Fam. Striginæ, 3 gen. 3 sp., viz., 1 Phodilus badius; 2 Glaux flammea and Javanica.

DIVAKARA, Sans. From diva, day, and kara, from kree, to do.

DIVADATSI or Divadratsa, Tam. Vitis vinifera.

DIVE PARRE, Singh. A wood of the western province of Ceylon, used in common house-buildings. A cubic foot weighs 44 lbs. and the timber lasts 20 years.—*Mr. Mendis.*

DIVIAN-DIVA, Sans. Senna.

DIVI-DIVI, also dibi-dibi, also libi-libi. Cæsalpinia coriaria, a plant of South American origin, belonging to the natural order "Cæsalpineæ," naturalized in India and now grown at several stations in the Madras and Bengal Presidencies, Bangalore, Hoonsoor and Guntoor. The seed pods have been extensively used for tanning leather, and for this purpose are considered superior to all the Indian astringents. Leather tanned in this way is considered equal to that of the best of Europe manufacture. A good sized tree in the West Indies is said to produce about 80lbs. annually. Its leaves are doubly pinnate, and the leafleats of twelve pair without a terminal one; they are oblong, obtuse, smooth, very entire. The flowers are disposed in spikes issuing from the extremities of the branches; they are small, yellowish and slightly fragrant. To these succeed oblong compressed somewhat obtuse pods curved laterally, the inner side being concave and the other convex. The seeds rarely exceed three or four in each pod, and are of a brownish color. It is to the curved pod of this leguminous shrub that the commercial term of Divi-Divi, or Libi-Libi, is given. The average produce of pods from a full grown tree has been estimated at 100lbs. weight, one-fourth of which consists of seeds or refuse, leaving about 75lbs. of marketable matter. "Divi-Divi" pods are of a dark brown color externally, when ripe, transversely wrinkled and curled, from 1 to 2 inches long, and ⅜ of an inch wide. The outer skin of the pods is very thin, and peels off easily if the pods are ripe. Underneath it, and separated from the seeds by a layer of woody fibre, is a considerable thickness of astringent matter of a light yellow color. Each pod contains from 2 to 4 seeds in separate compartments. The astringent matter in the walls of the pod, is almost pure tannin. An excellent tannin, slightly darker in color than that manufactured from galls, may be prepared by a separate process. About 60 or 65 per cent. of the whole pod, (excluding seeds) consists of impure tannin. The remainder being made up of woody fibre, starch, and gum. The powder of the pods is of a light yellow color, taste purely astringent, and strongly resembling tannin, as met with in commerce. At an interval of six feet apart, an acre of ground will contain 1,210 trees, yielding an average of 810 cwts., and 30 pounds of divi-divi, or above 20½ tons of marketable matter, worth, at only £5 per ton, £200. Should the interval between the trees be extended two feet more, we shall, still have 680 to the acre, the produce of which would not improbably be increased by the increased space given for the extension of the branches. The ground in which this tree admits of being cultivated is that which is least adapted to the staple products of tropical agriculture; guinea grass may be profitably raised beneath its shade, and as with the exception of the three years which precede the commencement of its bearing, there is hardly any deduction to be made from its returns, it promises to be among the most valuable objects of a planter's attention. Divi-Divi resembles a dried pea-shuck curled up filled with yellow powder, and a few dark brown seeds. Its tannin differs materially from that of nutgalls. The quantity of mucilage it contains precludes it from the use of dyers, but the experiments of Mr. Rootsey of Bristol showed the pods to contain 50 per cent. of tannin, and it is largely used by curriers. It appears also from trials made that one part of Divi-Divi is sufficient for tanning as much leather as four parts of bark and the process occupies only one-third of the time. The selling price ranges from £8 to £13 per ton. The imports into the United Kingdom from 1814 to 1850 ranged from 10 tons to 3,900 tons. The seed pods of this tree being known to contain a large percentage of astringent matter, induced Dr. Cornish to use them in fever. *Juror's Report, Madras Exhibition* 1855—*Indian Annals, No. VII, p.* 120. *Simmonds Comm. Products, p.* 503.

DIVI LADNER, the forbidden fruit of the Ceylonese, is the produce of a species of Tabernæmontana.—*Eng. Cyc., Vol.* ii, p. 365.

DIVINATION is a regular science among Malays who resort to diviners on all occasions of importance—as for instance the almost universal custom in all nations of fixing on a propitious day to commence a journey or any undertaking. The commonest system is analogous to the Roman "sortes"—a Koran is used for this purpose: they have also books filled with sentences and words, the person consulting them cuts in with a kris and the sentence marked by the kris point is interpreted to suit the wants and wishes of all parties. In the Allu ordeal of the hindoos of Guzerat, a cloth or a raw hide is dedicated to one of the forms of Durga, the claimant of a disputed boundary puts it over his shoulders and walks over the contested limits. In Sind'h the "son" or "sugum" is a kind of divination by means of the position of birds and beasts, their cry, the direction of their flight and other such particulars. The divination, by lots, auguries, and omens, by flights of birds, as practised by the Getic nations, and described by Herodotus, and amongst the Germans by Tacitus are to be found amongst the Rajpoots. Their books on the subject could supply the whole of the Augurs and Aruspices, German or Roman. The mahomedans in India often cast lots, and in Sind is a practice similar to that of the mountaineers of Scotland, called Sleinanachd, or, "reading the speal-bone," or the blade-bone of a shoulder of mutton. The poet Drayton alludes to the practice of this "divination strange" amongst the "Dutch made English," settled about Pembrokeshire, in his Polyalbion, Song 5. Camden notices the same superstition in Ireland. The ordeal of taking out a piece of gold out of a pot of hot oil, *Karahi lena* is common in India. If the accused do so without being scalded he is deemed innocent. The ordeal amongst the hindoos called Dibya or Divya is from a Sanscrit word meaning Divine. In the *tola* or weighing ordeal, the accused is weighed, then certain ceremonies are performed and he is again weighed and if found lighter he is guilty. In *Agni*, or fire ordeal, the accused touches fire or heated metal, and if burned he is guilty. In *Jala*, or water ordeal, the accused is dipped under water, whilst an arrow is shot and a person runs and brings it. If the accused be still alive, he is innocent. In the poison, or *Visha* ordeal, if the accused swallow it with impunity he is innocent. Others are the Kosha or drinking holy water; the *Tandula*, or chewing grains of rice: the "tapta-masha," or taking a masha weight of gold out of a jar of hot oil or butter. In the *Dharmarcha* or *Dharm-adharma* ordeal, drawings of dharma and adharma, virtue and vice, are covered with cowdung and put in a covered vessel, from which the accused draws one. In the *tulasi*, the leaves of the tulsi and water are swallowed after an oath. The tulsi is sacred to Vishnu. In the *Kach'a ghara*, or unbaked pot, such a pot is filled with water and carried to some distance without spilling Bel-Bhandra, is swearing by the leaves of the Bel which is sacred to Siva. *Gangajala*, swearing on the Ganges water. *Devala*, or *Devalaya*, swearing in a temple, before an image. *Gao*, a cow, swearing, while holding a cow's tail;—*Brahman*, swearing while touching the feet of a brahman. *Sima* or *Simba*, the ceremony, after religious rites, of pointing out a boundary. In hindooism nine ordeals were recognised. In trivial cases, a few grains of rice that have been weighed with the Salagramma are put into the mouth of the suspected or accused person, who chews them and spits them out on a pipul leaf. If the person be innocent, the grain appears as if stained with blood: if guilty the rice is dry. In the trial by Kosha or image water, the accused person drinks some of the water with which an idol has been washed, and if the accused survive free from calamity through the next fortnight, he is innocent. The ordeal of the balance is applied to women, children, the aged, blind, lame and sick men, and to brahmans. After a fast of 24 hours both of the accused and the priest, the accused bathes in holy water, prayers are offered up and oblations are presented to fire. The beam of the balance is then adjusted, the cord fixed and the accuracy of the scales ascertained. The accused then sits in the scale and while being weighed, the priests prostrate themselves, repeat certain incantations and after an interval of six minutes the accusation paper with the written accusation is bound around the head of the accused who invokes the balance thus; Thou! oh balance, art the mansion of truth; thou wast anciently contrived by the deities: declare the truth therefore, oh! giver of success, and clear me from all suspicion. If I am guilty, oh! venerable as my own mother, then sink me down: but if innocent then raise me aloft." The accused is then reweighed; if he then weigh heavier, he is found guilty, but if lighter, he goes free. In the trial by fire, the accused in India walks barefoot into a mass of burning pipul leaves (Ficus religiosa)—in Siam, over a pit filled with burning charcoal. In the ordeal by boiling oil, the accused has to thrust the hand

into the scalding fluid. In the hot iron ordeal nine circles are drawn, each 16 fingers in diameter, and each the same distance of 16 fingers apart. The hands of the accused are rubbed with unhusked rice (paddy) and all marks on them carefully noted seven peepul leaves are then bound with seven threads on each hand, and the priest gives him a red hot ball to carry as he steps from circle to circle, keeping his feet within each until he reach the eighth, when he throws the ball on a heap of dried grass inside the circle. If his hands, which are then examined, be not burned, he is pronounced innocent. In Japan, a reputed thief bears on his hand a piece of thin paper having the figures of three deities. On this a piece of red hot iron is placed and if his hand escape, he is pronounced free. The water ordeal, is in vogue, in India, in Burmah and in Borneo. In India, the accused stands in water, nearly up to his waist, attended by a brahman, staff in hand. A person near, shoots three arrows from a bamboo bow and a man hurries to pick up the furthermost shaft. As he takes it from the ground, another person runs towards him from the waters edge; at the same moment, the accused grasps the brahmans staff and dives beneath the water. If he remain there till the two arrow fetchers return, he is innocent, but if any part of his body appear, he is guilty. In Burmah, a stake is driven into the water, the accuser and accused take hold and together plunge beneath the water and he who remains longer submerged is declared to have truth on his side. In the poison ordeal, white arsenic and butter in a mixture is administered. In the snake ordeal, a cobra and a ring are placed into an earthen pot, and the accused has to withdraw the ring. In the idol ordeal, two images one called Dharma or Justice the other Adharma, or Injustice are placed into a jar, and the accused is allowed to draw; if the Dharma image be withdrawn he is innocent. The Borneo Dyaks place two pieces of salt in the water, to represent the accuser and accused, and the owner of the piece dissolving the first loses the cause. Also, two shells are placed on a plate and lime juice squeezed over them and he whose shell moves first, is pronounced guilty or innocent, as may have been resolved on. But the more common mode amongst the Dyaks is for the accuser and the accused to plunge their heads beneath the water and he who remains longer is free. The Brinjari people use the branch of a Nim tree, the Azadarachta Indica. A husband throws it on the ground and turning to his wife, says, if thou be a true woman to me, lift that nim branch. *Arrows* are sometimes used in North-western India, as tests of innocence. The opposite ends of two arrows are held by a rattan laid upon the hands by two persons placed opposite to each other, they are parallel to and just sufficiently apart to allow of the suspected persons hand being held between them. The ends of the arrows merely rest upon the fingers. The arrrows are supposed to move towards and close upon the guilty hand. In Bastar, the leaf-ordeal is followed by sewing up the accused in a sack and letting him down into water waist deep; if he manage in his struggles for life to raise his head above water he is finally adjudged to be guilty. Then comes the punishment of extracting the teeth. This is said in Bastar to be effected with the idea of preventing the witch from muttering charms, but in Kumaon the object of the operation is rather to prevent her from doing mischief under the form of a tigress which is the Indian equivalent of the loup-garou of Europe. The Hejaz Arab licks red-hot iron as an ordeal.

Amulets are worn by almost all eastern nations. They are especially prized by mahomedans, both young and old of whom wear them. They are usually put on the young to ward off disease and to guard from the evil eye, and consist of figures with numbers on pieces of paper, or Arabic words, often extracts from the Koran engraved on potstone or silver or gold and worn from the neck. They are also put over the door porch or on the house wall. Amongst the Malays of Java *Mustika* means amulet, which is always some very scarce substance and which being worn about the person they are supposed to act as a talisman, and ward off evil. The *Mustika Kerbo* or Buffalo Amulet is quite white and round a like marble, nearly an inch in diameter, and semi-transparent; it is stated to be found at Panggul. The *Mustika Waringin* a calcareous concretion, is found at Ngadi Rejo. It is quite black and a little smaller than the Mustika Kerbo. Waringin is the name of a tree, the Ficus Benjamina, which always adorns the open plain in front of the houses of Javanese chiefs.

Arati, TAM. is a hindu ceremony for warding off the evil eye.

The Karachi tribes of Persia—in some parts called Kaulee and Soosman—are unquestionably gypsies. They wander about the country, and their habits are the same as those of this singular people elsewhere. The men are tinkers, basket-weavers, dealers in cattle, sheep-stealers, and thieves; but their women, in one respect, differ widely from gypsy females in Europe. Mr. Barrow, in his account of his extraordinary race—has commended the strict chastity of the gypsy

women ; but the Karachi ladies of Persia are quite independent of any such rigid virtue and one and all earn money in other ways than by telling fortunes. One very common mode of *divination* in Persia, is called the ilm-i-shoona or "science of the shoulder blade" and practised by cutting out the blade bone of a sheep newly killed and examining the lines and marks upon it. This was common in England in old times, and in Scotland in the last century. Pennant mentions it in the latter country, where it was termed "reading the spale-bane, and he gives an account of a Highlander in the Isle of Skye foretelling the event of the battle of Culloden by this means. The history of the life of Colonel Gardiner, and of many others amongst christians prove that visions are not confined to half civilized races. Confucius gave rules for this species of sorcery. Tacitus informs us, that among the ancient Germans, who were originally Scythians, the prototype of Rhabdomancy was engraven on rods. The Chinese had also rods with similar inscriptions. The Arabs, before the birth of Mahomed, divined by bundles of arrows in the Caâba. Mahomed destroyed this practice The Romans had peculiar modes of divination : their dies fasti, nefasti, their auguries, &c.

Sir J. E. Tennent mentions that the practice of astrology at the present day in Ceylon, and the preparation of the ephemeres predicting the weather and other particulars of the forthcoming year, appear to have undergone little or no change since this custom of the inhabitants of India was described by Arrian and Strabo. But in later times the brahmans and the buddhists have superadded to that occupation the casting of nativities and the composition of horoscopes for individuals, from which the *Sophistæ* described by Arrian abstained. It is practised alike by the highest and most humble castes of Singhalese and Buddhists from the Vellala, or agricultural aristocracy, to the beaters of tom-toms, who have thus acquired the title of "*Nahatiya*" or astrologers. The attendance on particular ceremonies, however, called *Balli*, which are connected with divination, belongs exclusively to the latter class. Amongst the mahomedans of British India, astrology is almost unheard of, though they keep their calendar, or Jantri and theJoshi calculates the ephmeris. The hindus also have their Calendar or Panjangam, but they all practise divination from books, for which the Chintamini pastakam is in use in the South of India. Amulets, charms, signs, and marks are, however, everywhere in use in the East. Of a similar nature was the blood sprinkled on the doorposts of Israel in Egypt, a sign that the destroying angel was not to enter, the inmates being under the divine protection. A similar preserving token is referred to in Ezekiel ix, 4, where the man "clothed in linen," having a writing ink-horn by his side, is commanded by God to set a "mark" upon the foreheads of those who grieved for the abominations of Jerusalem. "Behold my sign !" says Job xxxi, 35, according to the marginal reading ; or, "Behold, here is my Thau" (a mystic mark), as Calmet renders it, evidently referring to some distinctive badge which he wore ; and Paul, probably alluding to some acknowledged sacred sign, observes "henceforth let no man trouble me, for *I bear in my body the marks* of the Lord Jesus." Portions of St. John's Gospel were worn by the early Christians, and verses of scripture were even placed upon horses. Among the Anglo-Saxons, amulet gems were much esteemed. King John had a large collection, and, in the sixteenth century, amulets were warehoused in large quantities, and usually worn round the neck, as a protection from pestilence, as the following item shows : "a hundryth weight of amletts for the neke, xxx^{s} iiij^{s}" The celebrated Nostradamus gives the following extract from a MS. poem on the virtues of gems, written by Pierre de Boniface in the fourteenth century : "The diamond renders a man invincible ; the agate of India or Crete, eloquent and prudent ; the amethyst resists intoxication ; the cornelian appeases anger ; the hyacinth provokes sleep." There are six description of *charms*, or "muntras" known in Goozerat, which are described in a series of works forming the scriptures on the subject, or "Muntra Shastra." A charm called "Marun Muntra" has the power of taking away life ; "Mohun Muntra" produces ocular or auricular illusions ; "Sthumbhun Muntra" stops what is in motion ; "Akurshun Muntra" calls or makes present anything ; "Wusheekurun Muntra" has the power of enthralling ; and "Oochatun Muntra" of causing bodily injury short of death. Many of the charms worn by hindoos and mahomedans are merely to distract or avert the evil-eye. A not unfrequent one in sickness, is a string formed of hair that has been combed out of the head, to which is attached a piece of the Acorus calamus root, a cowrie shell, a marking nut, and the eye of a peacock's feather. All mahomedans have faith in charms. In the *Illahi Namah* (Section 12), an old Persian work, it is mentioned that women, during parturition, derive considerable benefit from wearing a charm composed of certain ingredients made into a

little ball, which must be "perforated with a hog's bristle." Most of the mahomedan pilgrims when moving towards Mecca, have a charm or "tawiz" suspended around their necks and almost all mahomedans when setting out on a journey bind a piece of money on their arm, as a votive offering to the Imam Zamin. In Arabia, the instant a foal is born, a charm is tied round its neck in a bag of black cloth, and sometimes in this the pedigree is placed. Many of the mahomedans of Turkey and Asia, carry talismans about with them, especially in war, consisting of verses of the Koran, to which they attach extraordinary influence, and with one mahomedan soldier, who had fallen in battle, a whole Koran was found wrapped in the rolls of his turban. The mahomedans put up charms over the lintels of the doors, on the walls of their houses, and almost constantly use them on their arms as amulets, for the cure of ailments, to cast out devils, to ward off demons, fairies, enchanters, and to cleanse a haunted house. In exorcism, certain names (Ism, sing. Isma' pl.) are used by mahomedans, the ism-jallali, or fiery or terrible attribute is used ; also the ism jamali, the watery or air attribute, and with these they cast out devils, and command the presence of genii and demons. Amongst mahomedan women love-philters are in frequent use, and engraved amulets, and leaves and roots of plants, are worn by them to retain or win affections. The Revd. Mr. Ward once saw a mahomedan woman dropping slips of paper into the river, and upon enquiry, found that they contained some sacred words and that the woman was presenting these papers to the river-saint, Khaja khizr, in hopes of obtaining relief. Persians consider the number "thirteen" so unlucky, that in general, they will not even name it. When they have occasion to allude to this number instead of mentioning sezdeh (*thirteen*), they say "ziyad" (much more) or hech (nothing).—*Wilsons Glossary of Indian Terms Richard F. DIVINE LAMAS, See Buddha.

DIVORCE, amongst the mahomedans, is called Tallaq and is of several kinds, but all of them in the power of the husband. The hindoo law does not admit of divorce. The budd'hist Burmese laws allow every facility for divorce. An appeal case was lately heard by the Privy Council, illustrating the mahomedan law of divorce. A moonshee wished to divorce his wife, without which a second wife would not have him, but he wished at the same time to avoid paying the first wife's dowry amounting to Rs. 26,000. He had two modes of proceeding either by his own arbitrary act to repudiate his wife—in which case he must restore the dowry ; or to divorce the woman with her own consent which is *khola*, in which case he may keep the dowry or make any arrangement regarding it. After the divorce, the woman must remain some months in seclusion, and be maintained by her late husband, till all chance of children has passed away. In a recent case the husband, by ill usage of his wife induced her mother to give up the marriage settlement and so proceeded by the *khola* method keeping the dowry. Both the Subordinate and Appellate Courts decreed the restoration of the dowry on the ground of force being used. Mahomedans in India follow the Koran and Sharra, and marry to four wives, though some take into their households a far greater number of women, under different designations. Mrs. Meer Hoossain Ally had heard of princes in Hindustan possessing seven or eight hundred, and Tippoo Sultan had no less than nine hundred women. In Madras some of these are known as the "*Harm*" which term is there applied to purchased women associating with their lord, but in Hindustan such are termed "*Doolee*" wives. These are not the "*Kuneez*" or slave girls, who are servants. There are three forms of "*Tulaq*" repudiation or divorce, amongst mahomedans in India. 1st. *Tulaq-i-byn*, which consists in the husband only once saying to his wife "I have divorced" you ; 2nd. "*Tulaq-i-rujaee*" in repeating the same twice, and 3d. "*Tulaq-i-mootuluqa*" in three similar repetitions.

DIWALI, HIND.

Dipauli.	HIND.	Deuli.	HIND.
Dewaligeicha	KARN.	Dipali.	,,

A hindoo festival, when lamps are lit, on the two last days of the dark half of Aswin. See Dipawali.—*Wilson.*

DIWAN KHANAH, amongst mahomedans, the common hall or place of reception. It has a line of flat cushions ranged round the room, either placed upon the ground, or on wooden benches, or on a step of masonry, varying in height according to the fashion

of the day. When such foundation is used, it should be about a yard in breadth, and slope very gently from the outer edge towards the wall, for the greater convenience of reclining. Cotton-stuffed pillows, covered with chintz for summer, and silk for winter, are placed against the wall, and can be moved to make a luxurious heap; their covers are generally all of the same colour, except those at the end. The seat of honour is denoted by a small square cotton-stuffed silk coverlet, placed in one of the covers, which the position of the windows determines. Thus in Egypt a neatly-furnished room, can be had for 5*l.* or 6*l.*—*Burton's Pilgrimage to Mecca, Vol.* ii, *page* 44.

DIWANIYAH. See Mesopotamia; Chaldea.

DIXAN, in Tigre, is the first town that is met with after surmounting the Taranta passes. Ferret and Galinier say it is a group of wretched huts, scattered irregularly on the top of a barren mountain, a miserable village, containing about 1,500 souls, christians and mussulmans.

DIXON, Colonel Charles George, author of a sketch of Mhairwarah, an officer of the Bengal Artillery which he joined on the 14th August 1813. He served throughout the Nepal war in 1814, 1815 and 1816. Was present at the siege and bombardment of Hatras in 1817. Was appointed Brigade Quarter Master to the Artillery and Pioneers with the Right Division of the Grand Army during the Pindaree Campaign of 1817-18. In 1820-21 was present with the Force which subjugated the Hill Tribe of Mhairwarah. In May 1835 he was appointed temporarily to the Civil charge of Mhairwarah. In January 1836, he was permanently confirmed as Superintendent of that District and as Commandant of the Mhairwarah Local Battalion. In March 1839, the Mhair Corps, in conjunction with the Joudhpore Legion, under the command of Captain Dixon completely routed a large body of outlaws at Kot in Mhairwarah and killed their chiefs with one hundred followers. In February 1842, his civil duties were enlarged by the jurisdiction of the province of Ajmeer being added to that of Mhairwarah, independently of his command of the Mhair Battalion, and was appointed Commissioner of Ajmeer in March 1853. The Mhair race, amongst whom the latter part of his career was passed are one of the bravest and were amongst the most predatory of the non-Arian races in India, and Colonel Dixon's efforts were directed to civilizing them. Gradually the whole population became attached to industrial pursuits. Colonel Dixon built a new town, strong and well planned, with two miles of wall as a defence and encouraged strangers of various castes, particularly that of shopkeepers and bunneahs to settle in it, capital and a readier means of buying and selling being two of the great wants of the young community. Up to A. D. 1838, the district was wholly dependant on supplies brought in (chiefly by plunder) from a distance. But by 1850 the population had much increased, and exported to surrounding towns and villages considerable supplies of produce; and the sounds of honorable industry were heard not only in the vicinity of Nya Nuggur, but in three or four hundred villages erected in the midst of the jungle. Civilization dawned on the face of those long-troubled hills in some of its most benignant forms.—*Athenæum, No.* 1201, *dated 2nd November* 1850.

DIYALAH, a tributary of the Tigris river on its eastern side. See Tigris.

DIYAN, Malay. Candles.

DIYA-NA-GAHA, Singh., Mesua speciosa.—*Chois.*

DIYAR-BEKR, a town on the banks of the river Tigris. In its prosperity it contained 40,000 houses with numerous cotton looms constantly at work and it enjoyed an active trade in gall-nuts, not only with Kurdistan, but also with India on one side through Bagdad, and with Europe through Aleppo on the other. But about A. D. 1836, it had scarcely 8,000 houses, 6,300 Turks and 1,500 Armenians. See Iran. Mesopotamia; Tigris.

DIYA-SIAMBALA, Singh. Æschynomene aspera.—*Linn.*

DIZABULUS, a Mongol ruler, is described as seated on a couch that was all of gold, and in the middle of the pavilion were drinking vessels and flagons and great jars, of the same metal. At the entrance of the tent there was a bench with cosmos (Kumis or fermented mare's milk) and great goblets of gold and silver set with precious stones. Shah Rukh's description of the constant drinking corresponds exactly to the account of the habits of the Mongol court in Plano Carpini and Rubruquis. Thus the former, on the occasion of Kuyuk Khan's formal inthroning, says that after the homage had been done they began to drink, and as their way is, continued drinking till hour of vespers" (p. 758.) Rubruquis's account of his residence at the court of Mangu Khan is quite redolent of drink, from which one sees how Sultan Baber came by his propensity to strong drink.—*Shah Rukh's Embassy, Yule in Cathay, Vol.* i, *p.* clxiv.

DIZFUL, an important stream in Khuzistan. The bed of an occasional torrent in ancient Susiana, called Ab-i-Bald, which falls

into Dizful is covered with a peculiar kind of pebble, which being filled with little fossil shells resembling grains of rice, is called Sang-i-birinj, or the rice stone. These stones are also found in the river at Shuster, but of an inferior quality, and they are in much request throughout Persia for the head of the Nargil pipe, which is almost invariably composed of this material, set in silver. See Khuzistan or Arabistan, Luristan, Sabi, Susa.

DIZ SIYAH. See Luristan.

DJEMEL, properly Jamal, ARAB. A camel. See Camelus.

DJAKSA, and Kliwon Patteh, in Java, are native officials. Djaksa is a judicial officer.

DJABAIL. Burckhardt, in speaking of a tribe called El Haib, known in these parts, says they have no fixed habitations. They winter, he adds, when the pasture on the mountain fails, on the coast about Djebail, Tripoli and Tortosa.—*Robinson's Travels, Vol.* ii, *p.* 74.

DJINGI, MALAY. Cucumis acutangulus.

DJURNANG, MALAY. Dragon's Blood. See Calamus.

DO, HIND., PERS. Two ; hence dohra, double ; do-patta a sheet of double breadth ; do-shala, a double shawl. Do-Suta double thread ; do-bara twice ; double distilled or over proof spirit.

DO, HIND. Triticum æstivum.

DOAB, HIND. PERS. 'Do' two, and 'ab' water. A tract of country lying between two rivers, a Mesopotamia. In the same way, Panjab—from 'panj' five, and 'ab' waters. In India, people speak of the doabs of the Ganges and Jumna,—of the Godavery and Kistna—of the Tumbudra and Kistna, the Raichore Doab, &c. The doabs of the Panjab are fertile as far as the river influence extends, but have in the centre a high arid tract called "bar." The names of the Doabs of the Panjab are in all instances, ("excepting the first or Jalandhar Doab) the result of a rude attempt to join the names of the rivers on each side into one word. Thus passing the Jalandhar Doab, between the Sutlej and the Beas, we come to the Bari Doab, (Beas and Ravi.) Then between the Ravi and Chenab, the Rechnah Doab ; between the Jihlam and Chenab, is the Jach Doab. The last Doab up to the Indus, takes its name from that river, and it is called Sindsagar, "the ocean of the Sind" or Indus river. The Bari Doab is that district of the Panjab in which Lahore and Umritsir are built, also the sanitarium of Dalhousie near the Kala-top forest and the district of Montgomery to the south of Lahore. The Bari Doab has 1,200,000 acres of untilled land of which 180,000 are covered with jungle. This Doab has two features, viz., a flat alluvial tract, called "dhaya" several miles broad, running along either river and producing tamarisk and jhand. Also an elevated dorsal plateau in the Manja or middle part and called Ganj-i-bar, or bald country. Its soil is intensely arid, often saline, and produces only some salsolaceous plants and a few bushes of jhand. The district lying between the Indus and the Jelum, called the Sindsagar doab is 147 miles broad in the widest part, and whilst it is the largest, is the most sterile and least inhabited, abounding with undulating bare eminences, and rugged declivites. The Rechnah doab, between the Chenab and the Ravi, is seventy-six miles in its widest part, and consists of an arid plain. The Bari doab (sometimes called Manja, whence the Sikhs resident here are called Manja Singh), between the Ravi and Beas, is the narrowest of the doabs. The Julindar or Jalendra doab, the smallest, is between the Beas and Sutlej, and is in a better condition than the other intra-fluvian tracts. The population of the Gangetic Doab is 800 to the square mile, of the cultivated tracts of Pegu 782, of the Central Provinces 365. The anterved of the ancient hindus, is the Doab or Mesopotamia of the Jumna and Ganges. From the narrow point in which it terminates the valley broadens as it stretches away towards the west, embracing a greater and greater area between the Ganges and Jumna, The whole of its immense superficies forms a vast, populous, and busy hive, enriched by human industry, and embellished by human taste. On the map no country is so thickly dotted with great townships and cities, and under the sun, no country makes up such a highly interesting prospect of green fields, orchards, and gardens, in a continuous succession. In this fair savanah man has had his abode from a remote antiquity, to reap rich harvests, and live amidst plenty. Here were the cities of the pre-Vedic Dasya races. Here rose the first cities of the Arya race. In the plains of the Doab, the rajahs of Hastinapoor, of Indraprasthra, and of Kanouj, exhibited the highest power and splendour of hindoo sovereignty. The rich districts watered by the Ganges and Jumna have always tempted the avarice of the foreign conqueror. Here was the residence of the most famous hindoo sages. From this birth-place of arts and civilization wisdom travelled to the west. This Doab is the battle-ground of the Pandoo against the Kuru—of the Ghiznivide and Ghorian against the hindoo; of the Mogul against the Patan—of the Mahratta against the Mogul—and of the British against the Mahratta, where

many a spot is hallowed by tradition, and many a ruin is consecrated by history. In this Doab almost every inch of land is under the plough. From Allahabad to Sheeoabad there are four large cities, and villages at frequent intervals. A similar distance in Bengal is no doubt dotted with the same number of villages but has not one town equal to Futtehpore, Cawnpore, or Mynporee. Here the rural population is more intelligent and spirited than the same class in Bengal. The humblest Doabee lives upon better food, and covers his body, with more abundant clothing than the humblest Bengalee. The cattle here are various. Camels, buffaloes, horses, donkeys and oxen are all made to assist man in his labours. The fondness of the Doabee women for coloured millinery evinces a more refind female taste, and to them may remotely be traced the impetus which is given to the various dye-manufactures of the country. The agricultural women of the Doab use ornaments of brass and bell-metal. The same class in Bengal is in the habit of wearing shell-ornaments, and a pair of Dacca shell-bracelets may sometimes cost the sum of two hundred and fifty rupees. One particular ornament in general use amongst the Doabee women, of both the upper and the lower classes, is the teeka, which is in the shape of a tiny crescent made of gold, silver, or tinsel, according as the wearer is circumstanced. It is fixed with an adhesive substance on the forehead, just between the eyebrows. These teekas are not a little prized and coveted by the Hindoostani young men. They train bulbuls to execute little commissions of gallantry. On a given signal, the bird goes seizes and carries off the teeka from the forehead of a woman, as precious booty, to her pining lover. The Doab, like Bengal, is flat and alluvial. The vast plain is uninterrupted by a single eminence ; but the soil and climate differ in the same degree as does a Hindoostani from a Bengalee. The tall and robust figure, the firm step, the stern eye, and the erect bearing of the manly Hindoostani, are everywhere to be seen. In Bengal the oxen alone form beasts of burden. A Hindoostani cooly takes the load over the waist, and not upon the head. In Calcutta the Baboos do not know what it is to ride. In Hindoostan rural women perform journeys on horse-back and princesses discuss the merits of horsemanship. The people of the Doab have for the most part well-formed features. The rude Jaut has a coarse mean physiognomy—*Tod's Rajasthan, Vol.* i, *History of the Panjab, Vol.* i, *p.* 23 *to* 28 ; *Tr. of Hind., Vol.* i, *p.* 334 *to* 372 ; *Vol.* ii, *p.* 18 ; *The Indian Administration, by H. G. Keene, Tr. Hind., Vol.* ii.

DOABA, a moist rich tract of land between the Swat and Cabul rivers. See Khyber, p. 510.

DOA-I-MASOORA, supplication for the remission of sins.

DOA-I-QOONOOT, prayer of praise.

DOB, Eng., Ethiop., Heb. A bear.

DOBARA-AR'K, double distilled arrack.

DO-BHASHA, Hind., Two languages : Do-bash or Do-bhashi, one who speaks two languages.—*Wilson.*

DOBE, Hind. A brahman who has studied or who teaches two of the four Vedas, hence the term do, two and veda. A caste of brahmans so termed, generally ignorant and low persons, and by profession boxers and wrestlers.—*Wilson.*

DOBINEA. See Acer.

DOBLET, It. Dimity.

DOBRA, a town in Manbhoom.

DOBSOON-NOOR or the Salt Lake, is celebrated over all the west of Mongolia. It furnishes salt, not only to the neighbouring Tartars, but to several provinces of the Chinese empire. The Dobsoon-Noor is less a lake than a vast reservoir of mineral salt mixed with nitrous efflorescence. The latter are of a faint white and friable between the fingers ; they are easily distinguishable from the salt, which is of a greyish tint, and with a shining and crystalline fracture. The lake is nearly ten miles in circumference, and here and there are yourtes inhabited by the Mongols, who are occupied with the salt trade ; they have also Chinese partners, for Chinese take part in every kind of trade or industry. The manipulation to which the salt is subjected requires little labour or science. It consists of nothing more than picking up the pieces, laying them in heaps, and covering them with potter's clay, and the salt sufficiently purifies itself.—*Huc's Recollections of Journey, pp.* 127-8.

DOBUTEE-LUTA, Beng. Ipomœa pescapræ.

DOCHUTI, Hind. See Domala.

DOCKET. This term has various meanings. In trade it is often applied to a short certificate, summary, or memorandum ; In Government correspondence it means the summary or prices on the back of a letter, in English Law it signifies a brief in writing. —*Faulkner.*

DOCKS. Docking of vessels. Along the greater part of the Eastern coast of the Peninsula of India, wherever the rivers can be entered by coasting craft, docks are formed by digging a channel from the river sufficiently large to allow the vessel to be floated into it at high water : a dam is thrown across the channel and the earth being thrown into

the dock thus formed the vessel is floated up above the water mark. By draining off the water the vessel is left high and dry imbedded in earth. This is removed to allow of access to the bottom of the vessel which is propped up by stones, it is usual also to place logs under the keel. A dry dock is thus formed about the vessel at a small expense. The repairs having been executed, it becomes necessary to lower the vessel down to that point when, the dam being removed and the water let in, she can be floated out. For this purpose cables are coiled under her and these coils filled in with earth, the earth under the vessel and logs which were placed under her keel removed, the dock is dug out to its former depth, the vessel is left suspended resting on the coils, by uncoiling the cables gradually the vessel is let down and is then floated out. Ships of 400 tons are thus docked at Coringa.—*Rohde, M.S.S.*

DOCLEA, a genus of Crustacea, viz :—

Doclea ovis, *Edws.* Indian seas.
„ hybrida, *Edws.* Coromandel coast.
„ muricata *Edws.* E. Indies.
Pisa styx, *Edws.* Mauritius.
Chorinus aries, *Edws.* Coromandel.
„ aculeata, *Edws.* Asiatic seas.
„ dumerilii, *Edws.* Vanicoro.

DOCUMENT-BILL, an Indian bill of exchange drawn on London having as collateral security the bill of lading and policy of insurance on the goods, against a part of the estimated value of these the bill is drawn.—*Simmond's Dictionary.*

DODA. See Kelat, p. 493.

DODA, Hind. Papaver somniferum, also Pyrus Kumaonensis, Gul doda, Mal doda, Hind. Leucas cephalotes.

DODABETTA, the highest point on the Neilgherry mountains in Southern India, in lat. 11° 22′ N., long. 76° 44′ E., its height being 8,640 feet. It was made the site of an observatory, under the astronomer at Madras. A record of the meteorological observations was published at Madras in 1848.—*Sykes, Schlagent.*

DODAH. See Suspension bridges.

DODAH, Hind. The unopened cotton pod ; any round seed-vessel, as poppy head.

DODAK, Hind. Eclypta erecta, also Sonchus oleraceus, Convolvulus pluricaulis and Andrachne telephioides. *Bara dodak*, Hind. Euphorbia thymifolia. *Kulfa dodak*, Hind. Euphorbia helioscopia.

DODAK, Hind., also dudal, milky, from dudh, milk.

DODAL, Hind. Spiræa Lindleyana.

DODA MARRI. See Kelat, Káhán.

DODAN, Hind. Sapindus detergens, (mitha) dodia, Hind. Aconitum.

DODAR of Murree hills, Kaghan, &c., Pyrus kumaonensis.

DODDA BHAIRA, also Doddi. See Oriza sativa.

DODDA GODDA, Can ? A wood of Mysore.

DODDERS, species of Cuscuta. In the Himalaya, in the Soane valley they cover even tall trees, with a golden web.—*Hooker, Him. Jour., p.* 38.

DODDI BASHANAM, Tel. Sulphuret of Arsenic.

DODECAHEDRAL GARNET, that beautiful variety called cinnamon-stone or essonite, was discovered by Dr. Benza, in the Neilgherries in the hypogene hornblende rock near the Seven Cairns Hill, where entire portions of the rock are formed almost exclusively of them. The essonite and hornblende are in large separate crystals, imbedded in a paste of compact felspar and hornblende ; the former is very liable to disintegrate, leaving in falling out small cavities in the rock.

DODECATHEON MEADIA, a genus of the Primulaceæ ; ornamental plants, when in flower, colours, lilac, purple and white, grown in a light soil and cultivated by dividing the roots.— *Riddell.*

DODHAN, Hind. of Panjab, Sapindus acuminatus, *Wallich*, Sapindus detergens, *Roxb., Royle.*

DODOH, Jav. In Java a posture of humility which inferiors assume when approaching superiors. It is similar to the custom in Burmah, when the superior sits on his legs.

DODONEA BURMANNIANA, *DC.*

Sanatta. Hind.	Ghuraske of Trans-Indus.
Aliar. „	Veravena. „
Ban men du of Ravi.	Shumshad. „
Mendru of Beaz.	

A handsome small evergreen shrub, well suited for hedges, for which it is often used, and generally called "bog myrtle."—*Dr. J. L. Stewart.*

DODONEA VISCOSA, common on the Neilgherries ; wood elastic and useful for tool handles.—*McIvor.*

DODRU, Hind. Ilex dipyrena.

DODUGA, Tel ? A wood of the Northern Circars.

DODUR, Hind. Cæsalpinia sepiaria.

DODWAR KHATAI, Hind. Cedrus deodara.

DŒLER, Dan. Deals.

DO-FASLI, Hind. Land giving two harvests in the year.

DOFLA. Tribes occupying the hills forming the northern boundary of Assam. In one of their districts, that of the Char Douar or

Four Marches, no less than 180 petty chiefs are said to hold authority in the Dofla villages. See Dophla, India.—*Latham.*

Kuon, κυων GR.	Kuka, TEL.
Kutta, HIND.	

Several authors have held the view that the dog is derived from the wolf, but the various kinds of dogs are commonly believed to have been derived from one extinct species. On the monuments of Egypt of date B. C. 3,400 to B. C. 2,100, several varieties of dogs are represented, and on one Assyrian monument of date B. C. 640, an enormous mastiff is figured, evidence of the fact of the long existence of many varieties. A predilection for the society of man seems almost inherent in the dog, and when we trace back its history, as far as the refuse heaps of Denmark and the pile folks of the Swiss lakes or, what is still more suggestive, the representations on the Egyptian temples and tombs, the great fact is irresistible, that man and the dog have shared each others company for possibly a longer period than any other creatures; and whether the love at first was gradual or not, it has now, at least as far as the brute is concerned, become instinctive. Moreover, when we think of the vast periods embraced by the Egyptian monuments of antiquity, and the time it must have taken to develope even one variety from the feral stock, and note the fox-hound or turnspit of 4,000 to 5,000 years ago, it may well be conceded that the dog, of all four-footed beasts, has a claim to our kindness and protection. The Himalayan wild dog, when taken young, is easily tamed, and this rule would seem to hold good with the wild races of other countries, indeed although not generally acknowledged, the wolf, jackal and hyena, get much attached to man, if carefully reared and treated with kindness. The semi-domesticated dogs in common with the wild species, have erect ears, and this would seem to become more 'pronounced' the nearer they assimilate to the latter. This circumstance has been noted in respect to domesticated sheep, goats, &c., when left more or less to shift for themselves, as is apparent on the Himalayas and Alps. In natural history, Canis the dog takes the following position,

Order Carnivora.

Amongst the hindoos of India and the Indian mahomedans, the dog is regarded as an unclean animal. With the Cree, Ojebway, Swampy and Sioux, the dog is supposed to be the most acceptable sacrifice to the offended deities, five dogs being the common number for a propitiatory offering. The unclaimed dogs of Bombay, of Egypt, Mecca and Constantinople, are a sad nuisance, in Bombay being protected and fed, but not housed, by the Parsee inhabitants, as well as by Hindoos. An expiring Parsee requires the presence of a dog, in furtherance of his departing soul, and, after the Sug-did or dog-look, the exposed body is speedily consigned to a banquet of the vultures. In Rangoon hundreds of Pariah dogs infest the town, chasing and tearing to pieces goats, &c., by day, and howling to their hearts content the live long night? the greatest number of dogs are found near the Kyoungs. The greyhound of Bamian is fleet. It has long shaggy hair on the legs and body. The dog, which is known in Bengal by the name of the Nepaul dog, is, properly speaking, a native of the upper and lower Thibets, whence it is usually brought to Nepaul. It is a fierce and surly creature, about the size of an English Newfoundland, and covered with thick long hair. It is reckoned to be a good watch-dog, and never to sleep at night. Another animal to be found in the Nepaul hills worthy of description is

the Dhole or wild-dog. These animals are found in packs varying from fifty to two hundred, and the havoc committed by them among the flocks of sheep and hill cattle is incredible. Their destruction of deer also is immense, and their mode of hunting may be worthy of mention. In size the wild-dog is little larger than the common jackal of India, but longer in the body and possessing much greater power, with a very formidable set of jaws: colour, a rich reddish-brown, with scenting qualities of the highest order. Soon after nightfall the pack assemble at a given cry, when they disperse in threes and fours in search of game. The first party that hit off the trail, open, when the whole pack rush to them, and when all are assembled fasten to the trail and off they go. The deer soon become alarmed and double, when the pack immediately tell off in parties, each one rushing to the different passes for which deer are known to make, and on the deer attempting to pass either, it is immediately seized by the party, who utter a simultaneous cry, and the whole pack then rush in and the deer is at once devoured. Fresh game is next sought, and in the same way destroyed, and this species of hunting is continued according to the size of pack, till all their appetities are appeased, when they retire to their almost inaccessible fastnesses in the rocks, and remain for three or four days, until hunger again drives them forth on another excursion. From their destructive qualities, the wild-dogs hardly ever remain longer than a month in the same locality, having in that time effectually scared away all the deer for miles round. Captain Smith never knew them to attack man, and even when severely wounded they will only snap after the manner of a wounded jackal. When deer are not procurable, they will attack even bears. Mr. Arthur Grote, C. S., sent to the Bengal Asiatic Society from Chaibasa, Central India, the skins and skeletons of a mature female, and male half-grown, of the ordinary wild-dog so called, of this country. These animals are specifically identical with a particularly fine living adult male sent down from Upper Assam; and this appears to be the ordinary species alike of the Himalaya and of Central and S. India, Canis Dukhunensis, *Sykes* and C. Primævus, *Hodgson;* and a Malayan specimen in that museum, which is supposed to be C. sumatrensis, Hardwicke, differed only in the considerably deeper tint of its rufous colouring. The dogs of Kanawar are of a large ferocious breed, resembling wild beasts in their nature; they are covered with black wool, and are very averse to strangers, whom they often bite and tear in a most shocking manner; they are generally chained during the day, otherwise it would be dangerous to approach a village. The fleece, especially of the young ones, is almost equal to shawlwool. Dogs are found domesticated, particularly to the northward, and the breed of Bisehur is noted for its size and hardihood. The finest dogs of this breed bear a considerable resemblance to a mastiff, but retain a good deal of the cur. Their colour in general is black and white, with a little red occasionally; their hair is long and thick, and the tail long and bushy, curling up behind: their head is somewhat long and pointed, like the common shepherd's dog. They are often very fierce, and sometimes attain a considerable size, but are seldom so large as a full sized mastiff. These animals are furnished with a down under their long shaggy hair, which is as fine and soft as shawl wool; this comes off easily in warm weather, and is regularly shed with the hair. Every animal is similarly furnished in this cold country. The natives use these as sheep-dogs, in the same way as those of other countries, and also for hunting all sorts of game, even birds which they tire out in flying; and some were valued at a very high price. From a genealogical table in the Encyclopædia Britannica, it appears that the common Turkish dog is the parent stock of most others known in Europe. —*Darwin's Variation of Animals and Plants; Jerdon's Mammalia, Eng. Cyc.; Hind, River Exploring Expedition; Smith's Nepaul; Jour. Asia, Soci. of Ben., Nov.* 1856, p. 440; *Captain Gerard's Account; Fraser's Himalaya, Mountains, p.* 354; *Robinson's Travels, Vol.* ii, *p.* 356.

DOGANA RUKAT. Vide Rukat.

DOGAR, a tribe in the N. W. of India, predatory and pastoral, following mahomedanism but claiming to be Chohan rajpoots. The other converted Chohan, however, believe them to have been Jat and Gujar. The raja of Kashmir is a Dogar. In the 18th century they occupied a considerable tract on the banks of the Sutlej and made themselves formidable to the mahomedan government of Delhi. Members of them rose to power as feudatories of Ranjit Singh, and on the fall of that chief were acknowledged by the British as rajahs of Jamu and Kashmere. The name is also pronounced Dogra in the dialects in the Panjab hills.

DOGBANES, the Apocynaceæ, are trees and shrubs, of which the oleander is a conspicuous example. But some are herbaceous, as in the case of the Vinca, or Periwinkle, a climbing plant with trailing twigs. The Nerium piscidium of Roxburgh, is common in the Khassya or Silhet Mountains, and there

called Echalat. It is an extensive perennial climber. Its bark contains a large quantity of fibre, which the natives use for the same purposes as hemp. Dr. Roxburgh, in steeping some of the young shoots in a fish-pond, in order to facilitate the removal of the bark and to clean the fibres, found that many, if not all the fishes, were killed. Hence the specific name which he applied. Dr. Wight formed the plant into a new genus, Echaltum.—*Fl. Ind.*, *Vol.* ii, *p.* 7.

DOGGALI KURA, Tel. Amarantus polygamus.—*Linn. Roxb.*

DOGHAN. See Kaffir.

DOGRA also written Dogur, a tribe scattered over various tracts of the North-west of Hindoostan. There are a few in Hansi, Sonam and Ferozepoor, which latter place, together with a considerable tract along the bank of the Sutlej, they held for a long time during the last century in almost undisputed sovereignty. Their occupation is divided between pasture and plunder. They are mahomedans, and state that they were originally Chouhans; but the Caim Khanee and other converted Chouhans of those parts will not acknowledge the fraternity, asserting that Dogurs were nothing but Jats and Goojurs. This appears to be the case, notwithstanding all their emphatic negations. Dogurs are held in no consideration by their neighbours, but in former times they were much dreaded on account of their predatory habits, which a civilized neighbourhood and a strong Government compel them now unwillingly to relinquish. Their personal appearance is in their favor. They are a tall and muscular race, and are generally remarkable for having large aquiline noses.—*Elliot's Supp. Gloss.*

DOGS MUSTARD, Eng. Cleome viscosa.

DOG-SKIN. See Leather.

DOGS TONGUE FISH, is shaped like the sole; it attaches itself to the bottoms of boats, and makes a sonorous noise, which is more musical when several are stuck to the same plank and act in concert.—*Bowring's Siam.*, *Vol.* i, *p.* 11.

DOG-WOOD, Eng. Cornus macrophylla, *Wall.*

DOH, a name in Java for the horsehair like fibre of the Ejoo or Gomuti palm. the Arenga saccharifera, Labill.—*Simmond.*

DOHADA, a term which usually signifies the desire or longing of a pregnant woman, to which the hindoos attach equal importance as did the nations of Europe, p. 206.

DOHAGUN. Amongst the hindoos Sohagun, is a woman who becomes satí previous to her lord's death. Dohagun, one who follows him after death.

DO-HARTHA. A well with two wheels. See Do-mala.

DOHEE, Hind. ? A tree of Chota Nagpore, with a soft, white wood.—*Cal. Cat. Ex.* 1862.

DOING NUK. A hill race, in Aracan on the upper waters of the Mayu river. They are budd'hists, their language is a corrupt Bengalee and they call themselves Kheim banago.

DOIPHORYA, Mar. The name of a class of hindoo mendicants who knock their heads against stones to enforce compliance with their demands; hence any importunate petitioner.

DOITYA, Sans. The sons of Ditee.

DOITYARI, Sans. From doitya, a giant, and aree, an enemy.

DOITYA-GOOROO, Sans. From doitya, a giant, and gooroo, a teacher.

DOIVUGNU, Sans. From doivu, fate and gna, to know.

DOJORA. A river of Bareilly.

DOK, Jav. Gomuto, Malay. Arenga saccharifera.

DOKA, Hind. ? A tree of Chota Nagpore, with a hard red timber. *Cal. Cat. Ex.*

DOKE-KA-DET, Burm. Connarus monocarpus. *Linn.*

DOKESWA. Hind. Elettaria cardamomum medium.—*Wh. and Maton.*

DOKHMA, or Tower of Silence, the place of sepulture for the dead of the Parsees, also said to be the name applied to the fire temples of the ancient fire worshippers overhanging the Caspian sea.

DOKHN. Arab. Setaria Italica.

DOKHTAR, Pers. A daughter: it is pronounced much the same as that word is in Scotland. It is from the Sanscrit Duhitri, one who milks the cow, a milk maid.

DOKOA, a pigmy African race described by Dr. Krapf, 4 feet high. They pray with feet in the air and their head on the ground, and eat snakes, ants, mice.

DOKRA, a low caste of Singhbum.

DOKUN, Arab. Setaria Italica.

DOL, in Bengal a social section of high caste hindoos, each presided over by Dolapatti, who summons the section together on marriage and death festivals.

DOL in Persian, also Dol Dolab and Dolaba, a revolving wheel of buckets for drawing water, usually called a Persian wheel, and such as is used in dredging machines: in Oordoo, Dol is written either with the Persian or Hindee D.—*Elliot*

DOLA in Yemen is a government officer much such another as a Pacha in Turkey, only acting upon a narrower stage.—*Nieburh's Travels, Vol.* ii, *p.* 85.

DOLA. Bier. Dola Runka, the war bier. Dola-Yatra.—*Tod's Rajasthan, Vol.* i, *p.* 600.

DOLAI. See Kelat, p. 492.

DOLDRUMS, a term given by seamen to the zone or girdle of the equatorial calms, lying between the N. E. and S. W. trade winds. Here long calms alternate with dreadful storms. Besides being a region of calms and baffling winds, it is a region noted for its rains and clouds which make it one of the most oppressive and disagreeable places at sea. The ships from Europe for India and Australia have to cross it. They are often baffled in it for two or three weeks ; then the children and the passengers who are of delicate health suffer most. It is a frightful grave-yard on the way-side to those eastern lands.—*Maury's Physical Geography, p.* 175.

DOLI, grounds and houses, established by hindoo religious bodies in towns.

DOLICHOS, a genus of plants, belonging to the natural order Fabaceæ, or the bean tribe ; about 32 species of Dolichos are known. Cattle eat the straw of D. pilosus, the Takurikulay of Bengal ; several varieties of D. sinensis are cultivated, and D. uniflorus, the common horse gram plant is grown in many parts of India. Dolichos Pilosus, with downy leaves and pods, abounds in some sections of Tenasserim. In Japan a kind of butter, called mijo, is obtained from a species of the dolichos bean (Dolichos soja).—*Simmonds, Mason.*

DOLICHOS ALBUS, *Lour.* Syn. of Lablab vulgaris.—*Savi.*

DOLICHOS ARBOREA, *Roxb.* Syn. of Pongamia glabra, Vent.

DOLICHOS BENGALENSIS, *Jacq.* Syn. of Lablab vulgaris.—*Savi.*

DOLICHOS BIFLORUS, *Roxb.* Syn. Dolichos uniflorus.—*Lam.*

DOLICHOS BULBOSUS, *Rumph.* Syn. of Pachyrhizus bulbosus.

DOLICHOS CATIANY, *Roxb.*

D. sinensis *var.* orthocarpus.

Kulti, HIND.	Ulavallu, Ulava, TEL.

It is used in Southern India for cattle and is the common food for horses in the southern part of the peninsula. It is a very pleasant tasted pulse, and is used by the lower classes as an article of diet in curries. It is grown in fields after the rains. When given to horses it must first be boiled; they soon become very fond of it, and keep in as good condition as upon any other grain.—*Ainslie, p.* 238.

Moneela gram oil, ENG.	Varcadalai yennai, TAM.
Varoosanigaloo nuna, TEL.	

is a pale yellow clear oil.—*Drs. Roxburgh, Voigt, J. L. Stewart.*

DOLICHOS VIROSA, *Roxb., Rheede.* Syn. of Canavalia virosa, *W. & A.*

DOLL OR PIGEON PEA. Cajanus indicus.

DOLLA KORAWA. See India.

DOLLAR, a coin current in the United States of America, parts of South America, China, and some of the Continental States of Europe. It is usually the largest silver coin of a country. The American dollar is divided into 100 cents., and is valued at 4*s.* 2*d.* There are Sicilian, Austrian and Spanish dollars, which are estimated according to their weights and fineness.—*Simmond's Dict.*

DOLLY, a river of Sylhet.

DOLMEN, a table stone used by ancient races, as a monument for the dead.

Cromlech, is a word applied by the British to widely different structures. Its true meaning is a circle of upright stones, like the "hurlers" and "nine maidens" in Cornwall. The cromlech of the British antiquarian is the same as the Welsh and English "quoit," such as Arthur's quoit or coetan, near Criccieth, Lanyon quoit and Chun quoit and others in Cornwall, Stanton Drew quoit in Somersetshre, the Kitts-Koty or quoit, near Maidstone and the Coit-y-curoc in Guernsey all of them circles of upright stones. Professor Sven Nilsson (*On the Stone Age, p.* 159,) defines the English cromlech as synonymous to the French dolmen, the Scandinavian dös and the dyss of Denmark, consisting of one large block of stone supported by some three to five stones arranged in a ring and intended to contain one corpse only, several of these dorsar being sometimes enclosed in circles of raised stones. Following, however, the nomenclature given by the late Dr. Lukis, we cannot be far wrong in assigning the word cromlech to all elaborate megalithic structures of one or more chambers, in which category the passage graves may be included. The Dolmen (Dol a table, moen a stone), is, as its name implies, of different structure. The cromlechs of Jersey and the adjacent islands partake of the character of the French Grottes aux Feés, the fairy's grotto, as well as the Gangrifter, the gallery tombs of the Swedes, the jettestuer or chambered tumuli of the Danes and the German Hunenbetten. In China, the chambered tumuli associated with megalithic avenues have attained their greatest development. The great tomb (the Ling or resting place of Yung Lo of the Ming dynasty) thirty miles from Pekin, consists of an enormous mound or earth barrow covered with trees, and surrounded by a wall a mile in circumference. In the centre of the mound is a stone chamber containing the scarcophagus in which is the corpse. This chamber or vault is approached by an arched tunnel, the entrance to which is bricked up. This entrance is approached by a paved causeway passing through numerous arches, galleries,

courts and halls of sacrifice, and through a long avenue of collossal marble figures sixteen pairs of wolves, kelins, lions, horses, camels, elephants, and twelve pairs of warriors, priests and civil officers.

DOLOMIEA MACROCEPHALA, *DC.*

Dhup, Dhupa, Gugal, PANJAB. Sutlej. | The Root. Pokhar-mul, PANJAB.

Not uncommon from the Sutlej up to the Indus, at from 10,500 to 13,000 feet, often growing on the crests of ridges. The odorous root is locally used as incense offered at shrines and to rajas, and the flowers also are placed in temples on the Sutlej.—*Dr. J. L Stewart.*

DOLOMITE, a magnesian lime-stone, used for building and for lithographic stones.

DOLPHIN. This name is applied by southern-going sailors to two fishes, one the brilliant Coryphæna hippuris *Linn.*, the Dorado or Dolphin proper, of a brilliant blue or purple, the other the Dolphinus or Porpess. Naturalists recognise about thirty species.—*Bennet, p.* 21.

DOLPHINUS PLUMBEUS, *Cav.* Syn, of Steno Malayanus.

DOLPHIN VENTRE Roux of Paris Museum. Steno Malayanus.

DOLA, SANS. From dool, to swing.

DOM or HALI, a low caste in northern India, employed as makers of ropes, fans, baskets and mats. In Oudh, the Dom, is a sweeper, carries away the dead; is often a musician and his wife the Domini an actress who performs in the private apartments of women. In Kumaon in North-western India, engaged in basket making and wicker work. They have dark almost black skins and crisp curly hair. The Dom of Kumaon, is dwelling amongst the general population in the north of India, under the Himalaya and in the Kumaon Hills. The Dom were once a considerable tribe and are still a numerous helot section of the population being in fact the only inferior class and ordinary laborer as well as artizans. The Dom are very black with curly hair and altogether aboriginal in appearance. The Dom or Domar in the labor market of northern India take the place of the Mang of the south of India. Dom, of northern India are rope, fan, basket and mat-makers. In Oudh and Bengal the Dom are sweepers, and carry dead bodies. The Dom are also musicians. The Mirasi Dom are mahomedans and called Mir and Mirasi. They seem to be one of the aboriginal tribes of India. Tradition fixes their residence to the North of the Gogra, touching the Bhur on the East, in the vicinity of the Rohini. Several old forts testify to their former importance, and still retain the names of their founders, as for instance Domdiah and Domungurh. Ramgurh and Suhunkote on the Rohini are also Dom forts. Buchanan considers that the Dom are the same as the Dom Kutur (Domtikar). He also conceives that the Dom expelled the Tharoo and were afterwards expelled by the Bhur: There are sevaral Dom or Domra scattered over the Western Districts of Oudh and in Bundlecund and Saugor, who are engaged in the menial occupations of making ropes, fans, mats, and such like articles. In Oudh the term Dom is applied to sweepers as the Bhungee and Chookra are elsewhere. Dom is also the name of a tribe of mahomedans descended from Bhat. They are perhaps more generally known by the name of Meerasi and Puk'hawuje. The name of Meerasi is abbreviated into Meer: and thus the Meer of the Kala Nuddee, after whom Meerapoor is called, having assumed this distinguished title, are frequently able to conceal the truth of their being really descended from the Meerasi Soorkh. In the great belt of forest land intervening between the mountains and the plains are tribes whose characters are scarcely yet known. One of these the black curly haired Dom of the North-west provinces are generally regarded as a remnant of the original stock which the intruding Arians displaced, the huts of the Dom or Hali being on a low range. The Dom are hereditary bondsmen to the Rajpoots. They are supposed to be the same as the Dom of the Santal Hills, and the Dumi still a well defined tribe in Sub-Himalayan Nepal. Besides the Dom of Gurhwal, in the North-west provinces, there are wandering and wild tribes, named Bhur, Damak, Kanjar, Pasi Kumboh, Nat Saussee, Gond and the Tharoo in the Terai—the Pasi also occurring in Oudh.—*Wilson; Lathame; Campbell, pp.* 16-125, *Buchanan, Eastern India, Elliott Supplement.*

DO-MALA, HIND. A large well, furnished with a double "harth" or Persian wheel.

DOMANG, a low caste race in Kunawar, the same as the Dom of Kumaon.

DO-MAT, HIND. Soil, part clay and part sand, hence the name, "two earths," do-mat.

DOMBA, OR DOMBAR, *Karn.* also domar.

Dommara, TEL. | Dombari, MAR.

A tumbler, a rope dancer, a juggler, probably a vernacular modification of Dom. The Domar, are also known in the south of India as the Kollati or Khelati. The young women are models of physical strength, they are not restrained from intercourse for money. They are in small clans in the centre and south of the peninsula of India.

DOMBA GASS, Singh. Calophyllum inophyllum.—*Linn.*

DOMBAKEENA, Singh. Calophyllum moonii.—*Wight.*

DOMBA OIL, a fragrant fixed oil obtained in India from the seeds of the Alexandrian laurel, Calyophyllum inophyllum. It is used for burning and for medicinal purposes.—*Simmond's Dictionary.*

DOMBE, Singh. Calophyllum inophyllum, *Linn.* A soft, coarse, open-grained, light Ceylon wood, bearing a strong resemblance to inferior Honduras mahogany, takes a good polish, and presents a pretty, curled pattern; perhaps not a very durable wood, at all events in its native country.—*Ex. p.* 1851.

DOMBERA. See Rhodia.

DOMBEYA, a genus of plants belonging to the natural order Sterculiaceæ, inhabiting the East Indies and the isles of France, Bourbon and Madagascar. The name Dombeya was also applied to the plant now called Araucaria excelsa. The bark of D. Spectabilis is made into ropes in Madagascar.—*Eng. Cyc., p.* 385, *Roxb., Voigt.*

DOMBEYA ANGULATA, *Cav.* Syn D. tiliæfolia, *Roxb.*, is a shrub, native of Bourbon, with rose coloured flowers like those of the common oleander, leaves cordate, acuminate, and serrate; old ones three or five-angled; flowers in corymbs, of a pretty rose colour.—*Roxb., Riddell, Voigt.*

DOMBEYA EXCELSA, *Lam.* Syn. of Araucaria excelsa, R. *Br.*

DOMBEYA PALMATA, *Cav.* A shrub; leaves palmate, resembling the common castor oil plant; flowers, in large terminal corymbs, rose coloured, appear in September and October.—*Riddell.*

DOMBEYA TOMENTOSA, a small tree with rose coloured flowers.—*Riddell.*

DOMEA. See Touking.

DOMESTIC CAT, *End.* Felis catus. See Felis.

DOMETT, a thin kind of flannel, of which the weft is of wool, the warp of cotton.—*Faulkner.*

DOMINOS, a group of several islands moderately elevated near Lingin in lat. 0° 2′ to 0′ 10″ S.—*Horsburgh.*

DOMNEEAN, Hind. Female musicians.

DOMOLO, Jav. Wormwood.

DOMOOTEE, Beng. Hydrocera triflora.

DOMTIKAR, Hind. A division of Sarwaria brahmans.

DON. D., a botanist, author of the Prodromus Flora and Nepaulensis.

DON or clod-crusher is drawn with two bullocks; the driver stands on the implement when working it. The 'Kooloo' is used after the clod-crusher for levelling the ground. With the scarifier removed, it is used for covering is the seed after it is drilled in. The Koree, or drill used in rice cultivation.

DONA, Sans. Wormwood. Artemisia Indica. A. elegans, also Daphne oleoides.

DONA, a leaf so folded up as to hold anything.

DONABEW, a town in Pegu, taken 2nd April 1825.

DONACIA, one of the Coleoptera of Hong Kong.

DONAX ARUNDASTRUM, *Lour.* Syn. of Maranta dichotoma—*Wall.*

DONDA. Tel., also Bimbika. Tel., Coccinea indica.—*W. and A.*, also Momordica monodelpha.—*Roxb., Rheede.*

DONDA KURA, Tel. Bryonia grandis.

DONDRA HEAD, the most southern point in Ceylon, is in lat. 5° 55′ N., long 80° 37′ E.—*Horsburgh.*

DONDU, Hind. Tubes of the corolla of the Nyctanthes arbor-tristis.

DONG. See Yak.

DONGAR-KOLI, Mar. A lawless tribe inhabiting the hilly country. See Coolee.

DONGI-DONGI, of Maccassar. Eucheuma spinosa, Plocaria candida, *Nees*; the Agar Agar of commerce.

DONI. A vessel used in the coasting trade of Coromandel, from which they often carry cargoes to Ceylon and the Gulph of Manaar. The Doni, of the Coromandel coast is a huge vessel of the ark-like form, about seventy feet long, twenty feet broad, and twelve feet deep; with a flat bottom or keel part, which at the broadest place is seven feet; and at the fore and after parts of the vessel it breaks into ten inches, which is the siding of the stem and stern-post. The fore and after bodies are similar in form midships. Their light draught of water is about four feet and when loaded, about nine feet. These rude unshapely vessels trade from Madras and the coast to the Island of Ceylon; and many of them to the Gulf of Manaar, as the water is shoal between Ceylon and the southern part of the continent. They have only one mast, with a long sail; and are navigated from land to land, and coastwise, in the fine season only.

DONKEY, the ass, the gad'ha of the Urdu speaking races of India. Gadhe-ka-hal. Hind. literally a "Donkey's plough." Before the British domination in India, it was not uncommon to yoke donkeys in a plough and drive them over the ruins of a captured fort, as a mode of showing supreme contempt for the vanquished enemy. The furrows thus

raised were levelled by the Loheki-mye, or iron harrow. Horace says (Carm. I. 16.)

* * Exitio gravi
Stravere, et altis urbibus ultimæ
Stetere causæ, cur perirent
Funditus, imprimeretque muris
Hostile aratrum exercitus insolens.

This mode of wreaking vengeance has been in especial favor with eastern nations, and was practised by Jenghis Khan and Timoor with unrelenting severity. Hence the common expression "I shall sow barley where you now stand" as in the vaunt of the bandit minstrel Kurroglow, at p. 138 of "Popular Poetry of Persia." Gudhe-par-charhana, literally to seat upon a jackass, is a punishment more commonly known by the Arabic word Tusheer, publication, celebration; which is rendered by Golius, "Per urbem duci jussit sontem in exemplum; fere asino aut camelo impositum."—*Elliot's Supp. Gloss.*

DONKIA, a pass in Sikkim, in lat. 27° 56′, long. 88° 48′. The crest, is 18, 466 ft. above the sea: Tibet is visible from its summit. Dr. J. D. Hooker's sketch of the grand but most desolate panorama beheld by him from the summit of the Donkia Pass ought to be familiar to all readers; and he elsewhere remarks that no village or house is seen throughout the extensive area over which the eye roams from Bhomtso, and the general character of the desolate landscape was similar to that seen from the Donkia Pass. The kiang grazing with its foal on the sloping downs, the hare bounding over the stony soil, the antelope, the *Tchiru* and also the *Goa*, *Procapra picticaudata* of Hodgson, scouring the sandy flats, and the fox stealing along to his burrow, desert and Tartarian types of the animal creation. The shrill whistle of the marmot alone breaks the silence of the scene, recalling the snows of Lapland to the mind; while the kite and raven wheel through the air, with as steady a pinion as if that elevation possessed the same power of resistance that it does at the level of the sea. Still higher in the heavens, long black V-shaped trains of wild geese cleave the air, shooting over the glacier-crowned top of Kinchinjhow, and winging their flight in one day, perhaps, from the Yaru to the Ganges, over 500 miles of space, and through 22,000 feet of elevation: one plant alone, a yellow lichen (*Borrera*) is found at this height, and that only as a visitor for, Tartar-like, it migrates over the lofty slope and ridges, blown about by the violent winds. He found a small beetle at the very top, probably blown up also; for it was a flower-feeder, and seemed benumbed with cold.

DONTARI KOONTA, Uria. Mimosa rubicundis.

DONWAR, a tribe of cultivators in Goruckpur, Ghazipur and Azimgurh, supposed to be brahmins, or Bhuinhar. They call themselves Rajpoots. We find zemindars of this mixed Rajpoot-Brahmin tribe in the Perguunah of Sidhooa Jobna in Goruckpur. They were strong enough at one time to establish a principality on the Kosi in western Tirhoot and there are several monuments still existing in that neighbourhood which attest the power of the Donwar Raja, Kurna Dee.

DOOAR, from Dwar, Hindi, a gate or entrance, a term applied to the mountain passes leading from the plain at the foot of the Himalayas, into Bhotan, also to the rich and fertile level tract itself. The Dooars are occupied by an Indian race. They are 18 in number: their breadth varies from ten to twenty miles and their extreme length 220. They are in a narrow tract extending along the foot of the lower range of the Himalaya, and very unhealthy and are inhabited by a tribe called the Mechi. The new boundary on Bhootan along the West Dooars district commences from the confluence of the Jetee Nuddee with the Dechee or Juldoka river. It runs along the foot of the hills to the Alaikooree or Pana Nuddee, up to which point 37 platforms mark the boundary. The boundary along the Buxa Hills commences from platform No. 37. From No. 37 to 38, the boundary runs along the northern bank of Alaikooree or Pana Nuddee called the Western branch of the Deemah Nuddee. From No. 38, along Gecheejo Pass to No. 39, Gecheejo Hill on the Sinchula Range. From thence on the crest of the Sinchula Range to No. 41, Jyntee Hill. From No. 41, along the slope of the hill and Jyntcechoo Nullah, known as the eastern branch of the Jangtee Nuddee, to No. 42, on the Jangtee Nuddee where the Buxa Hills terminate. From No. 42 to 47, the boundary again runs along the foot of the hills to the Thingchoo or Rydak river. For a distance of 86½ miles, forty-seven marks for platforms have been erected. The West Dooars include the tract of country at the base of the Bhootan hills from the Teesta river to the Sunkos river on the east. It is about twenty-five miles broad, and terminates on the northern limits of Rungpore Cooch Behar. The portion east of Dooar Chamoochee to the Rydak river was surveyed during season 1866-67. Of the total area of 956 square miles, 47 square miles only are under cultivation, the remaining 909 square miles are covered with grass and forest. The area of the Buxa hills is fifty square miles. The Sinchula range is five miles from the

foot of the hills. Buxa, about 1,700 feet above the plains, is situated midway ; it is surrounded on three sides by hills and only open to the south. A regiment of Native infantry is stationed at Buxa ; the right picket occupy the Umunea hill, 2,086 feet high, and the left picket, the Chereleeka hill 2,457 feet high. Limestone is plentiful all round Buxa and coal has been found near the sources of the Deemah Nuddee. The total number of inhabitants is 12,564, exclusive of the troops and camp followers at Buxa, or thirteen to the square mile. They are detailed below :—

Rajbungsee or Hindoos.	9,380	Toto	84
Mussulmen.	605	Bhotia	67
Mech and Garrow ...	2,428	Total ..	12,564

—*Ann. Ind. Adm., Vol.* xii, *p.* 87.

DOODH-LUTA, Beng. Oxystelma esculentum.

DOODH-PAYRA, Hind. Sweetmeats.

DOODH-PITULEESHIM, Beng. Lablab falcatum, majus.

DOODHYA, Hind. A preparation of Aconite root.

DOODIA-PICTA, *Roxb.* Syn. of Uraria picta.—*Desv.*

DOODIYA-KULMEE, Beng. Calonyction Roxburghii.

DOODYE. A river near Nandnair, in Gurrawara.

DOOGDHA. A tribe of inferior brahmins on the borders of Futtehpoor and Allahabad. They date their origin from the time of Jye Chund, who figures in so many fabulous legends of those parts. Those by the *Pande*, who were Doogdha brahmins, (*i. e.* of mixed blood) received 48 villages, of the greater part of which they are in possession to this day.—*Elliot's Supp. Gloss.*

DOOB, Hind., called Doobla in Bengal, a grass, Agrostis linearis *Kœn*, Cynodon dactylon, *Royle.* The nutritive qualities of Doob have caused it to be a great favorite with the natives of India, and frequent allusions are made to it by the poets. It is the Hariali of the people of Iudia. Its tenacity, whenever it once fixes its roots has caused it to be used in a common simile when the attachment of zemindars to their native soil is spoken of. See Graminaceæ.

DOODAH, Guz. Cordage-Rope.

DOODEA, and Sookeha, rivers near Nursingghur.

DOODH, Hind. Milk.

DOODHIA KI LAKRI, Hind. Wrightia antidysenterica.

DOODH-KULMI. Ipomœa turpethum.

DOODH KA MAHAENA, Hind. The tenth month, so termed, literally the milk month.

DOOKKON, Arab. Sphæranthus indicus.

DOOLAGHONDI, Tel. Tragia involucrata.

DOOLAGOVILA ISARA, Tel. Aristolochia indica.

DOOLA KOODA, Mahr. Nerium antidysentericum.—*Linn.*

DOOLAL-CHAMPA, Beng. Hedychium coronarium.

DOOLALA, Sans. From Doorlabha, obtained with pain.

DOOLB, Arab. Platanus orientalis.—*Linn.*

DOOLEE. A palanquin or palkee, a litter, with wooden frame work and canvas ; a coarsely made palanquin, light and airy, generally used for carrying the sick.—*Burton's Scinde, Vol.* ii, *p* 263.

DOOLEE-CHAMPA, Beng. Sphenocarpus grandiflorus.

DOOLING, a river near Goonteah in Midnapoor.

DOOM or DOUM, the Gingerbread palm-tree exclusively inhabiting Upper Egypt, especially the neighbourhood of Thebes, whence it is named *Cucifera Thebaica*. Its stem, instead of growing without branches like other palms, forks two or three times thus assuming the appearance of a Pandanus. Clumps of it occur near Thebes. The fruit is about the size of an orange, angular, irregularly formed, of a reddish color, and has a spongy, tasteless, but nutritious rind. The albumen of the seed is hard and semi-transparent, and is turned into beads and other little ornaments. Gærtner described it under the name of *Hyphæne coriacea*. It is known in Egypt as the Gingerbread-Tree, because of the resemblance of its brown mealy rind to that cake.—*Eng. Cyc. p.* 385.

DOOM. In Affghanistan a class of servants attached to families of rank whose wives serve in the women's apartments and are go betweens in marriage negotiations.

DOOMA, Hind., also written dúma, is the name of the leather case in which tea is imported from Thibet into Ghurwal and Kumaon. It contains about three seers, and bears a price of six or seven rupees.

DOOMBA-STACUM, Tel. Alpinia galanga.

DOOMBUR. See Jogi.

DOOMBUR, Hind. Ficus glomerata.

DOOMNAR. A place famed for its brahminical caves or rock-cut temples. The finest specimens are at Ellora and Elephanta, though some good ones exist also on the

island of Salsette, and at Mahabalipur. In form many of them are copies of and a good deal resemble the budd'hist Vihara. But they have not been appropriated from the budd'hists, as the arrangement of the pillars and position of the sanctuary are different. They are never surrounded by cells as all Vihara are, and their walls are invariably covered or meant to be covered with sculpture, while the Vihara are almost as invariably decorated by painting, except the sanctuary. The subjects of the sculpture of course always sets the question at rest. To this class belong the far-famed Kylas at Ellora, the Saivite temple at Doomnar, and the Ruth at Mahabalipur This last is cut out of isolated blocks of granite, but the rest stand in pits. The Indra Subha group at Ellora are of a separate class, but whether they are brahminical or Jaina is undecided. The Kylas at Ellora is a wonderful work of art—is one piece of rock—in fact a small hill cut into a temple. The Ellora caves are excavated in a porphyritic greenstone. See Karli.

DOOMNEE. See Kunawar.

DOOMOOR, Beng. Common fig tree, Ficus carica.

DOON DOOMMALE RESIN, the gum-resin of the Doona zeylanica tree. A valuable article of commerce.—*Ed. Phil. Journ.*

DOON, Burm. In Aracan a land measure 30,720 square yards, therefore equal to a little more than six and a quarter English acres.

DOONA, *Thwaites.* A genus of great trees of Ceylon, D. affinis occurs between Ratnapoora and Galle, at no great elevation. D. congestiflora, "Tinneya grass, *Singh.*, at Hinidoon and Pasdoon Corles, D. cordifolia, at no great elevation at Pasdoon Corle and Ambagamowa : D. Gardneri, in the central province at an elevation of from 3,000 to 5,000 feet. D. nervosa at Eknalagodde near Ratnapoora.—*Thwaites, En. Pl. Zeyl.*

DOONA TRAPEZIFOLIA, *Thwaites.*

Tuccahaaloo-gass. Singh.

Grows as a common forest tree, in the central and southern parts of the island of Ceylon up to an elevation of 1,500 feet.—*Thw., p.* 55.

DOONA ZEYLANICA, *Thwaites.*

Doon-gass. Singh.

Grows in the central province of Ceylon, up to an elevation of 4,000 feet. A large quantity of colourless gum-resin exudes from the trunk and branches of this fine tree, which, when dissolved in spirits of wine or turpentine, makes an excellent varnish.—*Thw., p.* 34.

DOONA ZEYLANICA, produces the gum-resin, called by the Cingalese, "doon-doomale."

DOONA ? See Resins.

DOONAH, or *dooah*, in Rajpootanah is a portion of the dish of which the prince partakes, sent by his own hand to whomsoever he honors at the banquet. At the "russora," or refactory, the chiefs who are admitted to dine in the presence of their sovereign are seated according to their rank. The repast is one of those occasions when an easy familiarity is permitted, which, though unrestrained, never exceeds the bonds of etiquette, or the habitual reverence due to their father and prince. When he sends, by the steward of the kitchen, a portion of the dish before him, or a little from his own *khansa* or plate, all eyes are guided to the favored mortal, whose good fortune is the subject of subsequent conversation. Though, with the diminished lustre of this house, the *doonah* may have lost its former estimation, it is yet received with reverence.—*Tod's Rajasthan, Vol.* i, *p.* 317.

DOONCHA, Hind. properly Dhancha, the Æschynomene cannabina, extensively cultivated in Bengal on account of its coarse fibres, which are much employed in making cable-ropes.

DOON, Hind. A valley, a term locally applied in the Siwalik Hills, under the Himalaya, as Patlee Doon, Dehra Doon. We appear to have the word in the Celtic and Indo-European languages, as well as in the Arabic. In English we preserve to the present day both the adverb, "down" to imply descent and "down" the noun to imply a slooping hill, an elevated plain, or hillock of sand on the sea shore.

DOOND. See Khyber.

DOONEEADAR. A mode of address among fuqeers.

DOONGURPORE. This family is an offshoot of the House of Oudeypore. On the fall of the Mogul empire, Doongurpore, like other Rajpoot States, became tributary to the Mahrattas. It was at first arranged to divide the tribute of Rupees 35,000 levied from it between Sindia, Holkar and Dhar, but Dhar ultimately succeeded in establishing its exclusive right. This tributary claim was transferred to the British Government by the Treaty of 1818 (No. L) with Juswunt Sing in return for its protection. As in other States inhabited by wild hill tribes, it became necessary at an early period of the British supremacy to employ a military force to coerce the Bheels who had been excited to rebellion by some of the disaffected nobles. The Bheel Chiefs, however, submitted to terms (No. LIII) before actual hostilities

commenced. The Rawul, Jeswunt Sing, was incompetent as a ruler, and addicted to the lowest and most degrading vices. For his incompetency and the disturbances of the peace which he created he was deposed (No. LIV) in 1825, and his adopted son, Dulput Sing, grandson of Sawunt Sing, Chief of Pertabgurh, was made Regent. In 1844 the succession of Pertabgurh devolved on Dulput Sing. The Chief of Doongurpore has received a Sunnud (No. III) guaranteeing to him the right of adoption. He is entitled to a salute of fifteen guns. The area of his State is about 1,000 square miles, with a population of about 100,000. The revenue, after deducting the tribute and the stipends of feudatories, is about Rupees 75,000. No local corps or contingents are kept up at the expense of the State. The Chief's military force consists of about 125 cavalry and 200 infantry.—*Treaties, Engagements and Sunnuds, Vol.* iv, p. 168.

DOON-GASS, SINGH. Doona zeylanica. —*Thwaites.*

DOON-KOLA, SINGH. Tobacco.

DOOP OR DUP-MARAM, also named Nadenara, a tree in the forests of the western coast of India from north to south. It grows from sixty to eighty feet high, and from two to three feet in diameter. It is a light sort of wood, similar to the white American fir of New England. This tree produces the best description of Indian dammar, or resin ; but it is not so valuable as the dammar from the island of Sumatra. The natives use the large trees as rafts, and as catamarans, and for house-building, and the small spars to make sheds and yards for the native vessels. So long as the moisture of the wood remains, it may be considered to answer these purposes, but when it becomes dry, it is very brittle and of no use. At Cochin, Mr. Edye found the rafters and uprights of the roofs over the ships of war at that port, of this wood, with the purlings of split bamboo over them, and cadjans (cocoanut leaves plated), all of which were lashed together by coir yarns. The amount of expense for a roof with sheds was about 350 rupees, or £44 sterling. One sort of the Dup-maram is named Nadenar, which means long-stringed Dup-maram, not of much use or value, grows to about sixteen inches in diameter, and sixty feet in height. Another sort named Paini Dup-maram, which produces a sort of resinous gum, is found in the Cochin and Travancore forests, but is rarely cut down, as the dammar taken from it is valuable, and when mixed with the wood-oil makes the Paini Varnish. This is an article export to China from Sumatra, where this tree also grows from thirty to fifty feet high, and from two to four feet in diameter, and in greater abundance than on the coast of Malabar.—*Edye, M. & C.*

DOOPADA NUNA, TEL. Piney tallow, Doopada oil. Oil of Vateria indica. Doopada Resin, exudes from the Vateria Indica, and constitutes the piney varnish. The resin is used as a fragrant incense in temples, the quantity procurable is very considerable.—*M. E. J. R.*

DOOPATEE-LUTA, BENG. Ipomœa pes-capra.

DOO-PAHARIYA, BENG. Pentapetes phœnicea.

DOPUTTA, the dooputta scarf, an exquisitely beautiful article of Indian costume for men and women is worn more frequently by mahomedan women than hindoo, and by the latter only when they have adopted the mahomedan langa, or petticoat; but invariably by men in dress costume. By women this is generally passed once round the waist over the petticoat or trousers, thence across the bosom and over the left shoulder and head ; by men across the chest only. Dooputtas, especially those of Benares, are perhaps the most exquisitely beautiful of all the ornamental fabrics of India ; and it is quite impossible to describe the effects of gold and silver thread of the most delicate and ductile description imaginable, woven in broad, rich borders and profusion of gold and silver flowers, or the elegance and intricacy of most of the arabesque patterns of the ribbon borders or broad stripes. How such articles are woven with their exquisite finish and strength, fine as their quality is, in the rude handlooms of the country, it is hard to understand. All these fabrics are of the most delicate and delightful colours ; the creamy white, and shades of pink, yellow, green, mauve, violet and blue, are clear yet subdued, and always accord with the thread used. and the style of ornamentation, whether in gold or silver, or both combined. Many are of more decided colours—black, scarlet and crimson, chocolate, dark green, and madder ; but, whatever the colour may be, the ornamentation is chaste and suitable. For the most part, the fabrics of Benares are not intended for ordinary washing ; but the dyers and scourers of India have a process by which the former colour can be discharged from the fabric, and it can then be re-dyed. The gold or silver work is also carefully pressed and ironed, and the piece is restored, if not to its original beauty, at least to a very wearable condition. The dooputtas of Pytun, and indeed most others except Benares, are of a stronger fabric. Many of them are woven

in fast colours, and the gold thread—silver is rarely used in them—is more substantial than that of Benares. On this account they are preferred in Central India and the Deccan; not only because they are ordinarily more durable, but because they bear washing or cleaning better. In point of delicate beauty, however, if not of richness, they are not comparable with the fabrics of Benares. Scarfs are in use by every one, plain muslins, or muslins with figured fields and borders without colour; plain fields of muslin with narrow edging of coloured silk or cotton (avoiding gold thread), and narrow ends. Such articles, called 'sehla' in India, are in every day use among millions of hindoos and mahomedans, men and women. They are always open textured muslins; and the quality ranges from very ordinary yarn to that of the finest Dacca fibres. No attire is so becoming to the delicate form of a woman as the Hindoostanee garments angya and dopatta. A woman in European attire gives the idea of a German manikin, an Asiatic in her flowing drapery, recalls the statue of antiquity. These scarfs are manufactured at various places and of different qualities and colours. Those brought from Benares are always with gold and plain lace borders of different sorts, are sold at from 25 to 350 Rupees each. Those of Arnee in the Collectorate of Chingleput, with borders of yellow cotton, are priced at from Rupees 2 to 7 each and those of Ooppada in Rajahmundry are woven with white borders and are sold at from 1½ to 3 Rupees each.—*Dr. Watson; Tr. of Hind., Vol.* ii, p. 37.

DOOR, or Hulqaa, female ornament.

DOORANI, a titular name of an Afghan tribe. See Dourani.

DOORBA, Beng., Hind. Cynodon dactilon, Pers., the hariali grass.

DOOREAH, Hind. A dog-boy.

DOORGA, a name of the hindoo goddess Parvati or Kali. Doorga, Sans., means difficult of access, from door, *prep.* and gâm to go. Parvati or Doorga Mata, the Mater Montana of Greece and Rome, is according to Diodorus, an epithet of Cybeleor Vesta as the guardian goddess of children, one of the characters of the Rajpoot "Mother of the Mount," whose shrine crowns many a pinnacle in Méwar; and who, with the prolific Gourí is amongst the amiable forms of the universal mother, whose functions are more varied and extensive than her sisters of Egypt and of Greece. Like the Ephesian Diana, Doorga wears the crescent on the head. She is also "the turretted Cybele," the guardian goddess of all places of strength, doorga, and like her she is drawn or carried by the lion. As Mata Janávi the "Mother of Births," she is Juno Lucina: as Padma, 'whose throne is the lotus,' she is the fair Isis of the Nile: as Tripoora 'governing the three worlds,' and Atmá—devi, 'the goddess of souls,' she is the Hecate Triformis of the Greeks. In short, her power is manifested under every form from the birth, and all the intermediate stages until death; whether Jánávi, Gourí, or the terrific Cali, the Proserpine or Calligenia of the west.—*Tod's Rajasthan, Vol* i, *p.* 576.

DOORGAH POOJAH, a term given in Bengal to the hindoo festival of the Dusserah, occurring in the autumn. See Dassarah; Dusserah.

DOORGAWATEE, queen regent of Gurha Mundela, was killed in action against the troops of Akbar, under Asof Khan, she was interred where she fell and to this day, the passing traveller places over her grave, one of the white quartz crystals with which the hills in the neighbourhood abound. Two rocks are at her grave which the people believe to be her drums converted into stone, and the neighbouring villagers say that they occasionally at night hear sounds issuing from them. See Cairn.

DORIAN, the fruit of the Durio zibethenus a pleasant tasted fruit, but to most Europeans, of most offensive persistant odour though the natives of Amherst and Malacca are very fond of it. They cost three rupees each.—*Moulmein.*

DOORK'HEE, Hind., also written durk'hi. An insect whose ravages are very destructive to Indigo, when the plant is young.

DOOROO, Singh. Cumin seed.

DOORS, are generally open in India and the number of servants about, admit of this. But when the doors are shut, before opening them, all the questions in Acts xii, 13 are put 'And as Peter knocked at the door of the gate a damsel came to hearken named Rhoda.' A stranger approaching a house, does not attempt to open its door but usually claps his hands, two or three times together. This is called thali dena. The English word "door," is from the Sanscrit, "dwar", and has its equivalent in "dar" Persian. The English in Calcutta, retain a door or gate keeper, dar-wan, who shuts the gates when visitors are not receivable.

DOORUGBUNSEE, also written Duragbansi, name of a clan of Rajpoots who hold villages in Gurwara.

DOORVA, Beng. Cynodon dactylon, the hariali grass.

DOORYODHANA, Sans. From door, *prep.* and yodhana, war.

DOOSIU. See Japan.

DOOSTPARISHA, Sans. Tragia involucrata.

DOOTEE-SAMBODHU, Sans. From dōōtēē, a female messenger, and Sāmbodu, a call.

DOOWIN—? Durio zibethinus.

DOPAEE, Hind. A variety of magic squares.

DOPAHRYA, Hind. Pentapetes phœnicea.

DOPATEE, Beng. Impatiens balsamina.

DOPHLA. That portion of the southern face of the sub-Himalayas which extends from 32° 50' to about 34° north latitude, and forms the northern boundary of the valley of Assam, from the Kuriapara Dowar, to where the Subanshiri debouches into the plains, is occupied by a tribe of mountaineers, usually known to the people of the valley, under the appellation of the Dophla. This term, whatever may be its origin, is not recognized by the people to whom it is applied, except in their intercourse with the inhabitants of the plains. Banguni, the term in their language to signify *a man*, is the only designation they give themselves. During the latter days of the Ahom suzerainty when internal dissensions and the growing imbecility of the government furnished opportunities for the bordering tribes to indulge in acts of rapine and lawless aggressions on their low-land neighbours, the Dophla were not slow in exacting their share of the general spoil. Several attempts were made to check their atrocities: and on one occasion, rajah Gourinath Sing, is said to have marched an army into their hills for the express purpose of chastising them, and several thousand Dophlas were taken prisoners and brought down to the plains. The rajah, obliged them to dig a canal with the view of draining off the large and unwholesome morasses that still exist in muhal Kollongpur. But, owing to the bad treatment to which the prisoners were subjected, and the unhealthiness of the season, the greater portion of them are said to have perished, and the task assigned to them remained unaccomplished.—*Beng. As. Soc. Jour., No.* 2051.

DOPPELT CHLORQUECKSILBER, Ger. Corrosive sublimate.

DOR, a tribe of Rajpoots, some of whom, mostly converted to mahomedanism, are settled in the district of Aligarh, also about Banda and Sagar. Time has destroyed all knowledge of the history of this race, but they must have been of importance in the time of the last hindoo sovereign of Delhi, Prithi-raj, as he commemorated a victory over them by a tablet. Before the emigration of the Bir Goojur race, they were the chief proprietors of Aligarh; and a remnant of them now exists in Dubhaee, Atrowlee, Coel, Shikarpoor and Burun.—*Elliott, Tod, Wilson.*

DOR, Hind. Land ploughed twice. When ploughed three times, it is called Teoor; when four, Chuwur.

DOR or CASTEL PELEGRINO, the modern village Athebis the first place towards Jaffa; it is the Castel Pelegrino of the Crusades, and the Dor of the Hebrews. Its columns and buttresses, are a confused mass, stretching into the waves, over which the surf breaks. Dor is the celebrated city of Cæsarea.—*Skinner's Overland Journey, Vol.* i, *p.* 96.

DOR, Hind. Spiræa Lindleyana, also Arum curvatum.

DORA, Tel. A respectable person, the equivalent of Mr. or Master; plural Doragaru; Dorawanlu.

DORADINA. A group of trees of the family Siluridæ Stenobranchiæ.

DORAK. See Khuzistan or Arabistan.

DORANA, Singh. Dipterocarpus glandulosus, *Thw.*

DORCUS, one of the Coleoptera of Hong Kong.

DORDONIA ORIENTALIS. Hop wood of Norfolk Island, does not attain to more than a foot in diameter, and is principally used for veneering and in turning ornaments.—*Keppel's Ind. Arch., Vol.* ii, *p.* 282.

DOREMA. A genus of plants belonging to the natural order Umbelliferæ.

DOREMA AMMONIACUM, *Don.*

Ferula orientalis.	Ferula ammonifera Fee.
Feshuk, Arab.	Simugh teratees, Pers.
Eastern giant fennel, Eng.	„ b'ul-shirin, „
Oshak, Pers.	

A glaucous green plant with a perennial root, and large leaves 2 feet long. It is a native of Persia, in the plains of Yerdekhast and Kumisha in the province of Irak; and near the town of Jezud Khast in very dry plains and gravelly soil, exposed to an ardent sun. This is one of the plants which yield gum ammoniacum, but it is probable that several plants yield this as well as the other gum-resins of the order Umbelliferæ. This gum resin is imported into Bombay from the Persian Gulf, and re-exported to different countries. It is obtained by incisions in the plant, and occurs in two forms—first in voluminous masses of yellowish colour, enclosing white almond-like tears, the whole being of plastic consistence, and very impure;—secondly, in tears of irregular form, white or yellowish, opaque, rather solid, agglutinated or distinct, compact, brittle, of glassy fracture, and free from impurities. Its

odour is faint and peculiar, taste sweetish and then bitter. It is partially soluble in water, ether, alcohol, alkaline solutions and acetic acid. Its medical effects, are similar to, but less powerful than asafœtida. It is principally employed as an expectorant in the chronic catarrhs and asthmas of old persons. It is also applied externally as a warm and stimulating plaster. (Lindley, *Flora Medica.*) —*Eng. Cyc., p.* 335; *Faulkner; O' Shaughnessy, p.* 364—365; *Powell's Hand-Book, p.* 354. See Ferula, Persica, Asafœtida.

DORGANIA SUBPLANA. See Chelonia.

DOREY, a village in New Guinea, in which the houses are built on posts, in the water, and are reached by long rude bridges. The houses are low, in the form of a boat bottom upwards. The people resemble the Ke and Aru islanders, and many of them are very handsome, tall and well-made, with well cut features and large aquiline noses. Their colour is a deep brown often approaching closely to black, and the fine mop-like heads of frizzly hair appear to be more common than elsewhere, and are considered a great ornament, a long six pronged bamboo fork being kept stuck in them to serve the purpose of a comb. The majority have short woolly hair. They are shore dwellers, fishers and traders. The hillmen, or Arfak, of the interior, are generally black but some are brown. Their hair though always more or less frizzly, is sometimes short and matted. Birds of paradise are brought to Dorey for sale from Amberbaki, about a hundred miles west. The Arfak mountains are about ten thousand feet high, and inhabited by savage tribes. The inhabitants of Dorey are all seafaring. Men, women and children are seen at almost all times in their small outrigger prahus. They prefer making use of their sampans to pass from one house to another to going on foot. They do not walk more than is absolutely necessary, either to go to their gardens, or to bring wood or water, which is the daily duty of the women. They are all very expert in swimming and diving. Often when some of their small prahus were lying near the ship on throwing overboard pieces of copper, glass beads, and similar trifles, young and old sprang from the sampans and dived to secure the prize. They scarcely ever came to the surface without having brought up what had been thrown in. Knives were the only things which they did not succeed in securing, as these sank too quickly to allow them to dive for them; as there were many in the water at the same time, struggles sometimes took place amongst them under water. The children learn to swim and dive as soon as they can run and they can keep in the water a long time. On a pole near the stem of of the boat, they place, chiefly for ornament, a thin, finely carved, red and white striped plank, sometimes furnished with the image of a Papuan's head, with out-sticking hair, made from gumuti fibres or cassowary feathers. Their food consists principally of millet, obi, maize, a little rice, fish, hog's flesh and fruit. Sago, the general food of the inhabitants of the Moluccas and the islands to the east, is here only found in small quantities and is brought from elsewhere. The fish and flesh they eat roasted or dried. Respect for the aged, love of their children, fidelity to their wives are traits which reflect honor on their disposition. Chastity is held in high regard and is a virtue which is seldom transgressed by them. A man can only have one wife and is bound to her for life. Concubinage is not permitted. Adultery is unknown amongst them. They are generally very fond of strong drink, but although they go to excess in this, it could not be learned that they prepared any fermented liquor, not even sago, weer or tuak. Kidnapping is general in these countries and is followed as a branch of trade, so that there is no dishonour attached to it.— *Wallace*, ii, *p.* 184; *Earl p.* 71; *Journal of the Ind. Arch., June* 1852, *pp.* 312 *to* 317.

DORI, Hind. Cedrela toona *var.* C. serrata, *Royle*, also Polygonum bistorta.

DORIHAR, Hind. A pedlar selling laces and thread, also, a Saiva mendicant living partly by the sale of thread. Dori means a small twine or thread or cording, used on the edges of clothing, similarly to Nakki, Gota, Kinari, Patti, Mandil and Zardozi.

DORIS BARNARDI, of Kelaart, has rich colours. D. Exanthemata, of Kelaart, of Formosa, Labuan and Borneo is nearly eight inches long, of an olive green colour, and is the largest known nudibranch. Its besses and tubercles render it an unpleasing object.— *Calld.*

DOR-KHAIR, Hind. ? A tree of Chota Nagpore, with hard, yellowish-red timber.— *Cal. Cat. Ex.*, 1862.

DORKINEE. See Bazeegur.

DORLA, Duk. Brinjal.

DORLE KA PHAL, Duk. Solanum jacquini.

DORO Sindh. Unripe fruit of Capparis aphylla.—*Roxb.*

DORVILLE. Fathers Grueber and Dorville crossed China from Pekin, by Singanfoo to Sining, and reached the Koko-noor valley, and thence passed into Tibet, round the sources of the Hoang-ho, and crossing those of the Yang-tse-Kiang river, they came on from thence to India, through the valley of Nipal by Katmandu and Hetounda to Patna,

on the Ganges, where Dorville died.—*Prinsep Tibet, Tartary, and Mongolia, p.* 14.

DORYMA BERDMOREI, *Blyth.* A genus of the family Geckotidæ, found in Mergui.

DOSA, Tel. also NAKKADOSA, Tel. Cucumis utillissimus.—*Roxb., W. & A.*

DOSAD, in Bengal, a low caste, employed as executioners, to remove dead bodies, as village watchmen, and messengers: in Bengal and Bahar, the work of labourers is done by Bhui, Rajwar and other aboriginal tribes, but Chandal, Dosad, Hari, Bhumali are names of other outcaste races, the Bhuimal, in Bengal, are the lowest or sweeper class, the Dosad of Bahar used to make frequent predatory excursions into lower Bengal.—*Campbell, p.* 129, *Wilson.*

DOSKI, Rus. Deals.

DOSS, from Dasa, Sansc., a slave,—a surname of many hindoo races in India, as Jaggadamba Doss, and supposed by some to mark their origin,—by others to have the same reference to the hindoo gods, as the Abid, or Gholam of the present Arabs "slave" to the Almighty. Many of the mahomedans having such names as Abid-ul-Kadir, Abid-ullah, slave of the Almighty, slave of God. This name, among hindoos, is borne chiefly by men of the bunya caste, by byragee fukeers, and occasionally by kayet'hs and brahmins. It is usually coupled with the name of some deity, as Shib Doss, Narayen Doss, &c., to imply subjection to some special tutelary god.

DO-SHAHI, Hind. A soil, part clay and part sand, soil of two kinds mingled, hence its name, do-mat, or two earths.

DO-SHALA, Hind., Pers. Double shawl, shawls being always worn double, by the natives of India.

DOSHAM. See Polyandry.

DOSIA POWDER. The Japanese have a method of interment peculiar to themselves. Instead of enclosing corpses in coffins of a length and breadth proportionate to the stature and bulk of the deceased, they place the body in a tub, three feet high, two feet and a half in diameter at the top, and two feet at the bottom. The Japanese, state that they produce this result by means of a particular powder called dosia, which they introduced into the ears, nostrils, and mouth of the deceased, after which the limbs all at once acquire astonishing flexibility. As they promised to perform this experiment in Mr. Titsingh's presence, he remarks, the experiment accordingly took place in the month of October, 1783, when the cold was already pretty severe. A young Dutchman having died in the island of Desima, he directed the physician to cause the body to be washed and left all night exposed to the air, on a table placed before an open window, that it might become completely stiff. Next morning, several Japanese, some of the officers of the factory, and myself, went to examine the corpse, which was as hard as a piece of wood. One of the interpreters, named Zenby, drew from his bosom a santock, or pocket-book, and took out of it an oblong paper full of a coarse powder resembling sand: this was the famous dosia powder. He put a pinch into the ears, another into the nostrils, and a third into the mouth, and presently, whether from the effects of this drug, or of some trick which he could not detect, the arms, which had before been crossed over the breast, dropped of themselves, and in less than twenty minutes, by the watch, the body recovered all its flexibility. He attributed this phenomenon to the action of some subtle poison, but was assured that the dosia powder, so far from being poisonous was an excellent medicine in difficult labours. In such cases, a cup of hot water, in which a little of the dosia powder, tied in a bit of white rag, has been infused, is administered to the patient, who is then sure to obtain a safe and speedy delivery. The dosia powder is likewise recommended as the most efficacious remedy for diseases of the eyes. An infusion of this powder, taken even in perfect health, is said to have virtues which cause it to be in great request among the Japanese of all classes. It cheers the spirits and refreshes the body. It is carefully tied up in a piece of white cloth and dried, after being used, as it will serve a great number of times. The same infusion is given to people of quality when at the point of death: if it does not prolong life, it prevents rigidity of the limbs; and the body is not exposed to the rude handling of professional persons—a circumstance of some consequence in a country where respect for the dead is carried to excess. He had the curiosity to procure some of this powder, for which he was obliged to send to Kidjo, or the nine provinces, to all the temples of the Singous, which enjoy the exclusive sale of it, because they practise the doctrine of Kobou-Daysi, its inventor. It was after the death of this Kobou-Daysi, in the second year of the nengo-zio-wa (A. D. 825), that this sand came into general use in Japan. The quantity obtained in consequence of his first application was very small, and even this was a special favour of the priests, who otherwise never part with more than a single pinch at a time. At his departure in 1784, however, he carried with him a considerable quantity of the dosia powder. Part was put up in lots of twenty small packets each, with

the name written on the outside in red characters, the rest was in small bags: this was only a coarse powder, in which were to be seen here and there particles of gold, and which probably was not yet possessed of the requisite virtues. One small packet only had undergone the chemical operation which ensures its efficacy, and this was a powder as white as snow. The discovery of the dosia powder is ascribed to a priest named Kobou-Daysi: he became acquainted with the properties of this valuable mineral on the mountain of Kongosen, or Kimbensen, in the province of Yamotto, where there are many mines of gold and silver, and carried a considerable quantity of it to the temple to which he belonged, on the mountain of Kojas-an. The priests of this temple continue to chant hymns of thanksgiving to the gods who led Kobou-Daysi to this important discovery. When their stock is exhausted, they fetch a fresh supply from the mountain of Kongo-sen, and carry it away in varnished bowls. The priests pretend that the dosia powder owes all its efficacy to the favour of their prayers. As soon as the new supply arrives, it is put into a basin, varnished and gilt, and set before the image of the god, Day-nitsi, or Biron-sanna. The priests, ranged in a circle before the altar, and turning between their fingers the beads of a kind of rosary, repeat for seven times twenty-four hours a hymn called Guomio-Singo, the words of which are:—

Or o bokja Biron sanna nomaka fodora mani
Fando ma, zimbara fara, fare taja won.

The priests assert, that, after this long exercise, a kind of rustling is heard in the sand; all the impure particles fly out the vessel of themselves, and nothing is left but the purified dosia powder, which is then divided among all the temples of the Singous. It has the appearance of sand, and when it is fully perfected for use is as white as snow. It is obtained on the mountain of Kongosen or Kinbensen in the province of Yamatto, where there are many mines of gold and silver. The process by which it is prepared is the secret of the priests. Their knowledge is doubtless the result of accidental experience, for their acquaintance with chemistry is so slight that we may safely conclude they do not understand the rationale of its preparation.—*Titsingh's Illustrations of Japan, p.* 283; *American Expedition to Japan, p.* 72; *Hodgson's Nangasaki, p.* 222.

DOST ALI, in 1732, became nabob of the Carnatic in succession to his uncle Saadat Ullah. He gave one daughter to Chandah Sahib and one to Murtuza Ali and he appointed Chandah Sahib to be his dewan. His succession had been disliked by Nizam-ul-Mulk, who in 1730, incited the Mahrattas to invade Arcot, and Dost Ali, met them at Amboor on the 20th May 1740, and fell in battle.—*Orme.*

DOST MAHOMED KHAN was one of the younger sons of Sirfaraz Khan, the Barak, Zai sirdar, slain by order of shah Zeman at Kandahar, in 1799. The mother of Dost Mahomed Khan was of a Juanshir family, He succeeded shah Shoojah as ruler in Affghanistan but political difficulties with Dost Mahomed Khan induced the Indian Government, at the close of 1838, to resolve on displacing him and replacing the deposed king shah Shoojah-ul-Mulk. This was done, after a series of successes and severe reverses, in one of which the entire British army was destroyed by climate and the sword, and was the greatest disaster that ever befel the army of India. In his turn he was driven from his throne by the British in 1839, was taken prisoner to Calcutta but was ultimately restored. He brought Cabul and Candahar under his rule and when close on eighty years of age, he wrested Herat from Persian influence and on the 9th June 1863, he died, twelve days after he had taken the city by storm. He left 16 sons, who continued for many years, a civil war of succession.—*Masson's Journey, Vol.* iii, *p.* 17.

DO-SUTI, Hind. A kind of cotton cloth. The words mean double thread.

DOSWANIO, Guz. A dealer in cloth, a pedlar of the Banya tribe.

DOSYPELTIDÆ. A family of reptiles including Eladistoda Westermanni, *Rein.*

DOT PURMA. See Hindoo.

DOW, Alexander, translated and published Ferishta's history of the mahomedans of Asia. —*Orme.*

DOUBLE COCOA-NUT. Lodoicea.

DOUBLE HEADED SNAKE, of Ceylon, Uropeltis grandis.

DOUBLE ISLAND, Lat. 15° 52′ N. Long. 97° 33′ E.

DOUBLETS, in jewellery, a thin slice of a pure gem cemented over a paste of same colour; or a paste of facetted crystal, cemented over a pure gem.

DOUK LOUNG, Burm. Dalbergia reniformis.—*Roxb.*

DOUK-TA-LOUNG, Burm. Dalbergia glauca.

DOUK-YA-MAH, Burm. Dalechampia pomifera.

DOUK-YAT, Burm. Photinia serratifolia.

DOUL, Hind. The ridge or small embankment dividing irrigated fields.

DOULA, Hind., also written daula, a boundary. In many English games, as in

barley-break, and occasionally in foot-ball, the limits are the Doules and the foot-ball is said to "Douled."

DOULALWALLA. See Khyber, p. 514.

DOULATABAD, 19° 57′, 75° 14′, in the Dékhan, 9 miles N. W. of Aurangabad. mean height of the village, 2,013 ft.—*Calld.*

DOUM-PALM, Hyphæne the baica.

DOUN-DALOUN, Burm. See Indigoferæ.

DOUNG, Burm. A hill.

DOUR—surrounded by the Wuzeeree hills, and adjoining the western border of Bunnoo, is the small valley of Dour, inhabited by a distinct race, and containing about 8,000 inhabitants. This valley originally belonged to the Doorani kingdom. It was, together with other outlying tracts, formally ceded to Runjeet Singh by the tripartite treaty of 1838; but afterwards, in 1847, the British relinquished all claim to it on behalf of the Sikhs. The people of Dour more than once expressed a wish to come under British jurisdiction, but the offer was not accepted. During the treaty negotiations of 1855, the ameer's representative urged that the valley once formed an integral portion of the Dooranee empire, and that His Highness now wished to take it, provided that the British did not claim any title. The Government replied that the British did not desire to assert any claim, nor to interfere with the ameer, if he chose to re-annex it to his kingdom.

DOUR or DAUR, Arab., Hind. In military life in India, is employed to designate a sudden expedition against an enemy.

DOUR, Hind. The slings attached to a bucket for irrigation. The more usual terms are joota and jotee.

DOURA, Hind. See Graminaceæ.

DOURANELLE, Egypt. Holcus spicatus.

DOURANI, a name of the Affghan tribe Abdali, given to them by Ahmed shah, Saddozye, on his ascending the throne in A. D. 1747. They are also called Sulimani, from a district of which, the Tobeh Maruf, they formerly came. The Durani Affghans are an agricultural, but chiefly a pastoral race, who term their summer and winter ground, Eilak and Kishlak, dwelling in their coarse black camlet tents, called Kishdee, the same with the Kara ulli of the Turks and Siah-chader of the Persians. The number of Durani tribes are nine, the names of seven of which end in "zye," which means the same as the beni or walad of the Arabs, and the mac of the Scotch. The names are the

Mauku.	Populzye.	Noorzye,
Khongani.	Allekozye.	Alizye, and
Barukzye.	Achikzye.	Ishakzye.

The Populzye are the largest. In person, the Durani are stout and well made, many of them being above the standard of the Indo-Germanic races of Europe. Some have round and plump faces. With others, the countenance is strongly marked, and with most the cheek bones are prominent. When a family is by itself, the men and women eat together; but few restraints are put upon the female, and her influence is considerable. The Durani tribes, all but the Achikzye, are religiously given, but not intolerant. They are of the sunni sect. Their national dance, called Attun, is danced almost every evening with songs and tales to accompany it. They have a strong love of country chase. They are fond of tales, fond of the chase, and except the Achikzye about 5,000 in number, all are religious. The Durani, especially the men of Kandahar, have a powerful love of country: The Durani is rarely a merchant or adventurer. They are hospitable and brave, and are the most important of the Affghan tribes.

DOVE.

Oinos, Greek.	Fakhta, Hind.
Jona, Heb.	

Doves are numerous in India. See Birds.

DOW, a vessel employed in the trade between the Red Sea, the Arabian coast, the gulf of Persia and the coasts of India, in Cutch, Guzerat and Malabar. They were also used in the Persian Gulf, for the purpose of war and piracy. They are always manned by Arabs. The Arab Dow is of about one hundred and fifty to two hundred and fifty tons burthen, by measurement; grab-built, with ten or twelve ports; about eighty-five feet long, from stem to stern; twenty feet nine inches broad; and eleven feet six inches deep. Of late years, this description of vessel has been built most perfectly at Cochin, on the coast of Malabar, in the European style. These vessels have a great rise of floor; are calculated for sailing with small cargoes; and are fully prepared, by internal equipment, for defence, with decks, hatchways, ports, poop-deck, &c., like a vessel of war; many of them are sheathed, on two-and-a-half-inch plank bottoms, with one inch board, and a preparation of chunam and oil, which is called galgal, put between the planks and sheathing-board, causing the vessel to be very dry and durable; and preventing the worm from attacking the bottom. The worm is the one of the greatest enemies in India to timber in the water, while the white ant is as much so out of it. On the outside of the sheathing board there is a coat of whitewash, made from the same articles as that between the sheathing and planks; which coat is renewed every season they put to sea. These vessels have generally one mast, and a latteen-sail: the yard is the

length of the vessel aloft; and the mast raking forward, for the purpose of keeping this ponderous weight clear, in raising and lowering. The tack of the sail is brought to the stern-head, and sheets aft in the usual way; the haulyards lead to the taffrail, having a pendant and treble purchase-block, which becomes the backstay, to support the mast when the sail is set: this, with three pairs of shrouds, completes the rigging; which is very simple, the whole being of coir-rope. Several of these vessels have been fitted as brigs, after their arrival in Arabia; and armed by the Arabs for cruising in the Red Sea and Arabian Gulf, as piratical vessels: they are also the class of vessels of which Tippu Sultan's fleet at Onore consisted. When armed, they were too powerful for the Bombay marine brigs. This has never happened, but when in great numbers, and the brigs weak and unsupported. The large dows make generally one voyage in the season, to the southward of Arabia; taking advantage of the north-east monsoon to come down, and the south-west to return with an exchange cargo. They generally bring dates, fruit, preserves, Shiraz-wine, and horses, and take back rice, coir, canvas, cocoa-nuts, oil, timber, dammar, &c., various articles of cloth of the country manufacture, and from Bombay, European articles of every description. The trade of the western coast of India is very great in those vessels; extending from Allepy, the southernmost port on the coast of Malabar, up to Bombay: but all the trade to Bengal is carried on by ships which are called "Country Traders," from the Gulf of Persia and Arabia. The Arabs are a powerful, well grown, handsome people, and very acute and intelligent in trade. They usually navigate their ships to Bengal in perfect safety, and with great skill.—*Adey, Sir John Malcolm.*

DOWAH or GOGRA. A river near Manjeeghat in Chupra.

DOWANIYA, Singh. Grewia asiatica, *L.*

DO-WATI. See Hindoo.

DOWHOOREE. A river near Raneegunge.

DOWLAH, Arab. The fifth title amongst Indian mahomedans, as Saraj-ud-dowlah, Rashid-ud-dowlah. In Southern Arabia, a dowlah is a governor of a province, equivalent to the Turkish title of Pasha.

DOWLAISHWARAM. A military station on the Godavery river.

DOWLAT, Arab., Hind., Pers. Wealth, prosperity, Umr-o-dowlat ziadah. May your days and your prosperity be prolonged.

DOWLATABAD, in 19° 57′; 75° 14′, in the Dekhan, 8 miles N. W. of Aurungabad. Mean height of the village, 1,721 ft., a fortress which has been known by several names, Deoghur, Deogiri. It consists of a conical green-stone rock, the base of which is scarped to a height of 120 from the ground. The upper conical part is reached by means of an opening at the base of the scarp, which gives admission into a low narrow passage, hewn out of the solid stone, and opening into a large chamber or vault that has been excavated in the interior of the hill. From this vault a vamp or gallery gradually sloping upwards, and also excavated in the solid rock, winds round the interior. It has a height and breadth of 12 feet and terminates above in a recess on the top of the rock, about 20 feet square. At the base of the rock is a ditch, which is crossed only at one place, and by a causeway on which only two men abreast can walk and defended on the side next the rock by a battlemented building Outside the ditch is a minaret 100 feet high. Its position is commanding, and it has from the most ancient times been stronghold of the rulers in that part of India. It was the capital of Ram Deo, a prince of so great power that the mahomedans looked on him as king of the Dekhan. Umber a sovereign of high rank among the princes of the Deccan, who governed his dominions with wisdom, built the city of Gurkeh, now called Aurungabad, five kos from Dowlatabad, and died two years before the expedition of shah Jehan, at eighty years of age, leaving his dominions the best cultivated and the happiest region in India. Alla-ud-din, nephew and general of the emperor Feroz, in 1294 swept across the Nerbuddah, with an army of 8,000 men and presented himself before Deoghur which he captured. He entered into negotiations with the rajah and besides money and jewels obtained the cession of Ellichpoor and its dependencies, and the raja was further to pay tribute annually. On his return, he was met by his uncle Feroz, whom he assassinated, as he patted on the cheek. Camala Devi, was the wife of the rajah of Guzerat, and was celebrated as the flower of India. On the fall of Nerwalla, the capital of Guzerat, her husband became a fugitive and Camala Devi was taken prisoner and carried to Alla-ud-din's harem; and, attracted by her beauty, wit and accomplishments he made her his queen. Her fascinations soothed that savage Pathan in his moodiest hours and influenced him to a lenity hitherto unknown to him. Her daughter Dewal Devi had escaped with her father. Her reputation for beauty equalled that of her mother, and the son of Ram-deo, the rajah of Deogiri (Dowlatabad) had long sued for her, but her father, proud of his

Rajpoot origin, could not accept a Mahratta, even though a prince. Camala Devi, however, having expressed to Alla-ud-din, a wish to be joined by her daughter, Alla-ud-din sent a strong army under a general to bring Dewal Devi to Delhi. In this extremity, her father accepted the Mahratta prince and sent off his daughter to Deogiri under an escort, but the escort was overtaken, the fair maiden seized and carried to Delhi, when Khizr Khan the son of Alla-ud-din, married her. Their union was very happy and the poet Khusroo praised them, but Khizr Khan's eyes were put out by Kapoor. In five years from the death of Alla-ud-din, the throne of Delhi was filled by Kafur, a converted hindoo, who filled the capital with hindoo troops, put out Khizr Khan's eyes, put to death all the survivors of Alla-ud-din's family and transferred Dewal Devi to his own zenana.—*Wilson, Briggs, the Nizam.*

DOWLAT RAO SCINDIA, was defeated by Holkar near Poonah in 1802.

DOWRY, the " mahr" of the mahomedans.

DOWYAT, Burm. Maximum girth 3 cubits. Maximum length 18 feet. Found abundant, but, always inland, all over the country, at Amherst, Tavoy and Mergui. When seasoned, floats in water. It has a soft, bad wood, useless except for elephant bells.

DO-ZANOO BYTHNA, Hind. To kneel on both knees.

DOZUK, Hind. The seven hells.

DRAB, of Hazara, Cedrela toona, *var.* serrata.—*Royle*, Panj. Pinus longifolia.—*Lamb., Roxb.*

DRACÆNA. A genus of plants belonging to the Liliaceæ, known as the Dragon trees of which there are several species mostly shrubs in the East Indies, growing in China, Bourbon, the coast of Africa, Canary Islands. One mentioned by Sir G. Staunton had a diameter of 12 feet at 10 feet from the ground. The singular red leaved Chinese iron-wood, a species of Dracæna, is chiefly noticeable for its long red leaves.—*William's Middle Kingdom, p.* 279.

DRACÆNA ATROPURPUREA, *Roxb.*

Kwon len net, Burm. | Kwon len phyoo, Burm.
Dragon tree.

Two or more species of the dragon tree, resembling small areca palms are seen in Burmese compounds, but the most common is the one with dark purple leaves.—*Mason.*

DRACÆNA DRACO, is the indigenous dragon tree of Teneriffe. It affords a similar secretion to that of Calamus draco. The tree at Teneriffe measures seventeen feet in diameter, and is on strong reasons estimated to be 1,500 years old.—*O'Shaughnessy Dispensatory, p.* 643.

DRACÆNA TERMINALIS, *Willde.* A native of China and the Eastern Archipelago where its root is considered valuable in dysentery and is said by Rumphius to be employed as a demulcent in cases of diarrhœa ; the plant is a signal of truth and of peace in the Eastern Archipelago. In the islands of the Pacific Ocean a sweetish juice is expressed from its roots, and afterwards reduced by evaporation to a sugar, of which specimens were brought to Paris by Captain D'Urville from the island of Tahiti (Otaheite.) The root is there called Ti or Tii, and thence no doubt corrupted into Tea-Root by the English and Americans. M. Gaudichaud mentions that in the Sandwich Islands generally an intoxicating drink is prepared from this root, to which the name Ava is often applied, as well as to that made with the roots of Piper methysticum. The root is employed as food in the Fiji Islands, it weighs from lbs. 10 to lbs. 40.—*Eng. Cyc.*

DRACOCEPHALUM, amongst well known species of this genus, are the D. Canariense, the balm of Gilead, with pretty blue flowers: the scent only lies in the leaves, and the plant seldom exceeds eighteen inches in height, the other species have large splendid blue flowers, and are easily reared from seed; the plants are best grown in pots.—*Riddell.*

DRACONTIUM POLYPHYLLUM, *L.*

Jangli kandi, DUK. | Kat karne, TAM.
Purple-stalked Dragon, ENG. | Adavi kandi, TEL.

Grows in the Konkans and on the western coast of India at Bombay and Japan. Its root after having undergone certain preparations, to subdue its acrimony, is supposed to possess anti-spasmodic qualities, and is considered as a valuable remedy in asthmatic affections, given to the quantity of twelve or fifteen grains in the course of the day. It is also one of the many remedies the Natives use in cases of hæmorrhoids. In the dry condition in which it occurs in the bazars, it has, though faint, a smell not unlike that of musk.—*Ains. Mat. Med., page* 73.

DRAGOMAN, TURKISH. An interpreter, a corruption of the Arabic word, Tarjuman, a translator.

DRAGON BOATS, of China, are long and narrow, capable of holding forty to eighty men. They are employed by the Chinese in their boat races and rowing matches, in the festival of the fifth day of the fifth month, usually falling in June, and seemingly relating to the summer solstice.

DRAGON CANE. A kind of rattan, strong, springy and much valued. They occur both light and dark coloured: a variety with a soft bark is called Manilla Dragon Cane.—*Seeman.* See Calamus.

DRAGON FLY OF CEYLON. Euplæa splendens.

DRAGON, PURPLE-STALKED, ENG. Dracontium polyphyllum, *Linn.*

DRAGON RIVER, or Kew-lung-keang, one of the largest rivers in Southern Asia. It takes its rise in Yu-nam, on the frontiers of Se-fan, in Lat. 27° 20′ N. It is at first named Lan-tsan, but towards the south, and before it enters the Laos country, it is called Kew-lung-keang, or Nine Dragon River. In Chinese territory it runs a long distance through a magnificent valley. In 16° N. Lat. it bends more to the west, and enters Cambodia, having previously been augmented by a large tributary. It then drains the whole length of that country, and falls by three embouchures into the sea in about 9° 34′ N. Lat. In many places the river is very deep, at others there are rocks, sand banks and shallows, which obstruct navigation. The river runs through Yu-nam, and there are cities upon it. In Laos villages adorn its banks, and in Cambodia the principal population is near it. We may conceive what a mighty stream it must be when it traverses eighteen degrees of latitude, it forms at its mouths an alluvial deposit second only to the Yangtze-kiang, or Whang-ho. There are numerous other rivers in Cambodia. On the frontier of Siam is the Kh river, an insignificant stream, but the boundary between the two countries.—*Royal Geographical Society Journ., Vol.* 33, *p.* .

The dragon's blood gum resins, of commerce, are obtained from several plants. That of Socotra, West Indies, Spanish Main and America, is from the Pterocarpus draco of *Linn*: In the Canary Islands, it is from the Dracæna draco, and that of further India is said to be obtained from several species of Calamus. Those which chiefly yield it are the *C. petræus* (Lour) *C. rudentum* (Lour.), *C. verus* (Lour), and *C. draco* (Willd.), natives of Hindustan, Cochin China, the Moluccas, Borneo and Sumatra, but of which the last three were by Linnæus reckoned mere varieties of the *C. rotang* (Linn.) The ripe fruits are covered with a reddish-brown dry resinous granular matter adhering to the ripe fruit and obtained by beating or thrashing the fruit in little baskets. Within the Archipelago, the principal place of production is Jambi on the north-eastern side of Sumatra. The plant is the wild produce of the forest, and not cultivated, although some care is taken to preserve it from destruction. The collectors of dragon's-blood are the wild people called Kubu, who dispose of it to the Malays, at a price not much exceeding a shilling a pound. The whole quantity pro-

duced in Jambi is said to be about 1,000 cwt. The best kind imported into Europe in reeds, is manipulated by the Chinese. The canes of the male plant used in former times to be exported to Batavia, and very probably formed the "true Jambees," commemorated in the Spectator as the most fashionable walking-sticks in the reign of Queen Anne. The secretion of the fruit constitutes the best of *jur-nang*, or Dragon's blood. A second and rather inferior kind is produced by heat and by bruising the fruit, from which the natural secretion has been removed: the third, and most inferior, seems to be the refuse of the last process: it is perhaps doubtful whether it is ever procured from the plant by incisions. Large quantities of this drug are annually sent from Borneo to Singapore and Batavia, and thence to China, where it is much prized. In Europe, it is a constituent of some tooth-powders, and tinctures, and is also, and chiefly, used for colouring spirit and turpentine varnishes. This resinous gum received its present singular name from the ancient Greeks, who used it extensively. It is found in the market either in oval drops, or in large and impure masses composed of several tears. That which is good is of a bright crimson when powdered, and if held up to the light in masses, is semi-transparent. The tears are usually the firmest, and the most resinous and pure. If it is black when made fine, or very friable in the lump, it is inferior. It is often adulterated with other gums; but that which is genuine melts readily and burns wholly away, scarcely soluble in water, but fluent in alcohol; while the simulated crackles instead of burning, and dissolves in water. Its uses are various in painting, medicine, varnishing, and other arts. The best is procured at Banjermassing in Borneo, from whence it is carried to Singapore, and thence to the Chinese market in reeds, at $15 to $35 per pecul; the importation is principally in native vessels. The price in China varies from $80 to $100 a pecul after purifying and refining. The Chinese hold this gum in much estimation, and are the principal consumers of it in the East.—*Faulkner, Morrison's Compendious Description; Marsden's Hist. of Sumatra, p.* 159, *Crawfurd Dictionary, p.* 123; *Seeman on Palms.* See Calamus. Croton sanguifluum, Dalbergia monetaria, Dracæna draco, Eucalyptus resinifera, Resins.

DRAPER, Colonel, a British officer, who entered into a literary contest with Junius. He conquered Manilla, and in 1758, joined Colonel Lawrence in the Carnatic and gave able assistance at the battle of Wandewash.

DRAPORE. A hard, fine, rather close-grained, somewhat heavy, Ceylon wood.

DRAS. A district of Ladak.

DRASHTI DOSHAM, Sans. Evil eye.

DRAUPADI, daughter of Drupada king of Panchala. She was put forward by her father as the lady of the Swayamvara, or tournement, and was won by Arjuna one of the Pandava, and became the polyandric wife of him and his four brothers: she was subsequently staked by Yudhishthira, at dice and won by Duryodhana of Hastinapur and underwent great hardships until the destruction of the Kaurava. Draupadi, as the polyandric wife of the Pandava princes, is the heroine of the Mahabarat. Duhasana, one of the Kaurava princes dragged her by the hair into the public court, Bhima vowed to kill him for the insult and drink his blood and he fulfilled his vow. Yudhishthira and Draupadi have been deified and their feast is named the procession of fire, because in hindoo legend she is fabled to have passed every year from one of her five husbands to another, after a solemn purification by that element. In the Bhásha language, her name is written Dropti. In the "Enchanted Fruit" when Draupadi and her five husbands entered the garden, and Arjuna, with an arrow, brought down the fruit,

Light—pinioned gales to charm the sense,
Their odorif'rous breath dispense;
From Béla's pearl'd or pointed bloom,
And Málty rich, they steal perfume:
There honey-scented Singarhar,
And Juhy like a rising star,
Strong Chempa, darted by Camdeo
And Mulsery of paler hue,
Cayora which the Ranies wear
In tangles of their silken hair,
Round Bábul flow'rs, and Gul-achein
Dyed like the shell of Beauty's Queen,
Sweet Mindy pressed for crimson stains,
And sacred Tulsy, pride of plains,
Their odours mix, their tints disclose,
And, as a gemmed bright,
Paint the fresh branches with delight,

—*Wh. H. of I; Sir W. Jones, Vol.* xiii, *p.* 217. See Droopdevi.

DRAVEE. The Bombay group consists of fifteen or twenty islands in all: the island

of Bassein, about thirty miles to the northward of that which gives the cluster its name; Dravee, and Versova, just off the shore of Salsette; Salsette, by much the largest of them all; Trombay, conspicuous for the mountain called Neat's Tongue, which attains the altitude of 1,000 feet; Bombay itself, united on the northward to Trombay and Salsette, as these are united to each other by bridges and embankments, and to the southward, Old Woman's Island, Colaba; and Henery; and Kenery; with little rocks, and islets of lesser note and name.

DRAVIDIAN, a term which Dr. Caldwell has recently applied to the vernacular tongues of the great majority of the inhabitants of Southern India. With the exception of Orissa, and of those districts of Western India, and the Dekhan where Gujarathi and the Marathi are spoken, the whole of the peninsular portion of India from the Vindhya mountains and the river Nerbudda to Cape Comorin, appears to have been peopled from the earliest period, by different branches of one and the same race, speaking different dialects of one and the same language, and scattered off-shoots from the same stem may be traced still further north and west, as far as the Rajmahal hills, and the mountain fastnesses of Beluchistan. Dr. Caldwell excluding the Rajmahal, the Uraon and the Brahui, designates as Dravidian, nine idioms current in Southern India, viz., Tamil, Telugu, Canarese, Malayalam, Tulu, Toda, Kota, Gond or Goand, Khond or Kund or Ku, and says it has been remarked that in the ten cultivated languages of the Dravidian tongue, Sanscrit words are not at all, or but very rarely employed. He tells us that of all the Dravidian tongues, no two are so nearly related to each other as to be mutually intelligible to the people who speak them except in the simplest and most direct manner. The name for this class of languages and for the peoples speaking them is not yet definitely settled, the terms of Pre-Aryan, Dravidian, Aboriginal, Scythic, Hill and Serpent races have been applied, and Mr. Hunter estimates their numbers at eighty millions, but a writer in the *Friend of India* estimates them at only twelve millions. Amongst these are the Mair, Meena, Bhil, Sonthal, Kol, Gond, the Madera or pariah, the Madiga or tanner, and the Dhor or currier. In the southern districts of Peninsular India, an ancient aboriginal people called Curumber are the earliest known occupants of Dravida Desam, the modern Carnatic and Coromandel. They seem to have established numerous petty principalities over the whole Peninsula, which were ultimately absorbed in the Chola empire. Numerous sites attributed to this race and still called Curumber Cote, are to be met with. The number, site and condition of these with any remains still extant, should be carefully ascertained and noted. Small communities of the same tribe are found to this day in the less accessible hills and forests of many parts of the peninsula. Tamil was the language of three ancient dynasties of whom we have record: The Chola of Tanjore and Combaconum, who were settled on or near the Caveri and Coleroon rivers, and who, as some suppose, gave their names to the Coromandel or Cholamandel Coast: the Pandya, whose capital is now occupied by the inhabitants of Madura; and the Chera, who ruled at Kerala on the Malabar coast. Augustus, emperor of Rome, when at Antioch received an embassy with letters from king Pandyon of ancient Dravira. The embassy gave valuable and curious presents, amongst others a man without arms, and a serpent ten cubits long. In the letter, the king described himself as holding sway over six hundred kings, and he asked the friendship of Augustus. In the embassy was an Indian named Zarmanochegus, from Baragoza or Baroach who accompanied Augustus to Athens and there, as Calanus had done, committed-self immolation before the emperor. His tomb known as the Indian's tomb, was to be seen as late as Plutarch's time. The Tamil language is spoken throughout the vast plain of the Carnatic or country below the ghauts, termed by the mahomedan sovereigns and by the British who have succeeded them, the Carnatic Paen Ghat. The Tamil speaking country extends from Cape Comorin to Pulicat 30 miles north of Madras, and inland from the Bay of Bengal, to the Eastern Ghauts; it skirts Mysore on all its eastern frontier, is also spoken over the Bara Mahal, Salem, and Combaconum, meeting with the Malayalam at the great gap of Palghat; it is spoken also in the southern part of the Travancore country, on the western side of the Ghauts, from Cape Comorin to the neighbourhood of Trevandrum; also in the northern and north-western parts of Ceylon, where Tamulians formed settlements prior to the Christian era, and from whence they have gradually thrust out the Singhalese. Mr. Taylor is of opinion that Tamil was cultivated in its purity in the ancient Pandiya kingdom.

Mr Campbell arranges the Turanian aborigines into two sections, as under:

Dravidian or Southern.	*Northern or Kolarian*	
Tamil. Kurumbar.	Lurka-kol.	Languages, according to Max-Müller. unconnected with any others.
Canara....Burghar.	Ho.	
Do.....Kota.	Bhumi.	
Gond, Khond, Oraon, Rajmahali.	Mundah.	
Malaylam...Male Arisar.	Sontal.	
Telugu...Ramusi.		

Dravidian aborigines deal in demonology, fetishism, frantic dances, bloody and even human sacrifices ; they are, however, superior to the Aryan hindoos in freedom from disqualifying prejudices, but inferior to them in knowledge and all its train of appliances. Aboriginal tribes are most numerous, are, indeed the mass of the inhabitants, in the hilly country from the western and southern borders of Bengal, Behar and Benares to the frontiers of the Hyderabad and Madras territories, and from the Eastern ghats inland to the civilized portions of the Nagpore territory, but even, in this tract, are evident monuments of old hindoo civilization and of the saiva persuasion. The aborigines of India, both in physique and in the structure of their language, present a type analogous to the Negrito of the South seas, Papuans, Tasmanians and others, as well as to the nearer Negrito of Malacca and the Andamans. The Tamil was formerly called by Europeans the Malabar language, and this term is even still used amongst the illiterate of the English community, but even the educated classes write it erroneously, as Tamul. It was the earliest developed of all the Dravidian idioms, is the most copious and contains the largest portion of indubitably ancient forms. It includes two dialects, the classical and colloquial, the ancient and the modern, called respectively the Shen Tamil and the Kodun-Tamil, which so widely differ that they may almost be regarded as different languages. The Tamil race is the least scrupulous or superstitious, and the most enterprising and persevering race of hindoos, and swarm wherever money is to be made, or wherever a more apathetic or a more aristocratic people is waiting to be pushed aside. The majority of the hindoos found in Pegu, Penang, Singapore and other places in the east, where they are known as Klings, are Tamilians. All throughout Ceylon, the coolies in the coffee plantations are Tamilians ; the majority of the money-making classes, even in Colombo, are Tamilians, and ere long the Tamilians will have excluded the Singhalese from almost every office of profit and trust in their own island. The majority of the domestic servants and of the camp followers in the Madras Presidency and along with its army, are Tamilians, and the coolies who emigrate so largely to the Mauritius and the West India Islands, are mostly of the Tamil people. Including the Tamil people, who are residing in the military cantonments and distant colonies, and those in South Travancore, Northern Ceylon, and excluding all Mahomedan, Teling, and Brahmin residents of the Tamil country, who amount to at least ten per cent. of the whole population, the people who speak the Tamil language are estimated by Dr. Caldwell at about ten millions.

The Telugu, called also Telingu, or Telungu, is the Andhra of Sanscrit writers, a name mentioned by the Greek geographers, as that of a nation dwelling on or near the Ganges. It is the same language which, until lately, Europeans termed the Gentoo, from a Portuguese word signifying heathens or gentiles. In respect to antiquity of culture and glossarial copiousness, it ranks next to the Tamil, in the list of Dravidian idioms, but it surpasses all of them in euphonic sweetness. Telugu extends from Chanda, where it meets the Mahratta, and from Ganjam and Chicacole where it intermixes with Urya, along the coast to Pulicat on the marine lagoon thirty miles north of Madras, known as the Pulicat Lake, where it meets the Tamil. At Vizagapatam, which is 120 miles south of Ganjam, this is the sole language spoken. On this line of coast, two monarchies formerly existed, the Andhra and Kalinga, both apparently enterprising races and seafaring people, and it is doubtless from the name of the latter dynasty that the Burmese and Malays have derived the appellation of "Kling," by which they distinguish all people from India. The Kalinga dynasty appear to have gained great possessions to the westward, as, at the time of the mahomedan conquest, Warangal, seventy miles from Hyderabad, was considered by them the capital of Telingana, the eastern part of the nabob of Hyderabad's dominions, all the districts of Ganjam, Nellore and Cuddapah and much of the lands north. The most westerly spot at which it is spoken is the small town of Murkundah about 30 miles west of Beder and it reaches this by a wavy line running westerly from north of Madras, as far as the eastern boundary of Mysore which it follows up to that of the Mahratta country, thus including, in its extent, the Ceded Districts, Kurnool the greater part of the Hyderabad dominions and a portion of the Napore country and Gondwana. In ancient times, it seems to have been spoken as far north as the mouths of the Ganges. This appears both from the geographical limits which the Greeks have assigned to the territory of the Andhra or northern Telugu dynasty, and from many of the names and places mentioned by Ptolemy up to that delta being found to be Telugu. The Telugu people are undoubtedly the most numerous branch of the Dravidian race, although the Tamil surpass them in restlessness and enterprise and in that self reliance which supports them in their emigrations. Including the Naik or Naidoo ("Nayaka"), Reddi and

other Telugu tribes settled in the Tamil country, who are chiefly the descendants of those soldiers of fortune by whom the Pandiya and Chola kingdoms were subverted, and who number not less than a million of souls ; and including also the Telugu settlers in Mysore, and the Telugu inhabitants of the Nizam's territory and other native states, the people who speak the Telugu language may be estimated to amount to at least fourteen millions. Tamil and Telugu roots are, in the great majority the same, but peculiarities in inflection and dialectic changes have so modified the modern tongues, that they differ from each other as much as Portuguese from Spanish, Irish from Welsh, Hebrew from Aramaic, and Hindi from Bengali.

Canarese, properly the Kannadi or Karnataka tongue is bordered by the Tamil and the Telugu on the east. It is spoken throughout the plateau of Mysore and in the south-western districts of the Nizam's territory as far north as the village of Murkundah lying 30 miles west of Beder. Also, it is much spoken in the ancient Tuluva country on the Malabar Coast, now long designated as Canara, a name which it acquired from having been subjected for centuries to the rule of Canarese princes. But in Canara, the Malayalam, the Konkani and the Tuluva, are also spoken though less extensively than the Canarese. The Canarese character differs slightly from the Telugu, from which it has been borrowed, but the characters used for Tamil, Malayalam and Telugu are quite distinct from each other. The ancient Canarese character, however, entirely differs from that of the modern Telugu, and the Canarese language differs even more widely from the Telugu than it does from the Tamil. There is an ancient dialect of the Canarese language current, as well as modern, the latter differing from the former by the use of different inflexional terminations. The ancient Canarese dialect, however, has no connection with the Sanscrit character to which that name has been given, in which, viz., the Hala Kannada, many very ancient inscriptions in the Maratha country as well as in Mysore are found. Dr. Caldwell estimates the people who speak the Canarese language, at five millions. This includes the Coorgs, but he has no means, he says, of calculating the numbers in the Hyderabad country, where Canarese, Marathi and Telugu are spoken. The Urdu or Hindustani language there, is merely known to the mahomedans, the hindoos and Kaets from Northern India, the resident population using it as a lingua franca.

The Coorg or Kodaga language is spoken in the small principality of this name, lying on the western Ghats, and has hitherto been regarded as Canarese, modified by the Tulu. But Mr. Moëgling states that it is more nearly allied to the Tamil and Malayalam than to the Canarese.

Malayalam or *Malayarma*, is spoken along the Malabar Coast on the western side of the Ghats or Malaya range of mountains from Cape Comorin to the Chandagiri river ; or more strictly, perhaps, to Nileshwar (Nileswara) where a Nair rajah, conquered by Hyder, formerly ruled, from the vicinity of Mangalore where it supersedes the Canarese and the Tulu, to Trivandrum, where it begins to be superseded by the Tamil. The people speaking it in the States of Travancore and Cochin in the provinces of Malabar and Canara, are estimated by Dr. Caldwell at two and a half millions. The language, however, on the Malabar Coast, is rapidly being driven out by the Tamil. The people who speak it are, of all the Dravidian races, the most exclusive and superstitious and shrink with most sensitiveness from contact with foreigners though their coast, more than any part of India, has been in all ages visited by the traders of other lands, by Phœnicians, Greeks, Jews, Syrian Christians, and Arabs, and the three last even formed permanent settlements amongst them. They shrink from contact with foreigners, even from people of their own caste : retreating from the great roads, cities and bazars as eagerly as the Tamil flocks to them ; and the Malayalam speaking race are to be found isolated with their families in their high walled parambu, even in parts where the lines and centres of communication are entirely occupied by the more enterprising Tamil people whose language too seems gradually pushing the Malaya aside. Their retired character has led to the less scrupulous and more adroit Tamilians, occupying all the lines of communication and monopolizing the greater part of the public business and commerce of the Malabar States. In a short time, perhaps, the Malayalam will only be known in the hilly tracts or jungle fastnesses. Malayalam was separated from the Tamil before the latter was cultivated and refined, and from brahminical influence, has since had an infusion of Sanscrit words more than in any other Dravidian language, the fewest of such being in the Tamil.

Tulu or *Tuluva*, is the last of the cultivated Dravidian tongues. It is an idiom which holds a position midway between the Canarese and the Malayalam, but more nearly resembling the Canarese. Though once generally prevalent in the district of Canara, it is now spoken only in a small tract of country in the vicinity of Mangalore, by not more

than 100,000 or 150,000 souls. It has been encroached upon by many languages and is likely soon to disappear. The Tuluva has a strong resemblance to Malayala, though the Tuluva speaking race are unable to understand their Malayalam neighbours. Malayalam and Tulu are considered by Dr. Caldwell to be in gradual course of extinction.

The *Toda*, properly the *Tuda* or *Tudava* language, is that spoken by the Tudavar, a primitive and peculiarly interesting tribe inhabiting the Neilgherry Hills, practising quasidruidical rites, and commonly believed to be the aboriginal inhabitants of these hills. They do not at present number more than from 300 to 500 souls. It is supposed that they never could have exceeded a few thousand, but they have diminished through opium eating and polyandria, and at a former period, the prevalence among them of female infanticide. The Toda is the oldest indigenous speech on the hills.

The *Kota*, is the language of the Kotar, a small tribe of Helot craftsmen inhabiting the Neilgherry Hills, and numbering about 1,000 souls. It is a very old and rude dialect of Canarese, and their ancestors on the hills are supposed by Dr. Caldwell to have been at some ancient time a low caste tribe who had fled thither to escape persecution. The Kotar have been residing from an unknown antiquity on the Nilgherry Hills. They are exceedingly filthy in their habits, are addicted beyond all other low caste tribes to the eating of carrion and have been generally shunned by Europeans.

Budaga. Besides the Toda and Kota on the hills, the Budagar speak an ancient but organized dialect of the Canarese. The speech of the Budagar people from the north, commonly called Burghers, is undoubtedly an ancient Canarese dialect. This people are the most numerous class of the inhabitants of the Neilgherry Hills.

The *Irular* 'people of the darkness' speak a rude Tamil.

The *Curb* or *Curbuar* or *Kurumbar*, are nomade shepherds, who occupy the denser deeper jungles where they are occasionally stumbled upon by adventurous sportsmen, and the smoke of whose fires may occasionally be seen rising from the lower gorges of the hills.

The *Gond* or *Goand* is the language of the indigenous inhabitants of the northern and western parts of the extensive hill country of Gondwana, of the northern portion of Nagpore, and of the greater part of the Saugor and Nerbudda territories. Mr. Driberg compiled a very complete grammar and vocabulary of the Mahadeo dialect of the Gond language, and the dialect of the Saonee Gonds was noticed in a paper by Mr. Manger. The Gond dialect, says Mr. Logan, is Dravidian, hardly at all affected by Gangetic. The Khond, if not identical, probably agrees with it more than with Kol, and the basis of the latter is Dravidian. The Uraon and the Male or Rajmahali dialects are still closer to the Gond and south Dravidian than the proper Kol. The Khond, Kund, or more properly the Ku, is the language of the people who are commonly called Khond but who designate themselves Ku. They are a primitive race who are supposed to be allied to the Gond. They inhabit the upper parts of Gondwana, Gumsoor and the hilly ranges of Orissa and whose horrid rites of offering children and young people in sacrifice (see Meriah) is generally known. The two people by whom the Gond and Ku languages are spoken are supposed to amount to 500,000 souls. Dr. Caldwell estimates the proportionate numbers of the several races by whom the Dravidian languages, and dialects mentioned above, are spoken, to be 32,150,000, as follows :—

1 Tamil.....10,000,000	6 Toda.....300
2 Telugu....14,000,000	7 Kota.....1,000
3 Canarese...5,000,000	8 Gond or Goand,
4 Malayalum2,500,000	also Khund,
5 Tulu.....150,000	Kund or Ku500,000

About 20,000,000 of these are British subjects, and the remainder are under the native states of Hyderabad, Travancore and Cochin. In this enumeration, there has not been included the idioms of the Ramusi, the Korawar, the Lombadi, the Vedar, the Malearasar, and various other wandering, predatory, or forest tribes. The Lombadi, speak a dialect of the Hindi. The Ramusi and the majority of the Korawar, a patois of the Telugu. The tribes inhabiting the hills and forests speak corrupted dialects of the languages of the contiguous plains. The Malearasar, 'Hill Kings' called in Malayalam Mala-arasar, the hill tribes inhabiting the Southern Ghauts, speak corrupt Malayalam in the northern part of the range, where the Malayalam is the prevailing language, and corrupt Tamil in the southern, in the vicinity of Tamil speaking districts. The Kol and Sura dwell towards the north of the Gond and Kund, in Central India; their languages contain Dravidian words, but they belong to a totally different family of languages.

Uraon, the language of the Urya people, is an uncultivated idiom, and contains many roots and forms belonging to the Kol dialects and so many Dravidian roots of primary importance, that it is considered by Dr. Caldwell as having originally been a member of the Dravidian family of languages. The Bodo

Dhimal and other tribes inhabiting the mountains and forests between Kumaon and Assam, are styled Tamilian by Mr. Hodgson. He has done so on the supposition that all the aborigines of India, as distinguished from the Aryans, belong to one and the same stock, of which he considers the Tamilian of Southern India the best representatives. And he has founded this supposition on certain general grammatical similarities which are common to the entire Scythian group of languages.

The *Rajmahali* language contains so many Dravidian roots of primary importance, though it also contains a large admixture of roots and forms belonging to the Kol dialects, that Dr. Caldwell considers it had originally belonged to the Dravidian family of languages. It is spoken by the Malei, or inhabitants of the hills. A brief vocabulary of the words of the tribe inhabiting the Rajmahal hills, in Central India, as contained in vol. v. of the Asiatic Researches and Mr. Hodgson's more complete collections prove the idiom of this tribe to be in the main Dravidian.

The *Brahui* language, spoken by the mountaineers in the khanship of Kelat, in Beloochistan, contains some Dravidian words and a considerable infusion of unquestionable Dravidian forms and idioms. Considered as a whole, this language is derived from the same source as the Punjabi and Sindi, but it unquestionably contains a Dravidian element, derived from a remnant of the ancient Dravidian race having been incorporated with the Brahui. The discovery of this element beyond the Indus river, proves that some of the Dravidians like the Aryans, the Græco-Scythians and the Turco-Mongolians, entered India by the North West route. The Brahui state that their forefathers came from Halb, Aleppo. Of all the Dravidian languages, no two are so nearly related to each other as to be mutually intelligible to the people who speak them, except in the simplest and most direct manner.—*The Rev. Dr. Caldwell's Comparative Grammar, Sir Erskine Perry's Bird's Eye View. Pers. Obser.*

DRAVIDA. The country in which the Tamil language is spoken, the Coromandel coast from Madras southward : the country below the Eastern Ghauts to Cape Comorin. Also, a class of brahmanical tribes called the five Drāvir comprehending all those of the Peninsula or Drāvira, Karnata, Telinga, Gujerata and Maratha.

DRAWA, also DRAWI of Hazara, Cedrela toona, var serrata, *Royle.*

DRAWO, Hind. Fagopyrum esculentum.

DREAMS, are to a great extent still trusted to in Eastern countries. The earliest remarkable dreams recorded, were those to Abraham of the captivity and (Gen xxviii, 12). At Bethel, of the ladder. Subsequently (Gen. xxxviii, 5, 9 and 10.) were Joseph's dreams and those of Pharoah, Gen. x. 4 and 41. Gideon and Saul, I. Sam. xxviii, 6. Dreams, are intimately associated with the lower forms of religion. To the savage they have a reality and an importance which we can scarcely appreciate. During sleep the spirit seems to desert the body ; and as in dreams we visit other localities and even other worlds, living as it were a separate and different life, the two phenomena are not unnaturally regarded as the complements of one another. In Madagascar the people pay a religious regard to dreams, and imagine that their good demons or inferior deities, tell them in their dreams what ought to be done, or warn them of what ought to be avoided.

DREDGING. In this process note the numbers of species, the kinds usually found associating together, the number of living specimens of each, the number of dead, the average age of the specimens, though whether young or adult. The general state of the animals and particularly as to the maturity of the eggs or if they have been recently shed. The kind of ground. The depth. The distance from land. The zone whether the littoral zone, the space between high and low water marks : the laminarian zone or that in which the large tangles or sea weeds flourish, and extends from low water mark to a depth of about 15 fathoms, the coralline zone extends from the depth of 15 to 50 fathoms ; sea weeds are scarce, but corallines abound in this region, the coral zone is that in which deep sea corals are found and where the depth is beyond 50 fathoms. Any particular currents. What are the mollusca found between tide marks on the neighbouring coast ? Is mud present, and if present of what kind ? Are any dead shells common of which no living examples occur ? What seaweeds are found ? Do the different specimens of the same species vary much in size, form, or colour ?—*Edin. N. Phil. Journ., pp.* 206 *and* 207, *July* 1856.

DREH, Hind. Melia azedarach, also Albizzia odoratissima.

DREIFACH, Ger. Sulphuret of Antimony.

DREK, Panj. Albizzia odoratissima, *Benth.*, also Melia sempervirens, Melia azedarach, *Linn.*, also Pistacia integerrima.—*H. F. & Th.*

DREL, Dut., also Drell, Ger. Diaper.

DRENDU, Hind. Adelia serrata, Bandrendu, Acacia stipulata.

DREPAN, several caterpillars, the *Aloa*

lactinea, the *Orgyia Ceylanica*, *Euproctis virguncula*, the *Trichia exigua*, *the Narosa conspersa*, the *Limacodes graciosa* and a species of *Drepana* are found on the coffee trees but they do not cause much injury. Another caterpillar, however, though fortunately not abundant, the *Zeuzera coffeæ*, destroys many trees, both young and old by eating out the heart. It resembles the caterpillar of the goat-moth of England and is as thick as a goose quill. It generally enters the tree 6″ or 12″ from the ground, ascending upwards. The sickly drooping of the tree marks its presence.

DREPANOGNATHUS SALTATOR, JERDON. An ant which moves by jumps of several inches at a spring.

DRESHUK. In front of the Goorchanee and Lisharee hills, and between Hurrund and Mithunkote, are plains inhabited by the Dreshuk. They are British subjects. See Khyber.

DRESSES. The mahomedans of Madras are famed for the excellence of the flowered work on the muslin dresses of ladies. They are sold at from Rs. 7 to Rs. 70 each.

DRINGO, PORT. Sweet flag.

DRINKHARI, HIND. Datisca cannabina.

DRISHADAVATI. See Hindoo.

DRO, properly gro, Tibetan, Triticum æstivum.

DROB, HIND. Caragana tragacanthoides.

DROGUE AMERE, FR., a compound of mastic, frankincense, myrrh, aloes, and kreat.

DROK or BROG. Both occupants of the central part of northern Tibet. Mr. Hodgson supposes them a mixed race joined together for predatory purposes. See India.

DROMAIUS. The Emu, a genus of birds belonging to the Cursores, or Runners, an order of which may be thus shown :—

ORDER VI—Cursores or Runners.

Fam. Casuaridæ, Casuarius galeatus; 1 Dromaius novæ Hollandiæ

Fam. Struthionidæ, Struthio camelus.

Casuarius Bennettii, *Gould*, is the Cassowary of the island of New Britain, near to New Guinea, where it is called Mooruck. The height of the bird is three feet to the top of the back, and five feet when standing erect. Its colour is rufous, mixed with black on the back and hinder portions of the body, and raven black about the neck and breast. The loose wavy skin of the neck is beautifully coloured with iridescent tints of bluish purple, pink, and an occasional shady green, quite different from the red and purple caruncles of the *Casuarius galeatus*. The feet and legs, which are very large and strong, are of a pale ash colour. This bird also differs from the *C. galeatus* in having a horny plate, instead of a helmet like protuberance on the top of the head: which callous plate has the character of and resembles mother of pearl darkened with black-lead. The form of the bill differs considerably from that of the Emu, *Dromaius Novæ Hollandiæ*, being narrower, larger and more curved, and in having a black or leathery case at the base. Behind the plate of the head is a small tuft of black hair like feathers, which are continued in greater or lesser abundance over most parts of the neck. The egg is about the same size as that of the Emu, and is of a dirty pale yellowish green colour. The bird appears to Dr. Bennett to approximate more nearly to the Emu than to the Cassowary, and to form the link between these species. In its bearing and style of walking it resembles the former, throwing the head forward, and only becoming perfectly erect when running ; it also very much resembles the Apteryx in its body, in the style of its motion and in its attitudes. Its bill presents a great deal the character of that of a rail: it utters a peculiar, chirping, whistling sound, but also a loud one resembling that of the word ' Moork,' whence, no doubt, it derived its native name. Casuarius galeatus, the helmeted cassowary of Ceram, only, is so called from the horny helmet which surmounts the head. Its rudimentary wings consist of five long bristles like blunt porcupine quills. It runs swiftly with a bounding motion. It feeds on fruits, birds' eggs, insects, crustacea and tender herbage. It is a stout and strong bird, standing five or six feet high, and covered with long, coarse, black hair like feathers. The head has a large horny casque or helmet with bright blue and red colours on the bare skin of the neck. These birds wander about in the vast mountain forests that cover the island of Ceram. The female lays three to five large and beautifully shagreened green eggs, on a bed of leaves. The male and female sit alternately on the eggs, for about a month.

DROMAIUS NOVÆ HOLLANDIÆ rises to a height of seven feet. It lives on fruits, eggs and small animals.—*Crawfurd's Dictionary, p.* 84, *London Athenæum, No.* 1512, *Dec.* 12, 1857, *p.* 1551, *Wallace* ii ; *Dr. Bennett in a letter, dated Sydney,* 10*th Sept.* 1857.

DROMEDAIRE, LE. FR. Camelus dromedarius. See Camelus.

DROMEDARY, ENG. Camelus dromedarius.—*Linn.*

DROMIA RUMPHII, *Edws.*, E. Indies.

DROMIA FALLAX, *Edws*, Mauritius.

DROMIA HIRTISSIMA, *Edws.*, Cape of G. Hope.

DROMIA CAPUT MORTUUM, *Edws.*, Indian Ocean.

DROMIA UNIDENTATA, *Edws.*, Red Sea.

DRONA, SANS. Phlomis indica.

DRONA. A brahmin, the military preceptor of the Pandava and Kaurava princes. Drona was the son of Bharadwaj and in the Mahabharata is called Bharadwaj. The son of Drona is a celebrated hero in the Mahábharat named Aswatthamá.

DRONACHARYA, SANSC. From drona, a measure of capacity, and acharya, a teacher.

DROOHINA, SANS. From drooh, to injure.

DROON. See Punjab.

DROOPDEVI. The wife, in common, of the five Pandua brothers, was of the house of Kampilnagara. Yoodishtra having staked and lost the throne of India to Duryodhana, to recover it hazarded the beautiful and virtuous Droopdevi. By the loaded dice of his foe she became the golee of the Kauruva chief, who according to the hindoo legend triumphing in his pride, would have unveiled her in public; but the deity presiding over female modesty preserved her from the rude gaze of the assembled host; the miraculous scarf lengthened as he withdrew it, till tired, he desisted at the instance of superior interposition. Yoodishtra, not satisfied with this, staked twelve years of his personal liberty, and became an exile from the haunts of Kalindi, a wanderer in the wilds skirting the distant ocean. Tacitus describes the baneful effects of gambling amongst the German tribes, as involving personal liberty; their becoming slaves, and being subsequently sold by the winner. The Rajpoot's passion for gaming, is strong; and long anterior to Tacitus, perhaps before the woods of Germany were peopled with the worshippers of Tuisto, this vice prevailed amongst the Rajpoot warriors.—*Tod's Rajasthan, Vol.* i, *p.* 41, 179. See Draupadi.

DROOPING COCKSCOMB. Celosia cerunа.

DROSERA. A genus of plants, of the natural family Droseraceæ, or the Sun-dew tribe. D. Burmanni. *Vahl.* Mo-dwen-thæ of the Burmese, grows in Ceylon, the Peninsula, Bengal, Sylhet and Burmah. There are two different species at Tavoy.—*Mason, Voigt.*

DROSERA PELTATA. SANS. Drosera lunata. *Ham.* Grows in the Neilgherry and Bababooden hills. The leaves stain paper red. They are applied as a blister to the skin. They close upon flies which light upon them.

DROUGHTS. Are frequently in tropical Asia. They are alluded to in Genesis, xxxi, 40, in the day the Drought consumed me, and the frost by night, and my sleep departed from my eyes.

DROWA. HIND. Betula bhojputra.

DRUGS. Amongst the native physicians of the East and South of Asia, as in Europe 300 years ago, almost every substance, especially if possessing any peculiarity of colour, shape, smell, or taste, is believed to have some medicinal virtue. Much reliance is placed on the doctrine of the signatures, *i. e.*, the belief that a substance which has some of the physical characters of an organ or of the symptoms of a disease, will have power over what it resembles. Some substances (chiefly animal, however,) are considered to have medicinal virtues merely from their oddity, for example *pikhál mús,* rats dung; the gall bladder of the brown bear; the hairs of a tiger's whisker, &c. Difficulty of acquisition would also appear to add virtue; thus it frequently happens that of two kinds of a drug, the one which is more rare is considered much the more powerful, in some cases indeed when neither would appear to have any special virtue the hakim of India has curious beliefs as to the plants which produce some of the foreign vegetable drugs, and still more curious theories are held as to the source of some of those of mineral origin. Thus "*Zahrmohra,*" which comprise several mineral substances given medicinally is believed to be formed by the spittle of the "*Mar-khor*" (Capra megaceros) falling on stones in the Kohistan, west of the Indus. The great number of substances to which, by natives, and in their books on medicine, aphrodisiac virtues are attributed, is remarkable, some in connection with the doctrine of signatures, but most of them probably quite destitute of the qualities assigned to them.—*Powell's Hand-Book.*

DRUHYU. In hindoo legend, one of the sons of Yagati, one of the old fathers of mankind. Anu was the founder of one of the five great Turanian tribes, the Yadu, Turvasa, Druhyu and Anu.

DRUIDICAL REMAINS. The Cromlech or tri-lithic altar, in the centre of all Druidic monuments, is supposed by Tod to be a "torun" or triumphal arch, sacred to the sun-god Belenus. There are numerous Indo-Scythic remains in the Nizam's territory and near Bustar. See Cairn, Cromlech, Dolmen, Hindoo.

DRUKRI. HIND. Cissus carnosa.

DRUM? A Penang wood, of a light brown colour, used for ornamental furniture. A very small tree.

DRUM. The drum is used by Asiatic nations as a musical instrument, in war, and in lieu of a bell. The institution of the drum was adopted by a late king of Siam, according to Pallegoix, but the pages who had to answer it succeeded in extinguishing the practice. A curious Chinese drawing engraved in Chine Ancienne (L' Univers Pittoresque). *Pl.* 3.

represents this institution of the drum. A drum was suspended at the gate of the emperor of China, which supplicants sounded. The custom is a genuine Chinese one, and the summons seems to have been by a drum rather than by a bell. Thus in the Romance of "The Fortunate Union," the hero Teichun-gyu exclaims, "My lord, you are mistaken. The emperor himself suspends the drum at his palace gate and admits all to state their hardships without reserve."— *Yule, Cathay, Vol. I, C.* vi., *Davis' Chinese Miscellanies, p* 109.

DRUMBI, Hind. Arundo donax.

DRUM-FISH, a sea-fish near the Pearl river at Macao. Every evening, they assemble around a ship and continue their musical humming till about mid-night. The noise rises and falls or suddenly ceases at times as they quit the ship in search of food. —*Adams, p.* 63.

DRUM HARMONICON. See Musical instruments of the Burmese.

DRUMMOND, Lieut.-Col. An officer of the Bengal Army who wrote on the mines and mineral resources of northern Affghanistan on the copper mines of Kemaon, on the natural resources of Almorah, in Extracts from Public Papers N. W. Provinces ; Bombay Telegraph and Courier, Oct. 24, and Nov. 19, 1849, and Mofussilite, Nov. 10, 1849.—*Dr. Buist's Catalogue.*

DRUN. also PUA. Tib. The Tibetan name of the marmot of the western mid-Himalayas. See Marmot.

DRUNKENNESS, is a frequent vice in India, amongst men and also amongst women. The substances used are opium, the preparations of hemp, distilled spirits and the fermented juices of the palm trees. In India, horse play, and gross facetiæ, generally accompany tipsiness. In moderation, these substances are beneficial and all nations use them though the mode of their action on the human frame is not understood, but most of them must be regarded as nervine stimulants and as valuable in great mental or bodily exertions. Whatever be the process, they evidently supply some want in the system. In some individuals drunkenness is a hereditary disease equivalent to a mania ; and these cases are generally given up by the faculty, in despair. See Food.

DRURY, Major Heber, an officer of the Madras Army, author of Useful Plants of India, Madras, 1858, a work of much value, also of Hand-book of the Indian Flora.

DRUSE, an idolatrous race occupying the range of hills which extend parallel to the coast, from the neighbourhood of Beyrout to the heights above Sidon. They worship, it is said, the image of a calf but are tolerant and indifferent. They are brave, honest and hospitable. The mountains in the neighbourhood of Brahmana, are a lower range of Libanus, are everywhere covered with a sufficient portion of soil to admit of cultivation even to their summits. They are not less remarkable for the dense population which inhabits them ; houses and hamlets meet the eye in every direction. The number of the Druses is estimated at seventy thousand. Of these one-third are capable of bearing arms. It is not known at what period they first settled in these parts : *min kadim*, " ab orgine" is the general answer given to all inquiries on the subject. The Druses are not confined to Mount Lebanon ; they are likewise spread over the Haouran, a country lying to the south-east of Damascus. Zahle, seven hours from Balbec, belongs to the territory of the Druses. Half an hour from Zahle, on the south side of the village of Kerak, is the pretended tomb of Noah. The religion of the Druses professes a secrecy, which seems unnecessary, except for the sake of imposture. They believe in the transmigration of souls, but more as a punishment in this world than in the next, and that the Prophets recorded in the Old Testament, were only a succession of identical spirits. The names of David, Abraham, Ishmael and Pythagoras, occur in their sacred code, but without any adherence to our own ascertained chronology. Hamsa is the name of their God and sovereign, whom they consider to have been the true Christ, and Jesus, the son of Joseph, a travelling impostor, and therefore deservedly crucified. They seem equally averse to mahomedans and christians, and they use the Koran more as a blind than a belief, simply to deceive their Turkish masters. They consider the four Evangelists to have been so many powers or parts of religion, and Hamsa to have appeared about 400 years after mahommed, when he flourished eight years upon earth, and afterwards appeared seven times in all from the time of Adam, finally and formidably to appear when the Christians shall be more powerful than the Turks ; he will then spread the religion of the Druses by divine authority. Their creed requires implicit obedience, and rejects fasting, prayers, tithes and killing of animals. The dress of the female Druse resembles that of the Turkish women elsewhere, excepting that they wear that singular ornament of the head, called the *tantour*, which is a conical tube, about eighteen inches long, of silver, or copper silvered slightly over, according to the wealth of the wearer, and ornamented with a variety of patterns. It is fixed upon a cushion fastened to the

top of the forehead, and inclines slightly forward, like the horn of the fabled unicorn. Over this a piece of white muslin is thrown, which falls down, to the hips, and serves to envelope their faces at pleasure when they go abroad. This extraordinary *coiffure*, if not graceful, is picturesque, although it must be confessed, it impresses the beholder with an appearance of restraint to the wearer. In some parts of the mountain it is worn projecting from the side of the head; but this schismatical fashion is even still more unbecoming than the orthodox one. Their religion seems a remnant of some mahommedan heresy. They arrange themselves as the Akul or intelligent; and that of the "Jahil," or ignorant. The Akul, in number about ten thousand, form the sacred order; and are distinguishable by their white turbands, the emblem of purity, and the peculiarity of the folds in which they wear it. The Akul are not permitted to smoke tobacco; they never swear, and are very reserved in their manners and conversation. Nevertheless, they are allowed to marry. The chief of the order resides in a village called El-Mutna. The Jahil or uninitiated, who form by far the most numerous class, perform no religious rite whatever, unless when circumstances oblige them to assume the appearance of mahomedans. On these occasions, they enter the mosques, and recite their prayers with Turks. Schools are pretty frequent among the Druses. The Akul are generally the masters, and are paid by their pupils. They teach reading and writing. The remarkable appendage to the dress of the female Druse, has given rise to many conjectures amongst the learned, from a supposed analogy to the lingam or phallus, but it does not appear to have been an object either of religion or curiosity.—*Robinson's Travels, Vol.* ii, *pp.* 9 *to* 322.

DRUS, Hind. Callicarpa incana.

DRUVYA, Sans. A thing: Dravya-goona, Sans., from dravya, a thing, and goona, a quality.

DRYANDRA CORDATA, Thunberg, the tung-eu of the Chinese, is a plant valuable on account of the quantity of oil found in its seeds, and the tallow-tree, Stillingia sebifera, furnishes both tallow and oil. The former produces the tallow and oil so much in use in China: the latter furnishes a valuable oil which is used in mixing with the celebrated varnish of the country, and hence this tree is often called the varnish-tree. Dryandra cordata, is one of the favourite trees of the Chinese, prized for its beauty, the hard wood it furnishes, and the oil extracted from its seeds.—*William's Middle Kingdom, p.* 281, *Fortune's Tea Districts, p.* 119.

DRYANDRIA VERNICIA. Syn. Of Elæococca vernicia.

DRYADS. See Fountains, India, Rivers, Springs.

DRYIOPHIDÆ, a family of reptiles containing viz:—

Tropidococcyx Perroteti, *D. and B.* Neilgherry.
Tragops pradinum, *Reinw.* Sylhet, Mergui, Penang
„ dispar, *Gunth.* Animallies.
„ fronticinctus, *Gunth.* Pegu.
Passerita mycterizans, *Linn.* Bengal.

DRYMOCATAPHUS FUSCOCAPILLUS See Ornithology.

DRYMOICA. See Birds.

DRYOBALANOPS CAMPHORA, *Cole.*

Shorea camphorifera, *Roxb.*

A very large tree, a native of Borneo and Sumatra, where it sometimes attains six to seven feet in diameter. In the cavities of the trunk there occur collections of solid camphor, and of a light fluid called camphor oil. The solid camphor is often deposited in long pieces, weighing over ten pounds. This camphor is highly prized by the Chinese and Japanese, and so rarely finds its way to Europe that it is seldom found even in the richest collections of Materia Medica. The tree is said by Marsden to be very common in Sumatra, in the country of the Battas, but not to be found to the south of the line. In Borneo it was found at first towards the north, and is said to be particularly abundant in the country of the Kyans, in the interior, on the Bintulu and Rejang rivers, and has since been discovered in Sarawak. In Labuan it is common, and is one of the noblest of the trees in that fine jungle: it has a fine straight stem, from which the bark comes off in large flakes and the foliage is very dense, forming a well-shaped head to the tree, the stem of which is frequently ninety feet to the first branches. Not one in ten trees is found to produce camphor, and the camphor collectors cut notches in the trees, in order before felling to ascertain whether they are likely to produce camphor. It is said that in those which produce it, the younger and smaller trees are often found to be quite as prolific as the older and larger trees. The camphor is found in a concrete state in the crevices of the wood, so that it can only be extracted by felling the tree, which is afterwards cut into blocks and split into wedges, and the camphor, which is white and transparent, is then taken out. An essential oil is also found in hollows in the wood, which the natives crystallize artificially; but the camphor thus obtained is not so much esteemed as that found naturally crystallized. The produce though so valued by the Chinese, is not much used by the natives, though it is

occasionally taken inwardly as a medicine. The price in China of the Borneo camphor is said to be higher than that of Japan, in the proportion of twenty to one: it has been supposed that this disproportion is caused more by some superstitions of the consumer, than any real distinctions of properties. From the oldest and richest trees they rarely collect more than two ounces. After a long stay in the woods, frequently of three months, during which they may fell a hundred trees, a party of thirty persons rarely bring away more than 15 or 20 pounds of solid camphor, worth from 200 to 250 dollars. The Borneo camphor, of the Dryobalanops camphora, is in white crystaline fragments. Sp. G. 1·009. Its odour is not of so diffusable a nature; otherwise it closely resembles the camphor from the Camphora officinarum. The wood of the camphor tree is good timber suited for house and ship-building. The liquid camphor of the same tree appears of the nature of Camphogen. Dr. A. T. Thompson, by passing a current of oxygen gas through it, converted it into camphor. The oil, both in a fluid and solid state, is found in the body of the tree where the sap should be, but not in all trees. The liquid oil is abundant, and little appreciated, but the concrete bears a very high price, which depends wholly on its scarcity, and the fancy of the Chinese and Japanese, who ascribe high medecinal virtues to it, which it probably possesses in no higher degree than the cheap article which they themselves obtain by the distillation of the wood of the Camphora officinalis, and which may be had in the same markets for about one-hundreth part of the price.—*As. Researches, vol.* xii. *p.* 535, *Low's Sarawak, pp.* 44-46; *Marsden's History of Sumatra, p.* 150; *Royle's Materia Medica, p.* 536; *Crawfurd's Dictionary, p.* 81; *Simmond's Commercial Products; O'Shaughnessy, Bengal Dispensatory; Mason's Tenasserim; Tomlinson, p.* 287.

DRY ROT, is a disease affecting timber. When dry rot is produced by the attacks of fungi, the first sign of it consists in the appearance of small white points, from which a filamentous substance radiates parallel with the surface of the timber. This is the first stage of growth of the spores of the fungus, and the filamentous matter is their thallus or spawn. As the thallus gathers strength it insinuates its filaments into any crevice of the wood, and they, being of excessive fineness, readily pass down and between the tubes from which the wood is organised forcing them asunder, and completely destroying the cohesion of the tissue. When the thalli of many fungi interlace, the radiating appearance can no longer be remarked; but a thick, tough leathery white stratum is formed wherever there is room for its development, and from this a fresh supply of the destructive filamentous thallus is emitted with such constantly increasing rapidity and force, that the total ruin of timber speedily ensues where circumstances are favourable for the growth of the fungi. Dry rot consists of the thallus of *Merulius lacrymans*, or *Polyporus destructor*, two highly-organised fungi, but any of the fungi that are commonly found upon decaying trees in woods are capable of producing dry rot, and the most rapidly-spreading and dangerous kinds is caused by the ravages of different species of *Sporotrichum*. The latter throw up from their thallus whole forests of microscopic branches loaded with reproductive spores, of such excessive smallness that they may insinuate themselves into the most minute crevices or flaws even in the sides of the tubes of which timber consists, and they are infinitely more dangerous than *Merulii* or *Polypori*, which seldom fructify. The circumstances that are most favourable to the development of the dry rot fungi are damp, unventilated, situations, and a sub-acid state of the wood. The latter condition, especially in oak, is easily produced by a slight fermentation of the sap which remains in the timber, especially if the latter has not been well-seasoned before being employed. It has been proved experimentally that fluids which, in their ordinary state, will not produce fungi, generate them abundantly if ever so slightly acidulated. Dutrochet found that distilled water holding in solution a small quantity of the white of egg will not generate fungi in a twelvemonth, but upon the addition of the minutest quantity of nitric, sulphuric, muriatic, phosphoric, oxalic, or acetic acid, it generated them in eight days' time in abundance. Alkalescent infusions possess the same property. The only poisons which will prevent the appearance of fungi are the oxides or salts of mercury. A solution of fish-glue yields fungi rapidly and in great abundance; but a small quantity of red precipitate or corrosive sublimate destroys this power entirely. It is moreover an important fact that no other mineral preparation has any such properties. Dutrochet ascertained that other metallic oxides acted differently. Oxides of lead and tin hastened the development of fungi; those of iron, antimony, and zinc, were inert; and oxides of copper, nickel, and cobalt, although they retarded the appearance of fungi, yet did not prevent their growth in the end. These facts are confirmed by the experience of the use of Kyan's process for preparing timber, which consists in submitting

the wood to the action of corrosive sublimate. Immersing the wood in chloride of zinc likewise prevents the attacks of fungi, and also submitting it to the action of the vapour of creasote. Dry rot also occurs in animals. Specimens of hymenopterous insects resembling wasps have been brought from the West Indies with a fungus allied to *Sphæria militaris* growing from between their anterior coxæ, and it is positively asserted by travellers that the insects fly about while burdened with the plant. Upon opening the bodies of the wasps they are found filled with the thallus of the fungus up to the orbits of the eyes and the points of the tarsi: the whole of the intestines being obliterated. In such cases it is to be supposed that the thallus of the Sphœria first kills the wasp by compressing and drying up the body, and then, continuing to grow, occupies the whole of the cavity of the shell of the insect. A more common instance of animal dry rot is the disease in silkworms called La Muscadine. Silkworms of all ages are occasionally liable to become sickly and to die, soon after death becoming stiff, and acquiring such a degree of firmness as to be readily broken. They then throw out from their surface a sort of white efflorescence, which is the fructification of the fungus called *Botrytis bassiana*, their inside being filled by the thallus of the same plant. If some healthy caterpillars are placed beneath a bell-glass, along with a small portion of worm killed by the *Botrytis*, they soon catch the disease, exhibit the same symptoms as those already mentioned, and eventually perish; having, no doubt, been infected either by rubbing themselves against the dead worm, or, which is more probable, having received upon their skins the infinitely minute seeds dispersed by the *Botrytis*. If healthy crysalids are inoculated by the introduction below their shell of a little of the *Botrytis* matter upon the point of a needle, they also sicken and die. In these cases effects are produced upon insects similar to those upon timber; that is to say, vitality in the one case and cohesion in the other is destroyed by the growth of the thallus of certain fungi, which spread with great and irresistible rapidity, and fructify where occasion offers. Boletus destructor is also one of the dry rot fungi.—*Eng. Cyc., Tomlinson.*

DSO, and DSO-MO, in the Tibetan tongue, the bull and cow, the produce of the male Yak and common cow.

DUABANGA GRANDIFLORA, *Wall.*
Myouk-gnau, Burm.

A tree of British Burmah, wood used in house-building. A cubic foot weighs lbs. 30. In a full grown tree on good soil the average length of the trunk to the first branch is 80 feet and average girth, measured at 6 feet from the ground is 12 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex.*, 1862.

DUARA SAMUDRA was situated in the heart of Carnáta, about 100 miles north-west of Seringapatam, where its ruins still remain.

DUB, Rus. Oak. Quercus.

DUB, Hind. Cynodon dactylon.

DUBARO, Guz. A man of the Bhíl or Kúlí tribe.

DUBBA KAI PALLAM, Tam. Dubba pandu, Tel. Citrus aurantium; the orange.

DUBBER, Eng., Guz., Hind.

Dupper, Guz.	Sidda, Tel.
Sidde, Tam.	

Dubbers are bottles formed of skins, and used for holding and conveying spirits, oil, ghee, &c. They are made of all sizes, from a quart to 10 or 20 gallons, they are formed of untanned goat skins by stretching them when wet over unburned hollow clay-forms, the edges being well rubbed down on the lower skin to cause adhesion. The clay core is readily removed after the bottle is dried in the sun. They are manufactured in many parts of India. They are of nearly a globular form, roundish at the bottom, so as not to stand well, the aperture is round like that of bottles, but large in proportion to their size, the neck is short. They are made of all sizes, some to hold not a wine-glassful, one has been seen in Bijapur that was estimated at two hundred gallons capacity.—*Hindu Infanticide, p.* 177; *Rohde MSS.; Faulkner.*

DUBBOYE. See Komarpal.

DUBBRAY BAJANI-WALLA, also Dubbray Jogi. See Jogi.

DUBDUBEA. A Nepaul tree abounding in the Terai. Wood is a powerful astringent, and an article of trade.—*Smith's Five Years, p.* 67.

DUBH, Hind. A grass, Cynodon dactylon; its dry, creeping, stems spread out, and take root at the joints; it is commonly called "khabal" in the Panjab. This is the "dúrbá" grass of Sanscrit authors. In the Athawana Vedá it is thus apostrophized. "May Dúrbá which rose from the water of life, which has a hundred roots and a hundred stems, efface a hundred of my sins, and prolong my existence on earth for a hundred years." The flower of this grass is a most beautiful object under the microscope.—*Powell.*

DUBBOYE, in Guzerat, its chief is of the Bagela race.

DUBKA. A river near Khanee in Almorah

DUBOIS, Abbé J. A. A french missionary in Mysore and in the south of India. He wrote on the manners and customs of the

people of India, London, 1817, 4to. An account of Hindoo ordeals in Mad. Lit. Trans., 1827.

DUBRAY JOGI or Bal santa ka jogi. See Jogi.

DUBROMA GUAZUMA, *Will.* Syn. of Guazuma tomentosum, *H. B.*

DUBTHA, Hind. A bundle of peeled sugar canes ready for the press.

DUCA, Tel. Conocarpus latifolia, *Roxb.*

DUCHID PARAH, Kash. Flying squirrel.

DUCHIN. See Hot Springs.

DUCK. The domesticated duck is a decendant from the common wild duck, the Anas boschas. Its domestication has been accomplished in comparatively recent times, for it was unknown to the Egyptians, to the Jews of the Old Testament and to the Greeks of the Homeric period. About 18 centuries ago, Columella and Varro speak of the necessity of keeping ducks in netted enclosures like other wild fowl, so, even then, there was danger of them flying away. The A. boschas is met with in all the northern parts of Asia, Europe, America and Spain. The domestic duck is polygamous ; young ducks are injured by being allowed to swim in water. The domestic breeds are the common duck, the Flat-billed, Call and Penguin duck, Arlesbury, Tufted, Hook bill and Labrador duck, but though breeding in remote southern latitudes where the mallard is unknown, the domestic breed always shows parts of the wild. Certain ducks breed on cliffs or trees, and they must carry their young to the water, though this has not been observed. A large red duck, is the emblem of fidelity with the Rajpoots.

Tadorna vulpanser, the common Shieldrake of Europe, Asia, N. Africa is common in the Panjab ; not rare in Lower Bengal.

Spatula clypeata or *Anas clypeata*, the Shoveller, has the Circuit of northern regions, N. Africa and is tolerably common in India.

Anas stepera, the Gadwall,' and has the Circuit of the northern regions and Barbary, and is tolerably common in India.

Anas acuta, the 'Pintail Duck,' has the Circuit of the northern regions and Barbary, and is very common in India.

Anas boschas, the 'Wild Duck,' has the Circuit of the northern regions and Barbary : in India, is confined to Sindh, Punjab, and the Himalaya and its vicinity ; replaced southward by A. pæcilorhyncha.

Anas querquerdula 'Gargany,' of Europe, Asia, N. Africa, is very common in India.

Anas crecca, 'Teal,' of Europe, Asia, Barbary, is common in India.

Anas penelope. 'Wigeon,' of Europe, Asia, N. Africa, is common in India.

Fuligula ferina, the 'Pochard,' of the Circuit of the northern regions and Barbary, and is common in India.

Fuligula nyroca. 'Ferruginous Duck,' of Europe, Asia, N. Africa, is common in India.

Fuligula marila. 'Scaup Duck,' of the Circuit of the northern regions, occurs in Panjab, Sindh, Nepal.

Fuligula cristata, 'Tufted Duck,' of Europe, Asia, Barbary, is common in India. —*Darwin ; Blyth ; Jerdon.*

DUCKINASORE, is on the Ganges, opposite to it stands the village of Balli, a very old and orthodox place mentioned in the Kobi-Kunkun.—*Tr. Hind., vol* i, *p.* 3.

DUDAGRU. Hind. Ficus reticulata.

DUDAH. Guz. Cordage.

DUDAIEN of Gen. xxx, 14, is the Mandragora officinalis.

DUDAL, Hind. Taraxacum officinale, also Euphorbia helioscopia,

DUDDHI, Hind. Euphorbia thymifolia. —*Linn., Roxb.*

DUDDUGA, Tel. Guatteria cerasoides, *Duval.*

DUDE-KULAVADU, Tel. A cotton cleaner.

DUD-FRAS, Hind. Populus ciliata.

DUDHA-PAR. Hind. Euonymus fimbriata.—*Wall.*

DUDH-BATTHAL, Hind. Taraxacum officinale.

DUDHHI, Hind. ? A tree of Chota Nagpore with a soft white timber.—*Cal. Cat. Ex.* 1862.

DUDHI, Hind. Wrightia mollissima. Wrightia antidysenterica.—*R. Br.*

DUDHIA, Hind. Aconitum napellus. Wrightia mollissima.—*Wall.*

DUDHIA-MAURA, Hind. Aconitum ferox.

DUDHIKA, Hind. Nyctanthes arbortristis.

DUDH KALMI, Beng. Ipomæa turpethum.—*R. Brown.*

DUDHLAK, Hind. Microrhynchus nudicaulis.

DUDI CHETTU, Tel. Abutilon indicum.—*G. Don.*

DUDIGAPU CHETTU, Tel. Jatropha glandulifera.—*Roxb.*

DUDIPA, Tel. Hymenodyction excelsum.—*Wall.*

DUDIPALA, Tel. Oxystelma esculenta. *R. Brown.* Asclepias rosea.—*Roxb.*

DUDIPPA, of Godavery forests, Tel. Hymenodyction, *Species.*

DUDLA, Hind. Prunus padus, also Syringa emodi.

DUDLA JAMU, of Sutlej, Prunus padus —*Linn.*

DUDLI, HIND. Taraxacum officinale.

DUD SHAMBAR, HIND. Desmodium tiliæfolium.

DUFF, Dr. Alexander, a distinguished missionary of Calcutta.

DUFF, Captain Grant, author of History musical Instruments of the Mahrattas.

DUFF, and Surode musical instruments.

DUFFALI, a class of wandering devotees.

DUGDHA, HIND. A tribe of inferior brahmins on the borders of Futtihpoor, and Allahabad.

DUGGY. In Madras, round timber, from 20 to 40 feet long, 1-to-2½ feet square.

DUGHDIKA, HIND. Sonchus orixensis.

DUGKENTI, HIND., of Kaghan, Indigofera arborea.

DUGONG, MALAY. The sea-siren, merman, mermaid, is an inhabitant of the narrow seas of the Eastern Archipelago. Professor Owen denominated the Dugong of the archipelago, *Halicore indicus*, in distinction from that of the northern coast of Australia at a time when the former had not been ascertained to frequent (as a Dugong of some kind is now known to do) the Malabar coast and Gulf of Calpentyn in Ceylon ; but it still remains to be proved that this is the true Malayan Dugong,—however little reason there may seem to doubt it—as there might equally have seemed little cause to suspect the distinctness of the *Halicore australis !*

Halicore Dugong.

Trichechus dugong, *Gmel.* | Dugungus Indicus, *Ham.*

Indian Dugong,	ENG.	Mermaid, ENG.
Sea Siren,	,,	Le Dugong des Indes, FR.
Merman,	,,	

This inhabits the shallows of the Indian Ocean and about Ceylon, where the water is not more than two or three fathoms deep. It does not appear to frequent the land or the fresh water. Its flesh is delicate. The Dugong was noticed as occurring in Ceylon by the early Arab sailors, by Megasthenes (*Fragm*, lix) and Ælian, and subsequently by the Portuguese. It is this creature which has given rise to the tales about mermaids which have till the present day occupied the world, and doubtless had their origin in the tales of the Arab sailors. They are phytophagous or plant eaters.

Halicore Indicus. Owen. The Malay Dugong, an inhabitant of the narrow seas of the Eastern Archipelago.

Halicore Tabernaculi. Ruppell. The Dugong of the Red Sea, has a feeble voice, and feeds on algæ. It is about ten feet long. In February and March, fierce, bloody battles occur between the males. Its flesh, teeth and skins are utilized.

Halicore Australis. Manate of *Dampier.* White tailed manate of Pennant. It is a native of the West Coast of Australia.

Halicore Indicus. F. Cuvier.

Trichechus dugong, ERXL.	Halicore tabernaculum, RUP.
Halicore cetacea, ILLEG.	Dugungus marinus Tiede.
Halicore dugong, CUV.	

Dugong, MALAY. | Parampuan Laut, MALAY.

Under these synonyms Dr. Theodore Cantor unites all the above, which he says inhabits the Red Sea, the seas of the Malay Peninsula, Singapore, Sumatra, the Philippine islands. Moluccas, Sunda islands, and New Holland, It is supposed that the Dugong can be easily domesticated. The Halicore Dugong of Ceylon, was noticed as occurring there, by the Arab sailors, by Megasthenes *Fragm*, lix., and Ælian, and subsequently by the Portuguese. Doubtless the ancient Arab stories gave rise to the mermaid tales, which have since then occupied the world, for is this creature that has given rise to all the fables about the mermaid and the merman. Tennyson writes of

" A mermaid fair
" Singing alone
" Combing her hair
" Under the sea
" In a golden curl
" With a comb of pearl
" On a throne.
" At night I would wander away away
" I would fling on each side my low flowing locks,
" And lightly vault from the throne and play
" With the mermen in and out of the rocks ;
" We would run to and fro and hide and seek
" On the broad sea wolds in the crimson shells
" Whose silvery spikes are nearest the sea.

—*English Cyclopædia, p.* 913, *Mr. Blyth in Beng. As. Soc. Journ. Tennent's Ceylon, Dr. Theodore Cantor in Beng. As. Soc. Journal, No.* CLXXII of 11th December 1846, *Tennyson's Poems, 2nd Ed. p.* 60-62.

DUGSHAI. One of the Sanatoria of the Himalayas. See Sanatoria.

DUGUNGUS INDICUS, *Ham.*, Syn. of Halicore dugong.

DUGUNGUS MARINUS. Tiedemann apud *Schinz.*, Syn. of Halicore indicus, *F. Cuv.*

DUGURU, HIND. Ficus reticulata.

DAHAI, PANJ., Grislea tomentosa.—*Roxb.*

DUHAI, HIND. Justice ! an exclamation still made in India from any individual who considers himself injured, "Duhai Maharaj ! Duhai Company Bahadur !" Justice, Justice, my-Lord ! Justice Company Bahadur.—*Yule Cathay*, ii, *p.* 436.

DUHARU, BENG. A caste of fishermen and divers.

DUHSASANA and Duryodhana, sons of Dhrita rashtra.

DUHU, ARAB. Sesamum orientale.

DUHUN UL KHERWA, ARAB. Castor oil, ENG.

DUIVELS DRECK, DUT. Assafœtida.

DUIYA-KHUIYA, Beng. Desmochœta atropurpurea.

DUK or DOK, Jav. The hair of the Arenga saccharifera, Gomuti, Malay.—*Labill.*

DUKHAN. Part of the peninsula of India. See Dekhan.

DUKHANI-BROWN and HEMP, of Bombay, Ambari, Duk., Mahr.

DUKHN, Arab. Millet.

DUKKAR-KI-CHARBI, Hind. Hog's Lard.

DUKSHIN-ACHARI, Sans. From dukshina, the right hand, and acharin, acting.

DUKSHA, clever, Sans. From daksh, to act quickly.

DUKU. The Malay and Javanese name of a tree and fruit of the genus Lansium, and natural order Meliaceæ of botanists. To the same genus belong the langseh, langsat or langsab, for in all these forms the word is written, the rambeh and the ayar-ayar, probably all four but varieties of the same species. The duku is the most esteemed of them, and to the European palate is the best of the native fruits of the Archipelago, after the mangostin. The natives class it after the durian and mangostin. It is of the size of a pigeon's egg, of globular form, and covered with a coriaceous skin of the colour of parchment. The species seems to be indigenous in the western portion of the Archipelago, but to have been introduced into the Philippines, where one variety of it, the langseh, is cultivated.—*Crawfurd's Dict., p.* 125.

DUL, Beng. Panicum stagninum.

DULA, Hind. Abelmoschus ficulneus.

DULA KUDA, Mar. Nerium antidysentericum.

DULAGONDI, Tel, also Pedda Dulagondi, Tel. Mucuna prurita.—*Hook*, Syn. of Carpopogon pruriens.—*Roxb.*

DULA-GOVELA, Tel. Aristolochia indica.—*Linn.*

DULA-KANCHAN, Mar. Bauhinia acuminata.

DULA-KANDA, Tel. Arum. Sp. It is sometimes applied to A. capanulatum.

DULA KUDA, Mar. Nerium antidysentericum.

DULCAMARA, contains an active narcotic alkali, solanine, narcotic and diuretic: dose dr. 3 to oz. 1, thrice daily. It is very desirable to ascertain whether the Indian species, Solanum nigrum, Arrub-us-saleb, possesses similar virtues.—*Beng. Dispensatory, p.* 462; *Beng. Phar., p.* 277.

DULCE LIGNUM, Lat. Cinnamon.

DULCHIRRAM, Tel. Acacia kalcora, an enormous tree on the Godavery. Wood, hard and reddish.

DULHA, Ar. A bridegroom. Dulhan, a bride.

DULI, a litter or swing.

DULIGONDI, Tel., also Revati Dulagondi, Tel. Tragia cannabina.—*Linn.*

DULIAY, Beng. A caste, who carry palanquins or other burthens.

DULLA, Hind. Carbonate of Soda. A soda salt, or natron from the waters of the Lake of Loonar, it is used in dyeing, in medicine and the arts.

DULLAISEREE, a river near Roodpur in Dacca.

DULLEEA, rice and milk made of a very thin consistence.

DULLUN KATHI, Dukh. See Cotton manufactures.

DUL-MARA, Can. Chikrassia tabularis. —*Ad. Juss.*

DULTURAMU, Tel. Datura alba, *Rumph.*

DUM, Hind. A tail, hence dumbah the tailed sheep of Affghanistan and the Cape: dumchi marchi the tailed pepper, cubebs.

DUM-I-GURG, or the wolf's tail, is the Persian name for the first brushes of grey light which appear as forerunners of dawn.

DUMAGUDIAM. Coal occurs about 15 miles north of Dumagudiam, near the junction of the Tal-river near Lingala. The present limits of the coal measure fields in North India coincide approximately with the original limits of deposition and are not the result of faulting, or even mainly of denudation. All the successive beds (possibly with the exception of the Talchir) representing an enormous lapse of time, agree in one respect, that they seem to be purely fresh-water (fluviatile or fluvi-o-lacustrine) or esturine deposits. The Ranigunj, the Jherria, the Bokaro, the Ramghur, and the Karunpura fields all belong to the drainage basin of the Damoodah river.

DUMAGAS. See Mindanao.

DUMALEEA, a river of Sylhet.

DUMAR, Tel. A rope-dancer, an athlete.

DUMBA, Hind. A kind of flat tailed sheep of Peshawur, Kabul and the Salt Range.

DUMBAKI. See Kelat.

DUMBAR, Hind. Ficus goolereea.

DUMBA-STACAM, Tel. Alpinia galanga.—*Swz.*

DUMB-BELLS. See Magdar.

DUMBKI. See Kelat.

DUMKI MIRCHI, Duk. Piper cubeba.

DUM MUDAR, lit, the breath of Mudar.

DUMMULA, Eng. Dammer.

DUMMUR, Guz. and Hind. Dammer.

DUMOALA. A river near Saharunpoor.

DUMPA BACHALI, Tel. Spinacia tetrandra.—*Roxb.*

DUMPA RASHTRAKAM, Tel. Globba orixensis. The name is also applied to other Scitamineous plants.—*Roxb.*

DUMPA RASNA, Tel. Ophioxylon serpentinum.

DUMPOL-LONGSUE. A river near Nunklow in Cherrapoonjee.

DUMREE. A small copper coin, formerly current in the Carnatic; now rarely seen.

DUMREE, also written damri, in the Dehli Territory, a term applied to the sub-divisions of a village.

DUM TULI, Hind. Adiantum.

DUM-UL-AKWAIN, Arab. Pterocarpus draco, Dragon's blood.—*Linn.*

DUMUR. A name for the Bhatoo race, "dumbram," Tam, "dumbar war," Tel., and called also "kollati." See Bhatoo. Dumar.

DUN of Kashmir, Juglans regia.—*Linn.*

DUN-SIRIS, Hind. Acacia elata.

DUNA and murwa, Hind. Artemisia indica.

DUND, Sindi. Ponds or lakes on the line of the river Narra, from Sukkur to Omercote, or about 100 miles. The Narra is only filled with water during the inundation of the Indus river, and even this not often: it never reaches the sea, but is lost in the sand near Omercote. Betwixt this and Sukkur there are 360 dunds, most of which contain water throughout the year. They are from 300 to 400 yards across, but often many miles in length. They all become brackish during the hot weather. They abound in fish.—*Captain Del Hoste, in Bom. Geo. Trans., Vol.* ii.

DUND, Pers., Arab. Croton tiglium, Croton Seed.

DUNDA. The best known boats on the Indus are the *Zoruk* of the upper Indus, the *dunda* which plies from Mithankote to the sea, and the *dugga* which is specially suited from its strong build to the navigation of the rapids between Attok and Kalabagh. The better kinds of woods used in their construction (sissoo and large babul), are procured with difficulty, and various species of timber are generally seen in one boat, such as sissoo, babul, deodar, chir, bahn, and karil. Malabar teak is much prized in the lower Indus and fetches a large price. The ordinary ferry boats are constructed by the sides and bottom being prepared separately and brought together to be secured by knees or crooked pieces nailed to the bottom and sides. The bottom is made of sissoo, the knees of mulberry or olive, and the side planks of deodar. The wedges and trenails are usually made of tut and kahu. Ropes for rafts and boats are prepared either from hemp (Cannabis Indica), sirki (Saccharum spontaneum), Typha latifolia, "dib," or other reeds, common on the river bank. Munj (Saccharum munja), is also largely employed by the native boatmen. The great boat building localities of the Panjab are Pind Dadun Khan, Wazirabad, and Jelam, but there is a marked increase on the Indus, not only at Attok, but at Nowshera, Hashtnagar, Mokhud and Kalabagh.

DUNDA-PU, Tel. Nyctanthes arbortristis.

DUNDAWAT, Sans. From danda, a walking-stick; to fall in a straight posture, like a stick, at the foot of a brahmin.

DUNDA-ZANI, literally, stick-beating, a mode of torture said to have been practised by the subordinate officers in the private domains of the raja of Benares.

DUND BERRI, Arab. Jatropha curcas.

DUNDI, Sans. From danda, a staff.

DUNDGIRI, Hind. A very populous village, adjoining the esplanade of Bombay fort. Dund or dun, or dunger, is, in several dialects, derived from the sanskrit—a hill, or mountain; as it was also in some of the old languages of Europe.—*As. Res., Vol.* ix, p. 98.

DUNDIGAPU CHETTU, Tel. Jatropha glandulifera.—*Roxb.*

DUNDILAPU CHETTU, Tel. Calosanthes Indica.—*Blume*

DUNDA-DHARA, Sans. From danda, a staff, and d'hree, to hold.

DUNDA-SHOOKA. Sans., from dangsha, to bite.

DUNDUDHARA. See Yama, Dharmarajah.

DUNGANI. The great Ouigoor horde in Eastern Turkistan, are Turk, and they became mahomedans in A.D 966. The Chinese call them Hoeike, Oihor, and Hoai-Hoai. Towards the close of the 8th Century, the emperors of the Tang dynasty deported about a million of Ouigoor families, from the neighbourhood of Kashgar, and settled them at Kan-su and Chen-si. About A. D. 966, these families embraced mahomedanism, and under their chief Satook, they conquered Transoxiania, and carried away captive an immense number of Turks, of the Turghai tribe. In 972, the majority of these captives were allowed to return to their homes, but many remained, and they were styled Turghani or Tunghani, signifying remnant, and corrupted into Dungen, but known to the Chinese as Ouigoor or Hoai-Hoai. They are all mahomedans, but dress like Chinese. They are abstemious, religious, quarrelsome, using the knife, honest and fond of trade.

DUNGAREE, Guz., Hind., Tel, Datta, Tam. The Indian name of a coarse cotton fabric, manufactured in various parts of India, and used by the poorer classes of natives. The stouter kinds are much employed in the making of sails for native sailing vessels and tents. Dungaree is woven with two or more

threads together in the web and woof ; it is generally used for sails of country ships, and would no doubt be advantageously employed for the occasional light sails for larger ships, being more easily handled than European canvas. Superior descriptions are made with the web and woof, or web only, twisted either wet or dry, but this becomes as expensive as the best English canvas : the prevailing price of the ordinary dungarees, 30 cubits, that is 15 yards long and 2 feet wide, is 1 rupee 12 annas the piece at Masulipatam, being brought from Raylungy, a village and Talook to the northward, where a finer description, well adapted for tents, is made at 7 Rupees the piece of 36 yards, 1 yard wide. About Vizagapatam the ordinary dungaree is usually sold by weight. The best Bengal tents appear to be made of an open textured dungaree, the threads of which are finer than is usual in dungarees. Like all other cotton goods, dungaree should not be exposed to the weather in sails, tents, &c., till the weavers dressing and filth has been thoroughly removed by washing and partial bleaching.—*Faulkner, Rohde MSS.*

DUNGING OF CLOTHS, is a process resorted to by dyers both in the East Indies and Europe, the object being to impregnate cotton cloths with animal matter for which many dyes have a strong affinity.—*Rohde M.S.S.*

DUNG'TEN. A bone or relic receptacle, of the budd'hist religionists. The Chaitya, is any sacred object worshipped by the budd'hist, as a tree, an altar, a temple, as well as any monument raised on the site of a funeral pile, as a mound or pillar, and is probably applicable both to the budd'hist Chodten, or offering to the deity, and the Dung'ten, a bone or relic receptacle. The Stupa or Chaitya of Indian buddhism, are supposed to have been erected, subsequent to the Cave temples and Viharas or monasteries. The ancient Stupa were originally meant as receptacles of either the Buddhas or the Bodhisattvas and the kings who encouraged the propagation of the budd'hist faith. The Chodten or Chorten of Tibet are similar to the Stupa. They consist of a cylindrical vase, and have a cupola over them. See Buddha, Topes.

DUNGAL-KARNEWALA, literally, the assembler of a crowd, the master of ceremonies.

DUNIAH, Beng., Can., Duk. and Hind. Coriandrum sativum. Coriander seed.

DUNI-KADURU, Eng. Tabernæmontana dichotoma.—*Roxb.*

DUNIYA, Beng., Duk., Guz., Hind., Maleal, Sans. Coriandrum sativum.—*Linn., Roxb., W. Ic.* Coriander seed.

DUNK, a river of Purneah.

DUNKANI, Beng. Canscora decussata.

DUNORHUNG. A Penang wood, of a brown colour, specific gravity 1·235. Used by the Chinese for carving images.

DUNSHING, Hind. Abies webbiana.—*Hooker.*

DUNTI, Beng. Syn. of Croton polyandrum.—*Roxb.*

DUNTU PESALA-KAIA. Tel. Dolichos Tranquebaricus.

DUNUK, Hind. Aralia cachemirica, Dunuk-dopaharia, Hind. Pentapetes phœnicea.

DUOLA KANCHAN, Mar. Bauhinia acuminata, also B. albida and B. Gibsoni.

DUPADA CHETTU, Tel., Dupada mara, Mal., Dupa mara, Can. Vateria indica. —*Linn.*

DUPHALA and Abor Hills, are the mountains N. of Assam, inhabited by Bhooteans, Duphala, and Abor tribes. They are from 5,000 to 6,000 ft., above the surrounding level. The face of Assam presents an immense plain, studded with clumps of hills, rising abruptly from the general level. The mountains on the N. are composed generally of primitive rocks. Those to the S., are tertiary and metamorphic. See Dophla.

DUPLEIX. An eminent French commander, who served in the Peninsula of India in the middle of the 18th century, and made great efforts to sustain French interests there, against the British. He opposed Anwar-ud-din and his son Mahomed Ali, styled Wallajah, in opposition to Major Stringer Lawrence who was contending with Chunda Sahib. Dupleix, failed in an attack on Fort St. David, on the 19th December 1747. His efforts were directed to expel the British from the Peninsula his chief British opponents being Lawrence and Clive. In that time, Madras, Fort St. David, Cuddalore, Arcot, St. Thomé, repeatedly changed hands. He was appointed Chief of Chandernagore and succeeded M. Dumas as Governor of Pondicherry. He was of a bold, self-reliant but haughty character and was much thwarted by M. de la Bourdonnais. It was in his time that Madras was taken and held by the French and again restored to the British. He twice failed to take Cuddalore. He negotiated largely and formed alliances with native chiefs, with Anwar-ud-din, Chanda Sahib, Muzuffur Jung, and Nazir Jung. In 1752, he was appointed by Salabut Jung, Subadar of the Dekkan, Nawab of the Carnatic. For his services he was created a marquis, but misfortunes overtook him and he was superseded by M. Godeheu and returned to France in September 1754. On his return to

France in September 1754, the Government refused to pass the bills for the sums which he had ordered to be disbursed on his own responsibility and he was reduced to extreme poverty. He was shamefully treated, and three days before his death in 1754, he wrote in his memoir " I have sacrificed my youth, my fortune, my life, to enrich my nation in Asia." His great name shed a lustre on the struggles of his countrymen for empire in the East. *Orme; Malleson.* See Bourdonnais.

DUP-SALAI, Hind. Boswellia thurifera, Olibanum.—*Roxb.*

DUR, Hind. of Kangra, Cedrela serrata.

DURANA, Affghan. Cratægus oxyacantha.—*Linn.*

DURA. Daniel iii and i, tells us that Nebuchadnezzar the king made an image of gold whose height was three-score cubits, and the breadth thereof six cubits. He set it up in the plain of Dura, in the province of Babylon. This is the modern Imam Dour, on the left bank of the river.—*Rich's Residence in Koordistan, Vol.* ii, *p.* 148.

DURANA. Hind. Cratægus oxyacantha.

DURAND, Sir Henry Marion, entered the army in June 1828, as 2nd Lieut. in the Bengal Engineers; became Captain 1844, and promoted to Colonel, Feb. 1861. He served in the Affghanistan campaign; headed the explosion party, and fired the train at Ghuznee, for which he received a medal; served also at Gwalior and in the Panjab campaign at Chillanwallah and Goojerat, for which he received a medal with two clasps,and the Brevet of Major; was afterwards Agent to the Governor-General in Central India, when his conduct was frequently commended in dispatches, in 1858 he was nominated a C.B., and promoted to be Brevet Colonel; was appointed Major-General in the Army, and placed on the fixed establishment of general officers, March 1867; and invested with the order of the Star of India by the Governor-General in June 1867. He was an officer of great political sagacity. In 1857, he stood to his ground and stemmed the flood of mutiny from bursting into Hyderabad and pouring down the Deccan. Wrote on Dadapoor fossils in Bl. As. Trans., vol. v., 291.—On the Barometer, Ibid, 301.—On fossil rhinoceros, Ibid, 486; carnivora, 579; shells 661; quadrumana, 730.—*Howell Thurlow, Dr. Buist's Catalogue.*

DURANI. This Affghan race are partly pastoral and partly agricultural. All the Durani tribes have names ending in Zye, which, is equivalent to the Arabic, Ibn, or Wald, and to the Scotch Mac. There are nine of these tribes, the Popul-zye, which is the largest; Alleko-zye; Baruk-zye; Achik-zye; Nur-zye; Ali-zye; and Ishaq-zye, the last two being the smallest. In person, the Durani are stout and well made, many of them being above the standard of the Indo-Germanic races of Europe. Some have round and plump faces. With others, the countenance is strongly marked, and with most the cheek bones are prominent. When a family is by itself, the men and women eat together; but few restraints are put upon the female, and her influence is considerable. The Durani tribes, all but the Achik-zye, are religiously given, but not intolerant. They are Sunnis. Their national dance, called Attun, is danced almost every evening with songs and tales to accompany it. They have a strong love of country.—*Dr. Latham, p.* 202, *Elphinstone's Cabool.*

DURANTA ELLISIA, one of the Verbenaceæ, a scentless, beautiful, large shrub, with light blue pendulous flowers, it blossoms almost throughout the year, and is readily grown from cuttings. D. Plumieri is also a large shrub, with handsome drooping blue flowers having the scent of almonds: the clusters of seed berries which are numerous, when ripe, have a very pretty appearance from their dark orange colour, they do not appear to germinate readily.—*Riddell.*

DURAS or Hemb. Bafe or Bab. See Kashmere.

DURBA. Hind. Sans. See Dubh, Durva.

DURBAR. Hind. Pers. In India, an assembly held by a sovereign or ruler, equivalent to a Levee.

DURBET. See Dyassak.

DURBUNG. A river near Songnum.

DURDU, an old secluded pastoral race in Ghilghit and Chulas, on the Indus river, on the north. The Affghans on the one side and the Turkomans on the other, are gradually pressing on the less energetic Durdu. See India.

DURESHTA. Hind. Medicago sativa.

DURGA, a form or caricature of Parvati, and one of the Grama-devata. According to Bently, Durga, as wife of Siva, corresponds with the Juno of the Greeks and Roman: and the Isis of the Egyptians, as also Ceres and Proserpine. Durga, is only one of the names of the hindoo goddess who is known as Bhawani, Kali, Parvati. As Durga she is represented with ten arms. In one hand she holds a spear, with which she is piercing the giant Muhesha, in another, a sword; in a third, the hair of the giant, and the tail of a serpent twined round him, and in others, the trident, the discus, the axe, the club, the arrow, and the shield. One of her knees presses on the body of the giant, and

her right foot rests on the back of a lion, which is lacerating his arm. On her head she has a crown richly gemmed, and her dress is magnificently decorated with jewels. The giant is issuing from the body of the buffalo, into which he had transformed himself during his combat with the goddess. The plate given as the frontispiece of Moor's Pantheon, was taken from a cast by a then well-known artist, Chit Rai, and represents, with great precision the figures which are exhibited at the annual celebration of the *Durga Puja* or *Dusarah*. At this festival the images of her sons, Kartikeya and Ganesha, are also, in Bengal, usually placed on each side of her. This is the most splendid and expensive, as well as the most popular of any of the northern hindoo festivals and takes place in the month Ashwinu or in the end of September or beginning of October. The preliminary ceremonies occupy several days previous to the three days of worship. During the whole of this period all business throughout many parts of the country is suspended, and universal pleasure and festivity prevail. Sir John Malcolm, in the Transactions of the Bombay Literary Society, in allusion to the *Durga Puja* or *Dusarah*, has stated that the hindoo soldiers have converted the animals and instruments of modern warfare into emblems of their Bellona. Thus the horse is invoked to carry his master, first to victory and then to repose. The flag-staff is the ensign of Indra; the sword is celebrated under several names; the bow and arrow are also praised; and even fire-arms have their proper pre-eminence of adoration. The hindoo artilleryman, at all times, regards the gun to which he is attached as an object of superstitious reverence, and usually bestows on it the name of some deity. During the *Durga* festival, the cannon belonging to the army are planted, praised, invoked and propitiated by several species of offering. On the morning of the tenth day, the Peishwa, with all his chiefs and soldiers, used to move out to the camp in the vicinity of the city, each being ranged under his particular banner, mounted on his best horse, dressed in his finest clothes, and with his arms highly polished. Horses, elephants and camels, were all arranged in their gayest trappings, and every corps spread its gaudiest flags and banners. The whole population of the capital, either as actors or spectators, joined in this grand procession, which moved towards the sacred tree, the object of adoration. After the offerings and prayers, the Peishwa plucked some leaves off the tree, on which all the cannon and musketry commenced firing. The Peishwa then plucked from a field, purchased for the occasion, a stalk of *jowari* or *bajri*, on which the whole crowd fired off their arms, or shot arrows, and rushed in an instant and tore up the whole. Each endeavoured to procure his share of the spoil. Some succeeded in carrying off a handful, whilst others contented themselves with a few stalks; all, however, returned home with shouts of joy, and the remainder of the day and night was devoted to festivity and mirth. Many other usages prevail at this festival, which are peculiar to the Mahrattas, among others, that of sacrificing sheep and buffaloes, sprinkling the blood on the horses with great ceremony, and distributing the flesh of the former to all ranks, brahmins excepted. The chiefs often give money to enable their soldiers to buy sheep to perform sacrifices, which, from furnishing them with a good dinner, are by many considered as the most essential ceremonies of the Dusarah. The deity thus honored is, however, still the same, and Durga, who destroyed more giants than all the rest of the hindoo divinities together, is, under all the numerous names and forms derived therefrom, no other than Parvati, Bhavani, or Devi, the *sacti* or personified energy of Siva. The *Yoni*, the symbol of female energy, is the emblem of this goddess, as the *Lingam* is that of her husband. This emblem is worshipped by the Sacta sect: and, in conjunction with the Linga by the Saiva sect. It forms the rim or edge of the *Argha*, or cup, which encircles the *Linga*. —In the Durga puja, the sacred jar is an essential article in the celebration of the mysteries and is marked with the combined triangles, denoting the union of the two deities, Siva and Durga. The Sacta sect, worshippers of the Sacti, or female principle, mark the jar with another triangle. The Vaishnava sect, in their puja, use also a mystical jar, which is also marked. These marks, Mr. Paterson says are called Tantra; and are hieroglyphic characters, of which there are a vast number. He hence ingeniously deduces the identity of the hindoo puja with some Egyptian rites of a corresponding nature. An explanation of his views is given in his Essay on the origin of the hindoo religion, in the eighth volume of the Asiatic Researches, p. 401. In the different terrific forms of Siva and Durga, a necklace of skulls forms an invariable decoration, as does the crescent or half-moon on the forehead; and the moon is considered to be the peculiar reservoir of Amrita or the beverage of immortality.—In *Hind. Theatre, Vol.* ii, *p.* 59, Aghoraghanta invoking Chamunda, says of Durga,

> The elephant hide that robes thee, to thy steps
> Swings to and fro; the whirling talons rend
> The crescent on thy brow; from the torn orb

The trickling nectar falls, and every skull
That gems thy necklace laughs with horrid life.

Anna Purna Devi, a goddess in hindoo mythology, is a beneficent form of Parvati, she is described as of a deep yellow colour, standing or sitting on the *lotus*, or water-lily. She has two arms, and in one hand holds a spoon, in the other a dish. In her dress she is decorated like the other modern images of Durga, Anna Purna is a household goddess, and is extensively worshipped by the hindoos. Her name implies the goddess who fills with food, and they believe that a sincere worshipper of her will never want rice. She is possibly the Anna of Babylon and she has been considered as the prototype of the Anna Perenna of the Romans, whom Varro places in the same rank with Pallas and Ceres, and who was deified and held in high esteem by the Roman people, in consequence of having supplied them with food when they retired into Mount Aventine. Besides the great similarity of names, there is a singular coincidence in the times of their worship, the festivals of Anna Purna taking place in the early part of the increase of the moon in the month Choitru (partly in March,) and those of the Roman goddess on the Ides of March. In India, she is known simply as Anna, also as Anna Purna or Anna Devati. In his hymn addressed to her by the Rishi Agastya, she is personified as Pitu or material food. Anna Purna is from the Sanscrit, anna, food, and poornua, full. Another word is anna, food, and prashana, feeding.—*Coleman's Mythology of the Hindoos, p.* 91 ; *Wilson's Hindoo Theatre.*

DURG BANSI. HIND. A tribe of Rajpoots in Jonpur and Azimgurh.

DURGAH, properly Dargah a tomb or shrine. There are two noted shrines of this kind near Mangalore. The first is situated at the village of Cuddry (two miles off), and called *Sheikh Furreed ka Dargah.* It consists of a hole in the centre of the side of a perpendicular rock composed of laterite, which is said to lead to a considerable distance (they say all the way to Hyderabad, 450 miles.) The opening is square, about six feet above the ground, ascended by a flight of stone steps rudely constructed and just large enough to allow of a person to crawl in. The cavern is very dark, and no one knows the exact size of it, as none dare venture in. Adjoining is a chasm in the rock, and of inconsiderable size, which at its entrance has been built up with stone, and an opening left for people to creep in by as in the other ; but this is found open within (or exposed to the air) after it is once entered. Tradition states that about A. D. 1738, there was a peer named Sheikh Furreed, who made *chilla (i. e.* neither speaking, eating, or drinking for forty days, but worshipping God and living retired from the world) in Hindoostan. He resided at Cuddry for twelve years, during which time he used to observe *chillas*, remaining for forty days together in the cavern, seeing and speaking to nobody, eating and drinking nothing ; after the forty days were over he was wont to come out for four or five days, but partake of no other food but the leaves of a plant (since named after him), *Furreed-bootee* (the latter word signifying a medicinal herb), a sort of shrub which grows wild in the surrounding jungles and has a sweetish taste : he drank water, spoke during these days, said prayers in an adjoining stone building, and then retired again to this cavern to perform another forty days *chilla*, and so on. At the end of twelve years he disappeared, and it is said, this being the road to Mecca, that he set out for that town by this subterraneous route, and has never been heard of since. Mohamedans resort hither occasionally and on Fridays cook victuals, and having offered *fatiha* over them while burning incense, in his name, distribute them among the faqeers resident there, as well as those who have accompanied them. If a *durgah* be situated in a place where no food can be dressed (from want of materials or otherwise), they take sweetmeats with them, which they substitute in its stead. This *durgah* is in the charge of a *faqeer*, who receives (or rather helps himself to) the offerings that are made by visitors, and which are placed at the entrance of the cave, when he dies (the office not being hereditary) another is appointed, the one best qualified from his known piety and zeal. The committee for electing a successor consists of the four principal *mukhan-walay* (peers), residing at the four principal *mukhans* (or houses of peers), spiritual guides (so called) at Mangalore, and six or ten of their *murid* (or disciples), on such occasions numerous *faqeers* are likewise present. The four peers having come to an unanimous conclusion, appoint either one of their disciples, or the son of the deceased, if he be found duly qualified. In the days of sooltan Tippoo, the individual in charge of this *durgah* used to receive, by order of the sooltan, rupees corresponding to the number of masts of the vessels that entered the roads or harbour ; for every ship three rupees, patamars, &c., two rupees, *manji*, &c., one rupee : this rule was abolished when the place fell into the hands of the British. There is likewise a pagoda where a grand annual festival takes place, on which occasion an immense

concourse of people assemble. The second *dargah* is situated on the banks of the river at Mangalore, and consists of a large, long, tomb with minarets at each extremity. *Low Lungar Shah*, a faqir, whose name it bears is buried here. Lamps are burned here every night, and it is chiefly visited by the hindoo Tamil race, but also by mohamedans and other hindoos. Most hindoos, however, frequent *Sheikh Furreed's dargah*. These *dargahs* are resorted to when people are desirous of being freed from any distemper, misfortune, &c. If the individual who is enshrined in the *dargah* have been wealthy, large dinners are provided, *fatiha* offered, and the food distributed to any who choose to partake of it ; there being sometimes *Kanchni ka taefa* (bands of dancing girls) to entertain the guests. Among the great this takes place on every night of the year (and is never observed in the day time) ; but among the poorer classes of people, every Monday and Thursday or once a week or month.—*Herklots.*

DURGA PUJA, the festival of Durga in Bengal, in the month of Aswin, about October. On this occasion the images of her sons, Kartikeya and Ganesha, are also, in Bengal, usually placed on each side of her. This is the most splendid and expensive, as well as the most popular of any of the hindoo festivals, and takes place in the month Ashwina, the end of September or beginning of October. The preliminary ceremonies occupy several days previous to the three days of worship. During the whole of this period all business throughout the country is suspended, and universal pleasure and festivity prevail. It is known among the Mahrattas as the Dasserah and hindoo soldiers have converted the animals and instruments of modern warfare into emblems of their Bellona. Thus the horse is invoked to carry his master, first to victory and then to repose. The flag-staff is the ensign of Indra ; the sword is celebrated under several names ; the bow and arrows are also praised ; and even fire-arms have their proper pre-eminence of adoration. The hindoo artilleryman, at all times, regards the gun to which he is attached as an object of superstitious reverence, and usually bestows on it the name of some deity. During the *Durga* festival, the cannon belonging to the army are planted, praised, invoked, and propitiated by several species of offerings. On the morning of the tenth day, the Peishwa, with all his chiefs and soldiers, used to move out to the camp in the vicinity of the city, each being ranged under his particular banner, mounted on his best horse, dressed in his finest clothes, and with his arms highly polished. Horses, elephants, and camels, were all arranged in their gayest trappings, and every corps spread its gaudiest flags and banners. The whole population of the capital, either as actors or spectators, joined in this grand procession, which moved towards the sacred tree, the object of adoration. After the offerings and prayers, the Peishwa plucked some leaves off the tree, on which all the cannon and musketry commenced firing. The Peishwa then plucked from a field, purchased for the occasion, a stalk of *jawary* or *bajree*, on which the whole crowd fired off their arms, or shot arrows, and rushed in an instant and tore up the whole. Each endeavoured to procure his share of the spoil. Some succeeded in carrying off a handful, whilst others contented themselves with a few stalks, all, however, returned home with shouts of joy, and the remainder of the day and night was devoted to festivity and mirth. Many other usages prevail at this festival, which are peculiar to the Mahrattas, among others, that of sacrificing sheep and buffaloes, sprinkling the blood on the horses with great ceremony, and distributing the flesh of the former to all ranks, Brahmins excepted. The chiefs often gave money to enable their soldiers to buy sheep to perform sacrifices, which, from furnishing them with a good dinner, were by many considered as the most essential ceremonies of the Dasserah. In the Durga puja, a sacred jar, is an essential article in the celebration of the mysteries and is marked with the combined triangles denoting the union of the two deities, Siva and Durga. The Sacta sect, worshippers of the Sacti, or female principle, mark the jar with another triangle. The Vaishnava, in their worship, use also a mystical jar, which is also marked. These marks, Mr. Paterson says, are called Tantra ; and are hieroglyphic characters, of which there are a vast variety. He hence deduces the identity of the hindoo puja with some Egyptian rites of a corresponding nature.—*Sir John Malcolm, in the Transactions of the Bombay Literary Society, Cole. Myth. Hind. p.* 91 ; *Paterson, Essay on the origin of the Hindoo religion, Asiatic Researches, vol.* viii, *p.* 401.

DURGARAZ PATNAM, in the Nellore District one of the earliest of the British stations.

DURGARI, of Panjab, Albizzia stipulata. —*Boiv.*

DURGAVATI, pronounced Durgonti, was the daughter of the Chandail king of Mahoba, the ancient capital of Bundelcund. With her father's consent, the Gond king of Gurrah Mundla carried her off with an army of 50,000 men. After her husband's death, Asof Khan, a general of Akbar, in 1564, ad-

vanced to annex Gurrah Mundla, but as her son was a minor Durgavati assembled 1,500 elephants, 8,000 horse and some foot, and, clothed in armour, met the Moghul forces and drove them back. Asof again advanced and was again defeated with a loss of 600 men. A third effort was successful, her son was wounded, and her troops fled, she herself was wounded and she ended her life with a dagger. Her tomb is still to be seen in a narrow defile between two hills, and passers bye place crystals on her grave. Her name still rests in Gond story.

DURGOTSAVA. See Kali.

DURGOWTI. A river in the Benares district of Bengal.

DURHAWUT, See Burabur caves.

DURIA MADDEE, also kora maddee and koraman, *Tel.* Briedelia spinosa. A tree of the Godavery, wood appears to be very strong and good. Cattle eat the leaves most voraciously.—*Captain Beddome.*

DURIAN Two high islands, in the Duryan Strait and distinguished as the Great and Little ; Great Duryan being called by the Malays Pulo-Sanglar.—*Horsburgh.* See Duryan.

DURI-HAR. See Jogi or Yogi.

DURIO. A genus of plants of which the name has been derived from Durion, a well-known fruit of the Malayan Archipelago. The specific name of *zibethinus* has been applied to the tree which forms this genus from the fondness of the Malayan zibet (*Viverra rasse*, Hors.) for this fruit. The genus *Durio* belongs to the natural family of *Bombaceæ*, considered by some botanists to be only a tribe of *Sterculiaceæ*. It is characterized by having its five petals smaller than the five lobes of the calyx. The stamens, long and numerous, are arranged in five bundles, and have twisted anthers ; the free germen is surmounted by a long filiform style and capitate stigma ; the fruit, roundish and muricated, is divided internally into five cells, and easily separates when ripe into five parts ; each cell contains from two to four or five seeds enveloped in soft pulp.—*Eng. Cyc.*

DURIO ZIBETHINUS, *Linn.*

Echinus arboreus.

Du yeen, BURM.	Dorian, ENG.
Du yeen yaing, BURM.	Turrien, Siamese.

The Dorian is a large and lofty tree of the Malay Peninsula, the Eastern Archipelago and the Moluccas, large in shape, the flowers are arranged in clusters on the trunk and older branches, where is also borne the fruit, as in the Jack and Cocoa trees. It is of the size of a melon, covered with sharp points ; when it is ripe, the outer skin opens spontaneously, and the interior consists of five lobes of a creamy consistence and a whitish colour in which are nuts more or less numerous. The Durian is a favourite food of the natives during the time, May and June, when it is in season ; but there is usually also a second crop in November. It is as remarkable for the delicacy, combined with richness, of its flavour, as for the intolerable offensiveness of its odour. It is delicious to the taste, but the strong and persistent smell repels most Europeans from using it. In size it is equal to a melon, or a man's head, and sometimes compared to a rolled-up hedgehog hence it has been called Echinus arboreus in consequence of its hard and thick rind, which is yellow-coloured when ripe, being covered with firm and angular projections. The seed, with its edible enveloping pulp, is about the size of a hen's egg ; the pulp is as white as milk, and as delicate in taste as the finest cream, and should be eaten fresh, as it soon becomes discoloured and undergoes decomposition. The seeds of the Durian are likewise eaten when roasted, and have something of the flavour of chestnuts. The wood of the tree is valued for many economical purposes, especially when protected from moisture. The rind, probably from containing potash, is used in the preparation of some dyes. Although possessing an odour, so powerful and diffusive as to taint the air of a whole town when it is in season, the pulp is rich without being cloying. The natives of the countries yielding the Durian, prize it beyond all other fruits. In countries with a suitable climate, it flourishes without care or culture. It is most abundant in the western portion of the Archipelago and extends east as far as the island of Mindano, the only one of the Philippine group in which it is known. It is abundant in Siam, however, up to the 13th and 14th degrees of north latitude ; and again it is found on the coast of Tenasserim, in about the 14th degree of latitude, which is the furthest distance from the equator to which it has been successfully propagated. All attempts to cultivate it in any part of Hindoostan have failed ; nor has it, like some other Asiatic fruits, been transferred to tropical America. Crawfurd did not find that it was grown in Cochin-China, although he thinks it most likely that it is so in some parts of Kamboja. A hot, moist, and equable climate would seem to be indispensable to the Durian, but soil seems to be indifferent to it, for it thrives in the granitic, in the sandstone, and in the calcareous soil of the Peninsula and Sumatra, in the volcanic soil of Java, and in the rich alluvium of the valley of the Menam in Siam. The name, is pure Malay, and is a derivative from the word Duri, a

thorn or prickle, in reference to the sharp tubercles with which the rind is covered. This name, with trifling variations, is that of the fruit in every country in which it is found from Java to Siam, and it has no other. From this, therefore, it may be inferred that the tree is a native of the country of the Malays, viz., Sumatra, the Peninsula, and their adjacent islands, and that through the Malays it was more widely disseminated. In the interior of the Malay Peninsula, in several places in the forest are found Durian trees, always in a body together, to the number of about ten or twelve trees. Such places are for the Jakuns an object of great attention, and matter of work. They cut with the great axe all the other trees which surround the Durians, that these, by receiving more air, may grow up more easily, and give finer, and a greater quantity of fruit. They build there a small house, and then return to their ordinary habitations, which are sometimes distant from such places one or two days' journey. Durian, is seen to grow spontaneously in one of the small islands off the eastern coast of the Peninsula, and which is nearly one entire forest down to the margin of the sea. On Pulo Tingi, the orang-lant, or sea-gypsies, assemble, attracted from the coasts of the Peninsula, as well as from the islands of the Jehore Archipelago. On one occasion six boats from Moro, an island of that group, were found on their way to Pulo Tingi; they had travelled by sea a distance of 180 miles, to partake of the fascinating fruit.—*Roxburgh, Vol.* iii, *p.* 398; *Marsden's Hist. of Sumatra; Mason's Tenasserim; McClelland, Eng. Cyc.; Crawfurd Dict., p.* 126.

DURIYA MADDI, TEL. Briedelia spinosa, *Willde.*

DURMA, BENG. Amphidonax karka. See Graminaceæ.

DURMUR, HIND. Xanthoxylon alatum.

DUROOD, HIND., PERS. Blessing or benediction. Durudi, a person who reads prayers or reads the koran at the tombs of deceased persons.

DURPANA, SANS. From drip, to shine.

DURRA also ZURRUT, ARAB. Sorghum vulgare.

DURRA, a corruption of *Dwâr*, a barrier, pass, outlet or portal, and *Mokund*, one of the epithets of Krishna. *Mokundurra* and *Dwaricanat'h* are synonimous :—" the pass and portal of the Deity."—*Tod's Rajasthan, Vol,* ii. *p.* 702 703.

DURRABUND. See Khyber, p. 514.

DURRAH. See Pindara.

DURRAWAL, 18 coss, equally between Ahmedpoor and Bahawalpoor is the chief fortress of the Bahawalpoor state.

DURRE. See Chepang, Haiyu, Chetang.

DURRIKHANA, is a hall of audience, appropriated for ceremonies, carpets are spread.—*Tod's Rajasthan, Vol,* i. *p.* 185.

DURRUMPOOR. A revenue district in Bengal, formed out of ancient Bahar.

DURRUNG. A division of Lower Assam.

DURSHUA, TEL. Acacia sirissa—*Buch.*

DURAKHT-I-MUKUL, PERS. Commiphora Madagascarenis.

DURUNG, MALAY, in Bawean, a hall of audience or of reception, before the houses.

DURUNGA, HIND. Artemisia elegans.

DURVA, HIND. Poa cynosurioides. Vishnu as Rama, in his seventh incarnation, assumed the colour of this grass, which is, therefore, held sacred to that god, and used by the hindoos in all religious ceremonies. See Graminaceæ.

DURVASA, in hindoo legend, a rishi of a choleric temper, whose curse was of dreadful effect. See Lakshmi.

DURWAN, PERS., HIND. A doorkeeper.

DURWESH, OR FAQEER, a mohamedan religious mendicant or devotee, the Dervis of the Arabian Nights.

DURYA KA KEKRA, DUK., Crab.

DURYA-KA-NAREL, DUK. GUZ. HIND. Sea-cocoa-nut of Seychelles.

DURYAN, of Dryon : Lodoicea Strait, is above 120 miles long, from Pulo-Varela to the Carimons ; and is bounded on the west side by the coast of Sumatra, False Durian, Sabon and the contiguous islands : on the East side by the islands off the South and West sides of Lingin, Great and Little Durian and the adjacent islands. Throughout these Straits the tides are very irregular.—*Horsburgh.* See Durian.

DURYODHANA, the head of the Kuru race, who made war with the Pandava race, as the elder branch, retained his title as head of the Kuru, while the junior, Yoodishtra, on the separation of authority, adopted his father's name, Pandu, as the patronymic of his new dynasty. The site of the great conflict known as the Mahabharat between these rival clans, is called Kuru Khetu, or 'Field of the Kuru.' The rivalry between the races was continuous, but Duryodhanu, who often failed in his schemes against the safety of his antagonists, determined to make the virtue of Yoodishtra the instrument of his success. He availed himself of the national propensity for play, in which the Rajpoot continues to preserve his Scythic resemblance. Yoodishtra fell into the snare prepared for him. He lost his kingdom, his wife, and even his personal liberty and that of his brothers, for twelve years, and became an exile from the plains of the Yamuna.

DURZI properly DARZI, Hind., a tailor.

DUSA, Tel. Panicum fluitans.—*Retz.*

DUSARI TIGE, Tel. Cocculus villosus. —*DC.*, also Menispermum hirsutum.—*Roxb.* The withies are woven into small baskets and are used instead of cord by the ryots.

DUSH-BAHOO, Beng. Pardanthus chinensis.

DUSHTISTAN means a level country, from "Dusht," a plain ; but it is particularly applied to the low country extending along part of the shores of the Persian Gulf.—*Fraser's Journey into Khorasan, p.* 54.

DUSHTUPA CHETTU, Tel. Dæmia extensa.—*R. Brown.* Asclepias echinata.—*Roxb.*

DUSHA-BHOOJA, Sans. From dashan, ten, and bhooja, an arm. Dashahara, Sans., from dashan, ten, and hree, to take away. Dasha-koomara, Sans., from dashan, ten, and koomara, a son. Dusha-dik-pala, Sans. Pala signifies the cherishing of a person. Dasha-Rat'ha, Sans., from dashan, ten, and rat'ha, a chariot. Dashama-Padshahé-grant'ha, Sans., from dashama, the tenth, badshah, king, and grant'ha, a book.

DUSKY PRESBYTES. See Simiadæ.

DUSMASA. Vide Faqeer.

DUSS, Hind. Colebrookia oppositifolia, also Elsholtzia polystachya.

DUSSAUN, a small river of Banda running near Nureeawullee, near Bhopal, and 9 miles from Saugor.

DUSSAYRA, prop. Dush'hra, a great hindoo festival in the Deckan, answering to the Doorga puja in Bengal. As Arjuna and his brothers worshipped the "Shumee" tree, the Acacia suma and hung up their arms upon it, so the hindoos go forth to worship that tree on the festival of the Dussera. They address the tree under the name of Uparâjeetâ, the invincible goddess, sprinkle it with five ambrosial liquids, the Punchâmrit, a mixture of milk, curds, sugar, clarified butter and honey, wash it with water, and hang garments upon it. They light lamps and burn incense before the symbol of Uparâjeetâ, make chândlos upon the tree, sprinkle it with rose-coloured water, and set offerings of food before it.—*Forbes' Râs Mâlâ, Hindoo Annals, Vol.* ii, *p.* 335.

DUSSUMIERIA ACUTA, *Cuv. and Val.* Tamban bulat of the Malays. This fish is one of the Clupeonia. Head above, back and upper third of the sides deep glossy blue, bordered by a longitudinal band of pale copper-red ; the rest of the head and body shining silvery ; single individuals of this species occur at Penang at all seasons, but numbers from June to September. It is highly valued for its delicate flavour, and passes commonly as a 'Sardine.' The latter denomination it shares, however, with *Clupeonia perforata*, with which it is also confounded by the Malays under the common name of *Ikan tamban.* Both species have been prepared as 'Sardines a huile.' The family Clupeidæ may be thus shown.

Clupeidæ.

First Group.—Engraulina.
Gen. 2 Cetengraulis, 37 Engraulis, 10 Coilia.

Second Group.—Chatoëssina.
Gen. 10 Chatoessus.

Third Group.—Clupeina.
Gen. 61 Clupea, 3 Clupeoides, 1 Pellonula, 1 Clupeichthys, 14 Pelona, 7 Pristigaster, 1 Chirocentrodon.

Fourth Group.—Dussumieriina.
Gen. 3 Spratelloides, 2 Dussumieria, 2 Etrumeus.

Fifth Group.—Albulina.
Gen. 1 Albula.

Sixth Group.—Elopina.
Gen. 2 Elops, 2 Megalops.

Seventh Group.—Chanina.
Gen. 2 Chanos.

DUST, is carried along with winds to great distances. Sirocco or African dust is found by the microscope to consist of infusoria and organisms whose habitat is, not Africa, but S. America, and brought in the tract of the S. E. trade wind of S. America. In the dust of the Cape Verdes, Malta, Genoa, Lyons and the Tyrol, Ehrenberg discovered separate forms. Dust storms are very frequent in India. A dust storm passed over Madras on Sunday the 19th May, which had travelled all the way from Allahabad nearly twelve hundred miles away. It commenced at Allahabad about seven A. M., that day and continued till 1 P. M, retaining the same fury as when it began ; it reached Madras soon after the last named hour. On the evening of the 17th, Secunderabad had been visited with an unusually severe dust storm. It came from the North West and was accompanied by lightning and thunder. The air to a considerable height was rendered almost opaque by dense clouds of red dust. The wind raged with great fury for upwards of half an hour and on its abating was followed by a heavy shower of rain The storm at Madras on Sunday the 19th, passed over Kristnapatam seventeen miles S. E. of Nellore at half past ten o'clock in the forenoon of that day accompanied by a slight fall of rain. In the north of the district between Ongole and Ramapatam, there was a heavy fall of rain in the forenoon of Sunday, averaging from two to four inches. At Chingleput, thirty six miles South of Madras, the storm was experienced in full force at that station at two P. M. the same day. It came from the N. W. and the

wind was laden with vast quantities of reddish dust, no refreshing shower succeeded the storm.

DUSTAR OR PUGGREE. The name given in India, to the turban, worn on the head by mohamedans of Turkey and India, and by hindoos : the word turban is unknown to mohamedans of India.

DUST BOSEE, lit. hand-kissing.

DUSTH-BULLA. See Kurb-bulla.

DUSTOOR, properly written dastur, is perhaps a mere abbreviation of dastur-ul-amal. A body of instructions and tables for the use of revenue officers under the native Government of India.

DUST PANNA. A pair of tongs carried by faqeers.

DUSTUGIR-WALAY. An appellation given by the Gyr-mahdian mohamedans to all other sects.

DUSTAR-KHAN. A table cloth or rather a floor cloth, one spread on the ground.

DUSUN, or hill tribes of Ambong.

DUTA. In hinduism, messengers of the gods.

DUTCH. The name in the English language given to the people of Holland, in Europe, who call their own country Neiderland or Netherland. They have occupied parts of the East Indies since the close of the sixteenth century and designate their possessions in the Archipelago Netherlands India. Ceylon was occupied by the Portuguese in 1596, was taken possession of by the Dutch in 1658, and by the British in 1797. They had small possessions on the continent of India chiefly near Cochin, but at present they occupy or hold under feudatories a great part of the Eastern Archipelago, and their territories are styled the Dutch East Indies also the Dutch Indies, also the Netherland possessions in India. This nation first came to the Eastern Archipelago as the servants of the Portuguese. Pedro da Covilham and Alfonso de Payva, were sent as merchants in 1494, viâ Genoa, Alexandria, Cairo and the Red Sea, to Aden, where they separated to meet again at Cairo, in Abyssinia, Payva to search for Prester John, whom he heard of as reigning there over a highly cultivated people, but he died before reaching Abyssinia. Covilham went on to India where he made drawings of cities and harbours, especially, Goa and Calicut. Thence he returned along the coast of Persia to Cape Gardafui, and continued south to Mozambique and Zofala where he ascertained that the land joined the Cape of Good Hope. From Zofala he returned to Abyssinia and sent his diary, charts, and drawings to Genoa by some Portuguese merchants who were trading to Memphis. On receipt of these, king Emanuel, in 1495, sent four ships under Vasco de Gama, who visited Natal and Mozambique : in 1498, he was at Calcutta, in 1499 back at Lisbon.

In 1509, the Portuguese leader Sequiera entered the Eastern Archipelago. In 1510, Alfonso Albuquerque visited Sumatra, and in 1511, took Malacca, which he fortified, and sent out Antonio d' Abreu to search for the Spice Islands. On his way eastward, D'Abreu touched at Agasai (Gresik) in Java. In 1511, the Portuguese visited Bantam. Ludovico Barthema was the first European who described Java from personal observation, but some of his statements as to the cannibal propensities of the inhabitants are questionable. In 1596, the Dutch, under Houtmann first arrived off Bantam, and found the native king at war with the Portuguese. They lent him aid, on condition of having land at Jacatra allotted for a factory. The earliest expedition sailed from Holland in 1594, under Houtmann, who visited Bantam and then Madura, where he had to pay 2,000 rix-dollars to liberate some of his crew. On the 3rd of March 1599, he arrived off Hitu-Lama. War then ensured between the Spanish, Portuguese, and Dutch, which lasted till 1610, when the Dutch remained masters of these seas and monopolized the lucrative trade. The British tried to enter on that trade but they too were finally driven off. In 1610, the Dutch fortified the village of Jacatra which they named Batavia. In 1619, this was destroyed, but it was then rebuilt by Mr. Bolt, the Dutch governor-general, and this was the beginning of the present town of Batavia. In 1811, when France overran Holland, the flag of France was hoisted at Batavia, but in the same year the British captured it, only to restore it, on the 19th August 1816. Java, up to the 13th century was partly hindoo, partly budd'hist, partly mohamedan, but in the 15th century, mohamedanism took the lead, and in 1475 a mohamedan prince took the throne at the overthrow of the great kingdom of Majapahit, which had dominion over the whole of Java and the eastern parts of Sumatra. In 1749, the reigning prince abdicated in favour of the Dutch East India Company. Seven years prior to that event, the sovereignty had been divided into a spiritual head, the " Susunan" or " object of adoration," whose descendants now reside at Surakarta near Solo, and a second prince who was styled sultan, and whose descendants reside at Jokyokarta, both of them highly pensioned, by the Dutch rulers in the Archipelago. The

principal revenues of the Netherland Archipelago are derived from the undermentioned sources, viz. :—

1st.—Various Imposts.

The capitation of the Chinese .....f.	41,725
The tax on the killing oxen, buffaloes and sheep	315,966

It is said that Java and its dependencies reckon upwards of 16,000 of chiefs of villages.

The soil of Java does not present any products which are exclusively proper to it, but all tropical productions can be transplanted there and cultivated with success. If the imperfect knowledge and limited means of the Javanese have only until now permitted them to cultivate rice, coffee, tobacco, sire, katchany, maize and a little cotton, we may reasonably hope that a gentle and enlightened persuasion, will easily lead them also to cultivate pepper, gambier, cardamums, and the many kinds of tobacco and cotton, on procuring for this purpose seeds from Virginia and Brazil ; whilst the culture and manufacture of indigo, sugar, the extensive culture of cotton, coffee, tobacco, the manufacture of potass, of rum, &c., may furnish to European industry powerful means of augmenting products suited to exterior commerce and immense sources of riches and prosperity. In 1830, only two-ninths of Java were cultivated, and the other seven-ninths still presented a vast field for improvement. In 1843, the whole private Imports from Java and Madura, amounted to :—

Merchandize.....	f. 21,980,792
Gold and Silver specie.....	570,596
Exports of Java and Madura in 1843.....Total	f. 22,551,388

The whole private Exports has amounted to :

In Merchandize.....	f. 58,159,237

In 1854 Amboina, Ternate, Banda and Kayeli, were made free ports.—*Bikmore, p.* 147, *Count de Hogendrop, Coupid'œil sur l'isle de Java, Brussels*, 1830; *No. IV, October* 1857, *Journal of the Indian Archipelago, Temminck's General View of the Dutch possessions in the Indian Archipelago.*

DUTCHNA. See Parvati.

DUTRO, Port. Thorn apple.

DUTTATREYA, Sans. From Datta, a gift, and atreya, from Atre, a sage.

DUTTURAMU, Tel. Datura alba, *Rumph.* Datura metel.—*Roxb., Rheede.*

DUVALI, Hind. A hindoo festival; a sort of "feast of lamps" in September; rain falling at this season is good. See Dipawali.

DUVET D'AUTRUCHE, Fr. The Estrich, Ostrich, Estridge.

DUWANLOO, the Kujur of Duwanloo took their name from Duwanloo, a village near Erivân, in the vicinity of which they were long encamped.—*Malcolm's History of Persia, Vol.* ii, *p.* 262.

DUYONG, Malay. Halicore. Dugong.

DUZ, Hind. Asparagus Punjabensis.

DUZHAKA. See Arian.

DVAITA or DAUHITY, a system of hindoo philosophy. See Dwaitya.

DVAPARA-YUGA, in hinduism the third age of the world.

DVARA-PALAKA, a door-keeper.

DVIPA GUSTIA, Sans. Cassia alata.

DWADUSHATMA, Sans. From dwadushu, twelve, and atma, form.

DWAITA. Muttra boasts almost as high an antiquity as any city in India. It is the Sursena of Valmiki and Menu, the Methora of Strabo and Arrian and the Mo-thow-lo of Hwen Thsang. Long before Khansa reigned or Krishna was born, Muttra was a jungly tract occupied by the aboriginal Dwaita, who were probably the ancestors of the Mair and Meena of our day. Their king contemporary with Rama was Lubbin.—*Tr. of Hind., Vol.* ii, *p.* 21.

DWAITYA, Adwaitya and Vasista dwaitya, the three great schools of brahmanical philosophy.

DWAPARA, Sans. From dwa, the second, and para, after. See Suryavansa Yuga.

DWA-NEE, Burm. Eriolæna, sp.

DWARA, a portal, a door. Amongst all the nations of antiquity, the portal has had its peculiar veneration: to pass it was a privilege regarded as a mark of honour. The Jew Haman, in the true oriental style, took post at the king's gate as an inexpugnable position. The most pompous court in Europe takes its title from its porte, the "Bab" or door, where, as at Oodipoor, all alight. The tripolia, or triple portal, the entry to the magnificent terrace in front of the Rana's palace, consists, like the Roman arcs of triumph, of three arches, still preserving the numeral sacred to the god of battle, one of whose titles is Tripuri, which may be rendered Tripoli, or lord of the three places of abode, or cities, but applied in its extensive sense to the three worlds, heaven, earth and hell. From the Sanscrit "Pola," we have the Greek "polis," gate, or pass; and in the guardian or "Polioh," the door-keeper or porter; and the English language is indebted, not only for its portes and porters but its doors (dwára). Pylos signified also a pass; so in Sanscrit these natural barriers are called Pala, and hence the poetical epithet applied to the aboriginal mountain tribes of Rajast'han, namely Pálipati and Pala-indra, 'lords of the pass,' Nat'h-dwara,' is the most celebrated of the fanes of Krishna the hindoo Apollo. Its etymology is 'the portal (dwára) of the god' (nat'h), of the same import as his more ancient shrine

of Dwarica. Nat'hdwara is twenty-two miles N. N. E. of Oodipoor, on the right bank of the Bunas. Although the principal resort of the followers of Vishnu, it has nothing very remarkable in its structure or situation. It owes its celebrity entirely to the image of Krishna, said to be the same that had been worshipped at Mat'hura ever since his deification, between eleven and twelve hundred years before Christ. As containing the representative of the mildest of the gods of Hind, Nat'hdwara is one of the most frequented places of pilgrimage, though it must want that attraction to the classical hindoo which the caves of Gaya afford.—*Tod's Rajasthan, Vol.* i, *pp.* 323-589.

DWARAKA, the most amount shrine of Kistnah, is at the point of the Saurashtra peninsula called Juggut Koont. In the time of Krishna it seems to have been a hot bed of drunkenness. The people suddenly fell on each other after a great drinking time, and many were killed. Shortly after that, a storm wave overwhelmed the city and destroyed more of them, but Krishna, his brother Arjuna and a few others escaped. At Dwarica, the god of thieves is called Boodha Trivicrama, or of triple energy,—the Hermes Triplex, or three-headed Mercury of the Egyptians.—*Tod's Rajasthan, Vol.* i, *p.* 75; *Wheeler's History of India.* See India, Kattyawar; Koosust'hulli, Krishna.

DWARA SAMUDRA, p. 324. See India.

DWARENA, Hind. Arundo donax.

DWARF ALMOND. Cerasus Japonica.

DWARF PALM. Chamærops Khasiana.

DWARKANATH TAGORE, an enlightened hindoo of Bengal and religious reformer who travelled through Italy and France on his way to England. He returned once to his native country but again visited England and died. He took with him several medical pupils to be educated there. He adopted theistical views and his example originated the hindoo sects known as the Brahmo-Samajh and Vedo-Samajh.

DWIJA, Sans. A twice-born man, a man of any of the three first classes or castes of the hindoos, the brahmans, chetriya and vesya, after being initiated into their respective tribes, by investiture with the sacred thread which is called a second birth. Various ceremonies are attendant upon hindoo boys between infancy and the age of eight years. After that age, and before a brahmin boy is fifteen, it is imperative upon him to receive the *poita, zonar, janavi* or *jhandiam*, the sacred thread, which the brahmans, in their secret ceremonies, call Yadnupavita. The investiture, after a variety of preliminary ceremonies is thus performed. The priest first offers a burnt sacrifice, and worships the salagrama, repeating a number of prayers. The boy's white garments are then taken off, and he is dressed in yellow or red, and a cloth is brought over his head, that no Sudra may see his face: after which he takes in his right hand a branch of the vilva, Ægle marmelos, and a piece of cloth in the form of a pocket, and places the branch on his shoulder. A poita of three threads, made of the fibres of the suru, to which a piece of deer's skin is fastened, is suspended from the boy's left shoulder, falling under his right arm, during the reading of the incantations or invocations. The father of the boy then repeats certain formulas, and in a low voice, pronounces three times, the Gaitri O'm! Bhurbhuvă ssuvăhā, O'm! Tatsa vit'hru varennyăm. B'hargo devăsyă dhimahi dhiyo yonaha pracho dăyāth. O'm! Earth, air and heaven, O'm! "Let us meditate on the adorable light of the divine Sun, (ruler) (*Savitri*) may it guide our intellects." After this the *suru poita* is taken off, and the real *poita*, or sacred thread, put on. During this ceremony the father repeats certain formulas; the *suru poita* is fastened to the *vilva* staff, shoes are put on the boy's feet, and an umbrella in his hand. The receiving of the *poita* is considered as the second birth of a hindoo, who is from that time denominated "dwija" or twice-born. A brahman boy cannot be married till he has received the poita. The sacred thread must be made by a religious brahman. It consists of three strings, each ninety-six "hath" or cubits, (forty-eight yards) which are twisted together: it is then folded into three, and again twisted; these a second time folded into the same number, and tied at each end in knots. It is worn over the left shoulder (next the skin, extending halfway down the right thigh) by the brahman, khetrie, and vaisya castes. The first are usually invested with it at eight years of age, the second at eleven, and the Vaisya at twelve. The period may, from especial causes, be deferred; but it is indispensable that it should be received or the parties existing it become outcastes. It is regarded by the brahmins as of highly mysterious and sacred import; and they do not consider an individual as fully a member of his class until he have assumed this holy emblem. It is, in its import, the counterpart of the confirmation of the Anglican church. Of these zonars, a brahman wears four; the other privileged tribes but three. Some writers call this the brahmanical, or priestly or sacerdotal, thread; but not, it would appear, in strict correctness, it not being confined even to the priestly tribe, but worn by three out of the four tribes of

hindoos and by all the five sections of the artizan class, the kansala of the hindoos, viz : the goldsmith, brazier, blacksmith, stone-cutter and carpenter, and the number of three threads, each measuring ninety-six hands, for the sacrificial string, may have some mystical allusion to the ninety-six fixed annual sacrifices. The number three is mystical with almost all nations ; and, with the hindoos, may refer to the same source as the three sacred fires, the three legs of *Agni*, the triad of divine powers, &c., ninety-six does not however, arise from any ordinary process of three, and seven, and two ; the distinguishing numbers of Agni's legs, arms and faces. —*Moor, p.* 379, *Cole, Myth. Hind., pp.* 155, 245.

DWIJA RAJA, Sans. From dwija, twice-born, and raja a prince.

DWIPA, Sans. An island, from dwi, two, and ap, water : also an extensive region or continent. The cosmography of the Agni Poorana divides the world then known to the hindoos, into seven dwípa, or continents : one of these is "Sácá-dwípa, whose inhabitants, descended from Bup'ha, are termed Saceswara, (*i. e.*, Sacæ-lords)." His (Bup'ha's) offspring or descendants were Julud, Sookmar, Manichuk, Koorum, Ooturés, Darbeeka, Drooma, each of whom gave his name to a Khand, or division (qu. Sookmar Khand ?) The chief ranges of mountains were Juldus, Raivat, Siamah, Indue, Amki, Rim and Kesari. There were seven grand rivers, viz., Mug, Mugud, Arverna, &c. The inhabitants worship the sun. Slight as this information is, we must believe that this Sácá-dwípa or Sacataí, is the Scythia of the ancients ; and the Saceswara (the saca of Menu), the sacæ so well known in western history, the progenitors of the Parthians, whose first (ad) king was Arsaca. The sun-worship indicates the adorer of Mithras, the Mitra or Súrya of the hindoo ; the Arverna re-calls the Araxes applied to the Jaxartes, while Julud, the proper name of the son of the first king of Sácá-dwípa, appears to be the Juldus of the Tatar historian Abulgazi, who uses the same term as does the hindoo, to designate a range of mountains. Whence this identity between Pooranic and Tatar cosmography. The grand international conflicts amongst the "fifty-six Yadu tribes," at Cúrú-khéta and subsequently at Dwarica, are sufficiently known to the reader of hindoo history. A chief of the twice-born tribe (*i. e.*, brahmins) was brought by Vishnu's eagle from Sácá-dwípa, and thus have Sácá-dwípa brahmans become known in Jambu-dwipa. And Menu says that it was only on their ceasing to sanction brahmans residing amongst them, that the inhabitants of these remote western regions became 'Mletcha,' or barbarians, testimonies which must be held conclusive of perfect intercourse and reciprocity of sentiment between the nations of Central Asia and India at periods the most remote.—*Tod's Rajasthan, Vol.* ii, *pp.* 218 *and* 219 ; *Transactions of the Royal Asiatic Society, Vol.* iii, *Vide paper entitled "Comparison of the Hindoo and Theban Hercules ;" Mr. Colebrook on Indian classes ; Asiatic Researches, Vol.* v, *p.* 53.

DWIPAGUSTIA, Sans. Cassia alata, *L.*

DWOIMATOORA, Sans. From dwo, two, and matr, a mother.

DYA. See India.

DYAK. The people thus denominated must not be confounded with the Daya of the west coast. They inhabit the borders of the river of Banjermassing and some of the other southern rivers, and their proper designation is Ngajur or Biaju. They are also called Kahayan from the great river of that name. The notions of the Dyak respecting the spiritual world are in general much confused and at variance with each other. They agree, however, in the belief in good and evil spirits. The good spirits are divided into two classes, viz., spirits of the world above or of the higher regions, who are comprised under the collective denomination of "Lengiang," and spirits of the lower regions, or more properly such as have their dominion in the waters, in great rivers, and those are called "Jata." The collective name of the evil spirits is "Talopapa," which word signifies in general all bad things. It is to be observed here that the Dyak describe the aspect of the regions above as similar to the terrestrial world, mountains, valleys, streams, lakes, &c., &c., are found there as well as here beneath, and the dominions of various spirits are bounded by the different streams and branches of the rivers. The Sarebas Dyak live along the Batang Lupar river of Borneo and on the Batang Lupar mountains. Soon after Sir James Brooke visited the Archipelago, common fame brought to him accounts that the powerful tribe of the Sarebas, wearing small ear-rings, were the most fierce and treacherous of all the Dyak race. Excepting the Sakarran, they were the most savage, delighting in pillage and head-hunting, both by sea and land. The Dyak appear to be divided by many customs and usages naturally into two classes, which have been called by Mr. Brooke, land and sea Dyak ; the latter appear to have been the more savage and powerful, the former the more quiet and easily managed. Amongst the sea Dyak the practice of preserving the heads of their enemies, anciently instituted that they might be kept as memo-

rials of triumph, has degenerated, from its originally sufficiently barbarous intention, into a passion for the possession of these horrid trophies, no matter how obtained. Amongst the land Dyak the custom still remains as it was probably at first instituted, and no wish for the possession of a head would tempt these people to take one unless it were that of their enemy with whom they were avowedly at war. These land Dyak differ more decidedly in other particulars from those who frequent the sea, the sea Dyak, or such as are in the constant habit of frequenting the ocean for the purposes of carrying off the heads of fishermen. Settlements of them, which, however, appear to differ in some measure, are also found on the Karawit and the neighbouring branches of the river Rejang. This tribe, the name of which is Sebooyoh, mis-printed Sibnowan in Captain Keppel's book, came originally from the country situated about the sources of the western branch of the Batang Lupar river, in the direction of the lake Danau Malayu and the Pontianak river. They were expelled from thence by their enemies, and descending the Batang Lupar, established their villages on a small river named Sebooyoh, from which they are now designated. Another large village of the Sebooyoh Dyak is established on a creek of the Sarawak river about a mile below the Malayan town; the creek is called Pedungan, and the Dyak are often designated as orange or Dyak Pedungan—the men or Dyak of Pedungan. The banks of the rivers are the chief sites of the Dyak tribes. The villages of the sea Dyak are formed upon one plan, the houses being, if the tribe be small —that is to say, of about sixty families— all collected under one roof. Each house has its separate door. And the houses being built on very strong posts with wooden sides, and covered with atap, they present frequently a neater and more comfortable appearance than the frequently ruinous houses of the Malays. Besides the door opening into the verandah, they have on each side of their dwellings, which consist only of one room, a door communicating with the residence of the next family. The windows of their houses are part of the roof, which, in the construction of the house, has been separated for that purpose; it is raised and supported open by a notched bamboo or other stick, and when shut, is undistinguishable from the rest of the roof. The atap composing the thatch are not each tied to the rafters, but being bound into large sheets are secured only in a few places, so that in case of fire, by the few fastenings being cut, they are easily slid from the steep sloping roof. The Dyaks eat their food from the ground for a table; each having taken a portion of rice which he considers sufficient for him, this, if he be not provided with a plate, which many of them are, is placed upon a clean leaf of the Dillenia speciosa, and he dips his hand into the common stock of salt which is placed in the centre of the group. If they have flesh to their repast it is partaken of in a similar manner to the salt. In general appearance, the sea Dyak have the advantage of the Malays and land tribes, being of a higher, though still short, stature, well made, and with limbs of excellent proportions; a subdued and calm, but resolute air; an imposing carriage, walking with a light and graceful step, and peculiarly self-possessed bearing; these qualities impress the stranger more favourably than the smaller stature, less elegant figures, darker features, and more cunning expression of the countenance of the Malays. The women of the Sakarran and Sarebas tribes are, like their husbands and brothers, short in stature, generally more stoutly made than the Malay women, and with well-developed figures; they are very much fairer than they, or even than the men of their own tribes: while young, many of them would be thought very pretty, but soon, from their hard duties and other causes, they become stout and plain, and when old are frequently very ugly. When brought up amongst the Malays they continue much longer in their prime, and are generally thought prettier than the women of that nation: their hair, though naturally as good, from want of care and cultivation, never attains such length and profusion amongst those who reside in their own villages, though in circumstances which give them time for the adornment of their persons it attains equal length and luxuriance. The passion for head-hunting, which now characterizes these people, was not formerly so deeply rooted in their characters as it is at present; and up till the middle of the 19th century many of the inhabitants of Sarawak well recollected the tribes first visiting the sea with that ostensible and avowed object. In a limited extent the custom is probably as ancient as their existence as a nation; but though other tribes appear to be equally addicted to the practice, there can be little doubt that it is a corruption of its first institution, unless, as Forrest says of the Idaan of the north of Borneo, they consider human sacrifice the most pleasing to the divinity, and lose no opportunity of presenting it; but having conversed with the Dyaks frequently respecting this practice, they gave no such reason for it, and merely accounted for it, in their usual method, by saying, that

it was the adat ninik, or custom of their ancestors. The state of morality amongst the Sakarran and Sambas Dyaks is strangely more lax than in any of the other tribes. It is affirmed, and they themselves have frequently told that it is the common custom for the unmarried women to have amongst the similarly situated of the other sex, lovers to whom they are liberal of their favours: this proceeds with the knowledge and consent of the parents for some time, but if the girl should prove pregnant, the father of the child must take the mother for his wife; but if the connexion should long continue without the attainment of this desired result, the acquaintance is discontinued and they each seek new sharers of their loves. Should they not be constant to each other during this stage of their intimacy, the offence, though public, never becomes an occasion of scandal to either person concerned, and nothing is said of it except, perhaps, by the one who has been deceived. Though virtue before marriage is thus little respected, faithlessness after the marriage feast has taken place, is a grave and serious offence in which the whole village is concerned, it is punished by fine. The license granted to the young women appears amongst these people only to extend to their own nation, but it is probable, and in fact certain, in some tribes, that their favours are liberally extended to the Malays, should any happen to reside in their vicinity. This laxity of manners has been carried so far, that should a chief, or distinguished warrior of another tribe, travelling through the country, rest for a night at the village, it is a necessary part of their hospitality to provide a girl for his companion; but the information on this particular is derived from the Malays. It may be correct, as a similar custom is always followed by the Kyan tribes. The chief of the land Dyak, who is, or was named Ninik, is called Pa Jaguen, Jaguen being the name of his eldest child. Nearly all the beasts of the forest are eaten by these people, even monkeys, alligators (if small), snakes and other reptiles are esteemed. They regard frogs as a delicate dish, and bestow considerable pains in procuring them: their rice is cooked in brass or earthen pots, called priuk, which they purchase from the Malays. The whole of the sea tribes dispose of their dead by burial, they do not abstain from the flesh of animals. On a head-hunting party approaching the village, they announce to its inhabitants their fortunes by a horrid cry which is soon imitated and prolonged by the women and children, who have stayed at home. The trophies are brought on shore with much ceremony and wrapped up in the curiously folded and plaited leaves of the nipah palm, though frequently emitting the disgusting odour peculiar to decaying mortality. On shore and in the village, the head, for months after its arrival, is treated with the greatest consideration. In action, the left hand of the Dyak supports a large wooden shield, which covers the greater part of his body. It is made of the light wood of the plye or jelutong, about three feet long and twenty inches broad, convex towards the centre, and of the same breadth throughout. The heads of their enemies are, amongst the sea-tribes, preserved with the flesh and hair, still adhering to the skull, and these trophies are not, as amongst the land-tribes, the general property of the village, but the personal property of the individuals who capture them, though the honour of the tribe is augmented by their being in the village. The skull being freed from the brain, which is extracted by the occipital hole. This resembles the custom of those nations who sacrificed their slaves on the funeral pile of their deceased masters; and it is said that in the countries of the Kyan, which bounds that of the Sarebas Dyaks on the south and east, this custom of sacrificing slaves is still prevalent on the death of a chief. The sea Dyaks are described by one of the best informed writers on Borneo, as frequenting the neighbouring waters in their prahus. They inhabit chiefly the tracts about the rivers Sarebas and Sakarran, with their numerous and large branches, which form estuaries and deltas, with many avenues to the sea, very favourable to clandestine enterprises, and the facility of retreat. The hill Dyaks, or as they call themselves, "Orang Gunong," or men of the hills, differ in many peculiarities from the Dyaks of the sea tribes. The principal tribes of the Dyaks of the country of Sarawak are of this division, and they are the people whose miserable and oppressed condition called forth so much of the attention and sympathy of Great Britain. This division of the Dyak race occupies the most western portions of the island. The tribes of the Malayan states of Pontianak, of Sarebas, of Sarawak, and of Sadong, all belong to it, and the hilly interior of these countries is peopled entirely by them. In personal appearance, the Dyak of the hills very much resemble those of the other tribes already described, but they have a more grave and quiet expression of countenance, which gives to their features a melancholy and thoughtful air. It is natural to them, being observable, in a less degree, in all the tribes of both divisions. Their countenance is an index to the charac-

ter of their mind, for they are of peculiarly quiet and mild dispositions, not easily roused to anger, or the exhibition of any other passion or emotion, and rarely excited to noisy mirth, unless during their periodical festivals. Their dress, when they have property sufficient to obtain one, is the long cloth, or "chawat," the manufacture of the Sakarran Dyaks; but poverty more frequently compels them to supply its place with a rough substance made of the bark of several trees, particularly that of the genus Artocarpus, which produces the bread-fruit. For ornaments, they wear bracelets of the red wood of the heart of the Tapang tree, which, after exposure to the air, becomes black as ebony, and being without its brittle qualities, is more durable. Amongst the tribes on the western branch of the Sarawak river, the dress of the women is increased by the addition of an article, called by them "Saladan:" it is made of a bamboo, split, flattened, pared thin, and dyed black: being thus prepared, it is fitted to the body, and secured in its form and position by brass wires passing across its breadth, which also serve for the purposes of ornament: they are placed at the distance of about one inch apart from each other. Girls begin to wear it at the age of five or six years, and as it is too small to be taken off and on, being made on the body, it is only removed by destroying it, when the condition of the wearer renders a larger one necessary. This curious article of dress is confined to the tribes of Sarawak, called Singhie, Sow, Serambo, Bombuck, and Peninjow, who in their dress further differ from the other tribes of the hills. The amiability of the Dyaks of the hill tribes is of a superior character to that of those before described; intercourse between the unmarried is not here permitted; the young and unmarried men are not permitted to sleep in the houses of their parents, after having attained the age of puberty, but occupy a large house, of peculiar construction, which is set apart for their use in the village. Neither has the passion for taking the heads of their fellow-creatures, for the mere purpose of complying with a brutal custom and satisfying a barbarous appetite, ever entered their civil institutions, though to preserve the skulls of their enemies, as memorials of their triumph, has prevailed. —*Brooke, Mundy, Vol.* i, *p.* 202; *John's Indian Archipelago, Vol.* ii, *p.* 177; *Low's Sarawak, pp.* 165—247; *Temminck*, ii, 384; *Pritchard, Physical History*, i, 455; see also v, 84, 87.

DYES. Dyeing is the art of imparting to wool, silk, cotton, linen, leather, &c., colours which resist the operation of washing and the wear to which they are subject when made up into articles of furniture or clothing. This art was known at a very early period. Jacob made for Joseph a coat of many colours, (Gen. xxxvii. 3;) and in Exodus frequent mention is made of the ornaments for the Tabernacle as being composed of blue, purple, scarlet and fine linen. We read also in 2 Chro. ii. that Solomon having sent to Tyre for coloured linens, the king of that country answered his request by sending him a man skilful to work "in purple, in blue, and in fine linen, and in crimson." Ezekiel, (593 B.C.) in his prophecy against Tyre (xxvii. 7,) speaks of "blue and purple from the isles of *Elishah*," which has been supposed to refer to Elis on the west side of the Greek Peloponnesus, and hence it has been inferred that the Tyrians in the time of Ezekiel drew their supply of shell-fish used for dyeing purple from the coast of Greece. The Tyrian purple was greatly prized among the nations of antiquity. It is supposed to have been obtained from two different kinds of shell-fish, described by Pliny under the names *purpura* and *buccinum;* it was extracted from a small vessel or sac in their throats, one drop only being obtained from each animal, but an inferior colour was obtained by crushing the whole substance of the buccinum. A quantity of the juice having been collected, sea salt was added, and it was allowed to stand three days; after this, it was diluted with five times its bulk of water, kept at a moderate heat for six days more, and occasionally skimmed, and when thus clarified it was used for dyeing white wool previously prepared by the action of lime-water or of a species of lichen. For the finest Tyrian purple, the wool was first plunged into the juice of the purpura, and then into that of the buccinum; by exposure to air and light the wool passed through various shades of citron yellow, green, azure, and red, and after 48 hours a fine purple was produced. In some cases the wool was first dyed with a cheap dye, and the woven cloth was finished with the precious juice. The colours were durable, but very costly: Pliny states that a pound weight of the double-dipped Tyrian purple was sold in Rome in the time of Augustus for 100 crowns, (equal to about 30*l.* of our money.) This enormous price did not prevent many of the citizens of Rome from wearing purple attire until the time of the emperors, when the use of purple was limited to them. This exclusiveness proved fatal to the manufacture: it languished until the eleventh century, and then became extinct. In the seventeenth century the art of dyeing purple was revived by Mr. Cole, of Bristol, and in the eighteenth

century by M. Reaumur, of France; but by this time finer colours had been discovered, and cheaper processes invented. The ancient Greeks do not seem to have attended much to the art of dyeing: the people of Athens wore woollen garments of the natural colour, and although the more luxurious Romans patronised those who cultivated the art, yet the processes of a trade or manufacture were thought to be beneath the notice of any writer capable of describing them. We learn incidentally from Pliny that the competitors in the circus were clothed in dresses of green, orange, grey, and white. The art was lost at Rome after the invasion of the northern barbarians in the fifth century; but it was practised in the East and revived in Europe about the end of the twelfth century. Florence became celebrated in the art, and in the early part of the fourteenth century numbered not less than 200 dyeing establishments. The discovery of America supplied Europe with a variety of new colouring-matters, such as indigo, logwood, quercitron, Brazil-wood, cochineal, arnotto, &c. Before the introduction of indigo, woad was used for dyeing blue, and the cultivators of this plant in England and on the Continent endeavoured to prevent the use of indigo, which, by a decree of the German Diet in 1577, was declared to be "a pernicious, deceitful, eating, and corrosive dye." The introduction of logwood was opposed from similarly interested motives: its use was prohibited by a statute of Elizabeth, under heavy penalties, and all that which was found in the country was ordered to be destroyed: it was not until the reign of Charles II, that its use was permitted. Such prejudices of course interfered with the progress of the art in Britain: but by degrees, valuable improvements were made, and new processes introduced from abroad, such as the method of dyeing Turkey-red,—one of the most durable of colours. It was discovered in India, and afterwards practised in other parts of Asia and in Greece. About the middle of the eighteenth century some Greek dyers established dye-works for this colour in France; and in 1765 an account of the method of producing it was published, by order of the French Government. About the end of the last century the method was practised in England, when a Turkey-red dye-house was established in Manchester, by a Frenchman, who obtained a grant from Government for the disclosure of his process, which however, was not very successful. A better process was introduced into Glasgow by a Frenchman named Papilon; but before this, Mr. Wilson of Ainsworth, near Manchester, had obtained the secret from the Greeks of Smyrna, which he made public. The methods of imparting a permanent colour to textile fabrics are almost as numerous as the colouring matters employed. Most of the colours used in dyeing are vegetable: a few are animal and mineral. The most vivid and brilliant vegetable colours, such as those of flowers and other parts of plants exposed to the light, are small in quantity, very fugitive, and difficult to separate. The colouring matters of plants capable of being isolated, are mostly yellow, brown and red; the only blue dyes furnished by plants are indigo and litmus; no black vegetable dye has been isolated. Most vegetable colours are soluble in water; and those which are not so can be dissolved in alcohol, ether, or the fixed oils. Vegetable colours are permanent in dry air; but they gradually fade in moist air, especially under the influence of light. The blue of most flowers is converted into red by an acid, and into green by an alkali. Not only do the methods of dyeing vary with the nature of the dye-stuff, but also with that of the material to be dyed; different methods being adopted for cotton, silk and wool. In Southern Asia, the art of dyeing is no doubt of very ancient date, and one with which the people of India and Chinese have long been well acquainted. Their countries furnished all the raw materials for producing a great variety of colours; some of these are of so conspicuous a nature, such as the large flowers of plants, that the desire must early have occurred to transfer these colours to the person in savage nations, or to the clothes of so early civilized a people as the hindoos. This could easily have been done with the fugitive colours, but as they know how to make a colour like that of indigo, which undergoes a considerable degree of chemical change during its formation as well as while applied to the dyeing of its blue colour, it is evident, even if we had no other information on the subject, that they must have paid attention to some chemical subjects. But we know that they have long possessed, and knew how to manufacture, the several salts which have long been employed as mordaunts. That the art of dyeing was early practised we have the proof in the fact mentioned by Pliny, that flags of various colours were displayed by the Indians. It has been supposed that the hindoos may have learned this art from the Egyptians, but the probability is as great that the latter learned the art from the former, from whom also they probably obtained the alum which was celebrated by the name of Egyptian alum. Alum is still manufactured in Cutch; the natives of India have long known the use of sulphate of iron and of acetate of iron. The latter

they prepare by macerating iron in sour palm-wine, or in water in which rice has been boiled. The alkalis and acids with which they are acquainted may have assisted them in changing the shades of colours. Many of the details of the dyeing processes, are well known, and seem to have been the original of many of those followed in Europe until very recent times. The Exhibition of 1851 showed the people of Europe that they can dye every colour, and of a great variety of shades, and that, in a complicated pattern, they know the value and power of each in contrasting the effect of others, so as to produce a harmonious whole. Though the methods of dyeing practised in India are generally tedious and complicated, the natives have long possessed the art of giving beautiful and permanent colours to cotton goods. The country supplies all the raw materials for producing variety of colours, and the hindoos have long been acquainted with the alum and the salts of iron, &c., which are still employed as mordaunts. But in a country where chemical science may be said to be unknown, we naturally cannot look for any of those signs of progress, which in Europe, have marked the application of that science to the art of dyeing. The process is as rude as it was ages ago, and any improvement in colour, or production of a new one, has been rather the result of a happy accident, or an elaborate pains-taking experiment, than a skilful combination upon understood principles. Yet the field is one that well merits labour and research, for whatever be the external influence that operates in this country, the colours produced in dyeing are unquestionably brilliant, and the best test of their superiority is understood to have been afforded some years past, when Manchester cloths were sent out to the country to be dyed, and returned home to enter the market as the "blue cloths of commerce." It is almost entirely cloth of cotton that the natives of Southern India treat, and they are able to impart durable colours to this in reds, blacks and blues, and the various modifications of these; but their deep greens, yellows and other colours appear to be very fugitive. Dr. Heyne has published an accurate account of the mode of dyeing cotton yarn, as practised on this Coast, in his Tracts, (p. 204,) and a statement was furnished by a native working dyer at Madras, of the manipulation and materials employed by him for producing various colours. It is very evident from these documents, that the native dyers have at this day much to learn, and that their processes may be very materially improved. From the great diversity of substances used

in dyeing, including metals, woods, flowers, roots, barks, leaves, fruits, lichens, insects, &c., all of which require essentially different treatment,—there is considerable variation in the methods practised,—and this variety is further increased by the different nature of the materials submitted to the dyes, viz., animal substances, wool, silk and leather; or vegetable materials, as cotton, flax and wood. Experience shows that the colouring matter, which takes upon animal substances, will not suit vegetable matter, a piece of wool will bear an acid, which would corrode and destroy a cotton fabric and the dyeing of mixed fabrics, where animal and vegetable matters are combined, and where several brilliant colours are blended together, requires the manufacturer to practise all the nicety of his art. Dyeing is indeed a purely chemical process, and it is owing to the progress of that science in Europe, that such great improvement has been made of late years, and that many colouring matters, which were formerly considered of but little value, are now rising in importance, such as Munjeet, Chayroot, Logwood, Annotto, and are being more extensively brought into use, with a few little known substances as Puply Chuckay, Ratinara, Lichen, and extract of Casuarina, &c. Amongst some of these little known dyes, there are several well deserving a careful examination. It is to be hoped, that some method may be devised of rendering them available, as well as of applying more economically, those long in use, and which may be procured in large quantities and at low prices. A list of the principal part of the colouring materials of Southern Asia is given further on, at p. 182. The beautiful specimens of materials imported from China, India, New Zealand, the Continent, and other countries, and exhibited at the Crystal Palace, proved to England that she has yet much to learn from other nations in the art of fixing colors and obtaining brilliant dyes. The French are much superior in dyeing and the production of fast and beautiful colours. Their chemical researches and investigations are carried out more systematically and effectively than those of Britain. The Jury Reporters at the Great Exhibition observed that a vast number of new colouring materials have been discovered or made available, and improved modes have been devised of economically applying those already in use; so that the dyer of the present time employs many substances of the very existence of which his practical predecessors were wholly ignorant. From the increased use of many of the vegetable colours, and from the improved modes of applying the colouring matters, a demand has naturally

sprung up for various dye stuffs: and at the present time, many of the dyeing materials of distant countries are beginning to excite the attention of practical men; for though they have been acquainted with many of these substances, it is only recently that the progress of the art has rendered their use desirable or even practicable. It would be quite impossible, within due limits to make even a bare enumeration of the various plants and trees from which colouring substances and dye stuffs can be obtained: we must, therefore, be content to specify only a few. The roots of some species of Lithospermum afford a lac for dyeing and painting. Dried pomegranates are said to be used in Tunis for dyeing yellow; the rind is also a tanning substance. In the "Comptes Rendus," (xxxv., p. 558,) there is an account by M. J. Persoz, of a green colouring matter from China, of great stability, from which it appears that the Chinese possess a colouring substance having the appearance of indigo, which communicates a beautiful and permanent sea green colour to mordants of alumina and iron, and which is not a preparation of indigo, or any derivative of this dyeing principle. It was in thin plates of a blue colour, resembling Japanese indigo, but of a finer grain, differing also from indigo in its composition and chemical properties. On infusing a very small quantity of it in water, this fluid soon acquired a deep blue colour with a greenish tinge; upon boiling and immersing a piece of calico on which the mordants of iron and alumina had been printed, it was dyed a sea green colour of greater or less intensity according to the strength of the mordant—the portions not coated remaining white. A berry called *Makleua* grows on a large forest tree at Bankok, which is used most exensively by the Siamese as a vegetable black dye. It is merely bruised in water, when a fermentation takes place, and the article to be dyed is steeped in the liquid and then spread out in the sun to dry. The berry, when fresh, is of a fine green colour, but after being gathered for two or three days it becomes quite black and shrivelled like pepper. It must be used fresh, and whilst its mixture with water produces fermentation. The bark of *Datisca cannabina* dyes yellow. It contains a bitter principle, like quassia. A colouring matter is prepared from the dried fruit of the *Rottlera tinctoria*, to dye orange, which is a brilliant and tolerably permanent dye. It is apparently of a resinous nature. Turmeric is used in dyeing. The bark and roots of the berberry dye yellow; the colour is best when boiled in ley. *Symplocos racemosa*, known as lodh, and *S. tinctoria*, a native of Carolina, are used for dyeing. The scarlet flowers of *Butea frondosa*, the Dhak tree, and of *B. superba*, natives of the Indian jungles, yield a beautiful dye, and furnish a species of kino (*Pulas kino*), also used for tanning. *Althea rosea*, the parent of the many beautiful varieties of hollyhock, a native of China, yields a blue colouring matter equal to indigo. Indigo of an excellent quality has been obtained in the East from a twining plant, *Gymnema tingens* or *Asclepias tingens*. The juice of the unripe fruit of *Rhamnus infectorius*, *R. catharticus*, and *R. virgatus*, known as Turkey or French berries, is used for dyeing leather yellow. When mixed with lime and evaporated to dryness, it forms the colour called sap green. The roots of the aal tree, *Morinda citrifolia*, and of *M. tinctoria*, found abundantly in all the Asiatic islands, are extensively used as a dye stuff for giving a red colour. It is usually grown as a prop and shade for the pepper vine and coffee tree. The colouring matter resides principally in the bark of the roots, which are long and slender, and the small pieces are the best, fetching 8*s*. to 10*s*. a maund. It is exported in large quantities from Malabar to Guzerat, and the northern parts of Hindoostan, but seldom finds its way to Europe. The wood and roots of another species, *M. umbellata*, known in the eastern islands as "Maugkudu," are used extensively for their red dye, in Celebes and Java. Specimens of all these, and of the Lopisip bark, bunchong bulu wood, and the gaju gum (from undescribed plants), have been introduced into England. They are said to furnish excellent dyes in the Asiatic islands. Native dyes from Arracan have also been imported, viz., thittel and the-dan yielding red dyes, ting-nget and reros, affording dark-purple dyes; and thit-nau-weng, a chocolate dye. These would be worth enquiry, and particulars of the plants yielding them, the quantities available, and the prices might be procured. Dyes and colors from the following plants are obtained in India, viz., from several species of *Terminalia*, *Semecarpus anarcardium*, *Myrica sapida*, *Nelumbium speciosum*, *Butea frondosa*, and *Nyctanthes arbortristis*. The bunkita barring, obtained from an undescribed plant in Borneo, produces a dark purple or black dye. A species of Ruellia, under the name of "room," is employed in its raw state by the Khampti and Singpho to dye their clothes of a deep blue. It is described by the late Dr. Griffiths as a valuable dye, and highly worthy of attention. It might, perhaps, be usefully employed as the ground for a black dye. In Nepaul they use the bark of *Photinia dubia* or *Mespilus bengalensis* for dyeing scarlet. Though the methods of dyeing in use in India

are generally very tedious and complicated, yet the people have long possessed the art of giving beautiful and permanent colours to cotton goods, and Dr. Heyne suggested the advantage that might accrue to European dyers from a knowledge of their methods, and the process by which the beautiful Turkey red dyes are at present, owing to a late invention, given to cotton goods in Europe, very much resembles, in many of its features, the process of dyeing yarn red practised on the Coromandel coast, with substitution of madder for chay-root. Mr. Rohde does not think that any durable colours are communicated by natives to cotton cloth, except reds and blacks and modifications of the one or the other, their deep blues, yellows and other colours seem to him very fugitive. In New Zealand, the natives produce a most brilliant blue-black dye from the bark of the Eno tree, which is in great abundance. Some of the borders of the native mats, of a most magnificent black, are dyed with this substance. It has been tried in New South Wales; but, although found well suited for flax, hemp, linen, or other vegetable productions, it could not be fixed on wools or animal matter. It is of great importance that chemical science should be applied to devise some means of fixing this valuable dye on wool. As the tree is so common, the bark could be had in any quantity at about £3 10*s.* a ton; and tweed manufacturers are in great want of a black dye for their check and other cloths. Arsenic is principally employed in trade to produce a peculiarly vivid and showy shade of green which has superseded the less decided tints of nature. The form in which it is generally employed in England is that of a green powder, which is commonly known as "emerald green," known to chemists and writers on science as Scheele's green, after its discoverer. Another kind is also called "Swienfurth green," from a town in Franconia, where it was extensively manufactured on its early introduction. The chemical composition of Scheele's green is arsenious acid, six parts; oxide of copper, two; acetic acid, one. This dangerous material colours children's toys and sweetmeats: papers, coloured with this green, line fruit boxes, wrap up confectionery chocolate, line books, house walls, and it is used for tinting food articles, and colouring articles of dress.

Red Sanders wood, from the *Pterocarpus santalinus*, is hard and of a bright garnet red colour, and is employed to dye a lasting reddish brown on wool. It only yields its colour to ether or alcohol. The exports of this wood from Madras in one year amounted to nearly 2,000 tons. The imports of red Sanders wood from Calcutta and Bombay chiefly, into London, are to the extent of 700 or 800 tons a year, worth £6 to £9 per ton.

Sappan wood (*Cæsalpinia sappan*) is the bukkum wood of India, and is procured in Mergui, Bengal, the Tenasserim Provinces, Malabar and Ceylon. In 1842 as much as 78,000 cwts. were shipped from Ceylon, but the export from thence has decreased. A large quantity is exported from Siam and the Philippine Islands; as much as 200,000 piculs annually from the former, and 23,000 piculs from Manilla, 3,524 piculs were shipped from Singapore in 1851, and 4,074 piculs in 1852.

Arnotto, from the *Bixa orellana*, is used to impart a bright orange colour to silk goods, and to afford a deeper shade to simple yellows. The dry hard paste is also found to be the best of all ingredients for giving a golden tint to cheese or butter. A convenient liquid preparation is now sold to dairymen. The Spanish Americans mix it with their chocolate, to which it gives a beautiful rich hue.

Safflower is obtained from two species of *Carthamus*, viz., *C. tinctorius*, which has small leaves and an orange flower, and *C. oxyacantha*, with larger leaves and a yellow flower, a native of Caucasus. The former is cultivated in Egypt, the Levant, &c., where it forms a considerable article of commerce. The quantity annually imported into Great Britain ranges up to 5,000 tons, and it fetches, according to quality, from £1 to £8 the cwt.

Gamboge is extensively used as a pigment, from its bright yellow colour. The Ceylon gamboge is procured from the *Hebradendron cambogoides*, Graham; a tree which grows wild on the Malabar and Ceylon coasts, and affords the coarsest kind. The pipe gamboge of Siam is said to be obtained from the bruised leaves and young branches of *Stalagmites cambogoides*. The resinous sap is received into calabashes, and allowed to thicken, after which it is formed into rolls. Several other plants, as the *Mangostana gambogia*, Gaertner, and the *Hypericum bacciferum* and *Cayanense*, yield similar yellow viscid exudations, hardly distinguishable from gamboge and used for the same purpose by painters. The *Garcinia elliptica*, Wallich, of Tavoy and Moulmein, affords gamboge, and approaches very closely in its characters to Graham's *Hebradendron*. In like manner the Mysore tree bears an exceedingly close resemblance to that species. It is common in the forests of Wynaad in the western part of Mysore, and has been named by Dr. Christison, *Hebradendron pictorium*. Another gamboge tree has recently been found inhabiting the western Burmese territories. Both these seem to furnish an equally fine

pigment. As it can be obtained in unlimited quantity, it might be introduced into European trade, if the natives learn how to collect it in a state of purity, and make it up in homogeneous masses in imitation of pipe gamboge, the finest Siam variety. It seems to possess more colouring matter, more resin and less gum than the ordinary gamboge of commerce. Gamboge owes its colour to the fatty acid. The resin must be regarded as the chief constituent, and is most abundant in that imported from Ceylon, which contains about 76 per cent., and is therefore best adapted for painting. About 33 tons are annually imported into Great Britain where it sells at £5 to £10 a ton.

Indigo yielding plants grow chiefly in the East and West Indies, in the middle regions of America, in Africa and Europe, and are species of the genera *Indigofera*, *Isatis*, *Wrightia*, *Polygonum*, and *Nerium*. *Indigofera tinctoria* or *cærulea*, furnishes the chief indigo of commerce, and affords in Bengal, Malabar, Madagascar, the Isle of France, and St. Domingo, an article of middling quality, but not in large quantity. The *Indigofera disperma*, a plant cultivated in the East Indies and America grows higher than the preceding, is woody, and furnishes a superior dye-stuff. The Guatemala indigo comes from this species. *Indigofera anil* grows in the same countries, and also in the West Indies. The *Indigofera argentea*, which flourishes in Africa, yields little indigo, but it is of an excellent quality. *I. pseudotinctoria* cultivated in the East Indies, furnishes the best of all. *I. glauca* is the Egyptian and Arabian species. There are also the *I. cinerea, erecta* (a native of Guinea), *hirsuta*, *glabra*, with red flowers, species common to the East, and several others. The *Wrightia tinctoria* of the East Indies, an evergreen, with white blossoms, affords some indigo, as does the *Isatis tinctoria*, or Woad, in Europe, and the *Polygonum tinctorium*, with red flowers, a native of China. *Baptista tinctoria* furnishes a blue dye, and is the wild indigo of the United States. Indigo is at present grown for commercial purposes in India, from the 12th to the 30th deg. of north latitude; in the provinces of the Madras Presidency; in Java, in the largest of the Philippine islands, in Guatemala, Caraccas, Central America and Brazil. Indigo grows wild in several parts of Palestine, but attention seems not to have been given to its cultivation or collection. On most parts of the eastern and western coasts of Africa, it is indigenous; at Sierra Leone, Natal, and other places it is found abundant. Bengal is however, the chief mart for indigo.

Madder is the product of the long slender roots of the *Rubia tinctorum*, a plant of which there are several varieties. The principal supplies of this important article of commerce are obtained from Holland, Belgium, France, Turkey, Spain, and the Balearic Isles, the Italian States, India, and Ceylon. The plant is generally raised from seed, and requires three years to come to maturity. It is, however, often pulled in eighteen months without injury to the quality; the quantity only is smaller. A rich soil is necessary for its successful cultivation, and when the soil is impregnated with alkaline matter, the root acquires a red colour; in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this colour, but in France the red sells at two francs per cwt. higher, being used for the Turkey-red dye. Madder does not deteriorate by keeping, provided it be kept dry. It contains three volatile colouring matters, madder purple, orange, and red. The latter is in the form of crystals, having a fine orange red colour, and called Alizaine. This is the substance which yields the Turkey-red dye.

Madder is extensively grown on the central table land of Affghanistan, forming one of the leading products of Beloochistan; and, according to Lt. (Sir Henry Pottinger), it sells in the Kelat bazar at about 10 lbs. for 2*s*.

Chay-root, employed in the East Indies as a substitute for madder, is the root of *Morinda citrifolia*, under the name of Sooranjee. Turkey madder roots realise about 33*s*. per cwt. About 1,100 tons are annually shipped from Naples, worth about £30 per ton. Madder has become an article of great request, on account of the fine scarlet colour produced from its roots, and is so essential to dyers and calico printers that without it they cannot carry on their manufactures. It is cultivated extensively in Holland, from whence it is imported in large quantities into both England and France, though it is cultivated to some extent in both countries.

Indian madder or munjistha, is the *Rubia cordifolia*, a variety with white flowers, a native of Siberia, but is cultivated largely in the East, particularly about Assam, Nepaul, Bombay, Sind, Quetta, China, &c., for its dye-stuff, and is known as Munjeet. A small quantity is exported from China and India; about 338 Indian maunds were shipped from Calcutta in 1840, and 2,328 in 1841. It fetches in the London and Liverpool markets from 20*s*. to 25*s*. and 30*s*. per cwt., duty free; 405 tons were imported into Liverpool from Bombay and Calcutta, in 1849, and 525 tons in 1850, but none was imported in 1851 and 1852. The Jury in 1851, at the Great Exhibition,

remarked of this valuable dye-stuff, that some of the colours dyed with it are quite as permanent as those dyed with madder, and even more brilliant. The well-known imitations of Bandana handkerchiefs, white figures formed on a ground of Turkey-red are by means of an aqueous solution of chlorine. This is made to flow down through the red cloth in certain points which are defined and circumscribed by the pressure of hollow lead types inserted into plates of lead contained in a hydraulic press. The press is furnished with a pair of pattern plates, one attached to the upper block of the press, and the other to the moveable part of it. From twelve to fourteen pieces of cloth previously dyed in Turkey-red are stretched over each other as evenly as possible, and then rolled round a drum. A portion of the fourteen layers equal to the area of the plates being drawn through between them, the press is worked, and the plates are brought together with a force of upwards of 300 tons. The solution of chlorine is then allowed to flow into the hollows of the upper lead plate, whence it descends on the cloth and percolates through it, extracting the Turkey-red dye, the intense pressure preventing the bleaching liquor from spreading beyond the limits of the figures perforated in the plates. When a certain quantity of bleaching liquor has passed through, water is admitted in a similar manner to wash away the chlorine. The pressure is then removed, and another square of the fourteen layers is moved forward under the plates, and the process is repeated. When all the pieces have been discharged, they are winced in water, and further treated so as to improve the lustre both of the white and of the red.

The annual quantities of dye woods consumed in Great Britain average 50,000 tons, of value £300,000. The imports into Britain of indigo range to near 3,000 tons a year, value £1,344,000. The exports of dyes from India is considerable. Exclusive of indigo and of Munjit, the following were the values :—

1857-58.....	£ 87,076	1859-60.....	£104,089
1858-59.....	106,343	1860-61.....	138,871

The following mineral and vegetable dyes, are those in general use in India ;

Acacia arabica.
„ catechu.
„ rugata.
Adenanthera pavonina.
Alnus, *species.*
Althœa rosea.
Alum.
Anacardium occidentale.
Anchusa tinctoria.
Arsenic.
Artocarpus integrifolia.
Avicennia tomentosa.
Bunchong bulu wood ?
Berberis aristata & others.
Betula, *species.*
Bigonia chica.
Bixa orellana.
Borrera ushna.
Bunkita Barring of Borneo, undescribed.
Butea frondosa.
„ superba.
Cactus indica.
Cæsalpinia sappan.
Calotropis gigantea.
„ procera.
Carpesium, *species.*
Carthamus tinctorius.
„ oxyacantha.
Casuarina.
Cathartocarpus fistula.
Cedrela toona.
Ceruse, or white lead.
Chirongia sapida.
Chromate of lead.
Chulchuliera.
Cinnabar.
Citrus galgala.
„ medica.
Conocarpus latifolia.
Copper, sulphate of
Cratæva religosa.
Crocus sativa.
Cupressus, *species.*
Curcuma longa.
Cuscuta reflexa.
Cydonia vulgaris.
Datiscus cannabinus.
Delphinium saviculæfolium.
Diospyros mollis.
Dracæna draco.
Elsholtzia polystachya.
Emblica officinalis.
Ficus venosa.
Gall-nuts.
Gamboge trees, bark.
Gamboge.
Garcinia elliptica
Gardenia florida.
Geranium nodosum.
Green-earth.
Grislea tomentosa.
Gymnemia tingens.
Hedyotis umbellata.
Hebradendron gambogoides.
„ pictorium.
Hibiscus rosa sinensis.
Hypericum bacciferum.
„ cayanense.
Impatiens, *species.*
Indigofera tinctoria.
„ disperma.
„ cœrulea.
Iron, sulphate of
„ sesqui „ „
Isatis indigotica.
Lajward, ultramarine.
Lapis lazuli
„ „ artificial.
Lamp-black.
Lawsonia inermis.
Lead, chromate of
„ red oxide of, sandur
„ white, ceruse.
„ yellow oxide, litharge
Lime.
Lopisip bark.
Makleua, berry of Bankok.
Macrotomia euchroma.
Mangifera indica.
Mangostana gambogia.
Mang kudu of Celebes & Java.
Melastoma, fruit.
Memecylon tinctorium.
Mespilus bengalensis.
Morinda citrifolia.
„ tinctoria.
„ umbellata.
Musa paradisiaca.
Myrica sapida.
Natron.
Nelumbium speciosum.
Nerium tinctorium.
Nyctanthes arbortristis.
Ochre, red, yellow.
Oldenlandia umbellata.
Orpiment, Hartal.
Parmelia kamtschadalis.
Peganum harmala.
Photinia dubia.
Phyllanthus, *species.*
Pistacia cabulica.
„ terebinthus.
„ vera.
Polygonum aviculare.
„ barbatum.
„ chinense.
„ tortuosum.
„ tinctorium.
Potash, impure carbonate
„ bi-chromate.
Potentilla nepalensis.
Prussian blue.
Psychotria, root.
Pterocarpus santalinus.
Punica granatum.
Quercus incana.
Rhamnus. infectorius, catharticus, virgatus.
Rheum emodi.
Rocella montagnei.
Rottlera tinctoria.
Rubia cordifolia.
„ munjista.
„ tinctorium.
Ruellia, *species.*
Sal-ammoniac.
Salvadora oleoides.
Sapindus emarginatus.
Semecarpus anacardium.
Soda, carbonate of.
Stalagmites, gambogoides.
Symplocos crataegioides.
„ racemosa.
„ tinctoria.
Tamarindus indica.
Tamarix dioica.
„ furas.
„ orientalis.
Taxus baccata.
Tephrosia, *species.*
Terminalia bellerica.
„ catappa.
„ chebula.
„ citrina.
Thespesia populnea.
Urostigma religiosum.
Vachellia farnesiana.
Verdigris.
Ventilago.
Wrightia tinctoria.

Henna (*Lawsonia inermis,*) the mohamedan women in Asia use the shoots for dyeing their nails red, and the same practice prevails

in Arabia. In these countries the manes and tails of the horses are stained red in the same manner.

Burmese green dye-plants, are the turmeric and the leaves of the soap-acacia, *Acacia rugata*, which afford a beautiful green-dye.

Of red-dye plants, the rose-coloured fruit of the tamarind "yields a beautiful deep red colour, approaching purple;" the wood of the *Adenanthera pavonina* dyes red, and the wood of the black varnish tree affords a red-dye.

Of yellow-dye plants, the wood of the jack, the root of the pyschotria, the bark of the gamboge trees, the flowers of the butea, the rind of the Bengal quince, and the leaves of the memecylon and the touk-yat, all produce bright yellow-dyes.

Black dye-plant, the blossoms of the shoe-flower plant are used by the Chinese to dye leather black, the juice of the cashew tree gives a black to linen, and the fruit of the melastoma affords a black-dye.

The Shan black celebrated vegetable dye is made from the fruit of a species of ebony, *Diospyros mollis*, which is said to grow on the mountains that separate the province of Tavoy from the Siamese territories. Isolated plants may be seen in the gardens of Tavoy, and Moulmain.—*Mason.*

Javanese dyeing, the Javanese, of all the Malayan race, have made the highest progress in all the useful arts. They have a specific term for dyeing or tinting,—"madal;" but the Malays express it only by the word for dipping, "*chalup*." Yet the only generic words which either of them possesses for "colour," are the Sanscrit, warna; and the Portuguese, tinta. Their colours are usually sombre,—little varied, but generally fast. Blues are always produced from indigo, yielded for the most part by the Indigofera tinctoria, as in other parts of India, but in Sumatra, occasionally, from the Marsdenia tinctoria, a plant of the natural order of the Asclepiadeæ. Yellows are produced from the woods of two species of Artocarpus, the jack and champadah, and from turmeric; and reds from the bark of the root of the "*mangkudu*," the Morinda umbellata,—from the "*kusumba-java*," safflower or Carthamus tinctorius, from the "*kusumba-kling*," which is the annotto, or Bixa orellana, from the sapang, or sapan-wood, Cæsalpinia sapan, and from the nidus of the lac insect. Black is produced from the rinds of the mangostin fruit, and of the "*Katapang*," Terminalia catappa, with sulphate of iron. Sails and nets are dyed, and perhaps also tanned with a wood called in Sumatra "*ubar*," which is the Ricinus tanarius of botanists. The mordants used are rice-bran, alkalies from the combustion of some vegetable matters, as the fruit stalks and mid-ribs of the cocoanut palm and alum brought from China.

Chinese dyes.—In China, colouring matter used for dyeing blue is derived from two species of plants, the *Polygonum tinctorium* in the South, and the *tien tsing* or *Isatis indigotica*, cultivated at Shanghai and Chusan. The Shanghai indigo (Isatis indigotica) is largely cultivated in the Ke-wang-meow district, a few miles to the south. The "Kong-wha," a variety of safflower (Carthamus tinctorius,) was found for the first time in fields near Cading. This dye, is held in high esteem by the Chinese, and is used in dyeing the red and scarlet silks and crapes which are so common in the country, and so much and justly admired by foreigners of every nation. Large quantities are annually produced in the Chekiang province near Ningpo. The Chinese and Indian safflower have turned out to be alike, or nearly so. When Mr. Fortune prepared to take up his late residence in China, his attention was directed by the Calcutta Agricultural Society, to the Chinese varnish tree, *Rhus* species, the wax-insect tree, *Fraxinus* species, and to the soap-bean tree, *Cæsalpinia* species: to the various trees valuable for their fruit or timber and ornamental plants; but above all, to the green indigo (so called), *Rhamnus* species, which yielded a dye that was at that time attracting much attention in France.

Ruellia indigotica.—In China, in one part of the Chekiang province, and also amongst the Fung-hwa mountains to the westward of Ningpo, there are large quantities of a blue dye produced, which is in fact the indigo of that part of the country. A valuable kind of Indigo is made from a species of woad (Isatis indigotica) which is cultivated extensively in the level country a few miles to the westward of Shanghai. The kind in Chekiang equally valuable, if not more so, is made from a species of Ruellia, which may be called Ruellia indigotica. The same plant, apparently, has lately been discovered in the Assam country in N. E. India, where it is also cultivated for the blue dye it affords. On examining it in the garden of the Agricultural and Horticultural Society at Calcutta, alongside of the Chinese kind, it certainly bears a most striking resemblance.—*Fortune's Res. among the Chinese, p.* 145; *Wanderings in China*, 1846.

Rhamnus—"Green indigo," has been attracting much notice lately both in India and in Europe. A portion of cotton cloth obtained in China by the French manufac-

turers being greatly admired on account of the peculiar green of its dye, was submitted to the celebrated chemist, M. Persoz, with a request that he would endeavour to ascertain the composition of the green colour. The following is a translation of this report upon this subject to the Academy of Sciences. He was led to the conviction, by isolating the colouring principle, that the green was produced by a dyeing material of a peculiar nature and *sui generis*. It further was evident,

1st.—That the colouring matter was an organic product of vegetable origin.

2nd.—That the fabric on which it was fixed was charged with a strong dose of alum and a little oxide of iron and lime, bodies the presence of which necessarily implied that mordants had been used in dyeing the calico.

These results were so positive, and at the same time so opposed not only to everything known in Europe regarding the composition of green colour, but also to all that is recorded by writers regarding the dyeing processes employed in China for the production of green, that Mr. Fortune was induced to go into a more detailed investigation of the subject; and he applied to Mr. Forbes, the American Consul at Canton, for some of this valuable material. The substance is met with in thin plates, of a blue colour, having a strong analogy with that of Java indigo, but of a finer cake and differing besides from indigo both in its composition and in all its chemical properties. On infusing a small fragment of the substance in water, the liquid speedily became coloured of a deep blue with a shade of green. After the temperature had been raised to the boiling point, a piece of calico, prepared for printing with mordants of alum and oxide of iron, was dipped in it and a true dye was the result. The following appearance were observed. The portion of the fabric to which alum had been applied showed a deep green, of more or less intensity, according to the strength of the mordant. The portions charged with both alum and oxide of iron yielded a deep green, with a shade of olive. The portions charged with oxide of iron alone yielded a deep olive. The parts of the cloth where no mordant had been applied remained sensibly paler. The colours thus obtained were treated with all the re-agents to which the Chinese calico had in the first instance been subjected, and they behaved in precisely the same manner. From these experiments it may be inferred,

1st. That the Chinese possess a dye-stuff presenting the physical aspect of indigo, which dyes green with mordants of alum and iron.

2nd. That this dye-stuff contains neither indigo or anything derived from that dyeing principle. Mr. Fortune adds, that by some the flowers of the Whi-mei (Sophora japonica) were sent home as the "green indigo," but this plant yields a yellow dye and even when mixed with blue to make a green, the green is not that kind noticed by the French manufacturers. He found fields under cultivation with a kind of Rhamnus apparently. The Chinese farmer called it "Loh-zah, or "Soh-loh-shoo," and they showed him samples of the cloth which had been dyed with it. These samples corresponded exactly with those sent back from France, and they told him that two kinds were necessary—namely, the variety they cultivated in their fields and one which grew wild on the hills—in order to produce the dye in question. The former they called the yellow kind and the latter the white kind. The dye itself was not extracted by them; they were merely the growers. Further inquiries on the subject of the manufacture of the "green indigo" were conducted in connexion with Dr. Lockhart and the Rev. J. Edkins, of Shanghai, who found that a considerable portion of this dye was made near a city called Kia-hing-foo, situated a few miles west from Shanghai. Dr. Lockhart, writes from information procured by Mr. Edkins that the bark of two kinds of the tree known as the 'green shrub' (Luk-char,) one wild, which is called the white, and another cultivated, which is called the yellow, are used to obtain the dye. The white bark tree grows abundantly in the neighbourhoods of Kea-hing and Ningpo; the yellow is produce at Tsah-kou-pang, where the dye is manufactured. This place is two or three miles west from Wang-steen, a market town situated a little to the south of Kea-hing. The two kinds are placed together in iron pans and thoroughly boiled. The residuum is left undisturbed for three days, after which it is placed in large earthenware vessels, and cotton cloth, prepared with lime, is dyed with it several times. After five or six immersions the colouring matter is washed from the cloth with water, and placed in iron pans to be again boiled. It is then taken up on cotton yarn several times in succession, and when absorbed in this way it is next washed off and sprinkled on thin paper. When half dry the paper is pasted on light screens and strongly exposed to the sun. The product is called Lukkaon. In dyeing cotton cloth with it, ten parts are mixed with three parts of subcarbonate of potash in boiling water. "The dye made at Tsah-kou-pang is not used to dye silk fabrics, because it is only a rough surface which takes it readily.

To colour silk with it, so much of the material must be used that it will not pay. All cotton fabrics, also grass-cloths, take the colour readily. The dye does not fade with washing, which gives it a superiority over other greens. It is sent from Kea-hing as far as Shanting. It is also made in the province of Hoonan and at Ningpo, but the dye at these places is said to be of an inferior quality. It has long been used by painters in water-colours, but the application of it to dye cloth was first made only about twenty years ago. If some method could be discovered of applying it to silk fabrics it would become still more useful." The chips brought from Kea-hing were identical with the " Soh-loh," or " Loh-zah" (Rhamnus, sp.) The mode of extracting the dye from the bark or wood (for both seem to be used), as practised by the Chinese, appears to be slow and tedious, but with the European knowledge of chemistry this might possibly be improved. From these investigations it would appear that two colouring principles are necessary to the production of this dye. This however, will not affect the value of it as a rich and permanent green, a quality which has been appreciated by the French manufacturers, and which is also well known to the Chinese.—*Fortune's Residence among the Chinese, page* 167.

Chay-root.—Dr. Heyne's description of dyeing cotton yarn with chay-root, is as follows :

The yarn being washed and untwisted that it may not become entangled and being so separated that every part may be equally penetrated by the colouring matter, is divided into bundles of thirty or forty threads, through each of which at the middle and extremities a cotton thread is loosely sewed, but so as to allow of every thread being exposed to the sun's rays when hung up and the threads spread out on a bamboo.

The yarn is washed and cleansed in cold water aided by half an hour's manipulation, it is then kept in water in covered vessels till it acquires a putrid smell which takes place in from twenty-four to thirty-six hours, during which it is occasionally pressed and worked for a quarter of an hour together, it is then to be washed as clean as possible, beaten on a stone or earthen pot and then hung up to dry

While this process is going on a lye is prepared of the ashes of the plantain or other tree in cold water, it is an object to have this lye of sufficient strength which is determined by adding to a small quantity about half as much gingilie oil and giving to it a gentle motion : should it turn immediately white having no visible globules of oil swimming on the surface, it is good.

The quantity required of clean lye being poured off and strained, sheep dung in the proportion of three ounces to a pint of lye is dissolved in one-half of it, and this solution is again strained. The other half of the lye is mixed with half its bulk of gingilie oil and half as much tsiky (the saponaceous water procured during and retained from former process being in fact a solution of soap in water) the two liquors are then mixed together ; and if things are favourable, a milky scum arises.

The proportions required for, say half a pound of a yarn, would be gingilie oil half a pint by two pints, tsiky, (soapy liquor from former process) a quarter of a pint, sheep dung two or three ounces.

The yarn having been thoroughly imbued with this mordant is dried in the sun for some hours, it is then again soaked and dried as before. The same night it is treated with an additional portion of mordant ; is put into covered vessels and allowed to remain till morning. If any mordant remain the same process is again repeated.

The yarn is at night moistened with the lye first prepared diluted with one-third of its bulk of water and put into covered vessels. The yarn in drying, it should be remarked, should have the position constantly changed to prevent the mordants or lye from accumulating in the lower part.

Next day the yarn is spread out to dry on the bamboo, it is taken in at night and treated with lye, this alternate soaking or thorough moistening with lye at night and exposure during the day are continued without intermission till the yarn appears saturated with lye, or in fact till the oil is converted into soap, this if the lye is sufficiently strong may occupy five days. This is ascertained by washing a few inches from off the bundle in water holding some astringent in solution a whitish scum will arise, and it is from the feeling of this scum when worked between the hands, and the appearance of it afterwards that they determine the state, the workman being satisfied of the completion of this process, the yarn is again moistened for one day, morning and evening, with much diluted lye or plain water. The yarn may be immediately washed, but the process is much improved by retaining it for some weeks probably to allow the anamalizing matter to get fixed.

Before washing it thoroughly the yarn is washed in a small quantity of water which receiving the soapy particles in solution is retained by the dyer under the denomination of tsiky, it gradually acquires some consistence and a disagreeable smell. The yarn is then washed in a tank till nothing of the mordant

seemingly remains, but the smell and a certain softness to the touch. Occasionally the whole process is again repeated.

The yarn being thus thoroughly impregnated with the mordant, a cold infusion of cassah leaves in water is made, and after some hours the yarn is put into it and handled in such a manner as to expose every thread to its action, it is allowed to remain therein all night, the quantity of leaf used in the infusion is so great that it resembles a paste.

Next morning the water is wrung out from the yarn, the adhering leaves are shaken off and fresh ones with an equal quantity of chay-root substituted for half a pound of yarn, a handful of each is sufficient: after two hours the yarn is laid in the liquor.

The same process is repeated on the third day; by this time the yarn usually changes to a reddish yellow colour with occasional red spots, a liquor in which to soak the yarn is now prepared of a handful of chay-root in water.

On the fourth day the yarn will appear in the evening of a light red colour, it is to be treated in the same manner as on preceding days, and a similar liquor to the last named is prepared for soaking it in at night.

On the fifth day the yarn is washed in a tank and afterwards dried in the sun: as usual for soaking it in at night, a liquor is prepared of pounded cassah leaves mixed with gingilie oil sufficient to form a dry paste, of which about half an ounce is mixed in the usual portion of water after standing two hours a handful of chay-root is added and the yarn immediately immersed for the night.

The mode of proceeding on the sixth day is precisely similar, but the liquor for the night is prepared wholly of chay-root.

On the seventh day the yarn is again washed, dried, &c., on this and the next day it is immersed in a liquor composed of equal parts of cassah leaves and chay-root in water.

The yarn is now boiled in a liquor composed of that strained from it at the last night's process with the addition of chay-root, a handful for half a pound of yarn, and sufficient water to give room to agitate the yarn freely. The pot containing the liquor is placed on the fire which is kept up briskly till it begins to boil, it is then kept simmering till a rose-coloured froth rises and covers the surface when the fire is withdrawn and the pot with its contents allowed to cool gradually; during the boiling, the contents of the pot is stirred quickly so as to expose the yarn as little as possible to the action of the air, when cold the yarn is taken out and washed in a tank beaten as usual and dried in the sun; its colour should be a bright and lively red, if it fail it is occasionally brightened by steeping once more in a liquor composed with cassah leaves and chay-root, the former being mixed first with a little gingilie oil, a temporary brilliancy is further given by putting it in a cold infusion of safar wood.

The process appears to have been introduced for nearly eighty years into Europe: of late, improvements have been made but the process is still a tedious one.

Madder—In Ure's Dictionary of Arts under "Madder," several processes are described with minuteness: the following is one in which the several processes in use at Elberfola are enumerated:

1. Cleaning the cotton by boiling in a weak alkaline bath for four hours; cooling and rinsing.

2. Working it thoroughly four times over in a steep consisting of 300 lbs. of water, 15 lbs. of potash, 1 pailful of sheep's dung, and 12½ lbs. olive oil, in which it should remain during night. Next day it is drained for an hour, wrung out and dried, this treatment with the dung steep and drying is repeated three times.

3. It is now worked in a bath containing 120 quarts of water, 18 lbs. of potash and six quarts of olive oil, then wrung out and dried, this steep is repeated four times.

4. Steeping for a night in the river is the next process; a slight rinsing, wringing and drying in the air.

5. Bath made of a decoction at 110° F. of semul and not gulls in which the goods remain during the night, they are then strongly wrung and dried in the air.

6. Aluming with the addition of potash and chalk; wringing, working it well through this bath where it is left during the night.

7. Draining, and strong rinsing, the following day piling up in a water cistern.

8. Rinsing repeated next day and steeping in water to remove any excess of alum from the fibres, the goods continue in the water till taking to the dyeing bath.

9. The maddering is made with addition of blood, sumach, and nut galls, the bath is brought to the boil in 1¾ hour and kept boiling for an half an hour.

10. The yarn is rinsed, dried, boiled from 24 to 36 hours in a covered copper, with an oily alkaline liquid; then rinsed twice, laid two days in clean water and dried.

11. Finally the greatest brightness is attained by boiling for three or four hours in a soap bath containing muriate of tin, after which the yarn is rinsed twice, over-steeped and dried.

This is an instance of the very little progress that art has made in simplifying a pro-

cess which at first sight seems unnecessarily tedious, the superiority in the result is, chiefly to be attributed to the solution of salts of tin used to brighten the colours.

Morinda.—In many parts the roots of the Morinda umbellata are employed instead of chay-root in dyeing cotton yarn red: the colour is neither so bright or so durable. Dr. Heyne thus describes the process. Take 3½ lbs. of white cotton yarn and soak it in 1½ lb. of gingilie oil: a strong lye made of the ashes of the milk hedge, and the yarn steeped in it for four nights being dried in the sun during the day, it is then washed in brackish water and dried in the sun.

Five seers (kutcha 13¾ lb. ?) of togara root finely powdered are put into a pot of water together with the yarn and kept all night over a fire of cowdung, in the morning it is taken out and dried in the sun, the same process is repeated for two successive days and nights which completes the process. It is probable that a superior dye might be obtained if the same nicities were observed as in dyeing with chay-root. The green dye, China, the "*louk-ka*," "*lo-kao*," or "*king-lok*,' was first made known to Europe in 1845 since which time, scientific men have prosecuted inquiries regarding it. Its price in China has continued steady at 24 dollars the catty. In China, the green cloths dyed by this material, are called *liou-sai*, but are known to the trade as *so-lo-pou*, green colour cloth, when dyed by the bark: *nghiou-lo-se* (green nymphæa colour) and *nghiou-lo-pou* (green nymphæa cloth,) that is, cloth dyed with the *lo-kao* of the colour of the leaves of the nymphæa. Each piece of *liou-sai*, is feet *chin*, long, and one foot or one foot one inch broad, and in 1848, cost from 50 to 53 cents. In addition to the *lo-kao*, the French Consul, M. Montigny, sent one green dye stuff called *pih-chou-elle*, ten catties of which cost 4,920 sapeques: and another called *tong-loh*, green paint said to be prepared from the *no-me*, fifty catties of which cost 20,800 sapeques. *Tong-loh* is the Chinese for verdigris, and *no-mi* is the Chinese name of the glutinous rice. From this plant, it is not probable that any green dye can be prepared, and *tong-loh* is probably the green substance obtained from the berries of the *loh-chou*. Lo kao or lou kao, in Chinese signifies green glue or green lac, and all who have sent samples of the green dye itself, call it lo kao or lo kiao. In Canton it is louk-ko; in Fokien liok-koa and lek-ko. The first considerable consignment of the green dye was received in Paris in 1853, since which date, it has become an article of trade. At the Universal Exhibition held at Paris in 1855, samples of green dye were exposed, and Dr. Royle subsequently stated that there are three kinds of the green dye of China or green indigo. The first from China, the second from the Burman empire, and the third from Assam. That from the valley of the Brahmaputra, in Assam, is called *roum*, and is extracted from a species of Ruellia. This plant, the specific name of which is not known, or a nearly allied species is cultivated with the same object in Pegu and Burmah. It is altogether different from the *lila-roum*, which is the product of the Wrightia tinctoria of R. Brown, which by some is supposed to be the *R. Comosa, Wall.*, the Ebermaiera axillares, *De Cand.* Others point to the *R. Comosa, Roxb.*, which is the R. eucoma of Steudel, and the Butercæa ul mifolia of *De Cand.* MM. Edan and Remi, in 1854, reported that they had procured a very fine green from the fruit of the lo-za, but were unsuccessful in regard to the bark. Mr. Fortune informed Mr. Edan that without doubt the bark of the lo-za was employed to furnish the stuff with which to dye cloth green, and that the fruit was used in the preparation of green paint for paper. These points were repeated by M. Remi in 1855. All the experiments hitherto made with the bark and the leaves of the Rhamnus chlorophorus and Rhamnus utilis, have not been decisive. M. Persoz has succeeded in extracting a yellow dye from the bark of Rhamnns chlorophorus and the berries of the Rhamnus utilis, but he could not discover a trace of the green dye in the extracts prepared from the berries of both kinds, which were sent to him by the Agri-Horticultural Society of India. Nevertheless, if we are to receive the united testimony of Fathers Helot and Aymeri, MM. Arnaudtizon, Edkins, Fortune and Remi, we must believe that it is the bark of the branches, and perhaps also of the roots of the Rhamnus chlorophorus and Rhamnus utilis, but especially of the former, that gives to the green dye that brilliant colour which it assumes under the influence of artificial light. The fruit, at least that of the Rhamnus chlorophorus, probably yields a green colouring matter analogous to the bladder green, and differing from the true green dye both in colour and properties. The Chinese declare that other species of the same genus have dyeing properties. The Pe-piu lo-chou, is the Rhamnus chlorophorus of DeCaisne; and the *hong-pi to-chou*, the Rhamnus utilis and the author remarks that, "Until some European chemist shall have discovered traces of the green dye in some of the parts of the plants I am about to treat of, the flowers, the berries, the seeds, the leaves, the bark or the

root, it cannot be asserted that these plants are really those the Chinese use to dye their cottons with or from which they prepare the *lo kao*." There are some European plants which dye a green colour, the blue-flowered Scabions, is used for that purpose in Sweden : the Melissa officinalis yield under the action of spirits of wine, a permanent green dye, and the Mercurialis perennis yields a permanent blue green. The green dyes from the *Ruellia ;* Justicia tinctoria, *Lour. ;* Adenostemma tinctorium, *Cass. ;* Sanseviera læte-virens, *Ham. ;* Asclepias tingens, *Roxb. ;* Melissa officinalis, *Linn.*, have not yet been examined. Various plants stated to yield a green dye, colouring matter have been examined, but in vain for the *green dye of China*, there are the Arundo phragmitis, *Linn. ;* the Artichoke, deadly night shade, wild chervil, ash-tree, lucerne, Lycopersicum esculentum, *Mill. ;* Mercurialis perennis, *Linn.*, Ronabea arborea, *Blanco ;* the groundsel and the common field clover. In the experiments of M. Michel, he has obtained tolerable greens from the berries of Rhamnus catharticus, *Linn.*, and Rhamnus alaturnus, *Linn.*, but not improving by artificial light. He found that cloth taken out of the bath with a light nankeen dye, and placed at night on the grass, had assumed towards morning and long before it was exposed to the rays of the sun, a deep green colour. A damp atmosphere and dew were found to increase the intensity of the tint. The lower side near the grass was scarcely at all coloured, and a cloth left all night in a dark room was found in the morning to be unchanged. M. Persoz found the fruit of a buckthorn to yield a pretty lilac or silk. The green fruit of the Rhamnus infectorius, *Linn.*,(Avignon berries ; R. saxatilis, *Linn.*), Persian berries of R. alaternus, *Linn.*, and R. amygdalinus *Desf.*, afford a yellow colour. The fruit of the R. frangala, *Linn.*, gathered in July and August before they are ripe, yield according to Dambourney and Leuchs, a fast and brilliant yellow. According to Buchoz, a green. And when they are ripe, in September and October, they dye a purplish blue without any mordant, and green, violet and blue-violet, or blue according to the nature of the mordant employed. Dambourney obtained on wool, from the juice of the ripe berries fermented, very fine and fast greens, varying from an apple to a dark-green. The colouring matter of the berries of the R. infectorius, is—yellow before they are yellow, and dark-purple red as soon as they have attained maturity. Buchoz notices a similar peculiarity in the fruit of the R. catharticus, before ripening it yields a saffron-red ; after maturity, a green, known as bladder-green, and still later a scarlet. According to Waldstein and Kitaible, the green berries of R. tinctorius have dyeing properties similar to those of the fruit of R. catharticus, but more esteemed by the dyers. The inner bark of R. infectorius dyes yellow, when fresh : brown-red, when dry. The dry bark of the R. frangula yields a brown or dark-red, and the fresh a yellow dye, and its root as well as the bark and seeds of R. catharticus, a yellow and volatile colour named *Rhamno-xanthine*, which is dissolved by the alkalis and converted into a magnificent purple. The bark of R. catharticus and R. alaternus dye yellow : the wood of the latter species dyes dark-blue, and the root of R. infectorius a brown. The leaves of R. alaternus yield a yellow colour, and those of R. frangula, a greenish yellow. A mixture of the cuttings of R. alaternus, which yield a dark-blue, with the fresh bark of the same buck-thorn and of R. catharticus, R. frangula, and R. infectorius, which contain a yellow colouring matter, ought to produce a green. It is established that the European Rhamni contain a volatile principle, and nearly the same changes take place in the colouring matter of the several species, from red to violet, to blue, to green, and to yellow. The *lo kao* possesses similar qualities, and it is possible that the green dye, so remarkable when exposed to light, is a compound of blue and yellow having separately the same property and united in the bark of R. chlorophorus. But M. Rondot suspects that the supplementary yellow requisite to produce the green of *lo koa* is not obtained from one of the Rhamni, but from the *hoang-chi*, the fruit of Gardenia, or the hoai-hoa, the flower bud of the Styphno-lobium Japonicum. In 1855 when Mr. Robert Fortune was sent to China by the E. I. Company to procure tea plants for the nurseries in the Himalayas, he was particularly directed to give his attention to plants of that country stated to produce a green dye. Accordingly he sent seeds and samples to the Agri-Horticultural Society of Bengal, from which numerous plants have been forwarded to all parts of India. It seems established that the trees from which the green dye is prepared are two species of Rhamni, one wild, called by the Chinese white skin, and which grows in abundance in the vicinity of Kiahing and Ningpo. The other is called yellow skin by the Chinese, is cultivated at Tsoh-kaou-pang, where some thirty men are employed in the preparation of the dye stuff. M. Fortune sent to India and to England plants of both the cultivated and wild species. The flowers, leaves, roots, bark and fruit have all been indicated as the part of the plant from which the lo kou was

prepared. The wild species is a shrub and is called hom-bi-lo-za, from the circumstance that when its bark is boiled in water, a white scum is formed, which subsequently passes to rose, hom-bi, meaning Red-scum bark. The bark of the pa-bi-lo-za, or white skin, however long it be boiled. The Pe-pi lo-chou, or Rhamnus chlorophorus, is cultivated between 25° and 36° of N. L., but more especially, about the 30° and 31° of N. Lat. The hong-pi-lo-chou or Rhamnus chlorophorus, is mentioned as high as N. L. 39° and down to N L. 30°. This seems the hardier buck-thorn and capable of withstanding the severe frosts of Tchi-li, but it is evident that both species exist in abundance in the northern parts of the province of Tche-kiang, over a space of 45 square miles. Lo sa, or Lo-za or Lok zah is the term applied to the branches, of the plant when tied up in faggots for sale to the dyer. But there are two kinds of such faggots, one termed pa-hi-lo-sa, or white-skinned green vine branch, and the other hom-hi-lo-sa, red skinned green vine branch. Father Helot states that the people of Canton, on whose mountains the plant grows, call it *lieu-lo-chou*,—willow green tree. Fortune states that a farmer near Hong-tcheou-fou, who had some plantations of the cultivated Rhamnus, named it loh sah, and soh-loh-shu. Mr. Sinclair gives hwuy-chiang-chi or lee-chi, as the name of a bark used in Fokien for dyeing cotton green. The Hong-pi-lo-chou has all the characteristics of a wild shrub. The magnificent lustre, is only obtained after immersion in the infusion of the pe-pi-lo-chou. At Ayè, Father Helot was assured that the lo-kao, was prepared from the bark of the pe-pi,—and the dyers of Khiu-tcheou-fou described a process for dyeing silks and cottons with the pe-pi only. It would seem that the pe-pi alone yields violet, blue and green, according to circumstances, and a peculiar kind of the lo-kao, or green dye on cloth of a watery green tending to azure, with lime or alum ; that the hong-pi yields a yellow to impart a green to the colour, and that the lo-kao is impure if the admixture of this yellow be in too great a proportion. The shrubs from which the green dye is obtained are thorny. Rhamnus tinctorius of China differs from R. chlorophorus only in the shape of the calyx. The Rhamni indigenous to China are—

R. crenatus, *Sieb.* and *Zuccarini*, Japan.
R. globosus, *Bunge*, North China.
R. lineatus, *Lour.* Berchemia Loureiriana, *De Cand.* China, Cochin-China.

Mr. De Caisue told M. Rondot that an English horticulturist had reared a scrophularaceous plant, which had been sent to him as the Lo-za.

Ma-ly is the name of a tree growing wild in the province of Hit-cheou, the bark of which is used to dye common cloths.

Toxocarpus Wightianus, *Hooker*, is the Asclepias curossavica of *Lour.* It is called in Chinese Ma-li-kiu.

The Chinese have two modes of dyeing green, *first*, with the flowers of the hoai-hoa and indigo ; *second*, by indigo alone.

Green-dyes.—Since the middle of the 18th century, various accounts have been published of stuffs which dye fibrous substances of a green colour. Amongst these, the Tsai of Cochin-China was mentioned by Poivre about the year 1750, and again by Father Horta in 1766. Poivre's small work, printed at Verdun in 1768, mentions that " Tsai," on being fermented like the indigo, furnishes an abundance of green flowers, which of themselves yield an emerald green and persistent dye. Father Horta, writing in 1766 seems to repeat the above when he states that the Tongkinese cultivate a plant named " tsai" as he says, found only in Tongkin and Cochin-China, which, being steeped, furnishes a green flower, that yields a very strong emerald green dye. The word " tsai" is not Cochin-Chinese, but Chinese, and has two meanings, a plant or herb, and a pot-herb or vegetable. Subsequently in the year vii. of the French Revolution, a green dye plant of Cochin-China, was brought to the notice of Europe by de Cossigny, under the name of *Diuh-xanh.* He describes the plant as very like balm, and adds that a green fecula is obtained from it by trituration, and used to dye every shade of green.

Chinese Green.—M. Rondot's book entitled *Notice du Vert de Chine*, contains specimens of calico and silk dyed with the 'green,' and engravings of two plants, *Rhamnus utilis* and *Rhamnus chlorophorus*, from which it is derived. These plants are new to European cultivators ; they are, however, allies of the *Rhamnus theezans*, which has long been known as a tree from which the poorest class of Chinese pluck the leaves to use as a substitute for tea. The colour of the dyed silk is remarkably bright, a blue green, one of that class of colours which increase in brilliance in the light. It contains, in fact, some immediate principle which can only be developed by light, and it is a nice task for chemists to discover what this is. Persoz says that light will have to be more and more regarded as an industrial agent ; and of the Chinese green he remarks that it is *sui generis*, containing neither yellow nor blue. By experiments made at Lyon, it appears that six species of the European *Rhamnus* will yield a green dye.

Blancard's Manual of Trade of India mentions what Europeans call *Green Indigo*. M. Lefevre, Vicar Apostolic of Lower Cochin-China, was acquainted with the green dye, and one of his Cochin-Chinese interpreters at Touranne informed him that the green dye plant grows in the provinces of *Quang-nam* and *Quang-due*, but especially in the latter in the vicinity of Houé-fo—and that it imparts a green dye both to silk and cotton, and he supposes it possible that the fæcula of the dinh-xang (xang in Cochin-Chinese means green yellow) may be identical with the "tsai," of Poivre and Father Horta. In 1779, Charbentier de Cossigny when noticing the *dinh-xanh* asserted that the Indigo plant, when boiled by a process differing from that followed to obtain the blue, also yields a green fecula. Neither Loureiro, in his Flora, nor Pigneaux and Taberd in their dictionary, make any allusion to the "*dinh-xanh*," green dye of Cochin-China. M. Rondot seems to think that the "*Tsai*" and "*Dinh-xang*" are identical : and that the plant belongs to the genus Melissa or is identical with the Mercurialis perennis. He adds, however, that Correa considers the "Tsai" of Poivre to be from the Justicia tinctoria of *Lour. and Roxb.* and the Peristrophe tinctoria of *Nees*. About 1780, Loureiro noticed the green dye of Cochin-China, called *Kim-long-nhuom*, a product of this plant, the leaves of which he describes as saturated with a green dye, and used in dyeing cloths of a beautiful colour, and M. M. Pigneaux and Taberd agree with Loureiro in this account of its properties.

The *Kaiboung-boung*, and the *Cham-lon-la*, were also noticed by Loureiro as green dye plants of Cochin-China. The *Kai-boung-boung*, is the Aletris Cochin-Chinensis of Loureiro and the Sauseviera læte-virens of Haworth in his *Hortus floridis cocincinæ*. The other plant, the *Cham-lon-la* is Spilanthus tinctorius of Loureiro, the Adenostemma tinctorium of Cassini, and both a blue and a green colour are stated by Loureiro to be obtained from the pounded leaves, *optimam tincturam cæruleam viridemque*. He adds that this colouring matter is also obtained and equally brilliant from the indigo plant.

Vegetable Green-dye.—Dr. R. F. Thompson, Civil Surgeon of Malda, writes as to a green-dye as follows :—

"One maund of the dried leaves will dye 1,280 yards of cloth of a fine apple green colour. The supply cheap and unlimited; cultivation easily extended from cuttings or seed, requires little care or watching as no animal will eat it. The plant is doubly valuable from the seeds yielding a fine clear limpid oil for burning purposes, sample of which I also forward. It takes half an hour to dye a whole "than" of cloth. The oil is obtained from the seeds of the plant yielding the green-dye, and expressed in the ordinary bazar fashion in the common "koloo," it has a beautiful colour, limpid and burns well.

Carthamus tinctorius, the safflower, is a pretty annual plant, found wild in Egypt and the Levant. The petals of the safflower contain a red colouring matter insoluble in water, and called carthaméine, derived probably from the oxidation of a peculiar principle existing in the petals, called *carthamine*, and by Dumas, *carthamous acid*. When a weak soda solution of carthamine is left in contact with oxygen, it first becomes yellow and then red, and on saturating this red liquor with citric acid, red carthamine is thrown down. The affinity of carthaméine for cotton and silk is such, that when it is recently precipitated, those substances immediately combine with it, and become at first rose-coloured, and afterwards of a fine red, so that they may be thus dyed without the intervention of the mordant; the stuffs so dyed are rendered yellow by the alkalis, and the colour is to a certain extent restored by the acids. Carthaméine is never used in dyeing wool. When it is precipitated from concentrated solutions, it furnishes a liquid paint, which, evaporated upon saucers, leaves a residue of somewhat metallic lustre, used as a pink dye-stuff, and which, mixed with finely powdered talc and dried, constitutes common rouge. Safflower also contains a yellow substance soluble in water. When the infusion is evaporated it leaves an extract very soluble in water, precipitated by acids and soluble in alkalis. It is not reddened by oxidizing agents. The safflower is cultivated in China, India, Egypt, America, Spain, and some of the warmer parts of Europe, and is indigenous to the whole of the Indian Archipelago. A large quantity is grown in and exported from Bali. The Chinese safflower is considered the best, and that from Bombay is least esteemed. The price of safflower in the English market varies from £1 to £8 per ton, according to quality. The annual quantity imported into England is from 400 to 500 tons, ¾ths of which is sent from Calcutta, and about 150 tons is grown in the Dacca Collectorate.—*Engl. Cyc., p.* 787; *Tomlinson, p.* 333; *Simmonds, p.* 450; *Faulkner.*

The Javanese, who of all the Malayan race, have certainly made the highest progress in all the useful arts, have a specific term for dyeing or tinting,—"madal;" but the Malays express it only by the word for dipping, "*chalup*." Yet the only generic words which either of them possesses for

"colour," are the Sanscrit, warna; and the Portuguese, tinta. Their colours are usually sombre,—little varied, but generally fast. Blues are always produced from indigo, yielded for the most part by the Indigofera tinctoria, as in other parts of India but in Sumatra, occasionally, from the Marsdenia tinctoria, a plant of the natural order of the Asclepiadeæ. Yellows are produced from the woods of two species of Artocarpus, the jack and champadah, and from turmeric; and reds from the bark of the root of the "*mang-kudu*," the Morinda umbellata,—from the "*kusumba-jaiva*," safflower or Carthamus tinctorius, from the "*kusumba-kling*," which is the annotto, or Bixa orellana, from the sapang, or sapan-wood, Cæsalpinia sappan, and from the nidus of the lac insect. Black is produced from the rinds of the mangostin fruit, and of the "*Katapang*," Terminalia catappa, with sulphate of iron. Sails and nets are dyed, and perhaps also tanned with a wood called in Sumatra "*ubar*" which is the Ricinus tanarius of botanists. The mordants used are rice-bran, alkalis from the combustion of some vegetable matters, as the fruit stalks and mid-ribs of the cocoanut palm, and alum brought from China.

Yellow Dyes.—"Asbarg," produces a yellow for silk.

"Akal-bir" gives a yellow dye; the wood of the jack, the root of the pyschotria, the bark of the gamboge trees, the flowers of the butea, the rind of the Bengal quince, and the leaves of the memecylon and the touk-yat, all produce bright yellow dyes.

A plant grows wild in the southern part of the Chittagong district. The Mug make yellow and red dye, by grinding the plant and its roots into powder, and boiling the same in water. The colours are dull but seem to last for a long time.

Pupli chikay.—The bark of the pupli root is used in Mysore and elsewhere, as yielding an orange dye. It is treated with alum, myrobolans, &c. This dye stuff is in very common use in India, and deserves a fair trial in Europe. The pupli is seldom used alone, but generally as an adjunct with chay-root, to produce a rich chocolate colour, or, if with galls, a black.

The red dye obtained from the roots of the Morinda citrifolia is equal in every respect to that of the sapan wood; it is in fact in general use with the natives for dyeing the yarn of the native cloths, both silk and cotton; and with the exception of some specimens of Java dyes obtained from the same tree, better single colours of the kind are rarely seen; it must be borne in mind in relation to such a comparison, that the use of mineral mordant in the native process is unknown, and with the exception of weak ley made from the ashes of some of the plants of the jungles no other application is made beyond the simple solution of the extract from the wood itself.

Catechu has been used in India to give a brown dye to cotton; and has lately been very extensively employed in the calico-printing works of England. The salts of copper with sal-ammoniac, cause catechu to yield a bronze colour which is very permanent. The proto-muriate of tin produces with it a yellowish brown. A fine deep bronze hue is also produced from catechu by the perchloride of tin, with an addition of nitrate of copper. Acetate of alumina gives a brown, and nitrate of iron a dark-brown. For a golden coffee brown, catechu has entirely superseded madder, one pound of it being equivalent to six pounds of that root.

Japan materials for dyeing are taken from a species of Betula, from the Gardenia florida, Polygonum Chinense, barbatum and aviculare, all produce a beautiful blue colour, much like that from Indigo. The leaves were first dried, then pounded, and made into small cakes, which were sold in the shops.

In late years, in the latter half of the nineteenth century, coal-tar colours have been largely brought into use as dyes, and several of them have been employed by the dyers of India, and are likely to become considerable imports. Mauve first, about the year 1856, and next magenta about 1868, were made known, but each year has seen additions to this remarkable class of dyes, and when it is mentioned that of madder alone to the value of about 2,150,000*l.* is annually imported into Great Britain, about £1,000,000 worth of which is retained for consumption there, and that one of the coal-tar colours will take its place, their importance cannot be exaggerated. It is from benzol, discovered by Faraday in 1825, that all the aniline colours are prepared, and the latest discovered colours were from the hydrocarbon. Authracene, Alizarine, discovered in 1831, is the colouring principle of madder, but it is supposed that Authracene will take its place. In the year 1848, purpurine, a second colouring matter in madder, was discovered. It contributes to the full and fiery red colour in ordinary madder-dyeing, but dyes a bad purple, alizarine being essential to the latter. Many of the coal-tar colours are derivatives of aniline, one of the organic bases found in coal-tar. By the action of nitric acid, benzol is converted into a dense yellow oil, called nitro-benzol, and by the action of nascent hydrogen, this new compound is transformed into Aniline. Runge's blue, is obtained from

the destructive distillation of coal. The base of magenta is rosaniline, which now takes the position formerly held by aniline. Mauvine is the basis of the mauve. A product of rosaniline is aldehyd, from which, with hyposulphate of sodium, is formed the splendid fast colour aldehyd green or night green.—*Dr. Mason's Tenasserim, Mr. E. O'Reilly in Journ. Ind. Arch., Thunberg's Travels, Vol.* iv, *pp.* 61-90.

DYE-PHAL, ANGLO-BENG. Grislea tomentosa.—*Roxb.*

DYER'S BUGLOSS, ENG., is one name of the alkanet, the root of Anchusa tinctoria, a native of Britain. But, in the Panjab, a root is in use as a dye, to which the name of alkanet is given. It is probably the root of Onosma emodi, *Wall.* as other species of Onosma, also Echium rubrum and Lithospermum tinctorium are in Europe and elsewhere, substituted for alkanet.—*Birdwood.*

DYER'S GREEN WEED, a native of Britain, the Genista tinctoria, *W.*, yields a yellow dye, and, with woad, a green-dye.

DYER'S OAK, Quercus infectoria. It is also called Gall Oak, because the gall or nut-gall is produced in it. It is a native of the countries from the Levant to Kurdistan, and is supposed to yield the product known as Mecca galls, E. I. galls; and Bussorah galls.—*Birdwood.*

DYE-STUFFS, a term applied to drugs and dry-salteries of every kind used by dyers in producing colours.—*Poole, Statist. of Commerce.*

DYER'S WEED, Reseda luteola, a native of Britain, yields oil of "weld" seed. It is also known as dyer's yellow weed. It affords a beautiful yellow dye, from which Dutch pink is obtained.— *Birdwood.*

DYE-WOODS, a mercantile term applied to all kinds of wood, from which colouring or dyeing matter is extracted. About 50,000 tons of dye woods value £300,000, are annually imported into Great Britain.—*Poole, Statist. of Commerce.*

DYJA, also written daija, a dowry or portion which the hindoo wife brings a husband in marriage. It is the Maritagium of the Civil Law. Wilson, in a note to Mill's India (Vol. i, p. 447), says that "amongst the hindoos the practice of purchasing a bride by a dower is apparently of modern growth and a violation of the law." There are, however, passages in Menu on the subject which appear contradictory. These passages would imply the observance of both practices; and the same may perhaps have continued till the time of the Greek invasion, for Arrian (*Indica*, cxvii,) says the Indians neither took nor gave money in marriage; while Megasthenes (*Strabo*, Lib. xv), says their wives were purchased for a yoke of oxen. Amongst the agricultural tribes in the North-west Provinces, the present practice is most usual for the bride's father to purchase the bridegroom, so that the man receives the dowry, or Dyja, which consists for the most part, of money and household utensils. Thus, even when the daughter of Jye Chund was forcibly abducted by Pirt'hi Raj, her father sent to him the richest gems, the fruits of the victory of Beejy Pal, inestimable wealth, pearls, elephants and dyes. This system, the fruitful source of female infanticide, arises from the almost universal desire to obtain for the daughter the privilege of marrying into a higher family, which is only to be acquired by purchase. Sometimes, indeed, an imaginary purchase is made, similar to that which took place at certain Roman marriages, under the name of *Coemptio*,—though of course not with a view of securing the peculiar kind of privileges which the *Coemptio* gave,—but merely as a type of a custom of which the breach is thought preferable to the observance. This subject is noticed in Steele's "Summary of the Law and customs of Hindoo castes."—*Elliot.*

DYOKARAN, MALEAL. A blacksmith.

DYOOMANEE, SANS., from div, the sky, and manee, a precious stone.

DYSCHIRIUS, a genus of the Coleoptera of Hong Kong.

DYSOPUS, Barbastellus, Hipposideros, Kerivoula, Myotis, Plecotis, Pteropus, Rhinolophus, Rhinopoma, Nyctecejus, Scotopholus and Vespertilio, are genera of bats in India.

DYSOXYLON, a *species*, in Java yields a fruit used as garlic.

DYSOXYLON CHAMPIONII, a great tree of the central province of Ceylon, found up to an elevation of 4,000 feet.—*Thw. En. Pl. Zeyl., p.* 61.

DYSOXYLON MACROCARPUM, *Bl.*
Guarea binectarifera, *Roxb. Cat.*
Amoora ficiformis, *Wight Illust.* i. 147.

A great tree of Ceylon, found in the central province, up to an elevation of 3,000 feet, and at Batticaloa.—*Thw. En. Pl. Zeyl., Vol.* i, *p.* 60.

DYSOXYLUM MULTIJUGUM, *Arn.*
Guarea paniculata, *Roxb.*

A tree of Chittagong and Tipperah, *Roxb. Vol.* ii, *p.* 240.

DYTE or Asura Dyte, of the hindoos, Titans, were either the aborginal Bhils or the Scythic hordes.—*Tod's Rajasthan, Vol.* i, *p.* 94.

DYTERIA, a town in India, in L. 75° 59 E., and L. 18° 44′ N.

DYTISCUS GRISEUS, one of the aquatic coleoptera, is found in Europe and in Bengal.

DYUPETI, also Dyupetir. A name of Indra, seemingly the origin of the name Jupeter, perhaps from jiva, life, and pitra, father. Dyupetir may, however, be from words deo, god, and pitra, father, or from div, the sky, and pitra, father.

DYUTA, SANS. Gambling with dice, chess, &c., or betting on cocks, rams, &c. Dyuta-pratipad, also Dyuta-purnima, in hindooism, is the night of the last day of the light half, and eve of the first day of the dark half of the month Kartik, which is to be spent in gambling, in honour of Lakshmi the goddess of fortune.— *Wilson.*

DZAY KEIRA, a town in India, in L. 74° 20' E., and L. 20° 52' N.

DZASSAK. In Ili, the *tsiankiun* has authority over the Eluth and Chahar of his own central province of Ili, who have also Chinese ministers ; over the Eluth, Chahar, and Hassack under the *tsantsan* minister, resident at Tarbagatai, and over the mohamedans of the eight cities in Ili, south of the Tien Shan, who are under resident ministers of different degrees. In the Uliasutai province, which receives, a small garrison from the tsiangkiun of Shansi, there are Tangnu Uriankai, some of them *yumuh*, herdsmen, some *tasang*, peltry-men, under the *tsiangkium* in observation at Kurun, who is farther supreme over the ministers at Kobdo, having charge of the Mingat, Eluth, Chaksin, Altai Uriankai, and Altai-Nor Uriankai of the far province. On the borders of Tibet, are Tamuh, or Dam Mongol under 8 standards, amenable to the authority of the resident *tsantsan.* Of the feudal constitution of these tribes, it will be advisable to note the following particulars. The six *ming*, *chalkan* or leagues, into which these 24 tribes are formed, are each under a head or elder, and a lieutenant, chosen from a list of Dzassak, presented to the emperor by the Colonial Office. Every tribe is bound to assist any other in the same league which may be in danger. Once in three years, the leagues are mustered by four high commissioners selected by the emperor from incumbents of high civil and military posts in the empire ; their visit is of a thoroughly inquisitorial character. The Dzassak are in turn compelled to pay visits to Peking ; the year in which it is not the duty of this or that Dzassak to go, he sends a *taikih* ; on stated occasions all assemble in court costume to do homage in token of fealty before the door consecrated to Majesty at the headquarters of the tribe. The internal economy of the Outer, is much the same as that of the Inner Mongolians. Their Dzassak are ennobled by all the same titles except *tapunang*, of which there are none. Some of the Dzassak, whether otherwise ennobled or not, have the title Khan, which is superior to any of the rest, and brings with it a higher allotment of pay and gifts. Their chalkan or leagues, have each a Captain-general and a Lieutenant like the Inner Mongols, and are, like them, mustered and inspected triennially. Their military organization is, with a few exceptions, the same. First, in the region of outer Mongolia, we find four leagues of Kalkas, each under a Khan : 1st, the Tuchetu khanate, numbering 20 standards under 58 tsoling ; 2d, the Sainnoin, 24, including 2 Eluth standards, in $38\frac{1}{2}$ tsoling companies ; 3d, the Tsetsen, 23 standards in $46\frac{1}{2}$ companies ; 4th, the Dzassaktu, under 19 standards, including one of Khoits, in $24\frac{1}{2}$ companies. Now come the Durbet, in two wings, each of which is a league under a lieutenant-general, appointed as above : the left comprising 10 standards of Durbet and one of Khoit, in 11 companies ; the right three of Durbet and one of Khoit in 17 companies. Their position is beyond the north-west frontier line of the Dzassaktu ; they extend across the province of Kobdo, north of the city of that name, and their troops, amounting in 1,812 to 1,400 makia, were under the tsantsan of the Chinese government at Kobdo. The two wings are subject to one Khan. Under the same officer of Kobdo, are the troops of the new Turguth of the Urungu River, in the south-east of the same province, and Hoshoit of the Djabkan, farther north. The former under two standards in three companies, which would give but 150 makia, form a league, the single standard and company of the latter, furnishing 50 makia, belong to none. Under the Kurun general are 595 Tasang families of Uriankai Tangnu paying two skins of marten fur, and 412 pay 80 graymouse skins under the tsantsan of Kobdo, 412 of Altai Tangnu, paying graymouse skins, 256 marten skins, and 429 paying four fox skins each : also 61 of Altai Nor Tangnu paying graymouse skin, and 147 paying marten fur. Of Yumuh there are, under the general, eight companies of Uriankai, and under the tsantsan, seven of Altai and two of Alti Nor. Of the leagues whose soldiery is under command of the tsiangkiun of Ili, there are four of old Turguth and one of Hoshoit distributed in five circuits. The north contains the old Turguth of Hopoksiloh, three standards in 14 ; the east, those of Tsirholang, two in 7 ; the west, those of the River Tsing one, in 4 companies. These are north of the Tengkiri, stretching well

into Tarbagatai. Following the outline of modern Kansuh, we find in the north-east of the Tsing Hai, or Koko Nor, territory, five tribes in one league of 29 standards; it is peculiar in having no captain or lieutenant like the rest. Their standards are 21 of Koshoit in 80 companies; one of Khoit in 1; four of Turguths in 12; one of Kalkas in 1; and two of Choros in 6½ companies. Their fighting strength in 1812, would thus be 5,025 makia under the command of the Resident at Si-ning, on the borders of Kansuh. There are mohamedans in Kami and Turfan, as well as in the cities in East Turkistan. —*Wade's Chinese Army, pp.* 68 *to* 70.

DZA-WET-THA, Burm. Hydrochlorate of Ammonia

DZAYTANA, a town in L. 74° 31′ E., and L. 21° 10′ N.

DZIALA, Pol. Cannon.

DZUNGARIA, a territory in Central Asia, separated from Chinese Tartary by the Tian-Shan range of mountains. Late in the seventeenth century, Hojah Appak, of Kashgar, of the party of the White Mountain, sought the aid of Galdan Khan, sovereign of the Eluth or Kalmuk of Dzungaria. Taking advantage of the occasion, Galdan Khan, in 1678, invaded the states south of the Tian Shan, carried off the khan of Kashgar and his family, and established Hojah Appak over the country in authority subordinate to his own. Great discord for many years followed, sometimes the party of the White Mountain, sometimes the party of the Black Mountain being uppermost, but some supremacy always continuing to be exercised by the khans of Dzungaria. In 1757, however, the latter country was conquered by the Chinese, who, in the following year made a tool of the party of the White Mountain which was then in opposition and succeeded in bringing the states of Turkistan, also, under their rule.—*Yule Cathay, Vol.* ii, *p.* 547.

D'ZUTU, Tel. See Hindoo.

E. This letter of the English language has three distinct sounds, as in the words "here," her, and there.

In Sanskrit, the E is always long; and the sound of the Arabic E can be better indicated by the English letter "y" but to imitate the sounds of some of the letters of the languages of South-Eastern Asia, the English E has to be duplicated, thus Ee. To obtain, by means of the English E, its sound as in "there" the "e" is usually accented as in Véda.

E. This letter in the Chinese tongue means a barbarian, and is applied by them to all foreigners, as the hindus apply Mh'lecha, the Greeks and Latins, barbaros and barbarus. In the 50th article of the British Treaty with the Chinese, it was stipulated that E should not be used to designate the people of Britain. Yuen is another Chinese term for foreigner, the exact meaning of which has not been mentioned, and the term "Hung-mou yin," "red-bristled man" was also applied to the British.

EAGLE, ENG.

Nesr, ARAB.	Nisr, HEB.
Neshr, CHAL.	Sherza, HIND.

The Eagles, the aqualinæ, are arranged by naturalists as a sub-family of the falconidæ, of the order Raptores or Birds of Prey, the Accipitres of Linnæus and the Rapaces and Raptatores of other authors. Dr. Jerdon further divides the Aqualinæ into five groups, viz., True Eagles, Kite Eagles, Hawk Eagles, Serpent Eagles, and Fishing Eagles. They are birds powerful in flight and are often named in Scripture. Job xxxix. 27 says

> Is it at thy voice that the eagle soars?
> And therefore maketh his nest on high?
> The rock is the place of his habitation.
> He abides on the crag, the place of strength.
> Thence he pounces upon his prey.
> His eyes discern afar off.

1st.—*True Eagles.*

(*a.*) Aquila chrysaetos, *Linn.* The Golden Eagle.

Falco niger, GMEL.	Aquila daphænia, HODGSON.
,, melanonotus, LATH.	,, nobilis, PALLAS

The Golden Eagle is found over the greater part of Northern and Central Europe, Asia, and America, it is however rare in India, and only in the Himalaya, for, in Oudh and the N. W. Himalaya, it is the Lammergeyer, to which Europeans give the name of Golden Eagle. It is named *Berkut* and *Bjurkut* by the Mongols, and is the *Bearcoote* which Atkinson notices in his travels. It is 3 feet to 3½ feet long, and the Kirghis and other Mongol tribes train it to kill antelopes, foxes and even wolves, it is carried on a perch betwixt two men, or on a horse.

(*b.*) Aquila Imperialis, *Bechst.* The Imperial Eagle.

Aquila moglnik, GMEL.	Aquila Nipalensis, HODGS.
,, heliaca, SAV.	,, chrysaetos, JERDON
,, bifasciata, GRAY and HARDW.	
Frus, BENG.	Jumbiz, HIND.
Jumiz, HIND.	

The Imperial Eagle is found throughout the Himalaya, is not uncommon in Central India and on the Table Land, but is rare in the South of India. It commences to seek its prey about an hour after sunrise, hunting slowly at no great elevation over bushy valleys and ravines, and occasionally over cultivated ground, pouncing on hares, florikin, rats, lizards, &c., but will eat carrion.

(*c.*) Aquila Nævia, *Gmel.* The Spotted Eagle.

A. melanaetus, SAV.	A. vittata, HODGS.
,, clanga, PALL.	
Bukayari Jiyadha, BENG.	Nallagadha, TEL.
Kaljanga, HIND.	

The Spotted Eagle is found throughout India, N. Africa, Western Asia and the S. of Europe, and is tolerably common in the Carnatic and in Malabar; it prefers the vicinity of cultivated places, it lives on small animals, rats, squirrels, lizards, and frogs.

(*d.*) Aquila fulvescens. *Gray.* The Tawny Eagle.

A. punctata, GREY & HARDW.	A vindiana, FRANK, JERD.
,, fusca ,, ,,	,, nævioides, BLYTH.
Wohab, HIND.	Salwa, TEL.
Ali, TAM.	Dholwa of the Wagri.
Alawa, TEL.	Bursawul of the Yerkli.

This resembles the Imperial Eagle in miniature. It is found in a great part of India, is very abundant in the Deccan, but is unknown in Malabar, Bengal, and to the East of India. It prefers dry open plains. It quests slowly over fields, and feeds on hares, partridges, rats, lizards, and occasionally enters villages and towns and carries off chickens and ducklings. It pursues and robs kites, falcons, and other birds of prey.

(*e.*) Aquila hastata. *Less.* The Long Legged Eagle. Spizaetus punctatus, *Jerd.*

Jiyadha, HIND.	Phari Tisa, HIND.
Gutimar, ,,	

This Eagle is not common. It robs bird's nests.

(*f.*) Aquila pennata. *Gmel.* The Dwarf Eagle, also Garden Eagle.

Aquila minuta, BREHM.	Butaquila strophiata, HODGS.
Spizaetus milvoides, JERD.	
Bagati Jumiz, HIND.	Punja Prandu, TAM.
Gil'hrimar, ,,	Oodatal Gedda, TEL.

This eagle is found in Western Asia, N. Africa and S. Europe, and throughout India, frequenting groves of trees, gardens, and cultivated land, and pouncing on squirrels, rats, doves, pigeons, chickens; hens with chickens readily recognize it and call their young to them. Crows often pursue it out of their bounds.

2nd.—Kite Eagles.

(*g.*) Neopus Malaiensis, *Reinwardt.* The Black Eagle.

Aquila per-niger, HODGS.	Nisaetus ovivorus, JERD.
Heugong, BHOT.	Adavi Nalla Gedda, TEL.
Lahmong-Bong, LEPCH.	

This eagle is found in most of the hilly and jungly districts of India, in Burmah and Malayana. It is generally seen circling or questing for prey at no great height. Its chief food is obtained by robbing bird's nests of the eggs and the young.

3rd.—Hawk Eagles.

(*h.*) Nisaetus Bonelli, *Temm.* The Crestless Hawk Eagle.

Nisaetus niveus, JERD.	Aquila intermedia, BONELLI.
M'hor-augah, HIND.	Rajali, TAM.
M'hor-angi, do.	Kundeli-salwa, TEL.

This eagle is about 27 inches long, and is found throughout India, in the hilly and jungly districts. It preys on game birds and peafowl, ducks, herons and waterfowl, also on tame pigeons. Dr. Jerdon thinks it could be trained to hunt hares, antelopes, fawns and bustard.

(*i.*) Limnaetus nivæus, *Temm.* Changeable Hawk Eagle.

Faclo limnaetus, VIGORS.	Nisaetus pallidus, HODGS
	Sadal, BENG.

This small eagle occurs in Bengal and North to the Himalaya, and Easterly into Burmah, Malayana and the Archipelago.

(*j.*) Limnaetus cristatellus, *Temm.* The Crested Hawk Eagle.

Falco Lathami, TICK.	F. cirrhatus, GMEL.
Shah-Baz, HIND.	Jutu Bhairi, TEL.

The Crested Hawk Eagle is found throughout Central India, the peninsula, and Ceylon, and is said to inhabit the Himalaya, Kamaon and Bhutan. It sits on a high tree and pounces on hares, partridges, young peafowl, junglefowl, &c.

(*k.*) Limnaetus Nipaleneis, *Hodgs.* The Spotted Hawk Eagle.

NisaetusNepalensis, HOD.	Falco orientalis, TEMM.
„ pulcher, „	
Reijore BHOT.	Kanzha Chil, LEP.

This has been found in the Himalaya, Khassya Hills, and Ceylon. It kills pheasants, partridges and other small birds.

(*l.*) Limnaetus Kienierii, *de Sparre.* The Rufous-Bellied Hawk Eagle.

Spizaetus Albogularis, TICKELL.

This is found in the Himalaya and Central India, but is rare.

(*m.*) Limnaetus caligatus, *Horsf.* Is a dark coloured bird of Malacca.

4th.—Serpent Eagles.

(*n.*) Circaetus Gallicus, *Gmel.* The Common Serpent Eagle.

C. brachydactylus, MEYER.

Sap-maril, BENG.	Pamula Gedda, TEL.
Mal-patar, CAN.	Rawul of the Wagri.
Samp-mar, HIND.	Kondatelle of the Yerkali.
Pambu Prandu, TAM.	

This Serpent Eagle is found in the South of Europe, North Africa, all over India and Asia, and prefers the open ground, questing like a harrier. It eats any creature, but snakes and lizards are its chief food, hovering in the air, and pouncing suddenly like a stone down. It seizes with its talons the snake by the part of the head, and the snake often twines its body around the bird, and encumbers it.

(*o.*) Spilornis cheela, *Daud.* The Crested Serpent Eagle.

Falco albidus, CUV.	CircaetusNipalensis, HOD.
„ undulatus, VIGORS.	Buteo Bacha, FRANKLIN.
Circaetus „ JERD.	„ melanotis, JERD.
Tilai-baj, BENG.	Goom, CAN.
Sab-cheer, „	Botta-genda, GOND,
Furj-baj, „	Murayala, MAHR.
	Nalla Pamula gedda, TEL.

The Crested Serpent Eagle is found all over India, in Assam and Burmah. It lives on snakes, lizards, rats, frogs, and insects.

(*p.*) Spilornis Bacha, *Daud.* From Java and Sumatra is the Falco Bido, of Horsfield.

(*q.*) Spilornis spilogaster, *Blainv.* From Ceylon and Southern India.

(*r.*) Spilornis holospilus, *Vigors.* Is from the Phillipines.

5th.—Sea Eagles, or Fishing Eagles.

(*s.*) Pandion haliætus, *Linn.* The Asprey or Fish Hawk.

Pandion Indicus, HODGS.	Pandion fiumialis.
Macharya, BENG.	Macha-rang, HIND. OF NEPAUL.
Mach-manga, „	
„ moral, „	Verali adi pong, TAM.
Bala, „	Kora-min-gedda, TEL.
Pantiang, LEPCH.	Hegguli of Yerkali.

The Fish Hawk of Europe, Africa and Asia is spread all over India, abundant near the coast and along marine lagoons. It plunges from a great height into the sea and carries

off a goodly sized fish, but is frequently robbed by the Haliætus leucogaster. P. Leucocephalus, *Gould*, occurs in Australia.

(*t.*) Polioætus ichthyætus, *Horsf.* The White Tailed Sea Eagle.

Pandion lineatus, JERD.	Icthyætus lucarius, HOD.
Icthyætus bi-color, GRAY	Haliætus plumbeus, HODGSON
„ Horsfieldii, HODGS.	
Mach-moral, BENG.	Mudhuya, HIND.

This Eagle is rare, south of the Nerbudda, but common in Hindustan, Burmah and Malayana. It lives chiefly on fish, but will carry off a teal or wounded duck.

(*u.*) Polioætus humilis, *Temm.* A miniature of the last, is found in Malacca and the islands. It is the I. nanus of Blyth.

(*v.*) Haliætus fulviventer, *Viell.* The Ringtailed Sea Eagle.

Falco Macei, TEMM.	Haliætus unicolor, GRAY.
Haliætus „ BLYTH.	„ lanceolatus, HODGS.
„ albipes, HODGS.	
Macharang, BENG.	Bala, BENG.
„ manga, „	Kokna of the KOL.
„ korol, „	Ugus, „ „
Koral, BENG.	

The Ring Tailed Sea Eagle is found throughout the N. of India, along the Ganges and Indus up to Kashmir. It lives on fish, turtle and snakes.

(*w.*) Haliætus leucogaster, *Gmel.* The Grey Backed Sea Eagle.

Blagrus leucogaster, BLYTH	Falco blagrus, DAUD.
Ichthyaetus cultrungus, BLYTH.	„ dimidiatus, RAFFLES
	„ maritimus, GMEL.

This Sea Eagle is found throughout India, in Burmah, Malayana and Australia, chiefly on the coast and near the mouths of rivers. It lives on sea snakes, crabs, rats, and on fish which it picks up on the beach.

(*x.*) Haliætus leucocephalus is of N. America and N. E. Asia, *Jerdon. Birds of India, pp.* 57 *to* 86.

EAGLE STONES of the ancients, one of them was probably the bonduc nut of the Guilandina bonduc, and the Greeks believed that the Eagle Stone or Ætiles were only found in the nests of eagles. The Eagle Stones are the Hajar-ul-akab of the Arabs, who describe them as resembling tamarind stones, but hollow, and found in eagles' nests and believe that the eagles bring them from India, *King.* See Ærolites.

A highly fragrant wood, much esteemed by Asiatics for burning as incense. It is made into the pastilles, called Ud batti, in Hindi. There are several kinds in commerce, and supposed to be obtained from the Aloexylon agallochum, *Lour.*, Aquillaria agallocha, *Roxb.*, the Aq. Malaccensis, *Lam.* and the Aquilaria secundaria, q. v. The Eagle wood seems to be a resinous deposit in the interior of the tree. A good specimen of it is in the Government Central Museum, Madras. It is mentioned in *Num.* xxiv. 6; *Prov.* vii. 17; *Cant.* iv. 14. In Siam, only one kind of tree is known to produce this, it is only found in one tree out of twenty, and labourers often cut up several before finding any of it. It chiefly occurs in the trees on the islands, in the Gulf of Kambodia. They have a knowledge of the outward indications and felling the tree preserve the dark diseased portion which is sold at ten shillings the pound.—*Drs. Bowring, Siam: Royle, Ill Him. Bot. O'Shaughnessy and Roxburgh, Eng. Cyc., Voigt.*

EAGRE. CHIN. called in India, the "*Bore.*" That of the Tsien-tang river, is famous in Chinese history. According to a Chinese proverb, it is one of the three wonders of the world, the other two being the demons at Tang-chan and the thunder at Lung-chan. As in other countries it appears generally on the 2nd or 3rd day after the full or change of the moon or at what are called spring tides, and particularly in spring and autumn, about the time the sun is crossing the line. Should it so happen that strong easterly gales blow at these times the Eagre rolls along in all its grandeur and carries everything before it. Dr. Macgowan gave an account of it at Hang-chow-foo. Mr. Fortune from a terrace in front of the Tri wave temple saw, on a sudden, all traffic in the thronged mart suspended porters cleared the front street of every description of merchandize; boatmen ceased lading and unlading their vessels and put out into the middle of the stream, so that a few minutes sufficed to give a deserted appearance to the busiest part of one of the busiest city in Asia: the centre of the river teemed with craft from small boats to large barges, including the gay flower-boats, loud shouting

from the fleet announced the appearance of the flood which seemed like a glistening white cable stretched athwart the river at its mouth as far down as the eye could reach. Its noise, compared by Chinese poets to that of thunder, speedily drowned that of the boatmen, and as it advanced at the rate of 25 miles an hour—it assumed the appearance of an alabaster wall or rather of a cataract four or five miles across, and about thirty feet high, moving bodily onward. Soon it reached the advanced guard of the immense assemblage of vessels awaiting its approach, all intently occupied in keeping their prows towards the wave which threatened to submerge everything afloat: but their boats all vaulted, as it were, to the summit with perfect safety, and when the Eagre had passed about half-way among the craft, on one side they were quietly reposing on the surface of the unruffled stream, while those on the nether portion were pitching and heaving in tumultuous confusion on the flood. Others were scaling with the agility of salmon the formidable cascade. This grand and exciting scene was but of a moment's duration; The wave passed up the river in an instant, but from this point with gradually diminishing force, size and velocity, until it ceased to be perceptible, which Chinese accounts represent to be eighty miles distant from the city. A slight flood continued after the passage of the wave, but it soon began to ebb. The Chinese say that the rise and fall of the tide is sometimes forty feet at Hang-chow. The maximum rise and fall at spring tides is probably at the mouth of the river, or upper part of the bay, where the Eagre is hardly discoverable. In the Bay of Fundy, where the tides rush in with amazing velocity, there is at one place a rise of seventy feet, but there the magnificent phenomenon in question does not appear to be known at all. It is not, therefore, where tides attain their greatest rapidity, or maximum rise and fall, that the wave is met with, but where a river and its estuary both present a peculiar configuration.—*A Res. among the Chi.*, *p.* 317. See Bore.

EAJATA. Can. Elate sylvestris.

EAPAY. According to the Karen, the Creator. *See Karen, p.* 468.

EAR-GULIE, the Tamil name of a Ceylon tree which is about fourteen inches in diameter, and eight feet in height. It is not a useful wood.—*Edye's Ceylon.*

EARL George Windsor, devoted many years to the investigation of the countries and races of the Eastern Archipelago, the principal part of his writings on which appeared in the Journal of the Indian Archipelago. He also wrote a book on that Archipelago.

EARNEST MONEY, Eng. Tirmantha, Tam. This is paid down in almost every transaction of India.

EARRING, Ενοτια, Gr. Inaures, Lat. mentioned in Gen. xxxv. 4—Judges viii. 24—Hos. iii. 13 are worn in the ears, by men and women in eastern countries, and other ornaments are worn round the neck like the golden bulla and leather torum of the Roman youth. Philacteries are mentioned in Deut. vi. 8, ix. 18.

EAR-SHELLS, belong to the genus Haliotis and family Haliotidæ of the Mollusca.

EARTH, English.

Arad, Arab.	Danya, Hind.
Myay, Burm.	Terra, Lat.
Globe, Eng.	Zamin, Pers
World, ,,	Bhu, Sansc.
Terre, Fr.	Bhum, Tam.

The surface of the globe has 31,625,625$\frac{1}{2}$ sq. miles: of which the waters are 23,814,121. The surface covered with water is, therefore, to dry land as 3·8 to 1·2. The islands form scarcely $\frac{1}{22}$ of the continental masses. In astronomy the symbol of the earth (♁) is the inverted emblem of life, and probably bears some reference to terrestrial corruption and decay. *Proctor's Saturn*, *p.* 197, Maury.

EARTHQUAKES. Eng.

Myay-gyee, Burm. | Zalzalah, Hind. Pers.

Captain Baird Smith, in his Memoir on Indian Earthquakes, enumerates one hundred and sixty-two of them between the years 1800 and 1842. Many of which were felt in the Delta of the Ganges and since

1842, there have been at least fifty more shocks felt in various parts of Southern and Eastern Asia. Captain Baird Smith likewise refers to a great storm and earthquake that devastated Calcutta in 1737, published in the Gentlemen's Magazine printed in 1738-39, which runs thus:—"In the night between the 11th and 12th October 1737, there happened a furious hurricane at the mouth of the Ganges which reached 60 leagues up the river. There was at the same time a violent earthquake which threw down a great many houses along the river side. In Golgotta (Calcutta) alone, a port belonging to the English, two hundred houses were thrown down, and the high and magnificent steeple of the English church sunk into the ground without breaking. It is computed that 20,000 ships, barks, sloops, boats, canoes, &c., have been cast away; of nine English ships then in the Ganges, eight were lost, and most of the crews drowned. Barks of 60 tons were blown two leagues up into land over the tops of high trees: of four Dutch ships in the river three were lost with their men and cargoes; 300,000 souls are said to have perished. The water rose forty feet higher than usual in the Ganges." The steeple of the church was described to have been lofty and magnificent, and as constituting the chief ornament of the settlement.

On the 11th November 1842, occurred a severe earthquake of which Calcutta appeared to be the centre of emanation; the shocks extended 300 miles North, to Darjeeling in the Himalaya Mountains; to Chittagong or 250 miles on the East; and to Monghyr or 210 miles on the West; it was also felt on board the "Agincourt," seventy miles South of the Floating Light.

The surface of the Soonderbuns has more than once sunk below the level of the ocean the evidence of subsidence are on the whole coast from Cape Negrais to Akyab on the Eastern side of the Bay of Bengal. The Island of Reguain or Flat Island, as well as all the other islets and rocks on that part of the coast of Arracan, are now undergoing the process of upheaval. This fact was brought to notice in 1840, by means of the nautical surveys of the Brig "Childers." The coast from Akyab to Cape Negrais, is indented by deep and narrow gulfs similar to the fiords of Scandinavia, and lies within the prolongation of the great volcanic band of the Sunda Islands, which extends from Java to Sumatra, Barren Island and Norcondam: and indeed all the islands on the coast of Arracan bear evident marks of subterranean fire. In the Island of Cheduba 300 miles South-East from the Sandheads, in latitude 18° 51′ N., longitude 93° 28′ East, there are two mud volcanoes which rise to a height of from one hundred to two hundred feet. This line of upheaval is in the direction of N. W. by N, to S. E. by S. It is one hundred geographical miles in length, and varies in breadth from twenty miles to a very narrow strip of islets and rocks. The upheaval has been greatest in the middle of the line At the Terribles it was 13 feet; at different parts of the N. W. reefs of Cheduba, 22 feet; at the North point of the Island 16 feet; in the middle or the West Coast 13 feet; at the South end 12 feet; and the islands south of Cheduba to Foul Island 9 to 12 feet. The first symptoms of upheaval were observed about the year 1750 or 1760 on the occurrence of a great earthquake by which the sea was driven over the land and the effects of which were felt as far as the city of Ava. An earthquake is said to have occurred one hundred years earlier, and the inhabitants believe that a similar phenomenon occurs every century. In the island of Kyouk Phyoo, 35 geographical miles north or nearer the Soonderbuns, a volcanic eruption took place suddenly, east of the station, at 6 P. M. in June 1852. Again, "on Christmas eve 1855, the island was illuminated for miles around by a huge column of fire thrown up by the volcano, and in April 1857 about 10 A.M. the volcano was again in commotion." We learn from the Philosophical Transactions, (volume LIII.) and from the Journal of the Asiatic Society, (volume X., pp. 351-433,) as condensed by Sir Charles Lyell, that "the town of Chittagong in Bengal, was violently shaken by an earthquake on the 2nd April 1762, the earth opening in many places, and throwing up water and mud of a sulphurous smell. At a place called Bardavan a large river was dried up; and at Bar Charra, near the sea, a tract of ground sunk down, and 200 people with all their cattle were lost. It is said that sixty square miles of the Chittagong coast suddenly and permanently subsided during this earthquake, that Ces-lung-Toom, one of the Mug Mountains, entirely disappeared, and another sunk so low, that its summit only remained visible. Foul Hills are also described as having been variously rent asunder, leaving open chasms for thirty to sixty feet in width. Towns which subsided several cubits were overflowed with water; among others Deep Gong, which was submerged to the depth of seven cubits. Two volcanoes are said to have opened in the Seeta Canha hills. The shock was also felt at Calcutta. While the Chittagong coast was sinking, a correspond-

ing rise of the ground took place at the Island of Ramree, Reguain, and at Cheduba." —(*Johnston's Physical Atlas.*)

An earthquake of the 24th August 1858, was distinctly felt in Calcutta and Madras on that day. Prome in Burmah, barely fifty miles east of the active volcanoes at Ramree and Cheduba, suffered considerably, many pagodas were shaken down and houses destroyed, and a correspondent writing, 24th August 1858, from Kyouk Phyoo, gave the following description of it. We had, he says, rain all yesterday, and to-day in all the pluviometers showed 7-3 inches. There was a nasty Arracan atmosphere pervading the whole of the Island. The H. C. S. V. "Proserpine" had just undergone some repairs, and had started early in the morning for Akyab, but she had not made much way when certain indications in the barometer induced the Commander, Captain Eales, to return and anchor again opposite the wharf. Between 4 and 5 P. M., a slight shaking of the floor was first perceptible, suddenly followed by a rumbling noise and a vibratory motion of the ground, till the earthquake became so violent that the stoutest heart was obliged to fly out of his house. This state of the upheaving vibratory action of the earth from E. to W. lasted for about 2½ minutes, and then suddenly ceased, but in that short time, though no lives were lost, the School House, the Circuit bungalow, the Cutcherry were seriously damaged. The jail lost its upper part of solid masonry, and several pagodas were said have been upset and toppled down hill. The earth opened in various places, and a peculiar bluish soft sandy matter devoid of any smell exuded from them, and finally the horrible scene closed by an eruption from the volcano. Such a fearful convulsion of the earth had not been witnessed in Arracan by the oldest inhabitant. The barometer was 29·82. "The Proserpine" was lying in 11 fathoms of water at the time of the shock, and the sensation felt by those on board was much like that experienced when running on a reef, and the vessel, it is said, trembled in every part of her.

From the south-easternpoint of Java in south lat. 9° and east long. 114° to Chittagong a distance of 3,000 miles, are twenty-seven known active volcanoes and twenty-nine extinct ones. Volcanic fire has frequently broken out from the bosom of the ocean opposite Cheduba Island in lat. 19° N., and a few miles south of Pondicherry in 1757 A.D. a sub-marine eruption also took place. The volcanic fire near Cheduba, as was described by an eye-witness, in 1846, rose into the air as a brilliant column of fire illuminating the sea for miles. Across the Delta near the Rajmahal hills are several outpourings of lava which have taken place at different epochs, and numerous thermal springs close to these hills still proclaim the existence of lingering and smouldering, but deeply seated subterranean fires.

The Lake of Loonar, about two miles in circumference, is a body of water low down in the crater of an extinct volcano and further west the site of the Aden cantonment is also the crater of an extinct volcano. On the east, twenty miles north of Chittagong, is Seeta Koond, a hot spring, the gaseous exhalations on the surface of which may be inflamed by the application of fire.

Earthquakes are repeatedly felt at Kabul. Vigne tells us (*Pers. Narrat.* 212) there are usually a dozen in the course of a year. While the British were besieged at Jellalabad, in 1841, its walls were thrown down by an earthquake.

In July 18— ? smart shocks of an earthquake were felt at Lahore, Rawal Pindee, Attock, and Wuzeerabad. The shock of an earthquake was felt at Peshawar, on the 16th September, 18— ? about 7 A.M. The vibrations were barely sensible, but the concomitant rumbling noise was well defined. On the afternoon of the same day, the valley was visited by a dust storm, followed by drizzling rain, which continued throughout the night. On the 17th September the sky was densely overcast, and thunder was audible from the direction of the Sufaid Koh; no rain fell.

In January 18— ? there occurred a great earthquake, at Chittagong on the eastern coast of Bengal, and also at the Kangra Valley to the North of the Punjab, amid the N. W. Himalaya. The same earthquake occurred south at Sholapore, at Bombay at Mahableshwar and other places on the Western Ghats and in the Madras Presidency at Ramandroog near Bellary. There was a great earthquake some four or five years back which was felt all over Bengal and right up into Assam. In this one also Dacca and Silchar in Cachar have been moved; as also Assam, on the 14th December, a day previous to the shocks at Chittagong. The earthquake thus appears, as was considered probable, to have begun at the very Himalaya. Dewangiri was also moved, an instance of one of the most extended volcanic actions of which we have a record.

An earthquake occurred at Bombay on the 8th December 1857. Mount Aboo is subject to frequent shocks of earthquakes.

In North Arcot, in 1859, there occurred some shocks in Tripati and Chendragari.

One shock was felt at 5 P. M., on the 2nd February 18— ? and lasted for the space of a minute, taking its course from east to west. The noise resembled that occasioned by a railway train going at full speed. The tahsildar of Chendragiri reported that the sound was audible for the space of one minute, during which time the ground trembled and the shock was distinctly felt. On making enquiries he learned that the shock took its course from the foot of the Tirumalay Konda, a hill seven miles north of the Chendragari kusbah, and travelling southward terminated at Thorno Kumbala, a village seven miles south of Chendragari. The shock was felt west as far as Pakala, some 16 miles off, and on the north-west as far as Bimavaram, 10 miles distant. The shock appears to have been very partial, as nothing of the kind was noticed in the Palar talooks.

A shock of an earthquake was felt at Trichinopoly on Friday morning of 18— about a quarter before four. The shock lasted nine or ten seconds, passed on from west to east, and the extraordinary jarring and rumbling sound caused by it died away in the distance like thunder, not a cloud was visible in the heavens, which were beautifully clear.

One was felt on the 26th July 1854, all over lower Bengal.

On the 10th January 1869, a severe earthquake occurred in Assam, Cachar, and Munipore: at Silchar, the ground rose about 20 feet in a long wave, and the river rushed backward for an hour. The earth opened in many places and volumes of blue sand and water were thrown up, and a similar splitting of the earth occurred at Munipore. It extended a long distance into upper Burmah. It was very severe in the hills to the N. E. of Munipore. Even in the hills, the ground opened extensively and water rushed out with mud, people fell into the fissures and were injured. In the district of Chittagong and Eastern Bengal, earthquakes, have been felt every few years, some shocks having been pretty severe. Seta Khoond is perhaps the centre of volcanic action in the Chittagong district.

The entire Eastern Archipelago rests on a volcanic base, circular in form, or nearly so commencing from the West Coast of Burmah and passing through the great islands of Sumatra, Java, Celebes and Luzon. In the last island belonging to the Philippine group, there are some notoriously active volcanoes. Celebes consists almost entirely of volcanic soil. Between this island and Java there is a volcano on an islet called, if we recollect rightly, Tumboro—the most powerful and active of all. At the early part of the 19th century its activity was so great that whole towns and villages were destroyed, an entire coast line was essentially altered in character; bays were raised up into dry land and dry land covered by the sea, the entire island was overspread with death and devastation, so that ships out at sea saw it covered with gloom through which lurid fires ever and anon burst forth; ashes and particles shot out were said to have been found at a distance of a thousand miles, and there was a severe earthquake which extended much further still.

The volcanic chain goes round the outer circle of the Eastern Archipelago and the volcanic action consequently affects the whole group—working along the western end of the Indo-Chinese Peninsula, *i. e.*, on the Arracan and Chittagong coast, up to the Himalaya a thousand miles away in the Kangra, Koolloo and Lahoul districts the Jwala Mookhi fires of Kangra, the Mani Karn boiling springs of Koolloo, are but so many indications of the pent fires which lie beneath. The Bara Lacha Pass and other parts near it in Lahoul have been referred entirely to volcanic action.

The island of Simo, one of the Batu group, on the West Coast of Sumatra, had an earthquake and sea-wave on the 9th March 18—? Before the occurrence the island had 120 houses and a population of 1,045; on this day 96 houses were destroyed, and 675 of the inhabitants, besides 103 temporary residents, lost their lives. An earthquake was felt at the fall of the evening, shortly before the inundation. All the inhabitants then assembled on the open space in the middle of the campong, but a moment afterwards they tried to make their escape from thence, as they dreaded the fall of the houses which were already tottering. They were driven back, however, by a rush of water which approached from the back of the campong. Running back from this they were overwhelmed by another terrific wave, which, out of 282 persons, swept off 206. Two waves met each other at this point and wrought a frightful destruction. Large masses of rock were carried from the sea for 100 to 200 paces inland. A colossal old jawijawi tree, which formerly stood on the bay, lay with its roots and branches broken and twisted about two hundred places from the shore. The water retired with so much force that much must have been swept into the sea. Soon after the earthquake very heavy reports were heard, like distant cannon shots, on which was observed approaching at a great distance from the sea a wave of the

height of a full grown cocoanut tree, and which dashed with furious force on the island; some saved themselves by an immediate flight, the rest were overtaken by the water and swept away, except such as were caught by the jungle, or possessed presence of mind and strength enough to hold on to trees. Three such waves succeeded each other.

Earthquakes have been of frequent occurrence in the Philippines. In 1645, for two months, there was a succession of fearful earthquakes. In Cagayan, a mountain was overturned and a whole town engulphed at its foot. Torrents of water and mud burst forth in many places. All the public buildings in the capital were destroyed, six hundred persons were buried in Manilla, beneath the ruins of their houses, and 3,000 altogether are said to have lost their lives.

An earthquake of 1796, in the Philippines was sadly calamitous.

Again on the 3rd June 1863, at half past seven in the evening, a circumambient flame was seen to rise from the earth and gird the city of Manilla (the "Beauteous Flower of the East," as she is finely and poetically designated by her possessors), and at the same time a most terrific quaking of the earth took place. It lasted scarcely a minute, but in that short space nearly the whole of fair Manilla was reduced to a heap of ruins, upwards of a thousand persons killed, and many thousands wounded. Scarcely an edifice escaped without dead or wounded. The priests, their choristers and sacristans and the christians who were hearing the vespers of Corpus Christi, were nearly all buried and suffocated, under the ruins of the cathedral and other churches. The only church that wholly escaped was San Augustin, the same that withstood the tremendous shock of 1645. The Palace and nearly all the public and private, as well as commercial edifices, have either been thrown down or shaken from their foundations. Before the earthquake took place, sulphurous odours were perceived, rumbling like the firing of ordnance, and then like the approach of an immense locomotive and train! The flame that surrounded the city was seen from the bay to ascend towards the sky; and another, a triple-snaked one, came from the land over the water to the shipping, and threw them up at least two or three feet; while on shore the earth everywhere sunk at least two feet.

A severe earthquake was experienced in Batavia, and over an extensive region in Java, on the 16th of November 1847. In the Courant of the 27th October 1847, it was mentioned that a shower of ashes had fallen at *Buitenzorg* on the night of the 17th, which came from the Guntur mountain, in the district of Limbangan, residency of Preangar. On Sunday the 17th October, at 11 o'clock P. M., earthquake shocks, following each other in quick succession, were felt at Tijundjur, the first of which was very strong, and lasted for fully ten seconds. The shower of ashes began to fall the same night, and on the following morning had already clothed the earth, grass, trees, and buildings with a brown covering. The fall of ashes and sand lasted the whole day, and made it very inconvenient to be in the open air. The eyes of travellers suffered. The earthquakes had not wholly stopped at Tijundjur on the 29th October. The mountain had, however, fortunately, begun to be at rest, and no damage had been caused by the eruption. The shower of ashes had reached as far as the frontiers of the residency of Bantam, a distance of more than 80 miles to the westward of the place of the eruption.

The island of Gunong Api, or Fire mountain, is wholly a volcano, and has caused repeated desolation around it.

Earthquakes are frequent in the Moluccas and indeed, in all the islands between Sumatra and 125 ° of E. Longitude.

On the 21st December 1846 three shocks of an earthquake were felt in Ternate, the first two of which were very heavy and accompanied by a thundering noise. The obscure light prevented any other phenomena of this eruption being noticed save the noise with which it was attended and the column of ashes which it ejected above the clouds. The lava stream flowed to the north of the mountain without causing any damage. Other two earthquake shocks were subsequently experienced at Ternate, and on the 8th of April 1847 about half past 3 o'clock a severe earthquake took place which was felt in a direction from north to south and lasted some seconds without, however, occasioning any injury to buildings.

In the month of March 1847, a sinking of the mountain Nimbenok (which is three days' distance from Kupang) took place, in consequence of which many houses with their contents were destroyed by the great stones that rolled down.

F. Lewis de Froes in a letter, dated at Simonofeki in the Province Nacatta, October 15th, 1856, relates that in 1586 Japan was shook by such dreadful earthquakes, that the like was never known before. From the province Sacaja as far as Miaco, the earth trembled for forty days successively. In the town of Sacaja sixty houses were thrown down. At Nagasama, a small town of about a thousand houses in the kingdom Oomi, the

earth gaped and swallowed up one half of that place, the other half was destroyed by a fire. Another place in the province Facata, much frequented by merchants, and likewise called Nagasama by the natives, after it had been violently shook for some days, was at last swallowed up by the sea, the water rising so high, that they overflowed the coasts, washed away the houses and whatever they met with, drowned the inhabitants, and left no footstep of that once rich and populous town, but the place on which the castle stood, and even that under water. A strong castle in the kingdom of Mino, built at the top of a high hill, after several violent shocks sunk down and disappeared of a sudden, the earth gaping, so that not the least footstep remained, a lake quickly filling the place, where the foundations of the castle had been. Another accident of this kind happened in the province Ikeja. Many more gaps and openings were observed up and down the empire, some of which were so wide and deep, the guns being fired into them, the balls could not be heard to reach the other end, and such a stench and smoke issued out of them, that people would not venture to travel that way. Quabacundono (who was afterwards called Taicosama) resided at Sacomat, in the castle Achec, when these earthquakes begun, but they growing too thick and violent he retired hastily to Ofacca. His palaces were strongly shook, but not thrown down.

On the 23rd of December 1854, at 9-45 A. M., the first shocks of an earthquake were felt on board the Russian frigate "Diana," as she lay at anchor in the harbour of Simoda, not far from Jeddo, in Japan. In fifteen minutes afterwards (10 o'clock,) a large wave was observed rolling into the harbour, and the water to be rapidly rising in the beach. The town as seen from the frigate, appeared to be sinking. This wave was followed by another, and when the two receded which was at 10 h. 15 m. there was not a house, save an unfinished temple, left standing in the village. These waves continued to come and go until 2-30 P. M., during which time the frigate was thrown on her beam ends five times. A piece of her keel 81 feet long was torn off, holes were knocked in her by striking on the bottom, and she was reduced to a wreck. In the course of five minutes the waters in the harbour fell, it is said, from 23 to 3 feet, and the anchors of the ship were laid bare. There was a great loss of life; many houses were washed into the sea, and many junks carried up—one two miles inland—and dashed to pieces on the shore. The day was beautifully fine, and no warning was given of the approaching convulsion; the barometer standing at 29·87 in. thermometer 58°; the sea perfectly smooth when its surface was broken by the first wave. It was calm in the morning, and the wind continued light all day.

In a few hours afterwards, at San Francisco and San Diego, the tide-gauges showed that several well marked and extraordinary waves had arrived off the coast of California. The origin of these waves, and those which destroyed the town of Simoda, in Japan, and wrecked "the Diana," was doubtless the same. But their birthplace is not known to be near the coast of Japan, we may, with the tide-guage observations in California and Mr. Airy's formulæ, calculate the average depth of the sea along the path of the wave from Simoda both to San Francisco and San Diego.—*Maury's Physical Geography, p. 5. EAST. The East, the Morgen land of the Germans, has been the theme of innumerable writers, on its people and on their customs. Burder in his Oriental Customs, Ward in his Hindoos, Hardy in his Eastern Monarchism, and Roberts in his Oriental Illustrations of the Scriptures, Bunsen's Egypt, his God in History and the Holy Books of the Scriptures have given to the western nations a vast amount of information and it may, here, be briefly mentioned that the races occupying the South and East of Asia, are of Tartar and Mongol origin, Semitic, Arian and African, all various, in personal appearance, habits and customs.

The dimensions of an eastern city do not bear the same proportion to its population, as those of a European town. A place as extensive as London, or Paris, might not contain one-third of the number of inhabitants of either. The custom, prevalent from the earliest period in the East, of secluding women in apartments removed from those of the men, renders a separate house for each family almost indispensable.

The Shemite, says Layard, whether Hebrew, Arab, or Syrian, has a brilliant imagination, ready conception, a repugnance to any restraint that may affect the liberty of his person or of his intellect. He conceives naturally beautiful forms, whether they be embodied in his words or in his works; his poetry is distinguished by them, and they are shown

even in the shape of his domestic utensils. This race possesses, in the highest degree, what we call imagination. The best character of the Bedouin says Burton (*Pilgrimage, p.* 44) is a gentleness and generosity. The Shemite says Layard shows a ready eloquence; his words are glowing and apposite; his descriptions true, yet brilliant; his similes just, yet most fanciful. These high qualities seem to be innate in him.

The three great monotheistic systems which have divided the civilized world, came forth from nations of Shemite origin, among whom arose the priests or prophets of all those nations who hold the unity of God. In the South and East of Asia, are representatives of those three great religions, Jews, Christians, and Mahomedans, as, also, a people, the Parsi, following the fire-worship which seems to have been a corruption of the doctrines taught by Zoroaster. The Buddhists, likewise, in Ceylon, in the Trans-Gangetic countries and in those north of the great Himalaya, are very numerous, and follow several philosophies. The Arian race who pursue a worship of nature, of spirits, of demons, and have adopted physiological doctrines as revelations, are worshipping deified mortals and heroes, and are believing in many incarnations of Siva and of Vishnu. They are spread all over India, and have imparted to its prior occupants a considerable acquaintance with their religious books. These prior peoples constitute the bulk of the inhabitants of British India, and have merely added on to their own nature and spirit and devil worship some of the legends and philosophical views of the Arian hindoo, and amongst the professors of hindooism are a multitude of sects worshipping Siva, or Vishnu, or Brahma, or all of these, or their incarnations, or a mere Vikrahamu or idol of stone or wood or brass, with or without a form. A body of religionists, the Sikh, considerable from their activity and their late political power, converts from the Jit or Gete races in the Panjab, have adopted doctrines partly obtained from the monotheistic mahomedans, and partly from the Arian hindu, but, though their faith is only about 200 years in existence, they, too, have broken up into several sects. The great mass of the Indian people are of non-Arian origin, and follow religious rites and customs, the origin of which is quite unknown. The Mongolian, whether Scythian Turk, or Tartar, is without imagination or strong reasoning powers, but is intrepid in danger, steady in purpose, overcoming all opposition, despising his fellows, a great conqueror. Such has been his character as long as history has recorded his name: he appears to have been made to command and to oppress. We find him in the infancy of the human race, as well as at later periods, descending from his far distant mountains, emerging from the great deserts in Central Asia, and overrunning the most wealthy, the most mighty, and the most civilized of nations. He exercises power as his peculiar privilege and right. *Layard, Nineveh, Vol.* II. *p.* 239 *to* 244. *Burton's pilgrimage to Meccah, Vol.* III., *p.* 44. See Bedouin, Arab, China, Hindoo, India, Jat. Mahomedan, Parsee.

EASTERN ARCHIPELAGO extends over a space of more than 8000 miles, and consists of an immense labyrinth of islands, among which are at least twenty countries of considerable size, and one which nearly equals Europe in extent. The cluster of islands and islets, scattered in irregular profusion over the Southern Ocean, commencing at the southern extremity of the Bay of Bengal, forming this wonderful Archipelago, stretches eastward far into the Pacific, through 50 degrees of longitude, while in breadth it extends through 31 degrees of latitude. It comprises islands, and groups of islands, inhabited by races differing widely in character. It is not exposed to the extremes of heat. The air is cooled by constant currents; and the monsoons, regularly recur, blowing over the ocean and over forests and swamps which remain in a state of primitive nature. Abundant rains fertilize the soils, and produce a magnificence of vegetation which no country but Brazil can rival. The great importance of that vast tract, has drawn the attention to it of many European writers, but Mr. George Windsor Earl, and Mr. Logan, in the Journal of the Eastern Archipelago, were the most constant in their efforts to describe it. Mr. Logan proposed to designate it Asionesia but, the Indian Archipelago, Malay Archipelago, Malayanesia are other names at times applied to it. It has been, and still to some extent continues, the theatre of prodigious volcanic action, to which it owes much of its unequalled beauty and fertility; for ashes and scoria, if they blast and destroy for a time the luxuriant tropical flora, are afterwards the basis, and become the cause, of a most exuberant vegetation. In Java there are forty-six volcanic peaks, twenty of which still occasionally emit vapour and flame. A great part of the Archipelago, indeed, forms part of a vast volcanic area extending into the very centre of Asia. These eruptive forces must have operated in remote ages with inconceivable violence, and even in modern times, the great

eruption of Tomboro, in the Island of Sumbawa, about 200 miles from the eastern extremity of Java, is a notable example. This volcano had been for some time in a state of smouldering activity, but in April 1815, it burst forth with tremendous violence and did not cease to eject lava until July. The sound of the incessant explosions was heard in Sumatra, distant 970 geographical miles, in a direct line; and at Ternate, in the opposite direction, at a distance of 720 miles. Out of a population of 12,000 in the province of Tomboro, only twenty-six individuals survived. On the side of Java, the ashes were carried to a distance of 300 miles, and 217 towards Celebes; and the floating cinders to the westward of Sumatra formed a mass two feet thick, and several miles in extent, through which ships with difficulty forced their way. The finest particles were transported to the Islands of Amboyna and Banda, 800 miles east from the site of the volcano; and the area over which the volcanic effects extended was 1000 English miles in circumference, including the whole of the Molucca Islands, Java, and a considerable portion of Celebes, Sumatra and Borneo.

The limits of the volcanic band which crosses the Archipelago are distinctly defined by the active volcanoes with which it is studded. There is a great volcanic stream in the neighbourhood of Kamtschatka from which it can be traced in a south-west direction through the Kurile Islands, Japan, and Loo Choo, skirting the Coast of Asia, to Formosa, where it meets another coming from the south and southwest through the Philippines and Mindanao to the Moluccas, embracing the eastern extreme of Celebes and the western Peninsula of New Guinea, and then another curved from the westward along the Trans-Javan chain to the Straits of Sunda, where it meets one from a northwesterly direction through Sumatra and the Andamans to Cheduba island, in the northern part of the Bay of Bengal. From the western extreme of New Guinea, however, along the north coast of that island to New Britain, although its volcanic character has been decided by recent French navigators, there remains a tract including thirteen degrees of longitude in which no active volcano has been seen. Indeed it is by no means improbable that the band which takes a southerly direction from Japan through Fatzima, the Bonin and Mariana Islands, may prove to be continued to new Ireland; in which case the chain of active volcanoes which extends through the Solomon Islands and the New Hebrides to New Zealand, and perhaps further to the south, may indicate

the course of an independent stream. One writer, indeed connects the Sumatran line of volcanic action with that running to New Zealand. He says, the lines of volcanic action to which these islands have been subjected can be traced with tolerable distinctness. That one of these extends along the W. coast of Sumatra and the S. coast of Java; whence it is continued by a chain of islands, separated by narrow but deep channels, to New Guinea, and can be traced through that island to the Louisade Archipelago, and is probably continued by New Caledonia and Norfolk Island to New Zealand, thus forming a curved line resembling the letter S. The other line, he says, commences in Kamtschatka and extends through the Kurile Islands, Japan and Loochoo, to the Philippines, where it separates into two branches, one traversing Palawan and the N. W. part of Borneo, where it terminates near the limits of the Great Asiatic Bank, and the other continuing in a southerly direction until it comes in contact with the Sumatran line. It is near this point of contact that the volcanic action has been strongest, throwing the islands into fantastic forms, of which Celebes and Gillolo furnish striking examples. These islands all rise abruptly from an unfathomable sea, a circumstance unfavourable to their productiveness, since a large portion of the rich soil created by the decomposition of the volcanic rock is washed away into the ocean. Java, however, is in a great measure exempt from this disadvantage, owing to the Great Asiatic Bank extending to its northern coast, which prevents the soil from being lost, and it is deposited in vast plains lying between the mountain range and the sea. These plains are so surpassingly rich that they not only yield a sufficiency of grain for the consumption of a large portion of the population of the Archipelago, but at the same time afford such abundance of sugar and other tropical produce as to furnish cargoes for many thousand tons of shipping. The east end of Java is dry and arid.

With such violent subterranean forces in operation, even at the present day, it is easy to apprehend how numerous must have been the uprisings and subsidings of the solid matter of the earth in this region during bye-gone ages. According to the views which have been adopted from Sir Charles Lyell's prolonged investigations, it is probable that these changes have resulted from a series of great uppourings from the interior during bye-gone ages, indentical with those still in operation, though perhaps all in the lines which we observe in the direction of the existing mountain ranges.

One of these, the Eastern Asiatic range of mountains, is prolonged through Arakan, halts at point Negrais, to reappear through the Andamans and Nicobars; and, after extending along the S. W. coast of Sumatra, terminates at its S. E. point. Another mountain range runs along the Malay Peninsula, is lost for a time, but appears again in the high peak of Lingin, and terminates in Banca and Billiton, and a branch from this separates at Pulo Timoan, on the east coast of the Malay Peninsula, and ends at Carimata, in the strait between Billiton and Borneo. Two ranges traverse Cambodia and Cochin-China in the same direction, and these will be found to extend to, and, perhaps, to traverse, Borneo. Between the Cambodian range and the mountains at Sarawak, on the north-west extremity of Borneo, the Natunas islands and Pulo Condor form the connecting link; and as the Sarawak hills run to the south east, the range is probably continued, either by a connected line, or by isolated mountains, until it terminates in the Gunung Ratos, near Cape Selatan. More recent data shew that this range, after traversing the western part of Borneo, terminates on the south coast, a little to the eastward of Kotaringin. The Gunung Ratos would therefore appear to have been formerly connected with the primary range which shows at Bintulu, on the northwest coast of Borneo, and which may be a continuation of one of the Indo-Chinese ranges. The Anam or Cochin-Chinese Range is that which can be traced most distinctly across the Archipelago to Australia at the present day. There seems no doubt that the multitude of islands which are now to be seen are merely plutonic masses upraised by subsequent volcanic action: or are the tops of great volcanic outbursts which have appeared above the ocean. But if the disruptive forces in these regions have been formerly predominant, the creative and constructive power is now the most active. The zoophyte is adding silently but unceasingly to the number of these island-groups; coral-reefs are constantly emerging from the waters; seeds, deposited by birds, or wafted by winds, quickly vegetate; verdure spreads over the waste; and palm trees rise in tufted groves, as if by enchantment, from the ocean. The hidden but ever active energy of the coral-insect makes the navigation of this Archipelago exceedingly difficult, for charts and soundings do not long form safe guides where an unseen power is always at work, reducing the depth of seas, and converting water into dry land—(*Quarterly Review, No.* 222 *p.* 486.)

The remark that has been made with regard to the ranges in the south-eastern part of Asia is equally applicable to Australia, since one of the most marked features in the geography of that continent is the uniformity that exists in the direction followed by all the continuous mountain ranges that have yet been discovered. The contrast which the volcanic islands of the Archipelago afford when compared with the continent of Australia is very strikingly presented to the view of a voyager from Port Essington, crossing for the first time the sea that separates the continents of Asia and Australia. Even before he has lost soundings on the great bank which extends from the northern shores of the latter continent, the lofty mountains of Timor rise up before him. As he nears the land the colour of the water suddenly changes from green to deep blue; he has now passed the steep edge of the bank, and is floating on the unfathomable seas which bounds the volcanic Islands of the Archipelago. On closer examination he finds that the land of Timor rises abruptly from the depths of the ocean, so much so, that from many of the precipices which overhang the sea, a line of great length will not reach the bottom, while the very few spots on which anchorage is to be found are so close to the shore as to be available only when the wind blows from the land. And to complete the contrast, if the weather is clear we perceive that one of the mountains near the east end of Timor is an active volcano. The chain of Islands which extends from Java to Timor is of the same character; lofty volcanic peaks, some in a state of activity; while the islands are separated from each other by narrow channels of unfathomable depth, through which the current from the Pacific, caused by the prevalence of easterly winds, rushes with great force; but on passing these the voyager again perceives a change in the colour of the sea from deep blue to green, and, on sounding, he finds a bottom of stiff clayey mud, resembling exactly that of the bank which fronts the northern coasts of Australia, he is now on the great bank which extends from the south-eastern extremity of Asia far into the seas of the Indian Archipelago. The Islands now lose their volcanic character, and on arriving at Singapore, near the extremity of the Malay Peninsula, the general resemblance of the country to that in the neighbourhood of Port Essington is sufficient to strike the most careless observer. The land low and undulating; the shore with red cliffs alternating with sandy beaches; even the rocks of the red iron-stone,

known to Indian geologists by the name of laterite, are perfectly in character with the country of the Coburg peninsula, and even on closer examination little difference can be discovered except in the vegetation.

Five-sixths of the whole Archipelago are claimed by the Dutch as their own possession. (*Moniteur des Indes*) Sumatra, Babi, Nias, Mintao, the Pora Isles, Poggi, and the Enganos, Java, Madura, Baweean, the Kangeang, Banka, Biliton, Bintang, Linga, the Natunas, Anambas, and Tambetan, the kingdom of Sambas in Borneo, with the great Pontianak and Banjarmassim residencies, and the Karimata isles—Celebes, Sumbawa, Bouton, Saleyer, Amboyna, Ceram, Buru, Siam, Sangir, Talant, the Xulla and Bangaai groups, Halmahera, Obie, Batchian, Ternate, Tidor, Waigin, Battanta, Salawatte, Mysole, the Bandas, the Ki, Arru, and Tenimber, a part of Timor—Rotti, Savu, Sumba, Ende, Adenara, Salor, Lombate, Putare, Ombai, Bali, and Lombok—with the western part of New Guinea—all these are claimed by the Netherlands, and if her political supremacy were not in many of them a simple fiction, they would truly form a magnificent colonial empire. The political geography of the further East, however, is not yet accurately mapped out; nor, indeed is the region in any respect perfectly known. The recent magnetic survey has added much to science; but still more remains to be determined (*Elliot's Magnetic Survey, Phil Trans.* 1851 CXLI. 287.)

The Archipelago contains three islands, New Guinea, Borneo and Sumatra, of the first class, inferior in size only to Australia; Java takes a second place: three are of third size Celebes, Luzon, and Mindanao, each as large as the most considerable of the West India group; and of a fourth size at least sixteen, viz Bali, Lombok, Sumbawa, Chandana, Flores, or Mangarai, Timor, Ceram, Bouru, Gilolo Palawan, Negros, Samar, Mindoro, Panay, Leyte, and Zebu—most of them with spacious alluvial tracts, navigable rivers, and many natural riches. The groups and chains in which they are distributed are dispersed over narrow seas with the greater islands intervening. Innumerable channels and passages, therefore, open in every direction to the mariner,—tortuous, intricate, full of rocks, reefs, and shoals, which render them in some parts difficult of navigation. (*Grooi, Moniteur*, i. 53.) They are made less dangerous, however, by the prevailing serenity of the waters, the regularity of the currents, and the steadiness of the winds, though tremendous storms, called typhoons, occasionally visit the Straits of Malacca. (*Berncastle, Voyage*, I. 274). But over the China Sea, they are rare, and the islands of the interior region may be said to lie amid perpetual calms. The groups known as the islands of the Arafura sea, consist of the Tenimber, the Ki and the Arru archipelagos, with others of inferior significance. They are scattered over a considerable space of sea, and vary in size from seventy miles in length to mere tufts of verdure floating on the sea, like baskets of grass and flowers, crowned by tall clumps of palm, and dispersing through the atmosphere a fragrance like that of the cinnamon gardens in Ceylon. (*St. John's Ind. Archip. Vol.* II, *p.* 87.) Beyond the Archipelago, the islands of the Pacific Ocean are peopled by two races, differing widely in physical and mental qualities, one race called Papua or Melanesian has a very dark, almost black complexion, are of ungainly make with "low grade of mental faculties, savage, and for the most part incapable of civilization." They occupy the south-western islands, New Guinea, New Ireland, Louisade, Solomon Islands, Nitendy, the New Hebrides, New Caledonia with the Loyalty Islands, and the Fiji Islands. These tribes most nearly resemble the aborigines of Australia and Tasmania.

The second race is usually designated the Malay Polynesian or Brown race. Their colour is of all the various shades of brown, they are well made, capable of a higher civilization and are fond of a sea faring life. They nearest resemble the Malay tribes of the Archipelago who dwell in Malacca, Sumatra, Java, Borneo, Celebes, the Sunda, Molucca and Philippine islands. They are distributed through the islands from the Pelew group on the west as far as Easter island in the east, the Sandwich islands and New Zealand on the south being the largest of their territories.

Over the whole vast field under examination there are but two wide-spread languages that can be said to have dialects—the Malay and the Polynesian, the latter being essentially the same tongue in New Zealand, the Friendly, the Society, the Navigators and the Sandwich Islands, but in no others. (*Journal of the Indian Archipelago, p.* 178.)

Ethnologists, however, have arranged this race into two subdivisions, the Mikronesian and Polynesian proper. The Mikronesian is of somewhat darker complexion and comprise the western portion of the above range of islands, from the Kingsmill group to the Pelew islands,—These more resemble the Malay race than the Polynesian. The Polynesians, comprise the eastern half from the Samoa and Tonga islands as far as Easter island, together with the Sandwich islands and New Zealand. They are so far apart as to be

regarded a separate family. Dana observes that a line drawn from the Pelew islands to the east of the Philippines, past Salomon and Samoa islands, to the north of Society Islands on to Pitcairn island, is a boundary line between the low islands or atolls of the north, and the high islands of the south. The area between that line and the Sandwich islands, is 2000 sea miles wide and 6000 miles long, is studded with 200 low coral islands, and is one vast area of depression.

In the immediate neighbourhood of this Archipelago is Australia, but its fauna differs in its types from those of all other parts of the world, in it, only, are marsupial kangaroos, opossums, wombats and the duck billed platypus. It has no woodpeckers nor pheasants, but it has the mound-making brush turkey, the honey sucker, the cockatoo, and the brush tongued lori, which are found nowhere else in the globe.

Bali, Borneo, Java, Timor, the Philippines, the Moluccas and New Guinea possess almost similar climates, but there are great differences in their animal productions. In Bali are the barbet, fruit-thrush and woodpecker. In Lombok, the cockatoo, honeysucker, and brush turkey. In Java and Borneo, are many kinds of monkeys, wild cats, deers, civets and many varieties of squirrels. In the Celebes and Moluccas the prehensile tailed cuscus is the only terrestrial animal seen except pigs and deer. In the western Archipelago are the wood-pecker, barbet, trogon, fruit-thrush and leaf-thrush, but to the eastward these are unknown and the lori and honey-sucker are the most common. But the natural productions of Borneo, Java and Sumatra, have a considerable resemblance. Sumatra has the Indian elephant, the tapir and rhinoceros; Borneo has the same elephant, and tapir; one of the Javan rhinoceros is different, but another occurs in Asia and the smaller mammals are generally the same in the three Islands. The fauna of Borneo and Celebes differ extremely, and this difference continues to the south, the line of separation passing between Bali and Lombok, though these two islands are only fifteen miles apart (*New Zealand, Dr. F. Von Hochstetter, Stuttgart* 1867.)

Sumatra was at one time known as lesser Java. In 1615, its raja or sultan of Achin was of sufficient power to collect a fleet of 500 vessels and an army of 60,000 men.

The elephant, tapir, ouran outang, argus pheasant, dragon's blood, are all wanting in Java. The Sunda ox, peafowl, rhinoceros and sloth and teak occur in Java. In Sumatra, Papilio memnon, a beautiful butterfly has two dissimilar females, one

EASTERN ARCHIPELAGO.

of them, like P. Coon, P. doubledayi and P. and rogeus occurs in India. Ornithoptera crœsus occurs in the forest at Batchian. It is of great beauty and brilliancy, the male seven inches across.

Timor is dry and arid and has only seven species of land mammals, the common monkey, the parodoxurus fasciatus, a civet cat, the felis megalotis or tiger cat, said to be peculiar to the island and the Cervus timoriensis, the Sus timorienses and the cuscus orientalis, opossum.

The Ox antelope of Celebes is the Anoa depressicornis.

There seem to be two distinct varieties of the Papuan race inhabiting the south-east portion of New Guinea. The first occupies the western shores of the great bight, and probably extends over the whole of the adjacent country, along the banks of Aird river, and the other great fresh-water channels. These people appear to agree with the Torres Strait Islander—an offshoot, there is reason to believe, of the same stock—in being a dark and savage race, the males of which go entirely naked. The second variety occupies the remainder of the south-east coast of New Guinea and the Louisiade Archipelago; they agree in being a lighter coloured people than the preceding, and more advanced in civilization:—mop-headed, practising betel chewing, and wearing the breech-cloth, in some of their physical, intellectual, and moral characters, and also partially in their language, they seemed to Mac Gillivray (voyage, vol. 1, p. 77) to shew indications of a Malayo-Polynesian influence, probably acquired before their arrival in New Guinea, along the shores of which they seem to have extended, colonising the Louisade during their progress, which at Cape Possession was finally arrested by their meeting with the other section of the race alluded to in the preceeding paragraph.

In the Island of Ansus, in the eastern Archipelago, inhabited by Papuans, their houses are built on posts, placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which the mangroves grow luxuriantly and completely obstruct a landing. The gardens, from this cause, are situated on the surrounding islands, principally on an island with a high beach lying opposite to the kampong. The Ansus Papuans have their hair in tufts. Their appearance is good natured, faces regular, eyes beautifully black, the mouth broad with beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which

gives them a more European physiognomy. The men are generally handsome and well formed, stout, without being too thick, strong and muscular; the women very good looking; and some children with very regular soft faces, and long pendant curling hair.

Generally, the Papuan is impulsive and demonstrative in speech and action. His emotions and passions express themselves in shouts and laughter, in yells and frantic leapings.

Mahomedanism has made large progress in the Archipelago, but Bali is still hindu. Mahomedan Malays inter without coffin or shroud. *Elliots Magnetic Survey, Phil. Trans* 1851 cxli 287. *Journal Indian Archipelago. Macgillivray Voyage Vol. I, p.* 77—8. *Journal of the Ind. Arch. June* 1852 p. 330-1-2 and 3. *Wallace, MacGillivray's Voyage* vol. I p. 77. *Quarterly Review No.* 222 *p.* 486. *St. John's Indian Archipelago Vol.* ii *p.* 877. *Earl: Keppel's: Ind. Arch., Vol.* ii. *pp.* 143, 386, 389. *Bickmores Travels.* See India, Inscriptions. Siam. Sapi.

EAST ARIANS. This designation has been given to the brahminic Indians, to distinguish them from the West Arians or Persians, who migrated into the northern country of the Zend. See India p. 310.

EASTERN GHAUTS, run along the Coromandel Coast, for about 1,000 miles, from Balasore, S. W. to Ganjam; thence to Naggery, near Madras; where they join the range which crosses the country in a north-easterly direction, from the W. Ghauts, N. of the gap of Palghat. Average elevation, of the ghauts is about 1,500 ft., Cauvery hills 4,000 ft., Condapilly, 1,700 ft., W. of Madras, estimated, 3,000 ft., Hills seen from the Moghalbundi, between Pt. Palmyras and Chilka Lake, appearing in irregular scattered groups, 300 to 1,200 ft. Granite constitutes the basis of the range; and clay, hornblende, flinty and primitive slate, or crystalline limestone, forms the sides of the mountains; and the level country, as far N. as the Pennar appears to consist of the debris, when the laterite formation covers a large surface. From the Kistna, northward, the granite is often penetrated by trap and greenstone. To Vizagapatam and Ganjam sienite and gneiss predominate, occasionally covered by laterite.

EASTERN INDIA. This term is sometimes used to designate India east of the Ganges, Trans-Gangetic India.

EASTERN MEDES, and Parthians were the two races who occupied Aria proper N. W. from India about the Arian lake. Subsequently, Medes, Persians and the tribes between the Medes and Indus were to some extent brought under one dominion and Arians stretched loosely from the Indus to the Caspian Sea. *Cal. Rev. No.* 64. See Hindoo.

EASTERN MELANESIA, a name proposed by Mr. Earl for the part of the Eastern Archipelago, east of the Moluccas. See India p. 318.

EASTERN NUMISMATICS, a branch of science carefully examined by Mr. James Prinsep.

EASTERN SIBERIA, its capital is Irkutsk.

EASTERN VINDYAH hills are occupied by the Kol and Male Uraon races. They are physically ultra Indian more than Dravidian.

EAST INDIA COMPANY. Of these, in the South and East of Asia are two great names known in history, the one, the English East India Company, the other the Dutch East India Company. There was a French East India Company, but it never became prominent.

The English East India Company was formed in 1599 by Royal Charter, with a capital of £30,133. Their first adventure of goods was to the value of £37,000 in five vessels under Captain Lancaster, and in the first fifteen years, their profits were to the extent of two hundred per cent. In 1613, they were ordered by Jehangir to settle in Surat. In 1634, Shah Jehan gave a firman for two English factories to be formed in Bengal, and subsequently, in gratitude for the benefits derived by one of the ladies of the zenanah of prince Shujah, from the medical skill of Mr. Boughton, Shah Jehan granted the privilege to the English of free trade in Bengal. The first factory of the Company was at Masulipatam, but, in 1625, it was removed to Armegon, and subsequently (1639) Mr. Day removed it to a village in the territory of the Rajah of Chandragiri. He erected a factory here, which was first called Fort St. George, but afterwards known as Madras. In 1662, Charles II ceded Bombay to the Company. In the time of James II the Company in 1690 obtained the king's permission to send Admiral Nicholson with 12 ships of war, 200 pieces of cannon and 600 men, to seize and fortify Chittagong and establish a kingdom, but this proved a failure, and fresh troops were sent out under Captain Heath, who burned down Balasore and proceeded to Chittagong. But finding this too strong, he sailed to Madras, which, with Bombay, were the sole possessions remaining to the English. But at this time Aurungzebe accepted the terms of peace which the English offered and allowed them to return to trade. Accordingly Mr. Char-

nock on the 24th August 1690, landed on the left bank of the Hooghly and laid the foundation of Calcutta. In 1698, the three villages of Calcutta, Chuttanutti and Govindpore were purchased for Rs. 16,000, and shortly after, during the reign of William III of England, the fortress of Fort William was erected. About this time, 1693, a rival English Company was started, from which much injury resulted to the English interest; but on the 22nd July 1702, these two companies were amalgamated under the title of the United Company of Merchants trading to the East. Little of interest occurred till 1715. In that year, an embassy was sent to the emperor Ferokhsir at Delhi. But, from the date of that small factory granted in 1613 at Surat the English East India Company grew in India up to 1858. In that time they decided the fate of kings, emperors, rajas, and maha-rajahs and had drawn under their rule upwards of a hundred millions of people. Clive and Warren Hastings, and Malcolm and Munro and Frere and Metcalf, and Lawrence and Napier had grown in their service to be great men, while Wellesley, Wellington, Hastings, Cornwallis, Harris, Bentinck, Dalhousie, Canning and Gough and Campbell and Rose, and Mansfield, servants mutually of the British nation and of the Company had risen to distinction in India. Their dominion and their great army of 300,000 soldiers was at length, in 1858, absorbed under the administration of the British Crown, consequent on a great revolt of the native sepoy army of Bengal, during which, the predatory races of the north and the dissatisfied amongst the nobles, took the opportunity to plunder and strive for independence, and during their efforts much innocent blood was shed and many horrors enacted. In the interval, however, amongst the servants of the Company, there had been Lord Clive, Lord Cornwallis, Sir Eyre Coote, Colonel Lawrence, Warren Hastings, Marquis Wellesley, Duke of Wellington, Sir David Baird, Sir John Malcolm, Sir Thomas Monro, Sir David Ouchterlony, Sir Lionel Smith, Lord Metcalf, Sir Henry Pottinger, Lord Hardinge, Lord Gough, Lord Keane, Lord Amherst, Lord Combermere, Lord Lake, Lord Harris, Sir Alexander Burnes, Sir Robert Sale, Sir Henry Lawrence, Sir Charles Napier, Colonel Neill, Mr. Thomason, General Sir James Outram, Colonel Havelock, Lord Dalhousie, Lord Canning, Hon'ble Mount Stewart Elphinstone, Sir Hector Munro, Lord Teignmouth, Sir Bartle Frere, Sir G. R. Clerk, Lord Combermere, Sir William Jones, Sir James Annesley, Sir Achibald Campbell, Dr. Royle Mr. James Prinsep, Lord Bentinck, Marquis of Hastings, Dr. Roxburgh, Dr. Morrison and his son. Sir W. O'Shaughnessy, Dr. Griffiths, Sir Whitelaw Ainslie, Dr. Jerdon, Dr. Wight, Sir Henry Durand, Sir Robert Montgomery, Sir Donald MacLeod, Lord Macauly, Lord Lawrence, Lord Napier of Magdala, Dr. J. B. Gilchrist, Sir Herbert Edwards, Dr. Crawfurd, Dr. Wilson, Sir Stamford Raffles.

During their rule, of a century and a half, the British put down predatory warfare.

They established security of person and property from Governmental aggression.

They introduced civil and religious liberty, instituted colleges, schools, museums and polytechnic Institutions for the introduction of a pure and rational philosophy, and the dissemination of knowledge.

They instructed its youth in the knowledge of the medical sciences.

They gave the freedom of the press.

They formed and introduced the Hindustanee language as a lingua franca; the English language was made known to them: Molesworth's Mahratta dictionary, and the works translated and published, by Colonel Jervis and others: Morris' Telugu Dictionary, Campbell's Telugu Dictionary, Gilchrist's Hindustance Dictionary and Grammar, Shakespear's Hindustani Dictionary, have been published, Richardson's Burmese Dictionary, Morrison's Chinese Dictionary, and works on botany, natural history, medicine and physical science.

They established printing.

They translated into many languages—the Bible, a book of pure morals.

They abolished mutilation and sanguinary punishments.

They abolished slavery in parts of India.

They abolished Suttee, human sacrifices and infanticide.

They put down Thuggee and its kindred iniquities.

They placed the remotest parts of India in communication with the whole civilized world.

They abolished transit duties.

They formed roads on a scale unknown to India under any previous Government.

They gave India the benefits of steam communication on its shores and rivers, and railroads.

They introduced agricultural and horticultural societies for the improvement of cultivation and produce.

They established Commercial Chambers and Banks, and displaced the innumerable coins of its former rulers by a new coinage.

They formed great dams over wide rivers and excavated great canals for irrigation and traffic.

They formed a great and cheap army, about 300,000 strong, from amongst the conquered races, and with them they made fresh conquests in India, in China, in Sind, in the Punjab, in Aden, in Burmah, in Assam, in Arrakan and Tenasserim.

They formed a powerful Navy, which gave to the Government a great influence over the lawless tribes that fringe the neighbouring coasts, their services mostly lay in the Red Sea and the Persian Gulf, and its cost was supposed to be greater than the British Navy could do their work, but the work of the Indian Navy was partly war, partly political and partly scientific, and they did thoroughly and well whatever fell to them to perform.

Their Courts of Sudr and Foujdari Adalat, their Supreme Courts of Judicature with Judges and Session Judges throughout the land administrating to each race their own laws and a great body of magistrates, and Courts of Small Causes furnished the people with the means of obtaining justice, and gave the Government the means of repressing crime, with the blessing of internal peace and progressive civilization.

The service of the State was open to every Indian race, it having been provided by Acts 3 and 4 W. IV. c 85 p. 87, "That no native of the said territories nor any natural born subject of His Majesty resident therein, shall by reason only of his religion, place of birth, descent, colour, or any of them be disabled from holding any place, office or employment under the said Company.

The English East India Company began as peaceable merchants, but, as is the custom of the east in all countries without police, they retained armed guards over their factories which led on the one hand to defensive and aggressive acts and on the other tempted needy soldiers of fortune to try to plunder them or to seek their aid; acts which led them by degrees to the acquisition of vast territorial possessions. Their first charter was obtained from Queen Elizabeth in 1599. Their 2nd Charter in 1661 from Charles II was extended in 1665. In 1702, Lord Godolphim united the old company with a new one that had been established in 1698, and renewed their charter in 1773, with a grant of a monopoly to China, again renewed in 1813 with permission for other merchants to trade, but a fresh charter in 1833, disconnected them, wholly from commerce, made them entirely a political body and permitted British subjects to settle in India. In the beginning of 1857, on a sudden moving of the soldier races, the Native Army of Bengal revolted and the soldier and predatory races in great portions of northern India rose in a rebellion, which was only suppressed with great loss of life and at great expense of money, and it was deemed advisable for Her British Majesty in 1858 to assume the direct government of the country, and to rule through a Viceroy, the first of whom was Lord Canning who was succeeded by Lord Elgin, by Sir John Lawrence and Lord Mayo.

EAST INDIES, this term is used to distinguish the tropical countries in the Eastern parts of the world from the West Indies, composed of the islands lying in the tropics between North and South America. The term East Indies is also used by the British, the Dutch and Spaniards to indicate their territorial possessions in the East. The West Indies belong principally to Great Britain, but to possess the East Indies has been an object of ambition to western races prior to historic times. The first great inroad of strangers was that of the Eastern Arians about 1,500 years before Christ who now form the brahminical tribes of British India, intellectual men, but without territorial possessions. Semiramis B. C. 1,200 moved with a great army, and entered India from the N. West, but was defeated and driven back with great slaughter. Alexander of Macedon approached India from a similar N. W. route but he stopped short in the Punjab, moved southwards along the right bank of the river Indus and then crossed the southern desert to Babylon where he died. Many Scythic races, of whom, however, little is known, appear to have entered India, in the neighbourhood of the modern Surat, in the early centuries of the Christian Era. After the time of Mahommed, the Arab khalifs who succeeded him, mahomedans from Ghazni, from the vicinity of the Oxus and from Persia obtained possession of great parts of the country now designated British India, the British being the present occupant of all the lands which previous conquerors obtained.

The Dutch East Indies or as that nation calls it, Netherland India are comprised in the great islands of the Eastern Archipelago, from Sumatra Eastwards. They lay claim to be the rulers or paramount power of $\frac{5}{6}$ of the whole Archipelago.

The Spanish East Indies are chiefly the Philippine Archipelago. The chief town of Manilla, was founded in A.D. 1581, and they have continued in undisturbed possession ever since. See Archipelago, Eastern Archipelago.

EAST INDIAN, this term has lately been adopted by all classes in India, to distinguish the descendants of Europeans and native mothers. The terms Eurasian and Indo-

Briton, were for a short time in use, but have ceased to be employed, other names such as Half-Caste are used by the British, Chatikar and Chi-Chi by the hindus and mahomedans of India, but these are derogatory designations. Chatikar, is from Chitta, trowsers, and Kar, a person who uses them. The mahomedans equally wear trowsers, but concealed by their long outer gowns. They are also known as Farangi, a person of Europe, similarly as Hyderabadi, Bengali, and Hindustani are employed for natives of Hyderabad, Bengal or Hindustan. The humbler East-Indians if asked their race reply that they are Wallandez, or Oollanday which is a modification of Hollandais the name having been brought down through the seventeenth and eighteenth centuries from the Dutch who were amongst the first who trafficked with the East.

They have in India all the rights and privileges of Europeans, and might advantageously be so styled. They are of French, Dutch, Danish, Portuguse and British descent, but many of those claiming a Portuguese origin, Xaviers, DeCastellas, &c., are merely descendants of converts to christianity or of household slaves of Portuguese officers. East Indians are chiefly employed as clerks in public offices in all the subordinate departments of the British Government.

EASTWICK, Captain Edward H. Bombay Army, Assistant Political Agent, Kattywar, Scinde, 1839-1842; was Professor of Hindi, Hindustani, and Mahratta, Haileybury. Author of Vocabulary of the Scindi language,—Dry leaves from Modern Egypt. Lond. 1847, 8vo.; 2nd Ed. 1852, translator of Bepp's "Comparative Grammar," and of various standard Hindustani and Persian works, editor of the entertaining and instructive "Autobiography of Lootfullah," which affords a remarkable picture of the inner life of a Mohammedan and of the manners, customs and modes of thought of the natives of India. Reported on the Revenues of Khyrpoor. On the pedigree of the Amirs of Sindh, published in Parliamentary paper. Translated the Kisso-i-Sanjan; also of the Zar-tushtnamah; Wrote on Alore and Rohri; Translated Schiller's Revolt of the Netherlands; Memoir of Pir Ibrahim Khan. Translated Bagh-o-Bahar, Anwar-i-Soheili, Gulistan. Author of Hand-book of India. *Dr. Buists' Catalogue.*

EASTWICK, J. B. A Bombay Military officer, author of a Vocabulary of the Scinde language.

EASTWICK, Capt. William Joseph, Deputy Chairman of the East India Company, is a son of R. W. Eastwick, Esq., of Thurloe-square, Brompton. He was born in 1808; was educated at Winchester College, and went out to Bombay as a Cadet in 1827. His first service was with the field force under General Welsh, at Kolapore, and in the Southern Mahratta Country. He was transferred to the political department as First Assistant to the Resident in Scinde. In that capacity, he was attached to the army of Lord Keane, and in 1838 accompanied it through the territories of Lower and Upper Scinde. Under the orders of Sir Henry Pottinger he was intrusted with the negotiation of the treaty of 1839 with the Ameers of Hyderabad, by which the Indus was thrown open to commercial enterprise, free of all imports and vexatious interference. During several months he held political charge of the disturbed districts at the foot of the Bolan Pass, constituting the base of British military operations in Affghanistan. Finally, he was appointed Acting Resident in Sind, and received the official approbation of the Governor-General for the manner in which he conducted the important duties intrusted to his charge at Hyderabad. In 1847, Captain Eastwick was elected to a seat in the East India Direction, and in 1858 was appointed to the office of Deputy Chairman.

EASTERN PENINSULA, a term frequently employed to designate the Malay peninsula, to distinguish it from the Western or Indian peninsula. Further west in the south of Asia, is the Arabian peninsula, and in Eastern Asia are the peninsula of Corea and peninsula of Kamtkatska.

EAST INDIA TACAMAHACA RESIN. See Calophyllum.

EATABLE HIBISCUS, Abelmoschus esculentus. W. and A.

EATCHAM PALLAM. Tam. Elate sylvesters.

ETTI MARAM or Vitti maram. Tam. Dalbergia sissoides.

EAU DE COLOGNE, a refreshing perfume, largely imported into India from Europe, where it is manufactured. It has in a minor degree some of the qualities of chloroform. The most celebrated manufactory is that of Ferina in Cologne, but much that is spurious is sold.

EAU DE CREOLE, a spirit distilled from the Mammee apple or wild Apricot of South America. See Clusiaceæ.

EAU DE RAZE. Fr. Turpentine oil.

EAU DE VIE also BRANDEVIN. Fr. Brandy.

EAU REGALE. Fr. Nitro-Muriatic acid.

EBBENHOUT. Dut. Ebony.

EBENACEÆ. See Diospyros melanoxylon.

EBENE. Fr. Ebenholz. Ger. Ebeno. It. Rus. Ebenus. Lat. Ebony.

EBIL. Ar. also Hilbuia. Arab. Cardamom.

A black wood, exceedingly hard and heavy, of great durability and susceptible of a high polish. It is exported from Upper Egypt, Abyssinia, Zanzibar, Madagascar, Mauritius, Ceylon, India, and Jamaica. The ebonies of South-Eastern Asia, are obtained from several species of Diospyros, Dalbergia, and Bauhinia, from trees growing in the Mauritius, Ceylon, in several parts of the Peninsula of India, in Coimbatore, Malabar, Canara, the Dekhan, in the Circars, Ganjam, Cuttack and Gumsur, also in Assam, the Malay peninsula, in Penang, Siam, and eastwards through the Asiatic Archipelago to the Philippine Islands. The true ebony is so deep a black, as to be used to personify blackness. But, woods sold under this name have also reddish, greenish or yellowish hues, and are distinguished in commerce as red, green and yellow ebonies, though these are in much less esteem than the ebonies which are jet black, free from veins, and close-grained. The jet black kinds are solely employed for ornamental furniture, cabinet and turnery work, rulers, and for handles for doors, knives, piano-forte keys, philosophical, musical and surgical instruments, mosaic work and inlaying, though cheaper woods, dyed black, are frequently substituted: but it is much affected by the weather, on which account it is seldom used in the plank solid. It is first mentioned in Ezekiel xxvii, 15: but in the plural, when the men of Dedan are described as bringing horns of ivory and ebony. Herodotus (iii, 97) mentions ebony as part of the presents brought in considerable quantities to the king of Persia by the people of Ethiopia, and Dioscorides describes two kinds, one Ethiopian which was considered the best and the other Indian which was intermixed with whitish stripes and spotted. But there are ebonies in the Mauritius, Ceylon and the south and east of Asia, equal to those of any other part of the world. The ebony in the south of the peninsula of India, is chiefly obtained from Coorg and Canara, from various species of Diospyros and is of a superior description, being perfectly black in colour. Smaller pieces are procured from Cuddapah, Salem, Nuggur, &c., but there is no steady demand, though, for ornamental cabinet work, it is peculiarly fine veined. That of Ceylon, from the Diospyros ebenaster, is of great value. And another heart wood, that of the Kadoem beriye or Bastard ebony of Western Ceylon, also from species of Diospyros, is occasionally met with of extraordinary beauty. The ebonies of the Palghat and Coimbatore districts, are supposed to be from species of Diospyros (ebenaster) and Bauhinia. In none of the trees, is the entire bole black, only the heart wood, the outer and white wood being the Tendua of the Mahrattas. The ebony tree of the Malabar forests, Diospyros melanoxylon, is also found sparingly in those of N. Canara below the Woolwa Ghat and near Meerjan inland. It is procurable, of a very superior quality, in the hill zemindaries of the Northern Circars, particularly in the Ganjam district: also, inland from Ellore in the Masulipatam district, logs of Diospyros ebenaster yield an ebony richly variegated with bright brown stripes and mottled, similar in appearance to Calamander wood, which, also, is from species of Diospyros. The Karens have distinctive names for four different species of Tenasserim ebony trees—the salt water swamp ebony, the water ebony, the yellow ebony, and the true ebony. Dr. Mason never met with the trees in flower, so as to be able to distinguish the species of Diospyros to which they belong, but had seen specimens of the wood in the southern provinces, not inferior to the ebony of commerce. Also, under the Burmese name of "yendaik," the wood of two different trees is sometimes seen. One, a species of ebony, and the other a leguminous tree, which, according to the descriptions of the Karens, is a species of dalbergia, and the wood resembles the blackwood of Hindostan. There is an inferior kind of ebony often seen at Moulmein, which the natives do not call by the same name that they do the trees which produce the good ebony, though evidently a product of the same genus. It also is from a species of Diospyros, Moulmein ebony. A similar wood at Tavoy is often denominated "iron wood." The Burmese ebony, known as "Tai" is found in the direction of Shooay-

Geen, but is very scarce. Ebony sells in England at £5 to £10 a ton.—*Drs. Gibson, Wight, Mason, Tredgold, Holtzappfel, Faulkner, Crawfurd, Thwaites, Voigt, Captain Dance, Mr. Rohde, Eng-Cyc.*

ECAILLE DE TORTUE. Fr. Tortoise-shell.

ECAN-LEDA. Malay. Pleuronectes solea.

ECBATANA, lay near the Zagros mountains. It was also called Achmetha and was the chief city of Media. According to Herodotus, Ecbatana was built near the close of the eighth century, B. C., by Dejoces, the founder, or (as other authors say) the restorer of the Median monarchy. But the orientals, according to Diodorus Siculus, claimed a far more ancient origin for it. They not only described it as the capital of the first Median monarchy, founded by Arbaces, but as existing prior to the era of Semiramis. That queen in the course of her royal progress, arrived at Ecbatana, a city situated in a plain, and there built a magnificent palace. In it Alexander deposited the treasures taken from Persepolis and Pasargada, and one of the last acts of his life was a royal visit to Ecbatana. It was originally the capital of Media, and seems greatly to have surpassed the other cities, Williams' (*Essays p.* 9.) affirms that the ancient Ecbatana, the capital of Media, is the modern Ispahan, the capital of Irak Ajami. But Sir William Jones, and the great French orientalists, place Ecbatana at Tauris, and Galius, who has been followed by D'Anville, and later geographers, at Hamadan. Media for the most part, is high and cold; such are the mountains to the east of Ecbatana, the mountains near Rhagæ and the Caspian Gates, and thence to Matiana and Armenia." *William's Essays pp.* 2-67. *Strabo. lib.* xi. *Cap* 13.

ECHALAT. Kassia. Nerium piscidium, Roxb. Syn. of Echaltium piscidium.—*Wight.*

ECHALTUM, Syn. piscidium.—*Wight.*

Nerium piscidium, Roxb.
Wrightia, piscidia, G. Don.

Bark yields a useful fibre: steeped in water the fishes die. *Voigt.*

ECHENEIS NAUCRATES. The Indian Remora or sucking fish.

ECHENEIS REMORA. Linn. The Remora or sucking fish, which is usually found attached to the shark. They are 6 to 12 inches long. Macgillivray says at one place (p. 237-8) that he had never before seen the sucking-fish (Echeneis remora) so plentiful; they caused much annoyance to the fishermen by carrying baits off hooks, and appeared always on the alert, darting out in a body of twenty or more from under the ship's bottom when any offal was thrown overboard. *Macgillivray, Voyage, Vol.* I *pp.* 237-8.

ECHINODERMATA. See Holothuriadæ.

ECHINOPS ECHINATUS,
Camel Thistle. *Hind.* Oont-katara.

Very common in Rajwarra: camels consume it readily. This plant is said to be a native of Mysore. Dr. Hoffmeister has enlisted this plant among the flora of the villages from the Errengkhal pass to Shipkie in Chinese Tartary. *Roxb. Fl. Ind. Gen. Med. Top, p.* 206.

ECHITES, a genus of shrubs and trailing plants of the natural order Apocynaceæ, of which Voigt mentions E. apoxys and E paniculata, Roxb. of Silhet, E. caryophyllata, of the peninsula and Bengal, and E. cymosa of the Khassya hills. There are above 60 species of this genus. They are dangerous lactescent plants, of no known use. Dr. Wight, in Icones, gives acuminata, antidysenterica, caryophyllata, cymosa, dichotoma, frutescens, hircosa, macrophylla, marginata, paniculata, parviflora, scholaris, venenata.—*Eng. Cyc. p.*487. See Caoutchouc.

ECHITES ACUMINATA, a climbing shrub with white flowers and habit as the next.—*Riddell.*

ECHITES ANTIDYSENTERICA. Roxb. Syn. of Holarrhena antidysenterica.—*Wall.*

ECHITES FRUTESCENS. Roxb. Syn. of Ichnocarpus frutescens.—*R. Brown.*

ECHITES MALABARICA. Lam. Syn. of Chonemorpha malabarica. Don.

ECHITES SCHOLARIS. Linn. Syn. of Alstonia scholaris.

ECHITES SPINOSA. Burm. Syn. of Carissa carandas.—*Linn.*

ECHIUM GRANDIFLORUM, one of the Boraginaceæ.

ECITON, a genus of ants, several species of which are found in India.

Eciton? rufonigrum, Worker, length about 11-24th of an inch; is very common in the Carnatic, makes its nests in holes of trees, old palings, bamboo rafters and such like; it does not care for sweets, is never seen on flowers, but devours dead animal matter. It stings very severely.

Eciton nigrum, Worker, length 9-24th of an inch, rare in Malabar, but tolerably common in parts of the Carnatic; same habits as the last. Females winged.

Eciton rufipes, Worker, length 11-48th of an inch.

Ecilon minutum, Worker, about 1-6th of an inch long, found in the Carnatic and in Malabar, on trees. *Jerdon.*

ECLIPSE

of the sun—nay-kyat-hgying. Burm.
of the moon—la-kyat-hgying. „
Girhan, HIND.

Amongst hindus, of ordinary education, an eclipse is still considered to be caused by a snake's endeavouring to eat up the luminary. The hindu myths on this point vary; but usually the "Iraku" or black and "Keathu" or red snakes, two giants with snake heads, who seized the Ambrosia, are mentioned. On the morning of the eclipse of the sun in 1868 the Lucknow train conveyed into Cawnpore no less than 27,000 passengers to bathe in the Ganges.

EDAGAI, also called the Eda-gai kulu and Idangai, form the great left-hand division amongst the Dravidian people of the south of India. See Caste.

EDAKULA ARITI. TEL. Alstonia scholaris.

EDAKULA MANDULA MARI. TEL. Vitis pedata.

EDAKULA PALA. TEL. Also Eda-kulu Ponna. TEL. Alstonia scholaris.

EDANAH. The Tamil name of a Malabar tree that grows to about forty feet in height, and two feet and a half in diameter. Its wood is very soft, and not durable: it produces a sort of gum, or resin, like the Payani. The wood is used for catamarans, rafts for heavy timber, canoes, spars for sheds, and other purposes.—*Edye, Forests of Malabar and Canara.*

EDAVADA. TEL. Alstonia scholaris.

EDDELLAH, the Malayala name of a tree which grows to about thirty feet high, and twelve inches in diameter. It is used in boats and country vessels; and is designated jungle wood. In consequence of its scarcity it is not much known or used.—*Edye Malabar and Canara.*

EDDI. TEL. Andropogon contortus.—*Beauv.*

EDDO, the name by which the esculent Caladium is known by the natives of the Gold Coast. See Colocasia.

EDDU MATTA CHETTU. TEL. Nelsonia tomentosa. *Dietr.* Syn. of Justicia tomentosa.—*Roxb.* The name signifies "bullock-trampled plant."

EDDU MUKKU DUMPA, TEL. also Eddu mutte dumpa. Pouzolzia tuberosa. The meaning of the Telugu words is bullock-muzzle plant.

EDDU NALIKE CHETTU. TEL. Elephantopus scaber.—*Linn.*

EDDU TOKA DUMPA. TEL. Dioscorea glabra.—*Roxb.*

EDEN, a Hebrew word, signifying "pleasure" or "delight," was made the name of several places, remarkably fruitful in their soil. The first is that province which the prophet Amos seems to notice, ch. i. 5, when he divides Syria into three parts, viz:—Damascus, the Plain of Aven, and the House of Eden, called Cœlo-Syria, or the Hollow Syria, because the mountains of Libanus and Anti-Libanus enclose it on both sides, and make it to resemble a valley. The second place wherein several learned men have sought for the country of Eden is Armenia, between the sources of the Tigris, the Euphrates, the Araxes, and the Phasis, which they suppose to be the four rivers specified by Moses, (Gen. ii. 10 &c.—See Paxton's Illustrations of the Scriptures.) The third place, which some have fixed on as the country of Eden, is Chaldea, not far from the banks of the Euphrates,—a country remarkable for its extreme fertility. Babylon has also been so named Aden; also Ceylon with its Peak and Bridge. The Eden mentioned by Ezekiel as a great commercial place is supposed by some to be the modern Aden; but it presents no signs of ancient grandeur. Eden is also supposed to have been in High Asia, between the common sources of the Jihun and other grand rivers where there is abundance of the *Ficus Indicus* or bur-tree, sacred to the first lord, Adinath or Mahadeva. Milton uses this tree to describe when (*Paradise Lost Book IX*). Adam and Eve

" both together went
" Into the thickest wood; there soon they chose
" The fig tree; not that kind for fruit renowned,
" But such as at this day, to Indians known.
" In Malabar or Deccan, spreads her arms,
" Branching so broad and long, that in the ground
" The bended twigs take root, and daughters grow
" About the mother tree, a pillar'd shade
" High overarched, and echoing walks between.
" There oft the Indian herdsman, shunning heat,"
" Shelters in cool and tends his pasturing herds.
———" Those leaves
" They gathered, broad as Amazonian large."

Tod's Rajasthan. Vol. I p. 23. *Robinson's Travels. Vol. II p.* 337. See Adam.

EDESA, now called Orfa, was the Ur of the Chaldees whence Abraham removed to Haran. It is a city on the Euphrates where Christian, Jewish and Buddhist tenets were discussed. Here Ephraem Syrus taught and Syriac translations were made of the Greek and Christian works which have preserved to us the original. *Max Müller.* See Semitic races. Sarng.

EDGWORTH, M. P. A Bengal Civil Servant, author of several articles on Botany and kindred scientific subjects, in the Bengal Asiatic Society's Journal.

EDGEWORTHIA BUXIFOLIA. FALC. of the tribe Theophrastæ, yields an edible fruit of Kabul, unknown in England.

EDGWORTHIA CHRYSANTHA grows in great abundance in China.

EDGEWORTHIA GARDNERI, is a beautiful shrub, with globes of waxy cowslip-coloured, deliciously scented flowers. This plant is allied to *Daphne*, from bark of which the Nepal paper is manufactured.—*Hooker Him. Jour. Vol.* I. *page* 205.

EDIBLE HIBISCUS. Eng. Abelmoschus esculentus—W. & A.

EDIBLE bird nests are made by the Collocalia brevirostris, McLelland: C. nidifica, Gray. These are found in the caverns of the limestone cliffs, throughout the areas of simple upheaval but not elsewhere; so that this singular production, which from its value is well known to those engaged in the commerce of the Archipelago, furnishes one of the best tests for deciding the character of the regions in which it is found In Java they are sold at from £500 to £583 per pecul. of 183⅓ lbs. avoird. See Birds' nests.

EDIBLE SEA-WEED. Plocaria candida. Fucus amylaceus.

Kyouk-pwen, Bur | Agar Agar, Malay.

A sea weed, abundant on the Tennasserim coast, and exceedingly valuable for its nutritious and medicinal properties for invalids. It was first brought to public notice by Dr. O'Shaughnessy as the edible moss of the Eastern Archipelago, and referred by him to the genus fucus. The fructifications however being in small tubercles, the Rev. Mr. Mason considers it as a species of Agardhs genus, Sphœrococcus, which now constitutes a member of the genus Plocaria. It is an allied genus with the Ceylon moss (Gigartina lichenoides) first described as Fucus amylaceus by Dr. O'Shaughnessy, the Plocaria lichenoides of Mr. Mason; also with a species found on the coast of Devonshire in England, Pl. compressa: with the Corsican moss of the Mediterranean, P. helminthochorton: also with the Agar-Agar Pl: tenax: but differs from the Irish moss or Chondrus crispus: and is not of the same natural family as the Iceland moss which, indeed, is a lichen, the Cetraria Islandica. The Tenasserim moss is said to be superior to all others, as it is wholly free from the bitter principle which renders other fuci so objectionable; but Mr. Mason seems to consider it almost identical with the Ceylon moss, for he gives the same account of it as Dr. O'Shaughnessy gives of that from Ceylon. It contains he says a considerable proportion of starch, and was hence named by Dr. O'Shaughnessy, the starch fucus, F. amylaceus, but his specific name has been since changed to *candida*, white, probably from a mistaken idea that the substance is naturally white, whereas it becomes so only by bleaching in the sun; its natural tint is a shade between olive and purple, such as the natives designate red. According to Dr. O'Shaughnessy's analysis 100 parts contain—

Gum	54·0	Iron, a trace	1·4 ?
Sulphate and muriate of soda ...	6·5	Vegetable jelly ...	54·5
		True starch...	15·0
Sulphate and phosphate of lime ...	1·0	Wax, a trace	0·5 ?
		Ligneous fibre ..	18·0

The best mode of preparing it for use is to steep it for a few hours in *cold rain water*, next to be dried by the sun's rays, and *ground to a fine powder*, boil for 25 minutes or half an hour, while hot pass through muslin or calico, strain and boil down till a drop placed on a cold surface gelatinizes sufficiently. With milk and sugar, and flavour with lemon juice or sherry.—See Agar-Agar, Euchemia; Fucus, Gigartina, Plocaria.

EDIBLE ZALACCA. Zalacca edulis.

EDICTS of Asoka, these were engraved on rocks. B. C. 255. See Asoka.

EDOM, the patriarch of the Edomites was Esau, and they dwelt on the Dead Sea from which they were driven by an earthquake. They were a warlike unsettled race of Arabs whose property was in their cattle, their waggons, and what their waggons could carry. They did not cultivate the soil, nor had they any respect for a landmark. The Nabatæans were at an earlier time the tribe called Edomites. But they lost that name when they carried it to the southern portion of Judea, when called Idumæa; for when the Jews regained Idumæa they called these Edomites of the desert Nebaoth or Nabatæans. The Nabatæans professed neutrality between Antigonus and Ptolemy, the two contending powers, but the mild temper of Ptolemy, had so far gained their friendship that the haughty Antigonus, though he did not refuse their pledges of peace, secretly made up his mind to conquer them. Petra, the city of the Nabatæans, is in a narrow valley between steep overhanging rocks, so difficult of approach that a handful of men could guard it against the largest army. Not more than two horsemen can ride abreast through the chasm in the rock by which it is entered from the east, while the other entrance from the west is down a hill-side too steep for a loaded camel. Their temples and tombs were cut out of the live rock, and hence the city was by the Jews named Selah, the rock, and by the Greeks named Petra, from which last the country was sometimes called Arabia Petræa. *Bunsen, Egypt* iii. 314-431. *Sharpe's History of Egypt, Vol. I., p.* 250-51.

EDRISI the Nubian geographer visited the court of Sid Rai Jyi Singh, the ruler of Analwara Puttun, A. D. 1094 to 1145. Edrisi states that Jyi Singh was then a buddhist. Marsden says that Edrisi is improperly called the Nubian geographer, that he dedicated his work to Roger, king of Sicily, in the middle of the twelfth century, and that he describes the island of Al-Rami; but the particulars so nearly correspond with those given by the Arabian traveller, as to shew that the one account was borrowed from the other. *Marsden's Hist. of Sumatra, p.* 4.

EDUCATION in the village schools of India is usually conducted in the verandah of a house or in the open air. Schools for children are frequently held under trees in Bengal, and the children who are beginning to learn, write the letters of the alphabet in the dust. This saves pens, ink, and paper. This is the old oriental custom, and is alluded to in *John* viii. 6, when Jesus stooped down, and with his finger wrote on the ground. A general mode of teaching writing, is to write with a pencil of soap stone, on a wooden board,or on a thick paste-board stained black. The writing board in Sindh is called a Furahi; a thin board made of some hard and fine grained wood stained red, black, green, or yellow. The ink contains no mineral substance, and is therefore easily washed off, the board being smeared with a thin layer of clay and water: metal plates are sometimes used. When the pupil has become somewhat skilful in the management of his pen, he lays aside the board and uses a material called daftari. It is made of several sheets of writing paper pasted together, smeared with a composition of verdigris, and glossed with a Mohro (polishing instrument made of steel,) so that it may be washed when dirty.—(*Richard F. Burton's Sindh p.* 396.)

The education of the brahmans of India in the vernacular of their district has usually been conducted along with a knowledge of Sanscrit, and many of them have acquired a knowledge of English. The lower caste hindus have restricted their acquirements to the vernacular languages of their district and a few of them to English, a very few know Sanscrit. The mahomedans throughout India learn Arabic, Persian and a small number know English. The Mopla or Lubbi mahomedan, has the koran in the Tamul tongue. Some of the Tamul women have been learned, one was an authoress, and many of their girls are now being sent to school. On the 29th July 1859, the Bethune School for native girls was founded at Calcutta, the most important feature in the East India Company's memorable despatch of 1854 was the measure of grants-in-aid. It offered to all schools, already existing, or that might hereafter be established, provided they were found efficient, pecuniary aid to an amount in each case not exceeding the sums arising from local sources, subject to conditions that in no way interfered with the perfectly free action of the managers of such schools, and only requiring that they should be submitted to Government inspection, with a view to ensure the secular instruction therein furnished being of a satisfactory character. It in fact threw open the field of Indian education to any one who chose to cultivate it, offering on the part of the Government to bear half the expense. The whole body of Missionaries (we speak especially of Southern India) hailed the boon with enthusiasm. They all, or with few exceptions, held out both hands to receive the proffered aid, submitting without a dissentient voice to the conditions imposed.

Education in India, up to 1867 was costing about half a million a year:

EDUR, a town in Guzerat.

EDURU BENGU. TEL. Bamboo.

EDWARDSIAA. E. hydaspica,E.maderaspatana, E. mallis are shrubs of the natural order Fabaceæ. It is doubtful whether these be different species, the flowers of E. mallis are pretty and is supposed to be the second kind of Arghawan (see Bauhinia variegata) mentioned by Baber or his translator as growing at Baber's tomb at Kábul. It grows in the Punjab and on the Suleiman range, up to 8,000 feet. *Dr. J. L. Stewart.*

EDWARDES, Sir Herbert, K.C.B., K.C.S.I. born 1819, died 1868, aged 50, an officer of theBengal Army. He served under Sir Hugh Gough at Sobraon and Moodki; served under Sir Henry Lawrence in the Punjab in 1848 and 1849, aided in the settlement of Cashmir, and establishing the authority of Gholab Sing, and aided in the rescue of the British prisoners at Multan. In the revolt and rebellion of 1857-58 and 59 he served in the Punjab alongwith the SirJohn Lawrence, Generals Nicholson, Cotton and Chamberlain. His views extended to ruling India as a Christian country, and his purse and pen were ever ready to aid in extending Christianity. The Indian Council decreed a monument to his memory. He commenced a life of Sir Henry Lawrence.

EDYE, J. J. Wrote on the Native vessels of India, Ceylon, Malabar and Coromandel Coasts, Lond. Also on the Timber Trees of Ceylon and Malabar. As. Trans. vol. i. 1—

15; and a description of sea ports on the Malabar Coast, Ibid, vol. ii. 324.

By a residence of five years in India, as His Majesty's Master-ship-wright in Ceylon, he had singular opportunities of becoming perfectly informed on the subject of which he treats in his memoirs. He describes in a clear and concise manner the various vessels of the coasts of Coromandel,—*Dr. Buist's Catalogue.* Malabar and Ceylon. See Boats. Timber.

EEB, a river of the W. Ghauts, lat. 20° 50, lon. 73° 42′. W., disembogues into the Indian Ocean.—Length 70 m.

EED. Arab. There are five Eeds or festivals, held annually by mahomedans. The two principal ones are the Rumzan feast or Eed-ool-fitr and the Buqr-eed; which are Farz and Soonnut. *i.e*, commanded to be observed both by God and Mahomed. The other three are, Mohurrum, Akhri-char shumbah and Shab-i-burat, & are only soonnut, or commanded by Mahomed. The Eed-ool-Fitr, or Ramzan-kee-Eed, is held on the first day of the tenth month Shawal.

Eed-us-Zoha, Arab. lit. Feast of day light, Eed-ul-Kurban, Eed-i Kabir. The Buqr-eed is also called the Eed-us-Zoha, Arab. lit. Feast of day light. It falls on the 10th of the month Zi-ul-Haj. It is also termed the Eed-ul-Koorban,or "the feast of sacrifice," and was instituted in commemoration of Abraham offering up his son Isaac, or as most mahomedans say Ishmael. It is also called the Eed-i-Kabir or great festival. *Herkl.*

EEDEE. Hind. School Holiday.

EEDGAH or NUMAZ-GAH, *lit.* a place of festival or of prayer; a building raised by mahomedans of India, generally without the walls of a town (often amidst gardens), erected on a platform or a pediment three or four feet above the level of the ground, and on an eminence, consisting of a straight wall with two or more minarets, and having in the centre, on a level with the ground, three steps, which forms the *mimbur* (or pulpit), from which the *khootba* (or sermon) is read on particular occasions or on particular feast days, such as those of *buqr-eed* and *rumzan-kee-eed*, which occupies from an hour and a half to two hours. It is said that the Arabian Prophet, in addressing the congregation, stood on the uppermost step; *Abu Bukur* 'his successor' on the second; *Oomur* on the third or lowest; but *Oosman*, observing that at this rate we might descend to the bowels of the earth, fixed upon the middle as the one from which to deliver the sermon; since then it has continued so. This building is merely intended as a signal post for people to assemble at to hear the *Khootba* read. A bamboo or any other post might answer the same purpose, but a brick building is usually preferred, as being more durable and affording individuals an opportunity of handing down their names to posterity, by being at the expense of erecting them. It is by no means a sacred edifice. *Herkl.*

EEG. Dan. Oak. Quercus.

ELE-GYWOT-SHA, a beast of Arracan, strips five to six feet in length, composed of several layers, of which one side is smooth and compact, and the layers on the other side thin but cancellar: all having a considerable degree of toughness.

EEK. Hind. also Eekh. Hind. Saccharum violaceum. Sugar-cane, a sugarcane-field. Eek hraj Hind, also Ookhraj is the day on which sugarcane is planted,and which, in Northern India, is performed with some rural ceremonies. Elliot.

EEITA. Tel. Aku. Tel. the leaf. Elate sylvestris. Eeita khallu. Tel. the Toddy Eeita pandu. Tel., the fruit.

EEL. Anguilla of Linnæus, Allaree. Tam. Eels are found in considerable quantities in the tanks, lakes, rivers and seas of the S. E. of Asia.

EERPILAKAI. Tam. Artocarpus pubescens. Wild. Its fruit somewhat resembles the Datura, and is the produce of the tree, called by Rheede Ansjeli (See Hort. Mat. Part 3rd table 32rd), who tells us that when much is eaten it is apt to produce diarrhœa, which, however, is cured by the root and bark of the same tree.—*Ainslie, p.* 240.

EESA-KHAIL,an Afghan clan,their country extends to within 30 miles of the province of Dera Ismael Khan. It is a strong and mountainous strip of land. The mountains of Eesakhail and Khussoor rise so abruptly from the Indus, that but for the access to this country on other sides it might make successful resistance. *Papers, East India Cabul and Affghanistan.* 1859, p. 22.

EESHEEGAYDUNTI. Tel. Caboose.

EESWARA MAMIDI. Sing. Xanthochymus pictorius.

EESHWA, Sans. the glorious, from Eesh, to be grand, hence Eeshwara, Sans. the glorious: Eshwari, feminine of eeshwara.

EESUN, a river in the Futtehghur district of the N. W. Provinces runs past Oomerghur in Muttra is at Talgawn, in Futtehghur, and is the river of Mynpoorie.

EETCHA MARAM. Tam. Elate sylvestris. Eetcham-elle, the leaf, Eetcham-khallu, the toddy.

EETWA, a river of Sylhet.

EEYOOHAIYER or Eeyoover, see Kummaler.

EEYUM. Tam. Lead.

EEGAN, a town of Borneo, see Kyans.

EGBATANA is the Hagmatana of the Cuneiform, inscriptions. See Ekbatana.

In Chusan every spring thousands of ducks' eggs are hatched by artificial heat. The establishment is situated in the valley on the north side of the city of Tinghae. The hatching house is a kind of long shed, with mud walls, and thickly-thatched with straw. Along the ends and down one side of the building are a number of round straw baskets well plastered with mud, to prevent them from taking fire. In the bottom of each basket there is a tile placed, or rather the tile forms the bottom of the basket; upon this the fire acts,—a small fire-place being below each basket. Upon the top of the basket there is a straw cover, which fits closely, and which is kept shut whilst the process is going on. In the centre of the shed are a number of large shelves placed one above another, upon which the eggs are laid at a certain stage of the process. When the eggs are brought, they are put into the baskets, the fire is lighted below them, and an uniform heat kept up, ranging, as nearly as I could ascertain by some observations which I made with a thermometer, from 95° to 102°, but the Chinamen regulate the heat by their own feelings, and therefore it will of course vary considerably. In four or five days after the eggs have been subject to this temperature, they are taken carefully out, one by one, to a door. in which a number of holes have been bored, nearly the size of the eggs; they are then held against these holes, and the Chinamen look through them and are able to tell whether they are good or not. If good, they are taken back, and replaced in their former quarters; if bad, they are of course excluded. In nine or ten days after this, that is, about fourteen days from the commencement, the eggs are taken from the baskets, and spread out on the shelves. Here no fire heat is applied, but they are covered over with cotton, and a kind of blanket under which they remain about fourteen days more, when the young ducks burst their shells, and the shed teems with life. These shelves are large, and capable of holding many thousands of eggs; and when the hatching takes place, the sight is not a little curious. The natives who rear the young ducks in the surrounding country know exactly the day when they will be ready for removal, and in two days after the shell is burst the whole of the little creatures are sold, and conveyed to their new quarters.—*Fortune's Wanderings, pages* 76 to 81.

EGG TREE. See Dalbergia.

EGG-BEARING GOURD. Cucurbita ovifera.

EGG PLANT. Solanum melongena,—*Linn.* See Brinjal, Bayngun.

EGG SHELL CHINA, a manufacture in Japan, in the provinces of Fozen and Setsuma.

EGIN, See Mesopotamia.

EGISA. Tel. Pterocarpus marsupium. —*Roxb.*

EGMONT ISLANDS, about six in number, part of the Chagos Archipelago.

EGRET, the common name of several species of heron. In Australia, what in India we call 'White Paddy-birds' and in Britain are the much prized Egrets, have come to be denominated 'Cranes;' and the real crane of that country is known as the 'Native Companion.'

EGERTON, a Bengal civil servant, who wrote an account of his journey through Spiti, Lond, 1864.

EGYPT, in the highway from Europe to the East, is now ruled by a mahomedan, a hereditary pacha or viceroy under the king of Turkey. Egypt is one of the most ancient of the kingdoms of the world. It is probable that it has always been of the same dimensions as now, viz., about 11,000 square miles in the small strip of the Nile valley running in a limestone plain elevated 150 to 500 feet above the sea, with the great sandy tract on the east, and the African deserts on the west. Every year from unknown times, the Nile rises in June to about 30 feet, overflows its banks, from the cataracts at Syene to its seven mouths, and subsides in September. Rain falls at places, at Alexandria, in great downpours, and occasionally at Cairo and in the desert, but its fall is uncertain and reliance is not placed on it. Upper Egypt was once been called Meroe, which name was afterwards applied to Abyssinia, subsequently it was named Ethiopia, till that name also was applied to the country beyond the cataracts, and then to Abyssinia. In the language of the country Egypt was named Chemi, a word the same as Ham and Cham; in Hebrew it was named the land of Mizraim, one of the tribes of the children of Ham; and from the

Greeks it received the name of Ægyptus, Egypt, or the land of Copts; and these last two names, having once meant the Delta, were afterwards stretched southward to include the whole of the country.

The annals of Egypt begin to be credible with the accession of Psammetichus, B.C. 670. He was the first to open his country to the Greeks, and in his reign we have the first coincidence of Egyptian, Greek, Median and Jewish chronology.

We learn from the Book of Genesis that the Egyptians were a tribe from Asia, called the children of Ham; and their physical character, and habits of life, both show that they were more nearly allied to Asiatics than to the less civilized tribes of the Arabian and Libyan deserts. The single lock of hair on the young nobles reminds us also of the Tartars; while the religious dread of the sea, the sacred bull, and the refusal to eat flesh, are what we meet with among the hindoos. Their worship of the bull reminds us also of the hindu reverence for the sacred cow and for the bull Nandi the vahan of Siva. They resembled the Chinese in their syllabic writing, and like Chinese and hindus in dutifully setting out food at the graves of their fore-fathers. They resembled the hindu, or the hindu them, in their respect for the sacred animals. Whoever killed one of these intentionally was put to death; and indeed whoever killed a hawk or an ibis even by accident was condemned to die. Whenever a house was on fire the chief care of the neighbours was to save the cats, the men and women might be burnt in the ruins, but the cats were to be saved at all risk. When a cat died a natural death every inmate of the house shaved his eyebrows, and when a dog died they shaved all over. The dead cats were carried to the sacred tombs at Bubastis, where they were embalmed and then buried. In the same way the hawks were made into mummies and sent to be buried at Butos, the serpents at Thebes, the crocodiles in the Labyrinth near crocodilopolis, the ibis, that useful enemy of vermin, at Hermopolis, bulls and cows at Alarbechis, and the other animals in the other cities.

(*Sharp's History of Egypt, Vol.* I *p.* 2. *Cal. Rev. May* 1808. *Sharpe's History of Egypt, Vol. I p.* 94-95.)

Their custom of embalming the dead seems to have originated with them, the mineral pitch for it was brought by foreign traders from the Dead Sea. The skulls of the mummies agree with history in proving that Egypt was peopled with a variety of tribes; and physiologists, when speaking more exactly, have divided them into three classes. The first is the Egyptian proper, whose skull is shaped like the heads of the ancient Theban statues and the modern Nubians. The second is a race of men more like the Europeans, and these mummies become more common as we approach the Delta. These are perhaps the same as the modern Copts. The third is of an Arab race, and like the heads of the labourers in the pictures.

Its ancient history is divided into two empires, the older empire of Menes, and the middle or the Hyksos and the newer from Amos to Sheshouk. The pyramids are the principal monuments of the older, and they were built in the reign of the fourth dynasty. The old empire lasted 1076 years. The new empire began with a struggle with Asia which soon extended to Phœnicia and Mesopotamia, Damascus, Nineveh and Babylon.

The Hyksos or shepherd kings were neighbouring Semitic tribes, from the N. E. of Egypt, that is Canaanites associated with Bedouin tribes of Northern Arabia and the peninsula of Sinai. They held Memphis, but their residence was a fortified camp on the border of the Syrian desert. The ultimate fall of the newer empire was mainly caused by an invasion of the country from Palestine, in which the utmost cruelties were practised and at its close Moses withdrew into Arabia. Up to the time of Amos, the Egyptians performed human sacrifices, Plutarch quotes Manetho as saying that in Eilethya (the city of the mother of Isis,) the sacrifice of the so called Typhoneans was performed during the dog-days—viz., human sacrifices, when the ashes of the victims were scattered to the winds. Porphyry also quotes the same work of Manetho on Archiology and Devotion, to the effect that Amos abolished the practice of human sacrifices in Heliopolis. They were formerly performed to Hera, the mother of Isis. The victims were examined and a seal was affixed to them, as were the calves without blemish. Three were sacrificed daily, Amos ordered the same number of wax figures to be offered in their stead. (*Bunsen,* 165—6 *p.* iv. *passim*).

The worship of Osiris was the oldest religion, and he was worshipped as the Lord, the God and father of each individual soul, the Judge of men who passes sentence strictly according to right and wrong, rewarding goodness and punishing crime. The worship of animals was not introduced into the established religion earlier than the second dynasty, 200 years after Menes, therefore not much more than 5,000 years ago. (*Bunsen's God in History, Vol.* 1 *p.* 226.)

The sun, or Amun-Ra or Kuaph-Ra the god of Thebes, or Jupiter-Ammon as he was

called by the Greeks, was the god under whose spreading wings Egypt had seen its proudest days. Every Egyptian king had called himself the son of the sun; those who had reigned at Thebes boasted that they were beloved by Amun-Ra; (*Sharpe's Egypt.*) The Egyptian priests were the first to teach that a man does not wholly die when life leaves the body. They said that after death the soul dwelt in the bodies of other animals, and was there imprisoned for its sins during a number of their short lives, and that after thus passing for three thousand years, through the bodies of birds, beasts, and fishes, it was again allowed to take upon itself a human covering. Hence they carefully saved the dead body from decay, by embalming it as a mummy, that it might be ready for the soul to re-enter when the years of punishment had elapsed (*Sharpe's Egypt, Vol.* 1 p. 196.)

While Solon and Hecatæus were studying the Egyptian customs, Pythagoras, if we may trust to the slightest and most uncertain of traditions, was studying in Egypt under Œnuphis of Heliopolis. He is said to have lived twenty years in Egypt, and on the conquest of the country by the Persians to have been taken prisoner and carried off to Babylon. (*Sharpe's History of Egypt, Vol.* I p. 151.)

Their language was recorded in hyeroglyphics. The words hitherto deciphered are about 503 in number and principally independent roots which can all be traced into the modern Egyptian to about 900 words (*Bun.* I, 270.)

In their manners and customs Herodotus found the *Egyptians* unlike every thing he had been used to in Greece. They wrote from right to left. They ate their meals in the streets. The priests were shaven, while other men wore beards. Every thing was remarkable and new to him.

It was in the time of the elder Pliny that the route through Egypt to India first became really known to the Greeks and Romans. *Sharpe's History of Egypt, Vol.* I p. 3. *Pliny lib.* vi. 26.

EGYPTIAN BEAN, a name sometimes given to the bean-fruits of Nelumbium speciosum, Willd, from the notion that they were the beans which the disciples of Pythagoras were forbidden to eat.

EGYPTIAN HARE. Lepus Ægypticus.

EGYPTIAN LOTUS. Nelumbium speciosum. Willd.

EGYPTIAN PRIVET. Lawsonia inermis.

EHDAKL MIRZIC. Arab. Camomile.

EHRA BADRA, a name of Vira badra.

EHREE or EHROO, a river of Boondee.

EHRETIA, a genus of plants, trees or shrubs of the natural order Boraginaceæ. Voigt names E. aspera and buxifolia small trees of the south of India. E. internodia a tree of the Mauritius, E. lævis and E. serrata trees all over India, E. arenaria, *Griff* is one of the sand binding plants of the Indian coasts. The root of E. buxifolia (kuruvingi vayr. Tam. Paleke jar, Hind.) is given in decoction as an alterative in syphilitic cachexia and its fruit is eaten. Wight gives Ehretia aspera, cuneata, lævis, ovalifolia, umbellata, viminea, Wightiana.

EHRETIA ASPERA, Roxb. A small tree of the Panjab plains, Sivalik hills and Salt Range: in times of dearth, its bark is ground mixed with flour and eaten. Its wood is valued for its hardness.

EHRETIA LÆVIS. *Roxb. Cor. W. Ic.*
Beurreria lævis, *G. Don.*

Pal-dantam, Godavery, Tel. | Seregada. Tel.
Peda pulimera, Circar

A pretty large tree, common in the drier parts of Ceylon, in the peninsula of India, is a native of the Circar mountains, grows in Hindostan, in the Dhera Dhoon, the Kheree pass and in Bengal. It furnishes a hard valuable wood, though not of great size. which in the Circars is used by the hill people for many purposes.—*Dr. Ainslie, Voigt Thwaites, Dr. Cleghorn, Captain Beddome, Rohde M. S.*

EHRETIA SERRATA, *Roxb.*
Ehretia pyrifolia, *D. Don.*

Kala aja. Beng. | Nulshima. Nep.

A tree growing in Bengal, Chittagong the Khassia mountains, Nepal, Bhootan, and the Dehra Dhoon. It furnishes a tough light wood easily worked and durable, made into sword handles.—*Voigt.*

EHYNCHO-CINETES. See Palemonidæ.

EICHE. Ger. Oak, Quercus.

EICHELN; ECKERN. Ger. Acorns.

EICHIA MARAM. Tam. Also Eichi Wood. Anglo-Tam. Ficus t'siela.

EIDIJ, a ruined town on the Karan river in Luristan. It was also called Mal Amir.

EIGHT-FOLD OBLATION. See Hindoo.

EIK. Dut. Oak. Quercus.

EILAK. Turki. The term given by the pastoral Durani, to their summer residence. Kishlak, also Turki, being that of their winter station. See Afghan.

EILAN. Hind. Also Elaur, also Ellal, Andromeda ovalifolia.

EIMAK. An Afghan tribe, known as Firoz Kohi, after the city of that name, about sixty-three miles from Teheran, whence they were removed by Timur. The Tartar conqueror, exasperated by the depredations of the people inhabiting Mazanderan, south of the Caspian, attacked Firoz Koh, and defeated them, and they are now located in the country between Herat and Maimana. According to other authority, the Eimak is a nomade branch of the Tajik of Afghanistan; the Tajik being the descendants of the ancient inhabitants of the country. General Ferrier however observes that the races known by these names who occupied Paropamisus, are so intermingled and their origin so uncertain that to investigate them is a hopeless task. He adds that under this name are comprehended all the tribes descended from the ancient conquerors of the Paropamisus speaking the Persian language. In manners and language, and physical appearance there is a great conformity amongst all the tribes who readily combine to oppose the Uzbeks and Afghans. They are probably a great nation subdivided into small governments or republics. They lead a comparatively savage life, in great repose or in the activity of a soldier life. The Usbeks and the Afghans are civilized people compared with them. The Persian they speak appears to be exceedingly ancient, and there is but little Arabic mixed with it; they only recur to the latter on rare occasions, when their own language does not afford a word by which they can express any particular idea, the Koran is very imperfectly known amongst them. They wish for nothing beyond a tent, a horse, a wife, and plunder. They are very hospitable, and to each other faithful and devoted. Well organised, they would make excellent soldiers, especially cavalry; their arms are the lance and bow, and they have very few fire-arms. The forms of the women are large, robust, and well developed, but their beauty is mediocre, and at forty they are frequently decrepid. Though the winters in the Paropamisus are very severe, the inhabitants prefer a tent to a house, because they can more easily gratify their love of frequent change, or even comply with the necessity for it, without being obliged to leave anything behind them. The tents, made of felt woven of camels wool, are thick and impervious, and when carefully closed the cold rarely penetrates them. Their country is fertile: there are few populations in Asia more favoured in this respect. They are shepherds rather than cultivators of the soil, nevertheless they have some crops of corn, barley, maize, and a kind of millet which they consider a great delicacy. The Eimaks encamp in the plains during the winter, and in the table-lands of the mountains in the summer and autumn. They are intrepid sportsmen, and frequently neglect the small game to pursue the wild beasts which abound in their country. Ruins are frequently met with, but no inscriptions are found that can lead to any explanation of their origin. They rear camels. *Ferrier Journ.* p. 255 See Aimak; Hazara; India p. 336; Jews; Kalmuck; Kabul; Koh p. 440.

EIMLEE, a sub-division of the Tuga tribe dwelling in Husunpur, Dhubaree, Dhaka and Oojharee in the zillah of Muradabad, many of these are mahomedans. *Elliot.*

EIN. Hind. Urtica heterophylla.

EING-GYIN. Burm. Shorea robusta.

EIN-SHE-MEN. Burm. Lord of the Eastern House; the peculiar appellation of the declared heir to the Burmese throne.

EIN WIN. Burm. A tree of Moulmein. Used for all ordinary purposes of building.—*Cal. Cat. Ex.* 1862.

EISEN. Ger. Iron.

EISENHOLZ. Ger. Iron Wood.

EISEN-VITRIOL. Ger. Sulphate of Iron.

EIZ UD DIN HUSSAIN. See Iz-ud Din Hussan.

E-JIN or EE-GIN of Malacca, peculiar grain from an undetermined plant but seemingly one of the Leguminosæ.

EJMAN. Name of an Arab tribe.

EJOO also EJU, Gomuto. A strong black horse-hair looking fibre obtained from the *Arenga Saccharifera.*

EK. Sw. Oak: Quercus.

EK. Hind. Pers. One. It enters into many compound words, as,

EK-ATASHI, Hind. also Ek-bara, in distillation, the spirit that first passes over. When redistilled, it is called do-atashi or do-bara, double distilled. Sih-atashi or thrice distilled.

EKAMRA-KANANA, Sans. from eka, one, amra, a mango tree, and kanana, a forest.

EKA DASHI, Hind. Literally one and ten, the 11th day of the moon's increase or decrease. It is one of the hindu fast days, or "Bart" *Powell.*

EK-FARDI, also EK-FASLI land yielding one crop annually. *Elliot.*

EKA-DANTA, Sans. from eka, one, and danta, a tooth a name of the hindu god Ganesh.

EKA. Sans. Chief.

EKA, a one horse shay.

EKTA. Hind. unequalled.

EKHARṬHA, Hind. A one-wheel well: a domala or dohartha well has two wheels. *Elliot Powell.*

EKALBIR. Hind. Datiscus cannabinus, its root is a dye stuff: also Verbascum thapsus.

EKBEER. Beng. Helminthostachya laciniata.

EKKUDU TIGE. Tel. Cardiospermum halicacabum.—*Linn.*

EKLINGA, a celebrated Saiva temple in the defiles of the Vindhya.

EKOJI, the first of the Mahratta rulers of Tanjore. He was the son of Shah-ji (A. D. 1644), a subhadar of the Carnatic under Aurungzib, who gave Tanjore to Ekoji as a jaghire. The last of the Tanjore rulers died in 1855, and the country was annexed to British territory.

EKSHA MALL, a Nepaul ruler who in A. D. 1,600 divided Patan, Khatmandu, Banepa and Bhatgaon between his daughter and his three sons. His full name was Jaya Eksha Mall, also Jye-Kush Mull.

EKTEER, Beng. Opihioglossum reticulatum. *Linn.*

EKU DANTA, a name of Ganesa, literally one-toothed.

EL, also named Kronos, of the Egyptians according to the doctrine of Byblus, was the son of heaven and earth, he conspired against his father Ouranos. El is the root of Elohim. Bethel of Gen. xxviii, 11—19, is a compound word, Beith-El, the house of El, meaning God's house. El of the Greeks (Yl in Hebrew and Phœnician), *i.e.*, God, the strong, whence comes Elohim, literally, the gods, and the Greco-Phenician Bætylia, or sacred stones supposed to have fallen down from heaven, (Διο πετεις) perhaps aerolites which were honoured and held sacred on account of the divine power supposed to be inherent in them: whether it was a common stone or an aerolite that Jacob had for a pillow cannot be known, as he rose from his dream exclaiming (v. 17). "How holy is this place;—this is none other but the house of God, (Bait-El.)** And Jacob** took the stone that he had made his pillow and set it up for a pillar and poured oil upon the top of it and called the name of the place Bethel." *Bunsen,* IV 242-3. See Bætyli. Bait.

ELACHI, Beng. Hind. Cardamom, Elettaria cardamomum.

ELA CHEDDI. Tam. Elettaria cardamomum, Maton.

ELÆAGNUS, a genus of plants of the order Elæagnaceæ or oleaster tribe of which nine species are known to occur in the S. E. of Asia. The ripe berries of E. angustifolius are eaten in Cashmere as also are those of E. dulcis, E. conferta, E. hirtensis, E. orientalis, E. Moorcroftii has ornamental flowers. The wood of E. conferta is the winter fuel of the people of Iskardo: and the honey gathered by bees from the sweet flowers of E. orientalis is much esteemed. *Voigt, Riddell, Honigberger p.* 273. *Hooker, Him. Journ. p.* 205. *Dr. J. L. Stewart.*

ELÆOCARPUS, a genus of plants of the natural order Elæocarpaceæ of Lindley, about 40 species of which are known. E. serratus, L. is a small tree of Travancore. E. cuneatus, Wight. A tree of Ceylon and the Western coast of the Indian peninsula. In Burmah, are several species, undetermined, which the Burmese name "tau-man-gyee," "than-lwen" and "wa-hso-ben."

ELÆOCARPUS, *Species.*

Poeechandia. Uria.

A tree of Ganjam and Gumsur, of extreme height 48 feet, circumference 5 feet and height from the ground to the intersection of the first branch, 9 feet. Ploughshares are occasionally made of this wood, but it is chiefly used for firewood. The rosaries worn by the byragi and Vaishnava are made of the seeds of this tree.—*Captain Macdonald.*

ELÆOCARPUS, *Species.*

Mhaghai, Burm. ?

A moderate sized tree of Akyab, plentiful in Ramree and Cheduba; wood used for knife handles, rules, &c., and the fruit and leaves are used by the natives for food.—*Cal. Cat. Ex.* 1862.

ELÆOCARPUS. *Species.* A very large timber tree of Martaban, used for masts and house posts.

ELÆOCARPUS. *Species.* A hard valuable timber tree, very abundant in the neighbourhood of Rangoon, and not uncommon in some parts of the Tenasserim Provinces. Carts are sometimes constructed of it, and it is used in house and boat building.—*Dr. Mason's Tenasserim.*

ELÆOCARPUS. *Species.* Salwen, *Burm.* The river Salwen derives its name from a tree of that name that grows on its banks. From the character of the genus, it would probably yield useful wood.—*Dr. Mason's Tenasserim.*

ELÆOCARPUS AMŒNUS, *Thw.*

A middle sized tree of the central province of Ceylon, grows up to an elevation of 4,000 feet—*Thw. En. Pl. Zeyl. p.* 32.

ELÆOCARPUS COPALLIFERUS Retz. Syn of Vateria Indica.—*Linn.*

ELÆOCARPUS CYANEUS. See Elæocarpaceæ.

ELÆOCARPUS GANITRUS, *Roxb.*

Ganitrus sphæricus, *Gaertn.*

Rudrakaya, Beng. Duk ?	Rudrakaya, Tam.
Utrasum Bead tree, Ang-Tel.	Rudra-kai, Tam.
Rudraksha, Sans.	Rudra-challu, Tel.

A tree of Java. The seeds about the size of common marbles, are worn as necklaces by brahmins and faqueers, they are commonly called *Utrasum* beads. *Riddell. Ward's View of the Hindus, Vol.* IV. p. 371.

ELÆOCARPUS HINAU, the Hinau of New Zealand, is a large timber tree. Its berry is edible though taste harsh.

ELÆOCARPUS INDICUS. *Roxb.* A tree of Chittagong.

ELÆOCARPUS LANCEÆFOLIUS, *Roxb.*

Ootradi ke munke, Duk.	Utrasum ? Tam.

A tree of the Khassya hills, Assam, Moulmein and Java. The seeds are used similarly to those of the Ganitrus sphæricus *Royle.—Drs. Royle, Ainslie, Mason and Voigt.*

ELÆOCARPUS LANCEOLATUS. Rottl.

Utrasum, Tam.	Ootrade ke munke, Duk.

The seeds are very rough, and about the size of small nutmegs. They are brought to India from Java, of which country the tree is a native. The Saiva brahmins and pundarums, religious devotees of the Saiva sect of hindoos, and who live by alms, wear strings of them round their heads and necks and form them into rosaries. This small tree is covered over with a profusion of white flowers. *Mason, Ain.'s Mat. Med. page* 142.

ELÆOCARPUS LONGIFOLIUS. *Bl.* A tree growing on the banks of the Salween and in Java.—*Voigt.*

ELÆOCARPUS LUCIDUS. *Roxb.* A tree of Chittagong.—*Voigt.*

ELÆOCARPUS MONTANUS, *Thw.* A middle sized tree of Ceylon.

ELÆOCARPUS OBLONGUS.

Kassow, Duk.

This is a handsome tree of the Dekhan, flowers in May, petals beautifully fringed, the foliage is frequently tinged with red, giving an autumnal appearance to the tree. —*Riddell.*

ELÆOCARPUS OBOVATUS, *Ain.*

E. coriaceus, *Hook.*

This tree grows at Newera Ellia and other elevated parts of the island of Ceylon, at an elevation of from 6,000 to 8,000 feet.—*Thwaites.*

ELÆOCARPUS PRINOIDES, W. and A. A tree of Assam, Khassya Hills and Kamaon. It is E. serratus of Roxb. not of Linn. Its fruit is pickled and curried.

ELÆOCARPUS ROBUSTUS, *Roxb.* A tree of the Khassya hills.

ELÆOCARPUS SERRATUS, *Linn.* Grows in the warmer parts of Ceylon, up to an elevation of 2,000 feet.—*Thwaites.*

ELÆOCARPUS TUBERCULATUS, *Roxb.*

Rudrachai, Tam.	Rudracha, Tel.
Badrachai, ,,	Badracha, ,,

A tree of the Travancore forests. The seeds are used by Vaishnava brahmins as rosaries.—*Mr. Rohde's M.SS.*

ELÆOCOCCA VERNICA. Dryandra vernicia, *Corr.* The varnish tree of China. The oil obtained from the nuts is used by painters. *Hogg.* 465.

ELÆOCOCCA VERRUCOSA, a native of Japan, the nuts yield a somewhat acrid oil, which is used there in food: and in the Mauritius, for lamps. *Hogg.* 461.

ELÆODENDRON GLAUCUM, Pers.

Schrebera albens, Retz.	Senacia glauca, Lam.
Mangifera glauca, Rottl.	Ceylon tea tree. Eng.

ELÆODENDRON ROXBURGHII, W. and A. This tree is a native of Ceylon and Coromandel, with small green flowers.—*Voigt.*

ELÆODENDRON INTEGRIFOLIA.

Hsoak, Burm.	Jouk-bin, Burm.

This is a very plentiful, strong, fine timber, found throughout the forests of the Tounghoo and Pegu districts, as well as about Rangoon. It is adapted for fancy work and cabinet making.—*Dr. McClelland.*

ELÆODENDRON ROXBURGHII, W. & A.

Elæodendron glaucum, *Wall.*
Nerija dichotoma, *Roxb.*
Rhamnus nerija, *Spreng.*

Boot-kus, Mahr.	Nerasi, Tel.
Selupa maram, Tam.	Nirija, ,,
Bira, Tel.	

This tree is a native of the mountainous parts of India. In Coimbatore, it is more remarkable for its fine form than for the length and thickness of its bole, but the wood, if good, can only be fit for cabinet making and small sized objects. Dr. Gibson says this tree is more common in the inland than in the coast forests of Bombay, but he had never seen it of a size fit for timber. The wood is however strong and compact. —*Drs. Wight and Gibson.*

ELÆODENDRON RUBER. See Celastraceæ.

ELACH. Beng. Cardamum Elettaria cardamum.

EL AJEM, Ajem, in Arabic, literally means foreign, but in the southern parts of Arabia, El Ajem is applied to the opposite parts of the coast of Africa.

ELAKA CHEVI CHETTU. TEL. Either Salvinia cucullata of Roxb. or Hutchinia indica. Elaka Chevi kura. TEL. Hydrocotyle rotundifolia.—*Roxb.*

ELAKI CHETTU. TEL. Elettaria cardamomum. WH. and MATER. Syn. of Alpinia cardamomum.—*Roxb.*

ELA KULLI. TAM. Euphorbia neriifolia.

ELAM. HIND. MAL. TAM. TEL. Auction.

ELAM, or Susiana was the country on the east of the southern portion of the Tigris, south of the Luristan mountains and was the cradle of ancient sovereignty. Berosus mentions a legend to the effect that the first dawn of civilization was there and that the teachers of mankind came from the shores of the Persian Gulf. Susiana was known as Elam, and all the Babylonian and Assyrian dynastic arrow-headed inscriptions hitherto deciphered refer to Susiana as the cradle of sovereignty where the ruins of great cities were discovered by Sir H. Rawlinson. The Elamites were a powerful nation in the early days of Abraham before either the Assyrian or Babylonian governments rose into power. Kedarlaomer, King of Elam, held Canaan and Arabia petræa in subjection.—*Bunsen* iii. 352. See Iran. Lud.

ELAMAVI also *Tiyya mamidi. Tel.* Mangifera, indicate L. Its Sans. name is *Sahakara* W. 913 "a fragrant kind of Mango,"—hence the name from *Ela*, "cardamom."

ELAMITES. See Iran. Elam.

ELANDEI PALLAM. TAM. Rhamnus jujuba.

ELANET, a hawk, the Falco melanopterus, Daudin, inhabiting Africa, India and America.—*Jerd.* i. 112.

ELANJI MARA. CAN. Rhamnus jujuba.

ELAPHRIUM EXCELSUM. See Calophyllum.

ELAPHRIUM TOMENTOSUM. See Calophyllum.

ELAPUR, the fortress of Krishna rajah. At the date of Charlemagne, Hindustan and the Dekhan were divided into four kingdoms viz., Gujara (Gujarat) on the west; Malwa, in the centre, the Gourha raj on the east including Bengal and Behar, and the Lateswara kingdom to the south, but the Soweajya or Sattarah sovereignty was also spoken of. Indra rajah who ruled the Lateswara kingdom conquered Gujarat, and aided the king of Malwa against the Gourea sovereignty. See Inscriptions, p. 390.

ELARAMU. TEL. A root employed in dropsical affections, supposed to be that of Ophioxylon serpentinum.

EL ARAM is mentioned in the koran as the Sail-ul-Arem, or flood of ul-Aram. It is the dam of Mareb, built by Queen Balkis above the city of Saba. It burst A. D. 120. See Mareb.

ELASTIC FIG TREE. ENG. Syn. of Ficus elastica.—*Roxb.* See Indian Rubber. Caoutchouc.

EL-ASWAD-IBN-KAAB. See Aswad, Masailma.

ELATERIDÆ. See Colecptera.

ELATE SYLVESTRIS, *Linn.*

Phœnix sylvestris, *Roxb.*

Eajata.	CAN.	Itcham maram.	TAM.
Sendi ka jhar.	DUK.	Ita chettu.	TEL.
Wild date,	ENG.		

The Leaf.

Itcham elle, TAM.	Ita-aku, TEL.

Its fruit.

Sandulay ka phal,	DUK.	Itcham pallam,	TAM.
Parushaka,	SANS.	Ita pandu,	TEL.

Its timber has the general characteristics of the family, but is inferior to the palmyrah, cocoanut, &c. In India, the fruit, when ripe, is small, oval shaped, dark coloured, and sweetish; about the size of a ripe wild plum, but, though it is now believed that this tree is identical with the date palm of Arabia, the fruit is not esteemed, being unimproved by cultivation. The leaves and stalks are made into baskets, boxes and hats, twisted into rope, used for thatching and in the manufacture of light mats for building huts. The inner wood furnishes, by boiling, a kind of catechu, which contains much tannin. It is obtained by boiling the heart wood for a few hours, when it assumes the appearance and consistency of tar. It hardens by cooling, and when formed into small squares and dried in the sun is fit for the market. The produce of Bombay is of uniform texture and of a dark red color. That of Concan and other parts of India, is of a chocolate color, and marked inside with red streaks. The analysis of Sir H. Davy gave the following result in 100 parts.

	Bombay.	Concan.		Bombay.	Concan.
Tannin.	54·5	48·5	Insoluble matters, sand, lime, &c. ...	5·0	7·0
Extractive	34·0	36·5			
Mucilage .	6·5	8 0			

The fibres of the leaf stalk are used for cables in the Red Sea. The natives of the East chew the fruit in the same manner as the areca nut, with the leaf of the betel, pepper and quick lime. *Simmond's Commercial Products, page* 579. *Ainslie, Madras Ex. Jur. Report.* See Date.

ELAVUM. The Tamil name of the wild cotton tree of Malabar, which grows to sixty or eighty feet high, and from four to six feet in diameter. It is a very soft, light wood, and used by the natives for catama-

rans and canoes; and also for rafting the heavy timber from the forests; it is not durable, or of much value,—*Edye. Forest of Malabar and Canara. (Note.*—This seems the Eriodendron anfractuosum.)

ELAVAM MARAM. Tam. Eriodendron anfractuosum.

ELAVAM PUNJI. Tam. Cotton of Bombax pentandrum.

EL-AYNEN a town of Nejd in Arabia the birth place of Mahomed-ibn-Abdul-Wahab. He founded the puritan Wahabi sect. He was born A. D. 1691. See Wahabi.

EL-BAKIA. The companions of Mahomed, the Astuwanat-el-Ashab, the Column of Companions. Their graves are at the El-Bakia.—*Burton's Pilgrimage*, iii *p.* 396.

EL-BEIT, a town founded by Tobba ul-Akram (A. D. 90-140) grandson of Shammir Yerash. Shammir, in an invasion of China perished with his army in the deserts of Thibet. Tobba to revenge his grandfather's death, marched from Yemen, rebuilt Samarcand, according to Thalaba, carried war into China, where he built El Beit, in which he left a colony of 30,000 Arabs, who continued a distinct people when Hamadun wrote in A. D. 553. See Samarcand, Shammir, Yemen.

ELBURZ. The mountains of Elburz, at the foot of the southern slopes of which the town of Teheran is situated, extend from the plains of Cazvin on the west to the town of Demavend on the east, forming the division between the low belt of country on the southern shores of the Caspian and the high lands of the central province of Irak. They are a portion of the lofty chain which branches off from the Caucasus, and after passing through Azerbijan the north of Persia and Affghanistan, terminate in the range of the Himalaya. The line of these mountains, though occasionally broken in Persia, especially in Khorassan, where it is intersected by several extensive plains, may easily be traced throughout the whole of this vast tract of Asia. The Elburz, although of the enormous height of 18,526 feet above the sea, has not a very imposing appearance from the plain of Tehran. Kazbek is 16,546 feet, but with the exception of the huge cone of Demavend, no peak towers above its fellows, and from a distance the summit of the range seems to be nearly level. In summer the snow disappears almost entirely from the southern face, but on the northern side it remains in large quantities throughout the year. Like the generality of mountains in Persia, those of Elburz are but scantily clothed with vegetation, the plants growing on the slopes having a dry blighted appearance, and as usual there is a total want of trees of natural growth. They are, like many other parts of this extensive range, rich in mineral productions, copper, iron, lead, and orpiment being found in large quantities. So many as five rivers, besides smaller streams, take their rise in the Elburz, within 25 miles north of Teheran.—*Col. Chesney's Euphrates*, p. 4. See Iran.

EL-KAJA. Arab. Trichelia emetica. Försk. a tree 30 to 40 feet high. Its fruit is fragrant and is an ingredient of the Abir or Besan with which the Arab women wash their hair. *Hogg.*

ELCHI, or according to the maps Ilitsi, is the city known to older travellers as Khoten. See Khoten.

EL-DOZ, after the death in A.D. 1205 of Mahmud of Gour, his kingdom was divided amongst his generals, and Kabul and Kandahar in Afghanistan fell to his slave El-Doz. He was, however, soon dispossessed by a prince of Kharism, whose successor Jelal-ud-Din was compelled to yield to Chingiz Khan. See Gour.

ELDER TREE. See Sambucus.

ELECAMPANE ROOT.

Ussul ur-rasun, Arab.	Alant-wurzel, Ger.
Inuleaulnee, Fr.	Bekh-i-zanjabil-i-shami, Pers.

Elecampane-root has an aromatic and slightly fetid odour. Formerly prescribed in dyspepsia, pulmonary complaints, and palsy; *Faulkner. O'Shaughnessy.* See Confection of Black Pepper.

ELECTUARIUM CASSIÆ. See Cathartocarpus fistula.

ELECTRICITY is evolved abundantly, in tropical Asia, at the beginning and close of the rains. The elephanta of Bombay, a stormy period at the close of the S. W. monsoon, is often attended with much electric disturbance. The N. W. storms at Calcutta, are always attended with a great evolution of electricity.

ELECTRIC TELEGRAPHY, the art of sending information by means of electric currents passed along wires. The system was early perfected in India by Sir William O'Shaughnessy, and all British India is now in inter-communication and in connection with Europe and America.

ELECTRIC LIGHTS are often seen in the swamps of India, and in storms on the masts and spars of ships at sea.

ELEMI is met with in yellow transparent masses; which readily soften, by the heat of the hand, and have a strong aromatic odour, and a hot spicy taste. It is a gum

resin and is said to be the concrete resinous exudation from one or more genera of plants, Amyris, Balsamadendron, Canarium, Elaphrium, and Icica. The Elaphrium elemiferum of *Royle*, yields Mexican elemi. The Cannarium commune Lam. (Syn. of C. Zephyrinum of *Rumph*) of the Spice islands and Ceylon, also the C. balsamiferum of Ceylon, is said to yield a resin which in odour and general appearance strongly resembles elemi. The resin called Arbol-a-brea at Manilla which somewhat resembles elemi is considered by M. Baup to be the product of Canarium album, a Philippine tree. Brazilian or American elemi is from the Icica Icicariba *Marcq.* and the Resin of Courina from I. ambrosica. It is abundantly produced in the forests of the Philippines, where it often assists in giving a cheerful blaze to the fire of the traveller. It is also exported from Manilla as a drug. The Philippine tree that affords it is probably a Canarium. There are other resins, of whose origin little is known, which have been imported as *Elemi.* Dr. Pereira says he had taken much pains to ascertain its commercial route, and found that all the importations of it were through Amsterdam or Hamburgh. It would appear that elemi formerly came from Ethiopia by way of the Levant; it is therefore probable that Britain receives it through Holland from some Dutch settlement in the East, and also from Africa, some small quantity probably being received from the Brazils. This gum resin forms an essential ingredient in many of the finest varnishes. *Waterstone. Faulkner. Cleghorn's Forests and Gardens of South India, p.* 378 to 380.

ELENDI. TAM. Zizyphus jujuba. Lam.

ELENJI. MALEAL. Mimusops elengi.—*Linn.*

ELENTHA. MALEAL. Zizyphus jujuba. Lam.

ELEOTRIS, a genus of fishes of the family Gobioidæ.

ELEPHANT, ENG. FR. GER.

Hsen,	BURM.	Pil,	PUSHTU.
Olyphant,	DUT.	Gaja,	SANSC.
Elephas,	GR.	Hasthi,	„
Hathi,	HIND.	Fiel,	SCAND.
Elephantes,	IT.	Elephante,	SP.
Elephas,	LAT.	Gallah,	SINGH.
Elephantus,	„	Ani,	TAM.
Gajah,	MALAY	Yeni,	TEL.
Beram	„	Yenuga,	„
Fel,	PERS.		

The source of the word Elephant, is doubtful. Sir J. E. Tennant supposes it to be the Hebrew "eleph" an ox, and "Hindi," Indian, like Tamar-i-hindi or tamarind. Pictet derives it from, airavata or airavana the elephant vahan of Indra from airavanta son of the ocean. Burton more correctly, says (*Pilgrim*, i. 275) it is from "Pilu" in Sanscrit, or as we now have it in Pushtu Pil, in Persian Fel, which in old Persian, becomes "fil," and, with the arabic article, "El-fil;" turned to elephas in Greek.

The Elephants of Ceylon, India, Burmah and Siam, frequent hilly and mountainous countries: they are met with in Ceylon at heights of seven and eight thousand feet, and in the South of India, at about 4,000 and 5,000 feet.

The elephant is the largest of terrestrial mammals. Though the Sumatran has been considered to differ, there is, according to most authors, only one Asiatic species, E. Indicus, which is found in Ceylon, in the southern and western parts of the peninsula of India in the forests at the foot of the Eastern Himalaya, in Nepaul, in the Saul forests, Tipperah, Chittagong, Burmah, the Malay Peninsula, and the larger islands of the Eastern Archipelago. There are differences, the elephants of the same locality even vary in form and character. They attain their full height when 18 or 24 years of age, and range from 7 feet to 10 feet in height up to the top of the shoulder. Twice round the forefoot gives nearly the exact height of an elephant. Elephants of Ceylon do not average above eight feet in height and never exceed nine feet yet Wolf says, he saw one taken near Jaffna, which measured twelve feet one inch, of course to the arch of the back. The Ceylon elephants are not so large as those of other parts of India. The East India Company's standard was seven feet and upwards, measured at the shoulder. Mr. Corse says the greatest height ever measured by him was ten feet six inches. As an example of the deceptiveness of a mere conjecture even by experienced persons, he mentions the case of an elephant belonging to the Nabob of Dacca which was said to be fourteen feet high, Mr. Corse wished to measure it particularly, as he himself judged it to be twelve feet. The driver assured him that the beast was from fifteen to eighteen feet;—yet when carefully measured, it did not exceed ten feet. (*Gosse's Natural History, p.* 118.)

The elephants of the farther peninsula much excel those of India and Ceylon, perhaps because they are less disturbed. The skeleton of an elephant in the museum at St. Petersburg, which was sent to Peter the Great by the shah of Persia, measures sixteen feet and a half in height, and probably this is the highest authentic instance on record. The African elephant is perhaps

not inferior to that of Pegu. Mr. Pringle, in a very graphic picture, has described an unexpected rencontre with an enormous elephant in an African valley. "We halted and surveyed him for a few minutes in silent admiration and astonishment. He was, indeed, a mighty and magnificent creature. The two engineer officers, who were familiar with the appearance of the elephant in his wild state, agreed that the animal before us was at least fourteen feet in height." Major Denham in his expedition into central Africa, met with some which he guessed to be sixteen feet high, but one which he saw killed, and which he characterised as "an immense fellow," measured twelve feet six to the back. Fossil remains of an elephant have been discovered at Jubbalpore, which measured fifteen feet to the shoulder.

The young are about three feet high when born, and the female begins to bear when about 16 years old. They are classed according to their outer forms, viz., the Kumariah or princely, a strong bodied animal: the Merghi or deer bodied; the Sankariah or mixed breed between the Kumariah and Merghi, and the Mirghabali, approaching the Mirghi. The Dantela, is the tusked elephant. The Mukna has a head like that of the female with comparatively small straight tusks. The elephant with nicely curved tusks is called the Palang (or bed) dant, and a one-tusked elephant is ek-danti or Ganesh after the hindu god of wisdom, who is represented with the head of an elephant and one tooth. Elephants of India are tamed to work but the supplies are all from the wild state. They are becoming scarce, and in 1868, the Madras Government began to preserve female elephants.

In the Syrian armies, anciently, the elephant seems to have been much employed. According to the Apocrypha (1st Maccabees, vi. 33, 37.) Antiochus, when warring against Judas Maccabæus, had in his army elephants guided by Indian drivers; each stated to have had on his back a strong wooden tower, containing thirty-two fighting men !But this is very great, such weight would amount to about $2\frac{1}{2}$ tons.

In the Ceylon forests they come forth to feed about 4 P. M., and they invariably retire to the thickest and most thorny jungle in the neighbourhood of their feeding place by 7 A. M. In these impenetrable haunts says Baker, (Rifle pp. 10-11) they consider themselves secure from aggression. The period of gestation with an elephant is supposed to be two years, and the time occupied in attaining full growth is about sixteen years. The whole period of life is supposed to be a hundred years, but Baker would increase that period by fifty. The height of these Ceylon elephants varies to a great degree, and in all classes is very deceiving. In Ceylon an elephant is measured at the shoulder, and nine feet at this point is a very large animal. Not more than one in three hundred has tusks, they are merely provided with short grubbers. Those with tusks are usually males. Elephants are gregarious and the average number in a herd is about eight, although they frequently form bodies of fifty and even eighty in one troop. Each herd consists of a very large proportion of females, and they are constantly met without a single bull in their number. He has seen some small herds formed exclusively of bulls, but this is very rare. The bull is much larger than the female, and is generally more savage. On each side of the elephant's temples is an aperture about the size of a pin's head, whence in the season of rut a secretion exudes, which is called mada or dana. Whilst it flows, the elephant is called matta, and at other times nirmada. The odour of this fluid is frequently alluded to in Hindu poetry, (See Wilson's Meghaduta, I. 132) is compared to the odour of the sweetest flowers, and is supposed to deceive and attract the bees. (See Ritu Sanhara, *William's Story of Nala, p.* 195-196.)

There has been an inclination to separate the Sumatran elephant from the Indian one, as possessing peculiarities. The *Elephas Sumatrensis* differs from that of India and Ceylon in the number of its vertebræ and the natives call it gajah, Temminck has named it Elephas Sumatranus.

This species is perfectly intermediate between the Indian and African, especially in the shape of the skull, and will certainly put an end to the distinction between Elephas and Loxodon, with those who admit that anatomical genus: since, although the crowns of the teeth of E. Sumatranus are more like the Asiatic animal, still the less numerous undulated ribbons of enamel are nearly quite as wide as those forming the lozenges of the Asiatic. The number of pairs of false ribs (which alone vary, the true ones being always six) is fourteen, one less than in the Africanus, one more than in the Indicus; and so it is with the dorsal vertebræ, which are twenty in the Sumatranus (twenty-one and nineteen, in the others), whilst the new species agrees with Africanus in the number of sacral vertebræ (four), and with the Indicus in that of the caudal ones, which are thirty-four.

White elephants, either lepers or albinos,

possibly in both of these conditions, are occasionally found, and the kings of Burmah and Siam take, as one of their titles, the appellation of Lord of the white elephant. Indeed the presence of a white elephant in Siam is considered as a palladium for the king's life and for the prosperity of the kingdom. The late Lord White Elephant in possession of the king of Burmah, was supposed to have been caught in 1806. He was close upon ten feet high which is a very large elephant, and had a noble head and pair of tusks. In Enarea, in Eastern Central Africa, a white elephant is reverenced, white elephants were kept by the rajahs of Kanouj. When Jaya Chaudra of Benares and Kanouj was defeated and slain by Shahab-ud-din, Mahmud Ghori, in A.D. 1194, on the banks of the Jumna, between Chandwar and Etawah, a white elephant was captured which is related to have refused to make obeisance to the sultan and had almost killed its rider who endeavoured to force the animal to comply. In the time of Mahomed's grandfather, when Abrahah the christian king of Hamyar advanced against Kenanah in Hijaz to revenge the pollution of the christian church at Sennaa, he was seated on an elephant named Mahmood, distinguished by its bulk and skin of pure white.

Captain Yule, (p. 121,) mentions having seen at Amarapura two elephants which had been taught to dance. In ancient Rome, as is related in All the Year Round, twelve elephants were taught to march into a theatre to a harmonious measure, sometimes in a circle, and sometimes divided into parties, scattering flowers around them all the while. Preserving their proper order, they would beat time to the music during the intervals of the dance. Being provided with splendid couches, adorned with paintings and tapestry, and a banquet spread before them upon tables of cedar and ivory, the elephants in the costumes of male and female personages of distinction, would dine decorously—not one of them voraciously taking an undue share of the delicacies, and all drinking moderately out of cups of silver and gold. Germanicus, according to Pliny, exhibited elephants hurling and catching javelins, fighting with each other, and executing the Pyrrhic dance. And it was through their love of music that elephants were trained to dance upon ropes. Four of them walked along a rope or ropes, carrying a litter, containing a fifth, which was feigning sickness. Many writers confirm the testimony of Pliny to the fact that the elephants walked backwards and forwards upon the ropes with equal precision. Seneca, in his Epistles, describes an elephant who, at the command of his keeper, would not merely walk, but would kneel down upon a rope. Suetonius describes an elephant who, in the presence of the Emperor Galba, climbed up an inclined rope to the roof of a theatre, and descended in the same way, bearing a sitter upon his back. Arrian mentions an elephant who performed as a musician to its dancing comrades. With a cymbal fastened to each of its knees, and a third to its trunk, he would beat a measure with astonishing precision and accuracy; while the other elephants danced a circle round him. "The Elephant is, at present, most usually employed for the transport of large tents and other articles of equipment, beyond the power, or of size inconvenient to be carried by camels or bullocks. Its load for steady work varies from about 15 to 20 cwt. exclusive of the pad or pack saddle. With this it travels at the rate of three miles an hour from 16 or 20 miles per diem; but it can perform and bear longer marches for some time without injury. On an emergency, a riding elephant can travel at the rate of five miles an hour, and will go about 40 miles in a day—but for a continuance its performance will not much exceed that of the baggage elephant. In India, there are elephant batteries of heavy artillery needed for sieges, and the nobles of Hyderabad use them largely for riding. *Burton's Pilgrimage to Meccah Vol. I. p. 275. Gosse's Natural History*, p.118. *Tennent's Sketches of Elephas Sumatranus L.*

The Agagir swordsmen of the Hamram Arabs ham-string the Abyssinian elephants with swords. The Abyssinians, still eat the flesh and that of hippopotami as described by Strabo (lib. xvi. p. 772 and Diod. Sic lib. p. 161.) The inscription of Adule mentions that Ptolemy invaded Asia with his land and sea forces and elephants from the country of the Troglodytes and Ethiopia.

The Ceylon elephants are driven into a Kraal and tied and tamed there. Within the forests and in the jungles of Ceylon are found a great variety of wild animals—the elephant the hyena, tiger-cat, the bear, the deer and the monkey, are among the most abundant. The number of elephants is incredibly great, and, issuing in troops from their lairs, they come crushing down the cultivated fields and plantations and devouring the crops, with great loss to the proprietors. They are found in all the uncultivated parts of the island but their favorite haunts are near to the farms, to which they prove so destructive that the colonial government

pays a reward of 7s. 6d. (about 1 Dollar, 85 cents) for every tail of the animal which is brought to the authorities. Mr. Talbot the Government agent at Galle, stated, that he had paid during a preceding year two hundred pounds sterling for tails, which would give six hundred as the number of elephants destroyed. An officer, actually killed during his residence on the island, no less than six hundred of these gigantic animals. Within a few months of the arrival of the Mississippi, two officers of the garrison destroyed no less than forty elephants in the course of a sporting visit of six weeks to the jungle. They are ordinarily shot with a rifle, the sportsman approaches his game in front, or that he may aim at either of the only two vital parts upon which a rifle ball will have any effect, one being directly in the forehead through which the brain is penetrated and the other behind the ear. The catching and taming of wild elephants furnish a large source of revenue to the Nepaul government. In taking them, the taroo or elephant catchers, having marked down a wild herd of three hundred or four hundred elephants, about two hundred taroo collect together, mounted upon elephants, and accompanied by two large "taking elephants," highly fed, and thereby kept always must (sensual.) The herd of wild elephants having been started, they get away trumpeting and whistling into the thickest part of the forest, hotly pursued by the mounted taroo, each of whom is provided with three or more nooses, called the moosack, which is made of very strong ran hide, well soaked in oil, and so ingeniously contrived, that when once attached to the elephant, the hind legs are gradually drawn together at every step he takes until he is brought to a complete stand-still. The chase continues frequently for twenty miles at full speed, until in fact, the wild herd becomes blown and is brought to a stand. The danger then commences, from the wild ones dashing at their pursuers, in their turn causing the most intense excitement during half an hour, until the arrival of the two must elephants, whose bulk prevents their keeping up with the more active ones, ridden by the taroos. These two elephants, each having three keepers upon their backs, dash into the herd. Their appearance, accompanied by the powerful nauseous odour emitted by most elephants, creates an immediate panic among the wild ones and soon paralyzes their efforts of resistance. The active little taroo now slide down from their steeds, and under cover of one of the must elephants, who pushes himself forcibly against the wild one selected from the herd, they, in a most dexterous and daring manner, slip the moosack on to each of the hind legs, which performance occupies about three minutes. The noosed elephant is then allowed to depart, and he goes off evidently delighted; but as the noose becomes contracted at every stride, he finds his intended flight brought to a close, at a distance of sixty or seventy yards. After operating upon about fifty wild elephants in a similar manner, the Taroos permit the remainder of the herd to abscond, and employ themselves in fastening the noosed elephants to separate trees, where they are detained from two to three weeks under the careful charge of the takers. If any of the captured show symptoms of violence, they are immediately punished most severely by two of the large tame elephants, who belabour them unmercifully with their trunks. Two such thrashings effectually cure the most insubordinate, and at the expiration of six weeks, the once free and independent denizen of the forest has a keeper on his back, and becomes as quiet as if he had been in a state of subjection all his life.

At Chittagong, says Captain Smith, (*Nepaul*) is renowned for the beauty and size of its elephants, so is Nepaul celebrated for the hardiness and ugliness of her produce: a fatal peculiarity extending to the Nepaulese themselves. The full-grown female elephants seldom exceed seven feet and a half in height, but the males of forty years old, at which age they are considered to be full-grown, are fine fellows, averaging from nine to eleven feet. One elephant was eleven feet four inches in stature.—(*Smith's Nepaul.*)

Elephants are captured in Siam by loosing female elephants in the forests at certain seasons, when the wild males return with them and are captured. The tamed elephant is guided by the Ankoos. PERS. HIND. (Ankasa, SANSC. Arpe. Greek: Cuspis, Latin. Hendoo, Singh) a goad and guiding rod in shape resembling a small boat-hook. It is figured in the medals of Caracolla of the identical form in use at the present day in India.

The elephant has been discovered fossil in the strata of the Nerbudda and in Burma. Amongst the remarkable remains brought from the Sewalik Hills, in Northern India by Captain Cautley and Dr. Falconer, were the remains of several species of the genus *Elephas* and other proboscidean animals. Dr. Falconer, speaking of the group of animals thus revealed by his researches, says;—"this fossil fauna is composed of representative types of *Mammalia* of all geological ages, from the

oldest of the tertiary periods down to the most modern; and of all the geographical divisions of the old continent, grouped together into one comprehensive assemblage. Among the forms contained in it there are—of the *Pachydermata*, several species of *Mastodon*, elephant, hippopotamus, rhinoceros, *Anoplotherium*, and three species of *Equus;* of the *Ruminantia*, the colossal genus *Sivatherium*, which is peculiar to India, with species of *Camelus*, *Bos*, *Cervus*, and *Antilope;* of the *Carnivora*, species of most of the great types, together with several undescribed genera; of the *Rodentia* and *Quadrumana* several species; of the *Reptilia*, a gigantic tortoise (*Colossochelys*), with species of *Emys* and *Trionyx*, and several forms of Gavials and Crocodiles. To these may be added the remains of Struthiones and other birds, and Fishes, *Crustacea*, and *Mollusca.*"

The genus *Elephas* in the collection which has been deposited in the British Museum includes six species.

E. planifrons, distinguished by the flatness of the forehead and the intermediate character of its molar teeth.

E. Namadicus, with a great developement of the cranium, and teeth closely allied to those of the Indian species.

E. Hysudricus, with a turban-like vortex of the skull and teeth, whose structure approaches that of the African elephant.

E. Ganesa is the most remarkable of the Sewalik species. A skull exists with remains of the other species in the British Museum. The total length of the cranium and tusks is 14 feet; length of the skull 4 feet 2 inches: width of the muzzle 2 feet; length of the tusks 10 feet; circumference of the tusk at the base 26 inches. The other two species are named *E. insignis* and *E. bombifrons.* Along with elephant remains, from the Sewalik hills, in the Calcutta museum are those of Elephas insignis E. bombifrons. E. planifrons; Mastodon Sivalensis, Elephas Hysudricus; E. Cliftii: Hippopotamus Sivalensis. Merycopotamus dissimilis. Rhinoceros Sivalensis. Equus Sivalensis. Hippotherium antelopium. Sivatherium giganteum. Hexapr. Sivalensis; Camelopardus sivalensis. Camelopardalis sivalensis. Antelope palœindicus. Antelope, *species.* Camelus sivalensis; Cervus, *species*: crocodilus, *species.* Leptorhynchus gangeticus; Colossochelys Atlas. *Tesudo, species.* Hippopotamus (Hexaprotod.) Sivalensis Hyena, Canis; Sus, Bos; and similar remains have been discovered also in Burmah, and in Perim island. The species of *Mastodon*, in the collection from the Sewalik Hills, are *M. Perimensis*, *M. Sivalensis* and *M. latidens.* Professor Owen states that a species of *Mastodon*, nearly allied to *M. angustidens*, has left its remains in the ossiferous caves and post-tertiary or newer tertiary deposits of Australia. From the conformity of the molar teeth, Cuvier regarded a *Mastodon* whose remains have been discovered in Pern as identical in species with the *M. angustidens* of Europe. Professor Owen regards the *M. longirostris* of Kaup, found in Germany, and the *M. Arvernensis of* Croizet and Jobert, dug up in Auvergne, as identical with his *M. angustidens.* In the collection of the British Museum, in addition to the species which we have mentioned above, will be found remains of *Elephas priscus* and *E. meridionalis*, found in Europe. There are also the remains of a species of *Mastodon*, *M. Andium*, from Buenos Ayres. *Owen, British Fossil Mammals and Birds; Falconer and Cautley, Fauna Antiqua Sivalensis; Mantell. Petrefactions and their Teachings*;—quoted in *Eng. Cyc. pages* 504 *to* 519. *Bengal As. Soc Catalogue of Fossil remains. Smith's Nepaul. Yule's Embass. All the Year Round. ELEPHAS PRIMOGENUS, the mammoth: one was discovered in 1799, by a Tungus near lake Oncoul in Sibera. It is surmised that in the North, the mammoth was covered by long hair.—*Mangin.*

ELEPHANTA.—Of this somewhat turbulent and noisy visitor of Bombay, the following are the times of its coming during the seventeen years 1840—1857, and the most notable of the circumstances attending it. The designation which these October storms bear, all over the western side of India is conferred on them as occurring about the time when the sun is in the constellation. "Hust," the Sanscrit for elephant. As they reach Bombay from nearly due east, their name is there not unnaturally imagined to have been conferred on them from the celebrated island from the direction of which they reach that city. The elephanta commonly makes its appearance a fortnight or so after the weather has fairly cleared up, when showers have almost ceased to fall, the barometer has become high, the sky bright and clear, and the alternating sea and land breezes have set in. For three or four evenings before its appearance superb piles of thunder-clouds are seen to accumulate about 3 o'clock every afternoon over the Ghauts: they soon ascend some way in the air advancing apparently against the sea breeze,—that

is, the upper and lower strata of air move opposite ways to each other. Magnificent displays of lightning with low growling thunder, prevail as twilight sets in: an hour or two after sunset the sky resumes its serenity. At length the clouds grow darker and more watery—the thunder becomes louder, the lightning more brilliant—they tumble up the sky, rolling in vast masses over each other, till a sudden squall bursts in and a deluge of rain follows. This scarcely ever occurs earlier in the day than 3 P. M., and it very seldom continues till dawn, though after three or four hours interruption it sometimes resumes before noon next day. When once the gale is over, the sky in general clears up at once, the clouds vanish, the alternate winds resume sway—hot days and dewy nights succeed, and the settled season commences. During the squalls which are occasionally experienced in March and April the barometer usually falls, or becomes very irregular, and pending the July storm it sinks very low indeed, and its range becomes singularly small. The bursts in the beginning of June and October, which herald in and close the S. W. Monsoon, seem purely electrical,—neither the pressure nor humidity of the air being materially affected by them. The Madras monsoon is stated, according to the old observatory reports, to set in about the 19th October; it has sometimes been known to set in as early as the 20th September, sometimes as late as the middle of November. September is for the most part a cloudy showery month, with occasional thunder and squalls. The monsoon in Lower Bengal sets in and closes about a fortnight later than our own: a considerable fall of rain and severe squalls of wind appear to be in general experienced about the third quarter of the October moon. Neither at Madras nor Calcutta is the separation between the rainy and fair seasons anything like so distinct. In 1840, the Elephanta set in on the 10th October with a violent dust and thunderstorm and quantities of rain, which continued from about an hour before till two hours after sunset: the wind blew in sudden and uncertain gusts from nearly due east,—bringing with it perfect sheets of rain. The thunder ceased in a few hour's time, but the rain continued for nearly forty hours with little interruption. On the evening of the 11th it drew off, when all became tranquil and quiet, and there was no storm that year. Fall for the monsoon, 63·15 inches.

1841.—After nearly six weeks of bright, tranquil, and cloudless weather, a violent thunderstorm occurred on the evening of the 16th October. The sky continued thick and louring, with lightning in the evening, till midnight on the 17th, when a violent burst of thunder and rain occurred: the thunder soon ceased, but the rain continued for a couple of days, water standing every where in pools, and the ground apparently as wet as in June. Monsoon fall, 71·49.

1842.—The monsoon of 1842 was one of unusual severity, 95·26 inches of rain having fallen. It broke up stormily and irregularly. The latter half of September was tolerably clear, but on the 29th sharp squalls, with lightning and showers, made their appearance, and so continued till the 1st October. On the 8th, and again on the 13th and 14th, there were squalls, with thunder and rain, the latter date probably affording the true Elephanta. There was in 1842 one of those supplemetary storms on the 12th and 13th of November which are of singularly regular occurrence.

1843.—The monsoon of 1843 was light, and the rain cemmenced early: there were scarcely any showers in September, and the result was an early and severe Elephanta. It commenced on the 27th September, when a smart thunderstorm crossed the island. The rain now began to fall in torrents, and in the course of three days no less than five inches were measured—in five hours' time two and a half inches fell. The weather then cleared up and there was no more storm that year—*Fall*, 59·27.

1844.—A furious dust storm which occurred on the 30th September seems to have taken the place of the Elephanta in 1844. There was a good deal of thunder, a very severe gale of wind, and a few drops of rain—scarcely amounting to a shower—the whole was over in a couple of hours' time. There was a very severe squall, with a thunderstorm, on the 10th October, the violence of which was more felt down the coast than at Bombay—*Fall*, 65·40.

1845.—A sharp squall and thunderstorm occurred on the 15th October supposed to have been the Elephanta—*Fall*, 54·73.

1846.—The Elephanta made its appearance on the evening of the 8th October 1846 and continued for a couple of days. The weather cleared up on the 10th, when on the 15th and 16th there was threatened a renewal of the storm: the threat was not realized, and after some thunder and lightning, the sky cleared up, and the slight showers of February were the next experienced that year.—*Fall*, 87·48.

1847.—There was a threatening of an Elephanta on the 2nd, and again on the 22nd October 1847.—with a good deal of thunder and lightning on both occasions. On the

2nd and 3rd November there was a smart thunderstorm, and heavy and protracted fall of rain, which continued from the 1st to the 5th. During this time three and a half inches were measured. As a considerable portion of the community reside in light half thatched dwellings, or in tents, from the Elephanta till the end of May, an unreasonable fall of this sort in November, occasions the greatest discomfort. The weather cleared up immediately after a fall was over, and not so much as a shower occurred from this time till the commencement of next monsoon—remarkable as this was both for the earliness and violence with which it set in.—*Fall* 67·31.

1848.—The Elephanta of this season was of unusual turbulence and duration. After threatening for near a week, it set in with the utmost fury on the 6th October. The thunder was about and near; the lightning flashed incessantly: the wind, which set in with violence in the N. W., in six hours' time had swept the compass round, blowing with peculiar fury from the east about two hours after sunset. It blew a severe gale from S. E., for twenty-four hours on end. Betwixt the 5th and 8th five and a half inches of rain fell, 2·88 having been measured on the 7th. On the 19th there was a sort of supplementary Elephanta—a sharpish squall and thunderstorm, but nothing com- to the first; of course the storm came as usual from the east.—*Fall*, 64·42.

1849.—The monsoon was this season of almost unprecedented violence and duration: about one hundred and twenty inches fell at Bombay, or nearly double the average. After an almost total cessation in August, it resumed in September, with almost July-like violence, and so continued till past the middle of the month; and under these circumstances there was scarcely time to brew an Elephanta, and short squalls, with some thunder and smartish showers of rain on the 3rd and 8th October, were all that occurred deserving of the name. There were some very brilliant electrical discharges in the beginning of November, but no further storm. On the 10th November occurred a thunderstorm and squall of short duration, but of very peculiar magnificence, with a second of lesser magnitude on the 15th. This terminated the rains for the seasons:—with the exception of a very slight shower in February, no more fell till the beginning of June.

1850.—Oct. 7.—The Elephanta burst at sunset with a heavy squall from N. E., lightning blazing all around the horizon. There was heavy rain across from Mazagon Hill to Byculla and so to Mahaluxumee; in the course of the evening there fell close on a quarter of an inch all over the Island. This, however, was only the prelude. The following evening the 8th, about 6 o'clock, a thunderstorm was observed over Panwell, and though the sea breeze was blowing somewhat briskly from north-westward, great piles of massy clouds kept rolling up from the east, thundering, terribly, as they advanced. At ½ past 5 the whole landscape suddenly became of a lurid yellow hue; at ½ past 6 a furious squall burst from the east, accompanied by such a torrent of rain, that it seemed as if a sluice had been opened. The sun had barely set when a pitchy darkness came on. This state of matters lasted for an hour, when the squall drew off, and it faired, the thunder and lightning continuing. At 9, a stiff and steady breeze set in from the east, and it continued to blow in puffs from the same quarter till 7 next day—three-quarters of an inch of rain having fallen during the previous 1¼ hour. A few very light showers fell in the last week of October, but from the date of the Elephanta the fair season had set in.

1851.—Sept. 25—Oct. 10—There is some doubt about the date of the Elephanta for 1851. There was, in fact, no storm precisely corresponding in character with what usually goes by that name. On the 25th, 26th, and 27th, occurred a series of thunderstorms and slight squalls, but they were too early, and they were not violent enough. On the 24th a thunderstorm occurred at Mahabuleshwur, exactly corresponding in all but date with the Bombay Elephanta. On the 10th and again on the 20th October the Elephanta threatened, but, did not come down, when the weather cleared up.

1852—8th to 11th Oct.—Like the year preceding, 1852 was without any very well-defined Elephanta. Betwixt the 8th and 11th there was frequent thunder with squalls from the east, clouds and showers, but none of those violent disturbances which characterise the gale. At this date there were violent hurricanes in the China seas and near the mouth of the Bay of Bengal.

1853—For this season from the Observatory reports we gather that the last rain for the season fell on the 24th September. We can observe no trace of any thing like an Elephanta, and we presume, therefore, that no such storm was experienced at Bombay. We fail to discover any unusual phenomona described amongst papers from the interior.

1854 Oct. 6-7—On the 6th and 7th October they had violent falls of rain, nearly 6 inches having been measured, and as this followed a track of open weather, and was the last rain of the season, it must, we assume, be accepted as the Elephanta. Yet all the cha-

racteristics of the gale save the rain were wanting. The wind was steady, and from the S. W., they had no squalls and very little thunder; the want was made up for by the Gunpowder Plot storm and subsequent hurricane of November.

1855—Sept. 29th and 30th; Oct. 11th and 12th—We are not sure which of these two storms is to be considered the Elephanta; the latter of the two corresponds most nearly with it in point of time, the former in point of character. On the morning of the 28th, half an inch of rain fell, and the sky exhibited that extraordinary transparancy which indicates almost complete saturation, and gives such singular beauty to the landscape. There was lightning in the evening, and a heavy thunderstorm crossed the zenith from nearly east to west. The morning of the 29th gave unmistakeable indications of an approaching storm, and there followed accordingly heavy thunder and lightning in the evening, and a severe thunderstorm again crossed the zenith from nearly east to west. On the evening of the 30th occurred a thunderstorm of still greater severity, accompanied with a violent squall of wind and drizzling rain from E and afterwards S. E. The wind veered round to N. N. E. in the course of the evening, and the sky became pure and serene, and so continued ill the 11th October. This we consder the true Elephanta. The disturbance of the 11th and 12th October is described as follows in the *Bombay Times*:—

"We had a very curious instance of a local squall on Sunday evening, the 7th instant. As we mentioned on Monday, we had distant thunder all the afternoon. From five o'clock the upper clouds began to ascend from Eastward right in the teeth of the sea-breeze. On reaching the zenith, about half past six, the squall struck Sewree and crossed the island. It was felt severely at Khandalla and Panwell and was so violent at Oolwa as to have stripped the roofs off the houses. It seems to have been a purely local burst, and was not so much as felt even at Mazagon, Byculla, or the Fort; it was not accompanied at Bombay with any rain, though heavy showers seem to have fallen in other quarters."—*Bombay Times October* 12.

"Just as we thought the weather had become thoroughly settled, a most unexpected change in the aspect of the air has made its appearance. On Wednesday the barometer fell at once by about a tenth, or from 29·854 to 29·807, and at this it stood for a couple of days. Yesterday it tumbled down by half a tenth, or from the number already set down to 29·777, and continued falling up to two o'clock when it stood at 29·636, having tumbled down by 00·141, on deducting 00·058 the natural descent by 00·033. About noon on Thursday it began to rain heavily at Panwell, and a thin film of cloud with slight showers spread over the sky, and prevailed all over the afternoon and evening. Yesterday it was looking cloudy and rainy all day, the wind blowing from the eastward; in the afternoon there was a smart shower of rain with much lightning in the South at sunset, and indications of stormy weather at no great distance from Bombay. The storm flag was hoisted from the Dockyard as a warning to the shipping in the harbour."—*Bombay Times, October* 13.

"The atmosphere continues to possess that extraordinary transparency which generally precedes or follows a heavy fall of rain, and for the greater part of the day the wind is from the S. E. quarter of the compass, the sea breezes having scarcely as yet resumed their sway. The clouds are mostly high but thick and watery,—the drift from easterly. On Saturday afternoon there were heavy showers, and apparently a severe thunderstorm betwixt Panwell and Khandalla. We noticed the extraordinary fall of the Barometer betwixt ten A. M. and two P. M. on Friday. We had no means of observing it later, but the Observatory reports of tomorrow will give us its entire descents. It rose on Saturday almost as rapidly as it had fallen the day before, and continued gradually rising till yesterday afternoon."—*Bombay Times, October* 15.

1855—Sept. 29th, October 7th.—There were slight thunderstorms betwixt the end of September and 8th October, but we observe no account of anything like an Elephanta.

1856.—Seems to have been without any thing deserving the name of an Elephanta. We find the following notices of slight disturbances on the 6th and 7th Oct. and as these occurred some weeks after the rain had ceased, we presume it is all to lay claim to. "Though we still continue to have vivid lightnings every evening over the mainland, appearances of storm have almost wholly passed away. Yesterday morning (6th Oct.) we had a thick mantle of clouds over nearly the whole sky; from long before dawn till about eight o'clock on the evening of Wednesday (8th October) we had every appearance of a squall; during the night a heavy thunderstorm passed over Bombay, and it looked like a renewal of the Elephanta, if we are in reality to suppose this gale already passed. Yesterday the sky was bright and

open, although it looked somewhat squally in the afternoon; and we should not feel surprised if we had yet showers of rain to usher in the cold season."

1857.—This year seems to have been still worse off than that preceding it, in the characteristic partition which separates our monsoons. After three weeks of fair weather, electric clouds are noted as visible in the east with lightning about the 6th, and this is all we can make out of it.

Out of the seventeen years here given Bombay had been five times without a regular Elephanta—that is a squall from the east, with rain and thunder—occurring, with the three exceptions of 1843, when it fell on the end of September, and betwixt the 1st September and 10th October. Unless during the two years 1843 and 1844, indeed, during the latter of which there occurred two squalls which divided betwixt them the honors of the Elephanta, it has always happened betwixt the 7th and 10th October, with a degree of punctuality which might well surprise the uninitiated. For the years 1845, 1856 and 1857 we have nothing but the Observatory report to guide us and cannot exactly make out when the Elephanta occurred.

It thus appears that for five years on end they had experienced at Bombay no such storms as that usually known as the Elephanta, and of the occurrence of which for the previous eleven years almost uninterruptedly we have minute accounts. Elephantas in all likelihood prevailed as regularly before 1840 into the depths of time as betwixt that date and 1857, but wanted a historian. The violence of the electric storm which ushers in the rains will be found, when we come to analyse the records, to have become as much mitigated in violence as that with which they close. It gives a melancholy view of our ignorance of the simplest and most interesting facts in Natural History, to think that we know nothing of the characteristics of this storm beyond the boundaries of Bombay harbour. Where it begins, where it ends, over what area it extends, or what form it assumes elsewhere are things utterly unknown to us. The Governments of England and of the East India Company have, within the past fifteen years, spent about £100,000 in making and publishing meteorological observations; these reports are all so learned that they are utterly useless. No meteorologist could, from one of the fifty magnificent quartos, one of which is now before us—form any idea whatever of the climate meant to be indicated. The printing alone of ten volumes of Bombay reports cost a lakh of rupees, yet no one could work out from them when the first burst of the monsoon, or when the Elephanta occurs, or what are the characteristics of each.—*The Bombay Standard and Chronicle of Western India, page* 5.

ELEPHANTE. Sp. ELEPHANTES, It. Elephant.

ELEPHANTA. An island across Bombay harbour a mile from Butcher island and known to natives as the island of Gharipuri. A cave in it in itself may be called a complete Pantheon: for among the hundreds of figures, there sculptured, every principal hindu deity is found. Buddha is evidently from his size and situation a principal personage there; yet not the image or deity to whom the temple seems peculiarly dedicated, which Major Moor apprehended to be the One Supreme Being. But as no representations are ever made of that Being, to his three principal powers, or attributes, (viz. according as they be contemplated—mythologically, ethically, metaphysically, or philosophically)

Brahma	Power	Creation	Matter	The Past	Earth
Vishnu	Wisdom	Preservation	Spirit	„Present	Water
Siva	Justice	Destruction	Time	„Future	Fire

In the Elephanta cave, Garuda is often seen with an appendage; and on several very old gold coins he has snakes or elephants in his talons and beaks—for he is sometimes spread, and double-headed, like the Prussian eagle, and one is round his neck: but he is not so represented either in pictures or casts. Destroyer of serpents, Nag-anteka, is one of his names. Some legends make Garuda the offspring of Kasyapa and Diti. Diti laid an egg, which it was predicted would produce her a deliverer from some great affliction: after a lapse of five hundred years, Garuda sprung from the egg, flew to the abode of Indra, extinguished the fire that surrounded it, conquered its guards, the devata, and bore off the amrita (ambrosia), which enabled him to liberate his captive mother. A few drops of this immortal beverage falling on the species of grass called Kusa, (the poa cynosuroides,) it became eternally consecrated; and the serpents greedily licking it up, so lacerated their tongues with the sharp grass, that they have ever since remained forked; but the boon of eternity was ensured to them by their thus partaking of the immortal fluid. This cause of snakes having forked tongues is still, popularly, in the tales of India, attributed to the above greediness; and their supposed immortality may have originated in some such stories as these, though, it is probable that the periodical renewal of their skin and assumed re-juveniscence is the true explana-

tion of this belief. The Elephanta caves are cut in a harder rock than those of Ellora. —*Moore's Pantheon, page* 342. See Gharipuri.

ELEPHANT APPLE. Eng. Feronia elephantum, *Cor.*

ELEPHANT CREEPER. Eng. Argyreia speciosa.

ELEPHANT-FOOT YAM. See Dioscoria.

ELEPHANT GOURD. Eng. Hasti Kosataka. Sans. Ennuga bira. Tel. Some large cucurbitaceous plant not yet defined. Perhaps Elephantopus scaber.

ELEPHANT GRASS. Eng. Typha elephantina.—*Roxb.*

ELEPHANTOPUS SCABER. Linn.

Anashovadi, Mal. Tam.	Husti kasaka, Tel.
Shamdulun, Beng.	Enuga bira, „
Samdulun, Hind.	Eddu nalike chettu, „

This plant grows in the peninsula of India, and its leaves are used in medicine.

ELEPHANT ROCK. A rock in Ceylon. Allagalla, Ætagalla and Goomeragalla, all signify the Elephant rock. The former—the grand mountain up whose precipitous side runs the railway incline of 1 in 45 for 13½ miles—is simply the Allia (untusked elephant) rock. The rock which, like an elephant couchant, guards Kornegalle, Ætagalla, is the tusked elephant rock; and the strange, massive block which towers over and gives its name to one of the finest estates in the Knuckles is the speckled elephant rock. The rock, at a distance gives the outline of an elephant, and the patches of cryptogams which spot its precipitous sides has led to the specific name—the Goomera elephant being that semi-leprous one which, in an advanced stage of the cutaneous affection, results in the "white elephant" so adored in Burmah. See Elephant.

ELEPHANT'S TAIL, Hair of

Hathi-ke-dum-ka-bal, Duk	Yeanuga toka Ventru-
Beram Rambut, Malay.	calu, Tel.
Anay val myre, Tam.	

Of this article, rings, bracelets and other female ornaments, are made in India.—*Ains. Mat. Med. page* 154.

ELEPHANT'S TEETH. These are obtained in South Africa, Ceylon, Burmah, &c. much of that which comes to China is brought from Siam in junks; the northern parts of Siam, Cambodia, and the confines of Burmah supply the Chinese market. A good deal finds its way into China direct from Burmah. They should be chosen without flaws, solid, straight, and white; for if cracked or broken at the point, or decayed inside, they are less valuable; every specimen, however, is useful to a greater or less degree, and can be entirely used. The largest and best weigh from 5 to 8 to a pecul, and decrease in size to 25 in a pecul. The cuttings and fragments are also of value sufficient to make them an article of trade. The number of articles which the Chinese make of it, and the demand for them on account of their exquisite workmanship, render the consumption very great. The circular balls which the Chinese make of ivory, as well as their miniature boats, fans, chessmen, boxes and fancy articles of all descriptions, are specimens of carved work unequalled in any other part of the world. From a quantity of ivory not weighing over three pounds, they will make a toy worth a hundred dollars. The largest teeth are sometimes valued at $120 a pecul, but the article usually ranges from $50 to $80 per pecul. This trade is likely to increase at the north. A large proportion of the ivory brought to China is re-exported in fancy carved ware. —*Morrison.*

The various vernacular names and the synonyms, will show that both the scientific and the unscientific world have believed that the round and conical-seeded cardamoms are the products of two species, but Mr. Thwaites, after a careful comparison of growing specimens, is satisfied that the plants producing respectively the round and the long cardamoms of commerce are not distinct species, but merely two varieties of the present species. In every essential particular the structure is similar in the two plants, the only difference being that var. α which produces the round cardamom, is a little taller, with rather narrower and less firm leaves, and that its fruit is more aromatic as well as different in form from that of var. β. The seeds of both varieties are used by the Singhalese to chew with their betel, and as medicines.

The long cardamom called Ensal in Ceylon grows wild in the Ceylon forests up to 3,000 feet, but the round cardamom is there only a cultivated plant, and is called by the Singalese, "Rata-ensal." The wild or Ceylon cardamoms are of less value in the market than those of Malabar. See Cardamom. *Thw. En. pl. Zeyl. p.* 318.

ELETTARIA FLORIBUNDA. *Thw.* A tree of the forests in the Ambagamowa district. *Thw. En. pl. Zeyl. p.* 219.

This is cultivated throughout India, and is the most productive of all Indian cereals. It is much eaten by the labouring people. Is extensively grown by the ryots in the Bangalore and Ashtagram divisions, and is the staple food of the inhabitants of Mysore; and though coarse in appearance, is a wholesome and nutritious grain. It is very indestructible; and may be preserved for about sixty years if carefully deposited in grain caves or pits. These pits are generally placed in hard dry ground. The pit is formed by digging a small hole of the size to admit a man, and as the hole descends, it is enlarged into a moderate sized circular room. After the pit is dug out, a large fire is lit in it to harden the sides. These stores are of inestimable value in moderating dearths, as the grain remains sound for very many years. The straw is a very good fodder for cattle, and it too keeps well. Owing to failure of rain, it may be high priced in Mysore; but there is no scarcity of that grain, large stocks of it being kept in the granaries of wealthy farmers. It is exported in large quantities, to Neilgherries, Salem, Bellary, Chittore, Madras, Trichinopoly, &c. When cheap, it sells in Bangalore at seven marcals or eighty-four seers for a Rupee; or if dear, $2\frac{1}{2}$ marcals or thirty seers. Ragi is usually sown in fields mixed with Buller, Togari, Hutchellu, Lave, Kari, Jola, Sasava, and Haralu. The drill consists of many reeds with holes, so that the whole of the seeds are sown through their respective holes in parallel lines. A fermented liquor is prepared from it called Bojali or Murwa, chiefly drunk in the Mahrattah countries as a drink in the Sikkim Himalaya, it seems more to excite than to debauch the mind. The millet seed is moistened and allowed to ferment for two days. Sufficient for a day's allowance is then put into a vessel of wicker work, lined with India rubber to make it water tight, and boiling water is poured on it with a ladle of gourd, from a large iron cauldron that stands all day over the fire. This fluid when quite fresh tastes like negus of Cape sherry, rather sour.—*Hooker, Him. Jour. Vol.* I *pages* 133—291.—*Madras Ex. Jur. Report. Dr. Cleghorn's Punjab Report. Dr. J. L. Stewart. Ainslie page*, 219.

Ragi,	HIND.	Maddi rubba chettu,	TEL.
Pedda sodi,	TEL.	Pedda chollu,	,,

This species is larger in size than E. coracana. It is cultivated in Southern India to a large extent, and like Dolichos uniflorus yields in favorable seasons more than a hundred-fold.

ELEUTH, a tribe of the Kalmuk, dwelling in Dzungaria. See Kalkas.

EL-FATTAHA, a town at the southern opening of the Hamrin Hills, at which the Tigris makes its exit from the hills.

ELFENBEIN. GER. Ivory.

ELGHAR OR YELGHAR. PERS. The forced march of an army or sudden incursion.

ELGIN. The Right Hon'ble James Earl of Elgin and Kincardine, K.T., G.C.B. and G.M.S.I., succeeded Lord Canningas Viceroy of India. He was born in London in 1811 and died and was buried at Dhurmsala in the Kangra valley of the N. W. Himalya, on the 20th November 186—? While Viceroy of India he was greatly aided by Mr. Maine and Sir Henry Durand.

EL HADHR, a town of Mesopotamia.

ELIJAH, also called Elias, a prophet of Tishbeh beyond the Jordan, in Gilead. The Ali Ilahi sect of Karund, revere him as an incarnation of the deity. A makan or resting place of Elias, exists on the borders of the Kassan and Sulmania governments of Kurdistan. The mahomedans believe that Elias never died, but is still on earth, awaiting the second coming of Christ. These views they derive from the Jews, who even took Christ for Elias. The mahomedans identify Elias with Khajah Khizr. A well and a chapel met with in the ascent to Mount Sinai are named after the prophet Elias, whom the Scriptures state to have sought refuge from the persecutions of Jezebel in the solitudes of Horeb. (See 2 Kings, xix.) Its presence in this situation, mentioned also by Edrisi, seems to be an argument of the identity of Gebel Musa with the Sinai of the Scriptures.—*Hamilton's Sinai Hedjaz and Soudan, pp.* 28-30. See Karund, Khizr. Kidder.

ELIM, in Phœnicia, a general name of God.

ELIM, in Numb. xxxiii. 10, it is mentioned "they removed from Elim, and encamped by the Red Sea." Wellsted (*Travels II p.* 44) supposes Girandel, where there is still water and palm trees, to be Elim.

ELIMITCHAM MARAM. TAM. Citrus bergamia.—*Risso.*

ELIMITCHAM PALLAM. TAM. Citrus aurantium. Limes.

ELIOTT, Daniel, a Madras Civil Servant, who served many years as secretary and subsequently as member of the Madras Board of Revenue, was a member of the Law Commission, to frame Laws for India; a member of the Council of Madras; and member of the Legislative Council of India for the Madras Presidency.

ELIUN, also Helyun, the Most High God of the Egyptians: higuthan kabiri.

EL-KASR. A lofty, extensive, but disturbed mound in Babylon, known by the name of El-Kasr, or the palace; supposed by some to have been the site of the royal palace of Nebuchadnezzar, and the hanging gardens of his queen Amytis. p. 13.

ELK-UL-BUTM. HIND. Pistacia terebinthus.

EL KUSH, an ancient town of Babylonia, its ruins are 11 miles E. S. E. of Felujah. The ancient kingdom of Babylonia comprehended a narrow tract along the river Euphrates, extending from the neighbourhood of Erech, or from about the modern town of sheikh-el-Shuyukh, to Babel, a distance of about 154 miles in a direction westward of North, and continuing from thence 287 miles further, in the same direction to Kalneh, on the Khabur. The kingdom extended eastward till it joined Assyria, including Akad, and two other cities no less remarkable. One of them bears the name of El Kush, extensive ruins about 11 miles E. S. E. of Felujah, and the other is the supposed site of antediluvian Sippara, Siferah of the Arabs, (Lieut. Lynch,) which is within the Medina wall, near the southern extremity.

The ell measure is taken from the length of the fore-arm. Aratni, Sansc. is the short ell measure.

ELLA, in hindu mythology is the mother of the Lunar race,—Ella is the earth personified.

Eartha of the Saxons; the Greeks; Ard in Hebrew. She is sometimes described as the daughter, sometimes as the sister of Icshwacu and married to Buddha. In the hindu mythology, according to Colonel Tod, the serpent (Budha) ravished Ella, daughter of Icshwacu, the son of Manu, whence the distinctive epithet of his descendants in the east, *Manus*, or men, the very tradition on an ancient sculptured column in the south of India, which evidently points to the primeval mystery. He says that in Portici there is lingam entwined with a brazen serpent, brought from the temple of Isis at Pompeii, and many of the same kind, in mosaic, decorate the floors of the dwelling-houses and that there are wreaths of lingams and of the yoni over the door of the minor temple of Isis at Pompeii while on another front is painted the rape of Venus by Mercury. The lunar race, according to the Purans, are the issue of the rape of Ella by Budha.

ELLAHNEEL. Tam. In Travancore, a small tree, with a light red coloured wood, specific gravity 0·779, used for temples, pagodas, and furniture.

ELLAKERRI. Singh. Milk.

ELLAKULLI. Tam. Maleal. Euphorbia nivulia.—*Buch.*

ELLA KURA. Tel. Also Ilakura. Tel. A pot herb, perhaps a species of Salsola.

ELLANDE. The Malayala name of a Malabar tree which the natives use for general purposes. It produces a fruit from which they extract a sweet scented oil, which is used medicinally; and also for the hair of the women in days of ceremony.—*Edye Forests of Malabar and Canara.*

ELLEE WANDERU. Singh. Presbytes thersites, a Ceylon monkey.

ELLENBOROUGH, Earl of, Governor General of British India in 1841. He arrived in India at the time that the Indian Army was holding Cabool. He was recalled by the Court of Directors, but the reasons for his dismissal of their service, were never divulged.

ELLICHPORE, a town in East Berar still of considerable size, though greatly decayed. A military cantonment is near of the same name.

ELLIOT, Charles Morgan, Captain, Madras Engineers, *Obit.* 1853? brother of Sir Henry Elliot, employed from 1846 to 1849 in the Magnetic Survey of the Indian Archipelago. In this duty he visited Moulmein, Madras, Nicobar, Sambuanga, Penang, Pulo Dinding, Borneo, Celebes, Pulo Penang, Singapore, Carimon, Pulo Buaya, Sumatra, Batavia and the Kokos or Keeling islands. *Elliot's Magnetic Survey.*

ELLIOT, Sir Henry Miers, K.C.B., one of fifteen children, of Mr. John Elliot, of Pimlico Lodge Westminster. He was born in 1808, was educated at Winchester School, and Oxford from which he passed into the Civil Service of the E. I. Company in Bengal and twice filled the post of Foreign Secretary. He died at the Cape in 1853, aged 45. He published in 1846 a Supplementary Glossary of Indian terms, an Index to the Mahomedan historians of India, 4 vols., and collected M.S.S. materials for a history of India which Professor Dawson and Mr. E. Thomas commenced to edit. (Calcutta Review on No. xxiv.) He was possessed of a vast store of information which his early death prevented him giving to the public. The posthumous work is entitled History of India as told by its own historians, edited by Professor John Dawson, M. R. A. S., Staff College, Sandhurst, and the volumes that have already appeared are of great value.

ELLIOT, Sir Walter, K.C.S.I., a member of the Madras Civil Service, 2nd member of Council at Madras and President of the Revenue and Marine Boards. Employed as a Revenue Officer, first in the Southern Mahratta country; subsequently as member of the Board of Revenue of Madras from which he was deputed as Revenue Commissioner, North Sircars, returning to Madras in 1855, to the Council. He contributed the following papers to the scientific Journals. On Hindu Inscriptions, Lond. As. Trans. vol. iv. 1;—Catalogue of Mammalia in the Southern Mahratta Country; Mad. Lit. ELLORA in L. 20° 2′ N., L 75°, 11′ E in the Dekhan, N. W. of Aurangabad. The entrance to the caves is 2,064 feet above the sea. It is called by the people Yerula and is near Roza in the Dowlatabad province of the Dekhan. The plateau of Roza, in the face that looks into the valley of the Godavery is scarped and the porphyritic greenstone amygdaloid rock has been excavated into great caves, and dwellings about 13 in number. Those of Dhumnar and Ellora, contain a strong admixture of brahmanism, and those of Elephanta are entirely brah-

manical though perhaps of the same age as those of Ellora. The plan of their excavation is the same as those of Adjunta, Salsette and Junir, and the Dherwarah at Ellora, is very fine. The pillars of Adjunta, Elephanta and Ellora have similar cushion capitals, the Indra Subha group at Ellora is either of brahminical or Jaina origin.

ELLORE, in Lat. 16° 44′; 81° 7′; E. is to the west of the Kolar lake in the Northern Circars. It is but little elevated above the sea, and is a Civil and Military Station of the Madras Presidency. It is called by the natives Upu, or salt, Ellore, to distinguish it from Rai (or stony) Ellore, the Vellore of the maps.

ELLU. CAN. Gingelly seed.

ELLUPA. TAM. ELLUPI. MALE. Bassia longifolia.

ELM. ENG. Alah. HEB. See Alnus.

ELMYUS. See Carex arenaria.

ELOHIM, God is sometimes so called, in the Bible, the meaning being Godhead, or Gods; also called, Jahvah (pronounced Jehovah.) But the word, was not spoken. Adonai, the Lord being used instead. Gen. II, 3 alone uses Jehova. Elohim, is the Eternal Lord.—*Bunsen*, IV 379.

ELOOPAY. TAM. In Tinnevelly, a wood of a red colour, used for building in general.

ELOOPEI POO. TAM.

Mohè ka phul,	DUK.	Iluppam pu,	TAM.
Maduka,	SANS.	Ippa puvvu,	TEL.

The dried flowers of Bassia longifolia, resemble grapes, are largely used in distilling arrack.

ELOOPU or Elupe Maram. TAM. The Malayala name of a tree which grows to fifty feet in height, and two and a half feet in diameter. It is said to be a useful timber, and is found to be durable in native vessels for planks, beams, &c. It produces a fruit from which an oil is extracted, which is used for lamps and other purposes.—*Edye*, M. *and C.* (This seems the Bassia longifolia.)

ELPHINSTONE, the Hon'ble Mount Stuart, a civil servant of the East India Company, who went as Ambassador to shah Shuja-ul-Mulk, king of Afghanistan. In 1802, shah Mahmood was driven out by Sujah-ool-Mulk, the younger brother of Zeman Shah, and Shah Shuja was still in possession of the undivided empire of Ahmed Shah at the time of Mr. Elphinstone's mission in 1808. This mission was sent for the purpose of concerting with Shah Sujah the means of mutual defence against the threatened invasion of Affghanistan and India by the Persians in confederacy with the French. Mr. Elphinstone had scarcely left Cabool ere Shah Shuja was driven out by Shah Mahmood with the aid of Futteh Khan. He was afterwards Resident at Poonah, while the last Peshwa, Baji Rao, was ruling the Mahratta states, and subsequently was Governor of Bombay. Author of report on the territories conquered from the Peshwa, Calcutta, 1821. Cabool. Lond. 1815; 2nd edn. 1825; 2 vols.—History of India, Lond. 1841, 2 vols. 8vo. Ob. 1860. He is the most judicious and impartial of all Indian Historians.—(*Dr. Buist's Catalogue.*)

ELPHINSTONE, Lord, Governor of Madras, 1836 to 1840. Governor of Bombay during the period of the revolt of the soldiery of Bengal during which some of those of Bombay also were implicated, died 19th July 1860.

EL-SHAM-I-SHARIF, also Sham, the eastern names of Damascus.

EL-SHARK, "the East," the popular name in the Hejaz for the western region as far as Baghdad and Bussora, especially Nijd. The latter province supplies the Holy Land with its choicest horses and camels. The great heats of the parts near the Red Sea appear prejudicial to animal generation; *Burton's Pilgrimage to Meccah, Vol. II. p. 4.*

ELTA-ZYE, a branch of the Kambarari tribe who occupy Bagban in Baluchistan.

ELTHARIAH, descendants, more or less pure, of Rajpoots and other Kshatriyas of the plains, who sought refuge in the Nepal mountains from the mahomedans, or merely military service, as adventurers. The Elthariah speak only the Khas language.

ELUKA JIDI CHETTU. TEL. A plant resembling mint eaten in times of dearth; perhaps Hydrocotyle rotundifolia or Marsilea dentata.—*Roxb.*

ELUTH, also called Sangariam, a Mongol tribe whose mode of life in habitations, food and drink, resemble those of the Kirghis. Along with the Torgat, Kalkas and Khoit, they occupy the country about Lake Koko Nor. See Kalkas, Kirghis.

EL UZZ a town of Mesopotamia.

ELWA. HIND. Aloes, also the plants Aloe indica and A. perfoliata.

ELYAN. HIND. also Ayar. HIND. Andromeda ovalifolia.

ELYMAIS, according to De Bode, is the modern Tengi-Saulek in the province of Pars or Fars. The name according to Professor Max Muller has been derived from Ailama, a supposed corruption of Airyama. The Persians, Medians, Bactrians, and Sogdians all spoke, so late as the time of Strabo, nearly the same language, and we may well understand, therefore, that they should have claimed for themselves one common name, in opposition to the hostile tribes of Turan.

And when, after years of foreign invasion and occupation, Persia rose again under the sceptre of the Sassanians to be a national kingdom, we find the new national kings the worshippers of Masdanes, calling themselves, in the inscriptions deciphered by De Lacy, "Kings of the Aryan and Anarian races;" in Pehlevi, *Irân va Anirân* in Greek, Αριάνων και Αναριάνων. Colonel Chesney says that Elymais or Sosirate was the capital of the province from which the hardy Cossæi spread their conquests over Susiana and the districts eastward. The Elymæans inhabited Mount Zagros, which is on the southern confines of Media and overhangs Babylon and Susiana. *Muller's Lectures, pp.* 226—229. *De Bode.* See Luristan.

ELYSIUM. See Yavana.

ELYTRA or wing sheaths of several of the beetles of India are highly lustrous and are articles of trade. See Beetle.

EM. Hind. Chenopodium album.

EMBELIA, a genus of plants of the natural order Myrsinaceæ, of which M. basæal M. nutans, M. ribes; M. robusta and M. villosa are known. The leaves and berries of M. basæal of the western coast of India are used in medicine. The berries of M. ribes are used to adulterate black pepper.

EMBLICA OFFICINALIS, *Gœrtn.*

Phyllanthus emblica, *Linn. Roxb. W. Ic.*

Myrobalanus emblica, *Bauhin.*

A crooked tree, almost the thickness of a man's body. It grows in the south of the Peninsula, in Canara, the southern Mahratta country, the Konkan, the Dekhan, in the forests of the Godavery and Circars, in Bengal, on the banks of the Jumna, the Panjab and eastwards in the Moluccas. The wood is hard and durable, is used for boxes, and for veneering: is good for well rings, does not decay under water, is well adapted for turning. The strongly astringent bark is used as a tanning material, and in dysentery and diarrhœa. The myrobalan fruit, can be pickled or preserved in sugar: native women consider the powder of the seeds to possess cooling properties and to be good for the hair, and use it mixed with either water or milk. The fruit is also used for making ink and to obtain a black dye.—*Voigt, Captain Beddome, Mr. Rohde, Dr. Cleghorn. Ib. Rept. on Kullu and Kangra. O'Shaughnessey. Voigt. Edye, Dr. J. L. Stewart, Honigberger*, 273.

EMBELIA PENTANDRA.

Ambut, Duk.

A scandent shrub with alternate, polished leaves; flowers in the cold season: fruit red, size of a currant.—*Riddell.*

Wai-warung,	Hind.		
Visha-al,	Maleal.		

A scandent shrub growing in the Peninsula of India and at Sylhet. Its berries are pungent and used to adulterate black pepper. They are stated to be anthelmintic and cathartic. *Riddell. Voigt. Birdwood. Cat. Ex.* 1862.

EMBELIA RIBESOIDES. Linn. Syn. of Embelia ribes.—*Burm.*

EMBROIDERY. The art of embroidery is one consonant with the habits of the people of India; their patience and delicate handling render success certain, and there is, says Dr. Royle (*Arts of India p.* 506—507), scarcely a town or city where creditable embroidery cannot be found. Delhi is a great place for embroidered fabrics both in silk and gold threads. In Lahore and Amritsar the manufacture of "kalabatun," or gold thread, is extensively carried on. And Benares has long been famed, for gold and silver threads and also for its beautiful brocades. The art of embroidery was known and practised with great skill, in ancient times, in Egypt, Assyria, and Persia. The Israelites learnt the art before their exodus, the Babylonians were famed for their rich tapestries, and the Assyrian monuments display richly embroidered robes and trappings. Many parts of India are famous for this art "*Zardozi.*" "From Dacca" says the Abbe de Guyon, writing in 1744, as quoted by Dr. Taylor, "come the finest and best Indian embroideries in gold, silver or silk; and those embroidered neckcloths and fine muslins which are seen in France." There has always been a demand for such scarfs for the markets of Bussora and Java. In the present day they have silks and woollens, muslins and nets, Cashmere shawls, European velvets embroidered with silk or tussur, that is, wild silk of either floss or common twisted silk thread: or with gold and silver thread and wire in great variety. The cloth

to be embroidered stretched out on a horizontal bamboo frame, raised about a couple of feet from the ground, and the figures intended to be worked or embroidered are drawn upon it by designers who are generally hindoo painters. On woollen cloths, however, the outlines are traced with chalk and on muslin with pencil, and the body of the design copied from coloured drawings. The embroiderers, seated upon the floor around the frame, ply the needle by pushing it from, instead of towards them. In place of scissors they commonly use a piece of glass or China ware to cut the thread. Among the embroidered articles at the Exhibition of 1851, those from Dacca and from Delhi were probably the best known. In Delhi, small shawls and scarfs are chiefly embroidered both with floss and twisted silk; in Dacca both nets and muslins, with floss silk of various colours. But Dacca is also famous for its embroidery of muslins with cotton, which is called chikankari or chikandozee One kind is "formed by breaking down the texture of the cloth with the needle, and converting it into open meshes." Dr. Taylor states that "Kashida" is the name given in Dacca, to cloths embroidered with muga silk or coloured cotton thread; and though generally of a coarse description, gives occupation to a number of the mahomedan women of Dacca. Though the scarfs of both Delhi and of Dacca, are much admired, it has been suggested by a lady, that muslins or nets, worked so as to be suitable for making ball-dresses, would probably be in great demand, as those which are now sold in Britain for such purposes are very inferior in taste and elegance to the Indian embroidery. The beetle-wing embroidery exhibited in 1851 from Madras was particularly elegant: and the velvet awnings, musnud covers, hookah carpets, and elephant trappings, embroidered with gold and silver, chiefly at Moorshedabad and Benares, were admired as well for richness as for the skill with which the ground-work was allowed to relieve the ornaments. The embroidered saddles and saddle-cloths, and floor-coverings from Pattiala, Mooltan, and Lahore, were of the usual style of what are called the works of that famed valley, and which was conspicuously shown in the dresses, caps, and slippers from Cashmere itself. But that the skill and taste are not confined to one part of India was also to be seen in the table-covers from Tatta in Sind and in the embroidered boots from Khyrpoor, which Mr. Digby Wyatt illustrated. The skill of the Chinese says Mr. Williams, (*Middle Kingdom, Vol* ii, *p* 123,) in embroidery is well known, and the demand for such work to adorn the dresses of officers and ladies of every rank, for embellishing purses, shoes, caps, fans, and other appendages of the dress of both sexes, and in working shawls, table covers, &c., for exportation, furnishes employment to numbers of men and women. The frame is placed on pivots, and the pattern is marked out upon the plain surface. All the work is done by the needle without any aid from machinery; there are many styles of work, with thread, braid, or floss, and in one of the most elegant, the design appears the same on both sides, the ends of the threads being neatly concealed. This mode of embroidery seems also to have been known among the Hebrews, from the expression in Deborah's song, (Judges v. 30). "Of divers colors of needle work on both sides," which Sisera's mother vainly looked for him to bring home as spoil. In China, books are prepared for the use of embroiderers, containing patterns for them to imitate. The silk used in this art is of the finest kind and colors; gold and silver thread is occasionally added to impart a lustre to the figures on caps, purses, and ladies' shoes. A branch of the embroiderer's art consists in the formation of tassels and twisted cords for sedans, lanterns, &c.; and in the knobs or corded buttons worn on the winter caps, made of cord intertwisted into the shape of a ball. Spangles are made from brass leaves by cutting out a small ring, by means of a double edged stamp, which at one drive detaches from the sheet a wheel-shaped disc.; these are flattened by a single stroke of the hammer upon an anvil, leaving a minute hole in the centre. Another way of making them is to bend a copper wire into a circle and flatten it. The needles are very slender, but of good metal; in sewing, the tailor holds it between the forefinger and thumb, pressing against the thimble on the thumb, to push it into the cloth.

In Southern India this art is practised, chiefly, at the towns of Tanjore, Madras, and Secunderabad. The Tanjore, and Madras works are very superior in quality and consist of a variety of fancy articles of great merit particularly pocket handkerchiefs, worked muslin dresses, scarfs which show great taste in the patterns and beautiful finish.

Embroidery in Gold and Silver is an art which furnishes some of the most gorgeous and expensive manufactures for which India has been long celebrated. In the taste and judgment evinced in the blending of brilliant colors and contrasting them with gold and silver on grounds of velvet, satin, silk, or

muslin, India in this manufacture, stands unrivalled. Some are very gorgeous shamianahs and elephant saddle cloths.

The gold and silver fancy fringes of Hyderabad are deserving of mention. Small samples of solid silver wire fringes and ornaments from Madura were deemed worthy of notice, but they are surpassed by the silver thread of Hyderabad.

In the embroidered fabrics in India, it may be mentioned, as a principle, that their patterns and colours diversify plane surfaces without destroying or disturbing the impression of flatness. They are remarkable for the rich diversion shown in the patterns, the beauty, distinctness and variety of the forms, and the harmonious blending of several colours. The oriental races have ever been celebrated for their skill in this art of embroidery which appears to have been practised in Assyria and introduced from thence into India. Pliny, however, mentions that it was a Phrygian invention and in Rome embroiderers were called Phryigiones. In Babylon, clothes were woven of different colours and called Babylonica. During the early part of the middle ages, Europe obtained its most important embroideries from Greece and the East. *J. B. Waring Master pieces of Industrial Art. Exh. of* 1862. *William's Middle Kingdom, Vol.*, ii. *p.* 123 *Royle, Arts of India, &c., p.* 506—507.

This precious stone has been known from the most ancient times. It is mentioned in Exod. xxviii, 18; in Tobit, Judith, Ecclesiastes, and Ezekiel. The famous emerald mines in Jabl Zabarah in Egypt—the Smaragdus Mons of the ancients—were worked 1650 B. C., in the time of the Great Sesostris II, by extensive galleries. They were again worked in the early part of the reign of Mahomed Ali pacha, and recently a British Company undertook them. The mines (*Bunsen's Egypt*, ii. 303) were on the Kosseir road from Koptos to Aennum (Philoteras). Wellsted thinks (*Trav.* ii, 323), that the locality indicated by Bruce was the island of Wadi Jemal, and that the Arabs had so called it, because of its proximity to the only emerald mines on the adjacent continent. Emeralds are now obtained in Egypt, Germany, from the Altai Mountains; the finest from New Grenada where they occur in dolomite, and, as is said, in India. The colour is peculiar, and called emerald green. The glass of bottle bottoms is, however, largely sold in Ceylon and other places as emeralds. Emeralds are rarely without flaws, " Rag," *Hind.* and, with the hope of deceiving, the manufacturers aware of this, make the false emeralds, with flaws. Of all precious stones, the emerald is most liable to defects, called flaws, and their absence should excite suspicion as they can be very easily imitated.

The Ural and Altai mountains have latterly furnished the finest emeralds: an inferior kind comes from Sakyat in Egypt. The localities in Coimbatore, which supply the beryl, are also supposed to have yielded the emerald, though Tavernier was not able to ascertain that, in his days, any part of India was yielding them. Tavernier (*Travels* p. 144) says "as for emeralds, it is a vulgar error to say they came originally from the East. And therefore when jewellers and goldsmiths, do prefer a deep coloured emerald inclining to black, tell ye, it is an oriental emerald, they speak that which is not true. I confess, I could never discover in what part of our continent those stones are found. But sure I am, that the Eastern part of the world never produced any of those stones, neither in the Continent, nor in the Islands. True it is, that since the discovery of America, some of those stones have been often brought rough from Peru to the Philippine Islands, whence they have been transported into Europe; but this is not enough to make them Oriental. Besides that, at this time they send them into Spain through the North Sea."—(*Tavernier's Travels, p.* 144.)

Pliny says, that in his time the best came

from Scythia. Mawe, on diamonds, quoted by Macculloch, says, that for the last two centuries Peru has been the only country known to yield emeralds. The beryl, is no doubt found in Siberia, which may have given rise to Pliny's statement. Many gems are imported from Ceylon, where the ruby, amethyst, topaz, sapphire, and cinnamon stone are found in great abundance, but not emeralds. Many emeralds come fromRussia, Siberia, and Central Asia to India.

The *beryl* of which mineral many of the stones used as emeralds, in India, consist, occurs in the Siberian Altai range; a number of these gems also come from Khatan, Ilchi, and the Chinese provinces. Natives of India say they are found in gold mines, and take 20 years to come to perfection. They are called "Zamrad," or "Zabrjad," and in Punjabi "Panna," the most esteemed colors are the "Zababi," next the "Saidi" said to come from the city Saidi in Egypt. "Raihani," new emeralds; "fastiki," old emeralds, that is, such as have completed their 20 years; "Salki," "Zangari" color of verdigris, "Kirasi," and "Sabuni."

Prismatic corundum or chrysoberyl, says Dr. Irvine, is found among the Tora hills near Rajmahal on the Bunas, in irregular rolled pieces, small and generally of a light green colour: these stones are considered by the Natives as emeralds, and pass under the name of "punna," but the natives are aware that they are still softer than the real emerald of India, which is generally green-coloured sapphire. (*Gen. Med. Top. page* 160.)

The finest beryls (aquamarines), says Mr. Tomlinson, come from Siberia, Hindostan, Brazil. In the United States very large beryls have been obtained, but seldom transparent crystals: they occur in granite or gneiss. A reputed beryl of large size mentioned in most books on minerarogy has recently been discovered to be a lump of quartz.—(*Tomlinson.*)

Aquamarine includes clear beryls of a sea-green, or pale bluish, or bluish green tint. Hindoos and mahomedans use them pierced as pendants and in armlets. The emeralds met with in modern times do not often exceed the size of a walnut; some, however, of a larger size have been found—but such instances are rare. A crystal in the cabinet of the Duke of Devonshire, measures in its greatest diameter 2⅝ths inches nearly; its lesser diameter barely 2 inches; its 3rd diameter 2⅛th inches; the extreme length of the prism is 2 inches. It contains several flaws, and is therefore only partially fit for jewellery; it has been valued at more than 500 guineas. A more splendid specimen, weighing 6 ounces belonging to Mr. Hope, cost 500*l*. Both these specimens were exhibited in the Great Exhibition. Emeralds of less beauty, but of very large size, occur in Siberia. One specimen in the imperial collection of Russia measures 4½ inches in length and 12 in breadth. Another is 7 inches long and 4 broad and weighs 6 lbs. Mr. Powell has seen a flat tablet of emeralds, full of flaws, but otherwise of good color, nearly 2½ inches square, worn as an amulet, and engraved all over. The maharaja of Kapurthalla possesses a large oblong emerald of this kind, and the maharaja of Pattiala has a round emerald of enormous size. Sometimes emeralds have flaws of intervening talc or sand. It is believed that a fly will not settle on this gem. Most of the emeralds commonly in use, in India, are smooth, cut and bored like beads; they are always full of flaws, and this seems so much the custom that a very good mock emerald which Mr. Powell has is made with flaws—as if sure to be detected otherwise.—*Powell Handbook. Econ. Prod. Punjab, p.* 49. *Tavernier's Travels, p.* 144, *Bunsens' Egypt* ii, 303. Wellsted's Travels ii, 323. *King. Powell, Hand Book. Irvine, Med. Top. of Ajmer. Tavernier's Travels. Emeri,	Fr.	Smerglio,	It.
Emeril,	,,	Smiris,	Lat
Smirgel,	Ger.	Nashdak,	Rus.
Smeregio,	It,	Esmeril,	Sp.

This substance is greatly used in the arts for grinding and polishing hard minerals and metals. Corundum and its varieties, viz., sapphire, corundum, and emery are only surpassed in hardness by the diamond. Emery is regarded as granular or amorphous corundum, coloured with iron, and is not known to occur in India, where corundum is used by the people in its place. It is principally imported into Britain from the island of Naxos in the Grecian Archipelago, and was found by Mr. Smithson Tennant to consist of Alumina, 86, Silica 3, Oxide of Iron 4. Total 93. It occurs likewise in Italy, Spain, and Saxony; and it is said, in small quantities, also, in Wicklow, Ireland. In the mixed corundums of Greece and Turkey the iron seems equally diffused through the mass imparting to it a bluish grey colour; but in specimens which reached the Madras Museum from Southern India the corundum and ore of iron, though occurring together, are not mixed, but remain apart, segregated, the corundum forming one side of a mineral and the oxide of iron, in a lump or lumps on

the other side; and all such masses are magnetic and possess polarity. Of the different varieties of emery used in the arts that of Naxos is still preferred, as it is more uniform in its quality than that from Pulah and Gumuch. That from Naxos is of a dark grey colour with a mottled surface and with small points of a micaceous mineral disseminated in the mass. It frequently contains bluish specks or streaks which are easily recognised as being pure corundum. When reduced to powder it varies in colour from dark grey to black, but the colour of its powder affords no indication of its commercial value. The powder of emery examined under the microscope shows the distinct existence of the two minerals, corundum and oxide of iron. The specific gravity of emery is about 4, but its hardness is its most important property in its application to the arts. The only difference in corundum seems to be the absence of oxide of iron. In Europe where machinery is so available, there could be no difficulty in preparing corundum powders of the requisite degrees of fineness. The selling price of Corundum in London has been from £10 to £25 a ton. There seems no reason why the picked corundums should sell for less than the finest emeries, and Captain Newbold mentions that the corundums near Gram, when sorted into the three sorts known in commerce, viz., the red, the whites, and the scraps, of these two are sold to the Arab merchants at Mangalore and Tellicherry at prices from twelve to fifteen or thirty rupees the candy equal to £4, £6, and £12 a ton.—*Madras Museum Report.* See Corundum.

ENAM. Hind. Pers. Grants or gifts generally of land and commonly in perpetuity for charitable purposes. A jaghire is usually an assignment of lands for service; or as a pension. Altumgha, is an estate in perpetuity for service, or free, as expressed in the deed. *Malcolm's Central India, Vol.* ii. 62.

ENAMEL.

Enamel,	Hind.	Schmelz,	Ger.
Email,	Fr.	Smalto,	It.

An enamel in the arts is an artificial vitreous mass the same as a paste, ground fine, then mixed with gum water and applied by a brush, and fixed by fusion. The art of fixing colours by melting in fire, says Dr. Royle, (*Arts of India, p.* 475-6) is of very ancient date: it was practised by the Egyptians, and carried to a high degree of perfection in Persia. The art is known in every part of India, and some exquisite specimens were sent to the Exhibition of 1851, both from Central and from North-western India. It is chiefly employed in ornamenting arms and jewellery, not only in gold, but also in silver.—(*Royle, Arts, &c., of India, page* 475.) Enamels being vitrifiable substances, to which peculiar colours are given, we may compare the Indian with the European methods of making enamel. In general, ten parts of lead and three parts of tin are oxidized by continued heat and exposure to air. To the mixed oxides add ten parts of powdered quartz, and ten parts of common salt, and melt in crucibles. Thus is obtained a white enamel, and the basis of coloured enamel, metallic oxides being added. The oxide of lead or of antimony produces a yellow enamel: reds are obtained by a mixture of the oxides of gold and iron. The oxides of copper, cobalt, and iron, give greens, violets, and blues; and a variety of intermediate colours by mixtures. The workmen of Behar are stated to make two enamels, which are applied to the surface of some of the rings. One is yellow: five parts of lead are melted in a shallow crucible, and to these is added one part of tin; and the alloy is calcined for four or five hours. It is then heated to redness in the crucible of the glass-furnace. One part of white quartz is next added, and the mass stirred about for three hours. It is then taken out with a ladle, poured out on a smooth stone or iron, and cooled in water. They then take one part of their palest green glass, and add a fourth part of the other materials, to make the yellow enamel. The green enamel is made in the same manner; and to the melted glass is added, not only the prepared lead and tin, but a small portion of the black oxide of copper. In Mysore they make a bright yellow enamel, by first calcining five parts of lead and one of tin, then adding one part of zinc, calcined in a separate crucible. When these begin to adhere they are powdered in a mortar. When the maker of glass-rings is at work, he melts some of this powder, and while the ring is hot, with an iron rod applies some of it in powder to the surface of the glass.—(*Royle, Arts of India, page* 476.)

ENAMEL.

At the Exhibition of 1862, a Jewel-enamelled ankus or elephant goad was contributed by H. H. the Rajah of Jeypore where the finest enamelled work of India is produced, and considered of great artistic merit. The enamellers there, came originally from Lahore. Their enamel is a kind of glass made in earthen vessels, and when fused the colouring matters are added; the whole is then allowed to cool, and in this state is kept for use. Only pure silver or gold articles are enamelled. From the silver, the enamel may come off in course of time; but it never does from the gold. All good enamel is consequently only applied to gold, which must be free from alloy, or otherwise it would tarnish by contact with the enamel in the great heat to which it is subsequently exposed. The gold is first carved of the required pattern; the enamel, having been ground to an impalpable powder, and made into a paste with water, is then placed on the exact spot required by the pattern. The article is then strongly heated, much skill being required to take it out at the precise moment when the enamel is thoroughly fused, but before the colours begin to run into one another. As soon as removed, the workmen then exert the full power of their lungs in blowing upon it as quickly and as violently as possible. The hardest colours are first placed in the furnace and fused and then those which melt more easily. Afterwards, the whole is ground and polished. The enamelled work of Jeypore is very highly valued, and can only be procured through H. H. the Rao of Jeypore himself, by whom the workmen are employed. The artisans themselves form a small family, and the real process of enamelling is kept by them as a secret, which descends from father to son like an heirloom.

Enamelling, as applied in India to jewellery, consists of an extremely fine pencilling of flowers and fancy designs in a variety of colours, the prevailing ones being white, red, and blue, and is invariably applied to the inner sides of bracelets, armlets, anklets, necklaces, carrings, surpech, tiara, and all that description of native jewellery, the value depending upon the fineness of the work, and often exceeding that of the precious stones themselves. In general the cost is moderate, as the finest specimens are only made to order. The best come from Benares, Delhi, and the Rajpootana states. In the South of India,

the manufacture of enamels on articles of domestic use like the above is almost entirely restricted to Hyderabad. It presents no varieties, but in general consists of a blue coating interlined with white on a surface of silver, and is applied to rose-water sprinklers, spice boxes, basins, and such like articles. The merit of the manufacture lies in the simplicity of the enamel itself, and in the lightness of the silver article to which it is applied. Though pleasing, it is the coarsest enamel produced in India. At Indore in Central India, the manufacture does not constitute a regular trade. It is invariably applied to articles of personal decoration such as necklaces, armlets, brooches, earrings, &c., which are set by native jewellers, according to the taste of the purchaser. These subjects generally consist in a representation of the avatars, or pictures of the metamorphoses of Indian deities; and the work is so perfect that it will stand, not only the influence of climate, but even rough handling.

The specimens of this kind of work have no fixed market value, and the price is, therefore, entirely dependent upon the number of competitors that may be in the field when any of them are offered for sale. A set of these ornaments, consisting of a necklace, earrings, two armlets, and a brooch, in plain gold, contributed to the Exhibition of 1851, was valued at 1,700 Rupees or £170. A duplicate, forwarded to the Paris Exhibition in 1855, was purchased for 600 Rupees or £ 60.—*Report of Exhib.of* 1862.*Royle, Arts of India, pp.* 475-6.

ENCAJES. Sp. Lace.

ENCENS. Fr. Frankincense. Olibanum.

ENCEPHALARTOS, a genus of the Cycadaceæ, their fruits are called kaffir bread. See Cycadaceæ.

ENCHINUS ARBOREUS. Syn. of fruit of Durio zibethinus. (*Qu.* Echinus ?)

ENCRE. Fr. Ink.

ENDE, a place resorted to by the Bughis traders. See Sumba.

ENDIVE, Cichorium endiva. Said to be a native of China. Used as salad, they are blanched by the leaves being tied together. *Jaffrey.*

ENDOR, the town of an Obi woman, mentioned in Scripture. See Ophis. Serpent.

ENDRA, Hind. Hiptage madablota.

ENG. Burm. In Amherst, a wood used for boat-building. Tree produces oil. It is a strong, heavy, useful, grey wood, suited for beams, piles, and the like.

ENG—BENG. Burm. In Tavoy, a strong wood used for common carpentry.

ENGELHARDTIA, Lesch, a genus of plants first discovered in the Malayan Archipelago, but since found in the Himalaya; to it belong Dr. Roxburgh's Juglans pterococca. E. Leschenaultii grows well in the plains of the North West Provinces but does not fruit. E. Colebrookiana is found as far north as Jurreepanee and in Nepal. E. Roxburghiana, in Silhet and at Chappedong. In Silhet it forms a large tree, the wood of which is valued by turners, and the bark, containing much tannin is considered the best used by natives for tanning. (Roxb). E. Wallichana is found as far south as Penang and Singapore.—*Royle Ill. Him. Bot. p.* 342. *Wall Pl. As Rar. t.* 208.

ENG-GYENG. Burm. In Amherst, a timber used for posts of religious buildings. A useful wood, but liable to split.

EN-GIE or IN-GIE. Burm. A white linen jacket used as an article of dress by Burmans. *Winter's Burma.* p. 54.

ENGLAND, the southern part of an island in Europe, which, with Ireland, another island on its west, forms the kingdom of Great Britain that now rules British India. It is said to have been known to the Arian hindus.

ENGLISH WOOL. See Shawl goat.

ENGRAULIS ENCRASICOLUS.

Anchovy,	Eng.	Anchois,	Fr.
True Anchovy,	,,	Acciughe,	It.

The anchovies of commerce met with in India are wholly imported. It is a small fish about four inches long with bluish brown back and silvery white on the belly. Very abundant in the Mediterranean, where, though occurring in other seas, they are chiefly caught at night, by nets, their heads immediately taken off, their entrails removed and pickled. Another Mediterranean species, E. meletta, is largely substituted for and mixed with the true anchovy. It is said to occur in the Bay of Bengal, and is one of the fish made into Balachang.

ENGRAULIS VULGARIS. See Engraulis encrasicolus.

ENGYSTOMA CARNATICUM, occurs at Dacca and Birbhum.

ENGRAVING. See Box. Buxus. Carving. Wood engraving.

ENGRAVINGS, to reproduce prints, engravings, writing, &c., take a piece of paper, dip it in a weak solution of starch, leave it to dry, and then moisten it with weak sulphuric acid. Afterwards take an engraving, put it over the vapour of iodine, and leave it there for the space of about five minutes, by which time the iodine will have fixed itself in every part that is black. Then take the iodized engraving, apply it to the

sheet of paper, press it for a minute or two, and the engraving is transferred, this can be done on steel, copper, and silver: and is a ready means of engraving. To engrave on copper or silver, put an engraving over iodine fumes, and then place it on the plate. If on copper, put it over the fumes of hartshorn or ammonia, wash it, and the engraving is produced. If it be silver, proceed as for daguerreotype, holding it over the vapour of mercury, and the engraving is produced, a more simple means is to put the engraving over the fumes of orpiment for a few seconds, place it on a plate of copper, press it, and the engraving sinks into it.

ENJI, the jacket worn by the Burmese with the Putso.

ENKASING. Hind. Berberis aristata.

ENKIANTHUS QUINQUEFLORUS. One of the flowering plants of China. On mountains from 1,000 to 2,000 feet above the level of the sea, this Enkianthus is found growing abundantly, and in great luxuriance, fixing itself on the crevices of the rock, in situations with very little soil. About the end of April or beginning of May, as the wet season begins the Enkianthus grows luxuriantly. It is always in blossom at the time of the Chinese new year, when its flowers are in great request in the south of China for the decoration of the houses, boats, and temples, just as those of the Nandian are in the north. In going up the river towards the Fa tee gardens, Mr. Fortune met boats in great numbers loaded with branches of peach and plum trees in bloom, enkianthus quinqueflorus, camellias, cockscombs, magnolias, and various plants which flower at this season. The enkianthus is brought down from the hills with the buds just expanding; and after being placed in water for a day or two, the flowers come out as healthy and fresh as if the branches had not been removed from the parent tree.—*Fortune's Wanderings, p.* 128 to 157.

ENKIANTHUS RETICULATUS, several species of Amygdala are cultivated in China for their flowers, and at new year's day, in Canton, the budding stems of the flowering almond, narcissus, plum, peach, and the enkianthus reticulatus, or bellflower, are forced into blossom to exhibit, as indicating good luck in the coming year. – *William's Middle Kingdom, page* 283.

ENGYSTOMA INTERLINEATUM. *n.s.* *E. Carnaticum*, Jerdon; *Bufo melanostictus*. The *Hylædactylus bivittatus*, Cantor, Hind-feet more webbed than in typical Engystoma; the belly and under surface of the thighs tuberculated; with also a few larger warts on the thoracic region. Length of head and body, 1½ in.; of hind-limb, 1⅓ in. Colour, a golden clay-brown above, with medial blackish vertical streak, diverging into two at the nape, which are continued to the base of each hind-leg, and when the hind-leg is closed it appears to be continued on to the limb. Limbs beautifully banded; the tarsi dusky posteriorly. Hab. Pegu.

ENHYDRA MARINA. See Hydridæ: Lutra.

ENNORE or KATIPAK, in lat. 13° 14′ N. long. 80° 20′ E. 9 miles N. from Madras, a small hamlet, on the southern end of the Pulicat Lake, a marine lagoon.

ENO. See Dyes.

ENOS. Aram. Adam and Enos the names of the first men. See Adam.

ÆOLUS. The chronicles of Eri describe Æolus as the chief of a Scythian tribe, who lived about 40 years after Moses i. e. 1368 to 1335 before Christ, he composed the chronicles of Eolus with the ancient traditions of his tribe.

EPEIRA, a great spider, found by Captain Sherwill, 1100 feet high, on the summit of Maruk, South of Monghyr. Some of the webs, including the guy ropes, were from 10 to 12 feet in diameter, the reticulated portions being about five feet, in the centre of which the spider, of a formidable size and very active, sits waiting for prey. In one web, was found entangled a bird about the size of a field lark, and eight young spiders feeding on the body. It was near the centre of the web, and its wings had been completely pinioned by the entwined web. The old spider sat about a foot above the bird. It was six inches across the legs and had a formidable pair of mandibles.—*Goss. Proc. Ent. Soc. November* 1, 1852, *p.* 239.

EPEROTIC and Illyrian, are branches of the old Indo-European stock of languages, See India p. 312.

EPHEDRA SAXATILIS; Asmani. Hind. A plant of Kaghan. *Cleghorn.*

EPHESUS, the chief town of Ionia, in Asia Minor, 45 miles south of Smyrna, famous for its temple of Diana. Amongst the mahomedans of the east, its story of the seven sleepers is continued, through the Koran. When the emperor Decius persecuted the christians, seven noble youths concealed themselves in a cavern, which was then blocked up with stones. They immediately fell into a deep slumber, which lasted for 187 years. At last the slaves of Adolius, removed some of the stones for building materials, on which the seven sleepers were aroused, and despatched Jamblichus, one of their number, to the city, to procure food; but the altered appearance of Ephesus, the age of the coin he presented to the baker, and his long beard, led to a discovery of the marvellous adventure. The bishop of Ephesus, the clergy and magistrates, visited the cavern, and, after conversing with the somnambulists, they quietly expired. James, a Syrian bishop of the fifth century, devotes a homily to its praise; and the seven sleepers are found in the Roman, Abyssinian, and Russian calendars. Mahomed introduced the tale in his Koran, as the companions of the cave, and says God caused them to turn over occasionally from right to left.—*Milner's Seven Churches of Asia, p.* 171, *Sale's. Koran, p.* 219.

EQUINOX. The Arab prince Albategnius stated the procession of the equinoxes to be 1° in 66 years.

ER. Hind. Prunus domestica.

ER. Tam. or Yer, a plough.

ERU. Hind. Manure.

ERA. Era and epoch generally mean the same thing. The Bengali and Vallaiti eras were established by Akbar. That of Bengal began on the 1st of the month Baisakh, 963 + 593=1556. The Valaiti-san was used in Orissa, where it was called the Aueli-san and began on the 1st of the month Aswin 963 + 592 A. D. 1555.

The *Alexandrian Era* was established commencing from the entrance of Seleucus Nicator into Babylon.

The Julian era was invented by Joseph Julius Scaliger about the middle of the 16th century. It is a period of 7980 years, arising from the multiplication of the Cycles of the sun, moon and indiction, or of the numbers 28, 19 and 15, its epoch commencing on the 1st January of the 706th year before the creation.

The *Mundane era* or era of creation, is the same as that of Alexandria, 4004 years before the Dyonisian or vulgar era. The Jews made it 243 years later or A. A. C. 3761 which is still the epoch of their mundane era.

The *kali yug* of the hindus, begins on Friday the 18th February and is for a period of 4,32,000 years of which 3101 had expired on the 14th March A. D. 1.

The *Era of Nabonassar*, 1st king of the Chaldæans, falls on Wednesday 26th February A. A. C. 747. Its year was of 365 days, without any intercalary day on the 4th year.

The *Olympiads*. A period of 4 years, the first of which began, it is supposed, with the nearest New Moon to the summer solstice, A. A. C. 776, being the 3938th year of the Julian period and 24 years before the foundation of Rome.

Vikramaditya was a prince of India who is supposed to have ascended the throne 57 years B. C. and the natives of Northern India count their luni-solar years from his accession.

Cesarian era of Antioch was established there in celebration of Cesar's victory at Pharsalia A. A. C. 47.

The Isberian or Spanish era dates from the conquest of Spain, in the year 715 of Rome.

Grahaparivrithi era of India, consists of 90 solar years. Its epoch is A. A. C. 24, and it is constructed of the sum of the products of revolutions of Mars (15) Mercury (22) Jupiter (11) Venus (5) Saturn (9) and Sun (1).

Constantinople era subsisted during the Greek empire, and in Russia, till the reign of Peter the Great.

Vrihaspati Chakra era of India is a Cycle of 60 of Jupiter's years.

Seleucidæ eras are two, the one reckoned from the date of Alexander's death A. A. C. 323, the second has its epoch 311 B. C. Both these were also called Syro-Macedonian. The people of the Levant and the Jews adopted it, the Jews calling it Tariq-Dilcarnaim and it is still in use amongst the Arabs.

Salivahana era. Salivahana was the son of a potter. He headed a successful popular movement and became the chief of a powerful monarchy in Maharashtra. He gave origin to a new era, which is still current in India. The era dates from A. D. 78, the supposed date of his death. It numbers the solar years, as the era of Vikramaditya numbers the luni-solar years.

The *Dioclesian era*, or Martyrs era, dates from A. D. 284, the year of that emperor's accession.

The *Hijira era*, dated from A. D. 16th July 622, the years are lunar.

There are two eras in Persia, viz., that of *Yezdejird*, iii. king of Persia dating from his accession 16th June A. D. 632 and that of *Malik-shah-Jelal-ud-din*, king of Khorassan, which dates from A. D. 1079, the date of his reforming the Yezdejird era. It is still in use in Persia, the Persian tropical year consists of 365*d*, 4*h*, 49′ 15″ 0‴ 48⁗ which is more correct than the Gregorian year.

The *Parasurama era* is current on the Malabar coast. At the birth of Christ 1176 years of the Parasurama era had expired, and the 1177th year began on the 17th August A. D. 1. Julian style.

The *ancient Jewish era* was composed of lunar years. Their *mundane era* is also of lunar years and its origin was in the 14th or 11th century.

Concurrence of Chronological Epochs at the birth of Christ, and Epochs of subsequent events referred to A. D. O. complete.

ERAGROSTRIS, Panicum, Pennisetum, Poa, Rotbellia, Saccharum, Vilfa, are the grasses of the Doab, only, perhaps, finer. *Birdwood quoting Royle.*

ERAMBOO. Tam.? A Travancore wood of a dark brown colour: used for common houses.—*Col. Frith.*

ERAN. Hind. also Erana, Andromeda ovalifolia.

ERANDAMU. Sans. Tel. Ricinus communis.—*Linn.*

ERANDI. Hind. The castor oil plant, its seed and oil, the small plant is called "choti erandi." The larger plant the "barri-erandi."

ERANDI. Hind. The name of the Tusser silk moth, so called because it feeds on the castor oil leaves.

ERI. Tam. A tank.

ERANTHEMUM, a genus of plants of the natural order Acanthaceæ of which E. cinnabarinum, E. montanum, E. pulchellum, and E. nervosum occur.

ERBSEN. Ger. Pease.

ERECH, a town near the Euphrates. See Kesra.

EREGATA AQUILUS. See Pelecanus.

ERIA OBESA. One of the most abundant of Tenasserim epiphytes, the flowers are small, and have little to recommend them.—*Mason.* Wight gives figures of E. pauciflora, polystachya, pubescens, and reticosa.

ERI BABUL. Hind. Mar. Species of Acacia, or varieties of Acacia arabica, also of Acacia farnesiana.

ERICENE-VEEJO. See Sakya muni. Hindoo.

ERICU. Maleal of Rheede. Calotropis gigantea. *Brown*

ERIKATA. Tel. Celastrus paniculata. —*Willd.*

ERIMPANA, also Shunda-Pana. Maleal. Caryota urens.—*Linn.*

ERINOCARPUS NIMMONII, one of the Tiliaceæ, the Jungle Bendy. A middled sized tree; flowers yellow in terminal panicles, appear in September and October. Fruit triangular, covered with bristles; angles somewhat winged, has a pleasing fragrance.—*Jaffrey.*

ERIOBOTRYA JAPONICA, *Lindl.*

Mespilus Japonicus, *Thunb.*		China of Bombay.?	
Yung-mai,	Chin.	Loquat,	Vernac.
Yang ma,	„		

This small tree of Japan and China, is now introduced all over the Deccan, and in the Punjab. It also grows in great perfection in New South Wales, and bears fruit twice in the year, and is highly esteemed both for deserts and preserves. The finest fruit is produced at the second crop, at the end of the cold season, and requires protection day and night; from birds in the former, and flying foxes in the latter. The fruit is of a yellow colour, with thin skin, a sweet acid pulp, one or two seeds in the centre—sometimes more. The seeds grow easily, and the fruit appears to be capable of great improvement. In Ajmere, it is cultivated in gardens but does not thrive well. It is very common in China and is often mentioned by Fortune, who found it growing at one place, along with peaches, plums, and oranges, and at another, with the Chinese gooseberry "Averrhoa carambola" the wanghee "Cookia punctata," and the longan and leeche.—*Tea Districts, pages* 7, 30, *Drs. Riddell, Irvine. Mad. Top, p.* 195, *Voigt, Clegh. P. R. p.* 81.

There are six species of this genus of plants, five of which are natives of America but all known by the name of wool or cotton trees. They are large trees, with a spongy wood which is used for little besides making canoes in the districts where they grow, and this one only grows in Asia and Africa. It attains a heigh of 150 feet or more, but there are two varieties described, the one growing in the East Indies and the other in Guinea, which differ chiefly in the colour of their flowers. The Indian variety *E. a. Indicum*, has flowers yellowish inside and white outside; whilst that of Guinea *E. b. Africanum*, has large crimson flowers. The Guinea tree is one of the largest and tallest of the forest trees and the trunk is employed for making the largest-sized canoes. In Ceylon, this is very common, up to an elevation of 2,000 feet. It is an elegant tree, common on the Coromandel Coast; the leaves fall during the cold season, and the blossoms appear in February before the leaves. It grows in many parts of the Deccan, but is not common on the Bombay side save in some parts of Khandeish. The trunk is perfectly straight. It is a light wood, is employed by the toy-makers or moochi race. It is likewise used for making rafts and floats. The seeds are numerous, smooth, black, and enveloped in a very fine soft silky wool.

The gum is termed *Huttian ka goud*, and is given in solution with spices in bowel complaints.—*O'Shaughnessy, p.* 227, *Ainslie's Mat. Med. p.* 208, *Drs. Gibson, Wight, Riddell and Cleghorn, Voigt, Thwaites.*

ERIOLÆNA, *Species.*

Dwa-nee, BURMESE.

This tree is not uncommon in British Burmah, but not very large: wood of a beautiful brick red color, tough and elastic, used for gun stocks, paddles and rice pounders. It is a wood well worth attention, the weight being moderate, a cubic foot weighing lbs. 47. In a full grown tree on good soil the average length of the trunk to the first branch is 50 feet, and average girth measured at 6 feet from the ground is 7 feet. It sells at 12 annas per cubic foot.—*Dr. Brandis.*

ERIOLÆNA, *Species.*

Chlo-ai-ni, BURM.

A tree of British Burmah. A red light wood, used like Dwa-nee, Eriolæna *sp.* for gun-stocks, paddles, and rice pounders, sells at 12 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex.*

ERIOLÆNA CANDOLLI, *Wall.*

H'twa-nie, BURM.

A tree of the Prome mountains. *Voigt.*

ERIOLÆNA HOOKERIANA.

Nara botku, TEL.

A strong hard Godavery wood—something like the Botku, a new species of Cordia—*Capt. Beddome.*

ERIOLÆNA TILIIFOLIA.

H'lwa-bo, BURM. | Let ɲan, BURM.

Grows plentifully throughout the Pegu and Tounghoo districts, attaining a height of fifty feet, with a girth of seven or eight feet sometimes, but usually about six feet. It is a strong tough timber, similar in its properties to Kydia. Wood white-colored, adapted to every purpose of house-building—*McClelland.*

ERIOPHORUM CANNABINUM. *Royle.*

Cotton Grass, ENG. | Bhabur, HIND.

Common in the Himalaya where it is twisted into twine and ropes. Its seeds are clothed at their base with a cotton like substance with which pillows are stuffed and candle wicks made *Royle, Fib. Pl. p.* 33-34. See Cotton Grass; Cyperaceæ.

ERIOPHORUM ALBINUM. See Eriophorum.

ERIOPHORUM COMOSUM. See Eriophorum.

ERIVAN, has been a province of Persia, ever since the conquests of Nadir Shah. It once formed a part of the kingdom of Armenia; and, hence, its native inhabitants are commonly called Armenians. To the north, and to the eastward as far as Karadagh, it bounds the present line of frontier occupied by the Russians; *Porter's Travels Vol.* p. 195.

ERSA. HIND. Iris florentina.

ERTHA, the German goddess of the earth whom Colonel Tod supposes to be the hindu Ella. The German *Ertha* had her car drawn by a cow, under which form the hindus typify the earth (*prithivi*). *Tod's Rajasthan, Vol.* i. *p.* 574.

ERU. Hind. Manure.

ERUA BOVII. Webb, this and E. Javanica and E. Scandens of Jussieu grow up to 3 and 4,000 feet in the N. W. Himalaya. The flowers have a sweet fragrance and the woolly fruit is used for stuffing pillows. *Dr. J. L. Stewart.*

ERUKU, also called Yerkal, and Yerkalvadu a migratory tribe in the peninsula of India, occupying themselves ostensibly as basket makers, and in fortune telling. But they are notoriously predatory and steal girls whom they devote to prostitution. They are found in mat huts on the outskirts of towns.

ERULAR, a low type of the Dravidian race occupying the lower skirts of the forests at the base of the Neilgherry hills. They are all of one class, but they arrange themselves into two clans, the Urali and the Kurutalei. They dwell in the clefts of the mountains and in the little openings of the woods. The word Eruli means unenlightened or barbarous, from the Tamul word "Erul" darkness and is the term applied to them by their neighbours. They sacrifice he-goats and cocks to Mahri, their deity, which is a winnowing fan, and they have minor deities, mere stones, that they call Mashani and Konadi Mahri. They inter their dead in great pits, 30 or 40 feet square, thatched over, and planted across, with an opening about a cubit square in the centre of the planting, across this opening are laid pieces of wood, on which the dead are placed, and covered with earth, and are left so till another person die, when the former remains and the earth are turned into the pit and replaced by the newly dead. See Kurumbar.

ERU MADDI. Tel. Terminalia Berryi.—*W. and A.* also Pentaptera Berryi, also Pentaptera angustifolia.—*Roxb.* It is probably not Terminalia arjuna.

ERU MALLE. Tel. A species of Jasminum which grows near water.

ERUMBALA—? Ferriola buxifolia

ERUMITCHI NARAKUM. Maleal. Citrus bergamia. Risso.

ERU PICHCHA. Tel. Clerodendron inerme.—*Gaert.*

ERUPUNA in Tamil, and Eremburapan in Malayala. This tree is of a dark brown colour, with a yellow tinge, and in texture resembles the marda; it is heavy and strong, grows to about fifteen inches in diameter, and from fifteen to eighteen feet long. It produces a small black fruit which is of no use. The natives prefer it to other woods for rice beaters, from its weight and texture. —*Edye. M. and C.*

ERUPUTI MARAM. Tam. Dalbergia latifolia.

ERU TUMIKI. Tel. A species of Diospyros.

ERUVALU MARAM. Tam. Inga xylocarpa.

ERUVANGA. Tel. Solanum, *Sp.*

ERVALENTA. See Ervum lens.

ERVIE, or Urvie; Caladium esculentum. A small bulbous root sown from March to July, in rows of beds, mostly along a water course where ginger is planted. It requires much water and takes from six to seven months to ripen. When boiled and then roasted it is very wholesome and somewhat resembles a yam in taste: the natives also put it into curries. It is not liked by Europeans.

Jhunjhunian-kari,	Hind	Massur Chenna.	

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 5,000 feet, grows in corn fields in northern India and is cultivated for fodder. *Cleghorn Punjab Report, p.* 66.

ERYNGIUM, a genus of plants of no economic value. E. campestre of Europe grows in Cabul and Cashmere. E. giganteum and E. Perowskianum are ornamental garden plants, and E. planum grows in Cashmere.—*Dr. J. L. Stewart, Honigberger. Riddell.*

ERYSIMUM PERFOLIATUM, is cultivated in Japan for its oil seeds.—*O'Shaughnessey, p.* 187.

ERYSIPHE TAURICA, one of the Fungi of the Himalaya.

ERYTHRÆA ROXBURGHII. See Chiretta.

ERYTHREAN SEA. This name (*Pliny, lib.* vi. *cap.* xxiii. and xxiv.) was applied to the Indian Ocean, as well as to the two gulfs which it forms on each side of Arabia. Herodotus does not particularly distinguish the Persian Gulf but includes the Arabian sea and part of the Indian Ocean, under the general name of Red or Erythrean. And Pliny styles the Persian Gulf "a bay of the Red Sea." Greek and Roman authors, however, generally use the terms "Persian Gulf," but it appears also among them, as the Babylonian sea, and the Erythrean sea, and this has caused a confusion with the "Red Sea." The Persian Gulf, by many is described as the "Green Sea," also in Eastern manuscripts as the Sea of Fars or Pars, of Oman, of Kirman, of Katis, of Basrah; deriving these and other names from the adjoining provinces and remarkable places on its Arabian and Persian coasts.

The commercial routes to the East, from unknown times, have been three, viz., by the Red Sea, by the Euphrates and Tigris and Persian Gulf, the Erythrean Seas of the Ancients, and by the Cape of Good Hope. The earliest route between Europe and India of which there is any record in the works of Pliny, Herodotus, Strabo and others, was by the Red Sea. Even before the building of Troy, spices, drugs, and many other kinds of merchandise were sent from the East by this route, The ships coming from the Indian seas landed their cargoes at Arsinoe (Suez) from whence they were carried by caravans to Cassou, a city on the coast of the Mediterranean. The distance from Arsinoe to Cassou was about 105 miles. It is said that on account of the great heat the caravans travelled at night only, directing themselves by the stars, and by landmarks fixed in the ground. According to Strabo, this route was twice altered in search of a more commodious one. About 900 years after the deluge, and previous to the destruction of Troy, Sesostris, king of Egypt, started the idea which M. de Lesseps in the christian year of 1869 worked out satisfactorily. The Egyptian monarch caused a canal to be cut from the Red Sea to a branch of the Nile, and had ships built for carrying the traffic sent. For some reason or other the enterprise did not succeed, possibly because the canal was not made deep enough, or because it was connected merely with a branch of the Nile instead of the main stream.

The next mention of the Red Sea route, is to be found in the Bible. (I. Kings c. ix, v. 26). About 1,000 B. C. Solomon, king of all Israel, "made a navy of ships in Eziongeber, which is beside Eloth on the shore of the Red Sea, in the land of Edom." And these ships brought gold, silver and precious stones from Ophir and Tharshish in such quantities that King Solomon "exceeded all the Kings of the earth for riches." Silver was so plentiful at his court that it was "accounted nothing of." The king's drinking cups—were made of pure gold, and

his shields were covered with beaten gold. It has never been settled where Ophir and Tharshish were situated, but we are distinctly told that the navy of Tharshish brought "gold and silver, ivory and apes and peacocks," and it has been surmised by some writers that Tharshish was either China, or some islands in the China seas. Ophir has been supposed to have been some district or port in India. The "precious stones" which King Solomon procured from Ophir are specially referred to. Some Portuguese historians, however, have supposed that it was Sofala, or some other place near the mouths of the Zambezi, on the east coast of Africa, whence the Tharshish fleet brought the rich merchandise which contributed so much to the splendour and magnificence of Solomon's kingdom. The Tharshish fleet is said to have arrived at Eziongeber only once every three years, from which we may fairly infer that the voyage was a considerable one, or the ships had to go with the S. W. Monsoon and return with the N. E. winds, or made a trafficking voyage from one place to another until the one cargo was sold and another shipped. Ships or boats coasting from the Red Sea to the mouths of the Zambezi would scarcely take three years for such a voyage unless they had had long to wait for a return Cargo. The general belief is that Solomon's navigators crossed the open seas and traded with India and China. The apes and the gold and the ivories could, however, have been got from many parts of Africa, and the South and East of Asia and their Sanscrit, Ethiopian, Hebrew, Greek and Persian name of the ape, Kapi, Ceph, Koph, Kephos, or Kepos, Keibi and Kubbi, are identical, and show that the apes may have been brought from any of those regions: the Singhalese, Tamil and Telugu names, Kaki, Korangu and Kothi, are less similar, but yet sufficiently near to merit notice. Had the ships visited the Malay peninsula, Sumatra, Java or Borneo, they would have known of the Simia satyrus (the Orang-atan of Malacca, and Sumatra, the Mia of Borneo) or seen the Siamanga syndactyla, the long arms of which measures five feet six inches across in an adult about three feet high. Mr. Russel Wallace has given the names for monkey in 33 languages of the Eastern Archipelago, none of which have any resemblance to the Kapi, Kubbi or Koph of the Sanscrit or Egyptian or Hebrew; but one of them the Kurango of Bolanghitam in N. Celebes, is almost identical with the Tamul Korangu. The following are the Archipelago names for monkey.

Aruka of Morella of Amboyna.

Babah of Sanguir, Sian.

Bohen of Menado and Bolanghitam of N. Celebes.

Budess, Javanese.

Dare of Bouton and Salayer of S. Celebes.

Kess of Amblaw, and of Cajeli, Wayapo and Massaratty in Bouru and of Batumerah.

Kessi of Cajeli.

Kesi of Camarian and Teluti in Ceram.

Kurango of Bolonghitam in N. Celebes.

Lehi of Matabello.

Lek of Teor and of Gah in Ceram.

Luka and Lukar of Teluti, Ahtiago and Tobo of Ceram.

Meiram of the Alfuro of Ahtiago in Ceram.

Mia of the Sulu Islands Tidore and Galela of Gilolo.

Mondo of the Baju.

Mingeet, Malay.

Nok of Gani of Gillolo.

Roke of Bouton of Celebes.

Rua of Larike and Saparua.

Sia of Liang in Amboyna.

Yakiss of Wahai in Ceram.

Similarly with regard to gold, it is a product of many countries, and there are conflicting opinions amongst the learned as to the meaning of Ophir, whether it be a country or it be the Arabic verb, Afr. to flow, to rush in, to pass on. Gold is found over a considerable part of the Malay Peninsula in the W. and S. parts of Borneo, in some parts of Luzon and Magindanao, and in the Philippine Archipelago, on Bachian in the N. and S. peninsulas of Celebes. It has been coined for money at Achin, but in no other part of the E. Archipelago. There are now in the Eastern Archipelago two Mt. Ophirs, one of them a mountain in Sumatra, in the Palimbayang district, rising 9770 feet above the sea to which the name was given by the Portuguese, and they gave the same name to a mountain 40 miles N. of the town of Malacca 4,000 feet high. In the vicinity of both of them gold has been obtained. But where the Opher was, from which Solomon got gold, will never be ascertained.

Necho, a King of Egypt who reigned about 600 years B. C., was also desirous of joining the Red Sea with the Mediterranean. He is also said to have commanded some Phœnicians to sail from the Red Sea to the Mediterranean, round the Cape of Good Hope—a voyage which they accomplished in two years. If the Phœnicians really did complete the voyage, they anticipated the discovery made by the Portuguese about 2,000 years afterwards. In any case, it is apparent that the king was fully alive in those days to the advantages of the trade from the East. About 100 years later, Egypt fell under the

kings of Persia, and Darius determined upon completing the projects of Sesostris and Necho by digging a canal between the Red Sea and the Nile; but being assured by the engineers of the period that the Red Sea was higher than the Nile, and that its salt water would overflow and ruin the whole land of Egypt, he abandoned his purpose.

The next king of Egypt who gave his attention to the construction of a Suez canal was Ptolemy, who reigned about 300 years B. C. He dug a canal from a branch of the Nile to Damietta, a port on the Mediterranean. This canal was 100 feet broad, 30 feet deep, and ten or twelve leagues in length, extending in fact to the "bitter wells." He meant to have continued it to the Red Sea, but desisted from fear that the Red Sea was three cubits higher than the land of Egypt! That this canal, though deeper than that of M. de Lesseps, did not succeed is evident from the fact that in 277 B. C. Ptolemy Philadelphus changed the direction of Indian traffic. Alexandria was now made the port on the Mediterranean side, and merchandise from Europe was carried thence up the Nile to the city of Coptus (probably near Keneh) and conveyed across the desert from thence to the sea-port of Myos-Hormos (probably near Cossier) on the Red Sea. On account of the dangers attending this port, Philadelphus sent an army to construct the haven of Berenice, in which the ships engaged in Indian commerce took shelter in great security. Trade increased enormously by the new route, and Alexandria became rich and famous. The father of Cleopatra received a prodigious revenue from customs alone. After the reduction of Egypt and Alexandria by the Romans, the trade increased still further. 120 ships were sent yearly from the Red Sea to India, sailing about the middle of July, and returning within the year. The returns on this Indian trade are said to have amounted to "an hundred for one," and through this increase of wealth the matrons and noble ladies of Alexandria were exceedingly profuse in decorating themselves with pearls and precious stones, and enhanced their personal charms by the use of musk and amber, and other rich perfumes.

Soon after this, the mighty Roman Empire fell and History itself is blotted out for a number of years. Not only the trade with India but India itself was completely lost to the Western world. When, after some centuries, we find the Genoese, engaging in commerce and navigation, a new trade route had been opened up between India and Europe. The merchandise from the Western part of India was now carried up the river Indus as far as it was navigable, and then across country, through Samarcand, to the river Oxus, down which it was shipped to the Caspain Sea. In like manner the merchandise from China and the Moluccas was shipped across the Bay of Bengal, and up the rivers Ganges and Jumna, and then carried overland to the Oxus. Samarcand was then a great emporium, and the merchants of India, Turkey and Persia met there to exchange their wares. The ships sailed across the Caspian to the port of Astracan, at the mouth of the Volga. Thence the goods were carried up the river to the city of Novogorod in the province of Reizan, (a city that must have been considerably to the South of the famous Nijni Novogorod of to-day,) then overland for some miles to the river Don, where they were loaded on barks and carried down stream to the Sea of Azoff, and on to the port of Caffa, or Theodosia, in the Crimea. Caffa belonged at that time to the Genoese, and they came there in their galliasses to fetch Indian commodities, which they distributed throughout Europe. This was a costly and round about route, but the merchants of those days made use of the rivers wherever they could.

In the reign of Commodita, emperor of Armenia, a better route was discovered, the merchandise being transported from the Caspian Sea through Georgia to the city of Trebisond, on the Black Sea, whence it was shipped to all parts of Europe. This was doubtless the origin of the connection of the Armenians with the trade of India. So highly was this route approved of that another Armenian emperor is said to have actually begun to cut a canal, 120 miles in length, from the Caspian to the Black Sea for the greater convenience of the trade, but the author of this scheme was slain and the enterprise fell through.

After a time the Venetians came upon the scene, and discovered a new and much shorter trade route to India, that down the river Euphrates—a route which even at the present day is declared by some to be the best that could be selected for communication between India and Europe. The Venetian merchants sailed from Venice to Tripoli; thence their goods were carried in caravans to Aleppo, which was a famous mart, whose reputation even Shakespeare did not fail to notice. From Aleppo the caravans made their way to Bir on the banks of the Euphrates. Here the merchandise was transferred to boats and conveyed down the river to a point near Bagdad on the Tigris. Bagdad being reached, the merchandise was then transferred to boats on the Tigris and carried down to Bussora and the island of Ormuz

in the Persian Gulf. In those days Ormuz was what Bombay is to-day, the greatest emporium in South Asia. Here all the velvets, cloths and manufactures of the West were exchanged for the spices, drugs and precious stones of the east.

The wealth acquired by the merchants of Venice in their trade with the East excited the envy of the whole of Europe. The Portuguese especially spared no expense in their endeavours to discover a new route to India, and after nearly a century of the most indomitable exertions they were fortunate enough in the latter part of the fifteenth century to find their way to Calicut by way of the Cape—a discovery whose effect may be likened in many particulars to that of the opening of M. de Lessep's Suez Canal. The Indian trade of those days was in fact revolutionized. In a very short time, the trade routes by the Red Sea and the Euphrates were completely forgotten, and the cheapest and shortest route between Europe and India was the high sea. After making use of the sea route for 500 years, the world is now returning to the route followed by the ships of king Solomon and Hiram king of Tyre as the best and the Euphrates route promises early to be opened, so that the routes of the Erythrean Seas of the ancient world will again be followed.—*The Madras Mail, 7th June* 1870. *Ouseley's Travels Vol.* I *p.* 163. *Ajaib al Baldan. Pliny lib.* vi. *ch.* xxiii. and xxiv. See Iran; Kishm, Musiris, Perim; Periplus.

ERYTHRINA, a genus of tropical trees and tuberous herbs with clusters of very large long flowers, which are usually of the brightest red; whence their name of Coral-Trees. Moore when describing the Indian islands, notices the

"Gay, sparkling loories, such as gleam between
"The crimson flowers of the Coral tree,
"In the warm isles of India's sunny sea.

Frequently their stems are defended by stiff prickles. Voigt notices 11 species as known in India, of which are E. arborescens of Nepaul, E ovalifolia of Bengal, E. Indica of India generally; E. stricta and E. suberosa of the Western Coast of India and E. sublobata of the peninsula. *Voigt* 237.

ERYTHRINA, Species.

Thykadah. BURM?

A tree which grows to a large size, and is procurable throughout the province of Akyab. Its wood is used for making banghies, also for boxes.—*Cal. Cat. Ex.* 1862.

ERYTHRINA, SP. The Mountain coral tree. A fine looking timber tree of this genus producing a reddish wood, is not uncommon in the interior of Tenasserim. The Karens select this tree in preference to all others on which to train their betel vines.—*Dr. Mason.*

ERYTHRINA CORALLODENDRON. LINN. Syn. of Erythrina indica.—*Lam.* See Cacao; Cocoa.

ERYTHRINA CRISTA-GALLI. See Erythrina.

ERYTHRINA FULGENS. PARI-JATA. HIND. Its flower is supposed to bloom in Indra's garden, and an episode in the Puranas, relates the quarrelling of Rukmini and Satyabhama, the two wives of Krishna, to the exclusive possession of this flower which Krishna had stolen from the garden.

A large tree of Ceylon, of the peninsula of India, also growing in the Konkans, Bengal, Assam, Tenasserim, Martaban and Amherst, and in the islands of the Archipelago; in India, flowering at the beginning of the hot season, its seeds ripening in June and July. In Ceylon, it grows in the hot drier parts of the island. In Ganjam and Gumsur, where it abounds, it attains an extreme height of 30 feet, circumference 2 feet, and from the ground to the intersection of the first branch, is 6 feet. It is a common tree in all parts of the Bombay country, but most so on the coast. Its place in the forests is generally taken by Erythrina suberosa. It supplies, in Tenasserim, a soft, white wood, as easily worked as the pine, which might be made valuable for many economical purposes. It is the wood commonly used by the Moochie men for making light boxes, scabbards, children's toys, &c. It is likewise employed in making rafts, and fishermen's floats, and is hollowed out and made into canoes. The wood used for this purpose in upper Hindostan is the Bombax ceiba. It is the "Moochee" wood of Madras, and is there, also, used for toys, light boxes and trays, and the varnished toys from the Northern Circars are made of it. For sword scabbards, it is a first rate material, and may be exported to Europe so soon as the eyes of the military

public shall have been sufficiently opened to the necessity of sacrificing clank and shine to utility in the matter of sword scabbards. The wood is exactly ⅓rd the weight of water, and of necessity very weak. It is particularly applicable to many purposes for which deal is employed at home, such as in making packing cases, &c., &c. The natives of Nagpore use it exclusively for sword cases. It is eaten by white ants eagerly. The timber, in Nagpore varies from 14 to 17 feet in length, and from 3 to 2½ feet in circumference, and sells at 3 annas the cubic foot. This tree is employed in many parts of India to support the black pepper vine, being of quick growth from cuttings, with firm, permanent, smooth, bark, which never peels off and gives firm hold to the roots of the vine, and they are full of leaves and very shady during the hottest months of the year which shelters the vine from the intense heat of the sun and keeps the ground moist. As soon as the hottest weather is over, the leaves drop and expose the vines to the sun and weather during the cool season.—*Drs. Roxb.* iii 249, *Ainslie, Wight, Mason, O'Shaughnessy, Cleghorn and Gibson, Mr. Rohde, Capts. Sankey and Macdonald, M. E. J. Reports, Voigt, Thwaites.*

ERYTHRINA OVALIFOLIA, *Roxb.*

Huri kankra. BENG. | Yak erra baddoo gass. SING.

Mullu moduga.	TEL.		

This tree is a native of the inland mountains of the Circars, and is frequently of great size, with branches spreading and numerous, and trunk without prickles. The wood, like that of all these species, is remarkably light, soft and spongy, and is much employed by the moochies who make trunks, toys, and other things that are to be varnished, the wood retaining its priming or under coat of paint better almost than any other wood; and it is not liable to warp, contract or split. The moochies at Condapilly and Nursapore are famed for their art in forming and varnishing this wood for toys, &c. It is planted by the Tamil people about their temples. In Bengal, the leaves fall during the cold season in February, when destitute of foliage, the blossoms appear and soon afterwards the leaves: the seed ripens in May, the trunk is perfectly straight in large trees, five or six feet in circumference, tapering regularly, and the seeds are enveloped in fine, soft, or silky wool, adhering slightly to them.—*Roxb.* iii, 254, *Mr. Rohde's MSS., Mr. Jaffrey.*

The flowers of this small tree are very little and of a yellowish green colour. The wood is so fragrant that the inhabitants of Mysore use it in lieu of sandal wood. Its leaves, Devadarum kirai, *Tam.*, are used by the people as greens: and bruised and mixed with gingelli oil, are applied as a refreshing application to the head.—*Ainslie, Jaffrey.*

ERYTHROXYLON COCA. See Erythroxyleæ.

ERYTHROXYLON INDICA, *Linn.* Syn. of Sethia Indica.

ERYTHROXYLON MONOGYNUM. *Roxb.* Syn. of Sethia Indica.—*D. C.*

ERZEROOM, the capital of the pashalic which bears the same name, is about ten days journey from the Persian frontier. It is built on an elevated plain about 6,000 feet above the level of the sea. The cold there is intense, and lasts usually from September till May. Lying on the high road from Persia to Constantinople, it is the resort of many merchants and caravans, but it has not recovered the Russian occupation in 1829, when its fortifications were dismantled, and many of its most opulent and industrious inhabitants, the Armenians, were induced to emigrate. One of the branches of the Euphrates flows at a short distance below the city.

ERZINGAN, a town of Mesopotamia.

ESA KHAIL, an Afghan tribe on the Punjab frontier, who, along with the shiah Turi, and the Jaji dwell on the daman or skirt of the Sulimani range. The Esa Khail occupy the banks and islets of the Indus in a valley containing forty-five villages; it is a narrow oblong strip between the Indus and a long spur of the Khuttuk range, that runs southward into the plain. *Rec. Govt. of India. No.* II

ESA MUTTEE, a river near Dacca and in Kisnagurh. It runs near Pahrumala in the Bogra district.

ESAR. Hind. Rubus rotundifolius.

ESARHADDON, 3rd son of Sennacherib. See Babylon.

ESCAMONEA. Sp. Scammony.

ESCARBOUKLE. Fr. Carbuncle.

ESCHSCHOLTZIA, one of the Papaveraceæ, a very beautiful, very delicate little flower, of a deep yellow orange colour.—*Riddell.*

ESCOBAS. Sp. Brooms.

ESCOVAS. Port. Brushes.

ESCULAPIUS, amongst the Greeks and Romans the god to whom the care of medicine and health pertained. Esmun, the snake god of the Phœnicians, is identified by Bunsen (iv. 259) with the Egyptian Hermes, called Tet and Taautes in Phœnician. Esmun Esculapius is strictly a Phœnician god. He was especially worshipped at Berytus. At Carthage, he was called the highest god, together with Astarte and Hercules. At Babylon, Bel corresponded with him. According to Jamblicus and the Hermetic books, the Egyptian name of Esculapius was Kameph, (*Bunsen* iv. 256-7). The Aswini-Kumara, the sons of Surya, amongst the hindus, correspond with the western Greek and Roman Esculapius. See Pandu, Surya.

ESCULAPIAN ROD, has been supposed by some to be a stem of a Bauhinia plant. It is probably however the form serpents assume when in congress and which is represented at every hindu serpent shrine.

ESCULENT CALADIUM. Caladium esculentum. See Eddoes.

ESCULENT CYPERUS. Cyperus esculentus.

ESCULENT OKRO. Eng. Abelmoschus esculentus. W. & A.

ESDAILE, Dr. ob. 1859, at Sydenham; a Bengal medical officer, the eldest son of the Rev. Dr. Esdaile, afterwards of Perth, and was born at Montrose on the 6th February, 1808. He studied and graduated in the University of Edinburgh. In 1837, the facts of mesmerism began to be copiously and clearly presented to the British public, and becoming assured of its truth, he devoted himself to its study. His first results were published in the 'Indian Medical Journal' for June, 1845. His first trial was casual. Seeing a felon in agony after a surgical operation, he thought he would try to mesmerise the sufferer who presently exhibited the very phenomena which were witnessed in England—went to sleep, was pinched, had pins and nails thrust into him, sat on the edge of a chair with the nape of his neck resting against its sharp back; had fire applied to his knees, inhaled strong ammonia for some minutes, and drank it like milk, without any uneasiness, and bore the exposure of his eyes to the sun without winking or contraction of the iris. After this time Dr. Esdaile performed a very large number of surgical operations—some of them absolutely gigantic—without pain. Enormous tumours are common in India, and Dr. Esdaile cut many of them away with perfect success, the patients knowing nothing about the matter, till on awaking they saw their tumours lying upon the floor. In 1846 he removed 21 tumours—some weighing 30 lbs. one 40 lbs. and one 112 lbs.; in 1847, eight—one of 40 lbs. and another of 100 lbs. in weight; in 1848, 34—some of very great size and weight. In 1849, he removed 10—some very large. In 1849, we learn that he performed 62 capital operations. In one place we read that after 100 capital operations with insensibility, only two patients died within a month—one from cholera and the other from lock-jaw. Persecution, he of course, experienced; but the editors of the newspapers took up his cause. A mesmeric committee was appointed by Government to investigate his facts. He satisfied them, and was placed at the head of a mesmeric hospital. After his return from India, where he spent many years, he lived in privacy, first in Scotland, and as he found the north too cold ultimately in Sydenham, where he died."

ESKAR. Mahr. A village servant, generally a Mhar.

ESSENIANS, a sect amongst the Hebrews, who every day saluted the rising sun.

ESSENTIAL OILS, called also volatile oils, are obtained from various parts of odoriferous plants, chiefly by distillation, but also by the chemical perfuming process of enflowering. The best known volatile oils are those of almonds, aniseed, bergamot, cajaputi, camomile, camphor, caraway, cassia, cinnamon, cloves, juniper, lavender, lemons, mint, nutmeg, orange, peppermint, pimento, rhodium, rosemary, roses (otto), savine, sassafras, mint. But in India, sandalwood, jasmine, nutmegs, indeed every odoriferous plant, is by the perfumers made to yield an essential oil. The Chambeli-ka-attr of Lucknow from Jasminum grandiflorum, extracted from the petals, sells at 2 Rupees per tola. This plant is extensively cultivated in gardens in Lucknow for the sake of its flowers. Motiah or Belak-ka-attr of Lucknow, Jasminum sambac, is also extracted from the petals, and sells at 2 Rupees per tola. It is cultivated extensively in gardens in Lucknow for the sake of its flowers, and is coloured red by mean of dragon's blood. See Atr. Otto.

ESTHER. In the centre of Hamadan, is the tomb of Ali Ben Sina, and not far from it are those of Esther and Mordecai, which are held in great veneration by the Jews of the town, and kept in a perfect state of repair. On the dome over these tombs is an inscription to the effect that Elias and Samuel sons of Kachan finished building this temple over the tombs of Mordecai and Esther on the 15th of the month Adar 4474. The tombs are made of hard black wood which has suffered little from the effects of time during the 11½ centuries they have existed. They are covered with Hebrew inscriptions still very legible, of which Sir John Malcolm has given the following translation. "At that time there was in the palace of Suza a certain Jew, of the name of Mordecai: he was the son of Jair of Shimei, who was the son of Kish, a Benjamite, for Mordecai the Jew was the second of that name under the king Ahasuerus, a man much distinguished among the Jews, and enjoying great consideration amongst his own people, anxious for their welfare, and seeking to promote the peace of all Asia," The traveller, unless told, would never recognise them as tombs. The entry is by a low door, and the tombs occupy the whole of the internal space to the ceiling, leaving only a very narrow passage for walking round the huge stone-like construction in the middle. Literally, not an inch is left on the whitewashed walls on which the Jewish pilgrims of a thousand years have not inscribed their names.—*Ed. Ferrier. Journ. p.* 37.

ETRUSCAN, an ancient Indo-European dialect, distinct from the Italian. See India p. 312.

ETYMANDER, of the Classics is the river Helmund. See Arians.

ETZEL, known to Europe as Attila. He was the leader of the Hiong-nu, a pastoral tribe, who had been expelled from the borders of China by the powerful dynasty of Han, and formed one of those pastoral tribes who roam in the lands from the Altai to the walls of China. The Hiong-nu, after their inroad on the Gothic empire of Hermanrich, made their way, under Etzel or Attila, into the heart of France. Hordes from the same regions under Togral Beg, and Seljuk and Mahmud and Chengiz and Timur and Othman, overwhelmed the kaliphat and the empires of China, of Byzantium, and Hindoostan and lineal descendants of the shepherds of High Asia, still sit on the throne of Cyrus, and on that of the Great Constantine.

EUCÆRUS, the surname of Demetrius III, B. C., 94, a Greek sovereign of Syria. See Greeks of Asia.

EUCALYPTUS. This genus, consisting of lofty trees, is found in the Malay peninsula, but it is chiefly Australian, where the species occur in great profusion, and, with the leafless acacia trees, give a most remarkable character to the scenery. E. calophyllum attains a height of 150 feet; and a girth of 25 to 30 feet is not uncommon:—Several Eucalypti have been introduced into India and are growing on the Neilgherry hills. E. resinifera yields the Botany Bay kino. Large cavities occur in the stem of E. robusta, and the places between the annual concentric circles of wood, are filled with a beautiful red or rich vermilion-coloured gum, which flows out as soon as the saw affords an opening. Eucalyptus rostrata of western Australia, is the mahogany of the colonists, also the Jarrah or Yarrah, and has been recommended for the railway sleepers of India. In many species the leaves and other characters at different ages of the tree, or in different situations, are so variable in their form, that it is difficult botanically to distinguish them from each other. The leaves are often arranged with their faces vertical, so that each side is equally exposed to the light. The following seem to be the botanical species to which the colonial names belong:—

Blue Gum of Port Jackson, Peppermint Tree ...	E. piperita.
Blue Gum of Hobart Town ...	E. globulus.
Stringy Bark	E. robusta.
Iron Bark: Kino-Gum, White Gum of Van Diemen's Land.	E. resinifera.

The Weeping Gum of Van Diemen's Land. The Mountain Blue Gum of Van-Diemen's Land. The Black Gum of Van Diemen's Land. The Black Budded Gum of Van-Diemen's Land. The Cider-Tree of Van Diemen's Land, and the Manna Gum are all unascertained.

Manna of Moreton Bay ...	E. Manna. Cun.
Blood wood of Port Jackson ..	E. Corymbosa.
White Gum of Moreton Bay...	E. subulata-Cun.
White Gum of the S. W. Interior.	E. lencodendron. Cun.

Dr. Bennett, in his "Wanderings in New South Wales," states that a large quantity of camphorated oil, which closely resembles the cajeputi, is produced from the foliage of several species of Eucalyptus. Some of the leaves, which are of a bluish green, contain it in such abundance as to cover the hand with oil when one of the leaves is gently rubbed against it. This Australian genus possesses 130 species. Several of them have been introduced into India, and others of them might be so. The Australian names gum trees, blue gum, grey, spotted, &c., are terms which vary in each district, but many of them yield a timber tougher and more durable for ship-building than either oak or teak; and not liable to injury from salt water or white ants. All the varieties afford a very valuable, close-grained, and highly scented cabinet wood, and essential oil is extracted from the leaves of one variety, the E. robusta, which was pronounced not unlike cajaputi, but very fragrant. All the varieties tried on the Neilgherries have succeeded, on every description of soil, from the swamp to the poorest clay, at all elevations, but also with a rate of growth little short of miraculous, viz., a foot per mensem, whereas hard woods in Britain progress at the rate of one foot annually. House-holders on the Neilgherries are now covering their compounds with the eucalypti and that pretty Australian favourite the Acacia melanoxylon, which is so invaluable as a source of fuel, for, like the perennial grasses, the more it is cut the better it grows. Eucalypti form the most prevalent forest feature over the greater part of East and South Australia, rivalled by Leguminosæ alone.—*Bennett. Simmonds. Eng. Cyc. Royle, p.* 301.

EUCALYPTUS AMYGDALINA, Bennet. The abundant Tasmania peppermint tree, is the least valuable as a timber tree, but lbs. 100 of its fresh leaves yield three pints of essential oil.—*Bennett.*

EUCALYPTUS CALOPHYLLA. See Eucalyptus.

EUCALYPTUS CORYMBOSA. See Eucalyptus.

EUCALYPTUS GIGANTEA. *Hook.* Stringy bark is a large tree with a hard wood but swelling and shrinking with the varying states of the atmosphere.—*Bennett.*

EUCALYPTUS GLOBULUS. LAB. Grows to 350 feet with a circumference of 50 to 100 feet, and has often 200 feet without a branch. It has large leaves and flowers and a hard, heavy and dense wood. —*Bennett.*

EUCALYPTUS GUNNII, when wounded, furnishes the inhabitants of Van Diemen's Land with a copious supply of a cool, refreshing, slightly aperient liquid, which ferments and acquires the properties of beer. —*Eng. Cyc.*

EUCALYPTUS KINO. See Eucalyptus resinifera.

EUCALYPTUS LEUCODENDRON. See Eucalyptus.

EUCALYPTUS MANNA. See Eucalyptus.

EUCALYPTUS MANNIFERA, exudes a saccharine mucous substance resembling manna in its action and appearance, but less nauseous. It is not produced by insects, and only appears in the dry season. Other species yield a similar secretion at Moreton Bay and in Van Diemen's Land. Mr. Backhouse says it coagulates, and drops from the leaves in particles often as large as an almond.—*Eng: Cyc.*

EUCALYPTUS OLEOSA, the plentiful Mallee scrub, is not more than 12 feet high, yields the next largest amount of oil. —*Bennett.*

EUCALYPTUS PERFOLIATA, is growing abundantly, on the Neilgherry and Pulney Hills, and at Bangalore, in Mysore. It is one of the most hardy of the genus and the best suited to the hills. Eucalyptus perfoliata, E. pulverulenta, exist in the open air near Edinburgh; they and other species will thrive in the south and west of England. See Evergreens.

EUCALYPTUS PIPERITA. See Eucalyptus.

EUCALYPTUS PULVERULENTA. See Eucalyptus. Evergreens.

EUCALYPTUS RESINIFERA.

E. Kino. | Metrosideros gummifera.

Botany bay kino tree. Brown gum tree. A native of Australia, cultivated in the Calcutta Garden. Has leaves with very minute and numerous little dots. The bark, says Dr. O'Shaughnessy, yields a gum not inferior to kino, and sold as such. The bark of this and other species is so hard as to cause them to be called Iron-Bark Trees by the colonists. And the Blue Gum-Tree and some others throw it off in white or gray longitudinal strips or ribands, which hanging down from the branches, have a singular effect in the woods. An astringent juice flows from this tree, named Botany Bay kino. Ainslie quotes Dum-ul-ookwain as the Bazaar name of this kino, but that term properly applies to the "Dragon's blood." It is infusible, occurs in fragments of variable size and form, often covered with brownish powder, brittle, thin, translucent and ruby coloured, fracture glassy and chocolate coloured, of variable depths of tint, destitute of odour. Taste austere and somewhat bitter, powder red-brown; water dissolves about two-thirds, alcohol three-fourths, ether one-twentieth only. But there are different statements made by writers on this subject. Mr. White, who has witnessed the collection in Australia, says a single tree will yield 500 lbs. of this kino in one year by incisions practised on the bark. The medical uses of this article correspond exactly with those of kino, as already described. The bark and leaves are aromatic, but their essential oil has not been separated.

Mr. Simmonds says the astringent gum common throughout Western Australia, and of a considerable commercial value, is believed to be from the (Eucalyptus resinifera.) It is considered to be inferior to the ordinary Kino (Pterocarpus marsupium), and conjectured by Pereira to become gelatinous when made into tincture. Its bark is a powerful tanning substance, and a single tree will often yield 60 gallons of an astringent resinous-like substance from incisions in its bark; sold in the bazaars of India as a kind of kino.—*Simmonds. O'Shaughnessy, p.* 336. See Gums and Resins.

EUCALYPTUS ROBUSTA, contains large cavities in its stem between the annual concentric circles of wood, filled with a most beautiful red or rich vermilion-coloured gum, which flows out as soon as the saw affords an opening.—*Eng. Cyc.* See Eucalyptus.

EUCALYPTUS SUBULATA. See Eucalyptus.

EUCALYPTUS VIMINIALIS and E. Dumosa, produce a manna.

EUCHARIDIUM. A small plant bearing a purple flower.—*Riddell.*

EUCHEUMA SPINOSA, of Malacca, yields part of the agar-agar of commerce.

The plants and their synonyms, which yield the commercial agar-agar are as under:

Eucheuma Spinosa.

Fucus spinosus,	Linn.	Plocaria candida,	Nees.
„ tenax,		Gracillaria tenax.	
Gigartina tenax,	Turner.	„ spinosa.	
Agar Agar,	Malay.	Bulung,	Jav.
Karang,	„	Dongi Dongi,	Mac.
Sajor-karang	„		

The Plocaria candida of Nees yields the Ceylon moss and the whole thallus of this one of the Algæ, is sometimes imported from Ceylon into Britain, and used there for dressing silk goods. The Malay name of agar-agar is also given to the Gracillaria spinosa likewise one of the Algæ, of the Order Rhodymeniaceæ and seems to have as synonyms, Gigartina tenax also Gracillaria tenax, also Fucus tenax of Turner. Mr. Williams and the honorable Mr. Morrison say of the Gigartina tenax, that the Chinese people collect this sea-weed on the coast to a great extent using it in the arts and also for food. The Gigartina tenax is prepared as affording an excellent material for glues and varnishes. It is boiled and the transparent glue obtained is brushed upon a porous kind of paper called "shachi" which it renders nearly transparent. It is also used as a size for stiffening silks and gauze, and extensively employed in the manufacture of lanterns and in the preparation of paper for lattices and windows. This and other kinds of fuci are boiled down to a jelly by the islanders on the south and extensively used for food, it is known in commerce under the name of agar-agar. (*Williams, p.* 275.) The Honorable Mr. Morrison says the Gracillaria tenax is the Fucus tenax of Turner; about 27,000 lbs. are annually imported into Canton, from the provinces of Fokien and Tchi-Kiang, and sold for 6d. to 8d. the pound. The Chinese make it the basis of an excellent glue and varnish, and employ it chiefly in the manufacture of lanterns, to strengthen or varnish the paper and sometimes to thicken or give a gloss to silks or gauze. Mr. Neill thinks that the gummy substance called Chin-chou, or hai-tsai, in China and Japan, may be composed of this substance. Windows made of slips of bamboos and crossed diagonally, have frequently their interstices wholly filled with the transparent glue of hai-tsai. *Honorable Mr. Morrison, Compendious Summary. Williams.* See Agar-Agar, Algæ. Edible sea weed. Fucus, Plocaria.

EUCRATIDES. A Bactrian king, B. C. 185 who ruled over Bactriana, Ariana, Patalene, Syrastrene, Larice, Nisa, Gandharitis, Peukelaotis and Taxila. While still ruling, Antimachus Nicophorus seized part of his dominions and after the parricidal murder by Heliocles of Eucratides, his countries remained in the hands of Antimachus Nicophorus and Apollodotus. The Arian written character was adopted first, on the coins of the Greek kings, from Eucratides down to the barbarian king Hermæus. Eucratides was the earliest of the Greek kings of Bactria, Kabul and Aria who adopted bilingual inscriptions on his coins. It is supposed he did so consequent on his conquest of the Parapamisus after assumption of the title of Great King. On his murder, his wide dominions are supposed to have been broken into several independent kingdoms. His parricidal son, ruled for a few years over Bactria and Paropamisus.

According to Cunningham (*Hist. Panj.* i. *p.* 57.) Eucratides invaded India B. C. 165 and annexed the Panjab, which on his demise fell to Menander or Apollodotus. A list of kings, he says, had been obtained from recently discovered coins, of Greek mintage, bearing Arian inscriptions on the reverse, ranging from 153 to 120 B. C., who are supposed, upon good grounds, to have been sovereigns of the Punjab, the valley of the Indus, and Cabul.—*Thomas' Prinsep. History of the Punjab, Vol.* i *p.* 57.

EUDEMOS, a Greek ruler in the Punjab, who, along with Taxiles and Porus was named by Alexander to succeed Philip, on the murder of the latter by the mercenary soldiery. The Greek Colonists in the Panjab had first been placed under Philip while the Civil administration remained in the hands of Taxiles and Porus. After Alexander's death in B. C. 323 Eudemos made himself master of the country by the treacherous assassination of king Porus. A few years later in B. C. 317, he marched with 3000 infantry and 5000 cavalry and 120 elephants to the assistance of Eumenes, and did good service at the battle of Gabiene but, during his absence, Chandragupta, roused the nation, and slaughtered and expelled the Greeks. See Chandragupta.

EUDYNAMIS ORIENTALIS. *Linn.*

Cuculus maculatus,	Gmel	Cuculus mindanensis.	
„ niger.		„ scolopaceus,	Linn.
Kokil,	Beng.	Kokila,	Tel.
Koel (the male)	Hind.	Nallak (male)	„
Koreyala, (the fem)	„	Podak (female)	„

The male bird is greenish black throughout, and the female is glossy dusky green spotted with white above. Like the Cuckow, the koil lays its eggs in the nests of other birds. The nest of the "seven brothers" the "Sat Bhai," is selected occasionally, and it is a curious sight to see these social birds unitedly feeding the young koil that

has been hatched in their nest. Because the koils song is especially heard at the season of spring it is called the friend of love.

Sweet bird, whom lovers deem Love's messenger,
Skilled to direct the god's envenomed shafts
And tame the proudest heart; Oh, hither guide
My lovely fugitive or lead my steps
To where she strays.

Moors Pantheon p. 206. *The Hero and the Nymph p.* 247, *Jerdon Birds* 1342. See Kameri.

EUGEISSONIA TRISTIS. *Griff.*

Bartam, Malay.

A palm growing on the hills about Ching, Malacca and Penang. The leaves are used in Penang in making mats for the sides of houses, also for thatch, and for all the purposes to which those of the Nipa fruticans are applied.—*Griffith's Palms.*

EUGENIA. A genus of plants named in honour of Prince Eugene of Savoy. It contains nearly 200 species, though numbers have been removed to the genera Nelitris, Jossinia, Myrcia, Sizygium, Caryophyllus and Jambosa, in which are now contained the Clove-Tree, the Rose-Apple, and Jamoon of India, formerly included in Eugenia. This genus is confined to the hot and tropical parts of the world, as Brazil, the West India Islands, and Sierra Leone, and extends from the Moluccas and Ceylon in the south to Silhet and the foot of the Himalayas in the north. Some of the species secrete a warm volatile oil in their herbaceous parts; abound in tannin: yield good wood: and a few have fruits which are edible, though not very agreeable, from being impregnated with the aroma of the oil. Dr. Wight gives, in Icones, the following species of Eugenia:

(E) angustifolia,	(J) pauciflora,	(S) montana,
,, cymosa,	,, polypetala,	,, myrtiolia,
(N) acuminata,	,, purpurea,	,, Neesiana,
,, bracteolata,	,, ternifolia,	,, oblata,
,, clavifiora,	(S) alternifolia,	,, obtusifolia,
,, grata,	,, Arnottiana,	,, operculata,
,, mophylla,	,, brachiata,	,, pamala,
,, lanceolata,	,, calophyllifolia,	,, polyantha,
,, leplantha,	,, caryophyllifolia,	,, praecox,
,, Wightiana.	,, caryophyllœa,	,, pulchella,
(R) Moonana.	,, cerasoides,	,, reticulata,
,, Willdenowii,	,, cordifolia,	,, revoluta,
(J) alba,	,, corymbosa,	,, rottleriana.
,, amplexicaulis,	,, cymosa.	,, rubens.
,, aquea,	,, ferruginea,	,, rubicunda,
,, cylindrica,	,, fruticosa,	,, salicifolia,
,, hemisphœrica,	,, glandulifera,	,, sylvestris,
,, lanceolaria,	,, grandis,	,, thumra,
,, laurifolia,	,, jambolana,	,, toddalioides,
,, macrocarpa,	,, jambolana, var. micrcarpa.	,, venusta,
,, Malaccensis,		,, Wallichii,
,, Munroi,	,, lanceæfolia,	,, Zeylanica.

Mr. Thwaites mentions as growing at no great elevation in Ceylon, the Eugenia decora, *Thw.*, a small tree near Galle. Eugenia flaccifera, *Thw.*, a small tree at Reigam Corle; Eugenia fulva, *Thw.*, a small tree at Pasdoon Corle; Eugenia rivulorum, *Thw.*, a small tree on the banks of streams in the Singherajah forest, between Galle and Ratnapoora, and Eugenia terpnophylla, *Thw.*, a middle sized tree of Ambagamowa and Ratnapoora districts, and Reigam Corle. Eugenia mabæoides, (*Wight Illust.*) grows in the central province, at an elevation of 4,000 to 7,000 feet. Eugenia Moonïana, *Wight, Ill,* is abundant in the central province, up to an elevation of 4,000 feet, and Eugenia Willdenovii, *D. C.* Tambaleya-gass, *Singh.*, is common in the hotter parts of the island. Dr. McClelland names seven species of Pegu, viz. Eugenia nervosa, E. pulchella, E. myrtifolia, Tha-bai-jeen, *Burm*, E. jambosa, of the Southern parts of Pegu, affording dark strong wood.

Engenia pulchella, Khway-tha-byai, *Burm.* very plentiful in the Pegu and Tounghoo districts.

E. vulgaris, Thabyai-tha-phan. *Burm.*

E. ternifolia, Thab-yew-tha-byai, *Burm.* and E. jambolana also occur, but less plentifully than E. pulchella. These all afford excellent close grained strong timber, but subject to the attacks of white ants. Wood red colour, strong and adapted for house-building.—*Drs. Wight and McClelland, Voigt, Thwaites, Eng. Cyc.*

EUGENIA, *Species.*

Thab-yeh-tha-pan. Burm.

The different kinds of Thabyeh, of British Burmah, have a hard red coloured wood, close, but not straight grained, and supposed to be brittle. The wood is subject to the attacks of white ants. The stems are occasionally used for canoes. This is also used for house building. Breaking weight of the "Thabyehgah" E. caryophyllifolia, 254 lbs. A cubic foot weighs 50 lbs. In a full grown tree on good soil, the average length of the trunk to the first branch is 30 feet and average girth measured at 6 feet from the ground is 9 feet. It sells at 8 annas per cubic foot. (*Note.*—This seems to be Dr' McClelland's E. vulgaris.)—*Drs. McClelland and Branis.*

EUGENIA, *Species.*

Tha-bya Burm.

A tree of Moulmein.—*Cal. Cat. Ex.* 1862.

EUGENIA. *Species.*

Tha-bya-gyiu. Burm.

A tree of Moulmein. Wood soft, used in the ordinary purposes of a building material. —*Cal. Cat. Ex.* 1862.

EUGENIA ACRIS, *W. & A.*

Eugenia pimenta, *D. C. var* ovalifolia.
Myrtus pimenta, *Linn. var.* latifolia. *Roxb.*

Wild Cinnamon Tree, ENG. | Sung, HIND.
„ Clove „ „ |

A small tree, introduced from America, grows in Bombay, the leaves have a pleasant smell when bruised. Timber hard, red and heavy, capable of being polished and used for mill cogs and other purposes, where much friction is to be sustained.—*Dr. Riddell, Voigt.*

EUGENIA ACUTANGALA. LINN.

Barringtonia acutangula.

Hinjolo. URIA.

Under these names, Captain Macdonald describes a tree of Ganjam and Gumsur, of extreme height 30 feet, circumference 4½ feet and height from ground to the intersection of the first branch, 6 feet. Grows in abundance on the banks of rivers. The wood is not affected by damp, and is therefore generally used for the wooden frame work at the bottom of wells. Rice pounders are also made of it. The bark is given medicinally to women after childbirth.—*Captain Macdonald.*

EUGENIA ALTERNIFOLIA. *Roxb.*; *W Ill.*; W. *Ic.*

Movi chettu, TEL. | Moyi chettu, TEL.

Very common on the Nagari hills.—*Flora Andh.*

EUGENIA AMŒNA. *Thwaites.* A small tree of Ceylon, at Kokool, Corle and Dolosbage district, up to an elevation of 1,500 feet.—*Thw.*

EUGENIA BRACTEATA. *Roxb.*; W *& A.*

Engenia Roxburghii, *D. C.*
„ Zeylanica. *Roxb.*
„ læta. *Ham.*
Myrtus bracteata. *Willde.*

„ Heynei. *Spreng.*

Aramanda. TEL. | Goragamudi. TEL
Arivita. „ |

A shrub, frequent in low jungles near the sea on the Coromandel coast, and in the Northern Circars. It is only used for firewood. It likewise grows at Jaffna in Ceylon.—*Flora Andh., Thwaites.*

EUGENIA CARYOPHELÆUM, its berry is eaten in Ceylon.

EUGENIA CARYOPHYLLATA. *Thun.*

Caryophyllus aromaticus. *Linn*
Myrtus caryophyllus. *Spreng.*

Luvunga. BENG. | Ran jambool. MAHR.
Clove tree. ENG. |

A tree of the Moluccas, but cultivated in Ceylon, the Malay Peninsula, in the south of India, in Travancore, also in Mauritius and Bourbon. The cloves of commerce are the

unopened flowers, the flower buds. It is hardly found on the Bombay side, north of the Savitree. South of that river it is found only in Raees or greenwood jungles, and about temples. The wood appears quite equal to that of the common Jambool the Eugenia jambolana.—*Dr. Gibson, Voigt, M.E. A. R.* See cloves.

EUGENIA CARYOPHYLLIFOLIA. *Roxb.*; *W. Ic.*, 553.

Calyptranthes caryophyllifolia. *Ains.*

Choto jam, BENG. | Naurei, TAM.
Thab-yeh-gah, BURM. | Nawel maram, „
Naradidi Vriksha, CAN. | Neredu manu, TEL.
Nawel wood tree, ANG TAM. | „ chettu, „
Koata naga ? TAM. |

Grows in Coimbatore, in the Northern Circars, in Bengal and British Burmah. It is a native of various parts of India growing luxuriantly in almost every soil and situation. Flowering time the hot season; bears a round berry, black when ripe, the size of a pea. Ainslie gives a favorable account of the timber, and the wood is very strong, close grained, hard and durable. The different kinds of Eugenia, called Thab-yeh in British Burmah, have a hard, red colored wood, but not straight grained, and supposed to be brittle. The stems are occasionally used for canoes, especially those of Thab-yeh-gah, the breaking weight of which is 254 lbs. A cubic foot weighs 56 lbs. In a full grown tree on good soil, the average length of the trunk to the first branch is 20 feet, and average girth measured at 6 feet from the ground is 6 feet. It sells at 8 annas per cubic foot.—*Drs. Roxburgh, Wight and Brandis, Mr. Rohde's M.S.S. Voigt. Cal. Cat. Ex.* 1862.

EUGENIA CARYOPHYLLIFOLIA. *Lam.* not *Roxb.* Syn. of Syzigium jambolanum.—*D. C.*

EUGENIA CERASOIDES, *Roxb.*

Thabyehgyin. BURM.

The different kinds of Thabyeh of British Burmah have a hard red coloured wood, but not straight grained and supposed to be brittle. The stems are occasionally used for canoes. A cubic foot weighs 51 lbs. In a full grown tree on good soil, the average length of the trunk to the first branch is 40 feet and average girth measured at 6 feet from the ground is 9 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex.* 1862.

EUGENIA JAMBOLANA, *Lam.*; *Roxb.*

Mr. Robert Brown of the Madras Agri-Horticultural Gardens considers that this is the Calyptranthes caryophyllifolia and jambolana he sent for specimens according to the Tamil names, Nawel Maram and Naga maram, and they were both the same plants; and, as far as he can make them out, the following are one species:

Syzigium jambolanum.
Eugenia caryophyllifolia.
„ jambolana.
Calyptranthes caryophyllifolia.
„ jambolana.

About Madras, this tree is generally much destroyed by the Carpenter Bee. It, likewise, grows in the Bombay side of India, in Coimbatore, in Ganjam and Gumsur, in Bengal and Kemaon. It is found in all the Bombay ghat and coast forests; also pretty extensively near villages, where it has been planted. The tree is not very common either in Bodogoda or lower Goomsur, but is said to be rather plentiful in the Chokapaud forests. There are two kinds there termed respectively the "Bodo" & "Coojee" Jamo. Dr. Wight, writing in Coimbatore, says "of this wood I have no knowledge, it is said to be brittle and bad, but is described by Ainslie as fit for house building purposes." But Dr. Gibson thinks that Dr. Wight under-rates the quality of the wood, and he says that it makes excellent beams, but on account, probably, of its brittleness, is never cut up for cabinet purposes. The bark affords a large supply of a kino extract. —*Drs. Wight and Gibson, Capt. Macdonald, Voigt. Cleghorn, Punjab Report, Kullu and Kangra p.* 82.

EUGENIA LAURINA,—?

Wal boamboo, Singh.

Under these names Mr. Mendis mentions a timber tree of the central province of Ceylon, used in house buildings. A cubic foot weighs 36 lbs, and it lasts 15 years.

EUGENIA MALACCENSIS. *Linn.*

Jambosa Malaccensis, *D.* C.
„ purpurascens, „

Jam,	Maleal.	Jembu-neredi manu	Tel.

Grows in both the Indian peninsulas, in Bengal and in Sirmore. This tree bears a light whitish yellow fruit, pear shaped, with smooth skin, having a rose flavor, whence its English name. It is commonly cultivated in gardens on the coasts and in Hyderabad. It is easily propagated by seed, and grows luxuriantly in a good garden soil. The red coloured species, having the same flavor, is called the Jambo Malacca, The fruit is not much esteemed. In Tenasserim, the rose apple is cultivated to a small extent in European gardens.—*Drs. Ainslie, p.* 228, *Mason and Riddell.*

EUGENIA OBTUSIFOLIA. *Roxb.*

Thabyehgjo, Burm.

The different kinds of Thabyeh of British Burmah have a hard, red colored wood, but not straight grained and supposed to be brittle. The stems are occasionally used for canoes. A cubic foot weighs 48 lbs. In a full grown tree on good soil the average length of the trunk to the first branch is 20 feet, and average girth measured at 6 feet from the ground is 9 feet. It sells at 8 annas per cubic foot.—*Dr. Brandis, Cal. Cat. Ex. of* 1862.

EU-HO, called also the Yun-Lian-Ho, a river of China, a tributary of the Pei-ho river. At the junction is the town of Teen-tsing-foo a place of great trade.

EULÆUS, an ancient town in Susiana, supposed by some to be the Ulai of Daniel viii. 2, the Cissia of Herodotus, Susa and the modern Shush. See Khurdistan, Susa.

EUMETA CRAMERII. *Westw.*

Sack Trager,	GERM.	Kundi Puchi,	TAM.
Dalme-Kattea,	SINGH.	Muluka Rasari,	„

This is one of the wood moths or wood carriers of Ceylon. The insect gathers a bundle of thorns or twigs about it, binds them together by threads so as to form a case. The male, at the close of the pupal rest, escapes from one end of the case, but to the female it is a covering for life. Another species is E. Templetonii. *Tennant's Ceylon.* See Wood-moth.

EUNUCHS, are still employed in the households of the mahomedans and hindus of Egypt, Persia, Arabia and India. We learn from Herodotus, (*lib.* 6), that the Persians in remote times, were waited upon by eunuchs, and some attribute to them the invention. Ammianus Marcellinus, however, (*lib.* 14), ascribes the origin to Semiramis. Burton says that they were not known in Arabia at the time of Mahomed, but in the chapter of the Koran on "Nur" or Light, men who have no need of women are spoken of as persons before whom women may appear: the learned, however, do not agree as to who were here meant. Burton also (*Pilgrimage ii. 74 to* 155) mentions eunuchs coming to the prophet's tomb. Nearly all the slave hunters in Abyssinia when they catch a young lad, mutilate him and send him over to Mecca; but it is mentioned that they are still mutilated in Rajputana and in Aurungabad. Dr. Wolff (*Bokhara vi. p.* 217) mentions that in his time several of these eunuchs were married to several wives, and he instances Manujar Khan, the governor of Isfahan. Sir John Malcolm had known only two or three instances of eunuchs being employed in situations of trust during the reign of the king of Persia to whom he went as ambassador. He, however, observed that they were treated with uncommon attention and deference. In Hyderabad, in the Dekhan eunuchs are few, and there are many women dressed as men and employed as musicians and military guards.—*Malcolm's History of Persia, Vol.* ii, *p.* 438. 155 *n. Burton's Pilgrimage to Meccah Vol.* iii. *p.* 408.

EUONYMUS, a genus of plants belonging to the natural order, Celastraceæ, of which about 28 species mostly small trees, are known to occur in the South and East of Asia. E. echinatus of Nepaul is a shrub or climber, there are three unnamed species in Kaghan, "Barphuli" and "Siki" and "Butten." E. glaber occurs in Chittagong: E. grandiflorus and E. Hamiltonianus in the Dehra-Dhoon. E. grossus in Nepaul. E. dichotomus: E. Goughii and E. acutangulus in the Peninsula.—*Voigt.*

EUONYMUS FIMBRIATA.

Saki,	HIND.	Bar-phulli,	HIND.

Wood hard and useful.

EUONYMUS GARCINIFOLIA (?)

A small tree, growing near the Bombay ghats in the upper country to the south. It seems to be often cultivated in Canara, on account of its straightness, as applicable for house rafters. It does not reach a size sufficient to fit it for general purposes.—*Dr. Gibson.*

EUONYMUS REVOLUTUS. *Wight, Ill.* 178. A middle sized tree of Newera and other very elevated parts of Ceylon.—*Thw. En. Pl. Zeyl. p.* 73.

EUONYMUS TINGENS. The bark in the inside is of a fine yellow colour similar to that of Rhamnus. It is used to mark the Tika on the forehead of the hindus, and is considered by the natives to be useful in diseases of the eye—*Royle. O'Shaughnessy, page* 272.

EUPATOR, the surname of Antiochus V. a Syrian king B. C. 164. See Greeks of Asia.

EUPATORIUM TRIPLINERVE, *Vahl.*

E ayapana, *Vent.*	E. aromaticum.
Ayapana, BENG. HIND.	

The dried leaves and twigs are used in medicine. An infusion is a very agreeable diaphoretic and mild tonic. Dose, two fluid ounces thrice daily, and is a favorite remedy among the native practitioners.

The leaves are used in the Mauritius as a substitute for tea. There are several species, viz., E. Guaco, E. oderatum, E. perfoliatum and E. rotundifolium, or bone-set, is possessed of greater bitterness and less aroma, than E. ayapana, and is stated to be employed with much success as an antiperiodic in the intermittent fevers of the United States of America.—*O'Shaughnessy, Beng. Phar. page* 298. *Beng. Dispensatory* 422-3.

EUPHORBIACEÆ, *Spurgeworts*, a natural order of exogenous plants. In China many plants are cultivated for their oil to be used in the arts as well as cooking; a strong oil is derived from the seeds of two or three plants belonging to the euphorbiceous family, for mixing with paint, smearing boats, &c. It is deleterious when taken into the system, but does not appear to injure those who use or express it.—*William's*

Middle Kingdom, p. 107. See Euphorbia, Cluytia collina, Commia, Croton, Emblica; Givotia Rottleriformis, Hura crepitans Buxus, Jatropha, Ricinus, Cascarilla. Slipper plant.

EUPHORBIA, a genus of exogenous plants, giving its name to an extensive and important natural order. E. peplus, is purgative and emetic, in dose of 24 grs. E. gerardiana, E. pithyusa, E. sylvatica, same effect, dose 15 to 24 grs.—*O'Shaughnessy p.* 565.

Voigt enumerates 31 species as known in India, viz:

Acaulis.	Lactæ.	Prolifera.
Antiquorum	Ligularia.	Prunifolia
Arborescens	Linearis.	Punicea.
Bojeri.	Lophogona.	Pyrifolia.
Bupleurifolia.	Maculata.	Sessiflora.
Chamæsyce.	Melliflora.	Splendens.
Dracunculoides.	Nevulia.	Thymifolia.
Exigua	Parviflora.	Tiraculli.
Hirta.	Peltata.	Trigona.
Hoyæfolia.	Peplis.	Uniflora.
	Picta.	

And in other countries are E. balsamifera and E. Canariensis.

EUPHORBIA, Species. Yamula, BURM. Used for frames of lacquered ware.

EUPHORBIA AGRIA, (affinis, species) grows in the mountains of Cashmere, where it is officinal. The root of this plant is sometimes as thick as the arm, knotty, with boughs, and is blackish, whence the Cashmerians call it the black Hirbee (Euphorbia) and consider it the strongest of all other species (white, yellow, etc.) A man who had taken such a root out of the ground not having observed the rule to have the wind behind him, got a swollen face, from the powerful vapors.—*Honigberger, page* 274.

EUPHORBIA ANTIQUORUM. *Linn. Roxb. W. Ic. Rheede.*

Shia-dzaon,	BURMAH.		

In the Canaries, on volcanic soil, E. Canariensis and E. laphylla form great bushes with arms like candelabras.

EUPHORBIA CEREIFORMIS. See Euphorbia antiquorum.

EUPHORBIA CONTINIFOLIA. See Euphorbia antiquorum.

EUPHORBIA CASHMEREANA; TSOK, or Tsuk of Cashmere root of a dark brown colour, about an inch thick and is officinal in Cashmere.—*Honigberger, p.* 274.

EUPHORBIA CATTIMANDU. *W. Ell. W. Ic.*

Aku Chenrudu,	TEL.	Katti mandu,	TEL.

In Telugu literally "knife medicine" because used to fix knives in wooden handles, the juice of this plant is used in cementing iron with other substances (the blade and handle of a knife for instance.) It is common in the Northern Circars and is called Akoo Chenroodoo—which is described in Campbell's dictionary as "Euphorbia Neriifolia." This species and its product were brought to public notice by Mr. Walter Elliot.

EUPHORBIA CYPARISSIAS.

Tithymalus Cyparissias. | τιφυμαλος. Diosc. iv. 165.

Europe. Root excessively acrid. Des Longchamps considers the bark of the root a good emetic in doses of 12 to 18 grs. —*O'Shaughnessy.*

EUPHORBIA EPITHYMOIDES. See Euphorbia verrucosa.—*Honigberger, p.* 274.

EUPHORBIA GERARDIANA. See Euphorbia. Euphorbia antiquorum.

EUPHORBIA HELIOSCOPIA, vegetates in the gardens of Cashmere. The juice is very acrid and irritating. The seeds of this plant are officinal, and combined with toasted pepper are recommended in cholera. —*Honigberger, p.* 274.

EUPHORBIA HEPTAGONA. See Euphorbia antiquorum.

EUPHORBIA HYPERICIFOLIA. See Euphorbia antiquorum.

EUPHORBIA IPECACUANHA. Action of root exactly like that of Ipecacuanha, but more violent. It only requires to be given in proportionally small doses to be a perfect substitute for the best ipecacuan. *O'Shaughnessy. p.* 565. See Euphorbia antiquorum.

EUPHORBIA LAPHYLLA. See Euphorbia.

EUPHORBIA LATHYRIS,

Spurge. ENG. | Caper spurge. ENG.

The seed of this Euphorbium contains yellow fixed oil, stearine, acrid brown oil, crystalline matter, brown resin, an extractive colouring matter, and vegetable albumen.—*O'Shaughnessy, p.* 565.

EUPHORBIA LIGULARIA, ROXB. ii. p. 465.

Munsa sij, BENG. | Sha Zoung, BURM.

A plant sacred to Munsa, or Manisa, the goddess of serpents. The root of the tree mixed with black pepper is employed for the cure of snake bites, both internally and externally.—*O'Shaughnessy, p.* 564.

EUPHORBIA LIGULATA. This large columnar Euphorbia is common all along the Soane river, and is used everywhere for fences.—*Hooker, Him. Jour. Vol.* I, *p.* 46.

EUPHORBIA LONGIFOLIA, its yellow root is long and smooth for about half an inch to an inch in diameter and is called the yellow Hirbee. This species is used at Lahore as well as in Cashmere. The Cashmerean surgeons apply it in fistulous sores, &c.—*Honigberger, p.* 275.

EUPHORBIA MAURITANICA. See Euphorbia antiquorum.

Natives of India, suspend in their houses a few branches of the milk hedge, to attract flies. The mature wood is very strong and durable when not exposed to wet. On the Bombay side, it is extensively used, whenever procurable, as a dunnage material for the flat roofs of houses. It is sufficiently close-grained to be useful to turners. Could be readily creosoted, but is very seldom of scantling sufficient for sleepers. Wood light colored, the root of old shrubs is understood to be well adapted for gun stocks, but plants of sufficient age are seldom met with. Dr. Wight had often heard it spoken of as excellent for gun stocks, but it seemed to him too light colored. On the Godavery it grows to a large tree and the wood seems hard but is not used. In Gumsur and Ganjam it is not common, but extreme height 20 feet, circumference 2 feet, and the height from the ground to the intersection of the first branch, 6 feet. This plant is much used for making hedges, and from its continual green appearance is well adapted for the purpose. It grows best either upon a bank, or wall of large stones laid loosely for the purpose, having a good cover of earth upon it. Any cuttings will grow, and the plant if by itself will attain

the height of twenty feet or more. The wood makes the best charcoal for gunpowder. A parasite of a yellow thread-like appearance, and leafless, (the Cassyta filiformis) is very destructive to it, and will totally destroy a tree or a whole hedge in a short time, if not removed.—(*Riddell.*) Wood is light colored, the root of old shrubs is understood to be well adapted for gun-stocks, but plants of sufficient age are seldom met with. The milk mixed with flour, in doses of a drachm daily, is an Indian specific in syphilis. The inspissated milk is a violent emetic and purgative.—*O'Shaughnessy, page* 563. *Madras Exhibition of* 1855. *Drs. Wight, Riddell, Gibson and Cleghorn, Captain Beddome, Captain Macdonald.*

EUPHORBIA TITHYMALOIDES. The slipper plant, or buck-thorn, is thick, deep-green leafed, grows about three feet high, but, if kept trimmed, is admirably adapted for a border to a flower parterre: if occasionally watered is always green.—*Riddell.*

EUPHORBIA TORTILIS. *Rottl. W.Ic.*

Azfur zukkum,	Ar.	Tirukhu-kalli,	Tam.
Pilie saynd,	Duk	Tirugu jemudu,	Tel
Vajratunda,	Sans.		

This plant has got its Tamul and Telugu names from its branches being scolloped and twisted, the milky juice is very similar in its appearance and nature to that of the Euphorbia antiquorum, it is prescribed in small doses in conjunction with Palmira jaggery; undiluted it acts as a vesicatory, but mixed with a certain portion of castor oil it forms a useful embrocation in cases of palsy and chronic rheumatism.—*Ain's Mat. Med. p.* 120.

EUPHORBIA VARIEGATA, can be raised from seed in any common garden soil. —*Riddell.*

EUPHORBIA VIROSA. See Euphorbia antiquorum.

Euphorbe,	Fr.	Bonta jemmudu palu,	Tel.

A concrete gum resin, obtained from Euphorbia Canariensis of N. Africa and the Canaries; E. officinarum of Arabia and Africa; E. antiquorum of Arabia and India, E. tetragona. It is used externally in medicine.

EUPHORIA, a genus of fruit plants common to India and China, several species having been found in the district of Silhet; Dr. Roxburgh mentions the Chinese fruit E. Longan as indigenous in the mountainous country which forms the eastern frontier of Bengal, and having had specimens of the Lichi sent him from old trees growing on the Garrow mountains, when the trees in Bengal were but small. The Euphoria (or Nepheleum) litchi grows to 24 or 30 feet. It grows well in Bengal and the Mauritius, but in Madras has failed, and until recently was not very successful in Tenasserim.—*Mason. Royle Ill. Him, Bot. p.* 136.

EUPHRASIA OFFICINALIS, Euphrasy Eye-bright. a native of the heaths and pastures of Europe, of the Himalaya, Cashmere, and all the north of Asia. It is a pretty plant, slightly bitter and aromatic, once celebrated as an application to weak eyes, but now seldom or never employed.—*O'Shaughnessy, p.* 478, *Hogg, p.* 567, *Honigberger, p.* 276.

EUPHRATES, in Arabic and Persian, Forat or Forath, in the Hebrew language, Perath or Phrath, words which mean to fructify, or to fertilize. The elevated plateau which extends from the base of Mount Ararat into Northern Armenia, Kurdistan, and part of Asia Minor, contains the sources of four noble rivers, having their estuaries in three different seas; and thus, from Armenia, as from the centre of a great continent, giving an easy communication to the several nations of Europe and Asia. By following the Kizil Irmak through Asia Minor we reach the Black Sea, from whence there are inlets to Russia, Austria, Turkey, &c. In the same way the Aras, by terminating in the Caspian, opens several routes towards Great Tartary, as well as towards the rest of Central Asia and China; while the Tigris and Euphrates, with their numerous ramifications, afford abundant means of communicating with Persia, India, Arabia, and the continent of Africa. An extensive mercantile intercourse is also maintained with the same regions by means of numerous caravans, which, since the time of Abraham at least, have traversed the countries watered by those four rivers. The Euphrates rising near the shores of the Black Sea, and in its course to the Indian Ocean, almost skirting those of the Mediterranean, at one time formed the principal link connecting Europe commercially with the East. It has two great sources in the Armenian mountains, and the most northern of these sources, is situated in the Anti-Taurus, 25 miles N. E. of Erz-Rum. The branch from thence takes at first a westerly direction, and after passing

within seven or eight miles of the capital of Armenia, it is joined by two small feeders. Its first large tributary, however, is the Mahmah Khatun, which runs into it down the plain of Tejran. From hence the river, which is now a considerable stream, known by the name of the Kara Su, makes a circuit, winding through the mountains and over rapids, into the plain of Erziugan, through which it flows in the same general direction, close to the town of that name. At Erzingan, it is fordable only at a few places even in the dry season. As it nears the ancient Hit, with its bituminous fountains, the stream has an average width of 350 yards, with a depth of 16 feet and a current of three knots per hour in the season of the floods, when there are fourteen islands on some of which are small towns. About 70 miles lower down is the modern castle of Felujah, situated 29¾ miles W. 2° N. of Baghdad. The average width in this part of the river decreases a little, being only about 250 yards, with an ordinary depth of 20 feet; and there is a current of less than two and a half miles per hour in the flood season, when the river forms thirteen islands, without wood. About Felujah, at 5¾ miles N. 60° W. from it, the derivation, called the Saklawiyah, takes place; this stream crosses Mesopotamia by a tortuous eastern course on the north side of Akar Kuf, and enters the Tigris at a point five miles below Baghdad, but, until altered by Daud Pasha to avoid the danger of inundations, it joined the Tigris a little above the city. The distance from river to river (by the course of the Euphrates steamer in passing, under Lieut. Lynch, in 1838) is about 45 miles. Near the junction of the Euphrates and Tigris in L. 31° N. and L. 47° E., after a course of 950 miles, is the walled town of Kurnah containing about 800 houses, disposed along the right bank of the Tigris and the left of that of the Euphrates. It fluctuates as to size, and it was larger in 1831 than it was found in 1836 and 1837. It is chiefly constructed of reed-mats, and is on part of the supposed site of ancient Apamea; which probably stood within the line of walls still extending across the peninsula formed where the two great rivers cease to be known by their individual names. The Euphrates and Tigris, from this form one tidal channel, almost half a mile wide, and which takes nearly a straight course. S. 37° E. under the well known appellation of Shat-ul Arab, and when five miles below Kurnah their united waters receive those of the Kerah, or Kerkhah, which coming from the mountains of Ardelan through an extensive tract of country, passes a short distance westward of the ruins of Susa and likewise of the town of Hawizah. After receiving this accession, the Shatt-el-Arab flows through date groves and near several villages, chiefly on the left bank, and at length arrives opposite Basrah, which is 39½ miles by the river, and 36 miles S. 34° E. direct from Kurnah. In the whole of this distance there are but two islands, both of them large; and the river has an average width of 600 yards, with a depth of 21 feet; it has a current of two knots per hour during the flowing, and three knots per hour during the ebb tide. The modern town of Basrah is built on both sides of a creek, or canal, and in its present decayed state, as compared with former times, it still contains about 6,000 houses, which commence nearly at the edge of the main stream, and on its right bank. Below the city, this majestic river sweeps a little more to the eastward; its width is about 700 yards; its ordinary depth 30 feet; and it forms three large islands between this place and the small town of Mohamarah; that is, within a distance of 22½ miles by water, or 20½ miles direct, S. 70° E. Here the Karum enters it, after a long course from the Koh-i-zerd through Shuster, Ahwaz, and other places. After this great accession to its waters, the Shatt-el Arab inclines a little more towards the South; during the remainder of its course it passes many large villages, and almost continuous belts of date-groves; and at length it reaches the sea, which, at the bar, is 40 miles from Mohamarah. Between this last place and the sea its average width is 1,200 yards, and its ordinary depth 30 feet. The permanent flooding of the Euphrates is caused by the melting of the snow in the mountains along the upper part of its course. This takes place about the beginning of March, and it increases gradually up to the time of barley harvest, or about the last days in May, when it is usually at its greatest height. At Fort William the depth was found to be increased by 13½ feet; but, lower down, this varied, as may be supposed, in different places, according to the width of the stream. The river continues high, and its course very rapid, for 30 or 40 days; but afterwards, there is a daily decrease, which becomes very small and regular towards the autumn. From the middle of September to the middle of October the river is at the lowest. Mr. Rennie found the quantity of water discharged by the Euphrates, at Hit, to be 72,804 cubic feet per second: and the quantity discharged by the Tigris, at Baghdad, to be 164,103 cubic feet. The sum of these quantities (=236,907 cubic

feet) may, perhaps, be taken as a near approximation to the whole quantity discharged in a second by the Shatt el Arab, which is formed by the united waters of those rivers. Mr. Rennie estimates the quantity discharged by the Danube, in an equal time, at 338,100 cubic feet.

The breadth of the Euphrates at Babylon, says Colonel Chesney, is mentioned by Strabo as a stadium: Rennell says 491 feet; D'Anville 330 feet. Niebuhr 400 Danish feet, Rich 450 feet. The banks of the river are low and fertile. Its first rise is in winter, but it rises again in March, in April is at its full and continues so till June, overflowing the surrounding country, filling all the canals, and many parts of the ruins of Babylon are then inaccessible. On breaking down the river wall at Felujah, which is 36 miles to the westward of Baghdad, its waters spread over all the country to near the bank of the Tigris, of a depth sufficient to allow rafts and flat bottomed boats to cross and bring lime from Felujah. Its course through the site of Babylon is North and South. (*Euphrates and Tigris.—Col. Chesney, p.* 62.)

The Euphrates was first crossed by Abraham. The crossing of the Tigris,the passage of which is noticed as Heber(Eber) occurred B. C. 4,500 or B. C. 5,000, subsequent to Nimrod. The mountainous lands at the sources of this river, formed the primeval seat of the Semitic races.(*Bun.* iii. 413-460.)

The original Highland, south west of Armenia (Arminn) the country between the sources of the Euphrates and Tigris, and Mesopotamia proper, is Aram Nahrain. The Aramæans, were a Semitic race of highlanders who first settled on the upper part of the Euphrates and Tigris districts, and then passed through Mesopotamia proper (Aram of the two rivers,) the low land (where is Mash-Mons Masius) which falls gradually towards Syria, afterwards called Aram. The name of Uz, in Nejd, proves that its offsets extended as far as North Arabia. The upper Euphrates is nearly in the centre of that great range of territory called by the ancients Armenia, which extended eastward from that river to the Caspian Sea, and again westward over a part of Asia Minor. The former portion was almost universally known by the name of the Greater, and the latter by that of the Less Armenia; but both were sometimes subdivided into First, Second, and Third Armenia: a fourth division was added by Moses Choronensis and others. This last division, being on the eastern side of the Euphrates, constitutes in reality part of Armenia Major; while Armenia Minor is confined to the country westward of the Euphrates and is composed only of the three subdivisions above alluded to. Armenia Major in the time of its greatest prosperity, extended from 36° 50' to 48° N. Lat.; and eastward, in one direction, from 38° to about 48° 40' E. Long., with a surface of nearly 84,756 square miles of diversified country. Strabo (*Lib.* xi. *p.* 530,) makes it 200 schoens long by 100 wide, which would give a much greater superficies. The general limits of this territory will probably be best understood by considering the Euphrates to be its western boundary from Sumeisat until a few miles south of Erzingan, where the boundary quits the river, and preserves the direction of Tarabuzún, till it meets the mountains southward of Gumish Khanah.—(*Col. Chesney's Euphrates Expedition, p.* 94.) The populations to whom the term Armenian is now applied, call themselves Haik. Their chief occupancies are the Turkish province of Erzerum, and the Russian district of Erivan, and in Erivan the patriarch resides. They are now under the sway of Russia, Persia and Turkey, but they are found in all eastern countries; 37,676 are in European Russia alone, and one important settlement of them in Venice, that of the Mechitarist monks, on the island of St. Lazarus. In figure, the Armenians have been likened to the Jews, the Turks and the Afghan. They evince great commercial aptitude, and are bankers and merchants. In Armenia, however, they cultivate the soil. Before their conversion they were fire worshippers. Many of them now are Nestorians, some are Romanists. The language of the present day has affinities with the Iron, and Persian, Arabic, Syrian and Turk. General tradition and the formation of language point alike to the mountains of Armenia as the birth place of the Arab and Canaanitish nations, and there is especial native evidence to the same effect as regards Edom, consequently, also, the Phœnicians. Babylonia was a narrow tract along the river Euphrates from Erech or the modern town of Seikh ul Shuyukh to Kalneh on the Khabur river and eastward till it joined Assyria.

Bassorah, is built on a creek, or rather canal, about one mile and a half distant from the Euphrates. The banks of the creek are fringed with foliage, among which are the walnut, apple, mulberry, and apricot. It is called by the Arabs "Al-Sura" from "Be-al-Sura," signifying the stony soil on which it is built. Never having been the seat of sovereign power, it is not adorned with those structures which decorate the cities of the

east. The khalif Omar, in the fifteenth year of the Hijrah, wishing to combine the commerce of India, Persia, and Arabia and secure that of Sind and Guzerat, laid the foundation of this place near to the confluence of the Euphrates and Tigris. The Shatt-ul-Arab empties itself at the distance of eighty miles into the Persian Gulf, and commands the navigation of the surrounding countries, with the coast of India. *Latham, Descriptive Ethnology*; *Colonel Chesney's Euphrates Expedition* p. 94. *Bunsen's Egypt*, iii. 431. *Rich. Ruins of Babylon, page* 14. See Arabistan, Afghanistan, India, Iran, Jews, Kellek, Khalifah, Kirman, Koh, Kooffa, Koorna, Kush. Mesopatamia, Sassanidæ, Semitic Races, Tigris.

EUPLECTES. See Ploceinæ.

EUPLOCAMUS IGNITUS. See Phasianidæ.

EURASIAN, a name applied to the descendants of Europeans and Natives of India, also called Indo-Britons, and half-caste, all of which terms might advantageously cease to be used, and the people be designated Europeans. See East Indians.

EUROPA, seems to be derived from "Surupa," Sans., of the beautiful face,—the initial syllable *su* and *eu* having the same signification in the Sanscrit and Greek languages, viz., good, and Rupa is countenance. *Tod.*

EUROPEAN. This term, in British India, is usually meant to signify a native of Europe or America, of pure descent, in contra-distinction to a native of India, or an East Indian.

EURYA, *Species.*

Thaun. Burm.

Used in Tavoy for fuel only.

EURYA JAPONICA. *Thunb.*

Var. α. E. Thunbergii.	Var. γ. E. Chinensis.
Var. β. E. acuminata.	Var. δ, E. parviflora.

Neyadasse-gass. Singh.

Vars. α, β, and δ in the more elevated parts of Ceylon inland, up to 8,000 feet; δ in exposed situations; var. β from a little above the sea-level, up to an elevation of 5,000 feet, very abundant.—*Thw. En. Pl. Zeyl. I. p.* 41.

EURYALE FEROX. *Salisb.*

Nymphæa Stellata. *Willde.* Anneslea spinosa. *Roxb.* ii 573.

Machana. Hind. | Nallani padmam. Tel.

An Indian water-lilly with a small bluish purple flower covered everywhere with prickles, and so closely allied to Victoria regia as to be scarcely generically distinguishable from it. It grows in the eastern Sunderbunds, Lucknow, Tipperah, Chittagong, Saharunpur, Kashmir, and China. The discoverer of Victoria called the latter "Euryale Amazonica." These interesting plants are growing side by side in the new Victoria house at Kew. The Chinese species has been erroneously considered different from the Indian one. The fruit of Euryale ferox, is round, soft, pulpy, and the size of a small orange; contains from eight to fifteen round black seeds as large as peas, which are full of flour, and are eaten roasted in India and China, in which latter country the plant is said to have been in cultivation for upwards of 3,000 years.—*Hooker. Him. Jour. Vol.* ii. *p.* 255. *Thw. Voigt.*

EURYCLES AMBOINENSIS. Sal.

Larmen. Burm. | Næ-men. Burm

A fragrant white flowering bulb of the amaryllis tribe, not uncommon in native gardens of Tenasserim.—*Mason.*

EURYLAIMUS. See Aves. Birds. Musicapidæ.

EURYLEPIS TŒNIOLATUS. *Blyth.* A scink of the N. W. Himalaya. Pale olive-grey above, with three pale spotted dark bands more or less distinct, reaching backward as far as the hind-limbs; and the tail more or less speckled with dusky black: under-parts spotless dull-white. Length of adult 9 inches.

EUSEBES, a surname of Antiochus X, king of Syria, B. C. 95.

EUSEBIUS. See Zoroaster.

EUSPIZA STEWARTI. Blyth, affined to Eu. cæsia (Cretzch.) Length about $5\frac{1}{2}$; of wing 3 to $3\frac{1}{4}$ in.; and tail $2\frac{1}{2}$ in. Crown and front of neck ashy. See Aves. Birds.

EUTERPE CARIBBÆA. Spreng. Syn. of Areca oleracea.—*Linn.*

EUTERPE EDULIS, Mart: A palm of Brazil which might advantageously be introduced into India.

EUTERPE MONTANA. See Cocoa-nut palm.

EUTHYDEMUS, a Greek ruler in Bactria, B.C. 220, his sway extended over Ariana, including Aria, Dranga, Arachosia, and Paropamisadæ, Nysa, Gandharitis, Peukelaotis, and Taxila. See Greeks of Asia. Kabul, p. 437.

EUTHYMEDIA. Bayer says, in his History Reg. Bact. p. 84, that according to Claudius Ptolemy, there was a town within the Hydaspes yet nearer the Indus, called Sagala, also Euthymedia; but he scarcely doubts that Demetrius called it Euthydemia, from his father, after his death and that of Menander. Demetrius was deprived of his patrimony, A. U. C. 562. Sagala is conjectured by Colonel Tod to be the Salbhanpoora of the Yadu when driven from Zabulisthan and that of the Yuchi or Yuty, who were

fixed there from Central Asia in the fifth century, and if so early as the second century when Ptolemy wrote, may have originated the change to Yuti media, the central Yuti. Numerous medals, chiefly found within the probable limits of the Greek kingdom of Sagala, either belong to these princes or the Parthian kings of Minagara on the Indus. The legends are in Greek on one side, and in the Sasanian character on the reverse. The names of Apollodotus and Menander have been decyphered, but the titles of "Great King," "Saviour," and other epithets adopted by the Arsacidæ are perfectly legible. The devices however, resemble the Parthian. These Greeks and Parthians must have gradually merged into the hindu population. *Rajasthan Vol. I. p.* 233.

EUTOCA MULTIFLORA. A genus of flowering plants blue, pink, and violet.—*Riddell.*

EUSUFZYE, an Afghan tribe whose territory is bounded on the S. by the Indus; N. and E. by the Swat mountains, and W. by the Cabul river and the Mehra, or desert plateau between it and Hushtnuggur. The tract is intersected on the east by off-shoots from the Swat mountains, but in other parts it is a perfect plain. The inhabitants are proud, warlike and extremely sensitive in all matters connected with family custom. In the Peshawur district, the Eusufzye may claim political importance. As soldiers, they are not inferior to any of the independent tribes. They are the most martial of all the British subjects on the frontier, and the history of many generations attests their military exploits. Participators in every war that has convulsed the Peshawar valley, and always the recusant subjects of the Sikhs, they have now literally turned their swords into plough-shares and are right good lieges of the British. Their customs have been respected, the allowances of the chief and their village head-men have been confirmed. Though constantly tampered with by the Swat government to rebel, they only once yielded to temptation. That single instance occurred just after annexation in 1849. At the battle of Teree, which gave the sovereignty of Peshawur to the Sikh, the Eusufzye formed the strength of the mahomedan army which, numbering 30,000 men, withstood a Sikh force of equal numbers, supported by guns and headed by Runjeet Singh himself. *Records of the Government of India, No. ii, Parl. Pap. E. I. Cabul and Afghanistan.* See Afghan, Kabul, Khyber.

EVAPORATION. In his annual report of the Bombay Geographical Society from May 1849, to August 1850, Vol. ix., Dr. Buist, on the authority of Mr. Laidly, stated the evaporation at Calcutta to be "about fifteen feet annually, that between the Cape and Calcutta it averages, in October and November, nearly three-fourths of an inch daily; between 10° and 20° in the Bay of Bengal, it was found to exceed an inch daily. Supposing this to be double the average throughout the year, we should, have eighteen feet of evaporation annually." But, all the heat received by the intertropical seas from the sun annually would not be sufficient to convert into vapour a layer of water from them sixteen feet deep. It is those observations as to the rate of evaporation on shore that have led to such extravagant estimates as to the rate at sea. The mean annual fall of rain on the entire surface of the earth is estimated at about five feet. *Beng. Pharm p.* 285. *Maury's Physical Geography, pp.* 130-131.

EVE, the mother of the human race, is recognised under different names in all Cosmogonies. The Eve of Mosaic history, became the Astarte of the Assyrians; Isus nursing Horus of the Egyptians; the Demeter and the Aphrodyte of the Greeks the Scythian Freya and Baltis. The Eve of Genesis is the Hawa or Havvah of the Arab and mahomedan generally, Baltis, in Byblius called Beuth or Behuth, i.e. void of Genesis, is identical with space and means the mother's womb, the primeval mother—the fundamental idea, being the mother or source of life, which is the meaning of Havvah the Eve of Genesis. The tomb of Eve is pointed out in several places. On the east, Mecca is bounded by a hill called Abu-Kubays, and according to many mahomedans, Adam with his wife and son Seth lie buried there. At less than a mile from the Medina gate of Jeddah, a tomb said to be of our common mother Eve, is surmounted by a cupola and surrounded by walls, inclosing a pretty cemetery, in which many of her children lie around her. *Bunsen's Egypt. Hamilton Sinai, Hedjaz and Soudan p.* 66. See Abu Kubays; Adam; Baltis, Mount Arafat.

EVERGREENS. Trees and plants of the S. and E. of Asia which retain their foliage, in Britain are much prized. These consist of species of Abies, Cunninghamia, Cupressus, Ilex, Juniperus, Thuja, Arbutus, Aucuba, Buxus, Laurus, Rhamnus, Acacia affinis, Eucalyptus, Ligustrum, Magnolia, Berberis, Cistus, Colletia, Cotoneaster, Daphne, Rhododendron, Yucca, Bignonia, Jasminum and Vinca. *Eng. Cyc.*

EVIL EYE.

El-Eyn,	ARAB.	Jattatura.	ITAL.
Baskanos ophthalmos,	ANCIENT GREEK.	Chashm-i-bad,	PERS. HIND
Kako Mati,	MODERN. GREEK.	Drashti Dosham,	SANS
		Kan pada,	TAM.
Mal occhio,	ITAL.	Kaunu Taku,	TEL.

The evil eye alluded to in Proverbs xxviii, 22, and Mark vii, 22, is still a subject of dread in all eastern countries as well as in many of those of Europe. The Irish and Scotch as much believe that their cattle are subject to an injury from the blight of the evil eye as did Virgil's shepherd when he exclaims Nescio quis teneros oculus mihi fascinat agnos. The Greeks of the present day entertain the same horror of their Kako mati as did their ancestors in their Baskanos ophthalmos, and the Mal occhio of modern Italy is the traditional fascinatio of the Romans. Mr. Buckingham relates that when in Persia, being ill, his companions attributed his sickness, to the ill-wishes of a malignant enemy; to remove which, a fakeer took some rags from his body, and deposited them in the new made graves of some holy personages, believing that they thus acquired a virtue potent enough to dispel the supposed evil influence. The Arabians and Turks believe in it, and apologise for the profusion of jewels with which they decorate their children on the plea that they are intended to draw aside the evil eye. The mahomedans suspend objects from the ceilings of their apartments for the same purpose and the Singhalese and hindus place whitened chatties on the gable ends of their houses and in fields, to divert the mysterious influence from their dwellings and crops. On one occasion in the Northern Mahratta country, surrounded by villagers, all inclined to give trouble, but more than others, was one with an unhappy expression of countenance, their annoyances ceased on our shouting to the ugly man, Chasm-i-bad dur!—Avaunt the evil eye! Happy for an opportunity to ridicule one whom doubtless they knew to be not a loveable person, they joined in jesting raillery against him. The mahomedans hang round their children's necks and suspend in their houses, or place over the lintels of their doors charms consisting of verses of the koran, which are inscribed by holy men, or incantations by pretended exorcists, written on paper, or engraved pot-stone, silver or gold, to guard against the evil eye. And hindus resort to their temples to make offerings to their deities for the same object. Hindus and mahomedans alike think that jewels on children tend to attract on the jewels, the evil eye: Hindu mothers, when they suspect that the evil eye has fallen on their child from home, on returning to their house, take some chillies and salt in their hands and describe a circle round the infant's head, and thereafter place the chillies and salt in a well or in the fire, to destroy the evil eye and its charm together. Pretending exorcists, both men and women, also exorcise those blighted with the evil eye, by reciting a charm over cow-dung ashes, and rubbing it on the forehead and body of the child.—*Travels in Assyria, Media, Persia. p.* 172. *Milner's Seven churches of Asia p.* 120. *Burton's the city of the Saints p.* 129. *Sonnerat's voyage p.* 89. *Sir J. E. Tennant's Ceylon.* See Somal

EXERCISES OF SOLDIERS. Fencing is a graceful art, and one highly useful in eastern warfare. A good swords-man, full of confidence, with a supple wrist and ready with his point, has a capital chance of success against the sweep of the oriental scymetar. A single-stick player is greatly benefitted by a knowledge of the use of the foil. Bayonet fencing may be resolved into the lunge, parries carte and tierce, the feint, and the point, then a loose practice with knobbed sticks. Every man's carriage and appearance are improved by fencing, to say nothing of his health and the improvement of his chest. In large barracks, a room might be set apart for fencing and for gymnastics generally. This would be much better than exercise round a billiard table. Regimen and exercises remove disease; fencing may thus materially benefit a sickly youth, and add vitality to his frame. The leather gauntlet to the elbow is supposed to defend the arm from a sabre cut, but a swords-man who can divide a lemon on the open hand, cut through an inch of lead, or sever a leg of mutton with a sweep from left to right, would soon "walk through" the gauntlet, if it be not provided with flat pieces of steel inside. An invisible shield may be worn inside the left sleeve, on which unexpected defence to receive a stroke and return with a point. One of these was offered for the acceptance of the late Sir Robert Peel, on the formation of the new police, when they used to be so murderously assailed by ruffians, General Dallas, Governor of St. Helena, used to show the cavalry jacket he wore at the time of the siege of Seringapatam; it was "first-rate," coming well over the hips, and the shoulders and top of the arm defended by silver chain work. A score of maitres d'armes might be got up, one for each of the large garrisons, by selecting smart non-commissioned officers. A knowledge of Boxing prevents men resorting to the cowardly knife to settle their quarrels, when their natural weapons suffice. First-class sparrers seldom or never have occasion to use the naked fist, though they have the power and the skill to do so. Nothing gives a man confidence in his own powers so well, or sets him better on his legs than practising the art of self-defence, with the gloves. Nothing makes him more alert and springy, suppleing the joints and giving quickness to the eye. Besides moving round one's antagonist to plant the scientific blow, both arms are brought into play in boxing, and only one in fencing; this is a superiority which boxing has over fencing as a manly exercise. The principal thing to check among sparrers is loss of temper; if a man cannot control his

temper on getting a blow from a muffled hand, he ought not to put on the gloves for the agreeable practice of sparring. Quickness and lightly hitting (as with single-stick) is best; according to the size and weight of the individual, a pair of dumb bells exercised daily give great additional powers to the boxer, who, with the body well planted on the bent legs, left foot advanced, the hands lightly playing in front of the chest, the blow delivered with a swing from the shoulder straight between the eyes or above the waistband, stopped for the head with the fore-arm, the nails turned outwards, or for the body, on the arm, the nails turned inward, illustrates scientific boxing.

Extension Motions,—as practised in the barrack square, are of the greatest service in banishing the rustic air, opening the chest, and giving freedom and grace to the limbs. To prevent stooping, and to give a tendency to preserve an upright position, the people of India practise a simple and excellent manœuvre on the ground or against the projecting corner of a wall. Extended on the ground supported by their toes and hands or placing themselves opposite a wall they raise and lower the body, from and to the ground, they press the wall first with the right hand, turning the head to the left, and then with the left hand, turning the head to the right, and so alternately dozens of times, finishing by sinking to their heels half a dozen times to supple their legs. This simple exercise is particularly recommended to the notice of gymnasts. Bringing the hands to the front, then over the head, the fingers touching, extending the arms and bringing them to the side, bending over till the hands touch the feet, throwing the hands to the rear and making them meet in front alternately are all easy and useful practices and preparations for the Indian club exercise, admirable as it is for the back, arms, and loins.

Walking.—Nothing is more important for the Infantry officer or soldier than the power of walking a considerable distance without fatigue. This cannot be acquired by occasional efforts and walking long distances at irregular intervals; such, instead of being beneficial, is very hurtful. The irregular walker will say, "I feel much the worse, instead of the better, of the long walk I took this morning." Whereas, a man in the daily habit of walking six or eight miles a day, with intervals of rest, will not be knocked up when put to twenty or twenty-five miles on service. We are taught to turn out our toes in walking; the American Indians, however, put down the foot straight, walk lightly on the fore part of the foot, and make no noise with the heel, as those white men who walk clumsily do. Our soldiers are taught to keep the arms quiet in walking, whereas the Russians, with the fire-lock in the left hand, swing the right hand right across the body to help them on.

The highland kilt is well adapted for walking, as are the breeches of the Tyrolese, open at the knee. The long Alpen stock is a wonderful help among hills, and gives a man a third leg as it were. The dress of the French Zouave is admirable. For daily practice, a mile a quarter of an hour will be found the best rate for most men who would pretend to be walkers; among the men of the day the walking powers were remarkable of General Sir Colin Campbell (Lord Clyde), an early riser, temperate and light of foot.

Over exertion is most hurtful.—Some fine young men, though they have won a wager to march ten miles in two hours, equipped in heavy marching order, with firelock, belts, pack, and sixty rounds of ammunition, yet have injured their constitution thereby; old gymnasts should not encourage these great trials of strength and endurance, as they injure instead of benefitting the athlete. Among the first pupils of the Rolands of Edinburgh, were the fine men, Leith and Horn, models of muscular development, and casts of whose limbs are preserved—both have long ceased to walk this fair earth, self-sacrificed from overtasking their strength. Hood's strong man broke down attempting to lift the best bower anchor of the "Chesapeake."

Dancing.—As an exhilarating exercise, should be encouraged in barrack rooms, and as an assistant to good walking. The soldiers of the noble Black Watch had no objection to a reel during a halt on an ordinary march, this, in fact, with the music of the pipes, sub Jove, had always a most enlivening effect on the column. *Singing* (also of great importance to cultivate) usually ending the march, after the way-side dance.

Running.—The best runners are those who have power of limb, combined with good wind. In running, "those magnificent savages," the Kaffirs, excel, trotting over seventy miles a day on emergencies; their legs are like pillars. The late Colonel Mackenzie Frazer, a very powerful man, said that he ran across Scotland in one day; this was accomplished at a part in the North where it is seventy miles in breadth. The wind was behind him, and with his kilt on he went away before it, full sail, down a long valley. A tolerably thick sole may do for walking, but not for a runner. In the woods of America, the Indians mocassins have no

soles at all. that is, the upper and sole are of one thickness, giving perfect freedom to the foot on the soft surface of grass, leaves, and vegetable mould. Frequent practice over 100 yards is best, and with the arms well trussed; after that 1,000 yards, and before the steeple-chase up hill is attempted, as a feat for accomplished runners. Lieut Machell, 14th regiment, won the Irish Champion's belt, by running 150 yards in 17 seconds at Cork, and 200 yards in 23 seconds. But with this, as with other exercises, men "rejoicing in their youth," should not be provoked to attempt more than will do them good; heart disease is oft-times the result of excessive running and rowing.

Picking up Stones.—To pick up a hundred stones separately, and place them in a basket within the hour is a good practice in running, and should of course be begun slowly, picking up the first fifty to get into wind, then taking the most distant stones "is the trick." This was once done in 37½ minutes though 55 minutes is very fair 6¼ miles with the stooping.

A sack race, though it is more properly jumping than running, always affords great amusement, and is a good finish for a competition in manly exercises.

Leaping.—The apparatus for leaping is very simple for soldiers' competition; two light posts driven into the ground, and pierced with gimlet holes for pegs to support a cross bar; by this, the high leap is practised with or without a run, and a good leaper can manage, with a run, the height of his chin. The long leap with and without a run follows, and very good jumping with a run may be reckoned at from 17 to 21 feet.

The hop, step, and jump, is a favourite competition. The deep leap, or one from a height descending, is useful, and care should be taken not to alight on the heel, but on the toes, to avoid a jar to the system, 30 feet may be dropped with safety after some gradual practice. Vaulting over gates is a favourite amusement with active young men, also the leaping pole for clearing brooks, and going across country with greater facility.

Putting, &c., or throwing a shot, stone, or square weight, is much practised by artillerymen, as pitching the caber or young pine tree, is by Highlanders. Lifting weights is a good trial of strength if overstraining be avoided, 500lbs. may be raised by many men without difficulty, by standing over the body to be raised, introducing a stout stick into a rope surrounding the 500lb. weight, stooping, then grasping the stick with the hands before and behind, and then gradually rising.

Climbing—The thick mast, then poles and ropes, ladders hand over hand, &c., are strengthening exercises. Whilst exploring in the woods of New Brunswick some of the branchless trunks, were climbed, for the purpose of observation, by having irons strapped inside the legs and under the feet, and at the extremity of them, next the heels, were spikes to stick into the wood like bear's claws. Practice with the Eastern toddy drawer's apparatus would be useful. A simple apparatus for climbing, &c., may be set up in a barrack square, by resting one of the ladders usually found there against a gable, having a stout rope hanging from it, also a triangle, consisting of a bar of wood and a couple of ropes, swinging at the height of seven feet form the ground for the usual exercises of the gymnastic school on the horizontal pole; near the canteen, and for the amusement of the men in barracks, skittles, the nine holes, and quoits should be arranged.

Swimming.—If a body of troops be quartered convenient to water, it is of great importance they should be taught to swim. Besides promoting health, muscular development, and good spirits, swimming is of the highest utility to a British soldier, especially moving as he does so often across the ocean to foreign stations, east, south and west, and liable to the chances of wrecks at sea and accidents in crossing rivers. Various swimming belts are recommended; those to inflate have saved men's lives, and have also lost them, for the substance of which they are made is perishable and the belt collapses sometimes, after being laid by, and will not hold air. Captain Bond, 14th Regiment, and late 12th Lancers, was saved by one of the air belts, after being four hours in the water, on the occasion of the fearful wreck of the Birkenhead steamer at the Cape of Good Hope, and seeing at first strong swimmers pass him, whom he afterwards came up with, miserably perishing from exhaustion and the sharks. The only reliable belt is composed of flat pieces of cork, nine inches long, four broad, and two thick, sewn into a stout belt, which, when folded together, occupies little space in a carpet bag; this is imperishable angular hollow tin swimmers lately patented by an officer of the Royal Navy. Where there are no safety belts on the occasion of a wreck, the expedient of empty and corked bottles, or gourds placed under the arms, and inside a Jersey shirt, with a strap round the waist, may be resorted to. Many valuable lives are yearly lost from ignorance of the simple principles of floating in salt water (naturally so sustaining for the human body); from the mere

act of keeping the head up, the back hollowed, and the hands down, and moving them gently and horizontally under the surface, the body is supported upright in the water. For bold and powerful swimming, and diving fearlessly into deep water, practice is required; but two lessons are sometimes all that are necessary to set men going as swimmers, and as were practised formerly by the light company, 14th Regiment, who had a boat found them to exercise in rowing and to learn swimming thus:—A six feet pole was rigged out horizontally from the stern of the boat; at the end of the pole was an iron ring, a rope passed through this; one end of the rope was held by the instructor in the boat, at the other end of the rope was a girth, which supported the learning swimmer round the chest in the water till he was directed, with elevated head and concave spine, to strike quietly forward with his hands, and backwards frog-like, with his legs, whilst an assistant rowed leisurely into water of any depth. It is of advantage, to have a floating platform, round the edge of which the teacher walks holding a string which passes round the learner's chest and supports him in his first essay. A scanty portion of raiment should be provided as the swimmer's costume, and canvas slippers are also useful on pebbly shores. In India, rapid rivers are swam with a string of gourds round the waist, or under the arms. In Africa, by means of a wooden horse, that is, a log or large branch of a tree, with a peg driven into it, to hold on by with one hand, whilst the other hand and feet propel.

Competitions.—Exercises being encouraged and promoted out of doors in fine weather, an empty barrack-room or hut being set apart as a winter gymnasium, it is desirable to have, every few weeks, competitions to keep the practice alive, and make men as in the old border charters, "strong for feichten," instead of weak from strong drink. Competitions succeed best if a good deal be left to the men themselves, whilst moderate prizes from the gymnastic fund suffice. Three officers may form a committee to get materials for the roped ring, and arrange preliminaries. To prevent delay between the games, the names of intending competitors should be collected the day before, and one game be rolled into another, and two or three hours, at most, occupied by them. The Judges should be non-commissioned officers, and the whole conducted with strict impartiality, and in perfect good humour.

Theatrical amusements—are very well also, but manly exercises promote self-respect, and something in this way always in prospect, attaches men to their corps, and produces a laudable pride in the noble profession of arms.—*Lieut. Col. Sir J. E. Alexander, on manly exercise for soldiers in United Service Magazine for November* 1858.

EXCŒCARIA, *Species ?* Thur-ro-tha, *Burm.* A Tavoy wood.

EXCŒCARIA AGALLOCHA. *Linn. Roxb. W. Ic.*

Arbor excœcans. *Rumph. Amb.* ii. 179, 80.

Ugaru of Sunderbuns,	Beng.	Bone baya-za,	Burm.
Ta yau,	Burm.	Gewa,	Hind.
Ka yau,	„	Tella keeriya gass,	Singh.
		„ Chettu,	Tel.

This tree grows in Ceylon where it is very common near the sea. It grows freely in the Sunderbuns, is plentiful in the Rangoon and Tonghoo districts, and grows through the Eastern Archipelago. The Bengali name, Ugaru indicates a belief that it yields the fragrant Aloe-wood of commerce, but this does not seem to be the case. Dr. O'Shaughnessy, at one place, says (p. 563) that its wood is knotty grey or blackish, smooth and resinous. But Dr. McClelland describes it as white coloured, and adapted to every purpose of house building. The sap is described as extremely acrid, and as causing great agony if, in cutting down the tree, any of it fall into the eyes. Hence Rumphius name "excœcans" or blinding, and this is probably correct as Rumphius himself became, from some cause, blind at the early age of 44. *Thwaites En. Pl. Cey. McClelland. O'Shaughnessy*, p. 563.

EXCŒCARIA JAMETTIA. *Spreng.*

Tiger's milk tree. Eng. | Kamotti, Malkal.

Grows on the western coast of India. It abounds in an acrid juice, from which a good kind of caoutchouc may be prepared.—*Useful Plants.*

EXCŒCARIA OPPOSITIFOLIA. *Jack* Common in the Central Province of Ceylon, at an elevation of 4,000 to 6,000 feet.—*Thw. En. Pl. Zeyl., p.* 269. *Jack Cal. Journ. of Nat. Hist. IV, p.* 386.

EXIDIA AURICULA JUDÆ. Fries. Jew's Ear Fungus. One of the Thallogens, of almost universal growth and used medicinally,

EXIDIA HISPIDULA, one of the edible fungi of China.

EXILE TREE. Thevetia neriifolia.

EXOCETUS. A genus of fishes belonging to the Abdominal Malacopterygii, forming part of the family Exocidæ. Their pectoral fins are very long, nearly equal to the length of the body. The fish to escape its enemies rises into the air and its pectoral fins vibrate while wet, and re-vibrate as often as they pass through a crest wave, wetting

the fins afresh. Some of the fish proceed from 70 to 250 yards. There are several species. Exocetus volitans. *Linn.* the flying fish; E. solitarius; E. evolans; E. exiliens; E. mesogaster. The E. volitans is usually 10 or 12 inches long, but attains to 15 or 20 inches. Thirty-two seconds is the greatest length of time that their flight has been observed, and distance accomplished 250 yards. They are captured by torch light in the West Indies. *Collingwood, Bennett's Gatherings of a Naturalist. Bikmore.*

EXOGENS. See Chenopodiaceæ.

EXOGYRA. See Pecten spondyloideum.

EXOSTEMA. See Cinchona.

EXOTIC PLANTS have been extensively introduced into India. The house of Timur and of that, particularly, Baber, Akber and Jehangir, brought many of the trees of their native countries into India, Baber, whenever he found leisure in the midst of his active life, diversified with multitudinous vicissitudes, formed a garden. Akber followed up the plans of Baber, and introduced the gardeners of Persia and Tartary, who succeeded with many of their fruits, as peaches, almonds, (both indigenous to Rajpootana,) pistachios, &c. To Jehangir's Commentaries we owe the knowledge that tobacco was introduced into India in his reign; but in latter years, the British have introduced Cinchona, many of the Acacias, the Eucalyptus, discovered the tea plant, introduced Sorghum sacharatum, Divi-Divi, and the Musa textalis, or Manilla hemp was brought through Colonel Balfour from the Eastern Archipelago. Multitudes of exotic flowering plants have been introduced into India. *Tod's Rajasthan.*

EXPORTS. See Cotton manufactures. India, Food plants, Rice, Java.

EYDOUX. See.

EYES, PAINTING mentioned in 2 Kings ix 30, Jer. iv. 30, Ezek xxiii. 40) and tiring of the head is still common in every eastern country. In painting the eyes, mahomedans use two substances, lamp black (Koh'l) and grey oxide of antimony, the latter the men use, and the women use lamp black.

EYRE, MajorGeneral Sir Vincent, K.C.S.I., born 22nd January 1811, author of Military Operations at Caubul 1842; Prison sketches 1843. Metallic Roads 1856. He was a prisoner under Mahomed Akbar Khan in Afghanistan. His defence of Arrah in the revolt of 1857 virtually suppressed the rebellion in Shahabad. He exerted himself and was the founder of the town of Esapur nearDehraDhoon atthe base of theHimalayas.

EYUBI, a descendant of Salah-ud-Din, the Saladin of the Crusaders. The family are known as the Hassan Keif, and occupy the district of Shirwan. In Mr. Rich's time, the bey was powerful andindependent. See Kafra.

EZIONGEBER, on the shores of the Red Sea, 1 Kings ix & 26, is a little port at the head of the Elamitic, or eastern gulf of the Red Sea. This town more naturally belonged to the Midianites of Sinai, or rather to their friends the Egyptians. It was afterwards called Berenies by the Ptolemies; and its place is still pointed out by the Egyptian name of the valley in which it stood as Wasly Tabe, the valley of the city. Solomon's ships sent from Eziongeber, brought home chiefly gold from Ophir, no doubt the town known seven centuries later under the name of the Golden Berenice, and not many miles from the modern Souakin, where gold was more common than in every other place of trade. From Ophir they also brought precious stones and ebony. *Sharp's History of Egypt Vol. i. 107.*

EZRA, the prophet scribe is called by the mahomedans, Ozair. According to mahomedan tradition, Ezra was of the race of Jacob, of the tribe of Levi, and fourteenth in descent from Aaron. They say that the Holy Scriptures, and all the scribes and doctors who could read and interpret them, excepting a few who were taken captives to Babylon, were involved in the destruction of Jerusalem by Nebuchadnezzar. Ezra who was then very young, was among the captives, and continued to read and teach the law of God to his countrymen during their captivity. At the end of the captivity, Ezra returned to Jerusalem, and some say there, some, near Babylon, while he was occupied in weeping over the ruined city and temple of God, he said to himself, "How can fallen Jerusalem ever rise again!" No sooner had he conceived this thought than God struck him dead, and he remained so for one hundred years, when he was raised again, and employed the rest of his days on earth in explaining the word of God to the Jews. The Christians of the East say that Ezra drank three times of a well in which the holy fire had been hid, and that thus he received the gift of the Holy Ghost, which rendered him capable of re-establishing the Holy Scriptures among his countrymen. About 100 miles above Koorna, on the right bank of the Tigris, is his tomb. It is a pretty mosque of tesselated brick work, surmounted by a green cupola, and the corners and tops of the tomb are ornamented with large balls of copper gilt. *Rich's residence in Koordisan, Vol. ii. p. 390. Mignan Travels, p. 9. Townsend Outram. and Havelock, p. 308.* See Koorna: Tigris

F. This English letter has a perfect representative in the ف of the Arabic, Persian and Hidustani, but has no representative in Sanskrit, Hindi, Mahratti, Guzerathi, Bengali, Uriya, Telugu, Karnata, Tamil and Malayalam. The Mahratta people, however, pronounce it distinctly, the sound of F being given by them to that of the English and Hindi ph. The Mohawks of N. America, as also the Hurons and the tribes called the six nations never articulate with their lips. They have no p, l, m, f, v, or w,—no labials of any kind. In the Society islands, the gutturals are wholly absent; and in China, neither the d, nor r, is used, and g, h, ph. and f, in the non-Aryan tongues are often interchanged.

FAARSI, Jap. a varnish, in use, in Japan, of an inferior kind supposed to be from the Rhus vernix but adulterated with the varnishes of India and Siam.

FABACEÆ. The Bean tribe, leguminous plants, of which 284 species belong to New Holland and Polynesia; 42 to Japan and China 12 to Timor: 14 to Persia, 20 to Arabia, and 891 species in the E. Indies and Java, arranged under 133 genera. *Voigt.*

FABA VULGARIS. Mœnch.

Vicia faba,	Linn.	Chastang,	N. W., Himm.
Common bean,	Eng.	Nakshan,	,,
Bakla,	Hind.	Pinnis,	Anglo-Tam.
Kaiun,	N. W., Himm.		

This is found wild in the Sutlej valley between Rampur and Sungnam at an elevation of 8,000 to 14,000 feet. Cultivated from time immemorial for food for man and beast as a vegetable, or the beans are ground into flour.—*Cleghorn Punjab Report p. 66. Dr. J. L. Stewart.*

FABACEÆ. Leguminous plants. See Dalbergia leguminosæ.

FACAS. Port. Knives.

FACBERI. Singh. In Ceylon two sorts of Crotalaria, which grow there pretty plentifully, viz. C. laburnifolia, and retusa, both with yellow flowers. *Thunberg's, Travels. Vol. IV. p.* 185.

FADÁNIYA. Hind. Urinary and intestinal calculi, the bezoar stones. See Bezoar.

FADUJAR, also Hajr-ul-bucher. Arab. Bezoar.

FADVI. Pers. Hind. Servant—Devoted servant.

FÆNICULUM PANMORI. *D. C.*

Anethum panmori. *Roxb.* ii. 94.

Razeeanuj,	Arab.	Badian,	Pers.
Mooree,	Beng.	Moodorika.	Sansc.
Goowa mooree.	,,	Dewadooroo,	Singh.
Warealee,	Guz.	Rata-enduru,	,,
Sonf,	Hind.	Perun Siragam,	Tam.
Mayuri,	,,	Pedda gillakara,	Tel.
Panmuohri,	,,		

Cultivated in India. Fl. small, bright-yellow, Febr.; fr. March and April. Seeds of a pleasant, sweet, warmish taste, used for culinary and medicinal purposes, especially among the natives. *Voigt.* 24. See Confection of Black pepper.

FÆNUM. Lat. Hay.

FÆTID CASSIA. See Cassia tora.

FAGARA OCTANDRA. See Tacamahac.

FAGARA PIPERITA, the Pepper-bush of Japan. The leaves, as well as the berries, have a spicy taste, are heating, and at the same time rather disagreeable to the palate. *Thunberg's Travels. Vol. III. p.* 62.

FAGARA RHETSA. Roxb. Syn. of Xanthoxylon rhetsa.—*D. C.*

FAGHUREH JABRONG. A spice of Assam and Himalayas.

FAGONIA CRETICA. Linn.

Spalaghzai,	N. W. Himm.	Damiya,	N. W. Himm.
Dhama,	,,		

A small spinous weed common in most parts of the Punjab plains, and occurring in Affghanistan to about 3,500 feet. The plant is given as a febrifuge and tonic, and Dr. Bellow states that, in the Peshawar valley, it is administered to children as a prophylactic against small-pox. *Dr. J. L. Stewart.*

FAGOPYRUM. A genus of plants of the Nat. Ord. Polygonaceæ, of which P. cymosum, P. esculentum, P. fagopyrum and P. tataricum are known in India. Dr. Stewart thinks there are three species in northern India.

FAGOPYRUM EMARGINATUM. *Meisn.*

F. vulgaris,	—— ?	Ogal,	Hind.
Buckwheat,	Eng.	Phappar,	,,
Obal,	Hind.	Phulan,	,,

This is found in the Sutlej valley between Rampur and Sungnam at an elevation of 13,000 feet. At high elevations, cultivated to a great extent, this, with reddish flowers, is generally said to grow lower than P. esculentum, but he has seen both on the Sutlej at the same level, about 8,500 feet. *Cleghorn, Punjab Report, p. 66. Dr. J. L. Stewart.*

FAGOPYRUM ESCULENTUM.

Polygonum fagopyrum, *Smith.*

Buckwheat,	Eng.	Paphra,	Punjabi.

This has an erect stem, without prickles. It is found in the Sutlej valley between Rampur and Sungnam at an elevation of 13,000 feet. At high elevations, this and F. emarginatum are cultivated to a great extent. It grows on the worst and poorest soils, and is often sown as food for game, it is a native of Persia and other Asia-

tic countries, but was introduced into Europe by the Crusaders; and in many parts of France, where it is commonly grown, is called Saracen corn; so much is it esteemed in Belgium, that M. Bory St. Vincent says he was shown the tomb of the person who is reported to have first brought it into that country. *Babington, Manual of British Botany; Burnett, Outlines of Botany. quoted in Eng. Cyc. Cleghorn's Punjab Report p.* 66,

FAGOPYRUM POLYGONUM, was sent for exhibition to Lahore from the hills of the N. W. Himalaya and from Amritsar and Hushyarpur in the plains.

FAGRÆA FRAGRANS. *Roxb.*

Annah-beng, BURM ? of Martaban.
A-nan, BURM ? of Amherst, Tavoy and Mergui.
Annan-tha. BURM ? of do. do. do.

This useful tree grows in Martaban, Tenasserim, inland, particularly up the Attaran river: is very abundant in Amherst, Tavoy and Mergui, and in the islands of the Tenasserim Coast. Its maximum girth 4 cubits, and maximum length 20-25 feet, but of so slow growth that the Burmese refer to it in a proverb. When seasoned, it sinks in water. In Martaban, it is described as a compact, hard, yellow and very beautiful wood. In Tenasserim, also, as a very hard and excellent timber. In Amherst, Tavoy and Mergui, though almost imperishable, it is not found capable of bearing so heavy a strain as some of the other valuable woods of the province. It bears a breaking weight of 400 to 500 lbs. and its chief value as a timber is its imperishability when exposed to water or damp. Mr. Riley and Captain Dance say that the teredo navalis will not attack it, and Captain Dance mentions that neither heat nor moisture will warp or rot it, that it is impervious to the attacks of ants, and that the posts of a wharf at Tavoy, which for several years had daily, as the tides flowed and ebbed, been partly dry and partly wet, continued untouched by the worms. It is used for building houses, kyoungs, zyats, &c. as posts for buddhist edifices, piles for bridges, wharves, &c., but for lay purposes only by the English, as the Burmese regard it as too good for the laity and say it ought to be confined to sacred purposes. Hence, as the phoongies orBurmese priests look on it as a sacred tree, Annan wood has been more preserved in the forests of Amherst, Tavoy and Mergui than any other valuable wood: it is scattered thickly over the alluvial plains together with Strychnos nux vomica. It has been recommended for railway sleepers. Dr. Wight, in Icones, figures three species of this genus, viz., F. Coromandeliana; Malabarica and Zeylanica, the properties of which are not known.—*Rev. Mr. Mason's Tenasserim, Captain Dance's Report, Dr. McClelland's Report.*

FAGU. HIND. Ficus carica;—Faguri HIND. F. caricoides.

FA-HIAN, the Fo-kue-ki of Remusat, Klaproth, Landresse, a Chinese buddhist traveller in India, Kotan (Yu-than) and Tibet in A.D. 399-400, along with Hoei-king. Fa-Hian with Hoei-king, and other Chinese pilgrims reached Yu-than or Khutan, in A.D. 399-400. Fahian then travelled by Tsu-bo and Yuhoei and over the Tsu-Ling mountains southwards to Kie-Chha the modern Ladak where he rejoined Hoei-king. From Kie-Chha the pilgrims proceeded westward to Tho-ly which they reached in one month. *Fa-hian* came to India, overland by way of Tartary and Cabul, visited Ceylon and sailed thence to Java. On his return, he left behind him an account of his travels called Foe Koue Ki or an account of the Buddhist countries. At the time of his visit, Buddhism was still the dominant religion, though Vaishnava doctrines were gaining ground. *Cal. Rev. Cunningham*, Ladak. See Airun, Buddha, India, p. 364. Inscriptions 378, 384.

FAIENCE. FR. Delft.

FAILI, a tribe of Kurds. They are also called the Bakhtiari and dwell in the mountainous part of Kirmanshah. See Kurdistan.

FAILSUN. GREEK. TURK. Spogel seeds.

FAIL ZAMAN, amongst the Rajputs, security for good behaviour: Hazir zaman, security for re-appearance.

FAIR ENG. A fair, called in India, a mela, or assemblage is held periodically at many places. The system is known to most Asiatic nations, and has been followed up with eminent success in Russia, and exists in full force in Toorkistan, North of Hindoo-Koosh, it is not unknown in some parts of the Cabool dominions, and has long been familiar to the natives of India. The celebrated fair at Hurdwar will immediately occur to most, and, besides it, numerous "mela," or assemblages, take place in different parts of the country. In Asia everything yet contributes to give them vigour, and they flourish as the only means by which nations distant from each other, and the population ofwhich is often widely spread, can be readily supplied with articles of home and foreign produce. The merchants who carry on the trade from India to Cabool are principally Lohanee Afghans, whose country lies westward of the river between Dera IsmaelKhan and Cabool, and they now make an annual journey to and from these

places, bringing with them the productions of Afghanistan, and taking back those of India and Europe. Being a pastoral race, they are their own carriers; and being brave, they require no protection but their own arms. They leave the rugged mountains of the west at Drabund, and assemble at Dera Ismael Khan, where they dispose of some of their property; others proceed lower down the Indus to Dera Ghazee Khan, or cross to Mooltan and Bhawulpoor, where their wants in a return supply of goods, are sometimes to be procured. Failing this, the Lohanees pass into India, and even to Calcutta and Bombay. The Lohanee and all other traders descend from Bokhara and Cabool about the month of November, and set out on their return in the end of April. In the Russian Empire, Fairs have been founded in the memory of man, at which business to the amount of 200,000,000 of roubles, or about 10,000,000*l.* sterling is now transacted, and this is even on the increase. The removal of the great fair of Maccaire to Nejnei has only served to give commerce a greater impetus. *Burnes in Papers East India Cabul and Affghanistan, pp.* 103 *to* 109.

FAIRY HAIR. Eng. Adiantum capillus Veneris. The Persians give the name of Mu-i-Pari or Hair of the Fairy, to Saxifraga stenophylla, *Royle.* See Ferns.

FAIZABAD. Hind. The capital of Badakhshan.. The people are purer Iranians than the Tajik.

FAKHTAI. A grey color, probably from "Fakhtah," *Hind.* a dove.

FAKIR. Hind. from Fukr, Arab, a mahomedan religious mendicant. Their Persian name is Darvesh, from Dar, a door and vihtan to beg, but the Persian Darvesh is synonymous with the Arabic Fakir. Originally there were 12 orders,

Rafai.	Maulavi.	Jalwati.
Sadi.	Kadiri	Khalwati.
Sahravardi.	Nakshbandi.	Bedawi.
Shibari	Vaisi.	Dassuki.

There have been many branches or orders. Jalal ud Din, Rumi, author of the Masnavi-i-sharif, founded the Maulavi order. In European Turkey, they have formed somewhat permanent communities, and about sixty different orders, each named after its founder, are supposed to exist there. The Bahtashi of Constantinople, are said to be quite atheistic, not attached to the principles of the Koran nor firm believers in Mahomed as a prophet. They are generally of the sect of Ali, therefore Sufi, or mahomedan spiritualists. The Rafai Darvesh, so common in Turkey, inflict on themselves great self-torture. Some of the wandering Indian fakirs travel so far west as Hungary, to visit the shrine of a Santon, Gul-bava, and travel into Tenasserim and Burmah. One whom we recently met near Hingolee, in the Dekhan, was a native of the Punjab, but had been to Ceylon, Mergui, Tavoy, Rangoon and Moulmein. As a general rule, in India, the fakirs are now a low, profligate set of men, held in great disesteem by all classes of the community and some of them are utterly degraded in habits and mode of life. The bulk of them are Be-Sharra literally, without law, i. e, do not act up to the precepts of Mahomed, but are latitudinarians, a few are Ba-Sharra, or with law, following mahomedanism. The latter are the Salik, the Be-Sharra are the Majzub, Azad, Russool shahi, Emam shahi. Kalandar are of both sects. *Herklots Kanoon-i-Islam.* See Darvesh. Sufi.

FAL. Malr. Fruit of any tree.

FALASHA. A Semitic race in Africa.

FALCO. The falcon, a genus of birds several species of which occur in India. With five or six exceptions only, the whole of the European diurnal birds of prey are met with in India, many of them being much commoner in this country, and they are associated with numerous other species unknown in Europe. The Entolmactos fasciatus. (Falco Bonellii of de la Marmora) inhabits the southern parts of Europe, with Asia and N. Africa; being replaced in S. Africa by En. bellicosus: In India and Ceylon is far from rare but confined to the hilly parts. Hieractus pennatus, inhabits E. Europe, Asia, Africa, India generally, and Ceylon: differing very little (if at all) from H. morphnoides of Australia, a rare species in Europe. Prof. Schlegel doubts the proper habitat of this bird: it is not uncommon in India, preying much on domestic Pigeons. The true Falco peregrinus is common in India, together with F. peregrinator, which would otherwise be regarded its Indian counterpart. Such races as those of the Crossbills, the Bauri and Shahin Falcons of India, the British Phylloscopus trochilus and Ph. rufus, and the different European sparrows, maintain themselves persistently distinct.

FALCO CANDICANS. (Falco gyrfalco; 'Gyr Falcon.') An Arctic species, very rare in temperate regions: the Shangar of Indian falconry seems to denote it, as a bird of excessively rare occurrence in the Punjab. Some writers separate from it an Icelandic race, either as a distinct species or variety, respecting which there is much difference of opinion.

FALCO LANARIUS. *Schlegel,* an inhabitant of the South East of Europe, differs very slightly from the Indian F. juggur, *Gray.*

FALCO MELANOPTERUS. See Elanet.

FALCO PERIGRINATOR. The Shahin, a favorite Indian falcon, does not inhabit Europe, but is clearly the Falco ruber indicus of Aldrovand, rather than the small hobby-like Indian species (F., severus), on which Timminck bestowed the name Falco peregrinus ('Peregrine Falcon.') It inhabits Europe, Asia, North Africa, if not also North and South America: the South African race smaller; and Australian F. macropus (melanogenys of Gould) very nearly affined. Common in India; also a nearly affined species, F. peregrinator, which resorts more to the hills, and is the F. ruber Indicus of Aldrovand. Although the Indian and also the north American races are considered different from the European by some, we doubt the existence of any permanent distinction whatsoever. For the Bauri or Peregrine Falcon of India, Mr. Gould adopts Latham's name, F. calidus, thereby implying a distinction from true peregrinus. It may be doubted exceedingly if any one difference could be detected. It is true, that many highly approximate races (considered, therefore, as species) do maintain their distinctness, even in the same region and vicinity; as Falco peregrinus and F. peregrinator, Hypotriorchis subbuteo and H. severus, Circus cyaneus and C. Swainsonii in India.

FALCO SACER. *Schlegel* (F. lanarius apud Temminck and Gould), a very rare species in East Europe, seems to belong properly to Middle Asia, and occurs rarely in the Himalaya. *Cal. Rev. April* 1857.

FALCO NOBILIS, the sign of the Egyptian god Horus.

FALCONRY. The sport of falconry is widely diffused over Asia, even to Malaya-Asia; but whether extending to China and Japan, we are unaware. The "quarry" hawked by Dr. Layard's Bedouin companions on the great plain of Mesopotamia, is the Houbara "Bustard" (*Houbara Macqueenii*) of Sindh and Afghanistan; being a different species from that of Spain and North Africa (H. undulata;) it appears that the former has most unexpectedly turned up, of late years, in England and Belgium, if not also in Denmark. Dr. Francis Buchanan Hamilton, remarking upon the hawking or falconry observed by him in the Shahabad district, mentions that "the only pursuit worth notice that he saw in several days' hawking was from a large bird of prey named Jimach, which attacked a very strong Falcon as it was hovering over a bush into which it had driven a Partridge. The moment the Falcon spied the Jimach it gave a scream and flew off with the utmost velocity, while the Jimach eagerly pursued. They were instantly followed by the whole party, foot, horse, and elephants, perhaps 200 persons, shouting and firing with all their might; and the Falcon was saved, but not without severe wounds, the Jimach having struck her to the ground; but a horseman came up in time to prevent her from being devoured." The Wokhab or Ukab, as it is also termed, is a small Eagle, very abundant in the plains of Upper India, the Dukhun, &c., bearing many systematic names, the earliest of which is Aquila fulvescens; for it is a different bird, not quite so large and robust, as the Aq: nœvioides of Africa, with which it has been supposed identical. Mr. (now sir) Walter Elliot, of the Madras C. S., remarks that—"the Wokhab is very troublesome in hawking, after the sun becomes hot, mistaking the jesses for some kind of prey, and pouncing on the Falcon to seize it. He had once or twice nearly lost 'Shahins' (Falco peregrinator) in consequence, they flying to great distances for fear of the "Wokhab" i. e. the Jimach. The principal species employed in Indian falconry are identical with those of Europe; namely, the Bauri of India, which is the Peregrine Falcon of the West; and the Baz of India, which is the Gosshawk or 'Gentil Falcon' of Britain. In a curious Persian treatise on the subject, by the head falconer of the Mogul emperor Akbar, the various species used are enumerated, and may be recognised with precision: among them is the Shaugar, which is clearly the Jer Falcon of the north; represented as extremely rare and valuable, taken perhaps once or twice only in a century, and then generally in the Punjab. The Shahin (Falcon peregrinator), another favourite Indian Falcon does not inhabit Europe, but is clearly the Falco ruber indicus of Aldrovand, rather than the small hobby-like Indian species (F. severus), on which Temminck bestowed the name F. Aldrovandi. *Cal. Rev. April* 1857.

FALCONER, Dr. Hugh, a Bengal Medical Officer, a distinguished Palæontologist. He was born at Forres in 1808 and went to India in 1829. He was Superintendent of the Botanic gardens of Saharunpore and Calcutta. He returned to England in 1856 or 1857, and died 31st January 1865. In the last half of his life, he devoted his time to the study of Mammalian Palæontology, and after his death, two volumes of Palæontological Memoirs and Notes were published by Dr. Murchison, entitled "Palæontological Memoirs and Notes of the late Hugh Falconer, A. M., M. D., V. P. R. S.; with a Biographical Sketch of the Author," Compiled and

edited by Charles Murchison, M. D., F. R. S. (London: Hardwicke, 1868.) He and Sir. T.P. Cautley devoted much time to examine the fossils of the Sewalik hills. He was the author of an Account of fossil bones at Hurdwar in Bl. As. Trans. 1837, vol. vi. 233:—On elastic sandstone, ibid, 240:—On the geology of Perim island, Gulf of Cambay in Lond. Geol. Trans. 1845, vol. i. 365;—Fauna Sivalensis, or the fossil fauna of the Sivalik hills, Cautley and Falconer, Lond. 1846, folio. Of the many varied subjects treated of in the palæontological memoirs there are several of great interest even to the general reader. One of these relates to the form and structure of the Sewalik Hills and his investigations have shown that at a period geologically recent the present peninsula of India was a triangular island, bounded on each side by the eastern and western ghauts converging to Cape Comorin, while the base of of the triangle was formed by the Vindhya mountain range, from which an irregular spur (forming the Aravalli Mountains) extended northwards; while between the northern shore of this island and a hilly country which is now the Himalaya Mountains ran a narrow ocean strait. The bed of this strait became covered with débris from the adjacent Himalaya on its northern shore, and with this débris became entombed and preserved many and various animal remains. The present condition of the country has been produced by an upheaval of the land, so that what was the ocean strait, forms now the plains of India—the long, nearly level valleys in which flow the Ganges and the Indus. Besides this a great upheavement along the line of the Himalaya has elevated a narrow belt of the plains into the Sewalik Hills (determined to be but of tertiary age) and added many thousand feet to the height of the Himalaya. For a knowledge of curious and striking forms, the world is indebted to the Sewalik explorations by Dr. Falconer and Sir T. P. Cautley. Amongst the discoveries was that of the *Sivatherium*, a gigantic four-horned ruminant-like animal, considered by Dr. Falconer to have been furnished with a trunk like the tapir, and certain fossil apes, the first ever discovered. But one of the most curious and interesting forms is a gigantic tortoise, *Colossochelys atlas*, a description of which was communicated to the Zoological Society in the year 1844. It is well known that an ancient mythological conception represents the world as supported on the back of an elephant, itself sustained upon a tortoise. This ancient wide-spread notion (common to the ancient Pythagoreans and the modern Hindoos) had in it, before Falconer, an obvious incongruity in that the greatest land animal of the world was figured as supported on the back of an animal of a size comparatively insignificant. His discovery of the immense *Colossochelys*, tortoise, however, removed this incongruity, if only it could be shown that there was a probability of its having been a contemporary of earlier races of man, from whom the tradition of its existence might have been derived. In the very same formations in which this great tortoise was discovered the relics of a small one were also found, which latter has turned out to be identical with the existing *Emys tecta*, and on this ground, Dr. Falconer conjectured that human eyes might have witnessed the Chelonian monster alive, and watched its toilsome march. This association together of fossil animals and man as contemporaries was indeed remarkable, as it took place at a time so long anterior to that in which the antiquity of man began to receive an attention from men of science generally. One of the conclusions at which Dr. Falconer arrived concerning the more recent geological conditions of India is as follows:—

Conditions in India during the tertiary period were precisely the reverse of what have held in Europe. Instead of a succession of periods, with successive decrease of temperature, India has now as high a temperature, if not higher, than it ever had during the tertiary period. The upheavements have operated to increase the heat. In latitude 30° at 7,000 feet above the sea the mean temperature, making the compensation for the elevation and reducing it to the level of the sea, is 81·2° Fahrenheit, or equal to that of the equator. The same excess of temperature holds generally over the continent, as contrasted with the eastern side of the continent of Asia. Instead of numerous subdivisions of the tertiary period with successive faunas, facts tend to the conclusion that India had one long term and one protracted fauna, which lived through a period corresponding to several terms of the tertiary period in Europe.

The discovery of all these various tertiary Indian fossils affords an interesting connecting link between two zoological faunas now remarkably distinct. In Africa of the present day, but in no other part of the world, we find both the giraffe and the hippopotamus, together with many other peculiar animals. On the other hand, there are many mammalian forms which are as exclusively Asiatic. It might have been anticipated that, in India, as in South America

and in Australia, the forms of life which preceeded those now existing would have resembled the existing ones only, and not others which now inhabit a distant geographical region. But Dr. Falconer has shown that this was not the case; hippopotami and even giraffes having been proved by him to have been inhabitants of (historically speaking ancient but geologically speaking modern) India. The outcome of these investigations is the establishment of the essential unity, as regards mammalian animals, of the faunas of Europe, Asia, Africa, and North America, and the establishment of the fact that these great continents together form one vast zoological province widely distinguished from the fauna of South America on the one hand and from that of Australia on the other.

In exploring the fossil remains of Europe and of Asia, we find a mixed African and Indian fauna to have existed down to the miocene period, and it may thence fairly be concluded that the mammalian animals now peopling the great continents before named constitute a fauna of miocene origin, and in that case we must expect to have to descend to deeper deposits to find in northern latitudes the representatives of Australian or of South American forms. Such, indeed, is the case; it is only in the cocene strata that marsupials have been found in France, and only in strata much more ancient that they have been discovered in England. It is true that edentate animals (whose headquarters are now in South America) have been found in European strata of miocene age, but it must be recollected that certain animals belonging to that group (the pangolins and Cape ant-eater) are now found in Asia or Africa. So that the presence of one or two edentata is in no way inconsistent with the homogeneous nature of the great miocene fauna, which has with the lapse of ages become differentiated into those zoologically distinct provinces of the present day—the (1) Palæarctic, (2) Nearctic, (3) Ethiopian, and (4) Indian regions; the first including Europe, Africa north of the Sahara and Asia (exclusive of Arabia) north of the Himalaya; the second, North America down to Mexico; the third, Africa south of the Sahara and Arabia; and the fourth, Asia south and south-west of the Himalaya Mountains. The noble labours and many estimable qualities of Dr. Falconer will be perpetuated in a way worthy of him, and after his own heart; for a Falconer Fellowship is to be founded in the University of Edinburgh. None the less, however, are all interested in his fame indebted to Dr. Murchison for the painstaking and conscientious way in which he has performed his labour of love, and for the rapidity with which he has executed his arduous task. *Pall Mall Gazette, quoted in Friend of India.*

FALCONERIA INSIGNIS, a plant of Kussowlee.

FALEZ. HIND, a field of melons.

FALLOW-DEER, of Deut. xiv, 5, 1 Kings iv, 23 called in Hebrew "yachmar" or "red" is supposed to be the "Bakkar-ul-Wash" of the modern Arabs, a kind of antelope.

FALITA. HIND., a slow match; also, amongst mahomedans, a lamp charm.

FALLI. HIND., a kind of iron.

FALODEH, Pushtu. A white jelly strained from wheat, and, in spring time, in Kabul, drank with sherbet and snow.

FALSA. HIND. Grewia Asiatica: also the acid berry of Grewia Asiatica, much used to make a sherbet.

FALSAR. HIND. of Kotah. Fibrous ginger, the inferior sort.

FALSCHMEA. RUS. Barley.

FALSE POINT, a cape in Orissa. It is a low and wooded head land, and has a lighthouse, 120 feet above the water.

FALSH or Palach. HIND. of Kashmir, Populus ciliata.

FALUS, also Falus Mahi. ARAB. HIND. PERS. also Khanak-ul-Kalb, ARAB. Nux vomica.

FALWA. HIND. also Farri. HIND. of Salt Range, Grewia elastica.

FAMINES have repeatedly occurred in India, chiefly owing to the failure of rain, but occasionally, also, occasioned by wars necessitating an interruption to agricultural operations. In the past three hundred years, Bundelkund has been three times devastated by famine. The subject of famines has latterly been much investigated and it has been laid down as a sign of coming famine that food at three times its ordinary price, at a season when some months must elapse without relief, means famine in the great majority of cases; while in some cases famine comes long before that rate is reached. When the rate rises to four times the ordinary standard, it is probably accompanied by famine of a very severe description. In 1769, the prices of grain, in Lower Bengal, became unusually high. At that time, the executive civil administration was conducted by native officials, who temporally remitted £8,000 of rent. But, by the 4th January 1770, the daily deaths, from starvation in Patna, were up to fifty; and before the end of May, 150. The tanks were dried up, and the springs had ceased to reach the surface, and, within the first nine months of 1770, one-third of the entire population of

Lower Bengal, were carried off for want of food. The following is a partial summary of famines that have occurred in India. One occurred in 1833, and was described in As. Jl. new series, vol. xiii. part 2, 21, 26, 96, 98, 100, 146, 167, 239, 273. Another at Lucknow, in September, where 50,000 persons perished of famine and cholera in a few days; at Hydrabad, Malwa, Bahawulpore, Indapore, and Oodipore, the whole crops were destroyed by locusts; in Cashmere, 25,000 people perished.

In one famine, many people are said to have perished; and at Lahore, mothers eat their children.

Gerrard gave an account of a famine at Herat, in 1832, when 25,000 persons perished in As. Jl. new series, vol. xiii. part 2, 165.

In a famine in Bundlecund, in 1834, 600 persons died. *Ibid*, vol. xvi. That, of 1837, was noticed, vol. xxvi. part I, 1, 89, 177, 266, and that in 1838, in vol. xxvii. part I, 12, 180.

For a famine at Cawnpore, a million-and-a-half sterling of subscriptions was realized and distributed; 1,200 persons died; 1,300 were fed daily. *Ibid*, 273.

A famine occurred in Guntoor, in 1833, and was described by Capt. Best. In this famine, 150,000 human beings died of starvation, also 74,000 bullocks, 159,000 milk cattle, and 300,000 sheep and goats. The loss of revenue occasioned to Government during the fifteen following years exceeded two and a half millions sterling. Mad. Lit. Trans. 1844, No. xxx. 186.

In a famine in Nagpore, in 1819, the price of Jowarry rose from Rs. 5 to Rs. 30 per candy. *As. Jl.* 1820, vol. ix. 79.

A famine, in Cashmere. *Ibid*, 1834, new series, vol. xiv. part 2.

A famine in Cutch, horrible effects of. *Ibid*, 262.

A famine in Marwar, 50,000 people perished. *Ibid*, No. xxxvi. 106.

A famine at Ajmeer. *Ibid*, vol, xv. part 2,198.

A famine in Midnapore district. Ibid, 202.

A famine in Cuttack. *Ibid*, 1837, vol. xxiv. part 2,247.

A famine at Futteghur, Shahjehanpore, Calpee, and Singbhoom. *Ibid*, 285.

A famine in the Upper Provinces. *Ibid*, 1838, vols. xxvi. part 2, 20, 69, 78, 144, 184, 212—214, 237; xxvii. part 2, 88, 93, 148, 154, 190, 195, 280, 281, 327. Meeting at Calcutta respecting. *Ibid*, vol. xxvii. part 2, 70, 185. 500,000 lives lost.

A famine in the Doab. *Ibid*, 188.

A famine in Kattiwar. *Ibid*, 1839, vol. xxx. part 2, 67, 119, 123.

A famine in Cutch. *Ibid*, 1839, vol. xxviii. part 2, 200, 226.

A famine Meeting was held at Glasgow respecting the famine in India. Government assistance during the famine at Agra. Relief Fund, Bengal. *Ibid*, 1840, vol. xxxi. part 2, 28.

Famine in India. *Ibid*, 1840, vol. xxxii. part 2, 100, 315; xxxiii. part 2, 204, 277.

Famine, Chronology of, 1841. Montgomery Martin on, 1640—1655, 1661, 1764—1766, 1770, 1782, 1792, 1803, 1804, 1819, 1820, 1824, 1832, 1833, 1836, 1837, 1838. *Ibid*, vol. xxxvi. 105.

Famine anticipated in the Upper and Lower Provinces of Bengal. *As. Jl.* 1842, *vol.* xxxix. 103.

Remarks on the famine by the Rev. Robert Everest published in the Statistical Journal, in which are adduced facts to show that unfavourable seasons in India are periodical. *Ibid*, 1843, *vol.* i. *3rd series*, 468.

Famine in Cashmere. *As. Res.* vol.

In 1860-61, there was a great famine on which Colonel Baird Smith reported in 1861, and recommended irrigation. Colonel Baird Smith has remarked on the rough periodicity of famines, and it may be said that these local famines recur in one part of the country or other every 5, 10, or 15 years. The greater famines occur in successive centuries; instead of 5, 10, or 15 we may say at intervals of 50, 100, and 150 years. There is vague mention of great famines in the 13th, 14th and 15th centuries, notably one in 1471; and without going beyond the more recent centuries, there seems to be no doubt that one of the great historical famines affected India about the year 1631, in the reign of Shah Jehan. Another mention is made of terrible famine in the year 1661. In the 18th century, we do not find mention of any famine on the greater scale till that of 1770 swept all the lower parts of the Gangetic countries, and we know not how much besides. The famine in 1783-84 was undoubtedly one of the greater famines. There have been four famines in Ganjam within historical recollection; the first 1789 to 1792, second 1799 to 1801, third in 1836, and the fourth in 1866. Of these, the first was the most severe, far surpassing in intensity that of 1866. The great famine which desolated Bengal 1770-72 did not extend to Ganjam, and probably the people reaped no small profit from the export of grain. The extent of the famine of 1791-92 is not anywhere exactly given.

Contrasted with 1866, it is worthy of note that the two earlier famines of 1789 and 1800 began in the north of the Ganjam district, and increased in intensity towards the south, whilst that of 1836, as in 1866, was felt with greatest severity in Orissa and parts of the district, adjacent to Bengal. The third period of scarcity in Ganjam, after an interval of 30 years, occurred in 1836. Cholera was very prevalent, and many of the cattle also perished. Again after the lapse of a quarter of a century, Ganjam was visited by a severe drought during the latter part 1865 and the early months of 1866.

The report of the three Commissioners embraces Cuttack, Pooree, and Balasore, the three districts of Orissa, omitting the hill tracts—in which the famine raged with greatest intensity, and continued longest. Manbhoom, Singbhoom, Midnapore, Bancoora, Raneegunge, Burdwan, Hooghly, Howrah, Nuddea; and the extent of the mortality never will be ascertained with any accuracy. Mr. Ravenshaw estimates it at not less than one-fourth of the population.

The Commissioners can give no details of the effect of the famine in the Tributary Mehals. Mohurbhunj is a very large territory covering an area of upwards of 4,000 square miles, and the greater part of this tract must be included in the area of most severe suffering; but the roughest approximate estimate of the mortality cannot be given.

In Chota Nagpore, in which are the districts of Maunbhoom and Singhbhoom, the mortality for the famine of 1866 fell on the population about the same as in Orissa.

Bengal suffered in the year 1770 from famine, more widespread and terrible than any which has ever befallen any other British possession, and which Colonel Baird Smith deemed to have been the most intense that India ever experienced. In the earlier days of British rule in Bengal, famine occupied a place in men's minds at least as prominent as that which it has held in the minds of the present generation in the North-western provinces. It is true that Bengal has not experienced terrible famine for nearly 100 years. In the Ganjam district, nearly 11,000 persons perished, from actual starvation, and in one part of the district upwards of ten per cent.

Sir Arthur Cotton estimates that two acres of rice land will feed seven people for a year, and Mr. Fischer, the manager of the Shevagunga Estate, considers that a family of five will consume under 6 lbs. of grain, per diem. *Ann. Ind. Adm. vol. xii., p.* 11. 244 268, 288, 300 *Hunter's Rural Life in Bengal.*

FANA. See Laquis.

FANAM. A coin of the Carnatic, now uncurrent. The correct value of one Company's rupee was 12 fanams 68·57 cash. Where much nicety was not required, the usual rate of conversion was one fanam = 1 anna 3 pice. It was a small silver coin, the 1-12th of a rupee: no longer coined.

FAN PALMS, the Chamœrops humilis. *Linn.* used for this purpose, grows in considerable abundance on the shores of the Mediterranean. The leaves of many of the palms of southern Asia, the Corypha, the Livistonia, palmyra and Date palms, are similarly employed. That of Ceylon, is the Corypha umbraculifera.—*Linn.*

FANS of China are principally exported to the United States; a few go to India and South America. Those sent abroad are made of palm leaf and paper; feather and silken fans are not so often shipped. Fire-screens are included under this head as well as fans; these are lackered. In 1836-7, 171,143 fans and fire-screens were shipped to America at $\$1\frac{1}{2}$ per thousand, and 2,200 feather fans at 40 cents each. According to the old duty, 100 fans paid $1\frac{1}{4}$ mace duty. The greatest part of the fans sent abroad are those which do not fold up.—*Morrison.*

FAN-TAL, in China, the Superintendent of Finance. See Kwang-tung-chi.

FAN-YAN-MA, the Chinese name of Bamian.

FAQEER, Fakir, or Durvesh, amongst the mahomedans, religious mendicants of whom there are several sects. In India, this class of religious devotees are generally:

1 The Kadriah or Banuwa.
2 The Chistee.
3 The Shootareea.
4 Tubqateea or Mudareea, also called daffalee.
5 Mulling.
6 Rufaee or Goorzmar.
7 Jullallea.
8 Sohageea.
9 Nuqsh-bundeea,
10 Bawa peearay.

The Calendar durvesh is rarely seen in India. *Herklots.* See Darvesh. Fakir.

FARAN, the valley from which the Jabl-Musa range rises. That part of the range, on which the convent of St. Catherine is built, is called Tur Sina. See Jibbel-Musa. Senai.

FARANJ MUSHK, Hind. Calamintha umbrosa; Ocimum basilicum.

FARARI. Pers. Hind., absconding, disappearance, a person who has disappeared. Fauti-o-Farari, Casualties by deaths and disappearance.—*Elliot.*

FARAS. Hind. The tamarisks, Tamarix orientalis and dioica. The Faras plants, in the drier parts of the Doab and in the vicinity of Delhi, are called Asul or Atul, and

the galls or "choti-mai" which are formed on the tree are called Samrat-ul-Asul." in Arabic. *Elliot.*

FĂRĂSH. HIND. PERS. a carpet, hence Farāsh a servant who spreads carpets. Literally "carpet-spreader," but in Persia, Afghanistan, and India, applied to under-servants generally. Amongst the mahomedan armies, the Farāsh was a tent-pitcher, which in the British camps is the duty of the *Elliot, Ed. Ferrier Journ p.* 291.

FARASIUN. HIND. Salvia lanata, and S. Moorcroftiana.

FARAZ. AR. HIND. PERS. In the mahomedan religion, points ordered by God,—God's commands—Sunnut being the ordinances of their prophet. For instance, the Ramzan or Eed-ul-Fitr feast, and the Baqrid feast are both Farz and Sunnut, while the Akhiri Char Shambah, the Maharram, and the Shab-i-barāt are only Sunnut. Thus, also, Captain Burton says, the afternoon prayers, being Farz, or obligatory, were recited, because we feared that evening might come on before the ceremony of Ziyarat "visitation" concluded. Throughout India, the Farz or commands of God, are almost obscured by the quantity of the Sunnut and the traditions and there are frequent reformations attempted, but these speedily assume political features. A sect, styled "Farazi" was formed at Dacca in 1828, but it died out. *Elliot. Wilson. Burton's pilgrimage to Meccah, Vol.* ii. *p.* 66.

FARBE-ROTHE. GER. Madder.

FARD, AR. in accounting, a slip of paper, a list, a sheet, or statement, a slip in an account book. *Elliot.*

FARDUSI, a celebrated Persian poet. He wrote the Shahnamah in A. D. 1,000, containing three heroes, Jamshid, Faridun and Garshasp as the three earliest representatives of the generations of mankind. A little way from the gate of the entrance of Toos there stands a dome ornamented with lacquered tiles, so small as seemingly to form a part of some private house; this dome covers the dust of this celebrated poet who after the unworthy treatment he received from shah Mahmood, Ghaznavi, retired there to die. *Fraser's Journey into Khorasan p.* 519.

FARFEYUN. HIND. Euphorbium; gum of Euphorbia Royleana.

FARFUGIUM GRANDE. Mr. Fortune says that at Ningpo, in the garden of an old Chinese gentleman there, he met with a beautiful new herbaceous plant, having rich blotched or variegated leaves which has since been named as above by Dr. Lindley. It was growing in a neat flower-pot, and was evidently much prized by its possessor, and well it might for it was the most striking looking plant in his garden. He informed Mr. Fortune that he had received it from Pekin the year before, and that at present it was very rare in Ningpo, but he thought, his visitor might be able to procure a plant or two from a nursery-man in the town, to whom he had given a few roots. He lost no time in paying a visit to the nursery indicated and secured the prize. It reached England in safety.—*A. Res. among the Chinese p.* 420.

FARGARD, Persian, a section of the Vendidad, the book of the ancient Zoroastrians. See Arian, Parsi, Vendidad.

FARGHANA the native territory of the father of Baber. it lies on both sides of the Jaxartes, a portion of ancient Scythia.

FARIA, MANUEL DE. Author of the History of the Discovery and Conquest of India by the Portuguese; written in Spanish, and translated into English by John Stevens. —*Playfair's Aden.*

FARID BUTI, HIND. Farsetia Hamiltonii and. F. Edgeworthii, Cocculus villosus.—*D. C.*

FARIGH, AR. Release, free. F. Namah or F. Khatti deed of release. From this word also, is the word Farāghat, leisure, enjoyment, repose, affluence, also Farigh-Khatana a fee to the writer of a farigh khatti. *Elliot.*

FARINA. ENG. LAT. SP. Flour, meal; any flour, used as food, either from wheat, rice, Janipha, potato, Jatropha, Maranta, Curcuma, Canna. Every now and then some one of the farinæ is prominently put before the public. When Dr. Hassall wrote in the middle of the 19th century, the farinaceous foods, sold in London and their composition, &ca. were.—*Gardiner's Alimentary Preparation* was entirely of rice, reduced to the state of an extremely fine powder which crepitated, under pressure, in the same manner as do most of the arrowroots.

Leath's Alimentary Farina, or Homœopathic Farinaceous Food.—Consisted principally of wheat flour, slightly baked, and sweetened with sugar, together with potato-flour, and a very small quantity of Indian-corn meal and tapioca.

Semolina.—Consists of the gluten of wheat, with a certain proportion of the starch, part of this having been removed. Semolina resembles in appearance sago, but the little granules of which it is composed in place of being round as in sago are angular. When moistened, the water is rendered perceptibly opaque and milky by the starch still present and the fragments swell up and become soft and glutinous.

Prince Arthur's Farinaceous Food—was entirely Wheat Flour slightly baked.

Prince of Wales' Food—Consists entirely of potato flour.

Hard's Farinaceous Food.—Consists entirely of wheat-flour baked.

Maidman's Nutritious Farina—Consists of potato flour artificially coloured of a pink or rosy hue, the colouring matter probably being Rose Pink.

Bradens Farinaceous Food—Consists of wheat-flour baked.

Jones's Patent Flour—Consists of wheat-flour with Tartaric Acid and Carbonate of soda.

Soojee—Consists of wheat flour sweetened with sugar. *Baxter's Compounded Farina* consists of wheat-flour sweetened with sugar.

Plumbe's Improved Farinaceous Food consists principally of Bean or Pea-Flour, most probably the former, with a little Tacca Arrow-root, some Potato-Flour and a very little Maranta Arrow-Root.

Vita Roborant.—Consists of a mixture sweetened with sugar of the Red or Arabian Lentil and Wheat-Flour, the latter in considerable amount. Vita Roborant bears considerable resemblance to Du Barry's Revalenta and is sold at 2s. per pound.—

Captain Ripley states that a substance like arrow-root is obtained from a plant called "Pembwaoo;" and the tapioca from the root of a tree called by the Burmese "Kapalee Myoukoo." *Food and its adulterations p.* 250. See Farina. Fr. It. Meal.

FARINGH MUSHK. Hind, Ocimum incerta.

FARING. Hind, Per, Europe, from the old term Frank. Hence Faringi, a European or relating to Europe, such as,

FARINGI DATURA. Hind. Argemone mexicana.

FARINGI DATURA KA TEL. Hind, Oil of Argemone mexicana. See Oil, Brumadundu or Curuku oil.

FARIAD. Arab, Hind, Pers. A complaint: Fariadi, a complainant, a plaintive.

FARH. Ar. Enjoyment; hence. Farh-Bagh. Hind, Pers. Pleasure-Garden.

FAROKH SIR, or Mahomed Farokh Sir, emperor of Delhi. He was deposed and murdered on the 16th Feby 1719, by Abdullah Khan and Hussain Khan.

FARMAN. Pers, Hind. A royal mandate, an order from a king or other superior, which the British write Firman.—*Elliot.*

FARQAH. Ar. Pers. A tribe, from Ar. Farq, separation. Hence also—Farāqāt, separation, Faraqat behtar az malulat, absence is preferable to quarrelling; also Farq, the part on the crown of the head where the hair parts.

FARRAKHABAD, a town of the Agra district in Hindustan. It was taken by Sir Colin Campbell on the 2nd Jany. 1858.

FARRA-RUD, a river on the eastern part of Persia.

FARRI. Hind. Grewia elastica.

FARROPOS. Port. or FRAPOS. Port. Rags.

FARS. According to the Jehan Numa, one of the earlier divisions of the province of Fars was into the five circles or departments called "Kurre" and named Istakhr, Darabjird, Shapur, Ardashir and Kobad. At present, it consists of three principal parts, viz 1. Fars proper (Persis Proper.) 2. Laristan near the Persian Gulf; and 3 Behbehan, or the country of the Khogilu, which represents the circle of Kobad. Behbehan is bounded, on the north by the great belt of mountains which separate Irak Ajem from the southern provinces of Persia: the northern and north-eastern shores of the Persian Gulf form its boundary to the south, Ram-Hormuz and the Ka'b country lie to the west, while Shulistan separates Behbehan on the east from the direct dependencies of Fars. On the east and south-east, Behbehan is surrounded by the Mamaseni tribe: on the north and north-west by the Bakhtiyari, and on the west and south by the Ka'b Arabs. Also, the mountainous region to the north and north-east of the plain of Behbehan is occupied by the Khogilu tribes,—and the districts of Lirani and Zeitun, near the Persian Gulf, together with the fortresses of Gul-i-gulab, all come under the control of the governor of Behbehan. Fars, Pars or Farsistan, is the province of the kingdom of Persia, which gives its name to the country. It lies between 27° 20′ and 31° 42′ N. lat., and 49° 20′ and 54 E. long, being nearly square and about 220 miles in length and breadth. It has Kirman and Laristan on the east; the Persian Gulf on the south, Khuzistan on the west, and Irak-Ajem on the north, with a superficies of about 44,335 geographical square miles, or nearly one-third of France. It has many rich and picturesque tracts, and is less desert than other parts of Persia. This province of Persia contains the salt lakes of Bakhtegan (also called Niriz) and Dereachte, which are in the neighbourhood of Shiraz; and there is a fresh water lake in the plain of Zerdan. The principal streams are the Bendamir or Araxes, which receives the Kur-ab or Cyrus river, as it falls into lake Bakhtegan: and the Nabon, whose course is from Firozabad southward to the Persian Gulf. In this country are also the higher parts of the two

branches of the Tab. Towards the north (according to Mr. Morier), Mader-i-Suliman marks the tomb of Cyrus (son of Cambyses); to the west are the ruins of Kizla Safed, and, nearly in the centre, are those of the ancient capital, Persepolis. This territory represents ancient Persis, which was watered by the Araxes, Gyndes, Oroatis, Arasis, Pelevar and Bagrad. Its cities were Corna, Axima, Arbrea, and Artacana; besides many others whose sites are unknown. Persepolis was the capital in the time of Alexander: more anciently, the seat of the government was at Pasargada, (*Strabo lib.* xv. *p.* 729,) the Persagadis of Quintus Curtius (*Lib.* v. *cap.* vi.) but as this historian speaks of the fortress of Persepolis, and the city of Persagadis (qu. Farsa-Gerd?) it is possible that the extensive ruins in the plain, near the former, may be the Pasargada of Pliny. (*Lib.* vi. *cap.* xxvi.,) *Euphrates and Tigris, Col. Chesney, p.* 210.

The entire southern region of Fars, bordering on the Persian Gulf, is called the Germsair or "hot region." It extends from the sea to the latitude of Kazeroon, and runs parallel with the Persian Gulf, from the banks of the Tab to the confines of Laristan from Bushire, eastward, as far as Cangoon, the tract is named the Dushtistan or "land of plains." The Tungistan, commonly pronounced Tungistoon, or "narrow land," is a small tract of land east of Bushire. The greater portion of the people of the whole Germsair, consists of an independent lawless set, many of the tribes being robbers by profession.

A huge wall of mountains separates the Germsair, or low region, from the Sardsair, or high table land of Persia. One of the most conspicuous of these, is an abrupt lofty hill, named Hormooj; where, specimens of coal were found. Sardsair signifies "cold region." It is also termed the sarhada, a word literally signifying "boundary or frontier," but, there, is generally applied to any high land were the climate is cold.

The Sea of Oman, or Persian gulf, called also the Persian Sea, and Erythrean Sea, also the Sea of Fars has several islands, the Jazirah-i-Lafet called also Jazirah-i-daraz, or Long-Island, known on maps as Kishm. Also Khareg island, on maps Karrack, a small island but well watered, not very far from Busheer, which once belonged to the Dutch, and was held in 1838 to 1846 by the British. *Ouseley's Travels. Vol.* i. *p.* 334. *Kinneir's Geographical Memoir of the Persian Empire p.* 54. *Colonel Chesney's Euphrates and Tigris p.* 210. *Porter's Travels. Vol.* i. *p.* 458. See Aras. Ardea, Ardekan, Irak, Iran, Kashgoi, Kab, Kirman, Lar, Laristan, Oman. Erythrean Sea.

FARSAKH. Pers., by the old Greek historians *παρασαγγης*. It is the Persian league, about 18,000 feet in length and is known to Europe, as the Farsang or Parasang. It is usually reckoned at $3\frac{3}{4}$ British miles, but like the "kos" of India it varies greatly. According to Major Rennell, the farsakh is little short of $3\frac{1}{2}$ British miles. (See "Illustrations of the Retreat of the Ten Thousand," p. 4.) Mr. Fraser (Journey into Khorassan p. 367) says, "The Khorassanee farsakh is rather more than that of Irak;" rather less than 4 British miles. A farsang, is also said, to be a distance within which a long sighted man can see a camel, and distinguish whether it be white or black. (Bundehesch, cap. xxvi.) It is also described as one hours travel or journey or four miles. *Baron C. A. De. Bode's Travels in Luristan and Arabistan. p.* 57. *Rich's residence in Koordistan. Vol.* i. *p.* 197 *Porter's Travels. Vol.* i. p. 255.

FARSAN, an island off the coast of Yemen about three miles from the sea port of Jezan. The sea-faring population there, are largely occupied in the pearl fishery.

FARSH. Hind. Pers. A Carpet. See Farash.

FARSH, Hind. Populus nigra.

FARUD. Ar. Hind. Pers, literally descent or alighting: in the customs department, delivery in of goods. *Ell.*

FARW. Hind. Digitaria sanguinalis.

FARWA. Hind. Tamarix orientalis, the tamarisk.

FASCIOLARIA FILAMENTOSA and F. Trapezium. See Siphonostomata.

FASL. Ar. Hind. Pers., a season, a crop, a harvest.

FASLI OR HARVEST ERA. The origin of this era, the harvest year of northern India derived from that of the Hijra, has been traced to the year of Akbar's accession to the throne, or the 2nd Rabi-us-Sani A. H. 963 (14 February 1556) when a solar year for financial and other civil transactions was engrafted on the current lunar year of the Hijra and subsequently adjusted to the first year of Akbar's reign. In the Dekhan, however, the Fasli year, differs from the preceding, being apparently in advance of them. The Fasli year of the Dekhan owes its origin to the emperor Shah Jahan, who after bringing his wars in Maharashtra to a close in 1636, endeavoured to settle the country, and introduce the revenue system of Tudor Mul, the celebrated minister of Akbar, and thus naturally came

the revenue or harvest year. It differs from the Fasli of Bengal by seven years, from the acceleration of the lunar year. The year is or ought to be sidereal, but the Madras Government have now fixed its commencement to the 12th July, and applied it solely to revenue matters. The harvest years of northern India, however, have their origin from the year of Akbar's accession to the throne; or the 2nd Rabi-us-sani A H. 963 = 14th February 1556: the object of Akbar, in introducing the Fasli or harvest year, was merely to equalize the name or number of the year all over his vast empire, without interfering with the modes of subdivision practised in different localities, but from this sprang the four existing harvest years. The Bengali san, the Vilayati san, and the Tamil Fasli year, may be always considered identical with the Saka solar year, while the Fasli of the western provinces,may in like manner be classed with the luni-solar Samvat there current. The Hijra year, began on the 26th November 1555, N. S. The concurrent Fasli year, 963, began on the 1st of the lunar month *Asan*, (Aswina) which fell on the 10th September 1555. The Vilayati year 963, on the 1st of the solar month Asan, which occurred on the 8th September 1555. But the Bengali san 963, began on the 1st Baisakh falling within the same Hijra year, which was necessarily that of the 11th April 1556. The number 592 must be added to convert the two first eras into Christian account, if less than four of these months have transpired, and 593 years, if more: also 593 years for the first nine months of the Bengali san, and 594 for the rest.—*Prinsep's Antiquities by Thomas, p.* 170. *Elliot, p.* 367.

FASTIKI. Hind., a kind of emerald.

FATAH-UL-BALDAN, a historical work on mahomedan countries from Spain to Sind, by Ahmad, son of Yahya son of Jabir, styled Al-Biladuri. He was tutor to one of the princes of the family of the khalif Al Mutawakkal, and died A. D. 829-3 (A.H. 279.) *Elliot Hist. of India.*

FATAHAH, Ar., also al-fatahat, also Fatahat the name of the opening chapter of the Koran. It is a prayer, and is held in great veneration by mahomedans who give it several honorable titles, such as the chapter of praise, of prayer, of thanksgiving or treasure. They esteem it the quintessence of the whole Koran, and often repeat it in their devotions both public and private, as christians repeat the Lord's prayer. Most Turkish epitaphs end by the words "Fatihah ruhun ichun" say a Fatihah for his soul. The Fatahah is entitled the Preface, of the Koran or Introduction, and was revealed at Mecca, and is as follows commencing with the words "Bismillah-Ir-Rahman-ur-Rahim, "In the name of the most merciful God, Praise be to God, the Lord of all creatures, the most merciful, the King of the day of Judgment, Thee do we worship and of thee do we beg assistance. Direct us in the right way, in the way of those to whom thou hast been gracious; not of those against whom thou art incensed, nor of those who go astray." This Prayer is offered with upraised hands which are afterwards drawn down over the face. The hands are raised in order to catch the blessing that is supposed to descend from heaven upon the devotee; and the meaning of drawing the palms down the face, is symbolically to transfer the benediction to every part of the body. It is said on many religious occasions. *Sales Koran, Burton's Pilgrimage to Meccah. Vol*, i. *p.* 286. *Ferrier's Journey, p.* 502.

FATEH ALI SHAH, was king of Persia up to the year 18 . His life illustrates Persian customs. He was an eminently handsome man. He possessed one of the largest families on record, in ancient or modern times. Besides the four "akad" or lawful wives, permitted to every mahomedan, he had more than 800 "mutea" or inferior spouses. He continually changed his women, as he was tired of them and lacked novelty; but he never parted with any who had borne him male children. He had upwards of one hundred and thirty sons; and one hundred and sixty or seventy daughters. At the time of his demise, his children, grand children and great grand-children amounted to about five thousand souls! These princes Shahzadé were, long, a heavy burthen to the country. Scarcely a village of any size in Persia but had some prince resident at it to oppress and impoverish the people, while he devoted his time and energies to all manner of mischief and profligacy. Some became comparatively well off, but many fell into great poverty, there, and some of his descendants soon had to earn their living as mechanics, and tradesmen in the different cities. This state of things was surpassed by Augustus XI. of Poland who is said to have had 354 children by his numerous concubines. He also had one of his own daughters for his mistress, a piece of depravity of which Fateh Ali Shah was never accused.

FATHAH. Arab. Hind. Pers. Victory.

FATHER and MOTHER,

Ma Bap,	Hind.	Tilli Tandri,	Tel.
Taya-Tya pan,	Tam.		

Among the people of India, and amongst the Chinese, an honorific appellation to people of rank or to a person from whom a kindness is received or expected. In China it is a title by which the representatives of authority are designated. *Huc, Chinese Empire, Vol. i. p.* 22.

This is a natural measure, from point to point of an outstretched hand. It was common to Greek, Roman, and Indian, and is four cubits in length. The Greeks and Romans had also the foot (pes) the hand (palm) the palm (παλαιστη) and the finger (digitus). The Romans also had the military pace, the Greeks, and Romans also had the cubit, (cūbitus.) The ancient inhabitants of Asia had, as a unit measure, the cubit or ell, from the elbow to the point of the little finger. All of these digit (angul) palm, ell (hath) and span (bilish) are in use in India.

FATIHGANJ in L: 28° 27′. 4 N.; L. 79° 17′. 7 E. a town in Hindoostan, 10 miles N. W. of Bareli. At the Tower Station it is 628 ft. above the sea. *G. T. S.*

FATIHGARH, or Farakhabad in L 27° 23′. 3 N.; L. 79° 37′ E. in Hindostan, a large town on the right side of the Ganges, 90 miles E. of Agra. The Dâk bangalow is 635 feet above the sea. *Schl. Rob.*

FATIMAH, daughter of Mahomed and wife of her cousin Ali. Her tomb at Loms, Armenia, is held by shiah mahomedans in the highest reverence. The Koran is read there night and day, and nearly the same privileges are offered to the pilgrims, as at Mecca, that of having paradise for their portion. *Chatfield's Hindoostan p.* 209. See Tavernier. B. I. Ch. vi. and B. J. J. Ch. iii.

FAZZEH. Arab. Silver.

FEASTS, are often mentioned in the Old and New Testaments and the texts find many illustrations in India, Genesis xlv. 22 says 'To all of them he gave changes of raiment,' and at the close of a Feast, hindoos among other presents to the guests, commonly give new garments. A hindoo garment is merely a piece of cloth, requiring no work of the tailor. Deuteronomy, xxiii 10 says 'He shall not come within the camp,' and hindoos, in a state of uncleanness, are interdicted from feasts &c. Mark xiv 20 says 'It is one of the twelve that dippeth with me in the dish'. In the east, hindoos never eat together from one dish, except where a strong attachment subsists between two or more persons of the same caste: in such a case, one person sometimes invites another to come and sit by him, and eat from the same dish. It is highly probable, that the same custom existed among the Jews, and that the sacred historian mentions this notice of our Lord's, 'It is one of the twelve, that dippeth with me in the dish,' to mark more strongly the perfidy of the character of Judas. John ii 8. says 'Bear unto the governor of the feast.' It is very common both with the hindoos and the mahomedans to appoint a person who is expert in conducting the ceremonies of a feast, to manage as governor of the feast. This person is rarely the master of the house. The numbers invited amount occasionally to hundreds, sometimes thousands and a person to secure regularity is indispensable. *Ward's View of the Hindoos.*

FEATHERS.

Pluimen,	Dut.	Păr,	Guz.
Bedveern,	„	Piume,	It.

Federn,	„	Rekkalu,	Tel.

In Asia, feathers are rarely used for stuffing beds or pillows. In the south and east of Asia, as in Europe, feathers are largely used for personal ornament, and those of the ostrich, the Indian roller, the green king fisher, and the egret are most frequently employed. The feathers of the ostrich are imported from Africa and the west of Europe is chiefly supplied from the northern margin of the Great Desert of Arabia. Those plucked from the living animal or recently killed birds are more beautiful and more durable than if taken from the animal some time after death, or

than cast or dropped feathers. The plumage of the male bird, is very superior to that of the female, the fine drooping plumes on the back and near the tail being of the purest white, while those of the female are never free from a tinge of grey near the tip. Commercolly in Bengal says *Mr. Taylor* is celebrated for its feathers. They are either prepared singly for head-dresses, or made into tippets, boas, and muffs, some of them are exceedingly beautiful, and apparently not inferior in quality to those imported into Great Britain from Africa. The down of the young Adjutant Crane (Ciconia Argala) and of other cranes, are made into ladies boas and victorines. The Adjutant is very rarely found in Southern India, but a kindred species the Ciconia alba, (Jerdon), is pretty common. Of this the under tail coverts are collected and sold in considerable quantity. Many are procured at Trichoor in Malabar. In the Punjab the narrow black wing feathers of the "Onkar" are used to make the "kalgi," or plumes for the "khod," or helmet. These plumes have a very elegant appearance, they stand about 6 or 8 inches above the helmet. The feathers of the Houbara macqueenii are similarly used. In Madras, dealers in bird's feathers carry on this trade on an extensive scale: one dealer had nearly 100 sets of hunters each composed of 4 or 5 shikarees and one cook—most of these people are koravah (basket makers) who live in and about Madras. Each set has its head man who is responsible for the others. These sets are sent out once a year, each receiving from 20 to 100 Rupees together with a certain number of nets, a knife &c.—they traverse various countries between Bombay, Delhi, Benares, Calcutta and all over the Deccan, collecting the feathers of king-fishers and return after 6 or 8 months to Madras, each set bringing from 1000 to 6000 feathers which are taken by the dealer at Rs. 14 per 100, and shipped to Burmah, Penang, Singapore and Malacca bringing ten to thirteen dollars the hundred. Feathers form a considerable export from India. In the four years 1857-8 to 1860-1, to the value of £27,570 were exported, about $\frac{1}{3}$rd of which went to Britain, France and China. The wings of a king fisher are imported into Burmah from India through Aracan. *M. E. J. R. Dr. Taylor in Ex.* 1851. See Bird's Feathers.

FECHADURAS. Port. Locks.

FEDERN. Ger. also BETT-FEDERN. Ger. Feathers.

FEDERMESSER. Ger. Penknives.

FEGHAN, a word supposed by some to be the source of the term Affghan. See Afghanistan.

FEEJEE ISLANDS in the Pacific. See Fiji.

FEET WASHING, alike amongst hindus and mahomedans, is a purification strictly attended to before meals. With hindus, so soon as a guest enters, to present him with water to wash his feet is one of the first civilities.

FEIGEN. Ger. Figs.

FEILI or FAILI, a name of the Bakhtiari tribe; See Bakhtiari, Faili, Kurdistan.

FEINES MEHL. Ger. Flour.

FEL. Pers. Elephant, hence fel khana elephant shed: fel pai, elephantiasis. It is from this word "Fel," with the Arabic "al" that the words Elephas and Elephant come.

FELAMORZ, the son of Roostum, the hero of Persian romance, was defeated by Behram near the fort of Fessa, between Shiraz and Darab. Behram caused Felamorz to be hanged, and his tomb existed in the village, until, it is said, a European traveller removed it away, as a relic.

FELIS, a genus of mammal animals, of the cat kind, of the Natural Order Feræ, the family, Felidæ, and tribe Felinæ. Amongst naturalists, the notices of them are usually limited to the larger, wild animals of this genus, of which may be mentioned,

Felis Leo, the lion.

Felis Caracal, the Caracal.

Felis Tigris, Linn. the tiger or royal tiger.

Felis Leopardus. Schreb, the leopard or Cheeta of India:

Felis Pardus, the panther or Gorbacha of the Dekhan;

Felis Jubata the maned leopard, the hunting leopard.

Felis Melas, Peron. The black Cheetah.

Felis Pardochrous, Hodgs.

Felis Horsfieldii, Gray;

Felis Javanensis, Desm.

Felis Sumatranus, Horsf.

Felis Bengalensis, Desm.

Felis Torquatus, Fred. Cuv.

Felis Murmensis. Hodgs.

Felis Viverrinus, Bennett.

Felis Chaus, Gulden. The marsh cat.

Felis Macrocelis of Java.

Felis Cervaria the lynx.

Besides these are several of the smaller feline animals, usually termed cats. But, in the catalogue of animals in the India House Museum it is remarked that several of the smaller species of Felis have a very close family resemblance, and zoological writers are not agreed as to their specific distinctions. F. Javanensis Cuv. and Dum.

and F. Sumatrana, Horsfield, were classed under F. minuta, by M. Temminck. who is said to have, in despair, given up the attempt to distinguish them. Likewise F. Bengalensis, Desm. F. torquata, F. Cuv. and F. (Leopardus) inconspicuus, Gray, are by no means well defined. Similarly, amongst sportsmen in India, there is a continuous attempt to distinguish the various kinds of the Cheetah. The word is of Hindi or Mahrattah origin and means spotted and amongst the spotted feline animals, sportsmen speak of the Leopard, the Panther, the Black Leopard, the Cheetah, the Hunting Cheetah, and the maned Cheetah, and Cheetah is generally applied as a suffix to all of these. There would seem to be at least four varieties of spotted cats, besides such rare animals as the snow-leopard of the Himalaya and the black panther.

The two larger animals which are confusingly called Cheetah, panther, leopard, differ so much in marking and appearance as to make them, to the unscientific eye, appear distinct species. The lighter coloured of the two, has the ground of a light tawny yellow, shaded into white at the belly and inside of the legs, neck, and chest.

Besides these, there is a small spotted cat also called "cheeta" which preys on dogs and small animals, but is quite unequal to cope with a bullock. The spots on its body are nearly complete spots, and not rings as in the panther.

The hunting leopard (Felis jubata, Leoparda jubata) the fourth on the list, is quite distinct and it has a mane. Its claws are only partially retractile. Many of the native princes keep these animals and train them for the purpose of hunting antilopes. *Bona fide* cats of the genus Felis, are very numerous in species, are of all sizes, from the lion and tiger downwards, and are nowhere more abundant in species than in India and its environs from the snow-capped Himalaya to Ceylon inclusive, and along the eastern side of the Bay of Bengal and Malacca Straits. Throughout this range of territory they occur of all sizes, from the largest to the smallest; and appertaining to various sub-divisions of the great genus Felis. These sub-divisions or minor groups, however, have not been satisfactorily established: and one great authority, Professor Temminck of Leyden, gave up in despair the attempt to classify the long series of feline animals otherwise than in order of size. It needs no extraordinary acumen to recognise the type of one sub-group in the lion, of another in the tiger, of a third in the lynxes of a fourth (most distinct of any) in the hunting leopards or Cheetas of books on natural history, and so on; but there are various species which do not conform to any such division, nor possess sufficiently marked characters to stand as the types of peculiar divisions: again, there are local groups; thus, among the animals generally classed as Leopards, there is the South American type, with large bull-dog head and comparatively short tail, to which the Jaguar and Ocelots belong,—and also the Asiatic type with very long and thickly clad tail, large body-markings, &c., to which the Ounce or ('Snow Leopard') and several other and smaller animals appertain.

The various feline animals which may happen to fall under the notice of an Indian sportsman, are however, as under:—

FELIS LEO. Linn. The Lion. It is generally recognised that there is only one species, with several varieties, the lion of Senegal, the lion of Barbary, and the lion of Persia; and sportsmen are inclined to distinguish varieties in the lion of Guzerat and Kattywar, and the lion of Gwalior and Harrianah. The lion, is the desert king; as the tiger is monarch of the jungles. It is found in Guzerat, Kattywar, along the Runn of Cutch, in Rajputanah, Gwalior and Harrianah. It is tolerably plentiful at Gwalior and also about Goonah, and lions have been killed 20 miles from Sagur, wretched mangy looking things. In those met with, generally, the male is nearly maneless, and usually inferior in size and appearance to its African brothers. Tigers are said to avoid the lions and desert those jungles in which any roving lion may make its appearance. In Kattywar, the district the lions most affect, tigers are said to be unknown, though panthers are common. It has been supposed, also, that the lion avoids the tiger. And since the "Fifty Rs. reward" came out in the Central provinces, for tigers, and they have been shot off, lions have begun to appear in the northern-most parts. It is moreover unlikely that an Indian lion could contend with a tiger as the lion is much inferior in size and strength. In the Honorable Mountstuart Elphinstone's *Account of the kingdom of Cabul*, which was published in 1815, it is remarked, that—"the lion, though so common in Persia, and lately found in such numbers in Guzerat and in Hurrianah North West of Delhi, is very rare in Afghanistan." As regards the latter country, he adds,—"the only place where I have heard of lions, is in the hilly country about Cabul, and there they are small and weak, compared to the African lion. I even doubt whether they are lions." Lieut.

Irwin, who accompanied Mr. Elphinstone in his mission to Cabul, states, in his admirable *Memoir on Affyhanistan*, published by the Asiatic Society in 1839, that—"the lion is a native of Persia, and some are found as far as Tashkend, in a northerly direction and an easterly. There remains no doubt of lions being found in Harrianah; but in many of the intermediate countries these animals are very rare." These notices are contemporaneous; and one certainly conveys the idea of the lion being then a commoner animal in the great Harrianah desert than the other does: but so far back as in 1837, the late well known sportsman Major Brown, ('Gunga' of the *Bengal Sporting Magazine*) remarked, that—"only twenty-three years elapsed from the occupation of the country, when the Lions, which were at one time numerous in the dry and sandy deserts of the Harrianah, became extinct south of the Cuggar, through the ardour of British sportsmen, and, it is supposed, none are now to be found nearer than the Sutlej. Having no inaccessible dens to retire to during the hot weather, the lions, from necessity, took up their abode where water could be found; and as places of this description were rare, and generally near villages, their retreat was easily beaten up, and their entire destruction speedily effected. In the month of May, the lion-shooting party had only to ask one question from the people of the country, to know where they might expect sport?" viz: where water was still to be found. The largest lion seen in England was caught, when very young, in Harrianah, by Genl. Watson, and was presented to King Geo. IV. In Vol. 1 of the *Sporting Review*, the lion is cursorily mentioned as an inhabitant of the territories south of Gwalior in 1845: About 1848 there was seen in Calcutta a fine living lioness, more than two-thirds grown, which had been captured as a small cub in Sindh. She appeared healthy and vigorous; but died in the course of her passage to England. There were also then, in the London Zoological Gardens, a young lion and lioness from Guzerat; which is the stronghold of lions in India. From the accounts of Asiatic lions, there seem two varieties of them: one comparatively maneless; the other heavily maned, scarcely if at all less so than the African lion. Of the latter, again, some naturalists distinguish apart the lions of Barbary, Senegal, and South Africa. The lion seems to traverse great tracts of country and there is no doubt that those of Persia and Mesopotamia, possibly of distinct varieties or rearing, come to the west of India, along the line of the Indus to Sindh into Harrianah, Rajputanah, towards Gwalior, Kattywar and Guzerat, and that this is the explanation of the varied opinions put forward by sportsmen as to the appearance of the lions of India. The ordinary Persian lion is well maned; and this race is said to be identical with the Arabian. A fine Persian lion and lioness were long exhibited in the Surray Zoological Gardens, with a fine S. African lion and lioness in an adjoining den; and Mr. Blyth says there was not much difference in the development of the mane of those two lions; but the Persian was a much paler animal than the other." According to Mr. Warwick, the pair were brought as a present to King George IV., from Bussora, in the Boyne, man-of-war, Captain Campbell, and the King presented them to the Menagerie then at Exeter Change. The Asiatic," he adds, "differs from the South African lion in being rather less in size, with mane much more scanty, and of a light yellow colour, tipped with grey, the whole body being of an uniform fawn colour. The head wants the width and nobleness of countenance so apparent in the African lion. The tail is not so delicately tapering, and the tuft at the end of it is much larger in proportion." (*Naturalist's Library,—Felinæ*). Major, Sir W. Cornwallis Harris, however, had no faith in the existence of an Asiatic race of maneless or scantily-maned lions: and he was as familiar with the lion of Guzerat as with that of South Africa. He says that in point of size and complexion the South African lion differs in no respect from that found so abundantly in Guzerat—one of the only two provinces of India wherein the species exists—measuring usually between ten and eleven feet in extreme length (i. e. the stretched skin!), "and varying in hue betwixt ash-colour and tawny-dun; but generally possessing a more elaborate and matted mane; which peculiarity is attributable, in a great measure, to the less jungly character of the country that he infests, and to the more advanced age to which, from the comparatively small number of his mortal foes, he is suffered to attain. In India the lion is often compelled to establish himself in heavy jungles, which comb out a considerable portion of the long loose silky hairs about his head and neck; but this is seldom the case in the arid plains of Africa, where the covert being chiefly restricted to the banks of rivers, or to isolated springs, he rests satisfied with a less impervious shade, and is often disturbed from a clump of rushes, barely large enough to conceal his portly figure." Elsewhere,

Major Harris remarks, that—"amongst the Cape colonists it is a fashionable belief, that there are two distinct species of the African lion, which they designate the vaal and the zwart, or the "yellow" and the "black," maintaining stoutly that the one is very much less ferocious than the other: but colour and size depend chiefly on age; the development of the physical powers, and of the mane also, being principally influenced by a like contingency. That which has been designated the "maneless Lion of Guzerat" is, he says nothing more than a young lion whose mane has not shot forth; and I, he adds, give this opinion with less hesitation, having slain the king of beasts in every stage from whelphood to imbecility."

The so called maneless lion of Guzerat was brought to the notice of the London Zoological Society by Capt. Walter Smee of the Bombay Army, in 1833; and an excellent description and coloured figure of it are published in the first volume of the Society's transactions, contributed by that officer. A correspondent of the *B. S. M.* (for 1841), however, thus writes of the lions of Kattywar;—"Glad as I should be to agree with so accomplished a sportsman as Capt. Harris, and knowing at the time I write this, that he has killed more lions than any man on the Western side of India, yet having nearly accomplished fifty-head myself, I wish to observe that three years ago, in Kattywar there were lions with very dark skins, and which in fact were called by the natives Kalphoota, which means in these parts 'black skins,' or 'black stripe.' These lions, thirteen in number, charged most desperately; and I think they made good some seven or eight charges upon the head of Capt. Harris's quondam elephant, 'Mowlah' by name. Since this batch I have killed many, but none in colour or courage like them. Out of all the lions I have killed, 9 feet 2 inches is the longest I have seen, before taking the skins off for curing, they are stretched to 11 feet frequently.

"These lions," continues Capt. Smee, "are found in Guzerat along the banks of the Sombermuttee, near Ahmedabad. During the hot months, they inhabit the low bushy wooded plains that skirt the Bhardar and Sombermuttee rivers from Ahmedabad to the borders of Cutch, being driven out of the large adjoining tracts of high grass-jungle (Bhir) by the practice annually resorted to, by the natives of setting fire to the grass in order to clear it and ensure a succession of young shoots for the food of the cattle upon the first fall of the rains. They extend through a range of country about forty miles in length, including various villages, and among others those of Booroo and Goliana, near which my finest specimens were killed. They are so common in this district, that I killed no fewer than eleven during a residence of about a month; yet scarcely any of the natives, except the cattle-keepers, had seen them previously to my coming among them. The cattle were frequently carried off or destroyed, but this they attributed to tigers: the tiger, however, does not exist in that part of the country. Those natives to whom they were known gave them the name of Ontiah Bagh, or 'Camel tiger,' an appellation derived from their resemblance in colour to the camel. They appear to be very destructive to domestic cattle, and the remains of a considerable number of carcases of bullocks were found near the place at which my specimens were killed: about ten days previously, four donkeys had been destroyed at the village of Cashwa. I could not learn that men had ever been attacked by them. When struck by a ball, they exhibited great boldness, standing as if preparing to resist their pursuers, and then going off slowly and in a very sullen manner; unlike the tiger, which, on such occasions, retreats springing and snarling. "In addition to the district in which I have met with them, these lions are also found on the Runn near Rhunpore, and near Puttun in Guzerat. Some persons who saw them in Bombay stated that they also occur in Sind and in Persia. How far this latter statement may be correct I cannot determine; but I may remark that the Persian lion which is at present exhibited at the Surrey Zoological Garden, has none of the characteristics of the maneless lion of Guzerat, and seems to me to differ but little from individuals known to have been brought from Africa."

In the days of Lord Hastings' rule, it would appear that lions were still common in the great Harrianah plain. A contributor to the *B. S. M.*, in 1833, remarks that "Hansi was then in its 'high and palmy state,' and considered the best sporting country in India. Lions were found in considerable numbers, although lately they have become exceedingly rare. * * * The first Lion-hunt I ever was present at was the most beautiful sight I have witnessed. The party assembled at Hissar, where some of the sporting elephants of the Marquis of Hastings' retinue were stationed. A duffedar's party, of Skinner's Horse, accompanied us. The presence of sowars in Lion-hunting is very necessary; the plains being extensive, the animal is liable to be lost after the first on-

set, unless sowars are at hand to go out on the flanks, or to push on ahead to mark the jungle the lion retires into. In general, when a lion is pursued, he will either endeavour to get away by sneaking off, or take to the open country, and there await the attack: the latter, a tiger is never known to do, and I consider it to form the only peculiar difference of the two kinds of sport. A lion that takes to this open fighting gives more exciting sport by far than anything I have seen in tiger-hunting, and is the most trying for the elephants. * * * One killed was a young but nearly full-grown male stood exactly 3 ft. high, and was 9 ft. long; his mane was 9 inches in length." The famous lion 'King George,' formerly in the Tower menagerie, and procured in Harrianah when a small cub by the late Genl. Watson, was even renowned for the superb development of his mane. Mr. Bennett (in his *Tower Menagerie*) relates that in the commencement of year 1823, the late "General Watson, then in Harrianah, being out one morning on horseback, armed with a double-barrelled rifle, was suddenly surprised by a large lion, which bounded out upon him from the thick jungle at the distance of only a few yards. He instantly fired, and the shot taking complete effect, the animal fell dead almost at his feet. No sooner had the lion fallen than the lioness rushed out, which the General also shot at, and wounded severely, so that she retired into the thicket. Thinking that the den could not be far distant, he traced her to her retreat, and there despatched her; and in the den were found two beautiful cubs, a male and female, apparently not more than three days old. These the General brought away: they were suckled by a goat and sent to England, where they arrived in September, 1823, as a present to George IV., and were lodged in the Tower." The male was the animal from which Mr. Bennet gives his figure and description of the so-called "Bengal Lion;" and it was remarkable for the superb development of its mane, when little more than five years old, at which age the wood-cut of him was executed by Hervey. The sum of our present evidence seems decidedly adverse to the belief that a maneless (or comparatively maneless) race of lions exists in Guzerat: but that such a race inhabits Mesopotamia is considerably more probable. No lion, even in Africa, attains to the magnitude of the largest male tigers of India. The lion is shorter in the vertebral column, and much deeper in the chest; indicative of its capacity for running in pursuit: this the tiger never does; and its structure is more emphatically that of an animal which springs upon its prey. Nevertheless, the resemblance of the skulls is so great, that there is only one certain mode of distinguishing them, viz., that the nasal bones pass back beyond the maxillaries in the tiger-skull and fall short of the maxillary suture in the lion-skull: besides which the profile of the latter is generally much straighter, while that of the former is more tom-cat like, showing a strongly marked obtuse angle. The close affinity of the two animals is demonstrated by the fact of their having interbred and produced hybrids when in captivity; and it is curious that a newly-born lion-cub is far from being so utterly unlike a tiger cub as might have been expected. "They are at first obscurely striped or brindled, and somewhat tiger-like in the coat. There is generally a blackish stripe extending along the back, from which numerous other bands of the same colour branch off, nearly parallel to each other, on the sides to the tail. The head and limbs are generally obscurely spotted. When young they mew like a cat; as they advance, the uniform colour is gradually assumed; and at the age of ten or twelve months the mane begins to appear in the males; at the age of eighteen months this appendage is considerably developed, and they begin to roar." (Bennett's '*Tower Menagerie.*') Monsr. F. Cuvier, however, states that it is nearly the third year before the mane and the tuft on the tail appear, and that they are not fully developed before the seventh or eighth year. The eminent French naturalist was, however, misinformed. The so-called Bengal lion (from Harrianah) figured by Mr. Bennet was magnificently maned, though little more than five years old. It has been noticed, too, that in lionesses the markings of the young are often more or less obscurely retained till they are full-grown or nearly so. They were conspicuously visible in the Sindh lioness, about two-thirds grown, which was seen in Calcutta. Lion and tiger-cubs are, in confinement, apt to suffer much at the time of developing their huge permanent canine-teeth; and perhaps many die at this age when wild. *Mr. Blyth in B. As. S. Trans.*

FELIS TIGRIS. Linn. The Royal Tiger.

Striped tiger,	Eng.	Rimass,	Sumat.
Bagh,	Hind.	Ha-riman,	„
Machan,	Javan.	Pilli, Tam.	Tel.
Putte Wagh,	Mahr.		

The Royal Tiger is found throughout India, to the S. E. boundary of China, through the Malay Peninsula, in Java and Sumatra. They are numerous in the centre of the

Peninsula of India, and very numerous in Singapore. Full grown specimens vary considerably in size, colour, and markings, but are considered to be of one species. They feed on cattle, on the Sambur or Rusa hippelaphus, and more rarely on the Axis maculata or spotted deer, but frogs, also, hog, porcupine. and other creatures are eaten by them. The tiger is not brave, retires before opposition, unless wounded. The buffaloes in herds charge at a tiger and beat it off. The wild dogs hunt it down and destroy it: and one was found evidently killed by a boar's tusk. On one occasion, a herd boy being carried off, the buffaloes charged the tiger and made it drop the lad. *Mr. Blyth.*

FELIS JUBATA. The hunting Cheeta or Hunting Leopard is common, though not plentiful, throughout Southern India. They can be quite tamed, and handled with freedom. One let loose in the stables, played about with the dogs, and suffered itself to be tied up again without difficulty.—*Mr. Blyth's Report.* See Felidæ. Mammalia.

FELIS LEOPARDUS, *Schreb. Temm.*

The Cheeta,	ENG.	Ha-Riman Bintang,	MALAY.
The Leopard,	„		

The word Cheeta is Hindi and signifies spotted and the people of India apply the same term to the Felix jubata or Hunting Leopard. Felis leopardus is common all over India, and the Malay Peninsula, but Dr. Muller says it does not occur in the Eastern Archipelago. It is said also to occur in many parts of Africa. The Leopard, says Colonel Sykes, is taller than the panther, longer, and slighter built, more of the ground colour is seen, and the spots are more broken. A black variety of this is said to occur.

Gor-bacha,		DUKH.			
Cheeta,		HIND.	Machan Batchl,	„	„
Beebeea Bagh,		MAHR.	Bawn, Pushtu.		

Mr. (sir) Walter Elliot distinguishes two varieties by the Canarese names, Honega and Kerkal, the latter being the Gor-bacha. Of this M. Temminck gives the folfowing character:—when adult, less than the Leopard. Tail as long as the body and the head, its extremity when turned back reaching to the tip of the nose; colour of the fur deep-yellowish fulvous, its internal parts marked with rose-like spots of the same hue as the ground-colour of the fur; the numerous spots closely approximate; the rose-like spots from 12 to 14 lines at the utmost in diameter; caudal vertebræ 28.—The number of caudal vertebræ assigned to the leopard by M. Temminck is 22. It is found throughout India, in Java, and Sumatra. But, though there no doubt are differences in size and colour and markings and in the breadth of the head and temper between the feline animal or animals to which the terms leopard and panther are applied sportsmen of India best acquainted with them in their haunts and who in examining the skins and skulls have devoted a great knowledge of them, are often not able to distinguish the one from the other.

FELIS PARDUS. LINN. Syn.

Si mi Bhotia,	SOKPA.	Min-khyeng,	KAMI.
Domestic Cat,	ENG.	Poni,	TAM.
Billi,	HIND.	Pilli,	TEL.
Maida,	PERS.		

The general term cat is applied by naturalists to all the feline tribe, and in ordinary conversation, in India, many animals which naturalists exclude are designated cats: there are, however, a considerable variety of animals, which are called "cats" in all countries, Civet-cats, Genet-cats, Marten-cats, Pole-cats &c.; the Lemur also is the Madagascar cat; the marsupial animals of Australia, are known as "wild cats" and the Shirmindi billi of the people of India means the bashful cat. The "wild cats" of India are a small but savage kind of lynx (the Felis rufa), and therefore a true cat, according to Zoologists. Domesticated cats are found throughout Asia, as, indeed, throughout the world. They are not alluded to in Scripture, but they are mentioned in a Sanscrit writing, 2,000 years old and there are figures of them, on the monuments of Egypt of a much prior age. Mummey cats have been identified with Felis chaus or marsh-cats and with Felis caligulata, and F. bubastes, both still found in Egypt wild and domesticated. Pallas, Temminck and Blyth believe that the domestic cats are descendants of several wild species which readily intermingles. F. sylvestris is wild in Scotland. F. lybica is the wild cat of Algiers and in S. Africa, F. Caffra is wild. In India are four wild species, of which F. chaus has a lynx like tail, F. ornata or torquata occurs at Hansi, and F. manal occurs in central Asia.

Of two supposed wild types of the domestic cats of India, obtained by Mr. Theobald in the Punjab Salt Range, neither of which can be referred to the F. ornata, they have much more the appearance of domestic cats; and so they undoubtedly would have, were they really two aboriginal types which are still strongly indicated by the domestic cats even of Bengal. One is the streaked or spotted type, the colouring and markings of which are not much unlike those of the European wild cat (F. sylvestris, Brisson); only more distinct, and the transverse streaks are more broken into spots, especially towards the hinder part of the body; the fur, however, is short, and the tail slender and of uniform apparent thickness to the end; showing a series of rings and a black tip: ears slightly rufescent externally, but infuscated, passing to black at tip where there is a distinct small pencil tuft of black hairs; paws deep sooty black underneath. Mr Blyth saw, at Allahabad, an exact counterpart of this alleged wild race in a domestic Grimalkin; but, in general, the domestic cats of this type, about Calcutta at least, are greyer, with the spots smaller and more numerous. The other type much resembles F. chaus in colouring but does not at all approximate to that animal in its proportions: it is much smaller than the chaus, with proportionally shorter limbs, smaller ears, and much longer tail, which last distinctly tapers at the extremity, consequently, it exhibits no tendency to the lynx form and character, so conspicuously manifest in the chaus. The body is uniformly grizzled "cat-gray" more or less rusty or fulvescent, without a trace of spot or stripe, such as may generally be discerned faintly in the chaus: but the bands on the limbs are much more distinct than in that animal, those of the tail equally so: and there are the usual marks on the forehead and cheeks (much confused albeit on the former). And a dark band across the chest: lower parts more or less whitish or tinged with fulvous, and marked with blackish or brown-black spots: ears dull, rufous behind, with a slight blackish tip and

no pencil-tuft of hairs: the paws more or less sooty underneath. Domestic cats of this type abound in Bengal, if not generally over India: but such a coloration is utterly unknown among those of Europe: and the proper tabby markings (pale streaks on a black ground, peculiarily and symmetrically disposed, so very common in English cats.) are never seen in those of India! The tabby may be a modification (and a very remarkable one) of the markings of the wild F. sylvestris of Europe, a result of domestication but most assuredly the chaus coloured cats of India would seem to indicate an aboriginally wild stock of that colour, no doubt inhabiting the country somewhere: but if a truly and aboriginally wild specimen were to turn up, it would merely be regarded as a stray member of the domestic race, and so an end to all enquiry. The only guide to a probably correct result would be the fact, that such animal might inhabit a vast range of country, away from human haunts, without exhibiting the variation of colour everywhere observable in the domestic races; unless in neighbourhoods where it might interbreed with the latter which would pass for nothing: though to such neighbourhoods it would doubtless be attracted, just as the chaus is! The question then remains—Do two such feline types exist, or either of them, in an aboriginally wild state, in any part of India, as have just been described, and both of which are said to be found wild in the Punjab Salt Range? The difficulty of tracing the origin of many of our domestic animals is well known.

In the Isle of Man, cats are tail-less, and have long hind legs. The domestic creole cat of Antigua is small, with an elongated head, and that of Paraguay, also, small, has a lanky body. In the Malayan Archipelago, Siam, Pegu, Burmah, all the cats have truncated tails with a joint at the end, in China a breed has drooping ears, the large Angora or Persian cat, is supposed to be the descendant of the Felis manul of middle Asia it breeds freely with Indian cats.

Whittington, so long the hero of a favourite nursery-tale of England, is rivalled by the story of the Florentine Messer Ansaldo Degli Ormanni—in a letter of "Conte Lorenzo Magalotti" in the "Scelta di Lettere Familiari," published by Nardini, Lond. 1802 (p. 139), his two cats, "due bellissimi gatti, un maschio "una feminina," soon relieved the king of an island (Canaria) on which he had been cast by a violent tempest, from the plague of mice, and he was recompensed "con richissimi doni." *Earl p.* 333, *Darwin's Animals and plants. Ouseley's Travels Vol.* I. *p.* 171. *Jour. As. Soc. of Beng. No. V.* 1856, *page* 441-3.

FELIS ORNATA, Gray, (founded on an exceedingly bad coloured drawing, obviously by a native artist, published in Hardwicke's Illustrations of Indian Zoology; F. servalina apud Jardine, (Nat. Libr, Felinæ nec F. servalina, Ogilby,) F. ad Oxam, Pallas (apud Gray,) F. Huttoni, Bligh (founded on a skin from the Hazara hills), Chaus servalina, Gray, Brit. Mus. Catal.

This wild species approximates very nearly to the domestic cat. The ground colour of the fur is a "Cat Gray," more or less fulvescent or better described as pale greyish-fulvous in some specimens, with numerous roundish black spots, which tend to unite into transverse bands on the sides: on the head, nape and shoulders, the spots are smaller and less distinct, and tend to form longitudinal lines on the occiput and nape, but not upon the back: on the limbs there are distinct cross bands, with one or two broad black streaks within the arm, as in the chaus and commonly in domestic cats; the paws blackish underneath: cheeks-stripes as usual, breast spotted, but the belly almost free from spots: tail tapering more or less distinctly and marked with a series of well defined rings and a black tip: ears externally dull rufous, with a slight but distinct duskyish pencil tuft at tip, not black tipped as in the chaus, nor is the rufous colour nearly so bright as in that animal, differing little from the general hue of the body: the fur according to locality or perhaps season is more or less dense or full; and the markings are much brighter and more distinct in some individuals than in others.

Cultivated in India. Flowers small and white, seeds deemed tonic and carminative, used as a condiment and in curries. An oil is extracted from them. *Voigt.* 209.

FER. Fr. Iron.

FER-BLANC. Fr. Tin. White iron tinned iron.

FERGHANA. The native province of Baber; one of the most celebrated of eastern monarchs, and the founder of the imperial family of Delhi. *Malcolm's History of Persia. Vol. I. p.* 141. See Farghana.

FERDINAND PINTO. See Pinto.

FEREDUN, a hero in Iranian legend, identical with Thraetaona, the Trita of the Veda. He is fabled to have killed the tyrant Zohak, on the Demavend mountain of the Alborz, South of the Caspian, as Trita slew the demon Vritra, *Bunsen* 348. See Persian Kings.

FERHAD, so conspicuous in Persian romance, contemporary with Khusru Parvez; or Chosroes (at the close of the sixth century,) and that monarch's rival in the affections of fair Shirin, was a native of Kurdistan. He may be almost always recognised by the Tishah or pick-axe, with which, for the sake of his mistress, he fractured or excavated enormous rocks, and according to tradition, reduced the rugged face of Mount Bisutan into those extraordinary sculptures for which it is still remarkable. With his "tishah," says the poet Nizami, "he rendered the hardest stone, as it were, soft like wax." *Ouseley's. Travels. Vol.I. p.* 234.

FERINGI. Hind. Pers. A term employed by mahomedans of India to designate Europeans. It is used derogatorily, but ought not to be so, being derived from Fering, Europe; as Danai-i-Fering o Dowlat-i-Hind,—The wisdom of Europe and pomp of India. See Farang.

FERINGI DATURA. Duk. also Pila-Datura. Argemone mexicana.

FERISH. Hind. also Ferash. Hind. also Jhao. Hind. Tamarix indica.

FERISHTA, a native of the shores of the Caspian who, while still a lad of nine or ten years old, arrived with his father at the court of the Nizam Shahi king of Ahmednuggur. He seems to have accompanied Chand Sultan to Bejapore, where he lived under the Ad'l Shahi kings; and wrote the

Tarikh-i-Ferishta, a history still extant. He also wrote many novels. His death is supposed to have occurred in a period of famine while still only thirty years of age. His great work on the mahomedan kings of Asia was translated by General Briggs of the Madras Army, but the manuscript was burned when the Poonah Residency was destroyed by Baji Rao, and had again to be translated by General Briggs.

FERNS, flowerless plants, the Filicales of Lindley, and Filices of other authors, belonging to the Acrogenæ. They are not of any economic value, but Europeans in India largely cultivate them, as plants reminding them of home. They are nowhere common in the plains of India, but in the table lands they are met with and in the hills and mountains of India, they are abundant. Mr. Edgeworth found seven species in Banda (N. W. Provinces) two occur rarely and locally in the Punjab plains, and not more than three have been found in the west, even in the salt Range, which reaches 5,000, and in the Trans-Indus hills up to 8,000 feet. In the Himalaya, again, seventy kinds of ferns, out of a thousand species of plants collected, were got in the moister climate of Garhwal and Kumaon, while of 870 species of plants collected on the Chenab and Ravi only 30, and of nearly 700 species collected in Hazara only 20, were ferns. Dr. Royle enumerated 80 species. Dr. Wallich's Catalogue, excluding exotics gives 40 genera and 430 species, 95 of which were of the genus Polypodium, 62 aspidium, 58 Asplenium, 34 Pteris and 22 Acrostichum. Captain Beddome in 1863, issued a volume on the Ferns of Southern India containing 84 genera. In the mountains of the Archipelago, they are common, the following occur in India.

Polypodiaceæ.
14 Polypodium,
2 Hemionitis,
1 Notholæna,
4 Aspidium,
4 Asplenium,
8 Pteris,
1 Cheilanthus,
1 Lindsæa,
2 Adiantum,
1 Lomaria,
1 Sphæropteris,
5 Davallia,
2 Acrostichum,
1 Autrophyum,
1 Meniscium,
1 Tœnitis.
1 Allantodia,
1 Cheilanthus,
1 Vittaria,
1 Blechnum,
Gleicheniaceæ.
1 Ceratopteris,
1 Gleichenia,
1 Hymenophyllum,
1 Trichomanes,
Osmundaceæ.
7 Lygodium,
1 Schizœa,
Danæaceæ
3 Daneæ,
2 Marattia,
1 Kaulfussia,
Ophioglossaceæ.
4 Ophioglossum,
1 Helminthostachys,

In Dr. Wallich's Catalogue are the genera (12) Grammitis, Cryptogramma.

FEROCULUS. See Sorex.

FEROKI. HIND. of Dera Ghazi Khan, sulphuric acid.

FEROKHSER, king of Dehli, son of Maazzam styled Bahadur Shah succeeded to the throne in 1712 on the demise of his father. He tortured to death Banda, the guru of the Sikhs, the successor of their guru Govind. When the empire began to totter, he furnished the last instance of a Mogul sovereign marrying a hindu princess, the daughter of rajah Ajeet Sing, sovereign of Marwar. To this very marriage the British owe the origin of their power. When the nuptials were preparing, the emperor fell ill. A mission was at that time at Dehli from Surat, where they traded, of which Mr. Hamilton was the surgeon. He cured the king, and the marriage was completed. In the oriental style, he desired the doctor to name his reward; but instead of asking any thing for himself, he demanded a grant of land for a factory on the Hoogly for his employers. It was accorded, and this was the origin of the greatness of the British empire in the East. Such an act deserved at least a column; but neither trophied urn or monumental bust marks the spot where his remains are laid. *Tod's Rajasthan, Vol. I p.* 152 153.

FEROHZAD BUKHTYAR, the 29th and last but one of the Sassanian kings, A.D. 631. Under his successor Yezdigird, the kingdom fell to the mahomedans A.D. 632.

FERONIA ELEPHANTUM, *Corr. W. and A. Roxb.* II. 411.

Its Gum.

Kath bel ka gond,	HIND.	Vallam Pisin.	TAM

The large and tall wood apple tree, one of the aurantiaceæ or orange tribe, is well known South of the Nerbudda. It is widely diffused in India, being met with in the Northern Circars, generally through the Madras Presidency, in Coimbatore, is very common in the inland jungles of the Bombay Presidency, where it grows well every where; and, in Guzerat, it attains a good

size. In the Nalla Mallai hills the wood apple tree attains a large size, and the wood is rather heavy, light coloured, hard and durable. In Coimbatore the tree attains a large size, and its wood is white, hard and pronounced durable. A specimen which was tried bore 360 lbs. In Vizagapatam, it yields a hard, strong, heavy wood, and is there much used in house building, but said not to be very durable. In Guzerat, it is used in building and could possibly be creosoted so as to withstand exposure. Its spheroidal fruit, when ripe contains a dark brown, agreeable sub-acid pulp. When an incision is made in the trunk, a transparent oily fluid exudes which is used by painters for mixing their colours. Both leaves and flowers have a strong odour of anise, and the young leaves are given in the bowel complaints of children as a stomachic stimulant. It yields a large quantity of a clear white gum (Koit ka gond, *Hind*), much resembling gum Arabic in its sensible properties. It is very abundant, and forms the well known "East India Gum Arabic;" and, from its ready solubility without residue it gives the best mucilage for making black ink. The rather acid pulp contained within the hard shell of the Vullam pullum is eaten with sugar, but is not much prized. The tree is more prized for its valuable gum.—*Ainslie p.* 234. *Roeb Mr. Rohde, M. E. J. R. Dr. Gibson's Report, Dr. O'Shaughnessy, Dr. Wight's Report, English Cyclopœdia.*

FERONIA PELLUCIDA. Roth. Syn. of Ægle marmelos.—*W. and A.*

FEROZ. Pers. Victory, hence Ferozabad, Ferozpur, Feroz-shahr, as names of towns. Feroz, and Feroz-shah, names of persons and kings.

FEROZ KOHI, a no made tribe of Eimak, or Aimak, so called after the town of Feroz Koh, 63 miles from Teheran. Timur, exasperated by the depredations which they had committed, removed the whole of them into the mountains lying between Persia and India. See Aimak, Kabul *p.* 440.

FEROZ SHAH, in the neighbourhood of Ferozepur, in the Punjab. A battle was fought here on the 21st and 22nd December 1845 between the British and the Sikh.

FEROZPOOR. See Kunawer. Sat-dhara.

FEROZPUR, in Lat. 30° 57′ 1 N. Long. 74° 38′ 4,E in the Punjab, on the left bank of the Sutlej. The mean height of the station is 1,120 feet. P.C.

FEROZ SHAH, RUKN-UD DIN, king of Delhi in 1235. He was grand-father of sultan Mahmud, whom Timur conquered. It was this king (A. H. 752 to 790) who removed the lat or pillar,—according to one account, from near Khizrabad, immediately west of the Jumna at the foot of the Siwalik hills, to Delhi, and erected it in the centre of his palace. This column, is alluded to by Chund, as "telling the fame of the Chohan," but he says it was "placed at Nigumbode," a place of pilgrimage on the Jumna, a few miles below Delhi, whence it must have been removed to its present singular position. The name of Beesildeo (Visaladeva) heads the inscription on the pillar. The pillar is now known as one of the Delhi lat, also the golden lat, so called from the gilt kalasa "pinnacle or ball" which Feroz shah placed on its summit. This monolith like the kindred pillar at Allahabad was in the first instance exclusively devoted to the exhibition of a counterpart text of the edicts of Asoka, but succeeding generations have taken advantage of the ready prepared monument to supplement a record of their own prowess. The other stone pillar at Delhi was brought from Mirat. *Tod's Rajasthan vol.* ii *p.* 452. *Orme.* See Lat.

FERQUEH, amongst the Afghans, means a tribe. It is probably from the Arabic "Farq," separation,—Farqah, a tribe or community.

FERRARIA CROCEA. Salis, Rheede. Syn. of Pardanthus Chinensis. *Ker.*

FERREOLA BUXIFOLIA. *Roxb.* iii. 790.

Maba buxifolia, *Pers.*

Eroombala, Anglo-Tam. | Eroombala maram, Tam.
Illumbilli maram, Tam. |

This plant grows among the Circar mountains to the size of a small tree, but, in the low countries, it is only a shrub. The wood is dark colored, remarkably hard and durable; when its size will admit, it is employed for such uses as require the most durable heavy wood. Its small red fruit, containing one seed when ripe, is pleasant to the taste and is well known over India.—*Ainslie, p.* 224, *Mr. Rohde's MSS. Voigt.* 346. *Roxb.* iii. 790.

FERRI SULPHAS, also Ferri-vitriolatum, Sal-Martis. Lat. Green copperas. Sulphate of Iron.

FERRO. It. Rus. Iron.

FERRUM. Lat. Iron.

FERRUM VITRIOLATUM. Sulphate of Iron.

FERRY. The ferries at rivers in India and the S. of Asia are crossed in very various ways, but on the Tigris, Euphrates, the upper Indus and its affluents, the practice of three thousand years still continues.

Xenophon's ten thousand were ferried over on inflated skins, and three slabs in the British Museum show the representation of the king of Assyria, crossing the Euphrates in this mode which on the rivers named still continues. Canoes are of

common use on the ferries; two pieces of the bole of a palmyra tree, scooped out and blocked with clay at the end, and fastened together are used in the Circars: the wicker and leather coracle traverses most of the rivers in the peninsula of India. The ferry men on the Kistnah river in the peninsula are the Koli race, stalwart men. The Kili-Katr or Maddakpore race are also Kabl-gira or ferrymen. See Boat.

FERULA ASSAFŒTIDA. LINN.

Narthex assafœtida, FALC.	Hingiseh, HIND.
Asafetida, ENG.	Inguva, TEL.
Anguza, HIND.	Hingu-patri-chettu, „
Hing, „	

This plant grows in all the mountainous countries in the North, the South and the East of Persia, between Persia and Tibet and in Lar, Khorassan, Afghanistan up to India Dr. Cleghorn says the asafœtida plant occurs in Pangi, and in the localities given for daphne and desmodium (as yielding material for making paper in district jails.) Dr. Stewart got this plant in Khagan (Jhelam basin) at about 6,000 feet, and Dr. Cleghorn, he says, mentions specimens of it as being brought to him on the Upper Chenab, at over 8,000 feet. It is he adds also given by Aitchison as growing in Lahaul (10,000 feet,) not much further up the Chenab, but Dr. Stewart was told by Mr. Jaeschke that the Lahoul plant was a Dorema. Dr. Cleghorn also states that Dr. Falconer sent seeds of the plant from Iskardo to Mussooree and England where it thrives in the open air. Dr. Adams states that he saw the plant in Kashmir, and loads of it are taken to Sirinuggur, but Dr. Elmslie assured Dr. Stewart that the plant is not known there. This plant has been conjectured to have produced the "lasser" of the ancients (see Astrantia) which, however, is now ascribed to a Thapsia. The fetid gum-resin asafœtida has a nauseous, somewhat bitter, biting taste, and an excessively strong, fetid, alliaceous smell. It is used in medicine and by all classes of hindus as a condiment with their food. *Dr. J. L. Stewart, M. D. Dr. Hugh Cleghorn M. D. Panjab Report, p.* iii. See Asafœtida.

FERULA FERULAGO.

F. galbanifera, (Nees and Ebermanier.)

Coasts of the Mediterranean, the Caucasus, &c. yields copiously a secretion which dries into a gum resin, supposed by some to be galbanum, but Professor Don states that galbanum is yielded by quite a different genus, called by him Galbanum officinale.—*Eng. Cyc. Hogg. p.* 388.

FERULA HOOSHEE of Beloochistan resembles the asafœtida in size and appearance, and yields a gum like the opoponax of the European shops, (*Mrs. M'Neil's letter*, 1838) Professor Royle alludes to this also as resembling opoponax.—*O'Shaughnessy p.* 364.

FERULA ORIENTALIS.

Feshook, F.	Ammonifera, FEE.

It grows in Asia Minor, Greece, and Morocco, supposed a source of gum ammoniacum.—*O'Shaughnessy p.* 364.

FERULA PERSICA, W.

F. Sagapenum, Fee. Vol. ii. p. 201.

Sugbinuj, AR.	Sugafiun, GR. PERS.
Ee-sus, of BOMBAY.	Kundel, HIND.

A native of Persia, stem about two feet high. According to some authorities it produces Sagapenum. Nees von Esenbeck and Lindley consider it as one of many plants from which asafœtida is procured. Sapagenum, is found in masses. Its odour resembles that of garlic and asafœtida, its taste is hot, nauseous, and rather bitter. It is sometimes adulterated with bdellium, gunda-birosa, and other similar gum resins or turpentines. It is collected in the same manner as asafœtida; sells at four rupees the lb. The medical uses of Sagapenum are the same as those of asafœtida, but it is considered less energetic, and is but little employed.—*O'Shaughnessy pp.* 363-64.

FERULA SAGAPENUM. Syn. of Ferula persica.

FESHUK. ARAB. also Ushek. ARAB. Gum ammoniac.

FESTUCA QUADRIDENTATA. One of the Graminaceæ.

FETISH. See Papuan, Semitic races.

FEUD. In the Hindu word "wer" which designates a feud, we have a striking coincidence in terms; wer is 'a feud,' were, 'a foe.' The Saxon term for the composition of a feud, wergeldt, is familiar to every man. In some of the Rajput states the initial vowel is hard, and pronounced "ber." In Rajasthan ber is more common than wer, but throughout the south-west "wer" only is used. In these we have the origin of the Saxon word war, the French guer or guerre. The Rajpoot *wergeldt* is land or a daughter to wife. *Tod's Rajasthan, Vol.* i. *p.* 181.

FEUERSTEIN. GER. Flint.

FEUERWERKE. GER. Fireworks.

FEUX D' ARTIFICE. FR. Fireworks.

FEVE DE LOUP. FR. Hedysarum alhaji.

FEY-YUE-LING. A gigantic mountain on the frontier of the central empire of China rising like an advanced post of the mountains of Thibet. It rises almost perpendicularly, and presents to the eyes of the traveller many peaks. During the whole year it is covered with snow, and surround-

ed by clouds that reach to its very foot. The road is frightful, and passes over rocks and chasms; it is one of the most difficult in all China, and no place of rest can be found on it. *Huc. Chinese Empire. Vol.* i. *pp.* ii—16.

FIBROUS PLANTS, In India and Eastern and Southern Asia, the number and variety of these are great, and amongst the most deserving of attention may be enumerated, the following:

Abelmoschus esculentus,	Vendee fibre.
Abelmoschus ficulneus,	
Abroma augusta,	
Abutilon indicum,	Tootiee.
Abutilon polyandrum,	
Abutilon tomentosum,	
Acacia leucophlœa,	Oody nar—This tree is common near Cape Comorin. The fibres from the bark are used by the fishermen in making nets. A coarse kind of cordage is also made from it.
Acacia Arabica,	Karoovalum nar.
Æschynomene cannabina	
Agave Americana,	Pita or great Aloe fibre.
Agave cantala,	
Agave diacantha,	
Agave vivipara,	Kathalay.
Agave yuccæfolia.	
Ailantus Malabaricus,	Poroomarum.—inner bark not much used.
Aletris nervosa,	
Aloe indica, or vulgaris	Kuttally nar.
Aloe perfoliata,	Aloe fibre.
Ananassa sativa	Pine Apple fibre.
Andropogon involucrum,	
Andropogon schœnanthus	Camachy.
Andropogon muricatus	
Arenga saccharifera,	Arengee.
Antiaris saccidora,	
Areca vestiaria,	
Artocarpus, several species,	
Arundo donax,	
Bauhinia racemosa,	Maljhun.
Bauhinia diphylla,	
Bauhinia Vahlii,	Yepy tree bark.
Bauhinea tomentosa,	Vellay Aatee nar.
Bauhinea scandens,	
Boehmeria; several species.	
Bombax Malabaricum	
Borassus flabelliformis,	Palmyra fibre.
Bromelia, several species	
Broussonetia papyrifera,	
Butea frondosa,	
Butea superba,	
Callicarpa cana,	
Callicarpa lanata	Thondy nar.—Inner Bark. Not much used.
Calotropis gigantea, &c.	Ak, Mudar, or Yercum.
Calotropis Hamiltonii	
Calotropis procera	
Cannabis sativa	Hemp.
Carex Indica,	
Careya arborea	
Caryota urens,	
Chamærops or Hemp palm,	
Chamærops humilis	
Chamærops Ritchiana	
Cordia obliqua	Pothooveroosen nar.—Moderate strength.
Cocos nucifera,	Cocoa.
Corchorus olitorious	Jute.
Corchorus capsularis,	
Corchorus fuscus,	
Corypha, several species,	
Crotalaria Burhia,	
Crotalaria juncea	Under the name of Canamboo or Wuckoo, it is cultivated extensively in the Southern Travancore districts. Fishing nets are made from them; the best kinds are grown in the Northern district, Sunn (wuckoo nar.)
Crotalaria tenuifolia,	
Cyperus textilis,	Mat-grass, or Coaray.
Cyperus tegetum,	
Daphne bholua,	
Daphne cannabinus,	
Daphne Gardneri,	
Decaschistia crotonifolia,	
Desmodium argenteum,	
Desmodium tiliæfolium,	Ootrum ka bel.
Dœmia extensa,	
Eriochlœna Candollii,	
Eriodendron anfractuosum,	
Eriophorum cannabinum,	
Eriophorum comosum,	
Erythrina Indica,	
Ficus religiosa,	Arasa nar.
Ficus racemosa,	Atti nar.
Ficus Roxburghii	
Ficus venosa,	
Ficus Indica,	Aulamarum nar; Aallen nar.—Not much used.
Ficus oppositifolia,	Bodda nar.
Ficus Mysorensis,	Kul-sallum nar.—Not much used.
Fourcroya gigantea,	Seemay Kathalay.
Girardinia Leschenaultiana,	Neilgherry nettle.
Gossypium Indicum,	Indian Cotton.
Gossypium acuminatum,	Brazil Cotton.
Gossypium herbaceum,	
Grewia asiatica,	Bast.
Grewia tiliœfolia,	
Grewia rotundifolia,	Oonoo—Moderate strength.
Grewia didyma,	
Grewia oppositifolia,	
Guazuma tomentosa,	
Guazuma ulmifolia,	
Hibiscus cannabinus,	Poolychay fibre.
Hibiscus fragrans,	
Hibiscus sabdariffa	Roselle fibre.
Hibiscus striatus,	
Hibiscus vesicarius,	Wild ambara.
Hibiscus rosa chinensis,	Shoe plant fibre.
Hibiscus vitifolia,	
Hibiscus lampas,	
Hibiscus macrophyllus,	
Hibiscus manihot,	
Isora corylifolia,	Valumbrikai, Kywen nar-This is the most valuable fibre in Travancore. The plant grows abundantly at the base of the hills. The natives produce fibre from the stem.
Juncus,	
Lodoicea Seychellarum.	
Linum usitatissimum,	Flax.
Maranta dichotoma,	
Marsdenia Roylei,	
Marsdenia tenacissima,	
Mimosa Intsia,	Eenjy nar.
Musa paradisiaca,	Plantain fibre.
Musa sapientum,	
Musa textilis,	
Myssiessya hypoleuca,	
Orthanthera viminea,	
Pandanus,	
Pandanus odoratissimus,	Fragrant Screw Pine.
Papyrus,	
Pangres,	
Pantium macrophyllum,	
Pantium tiliaceum,	
Philadelphus. *sp.*,	
Phœnix acaulis,	
Phœnix dactylifera,	
Phœnix sylvestris,	
Raphis Cochin-chinensis,	
Raphis flabelliformis,	
Raphis, *sp.*	
Saccharum sara,	Sara.
Saccharum munja,	
Saccharum officinarum,	
Sanseviera zeylanica,	Moorghee, Marool.
Salmalia Malabarica,	Elavum parooty.
Sesbania aculeata,	
Sesbania cannabina,	
Sida asiatica,	
Sida graveolens,	
Sida Indica,	
Sida rhomboidea,	
Sida rhombifolia,	
Sida tiliæfolia,	
Sida periplocifolia,	
Sida populifolia,	Used for Cordage &c.
Strychnos potatorum,	Katha ven nar.
Smilax ovalifolia,	Krinkoddy nar.—Used for tying bundles &c.
Sterculia guttuta,	
Sterculia ornata,	
Sterculia villosa,	

Terminalia alata,	Mooroothen nar.—Bark, very strong and lasts many years: used for dragging timber, cordage &c. Common in the forests.
Terminalia belerica,	Umburathee nar.
Triumfetta lobata.	
[illegible]	Koornja.
[illegible]	
[illegible]	
Ulmus campestris,	
Urena lobata,	Bun—Ochra,
Urena sinuata,	" "
Urtica, several species,	
Urtica heterophylla,	
[illegible]	Coat seeragum.
Wikstræmia salicifolia	
Yucca angustifolia,	
Yucca gloriosa,	Pita or Adam's Needle.
Yucca aloifolia,	

The natives from time immemorial have been accustomed to utilize all of these, but want of roads, and the expense of transporting raw materials have restricted their use to their respective localities.

On the outbreak of the war with Russia the attention of manufacturers at home was directed towards the probable effect which the stoppage of the Russian trade would produce upon the supply of flax and hemp, the greater portion of which had been derived from that Empire. The question was not merely as to the rise in prices likely to follow so considerable a reduction of the quantity imported, but parties interested in the articles were anxious to discover the means for providing an effective and ample substitute for the Russian material; especially as from the returns published it became evident that the aggregate importations of the raw stuffs from all parts of the world were inadequate to the increasing consumption of the articles manufactured therefrom. The Manchester Chamber of Commerce took up the subject with all the interest it deserved. It was observed whilst the importations of flax from all parts in 1853 amounted to 94,169 tons, Russia alone contributed 63,399 tons towards that quantity; and out of 63,142 tons of hemp imported during the same year, 41,819 tons were obtained from Russia alone. The total value of these importations computed upon the average rates of the year, amounted in round numbers to £3,500,000 sterling, and at the immediately enhanced rates were estimated at £6,000,000. Under these circumstances attention was forcibly directed towards India, with a view to ascertain how far its fibres might yield a substitute for the produce hitherto chiefly imported from Russia and the result of the inquiry was that Indian fibres have been proved to possess all the necessary intrinsic properties, and in point of flexibility and strength some of them are infinitely superior to Russian produce. Very much was then done, by Dr. John Forbes Royle, Dr. Alexander Hunter, the Home Government, the Governments of Madras and of India, to extend our knowledge of the fibrous and textile materials of South Eastern Asia, and Lord Mayo, Viceroy of India has taken much interest in the matter, but there is still much to be done and the subject is of so great importance that the following details are given. The Court of Directors of the East India Company early moved in the matter, and they enclosed in their letter No. 6, of 15th March 1854, the following Memorandum by Dr. John Forbes Royle.

Boehmeria nevia.

The Rheea fibre forwarded by the Government of India, as the produce of Assam, in order that its properties and value may be correctly ascertained in this country, appears, he says, likely to prove one of the most valuable products of India, for in strength it exceeds the best hemp and in fineness it rivals the superior kinds of flax. Its culture is well known to the natives of Assam, and in the districts of Rungpore and of Dinagepore, being called "Kunkhoora." It is known in Burmah and is the Pan of the Shans, the Ramee of the Malays and of Java, and the Caloee of Sumatra. Its culture succeeded in Tenasserim, and is practised in Siam, as in other Eastern countries and islands. It can now be produced and sold with profit at as a cheap rate as Russian hemp, and if any machine could be employed for facilitating the separation of the fibre from the outer bark and the woody part of the stalks, it would speedily undersell all other fibres, as from four to five crops of it can be obtained within the year from the same plants. The Rheea fibre, though a new import from Assam, is well known under another name, being identical with the highly valued article of commerce, known by the name of China Grass, the Chu-ma of the Chinese, and from which the famed grass-cloth of China is manufactured. The proof of this identity is very complete. One of the educated Chinese introduced into Upper Assam, on account of the Tea manufactory there, recognized the Rheea as identical with the Chuma of his own country. The Rheea of Assam had been ascertained by botanists to be the same plant as the Urtica tenacissima of Dr. Roxburgh, who, half a century ago, was informed by a friend at Canton, that the plant which he had obtained from Bencoolen, as the Caloee of Sumatra, and to which he gave the above botanical name, was that from which the Chinese grass-cloth was made. Lately Dr. MacGowan settled at Ningpo, sent specimens of the Chu-ma to Calcutta. These, Dr. Falconer found to be the same

plant as the Boehmeria nivea of botanists, described under the names of Urtica tenacissima by Dr. Roxburgh. Sir W. Hooker had also identified these two plants as being identical, and has described the former as yielding what is called China Grass. Further, manufacturers in England have found the two fibres to be the same for all practical purposes. In Assam, Rungpore and Dinagepore this plant seems to be very generally cultivated, though only in small quantities, by the "doom" or fishermen race, near their huts. Manure is useful, and moisture essential quick growth, as well as shade and some protection from storms, in order to allow it to grow to the height of eight feet, from which a six foot fibre may be separated. Hence it is most common and succeeds best in the districts along the foot of the hills. It is grown from the separated roots and may be cut down several times in the year, so that four or five crops may easily be obtained during the year, and the aggregate produce of an acre of ground be about twelve maunds. The different crops vary in strength and fineness, the earlier being the stronger and the latter finer. The officers of the above districts, as well as others, state that the culture is perfectly understood, and that it is susceptible of easy and rapid extension, if the cultivators had any other inducement than their own requirements to grow it. The expense seems to be about 5 rupees a maund. For Major Hannay, referring to the fact of £20 a ton having been offered for any quantity in Calcutta, observes that "as it costs at least 5 rupees per maund, you will see that it can scarce be sent to Calcutta at the price offered." But he also says, that "if any cheaper method of separation from the stalk could be discovered, it would undersell all other fibres." Various attempts have been made to make this fibre more generally known and to bring it into demand as an article of commerce. Thus, Dr. Roxburgh having obtained four plants from Bencoolen in the year 1803, wrote that "some thousand plants have been reared from these four, so readily does it grow and multiply;" and also, that it was one of the strongest fibres he had met with. In the year 1811, Dr. Buchanan sent three bales of the fibres from the Botanic Garden at Calcutta to the Court. These were given to Messrs. Sharp, of Mark Lane, who reported that a thread spun of this fibre bore 252 lbs., whereas the weight required to be borne by Russian hemp of the same size, in His Majesty's Dock Yard, was only 84 lbs. The Society of Arts, in the year 1814, awarded a medal to Captain J. Cotton, of the East India Company's Service, for the introduction of this fibre. It had frequently been sent by Colonel Jenkins and the officers employed in Assam to the Agri-Horticultural Society of Calcutta, in whose transactions several accounts of it have been published. Mr. Henley, late of Calcutta, informed Dr. Royle that he readily collected two tons of it in the district of Rungpore, but that on sending it to this country, it sold at a loss, being unknown. Samples were sent by Major Hannay, Capt. Reynolds, Baboos Denanath and Lokenath to the Exhibition of 1851, when honorable mention was made of their efforts. Prize-medals were awarded to Messrs. Marshall and Messrs. Hives and Atkinson of Leeds, and to Messrs. Wright and Co. of London, for their several preparations of China Grass; also to M. Weber of Java, for some beautiful fibre sent by the Singapore Committee as the produce of a plant which he calls Boehmeria candicans, but which is probably only another name for the Ramee of the Malayas, which is cultivated there by the Dutch and its fibre introduced into Holland. Four gold medals have been awarded to Messrs. Meerburg of Leyden for specimens of sail cloth, ropes, cables, &c.: also for some finer kinds of cloth and table cloths: it is used by the natives of the countries which have been mentioned for making nets and fishing lines: also stout cloth and some of finer fabric. Major Hannay, who has long paid attention to this fibre and to whom much praise is due, was induced to send several samples of the Rheea fibre (the Dom Rheea of the Assamese,) with some grown by Capt. Dalton, in consequence of applications from this country by merchants who, however, offered a sum (of £20 a ton in Calcutta) which would not pay the expenses, and which moreover did not appear to be equivalent to the value of an article acknowledged to be identical with China Grass, which sells for £60 £70 and £80 a ton in Britain.

Since the arrival of specimens, Dr. Royle endeavoured to make the fibre known and its value appreciated. He sent specimens of both the Rheea and the Wild Rheea to the Society of Arts and published an account in their Journal of the 9th December. He sent specimens and wrote to Messrs. Marshall of Leeds and to the Commercial Association of Manchester, had frequently seen Mr. Sangster, as well as brokers and others, on the subject, and likewise sent specimens to Belfast and to Paris. Mr. Marshall acknowledged that the Rheea fibre is identical with China-grass and should class it with the middle or coarse quality, and that it is worth from £48 to £50 a ton in England; also, that it appears to be

clean and regular in colour and free from dead fibres which are often a great detriment; that it "is a useful quality of fibre, of which we could take a regular supply," and that "it would be of considerable advantage to obtain a supply from Assam" as a nearer market than China; and "if it could be supplied at lower rates than he mentioned, that would of course much encourage the consumption of it in this country." Of the Rheea fibre sent to the Exhibition of 1851, Mr. Marshall says, "It is the same as the above, but coarser in quality." Messrs. Wright and Co., had already come to the same conclusion, that for all practical purposes, the Rheea of Assam is the same as the China Grass. Mr. Dickson, of Deptford, to whom he had given specimens, says, "It is a splendid fibre, and when dressed as flax, of higher value than the sums mentioned by Mr. Marshall."

Though, Dr. J. Forbes Royle had no doubt, that when the peculiarities of the Rheea fibre or China Grass are more generally known, its excellent qualities will be fully appreciated, and that it will come into more general use as a rival to the finer kinds of flax, yet, at that time, there were but few spinners who thoroughly understood its management or have machinery to do it justice. It may not therefore realize its full value in the markets of Europe. As it was desirable, therefore, to have its strength tested as a substitute for hemp, Mr. W. Cotton was good enough to have the bale of Rheea fibre, and also that of the Wild Rheea, tarred by the warm register and twisted into five inch rope, and carefully tried with respect to the strength of each. The experiments were most satisfactory, neither rope breaking until the Rheea fibre bore above 9 tons weight, and the Wild Rheea nearly as much. The results of the experiments are stated in the accompanying Memorandum. Mr. W. Sangster had some of the Rheea fibre, which he had received from Assam, also twisted into small rope. It was pronounced by Messrs. Hunter by whom it was made 50 per cent. better than similar rope made with Russian hemp. A small portion was also made into fishing-line, which was described as being wonderfully strong.

Bon Rhea.—Though it is to be hoped that the Rheea or Dom Rheea fibres will prove too valuable to be only employed for rope making, the Wild Rheea or Bon Rheea, on the contrary, is well calculated for this purpose. No information was given respecting the plant yielding it, but it is no doubt one of the nettle tribe, and from being called Bon or Jungle Rheea, it has been inferred that it may be the Rheea in a wild state. But though there was no proof of this, it is satisfactory to find that Major Hannay of Assam describes it as "uncultivated, but very common in all parts of the province;" and again, "common in most of our forests." By proper management any quantity of young shoots can be obtained, and as the divided roots afford numerous shoots, and the plant can be propagated by slips as well as by seed, its cultivation for its fibre might be carried on with facility. He further says that he had paid 5 rupees a maund for it, and that "it is cultivated largely by the hill tribes on the North-west of Yunan, and by the Singpoo and Dhounnea of the own North-east frontier to a small extent only for a coarse cloth, but chiefly for nets. It is recognized by the Nepaulese as the Leepeeah of Nepal." Captain A. Thompson, of the firm of Thompson and Co., Rope makers, of Calcutta, says of it, that "it is all that can be desired for either canvas or lines, and only requires to be known to be generally used for that purpose." It was valued as being worth about £35 a ton in England. When made into a five-inch rope at Messrs. Huddart's works, it absorbed 1-7 of tar and did not break until it bore nearly 9 tons weight.

Boehmeria frutescens. There are several other fibres, some probably of equal value, to be found in abundance along the hills from Assam to near the Sutlej, as for instance, the Pooah fibre yielded by Boemeria frutescens and other *Hemps*. The strength of some of these fibres, in the plain untwisted state, has been ascertained with samples of the same length and weight. By this it will be seen, that the Rheea fibres bore very heavy weights in their untwisted state, and that three others are at least equal to Russian hemp and the Kote Kangra hemp was far stronger than any thing that has yet been tried. It is at the same time liked for its colour and texture, and would be certain to be employed for all the purposes for which the best hemp is required, if it could be procured. It is therefore included with the two Rheeas in the present recommendation.

The Jubbulpore hemp was extensively cultivated by Mr. Williams and already established as an article of commerce in India and highly esteemed by good judges in this country.

The Wukka Nar might be exported from Travancore, and the Madar or Yercum fibre from different parts of India.

New fibres, must be sent into the market for three or four years, and in sufficient quantities, to attract the notice of respectable manufacturers and induce them to give these fibres a fair trial. From ten to twenty tons sent annually into the market, for three or four years, would be sufficient; others say that this quantity should be sent twice a year. But in the case of India, such quantities being sent from different districts would arrive at different times and have the same effect. The Officiating Commissioner of Revenue in Assam recommends that as the culture of the Rheea fibre is sufficiently well understood, "the best way to encourage its extension would be to secure to the ryots a sure market at remunerating prices." Captain Dalton, Collector of Debrooghur, states "that the best method would be for Government to offer a premium of so much a ton on all that is produced for three or four years." Both recommendations might be united in one.

In issuing directions, as well as in making purchases, great care should be taken that the fibres were carefully and cleanly prepared, and if intended for rope-making and as a substitute for hemp, the Bon or Wild Rheea should be made to resemble as closely as possible the specimens of Petersburgh hemp, Mr. W. Cotton furnished samples in illustration for transmission to India. The improved appearance of the Rheea fibre sent by Major Hannay was owing to specimens sent out to him by Mr. Sangster; others cannot do better than follow Major Hannay's examples as there is every probability of establishing the best specimens of the Rheea fibre as a substitute for China Grass, when much higher prices would be realized than as a substitute for hemp only. Rheea fibre grows in the districts of Rungpore, and of Dinagepore, where it is cultivated under the name of *Kunkhoora*, and where it might very easily be collected and its culture extended.

The Himalayan districts of Kemaon, Garhwal and of Kote Kangra, abound in true hemp of the finest quality, cultivated both on account of its fibre and for the different preparations of Bhang. The fibre is sold among themselves for 2 rupees for 82lbs, or about 5s. a cwt. Lord Auckland, when Governor-General of India, calculated that at the native rates it might be landed in Calcutta for £7-16 a ton, and hemp-seed for £6 a ton.

Major Corbet gave three estimates of the price, including all expenses, at which hemp could be delivered in Calcutta from

Kotedwarra, Chilkea, and Sunnea, the average of which is £15-2 a ton. Captain Kirke, giving 5 rupees a maund for the hemp at Deyra Dhoon, calculated that it could be delivered for about £17-14 a ton.

In making advances for cultivating hemp, it is absolutely necessary to call the attention of the natives, not only to the culture, but to the preparation of the fibre. The culture seems to be very well understood in many parts of the Hills, as they carefully prepare and usually manure the ground, thin the plants to within three or five inches, and cut the male plants, "phoolbhanga which flowers, but has no seed," a month or six weeks before the female plant, "goolanga or ghoolbhanga" which has seed, the latter being cut about the end of September. As the preparation is also understood, the cultivators should be required to do this in their best way, so as to procure a clean and uniform article in long lengths, without raising or platting the ends up in any way and to resemble the Petersburgh hemp, as nearly as possible.

The hemp sent by D. F. Macleod, Esq., as the produce of Kote Kangra, was highly approved of in England. The subject so warmly taken up in 1854, continues to interest all who are desirous of improving the fibres of these countries.

Fibres tested at the Military Stores.

	lbs.
Petersburg Clean Hemp,... ...	160
Jubbulpore Hemp,...	190
China Grass,...	250
Rheea Fibre,...	320
Wild Rheea,...	343
Kote Kangra hemp, (no breakage at)	400
Wuckoo-nar fibre.....	175
Yercum or Ak or Mudar fibre	190

Clean samples of all the above fibres were taken of equal weights and firmly tied at their ends, so as to be of equal lengths, at the India House, and their strength tried in the usual way by Mr. Hull, in the Military Stores, 16th December 1853.

Experiments at Messrs. Huddart and Co., Rope Manufactory, Lime House, 13th February 1854. Experiments on strength of rope made from samples of Rheea and Bon Rheea fibre from Assam, received from the East India House.

Description of Hemp.	Size of Rope.	No of Yarns per Strand.	Total No. of Yarns in Rope.	Strength of Rope in Pounds.	Strength of Rope per inch. Circumference squared.	Size of Rope at breaking.	Tar absorbed.	Amount of stretching.
	In							
Wild Rheea, 1st Experiment...	4⅞	44	132	19032	844	4⅝	1-7	1 in 16
Ditto 2nd ditto..	do	do	do.	20124	894	4⅝	1-7	1 in 16
Rheea Fibre	4⅞	44	132	20488	910	4⅝	1-9	1 in 16

The preparation of the fibre is tedious, and is what causes the difficulty of sending it at a cheaper rate into market. Major Hannay writes, "when the stalks have become brown, for about six inches above the roots, the top is seized with the left-hand and the leaves are stripped off by passing the right-hand to the ground, near which the stalk is cut. The outer bark has first to be scraped off with a blunt-edged knife, when the exposed fibre, still attached to the woody part of the stalk, is placed in the hot sun to dry. On the third morning, after being exposed to the dew for several hours, the fibre is drawn off. This is done by breaking (beating) the woody stalk right through towards the thicker end and then separating the fibre therefrom, drawing it off slowly towards the small end, and repeating the process as often as necessary, though much of the fibre remains and may be taken off at a second breaking." (The fibres now require to be carefully washed, *Henley.*) "The hanks of fibre are then separately twisted at the upper end and tied up in bundles. When the threads are required for spinning, they are prepared by drawing the single hanks several times with a blunt-edged slip of bamboo held in the right hand, when they are easily opened out to the required fineness with the fingers and thumb nails. This is certainly a rude and tedious process." Dr. MacGowan, of Ningpo, states that "in China the last cutting is made in September, and from it the finest cloth is made, the first being inferior, coarse and hard. On being cut, the leaves are carefully taken off on the spot; the stocks taken to the house and soaked in water for an hour. In cold weather the water should be tepid. After this the plant is broken in the middle, by which the fibrous portion is loosened and raised from the stalk. Into the interstice thus made, the operator

thrusts the finger nails and separates the fibre from the centre to one extremity and then to the other. The stripping process is very easy. The next process is scraping the hemp, to facilitate which the fibre is first soaked in water. The strips of hemp are drawn over the blade of a small knife or scraper from within outwards, and being pressed upon by the thumb, the fibrous portion of one surface and the mucilaginous part of the other are thus taken off. The hemp is then wiped dry and the whitest selected for fine cloth. It is afterwards bleached."

The directions for peeling the Chu-ma or *Tchou Ma*, in China, as translated from the Chinese, are given as follows: "When the stems are all got in, they are split longitudinally with knives of iron or of bamboo. The bark is first removed, then the lower layer (which is white and covered with a shrivelled pellicle which comes off by itself) is scraped off with a knife. The interior fibres are then seen; they are to be removed and softened in boiling water. If the Tchou ma be peeled in winter, the stems must be previously steeped in tepid water, in order that they may be the more easily split. The first layer of Tchou-ma is coarse and hard, and is only good for making common materials; the second is a little more supple and fine; the third, which is the best, is used for making extremely fine light articles.

A few months after this Mr. Samuel Gregson M. P. in a letter of 1st June 1854, to Sir Charles Wood, mentioned that the growth of flax has rapidly increased within the last few years in the United Kingdom, and especially in Ireland. In 1849 the quantity of land in Ireland under this crop was 60,314 acres; and taking its average yield at 6 cwt. per acre, the produce would be 18,094 tons. In 1853 there were 174,423 acres under flax cultivation, yielding at the same average, 52,327 tons. The importation of foreign flax for the previous three years had been.

	From Russia. Tons.	*All other parts.* Tons.	*Total importation.* Tons.
In 1851.....	40,934	18,775	59,709
1852.....	47,426	22,703	70,129
1853.....	64,393	29,770	95,169
Total in 3 years	152,753	71,248	224,007
Average	50,920	23,749	74,669

The importation and the Irish production together of flax during 1853 amounted to 146,496 tons. Its market value, (at peace prices averaging £30 per ton,) amounting to nearly £2,000,000. Of the articles passing

under the general title, "hemp," including Sunn and Jute, from India, and that known as Manilla hemp, the quantities received were as under.

	From Russia. Tons.	*All other parts* Tons.	*Total importation* Tons.
In 1851..... ...	33,229	31,442	64,671
1852.....	27,198	26,516	53,714
1853	41,819	21,323	63,142
Total...	102,246	79,281	181,527
Average	34,082	26,427	60,509

Russia supplied considerably more than half the entire importation, realizing in 1853 upon 42,000 tons at peace prices averaging £35 per ton, a market value of nearly £1,500,000.

In the five years, 1830 to 1834, prior to the reduction of the excise duty on first class papers from 3d to its present equalized rate of 1½d. per lb., the average annual quantity made was 70,988,131 lbs.; and in the five years, 1849 to 1853, the average annual quantity made was 151,234,175 lbs. The production of the year 1853 was 177,623,009 lbs., being above 23,000,000 lbs. (more than 10,000 tons) over that of the preceding year, and more than 36,000 tons over 1834, such excess requiring for its production not less than 13,000 tons of raw material in the former case, and nearly 47,000 in the latter. The whole weight of material employed in the manufacture of paper only may be stated at between 110,000 and 120,000 tons per annum.

Dr. Forbes Royle, has proved the existence in various parts of the British Indian Empire, not only of the identical plants which furnish flax and hemp, but of numerous other plants yielding fibres of great importance, some of them greatly superior in strength and general value to either of those articles. Having submitted a variety of fibres to be tested, the weight each broke with was ascertained to be as follows.

Fibres in equal weights and equal lengths tested at the East India Company's Military Stores.

	lbs
Petersburg hemp broke with.....	160
Jubbulpore hemp, from Mr. Williams.. ....,.....	190
Wuckoo-nar fibre, Travancore...	175
Mudar or yercum fibre, common all over India..	190
China grass, Boehmeria nivea.....	250
Rhoea fibre, the same from Assam.....	320
Wild rheea, Boehmeria species, from Assam.. ...	343
Kote Kangra hemp (no breakage at).....	400

It is true that some of these Indian plants are grown in places remote from the seaboard, and from which there are still very bad roads, or no roads at all, for transport; but several of them, and amongst them perhaps the most prolific of all, are of very extensive growth in parts contiguous to the coast, and therefore capable of being beneficially and cheaply prepared for exportation.

FIBROUS PLANTS.

The most conspicuous of these is the plantain, which contains a valuable fibre, and is every where cultivated in the plains of India for its fruit, an article of universal consumption by the native population. It is a plant which bears fruit only once, and as soon as that is removed, it is, and has been from time immemorial, cut down and left to rot upon the ground. Persons who have paid close attention to the subject state that there will be no difficulty in obtaining from this plant alone any required quantity of fibre of admitted valuable quality, and as fast as the mechanical appliances necessary for its preparation can be sent out.

Applicable as this fibre is to the manufacture of every species of cloth or other articles usually made from flax or hemp, and of equal quality, it can be used with no less facility and advantage in the manufacture of paper; thus supplying both the one and the other of the important desiderata which the foregoing facts and figures establish.

When preparing for the Great Exhibition of 1859, Dr. James Taylor, who had long been Civil Surgeon at Dacca, furnished several interesting remarks on the fibres of that district. There are, he says, several plants in Bengal adapted for the manufacture of textile fabrics. A species of Urtica, of whose fibres the much admired grass-cloth of China is made, is cultivated in Rungpore; and either it, or an allied species, the rhea, is grown in Assam and Cachar. The pine apple plant too, from which a beautiful fabric is manufactured in Manilla, is indigenous in Sylhet and Assam, and is extensively cultivated about Dacca. The fibres of both plants are used by the natives for making fishing lines and nets; but no attempt, had been made in Bengal, to weave them into fine cloths. The same remark, perhaps, applies to "munga" (Sanseviera zeylanica) the fibres of which are commonly used to make bowstrings. The Calotropis gigantea possesses a fine silky fibre; and some varieties of the plantain tree, as the Musa textilis, yield fibres which, like the abaca hemp of Manilla, are capable of being converted into strong thread or cord, such as the Dacca spinners sometimes use for the bows with which they tease cotton. The people of Rungpore make cloths of the fibres of pât; and there can be little doubt, that if encouragement were given to them and other spinners and weavers in Bengal, they would, with the skill which they possess in these arts, also succeed in converting

these materials into fabrics. A manufacture of similar nature, indeed, was formerly carried on in Bengal. Mention is made in several old works relating to India, of cloths having been made of a plant called "Herba Bengalo," which appears to be now unknown as a material of manufacture. Linschoten, who visited Bengal in 1599, is one of the earliest travellers who notice it. After enumerating under the general name of gossipina, the various cotton goods manufactured in Bengal, he states—"Etiam quædam eximia ex herba instar fili preparant filum apud paludanum videas colore flavo. Herba Bengalo nominatur. Pingunt hoc filo lectum, sagula, pulvinaria, mutitia quibus pueros baptisandos induunt, circumtextis floribus, imaginibusque, ad miraculum usque artis ut nec in Europâ tale quid inveneris. Subâ inde item sericum miscent: sed ex quo purherbâ suunt preciosiora sunt, ipsumque sericum exsuperant. Telas hujusmodi "Sarryn" vocant, multi usus in India ad braccas et thoraces virorum. Abluuntur ut apud nos linteamina nitorem que suum velut nuper facto recipiunt." (Vide Navigatio ac Itinerarium Johan. H. Linscotani, A.D. 1599.) Mandelso speaks of it as "a certain herb having on the top of its stalk (which is about the compass of a man's thumb) a great button like a tassel: this tassel is spun out, and there are excellent stuffs made of it. The Portuguese call it Herba Bengalo, and make of it hangings and coverlets, in which they represent all sorts of figures." (Vide Mandelso's travels, A. D. 1639, translated by J. Davies, Book II., page 94.) A similar description is given of it by the Abbé Guyon in his history of the East Indies: "On trouve encore a Bengale une espéce singuliere des toiles quin'est ni fil ni coton, dont on fait des tapis et des couvertes. On les nomme simplement herbes. La tige de l'herbe, dont elles sont faites, a un pouce d'epaisseur et au haut une espéce de houppe qui contient une sorte de bourrée que les femmes du Paris filent on prendroit ces etoffes heure de loiser: mais elles sont sujettes a se couper dans les plis." (Vide Histoire des Indes Orientales, par M. L' Abbé Guyon, A. D. 1744, Vol. 3, p. 19.) Fitch about the year 1586, and Hamilton in 1744, both refer to it in their accounts of Orissa. The latter calls it herba, a sort of tough grass of which they make "ginghams-pinascos and several other goods for expor, tation," (new account of the East Indies by Captain A. Hamilton, A. D. 1744, Vol. I, p. 393,) what plant is referred to under the name of "herba bengalo;" is not now known but it appears to have been held in high estimation in former times.

On the receipt of the Courts letters, the Madras Government, on the 19th September 1854, reviewed the proceedings of the Madras Central Committee for the London Exhibition of 1851. It had remarked that, (Vide their report 17th April 1851) of the fibrous substances produced in India "some are altogether novel and some though long known in India, have not been used in Europe: of these the Committee particularly allude to be fibres of the plantain, of the yerkum."

	weight sustained. lbs.

Yercum nar (*Calotropis gigantea*)..	552

Fibres of the plantain quality very good. Fibres of the large or hill aloe good. The Garden aloe or Adam's needle has fibres a little finer and shorter than those of the large aloe. Fibres of a variety of roselle very like English hemp. Fibres of the pine apple very fine, strong and silky.

Dr. Wight says "yercum plant yields by far the strongest fibre it is a most common plant and may yet become a valuable article of export if a less costly mode of obtaining it without injuring its quality can be found."

The Coimbatore Local Committee allude to "a very fine flax-like fibre, the produce of a large nettle abundant in Mysore and on the Neilgherries. The Todawar race separate this flax by boiling the plant, and spin it into their coarse thread" and Dr. Wight records of the same substance that "it produces a beautifully fine and soft flax-like fibre which the Todawar use as a thread material. The sample of this was too small to make a proper rope, but its examination convinced the Committee that if well prepared and procurable in quantity it is fitted to compete with flax for the manufacture of even very fine textile fabrics."

Dr. Royle gives the following tested strength:

	lb.
Wuckoo Fibre small Cord ... ... broke at	86

Dr. Hunter observes of the plantain that "it yields an excellent substitute for hemp or linen thread. The fine grass cloth, ships' cordage and ropes used in the South Sea whale fisheries, are made from this substance. The outer stalks of the stem leaves yield the thickest and strongest fibres."

It is described by another writer "as the most conspicuous amongst the Indian fibrous plants." "It contains," he adds "a valuable fibre and is everywhere cultivated in the plains of India for its fruit, an article of universal consumption by the Native population. It is a plant which bears fruit, only once, and as soon as that is removed it is cut down and left to rot upon the ground —Persons who have paid close attention to the subject state that there will be no difficulty in obtaining from this plant alone any required quantity of fibre of admitted valuable quality and as fast as the mechanical appliances necessary for its preparation can be sent out."

"Applicable as this fibre is to the manufacture of every species of cloth or other article usually made from flax or hemp, and of equal quality, it can be used with no less facility and advantage in the manufacture of paper."

The janapa or sunn plant, yields fibres next in strength to the yerkum or jilladoonar. It is cultivated, in Rajahmundry, as a second crop on wet lands with profit to the ryot.

The fibres of the roselle (*Hibiscus cannabinus*) an excellent substitute for the tow now imported from Europe might be profitably supplied in abundance. Hemp, coir, and coir rope exported from Madras shewn by the Sea Custom Returns, amounted to

	Hemp.	Coir and Coir Rope.	Total.
	Rs.	Rs.	Rs.
1847—48	19,819	27,937	47,756
1848—49	23 242	1,38,617	1,61,859

1850—51	10,577	4,46,852	2,57,429
1851—52	46,683	2,42,019	2,88,702

At a meeting of the Society of Arts on the 12th December 1855, Mr. Thomas Watson brought to notice three basts sent by Lieut. Ripley from Araccan, one of which he deemed of value. He also mentioned a wild jungle tree, the 'Noona,' growing around Calcutta, yielding a serviceable bast also, the fibres of a Hibiscus, of Burmah, of the Urena lobata, and of the "Pee-law." A fibre called "Bedolee-lath" sent by Major Hannay from Assam, was soft and delicate. He mentioned that small quantities of the aloe fibre were being sold in Calcutta at Rs. 10 or 12 a maund, equal to £26 and £32 the ton. He also mentioned the Danche. When properly treated it possesses amazing tenacity, and withstands the action of water, and dilute acids well. It is largely grown, and seemingly little cared for beyond being made into mats for sheltering the betel vine from the sun; afterwards the dried fibres are used for blazing the bottoms of the natives' boats when they are desirous of burning off the old pitch. Rope is made of this fibre. It is easily cultivated, requires little trouble after once sown, and when cut before flowering, is, as usual with fibrous plants, much stronger than afterwards.

Dr. Alexander Hunter, Reporter, for the Jury for the Madras Exhibition of 1855, thus reported on the subject of the cultivation and cleaning of fibres.

Few subjects he says present a wider or more interesting field for investigation, than the best modes of cultivating and cleaning fibrous plants. Hitherto, these branches of industry have not been carried on in India, with sufficient care or energy, to make profitable returns to the agriculturist or the merchant. Some very serious faults have been committed in the process of cleaning Indian fibres, which have tended in a great measure to deprive them of their value for manufacturing purposes. In order to save labour, the usual practice has been to steep the plants till the sap and vegetable juices are thoroughly decomposed, as the fibre can then in most instances, be easily beaten or washed out, but this method, though applicable to a certain extent, in cold climates, where decomposition takes place slowly, is found to be very injurious to the fibre, and to be almost inapplicable in warm climates, where fermentation often passes into putrefacation within three days, and the decomposed sap acquires acid and other properties which not only deprive the fibres of their strength but discolor them in such a way as to render them quite unfit for manufacturing purposes. Most vegetable substances contain, besides the fibrous tissue, sap, cellular tissue, and a little coloring matter; the sap consists usually of water, gum, fecula and alkali with occasionally tannin. When plants are dead or dried up, they pass

into a red or brown, usually streaked with deep yellow and grey. It is often possible to detect a regular succession of colors in the different parts of the same plant, and a few very useful lessons may be drawn from them—1st, that the pale yellow or greenish parts of a plant contain fresh, tender fibres—2ndly, that the deep green parts of a plant contain fibres in full vigor, and 3rdly, that red or brown parts indicate that the fibre is past its prime and beginning to decay. In the latter case, the fibre becomes stiff, harsh and often brittle. If plants be cut and exposed to the air or steeped in water, the same succession of colors may be observed, while they are drying or passing into decomposition, and these form a criterion by which the value of the fibre may be detected. As soon as a plant is cut, the circulation in its leaves ceases, and a new process is set a going which if carefully watched, will be found to be a beautiful and wise provision for reducing the parts to their primitive elements; the fecula and gum begin to ferment passing first into sugar, then into spirit and lastly into vinegar, the rapidity of the changes is usually in proportion to the water in the sap and the temperature of the air; the drier the plant the more slowly does it usually decay, but if the sap be allowed to dry up in a cut plant, the above changes still go on, though they are less perceptible, and the plant undergoes another change which is an equally wise provision for reducing it to its pristine elements. It becomes stiff and brittle, light and crumbly, parts falling into dust while the fibre and woody parts often remain to point out how the plant grew, derived its nourishment, and accomplished the ends for which it was created.

The following, he adds, may be laid down as broad and simple principles which have been found by experience to be applicable to the cleaning of most fibres.

The Cutting of Plants for Fibres.

The leaves, stalks or barks of plants should be cut when in full vigor and of a bright green color—when old, dry or decayed, they yield coarse and stiff fibre—no more should be cut at a time, than can be cleaned within two days, and the cut plants should not be left long exposed to the sun, as the sap dries up, and the process of cleaning then becomes more difficult. The sooner the sap, pulp, and impurities can be removed from the fibre, the cleaner and stronger will it be. The process of rotting plants, or steeping till fermentation takes place, is objectionable in a warm climate, and is now being abandoned even in cold climates, as it discolors the fibres and takes from their strength. Beating, crushing and scraping fibres, improves their quality, instead of injuring them, as was at one time supposed. In fact, the more a fresh fibre gets knocked about, provided it be not cut across and rendered too short in the staple, the softer and more pliant does it become. If a plant be well crushed or beaten soon after it is cut, it may be immersed in water for a night and a good deal of the injurious part of the sap will be removed.

FIBROUS PLANTS.

The above remarks are applicable to the cleaning of nearly all plants. Some special observations regarding particular classes may be given.

The Palms—Cocoanut, Coir.—The coir fibre from the husk of the ripe cocoanut is greatly improved in quality and appearance by beating, washing, and soaking,—the old method of steeping in salt water for 18 months or 2 years, is quite unnecessary, and produces a harsher and dirtier coir. The tannin which this substance contains prevents the fibre from rotting, but most of the coir of commerce is a dusty harsh produce, but clean, and samples are suited to a superior class of manufactures, as fine mats and furniture brushes.

Leaves of the Palms—are employed for thatching and making fans, they do not undergo any preparation.

Leaf Stalks of the Palms—are harsh, stiff and brittle, but if beaten and washed they become softer and whiter; if carefully split and drawn like wire through perforated steel plates, a neat clean and durable basket work might be made from them.

Leaves of the Screw Pine make good matting. Some neat kinds of basket work have been made from this substance, it has also been tried for paper and yields it of good quality, light and strong. Further experiments are required to separate the green parts of the pulp from the white short fibre.

Rushes, Grasses, and Sedges—A good deal of uncertainty exists regarding the number and the names of the species employed. It is uncertain whether differences depend upon the treatment of the grass and the modes of splitting it, or on the different qualities of the plants employed. The Paulghat and Cochin mats have long been considered the finest in the South of India.

Liliaceous Plants—include the different varieties of aloe, agave, yucca, fourcroya and sanseviera. They are all hardy, require but little care for their cultivation are comparatively easily cleaned, and yield good white fibres of considerable length.

All that is necessary for cleaning them is to beat or crush the pulp with a common mallet, a pair of crushing cylinders, or a brake, then scrape away the pulp and wash the fibre. There are large exports of aloe fibre from the Western coast, and the cultivation of these plants might easily be extended on this coast, as it was on a former occasion. (See Report in Records of Military Board on aloe ropes supplied to the Arsenal from the years 1797 till 1805.) The aloe fibre contains a thick, viscid milky juice which remains in the fibre after it has been cleaned and imparts a stiffness to it. This juice can only be removed by hard beating or crushing. It is probable that this juice gives the aloe fibre its tendency to rot when much exposed to moisture.

FLAX—grows on the Shevaroy Hills, Mysore, Cuddapah, in the Nizam's Territories and the Northern Circars.

In cultivating sunn, hemp or flax, the seeds should be sown thickly together, in order that they may shoot up into long wand-like plants, which will yield much longer fibres, and be much less branched than if sown wide and freely exposed. The most promising substitutes for flax appear to be the pine apple, yercum, palay, ootrum and kooringa. Several of these grow abundantly in Southern India, but experiments are required to test their productiveness and the expense of their culture.

PLANTAIN—is extensively cultivated throughout India, but very little attention has been paid to the cleaning of its fibres. The plants being cut down and allowed to go to waste. The fibre is easily cleaned, but some simple crushing machinery is requisite.

HEMP, JUTE AND SUNN—of all Indian fibres appear to hold out the best prospects of proving remunerative. They are easily cultivated though not so strong as flax and its substitutes, they are suited for cordage, coarse cloth and other manufactures. The demand for them is steady. They could be cleaned economically by the machinery used for cleaning flax, but the machines would require to be made, and their uses taught to the Natives; further experiments might also be tried on the barks of some other promising plants as the species of Hibiscus, Abutilon, Abelmoschus, Althæa, Ficus, Bauhinia, Grewia, and Wrightia.

It still requires to be determined, whether tanning or tarring is the better mode of preserving cordage, and whether a substitute for tar might not be discovered in some of the numerous resins and gum elastics of Southern India.

Each district of India, has its own particular fibres, all largely utilized by the people. Of the very extensive and varied fibrous substances in all parts of the Madras Presidency only a few are cultivated as articles of export, though Southern India is abundantly supplied with fibrous materials for every description of textile manufacture, from the coarsest packing cloth, to the finest cambric, lawn, or muslin. It would be impossible to say how far the cultivation of fibrous plants might be carried, and what would be the demand for them at Madras, if properly prepared for the market; but there is no doubt, that the usual careless and slovenly mode of preparing these materials, has hitherto tended greatly to interfere with their sale in the European market. A large and interesting class of fibrous substances, which have hitherto attracted but little attention, is the barks of trees, many of which yield a strong and ready substitute for rope, and from the quantity of tannin, which some of them contain, they resist moisture, and retain their strength for a long time. With a little care and the employment of simple machinery, excellent ropes, mats and baskets might be prepared from some of these substances, and they would probably find a ready sale for agricultural and commercial purposes. One of the most common of these barks is the Bauhinia diphylla, called authee nar, yepy, and apa. This is a strong, coarse brown bark of which the Natives make temporary ropes for securing thatch, matting or fences. The barks of several other Bauhinias are used for the same purposes. The Ara nar is the bark of the Bauhinia parvifolia, of which matches for native guns are made. This class also includes the barks of the banian, Ficus indica or ala nar; of the peepul, Ficus religiosa or arasa nar; of the Ficus racemosa, atti nar; of the Ficus oppositifolia, bodda nar, Ficus (?) cullethy nar; of the bark of the Ficus tomentosa, also the barks of several species of acacia, as the babool (Acacia Arabica,) or karoovalum nar, the white acacia, or oday nar, (Acacia leucophlea,) velvaila nar, Wrightia tinctoria, and a number of other plants not yet identified. The trailing roots, twigs, tendrils, and drops of a number of plants are used for the same purposes. Under the head of Endogenous plants yielding fibres may be classed the

Palms,	Ananassa or Pine Apple,
Aloe and Agave,	Musa or Plantain,
Yucca or Adam's Needle,	Pandanus or screw pine,
Sanseviera or Marool,	Rushes,
Fourcroya or gigantic Aloe,	Grasses,
	Sedges, &c.

The Exogenous fibrous plants embrace those yielding cotton and silk cotton, flax and its substitutes, viz.:

Calotropis, or Yercum.	Bendee, or Abelmoschus.
Tylophora asthmatica.	Toothee, or Abutilon.
Cryptostegia grandiflora, or Palay.	Barks of Trees including varieties of
Dæmia extensa, or Ootrum	Ficus,
Hemp—Cannabis sativa, and its substitutes.	Bauhinia,
Jute, Corchorus olitorius	Grewia,
Sunn or Junapum, Crotolaria juncea.	Dalbergia,
Ambaree, or Hibiscus cannabinus.	Isora,
	Butea,
	Vernonia, &c.

The following fibrous plants occur in the Madras Presidency:—

Botanical Name.	Uses.
Saccharum sara ...	Moonshee's pen-reed grass.
Cyperus textilis ...	Used in the manufacture of mats.
Andropogon schœnanthus	Used in thatching.
Sanseviera Zeylanica ...	Bow string hemp, abundant along coasts.
Yucca gloriosa ..	Fibre and Oakum, clean and strong.
Yucca alcefolia ...	Clean white and silky.
Agave Americana ..	American aloe, now common in every part of India, used for cordage.
Agave vivipara ..	Long in the staple, clean and strong, used for cordage.
Agave viridis ..	Not strong do.
Fourcroya gigantea ..	White, strong, fit for cordage or paper.
Ananassa sativa ...	Fibres of various kinds, and worked in handkerchief, cords of different sizes
Musa paradisiaca ...	Preserved fruit and meal, fibre, tow, cords, ropes, tarred rope, canvas, worked handkerchiefs & paper.
Pandanus odoratissimus	White, good for paper.
Cocos nucifera ...	Cocoa mats, cord and ropes.
Borassus flabelliformis..	Good colored fibre only fit for basket work or coarse cordage.
Linum usitatissimum ...	Flax of commerce.
Grewia asiatica ..	Coarse strong bark.
Do. tiliœfolia ..	Do.
Triumfetta angulata ...	Do.
Corchorus olitorius ..	Jute, cloth, gunny bags and rope.
Do. capsularis ...	Do. do.
Hibiscus cannabinus ...	Gunny bags and cordage.
Do. sabdariffa ..	Strong and silky.
Do. vesicarius ..	Soft and silky, fit for weaving.
Do. rosa chinensis.	Clean and silky, fit for cordage.
Do. vitifolia ..	Good color, strong do.
Do. lampas ..	Fit for rope and paper.
Abelmoschus ficulneus..	Good color and long do.
Do. esculentus	Strong and clean.
Decaschistia crotonifolia	Strong, silky and of good color, fit for weaving.
Abutilon tomentosum...	Silky, good color, not strong
Do. polyandrum ...	Silky, stronger than the last, fit for rope
Do. Indicum ...	Clean and good, fit for rope

The *Fibrous plants of Travancore* are—Ailantus malabaricus, Paroo-marum, Malayalum, Inner bark. Not much used.

Agave americana.

Acacia leucophlœa, Oody nar. This tree is common near Cape Comorin. The fibres from the bark are used by the fishermen in making nets. A coarse kind of cordage is also made from it.

Aloe indica, or vulgaris, Kuttally nar.

Asclepias gigantia, Ericoo nar, Common.

Bauhinea tomentosa, Vellay Aatee nar.

Callicarpa lanata, Thondy nar. Inner Bark. Not much used.

Crotalaria juncea, Canamboo or Wuckoo. Cultivated extensively in the Southern districts. It is not exported. Fishing nets are made from them; the best kinds are grown in the Northern districts.

Cordia obliqua, Pothooveroosen nar. Moderate strength.

Erythrina indica. Moorookoo nar. Moderate strength.

Ficus indica, Aallen nar. Not much used.

Ficus mysorensis, Kul-aallun nar. Not much used.

Grewia rotundifolia, Oonoo. Moderate strength.

Isora corylifolia, Kywen nar. This is the most valuable fibre in Travancore. The plant grows abundantly at the base of the hills. It is from the stem of this shrub that the natives produce fire.

Mimosa intsia, Eengy nar.

Sida populifolia, used for cordage, &c.

Strychnos potatorum, Kathaven nar.

Smilax ovalifolia, Krinkoddy nar. Used for tying bundles, &c.

Sanseviera zeylanica, Marool nar. Excellent fibre when well prepared.

Terminalia alata, Mooroothen nar. Bark very strong and lasts many years: used for dragging timber, cordage, &c. Common in the forests.

Terminalia belerica, Umburathee nar.

Pandanus odoratissmus, Thalay nar. This plant grows abundantly in Travancore along the backwaters and canals, the fibres are extensively used, being good and strong.

General Rules for planting and cleaning.—When, says Dr. Hunter, plants are grown to produce fibres, they ought to be sown thick, to induce them to grow tall and slender, and without branches, so that the straight stems may yield a greater length of fibre, and it may be laid down as a general rule that the

softness or clearness of a fibre, forms a good criterion of its strength and vice versa.

As a general rule, every days steeping of a fibre, takes from its strength, and imparts more or less color. Therefore, with plants having bark and woody fibres,—the fibre can be purest extracted, by beating them, at first, well with a wooden mallet in order to loosen and allow the removal of the bark from the stalk, as it is generally on the inner surface of the bark that the fibres suitable for cordage usually occur. When the bark has been brought into a pulpy state, it should be well washed in clean water, to remove as much of the sap as possible, as this is the part, in which the putrifactive process first begins. The leaves, stalks, or barks of plants should be cut when in full vigour and in their bright green colour; when old, dried or decayed, they yield coarse and stiff fibre. Only so much should be cut at a time as can be cleaned within two days, and the plants when cut should not be exposed to the sun, as the sap dries up, and the process of cleaning them is made more tedious. The sooner the sap, pulp, and impurities can be removed from the fibre, the cleaner and stronger will it be. If a plant be well crushed or beaten soon after it is cut, it may be immersed in water, for a night, and a good deal of the injurious part of the sap will be removed. These remarks are particularly applicable to the coir fibre. With the Agave, Yucca, Fourcroya and Sanseviera beat or crush the pulp with a mallet, or crushing cylinder, or a brake, and scrape away the pulp and wash the fibres. In cleaning the fibres of pulpy plants, the plants should first be bruised or crushed, and the juice which exudes may be kept to be converted into a coarse kind of vinegar required in another process. For this part of the process the common sugar mill of India, with two perpendicular rollers and a channel to convey the juice into some convenient vessel, answers well, and the cost does not exceed ten Rupees. Where this small sum cannot be afforded, and labour is abundant, the plant may be well beaten with wooden mallets, on planks, until all the pulp is loosened. When it has assumed a pulpy consistence, the plant should be seized at both ends and well twisted on itself in various directions, to squeeze out the sap. It should then be well washed in plenty of water, untwisted, and scraped on a board, in small handfuls at a time, with a blunt straight knife, on a long piece of hoop iron, fastened into a wooden handle. When all impurities are thus removed the fibres may be soaked for an hour or two in clean water and then hung up in the shade to dry, the latter being a point of much importance as exposure to the sun at first, is apt to discolor them. By this simple process, fibres, of great length, of a silky appearance and of a good colour, can readily be prepared. The scrapings should be well washed and set aside in the shade to dry as tow, for packing, or as a material, for making paper. This process is applicable to all fleshy or pulpy plants such as those known as Aloe plants, the Agave, and Yucca, Sanseviera and plantain. Prices have been offered in England, of Rupees 250 to Rupees 700, (£25 to £75) for fibres cleaned in this manner, while only from £10 to £18 per ton was offered for fibres sent to England at the same time, but which had been cleaned by the ordinary rotting process.—

Fibrous Plants of Western India, the Western side of India is less richly provided with those gigantic grasses, which in the valleys of the Ganges and Brahmapootra form such important parts of household economy. Still in the forests or dangs and on some of the internal rivers of Guzerat there are supplies sufficiently ample for many purposes if we but had the industry to turn them generally to account. That they can be partially worked up into a shape at once useful, light, and elegant, may be seen in those tent-houses constructed of reeds which form the dwellings of our Indian gipsies, gopala and other wandering tribes. Some of these huts can with ease be carried on a small donkey, and the material is so closely woven as to resist the heaviest rain. In Sind the manufacture is more extended and the grass chairs of that province as well as the boat mats are models for lightness and comfort, *Musa textilis* grows on the Ghats from CapeComorin Northward, and if hitherto it has not been turned to full account this may be ascribed partly to ignorance or apathy on the part of those whose mountains afford many other fibres; and partly to the fact, that in the northern slopes of the Ghats, the plant does not reach a height fitted to afford a fibre or more than two feet in length. Its strength is well known to the Ghat people who employ it occasionally for domestic purposes in rope-making as well as use the stem for food. The stem is perhaps too short to allow of its being worked into exportable fibre.

Cocoanut. In Malabar and Ceylon every available spot within the influence of the sea breeze is being devoted to the growth of the Cocoanut. Along the Western coast of the Madras provinces the wavy downs naer the sea-borders which have hitherto produced only a

stunted and worthless crop of grass are being every where levelled, broken up and manured so as to form the beds of future plantations, the value of coir depends so greatly on the previous manipulation.

Linseed—is often sown as an edging crop to wheat and other grain because it is not eaten by cattle in the green state. The reason given for its being sown in both long and cross drills is that the plant being weakly requires close sowing to guard it against the action of the weather.

Bast. Of these our substitutes for Bast we need only remark that while they rank among the easiest grown and most extensively distributed of all our forest trees, they usually suffer more from the axe of the woodsman and the flames lighted by the cultivator of the jungle, &c., than almost any other class of trees. In places where they were once abundant, trees are now rare. In forests under the Western Ghats far to the southward, they are still to be found in considerable numbers, but in such places the population is too scattered and migratory to take up the manufacture steadily and on an extensive scale. Provided they get a supply for making nets to catch the elk or fetters for the tame elephant they generally seek no more. For the latter purpose they frequently use the bark of some of the Sterculia trees.

Crotalaria.—These remarks may serve as an introduction to the important subject of Sunn or Crotalaria fibre, because the Hibiscus cannabinus or Ambaree, need be but lightly noticed, for it is not likely to be ever largely exported, and its uses will continue to be chiefly confined to the agricultural population of its native places. The Sunn fibre is becoming an article of increased export and of growing importance particularly in the great agricultural districts to the east of the Godavery, in Malabar, Canara, Darwar, Mysore, in all the great grain countries to the south, and in Khandeish, the quantity grown has more than doubled during the last ten years. Brahmans and the higher classes of cultivators consider it beneath them to cultivate sunn, indeed there is a common belief, that a cow in calf, if tied with a rope of Sunn will miscarry. In Guzerat, it is often sown for a green manure, being ploughed into the land just after the flower has appeared. Also in the collectorate of Broach, it is somewhat extensively cultivated on those broken lands and edges of ravines which decline from the level of the Khannum or black soil to the Myhee river. In cleared patches of the different forests which skirt and lie at the foot of the Ghats, it is said to be regularly cultivated as a rotation crop. In Khandeish the Brinjari, (the great grain carriers of the country) grow it in spaces which they clear near their temporary camps in the rainy seasons and in the hilly parts of Mysore, large camps of the same wandering tribe may be seen with their small huts or lightly stretched tents of cloth pitched near the slope of a great river, while their cattle are browsing among the neighbouring heights, and whole families are busied either in attending to the cultivation of Sunn or in working up into twine and cloth such material as they have collected from the crop. For the former purpose the hemp has to be prepared by a tedious and laborious process of beating on a flat stone or wooden block, successive blows being dealt by the men, each of whom is armed with a heavy club. By this means the woody fibre is pretty effectually got rid of and the article is then handed over to the women, boys and girls of the company to be by them spun into twine on the rude spindle or piru which they always carry with them. It is no uncommon thing to see one of their stout wiry and bronzed visages—for such they always appear in the line of march, stalking along with a child on her back, her eye fixed on the movements of the cattle and both her hands employed in mechanically twisting the fibre of the twine on this spindle.

In districts below the Ghats the cultivation of sunn is limited to that grown by the wilder mountain tribes, and the mussulman and hindoo fishermen for their nets. Further cultivation seems to be restrained partly by fiscal measures and still more by the want of fresh water for steeping the fibre.

The practice of sowing the Sunn plant for the purpose of a green manure, proves that the natives appreciate the effect of manures decomposing in the soil: the use of liquid manure specially carted for the purpose of distribution was common in some parts of the country.

Combretaceæ. The withes of two species of the Combretaceæ are extensively employed in the place of iron stretchers for the mouths of the leathern sacks used in drawing water from wells.

Cannabis sativa is grown in several places; the mussulman population are just as great consumers of the intoxicating hemp product as the hindus. In Sind the extent to which it is used by all classes is frightful.

Paper. In Western India paper is made at Ahmedabad, Surat, Dharwar, Kolapore, and Aurungabad, the workmen are all mussul-

mans, the paper made at Aurungabad bears the palm as to fineness and gloss, hence the demand for it to engross sunnuds, deeds and other such documents. For royal use, as may be seen in the private account books of the late peshwa Bajee Rao, grains of gold leaf are mixed with the pulp and thus becomes spread over the surface of the paper. We believe that in all cases the pulp is formed from old grain bags originally made from the Crotalaria hemp or Sunn. Although the import to Bombay from Bengal of jute gunny bags for packing is considerable, we have never known them applied to the manufacture of paper.—*Bombay Quar. Review, page 265 of No. IV. of* 8855.

Moorshedabad, Bhaugulpore, and Cuttack abound in fibrous substances, and the Moorgahee, grown in the latter, is considered of a very superior description.

Assam furnishes many fibrous substances, and Dacca and Chittagong yield superior plantain fibre.

Eee-gywot-sha, a bast of Arracan, strips to five to six feet in length, composed of several layers, of which one side is smooth and compact, and the layers on the other side thin but cancellar : all having a considerable degree of toughness.

The Arracan fibres, known as Theng-ban Shaw, Pa-tha-yan Shaw, Shaw-phyoo, Ngan-tsoung Shaw, and Ee-gywot-Shaw attracted attention in England, but the quantity was too small for trying experiments.

The Tenasserim Provinces, Singapore and Prince of Wales Island yield abundant fibre, among them is that of the Aloe or Agave which is worked into thread; also, different sorts of pine-apple fibre, from the coarse material used for cordage to the finest thread for weaving cloth.

An officer sent, apparently from Arrakan or Assam, to the Bengal Agricultural Society, fibres from three plants : two from the Papeng shaw, one from Sida rhomboidea, and one of dhuncha, and an experiment made on the Papeng shaw was in two ways. In one process he stripped the bark, and immersed it in water, keeping the same for fifteen days ; and the other was to strip the bark and to allow the process of fermentation to take place before immersing the same in water, which took place in forty-eight hours, and remained immersed in water for seventeen days, then washed, and the refuse separated from the bark the bark does not seen to admit of the process of fermentation, as that which is without has yielded a finer description of fibre, the dhuncha fibres are extracted in the same way, of the whole, he considered the fibres of Sida to be the best; The basts of the Trans Ganjetic countries are very numerous. The bast is the liber or cellular tissue consisting of tough elongated vessels, which can often be separated and converted into fibrous material, useful for cordage and matting. That best known to Europe is a product of Russia and obtained from the Lime or Linden tree, the Tilia Europea, and converted into mats, and shoes. In the East Indies, species of Grewia, of Hibiscus, and of Mulberry, are remarkable for this product. The Theng-ban-sha; the Pa-tha-yon-sha, the sha-phyoo; the Ngan-tsoung-sha: Sha-nee and Ee-gw-ot-sha are the better known basts of Arracan.

The basts of Akyab and Burmah, are Heng-kyo sha, Dam sha, Tha-not sha, Wa-pree-loo sha and Sha goung, all used in preparing cordage for boats, nets, &c., wholesale market price, 2 Rs. 8 As. per maund, and all are of the inner bark of large trees.

The Sha Nee, Sha Phru, and Theng-ban sha of Akyab are most plentiful, and are used in preparing cordage for boats, nets, &c., and their wholesale market price is 1 R. 12 As. per maund. The Guandyoung sha of Akyab is used for cables and strong nets, the wholesale market price being 3 Rs. 4 As. per maund, and all these fibres are much used by the inhabitants of tha province.

The three basts extensively used in Burmah, for making ropes are called "That-poot-net-shaw," "Shaw-Laib-way," and Shaw-nee. These three basts, appear to be the inner barks of various species of sterculia and allied plants, which abound in the districts from whence they are forwarded. They are strong and enduring in their nature, and some of them have been tested with satisfactory results, but those seen are coarse and ill-prepared.

The Cacha codie are the stems of a creeper used for tying bundles and other purposes instead of twine.

The Mandrong rushes of Province Wellesley, grow spontaneously in the rice fields after the crop has been gathered, overspreading them like a second crop. Its fibre is strong, and is locally used in the manufacture of rice and sugar bags, mats, &c., experiment may prove it to be adapted for the manufacture of paper.

The Mang-kwang (Pandanus sp.) is used for matting, in Province Wellesley.

The Glam tree bark is from the Melaleuca viridiflora, Malacca. The Talee trap (Artocarpus sp.) is used at Hassang for fishing nets.

The Talee Taras, is of Singapore, and there is a bark used as twine, in Siam.

The Bark cloth of Keda in the Malay Peninsula is manufactured by the Semang an eastern Negro tribe; and that of the Celebes (Kaili) is made from the bark of the paper mulberry. Mr. Jaffrey at the Madras Exhibition of 1857, exhibited a very powerful new bast from the Eriodendron anfractuosum. A bast or Nar, from the large Australian or rather Cape tree (Acacia robusta) so common on the Neilgherries has been used for all purpose to which Russian bast is applied in gardens in Europe. The material is strong, tough, and durable also pliable when wetted; this bast could be procured cheaply and in large quantities, as when the trees are cut down the roots throw up numerous young shoots to the height of from 6 to 12 feet in one year. The bark of this tree is also a powerful tan. In the Tenasserim Provinces, as in other parts of India, cordage is made of coir, but ropes are more frequently made from the barks of Paritium macrophyllum, P. tiliaceum, Hibiscus macrophyllas, Sterculia guttata and Sterculia ornata.—*Mason.*

In China the staple summer corps are those which yield textile fibres. The jute of India, a species of Corchorus is grown in China to a very large extent and is used in the manufacture of sacks and bags for holding rice and other grains. A gigantic species of hemp (Cannabis) growing from ten to fifteen feet in height is also a staple summer crop. This is chiefly used in making ropes and string of various sizes; such articles being in great demand for tracking the boats up rivers and in the canals of the country. The beautiful fabric, China grass-cloth—is made in the Canton province and largely exported to Europe and America. The plant which is supposed to produce this (Urtica nivea) is also abundantly grown in the western part of this province and in the adjoining province of Kiangse. Fabrics of various degrees of fineness are made from this fibre and sold in these provinces, but none so fine as that made about Canton; it is also spun into thread for sewing purposes, and is found to be very strong and durable. There are two very distinct varieties of this plant common in Che Kiang—one the cultivated, the other the wild. The cultivated variety has larger leaves than the other; on the upper side they are of a lighter green, and on the under they are much more downy. The stems also are lighter in colour, and the whole plant, has a silky feel about it which the wild one wants. The wild variety grows plentifully on sloping banks, on city walls, and other old and ruinous buildings. It is not prized by the natives, who say its fibre is not so fine, and more broken and confused in its structure than the other kind. The cultivated kind yields three crops a year. A species of juncus, is also a great crop. Its stems are woven into beautiful mats, used by the natives for sleeping upon, for covering the floors of rooms, and for many other useful purposes. This is cultivated in water, somewhat like the rice-plant, and is therefore always planted in the lowest part of the valleys the harvest of this crop is in the beginning of July, and hundreds of the natives are employed in drying it. The river's banks, uncultivated land, the dry gravelly bed of the river, and every other available spot is taken up with this operation. At grey dawn of morning the sheaves or bundles are taken out of temporary sheds, erected for the purpose of keeping off the rain and dew, and shaken thinly over the surface of the ground. In the afternoon before the sun had sunk very low in the horizon it was gathered up again into sheaves, and placed under cover for the night. And so the process of winnowing went on day by day until the whole of the moisture was dried out of the reeds. They were then bound up firmly in round bundles, and either sold in the markets of the country, or taken to Ningpo and other towns where the manufacture of mats is carried on a large scale.—*Fortune.* Hemp is cultivated in the provinces north of the Meiling, but the plant also grows in Fuhkien; the grass-cloth made from it is not so much used for common dresses as cotton and silk. There are three plants which produce a fibre made into cloth known under this name, viz., the Cannabis sativa or hemp at Canton, the Urtica nivea, a species of nettle grown about Suchan, and the Sida tilicefolia near Tientsinfu.—(*Williams' Middle Kingdom, page* 106.)

The following fibres and textile materials were sent from India, to the Paris International Exposition.

Corchorus oltitorius, jute.
Hibiscus cannabinus, ambara.
Hibiscus striatus.
Hibiscus fragrans.
Sida periploccefolia.
Triumfetta lobata, fibres of good quality, and the plant is very abundant.
Sterculia villosa, oadal; very abundant.
Bombax malabaricum.
Crotalaria juncea, sunn, two varieties frequently employed under the term brown hemp and wuckoo nar.
Crotalaria tenuifolia, Jubulpore hemp.
Bauhinia racemosa.
Sesbania aculeata, dhanchee.
Butea frondosa, gular, string.
Calotropis gigantea, mudar; fibres good and silky the plant grows in dry places.
Daphne cannabina, employed in the fabrica-

tion of the satiny paper of India.
Daphne Gardneri, do.
Daphne Bholua, do.
Cannabis sativa or Indica, hemp plant, indegenous in India.
Urtica nivea or Bœhmeria nivea, China grass or chu-ma or rhea of Assam.
Urtica or Bœhmeria tenacissima, known under the term rhea. Plant grows spontaneously, the fibres are soft and tenacious.
Urtica or Bœhmeria puya, do.
Pandanus odoratissimus screw pine; fibres employed in the manufactnre of canvass and paper.
Bromelia ananas, pine apple fibre.
Agave americana; fibres strong but are altered by washing.
Agave vivipara, do.
Aloe perfoliata.
Yucca angustifolia.
Yucca gloriosa.
Yucca aloifolia; fibre very strong and in length 60 to 160 centimetres.
Sanseviera Zeylanica, moorva or bow-string hemp.
Musa paradisiaca, plantain.
Musa sapientum, plantain or banana.
Musa textilis, Manilla hemp, famous for its strength and particularly useful for ships cordage.
Cyperus segetum.
Papyrus pangorei
Eriophorum cannabinum, bhabur; for cordage.
Eriophorum commosum.
Typha elephantina.
Andropogon muricatus, cuscus, vetiver, sold in Europe as a perfume.
Bambusa arundinacea, and other species.
Maranta dichotoma.
Borassus flabelliformis.
Cocos nucifera, coir or cocoa nut.
Caryota urens. Kittul.
Arenga saccharifera, ejoo; its black fibres make excellent ships cordage.
Chamærops Ritchiana, &c.

(*Rapports du Jury mixte International, p.* 54.)

The reticulated fibre of the Abelmoschus ficulneus is made into paper and used in the manufacture of ghunny bags.

The Abelmoschus esculentus furnishes an excellent fibre for the paper makers and it is exported to a small extent as a rope making material. It has a fine gloss, which it retains even when brown and rotten; a bundle was found by Dr. Roxburgh to bear a weight of from lbs. 79 to lbs. 95.

The fibre of the Abelmoschus moschatus, broke with a weight of lbs. 107.

An excellent white fibre from the Abelmoschus tetraphylla, was exhibited by Mr. Jaffrey at the Madras Exhibition of 1857.

The fibres of the Abroma augusta are of great beauty, strength, toughness and fineness, and as it grows all over the East and as far as the Philippines, and so rapidly as to yield two, three and even four cuttings annually, all fit for peeling, it is deserving of more than common attention. The bark is steeped in water, for a week or more, according to the heat of the weather, and requires no further cleaning. The fibre is said to be three times greater and one-tenth stronger than that of sunn. A cord of the Abroma bore a weight of lbs. 74, while that of Sunn only lbs. 68. The fibres do not become weakened

by exposure to wet and the plant can be cultivated as an annual. (*Royle. Riddell; Roxb. iii* 156, *Voigt* 106, *Cycl. of Nat., Hist. Useful Plants.*)

The Abutilon Indicum yields a rather strong fibre fit for the manufacture of ropes. The plants are gathered and freed of their leaves and twigs and dried for two days in the sun. They are then tied in bundles and placed under water for about ten days; the bark and other foreign matter is removed by repeated washing, and the fibres are placed in the sun to dry.

Fibres of a long silky character fit for making ropes are obtained from the Abutilon polyandrum, and a fibre is also yielded by the A. tomentosum.

The leaves of Alestris nervosus, *Roxb.*, are used for making cordage: they are steeped in water for fifteen days in order to rot useless parts and then beaten to separate the fibres. Aloe Indica, A. littoralis, A. perfoliata and A. vulgaris, and the American Aloe or Agave Americana, yield fibres of great value.

The following is the result of experiments of the strength of fibres:—

Coir	... 224 lb.
Pooley Mungee (Hibiscus cannabinus)	... 290 „
Marool (Sanseviera zeylanica) ...	... 316 „
Cotton (Gossypium herbaceum) ...	... 346 „
Cutthalay nar (Agave americana)	... 362 „
Janapa (Crotolaria juncea), Sunn, hindee	... 407 „
Yercum (Calotropis gigantea) ...	... 552 „

Calotropus gigantea is a valuable plant and grows all over India. The charcoal of its roots is prized in the manufacture of gunpowder. Its leaves, buds, bark and milky juice are employed in native medicine, for their emetic, diaphoretic and purgative properties and the inspissated juice resembles caoutchouc, but is a conductor of electricity. It yields an ardent spirit. It is the "Bar" spirit of the western Ghats of India and according to Barth, the "giya" of the African.

Dunchai, the fibre obtained from the Æschynomene canabina grows plentifully. From the bamboo is made all the paper of China; the consumption, for all purposes, of 370 millions of a much-reading and much-printing population;—even that imported for engravings into Britain, under the name of "India paper," is thus derived. The

fibre of the pine apple is the Pina of the inhabitants of the Philippines, who manufacture from it their finest fabrics. The Chinese in the European settlements of the Indian Archipelago have of late years prepared the fibre in considerable quantity, exporting it to China, where it is in great esteem for thread, and for weaving fine textures. The paper mulberry, the Broussonetia papyrifera, which furnished the ancient clothing of the South Sea islanders, and from which the Javanese manufacture a cheap paper, of toughness and durability approaching to parchment, is of value.

In the matter of Cotton fabrics, Mr. Rivett-Carnac, says that "however successful the Manchester mills may have been in providing the better class of natives with that smart cloth called Jagernathee, of which the "koorta" which now constitutes the costume of all in society is composed, they have not yet succeeded in affecting the manufactures of the beautiful dhotees and other fabrics of Nagpore and Oomrair, in which the better classes and the now enriched peasantry of Berar indulge, nor have they touched the manufacture of the coarse strong cloth made in the Nagpore and Chanda districts from home-spun thread, which all the Koonbee race of that part of India prefer to any imported cloth." The cotton of Central India finds its way north by Jubbulpore, as it used to do by Mirzapore, for the native and factory looms of Hindostan and Bengal. Among the eight millions of the Central Provinces alone, half the whole cotton produced is woven into cloth. While they took 58, 402 maunds of English piece goods in 1866-67, they exported 52,893 maunds of their own cloth to Berar and Bombay.

A vast improvement has been effected in the character of the indigenous staple of Indian cotton, the natives have learned that there must be a selection of seed adapted to the climate and soil of each province. The exotic "Middling New Orleans" suits Dharwar, which is within the influence of the damp sea breezes. The indigenous Hingunghat is well adapted for the dry uplands of Berar, Nagpore and Khandeish. Hingunghat seed, selected on the pedigree system as the peasantry select their seed for cereals, will produce a useful staple. Ropes, made of cotton are in extensive use in all the South and East of Asia. Taking each bale at 400lbs, the highest rate of consumption in all Europe has of late been a little above four millions of bales a year, or 78,000 bales a week. The average consumption is 3,800,000 bales a year or 73,000 a week, in Britain, as follows:—

	1861.	1862.	1863.	1864.	1865.	1866.	1867.
East Indian ...	986,600	1,072,439	1,223,700	1,399,500	1,266,525	1,847,763	1,508,750
American ...	1,841,600	71,766	131,903	197,800	461,927	1,162,743	1,225,688
Other kinds ...	207,500	300,863	576,600	989,800	1,026,869	738,553	766,333
Imports into Great Britain ...	3,035,700	1,445,068	1,932,200	2,587,100	2,755,321	3,749,058	3,500,771

When we analyse the sources of the Indian supply, which is 1,500,000 bales to Britain, but 1,700,000 including exports direct to Europe and to China, we find the following:—

From		*Bales.*
Calcutta and Tinnevelly		425,000
Bombay		
Surat and Broach	100,000	
Dharwar and Koompta	150,000	
Khandeish	75,000	
Native States.		
Dhollera	250,000	
Kattywar	100,000	
Kutch, &c.	150,000	825,000
Kurrachee		70,000
Central Provinces and Berar		250,000
Nizam's Country		50,000
Central India States		50,000
Sundry small places		30,000
Total		1,700,000

The gomuti palm of very extensive culture in the Indian Islands, furnishes a fibrous matter at the roots of its fronds, much resembling black horse-hair, of finer texture and greater strength than the husk

of the cocoa-nut. This subtance, known to Eastern seamen as "black rope," is much used for cables and running rigging, and invites greater attention from our manufacturers.

Jute from the Corchorus capsularis has been imported from India into Great Britain only since the complete opening of the Indian trade in 1833, or for about 18 years. All the sacking of India is made from it and it is largely exported from Bengal, to the Dutch and Spanish possessions in Asia, to America and to Australia. The raw fibre of the jute, with a little wool, has been manufactured into good, useful, and substantial carpeting, which can be sold at the very moderate price of 8½d a yard.

The sunn, Crotolaria juncea, has been for many years imported from India, in quantities, into Britain.

In the Red Sea, cables are used formed of the coating of the branches of the date tree. At Oopada, the same material is used mixed with a proportion of fibre of the kaldera bush the Pandanus odoratissmus.

Of all the substitutes for hemp, probably the most important is that yielded by the banana, or Musa of botanists the stem of all of the species will produce a fibre of some utility, but, unquestionably, the only one that has hitherto been effectually used for this purpose is the Musa textilis, the well-known Abaca of the Philippine Islands. The fruit of this plantain is harsh, small, and uneatable when allowed to ripen, but in practice the ripening is prevented, for the flower is nipped off, and that increases the strength of the fibre. It has been immemoriably cultivated, and contributes largely to the clothing of the four millions of inhabitants of the Philippines, besides being largely exported in the raw state. It is made into cordage in the country, and takes the shape of cloth, most of the latter of a very fine quality and of great durability. In the raw state alone, known to us under the name of "Manilla hemp," the yearly exportation from Manilla amounts to about 6000 tons, the Americans being the principal exporters. The cost of this article at the port of Manilla is about £14 a ton, it is the coarsest fibres only that are exported, all the finer being retained for cloth, which as yet has not been made except in the Philippines.

India produces true flax and true hemp, exactly the same species of both as the European. The seed of the first, a valuable article, is crushed for its oil, and has of late been largely exported to this country. Hemp grows freely from the equator to the Himalayas and the fibrous matter of the stem is used as cordage. Jubbalpore hemp has been tested, and proved to be equal to Polish or Russian hemp, and is employed for ships ropes.

FICI. It. Figs.

FICO DEL INFERNO. It. Argemone Mexicana, Linn.

FICUS, a genus of plants belonging to the natural order Urticaceæ. The species are numerous, Voigt. numerates forty-two as having been grown in the Calcutta gardens, and Dr. Wight, in his Icones, gives the following fifty-two names of forty-two plants and ten synonyms;

Ampelos,	Exasperata,	Polycarpa,
Angustifolia,	*Excelsa,*	Quereifolia,
Aquatica,	Fruticosa	Racemifera,
Asperrima,	Glomerata,	Radicans,
Attimeeraloo.	Hederacea,	Ramentacea,
Bengalensis,	Heterophylla,	Rapiformis,
Benjamina,	Hirsuta,	Repens,
Cannabinna,	Hirta,	Scabrella,
Caricoides,	Humilis,	Scandens,
Comosa,	*Indica,*	*Serrata,*
Congesta,	Infectoria,	Tomentosa,
Conglomerata,	Laccifera,	*Truncata,*
Copiosa,	Lanceolata;	T'siela,
Cordifolia,	Macrophylla,	Tuberculata,
Cunia,	Nitida,	Vagans,
Dœmona,	Obtusifolia,	Virgata,
Denticulata,	Oppositifolia,	Wassa.
Elastica,		

One of this genus, yields the fig, others of them yield a useful caoutchouc, several of them yield fibrous materials used for cordage, for half stuff and paper making and the Banyan tree, and the pipul tree are highly ornamental plants. Several throw out aerial roots, from their branches which grow into the ground and again throw out branches. Some are valuable as fruit trees, and yield viscid and useful juices, but few of them are of value for timber. The Ficus carica, the common fig tree, is cultivated in many parts of India. Ficus Benjaminoides, the Tenasserim Banyan tree, which drops aerial roots like the Indian fig tree, grows amidst mangroves and near tidal streams.

Ficus cinerascens, *Thw.*, the Walgoona-gass of Ceylon, is a large tree of the warmer parts of that island. F. citrifolia, *Wilde*, grows in Ceylon and on the western side of India, where some parts of it are employed in medicine. Ficus disticha, *Blume*, grows in the Central province of Ceylon, at an elevation of 3,000 to 5,000 feet, and F. diversiformis, *Miq.*, is very common in Ceylon, up to an elevation of 2,000 feet. The root of Ficus excelsa, *Vahl.*, of peninsular India and the Moluccas, is given, in decoction, as a purgative. A soft, grey, timber is obtained from the F. Gooleeria, *Roxb.*, which grows in Hindostan and Chota Nagpore. F. heterophylla, *Roxb.* Wal-ahatoo, *Singh.*, is common in Ceylon, in damp shady places. F. infectoria, *Willde*, is of Ceylon and India, and its bark is chewed with betel, in lieu of the areca nut. Ficus laccifera, *Roxb.*, Noogagass *Singh*, is not uncommon, in the Central province of Ceylon. F. lanceolata, *Roxb.* Thapan, *Burm.*, of Pegu, yields a soft useless wood. F. lucida, *Ait.*, the Kapootoo-bo-gass, of Ceylon, occurs in the drier parts of that island. F. nitida, *Thunb.*, which grows in the south of China and in many parts of India, is a valuable ornamental tree and good for shade. F. racemosa, *Linn.*, of India, produces a fruit of little value. Ficus religiosa, *Linn.*, the Pipul of India, and Bo tree of Ceylon, is a graceful and ornamental plant. F. t'siela, *Roxb.*, is common, but its timber is of no value. Some of the species possess, in their milky secretion, a highly acrid principle, which explains the specific name of F. toxicaria of Sumatra, and F. dæmona of Tanjore.—*Drs. Wight and Gibson, Thwaite, Voigt.*

FICUS, *Species.* Kulli kae. CAN. Generally a climber. Abounds in Canara and Sunda, in the country from Bilgy to the Ghats. Juice peculiarly abundant and viscid and used as a bird-lime. Well merits a further examination.—*Dr. Gibson.*

FICUS, *Species.* Thub-boo. BURM. A Tavoy tree, used in house carpentry.

FICUS, *Species.* Thup-pan. BURM. In Tavoy, a large tree: wood not used.

FICUS, *Species.* Baee dhimeree. URIA ? A tree of Ganjam and Gumsur, extreme height 30 feet, circumference 2½ feet, and height from ground to the intersection of the first branch, 8 feet. It is burnt for firewood being tolerably common. The leaves are used for food platters: the fruit is eaten. —*Captain Macdonald.*

FICUS ASPERRIMA, *Roxb.*

Ficus ampelos, *Burm.*
" politoria, *Moon.*

See-Wana madde-ya-gass. SINGH.	Karasa, TEL.
Pindi chettu. TEL.	Tella baranki, "
	Baranki chettu, "

A large tree, a native of the peninsula of India, and which grows in Ceylon, up to an elevation of 2,000 feet. The trunk is remarkably short, but very thick and sometimes so completely covered with small very leafy branchlets, as to be entirely hidden. The leaves are used to polish ivory, horn, &c., and, in Ceylon, are in general use amongst native cabinet makers as a substitute for fine sandpaper, similarly to those of the Trophis aspera.—*Voigt, Thwaites, Mr. Rohde's MSS. Roxb.* iii. 554.

FICUS BENJAMINA, *Linn.* Rumph.

F. nitida *Wight.*

Kamrup, BENG.	Iiti alu, MALEAL.
Oval leaved fig tree, ENG.	Tella barranki, TEL.
Warangan, MALAY ?	

Grows in peninsular India, also in Kamrup and in the Archipelago. Is a valuable avenue tree, as it does not throw down ærial roots. *Roxb.* iii. 550.

FICUS BENJAMINOIDES, MASON.

Nyoung oung, BURM. | Tenasserim Banyan, ENG.

Leaves oval, suddenly acuminate, smooth, polished above; fruit auxiliary, paired, sessile, rough. It has the habit of dropping roots from its branches that root in the ground, and become trunks as large as the parent tree, to an extent nearly equal to the famous banyan. It escapes notice because it developes itself in the greatest perfection near the mangrove swamps, and on the banks of tide water streams above that belt where Heritiera trees and their associates show themselves, on land that is inundated by the spring tides only. Specimens are seen farther toward the interior, as on the banks of the Gyaine, but on the low banks near the sea between Tavoy and Mergui, the trees often form labyrinths from which it is difficult to extricate one's self. In towns, it would be quite an ornament to the sides of public walks. *Mason.*

FICUS CARICOIDES.

Kuwari, HIND. | Puari, HIND.

A plant of Kaghan.

FICUS CINERASCENS, *Thw.*

Wal-gona-gass, SINGH.

A large tree of the warmer parts of Ceylon. *Thw. En. pl. Zeyl. p.* 266.

FICUS CITRIFOLIA, *Lam. Willde.*

Ficus Mysorensis, *Roth.*
Urostigma Mysorensis, *Miq.*

Katu alu, MALEAL. | Boonooga-gass, SINGH.

Grows in Ceylon and on the western side of India. Various parts are employed in medicine.

FICUS CONGLOMERATA. Roxb. Syn. of Ficus cunia.—*Buch.*

FICUS CORDIFOLIA — ?

Nga thin-gyee, Burm. | Heart leaved fig tree, Eng.
Ny-oung-gyat, „ |

A tree of Moulmein and the Tenasserim Provinces. In Tenasserim, this tree usually supplies the place of the peepul in the public places, and in the neighbourhood of religious edifices. It approaches nearest to F. religiosa, yet is easily distinguished from it by the leaves being narower in proportion to the length, with much shorter points, and the fruit being perfectly round and not, as in religiosa, vertically compressed. It yields a strong wood, fit for any ordinary purpose.—*Dr. Mason, Cal. Cat. Ex.* 1862.

FICUS CUNIA. *Buch.*

F. conglomerata, *Roxb.*

A tree of the Concans, Rajmahal, Oudh, Nepal, Taong Dong, and Moulmein.

FICUS DÆMONUM. *Kon. Roxb.*

Yæ-kha-oung, Burm.

A tree of Tanjore and Burmah.

FICUS DISTICHA, *Blume.* Common in the Central Province of Ceylon at an elevation of 3,000 to 5,000 feet. *Thw. En. pl. Zeyl. p.* 266.

FICUS DIVERSIFORMIS, *Miq. I. c. p.* 441.

F. stipulata, Moon's Cat. p. 74.

Very common in Ceylon up to an elevation of 2,000 feet. *Thw. En. pl. Zeyl. p.* 266.

FICUS ELASTICA, *Roxb.*

Kusnir, Beng. | Caoutchouc tree, Eng.
Elastic fig tree, Eng. | Kasnir, Silhet.

The Indian Caoutchouc tree inhabits the Pundua and the Juntipoor mountains, which bound the province of Silhet on the north, where it grows to the size of a European sycamore. It is cultivated in Malabar. It is chiefly found in the chasms of rocks and over the declivities of mountains among decomposed rocky and vegetable matter. It produces when wounded a great abundance of milk, which yields about one-third of its weight of caoutchouc. It grows with great rapidity; a tree is described as being 25 feet high, with the trunk a foot in diameter when only four years old. Its juice is used by the natives of Sylhet to smear the inside of split rattan baskets, which are thus rendered water-tight. Old trees yield a richer juice than young ones. The milk is extracted by incisions made across the bark, down to the wood, at a distance of about a foot from each other, all round the trunk or branch, up to the top of the tree, and the higher the more abundant is the fluid said to be. After one operation the tree requires a fortnight's rest, when it may be again repeated. When the juice is exposed to the air it separates spontaneously into a firm elastic substance, and a whey-like fetid coloured liquid. Fifty ounces of pure milky juice taken from the trees in August yielded exactly 15½ ounces of clean washed caoutchouc. This substance is of the finest quality, and may be obtained in large quantities. It is perfectly soluble in the essential oil of cajeput. This tree abounds in Assam, but the outer Himalaya at Punkabarree, is its western limit. It penerates amongst the mountains, as far as the Teesta valley in Sikkim, but is of small size. It may be distinguished from a distance of several miles by its immense, and dense lofty crown. Dr. Griffiths gives the dimensions of one of the largest as follows: —Circumference of main trunk seventy-four feet, ditto of main trunk and supports, one hundred and twenty feet, ditto of area covered by the branches six hundred and ten feet, estimated height one hundred feet. The geographical range of the tree, so far as has been hitherto ascertained, may be stated to be between 25° 10′ and 27° 20′ north latitude, and between 90° 40′ and 95° 30′ east longitude. Throughout this space it is found in the densely wooded tracts, so prevalent along the bases of the hills, and perhaps on their faces, up to an average elevation of 2,250 feet. Up till recent years there was but one European manufactory of caouchouc in Assam, the process of cleansing the gum was kept a secret. When Assam is more peopled by Europeans, and its forests become more known, caoutchouc will form an important article of export.—*The Universal Review, No.* 3, *p.* 360. *Roxb. Fl. Ind. III.* 545, *Hooker, Him. Jour. Vol. I. p.* 102, *and II. p.* 13, *Voigt.*

FICUS EXCELSA. *Vahl.*

Ati meralu, Maleal.

Grows in the Moluccas and in Southern India. Its root is given as a purgative, in decoction. *Voigt* 287 *Useful Plants.*

A large tree thrives best near a water-course, or on the banks of the rivers, fruit like the common fig, and grows in clusters

along the branches, flavour insipid, but eaten by the poorer classes. In Ceylon, it is common on the banks of rivers, up to an elevation of 2,000 feet: grows, also, in the peninsula of India, the Konkans, at Taong Dong, Moulmein, Nepaul and all over Oudh. The wood is said to be used there for furniture, and some of the lac of commerce is gathered from this tree. Mr. Latham says that it grows in the Nalla Mallai, to a height of 40 feet with a circumference of 4½ feet; and that bandy wheels are made from its timber, which is straight grained, strong, and appears useful; it is by hindus, considered sacred, and is burnt when libations are offered. In the Panjab, it is said to be only useful for fuel, it there grows as high as, and resembles, peepul. A medicinal extract is obtained from the root.—*Col. Cat. Ex. of* 1862, *Mr. Latham, Voigt, Thwaites, Mr. Rohde's* MSS. *Fl. Andh: Riddell. Lt. Col. Lake.*

The Indian fig tree grows in most parts of the mainland and islands of India and in the hotter parts of Ceylon where, however, it seems to have been introduced. It is found in great perfection and beauty about the villages on the skirts of the Circar mountains. Its fruit, the figs, grow in pairs, and, when ripe, are about the size and colour of a middle-sized red cherry. If the seeds drop into the axils of the leaves of the palmyra-tree, the roots grow downwards, embracing the palmyra trunk in their descent; by degrees, they envelope every part except the top, whence, in very old specimens, the leaves and head of the palmyra are seen emerging from the trunk of the Banyan tree, as if they grew from it. The hindoos regard such unions with reverence, and call them a holy marriage instituted by Providence. Some of these trees cover an immense space even when comparatively young. In the Botanical Gardens at Calcutta, Dr. Falconer ascertained the great Banyan tree, which is still the pride and ornament of the garden, to be only seventy-five years old; for, people were alive who remembered well its site being occupied, in 1782, by a Date-palm, out of whose crown the Banyan sprouted, and beneath which a devotee sat. The editor writes from memory after a lapse of 36 years; but when, in 1834, he paced, at noon, the outer shadow of its branches, the circumference was near 360 paces, Dr. Hooker writing more recently mentions that this tree was eighty feet high, and throws an area, 300 feet in diameter, into a dark cool shade. It is undoubtedly a graceful tree. The editor paced it again, at noon, in 1863, and the circumference was still one hundred paces. Large banyans are common in India; but few are so symmetrical in shape and height, as that in the Calcutta gardens. Dr. Roxburgh had seen such trees full 500 yards round the circumference of the branches, and 100 feet high, the principal trunk being more than 25 feet to the branches, and 8 or 9 feet diameter. Marsden mentions a remarkable banyan or Bur tree, near Manjee, twenty miles west of Patna in Bengal, diameter 360 to 375 feet, circumference of shadow at noon 1,116 feet, circumference of the several stems, in number fifty or sixty, 921 feet. Under this tree sat a naked devotee who had occupied that situation for twenty-five years; but he did not continue there the whole year through, for his vow obliged him to lie, during the four cold months, up to his neck in the waters of the river Ganges. A remarkably large Banyan tree grows, or grew on an island in the river Nerbudda, ten miles from the city of Baroach, in the province of Guzerat, and was described by Colenel Sykes. It is called the Kabir Bar, a name said to have been given to it in honour of a saint, but more probably from the Arabic adjective "Kabir" great. It is supposed to be that which Nearchus described. Forbes in his Oriental Memoirs mentions its circumference as of 2,000 feet, and its overhanging branches which had not thrown down aerial roots stretched over a much larger area. The tree had as many as 320 large trunks and over 3,000 smaller ones, and was capable of giving shelter to

7,000 men. It was once much larger than at present, but high floods have carried away the banks of the island on which it grows, and with it a portion of the tree. Indian armies, when in that neighbourhood, have encamped around it, and at stated seasons hindoo festivals are held there, to which thousands of votaries repair. This is the tree, alluded to in Paradise Lost, when Adam and Eve

* * * * * both together went
Into the thickest wood: when soon they choose
The Fig-tree; not that kind for fruit renowned,
But such as, at this day, to Indians known
In Malabar and Deccan, spreads her arms,
Branching so broad and long, that, in the ground,
The bended twigs take root, and daughters grow
About the mother tree, a pillared shade
High overarched and echoing walls between.
There, oft, the Indian herdsman shunning heat,
Shelters in cool, and tends his pasturing herds
At loop-holes cut through thickest shade: these leaves
They gathered, broad as Amazonian targe,
And, with what skill they had, together sewed,
To gird their waist.

The tree, however, is not, as Milton sang, remarkable for the broadness of its leaf though the branches spread to a great extent, dropping their roots here and there, which, as soon as they reach the ground, rapidly increase in size till they become as large as, and similar to, the parent trunk. As the Banyan tree gets old, it breaks up into separate masses, the original trunk decaying, and the props becoming separate trunks of the different portions. The banyan hardly ever vegetates on the ground; but its figs are eaten by birds, and the seeds deposited in the crowns of palms, where they grow, sending down roots that embrace and eventually kill the palm, which decays away; the drops or aerial roots yield a heavy hard timber and, when well prepared by water seasoning, oiling &c., are valued for tent poles, spars of small vessels, &c. The timber of the trunk is not employed in India, but Mr. Rohde had used planks, sawn from large drops after they had been seasoned in water with advantage: for knife boards it is excellent. In Ceylon, Mr. Mendis says, it is used for common furniture and house buildings. A white glutinous juice is extracted by incision, from which birdlime is prepared and it is applied to the mouth to relieve tooth-ache; it is also considered a valuable application to the soles of the feet when cracked and inflamed. The bark is supposed by the hindoos to be a powerful tonic. The leaves are pinned together, to form platters, off which brahmins and hindoos eat. Much lac is often to be collected from this tree.—*Drs. Riddell, O'Shaughnessy, Dr. Hooker's Him. Journ. Vol. II. p.* 246, *Marsden's Hist. of Sumatra, p.* 160, *Mr. Mendis, Milton, Book of Trees, Voigt, Thwaites, Mr. Rohde's MSS., Eng. Cyc.*

This large, handsome tree grows in most of the countries of the S. E. of Asia. It is frequently to be met with near pagodas, houses and other buildings. One at Gya in South Bahar, is said to have been planted by Buddha, and, if so, is therefore more than 2300 years old. It is also held in veneration by the hindoos, because the god Vishnoo is fabled to have been born under its branches. This tree is planted for the sake of its extensive dark grateful shade and is preferable for avenues to the Banyan. The leaves are heart shaped, long, pointed, wavy at the edge, not unlike those of some poplars; and as the footstalks are long and slender, the leaves vibrate in the air like those of the Aspen-Tree (Populus trimula). Silkworms prefer the leaves next to those of the mulberry. The leaves are used for tanning leather. The roots are destructive to buildings, for if once they establish themselves amongst the crevices, there is no getting rid of them. Pepul bark is deemed a good tonic; the lac insects also flourishes on this tree. In Tenasserim, it is quite an ornamental tree but very scarce. The Chinese remove the cellular tissue or green matter of the leaves, and covering the skeleton with a coat of varnish or gelatine, paint figures of birds, flowers, &c. on its surface. It is the most sacred of trees with the Buddhists, for it was under this tree that Gaudama slept, and dreamed that his bed was the vast earth, and the Himalaya mountains his pillow, while his left arm reached to the eastern ocean, his right to the western ocean, and his feet to the great south sea. This dream he interpreted to mean that he would soon become a Buddha; and it was while seated beneath the same tree, that his dream was verified. A branch of the tree was sent to Ceylon by Asoka, and it flourishes there as the Bo-Tree. *Malcolm's Travels in South Eastern Asia. Drs. Mason, O'Shaughnessy, Riddell, Ainslie, Mr. Rohde.*

FIELEN, Ger. File.

FIENO. It. Hay.

FIERASFER, a species of this genus about six inches long dwells, as a parasite, within the great sea cucumber. It enters the mouth tears the sides and quarters itself between the stomach and the outer skin. *Hartw.*

FIGHTING STRENGTH OF THE FRONTIER CLANS OF INDIA. Writers have from time to time described the policy adopted by the British Government towards these clans, and its success appears at last to be acknowledged. An immense length of territory has to be watched. The clans can turn out a force greater than the whole Army of Bengal. They require an army of observation greater than the force which defended the Peninsula. The British Government has in fact placed the chain upon tribes as wild and almost as numerous as those who have for centuries maintained the independence of Arabia. The numbers stand as follows. Beyond British territory are

	Fighting men.
Tribes on Huzara Frontier and near the Indus—North of Peshawur, ...	8,000
Swat and its dependencies, ...	20,000
Momund, ...	12,000
Afreedie, ...	20,000
Oruckzye and other Tribes in Kohat Frontier, ...	30,000
Wuzeerie, ...	20,000
Sheoranee and others in Dehra Ismael Khan District, ...	5,000
Belooch Tribes on Dehra Ghazee Khan border, ...	20,000
Total...	135,000

the warlike Tribes within British Territory have the following numbers of

	Fighting men.
Turnoulee (including Jehandad), ...	8,000
Other Tribes of Huzara, ...	10,000
Eusufzye, ...	25,000
Khuttuck, ...	12.000
Bungush, ...	15,000
Derajat Tribes, ...	10,000
Total...	60,000

These men are all, trained from boyhood to the use of arms. All can use the tulwar, the long assassin's knife, and the long and heavy matchlock. All are fanatic mahomedans. All, too, are accustomed to consider plunder the easiest source of income, and robbery the only profession worthy of an honourable man, they have for ages regarded the people of the plains as serfs born to till for the benefit of the mountain and these lowlanders can be attacked through all the passes of ranges which extend for eight hundred miles, and the task of the Government may from this be partially comprehended. These tribes are, however, incapable of combination. They live in incessant bloodshedding feuds. Life for life is the universal law of the mountain, and the feud once commenced can end only with the destruction of one clan or the other. They have but one common bond, the hatred of the infidel, which from time to time urges individuals to acts of homicidal frenzy. A union among these tribes is considered in the Punjab an impossibility. But feuds as deadly were pacified in Arabia, when tribes equally wild and not more fanatic united for the conquest of the Oriental world.—*Friend of India*, 3 *April*, 1856.

FIG TREE the Indian fig-tree is the Ficus Indica, one of them has long been famed at Allahabad and which is still represented by a withered stem in the underground cave at Patala puri. There was, no doubt, a very ancient and venera-

ble fig-tree at Allahabad, perhaps for some centuries, for it is alluded to in various vocabularies, as Medini, &c., it is also described in the Kasi-khanda, and Kurma Purana. The first notice, however, is in the Ramayana (B. 11. Sect. 41 and 42) of Rama with his wife and brother resting under the shade of it after crossing the Jumna so that not only was the tree then in the open air but it was on the opposite side of the river to that on which it is now traditionally venerated. *Uttara Rama Cheritra* Note p. 302.

FIJI ISLANDS of Polynesia, in these until recently, the people were cannibals. They discouraged early marriages and the chastity of the young women was carefully guarded. Some at least of a chief's wives were always strangled on the death of their husband, to accompany him to the other world, and no reluctance was ever shown by women to submit to the sacrifice; nor, did young women consider the age of a man as any objection to their marriage, although fully aware that they must probably follow him to the tomb long before the natural termination of their own lives. The name and nature of their future abode differed in many of the islands, but the greater number spoke of "Bulu" as the place of departed spirits, a term probably synonymous with the Tongan Bulotu. *Capt. Elphinstone Erskine, Islands of the Western Pacific*, p. 248. See India pp. 319, 353.

FILLIGREE. A style of delicate wire-work, used for ornamenting gold and silver, introduced by the Italians, who call it filigrana, a word compounded of filum a thread or wire, and granum a grain or bead: this is in allusion to the early practice of ornamenting the wire-work with small beads. Wire used for this purpose is seldom drawn round, but flat or angular. The display of filligree work in the Great Exhibition was very wonderful for delicacy of workmanship and fantastic beauty. The chief exhibitors were from Sardinia, Turkey, the Ionian Islands and Malta. The native silversmiths of Cuttack have long been noted for the fineness, neatness, and lightness of their filligree work. This kind of work is executed, for the most part, under supervision, by mere boys, whose nimbler fingers and keener eyesight are supposed to enable them to bring out and put together the minute patterns with more distinctness and accuracy than their elders can; comparative cheapness is, perhaps, another reason for their employment. The ruling rates for this filligree work are from two to two and a half rupees, that is to say, taking the first rate, two rupees or four shillings is charged for every rupee weight of finished silver work, namely, one rupee for workmanship, and one rupee as the price of the silver. The filligree work in gold of Delhi and other places is famed. Next to muslins, and embroidered fabrics, filligree work is that for which Dacca is most celebrated but the art is also practised in great perfection at Cuttack, and in Sumatra, and China. The articles usually made at Dacca are Lady's ornaments, such as bracelets, ear-rings, brooches, chains, necklaces,

&c. and attar-dans and small boxes for natives. A specimen on a large scale could be made, such as a vase for flowers, a stand for writing materials. The design best adapted for displaying the delicate work of filligree is that of a leaf. It should be drawn on stout paper, and of the exact size of the article intended to be made. The apparatus used in the art is exceedingly simple, consisting merely of a few small crucibles, a piece of bamboo for a blow pipe, small hammers for flattening the wire, and sets of a forceps for inter-twisting it. The drawing of silver and gold (*i. e.* silver covered with gold) wire, used as thread in embroidery, is extensively carried on in several places and Benares is celebrated for this art. There are several varieties of silver and gold thread (badla) made at Dacca, as "goolabatoon" for the embroidery of muslins and silks; "goshoo" for caps and covering the handles of chowries; "sulmah" for turbans, slippers, and hookah snakes; and boolun for gold lace and brocades. Some of it is drawn almost as fine as a hair. In the time of Aurungzebe a quantity of this article was made yearly for the Court at Delhi. A hundred sticks covered with it, and plain gold, and silver "badla" to the amount of £2,000 in value, appear, among items composing the *Mulboos Khas Nuzr*, or present of royal clothing annually sent to the Emperor. The Trichinopoly filigree work is as light and elegant as that of Malta or Genoa. (*Dr. Taylor.*)

FIRE. Eng.

Mee,	Burm.	Ignis,	Lat.
Feu,	Fr.	Fuego,	Sp.
Feur,	Ger.	Narapu,	Tam.
Ag,	Hind.	Nepu,	Tel.
Agn,	„	Agg,	„
Fuoco,	It.		

Fire is frequently mentioned in the writings of ancient and modern nations as an object to be worshipped or reverenced. Perhaps the chief culture enjoined in the Vedas is that of Agni or Fire and of the Sun, and with the ancient Persians as with the Parsees of the present day, the worship of these two objects formed the principal religious duty. Fire is preserved in hindu, in Parsee, and in Buddhist temples and seems to be the inextinguishable fire alluded to in Lev. iv. and 13 as their lamps are kept perpetually burning, according to the injunction to the Hebrew Levites, "the fire shall ever be burning upon the altar; it shall never go out." An Agnihotra bramhin preserves the fire which was kindled at the time of his investiture with the poita, and never suffers it to go out, using the same fire at his wedding, and in all his burnt-offerings, till at length, after his death, his body is burnt with it. The sacred fire kindled by Montezuma was preserved at Pecos down to our own times. The Natches of N. America even now preserve a sacred fire and believe that frightful calamities would ensue if ever the fire were extinguished at both temples at once. Even among christians of the present day, according to Mr. Robertson, on the eve of the Greek Easter-day, the ceremony of receiving the *αφως-πυς* or Holy Fire is performed in the chapel at Jerusalem. The fire bursts from the sepulchre and the pilgrims of the Greek communion light their torches at it believing that they receive it from heaven. (*Robinson's Travels, Palestine and Syria* Vol. 1, pp. 47-8.

The lamps and candles which some christian sects keep in their churches are remnants of the ancient and modern culture of fire. The Athenians had a perpetual fire kept by widows; among the Romans it was kept by virgins. The Greeks had one in the temple of Apollo. The Parsi people, descendants of the ancient Persians, have a sacred fire, in each of their temples. The Chaldeans, adored fire, and when it went out, it was a presage of all sorts of misfortunes to the State. What kind of fire is meant by the "Strange Fire" of Lev. x, 1; Numb. iii, 4; vxvi and 61 (See also Lev. xvi., 12; ix,

24; xi. and Ecc. xxx. 9, is doubtful, but a Brahman should maintain three fires (Vikrama and Uravasi, Introduction, Vol. i. p. 190) two, mentioned in a Sukta of the Rig Veda and the Apastamba Sutra, are the Sabhya and Avasathya, the precise purport of which names is not known to the Pundits, nor explained in the Bashya. The literal sense would be the fire of the assembly and the fire of the village, as if a sacrificial fire was sometimes maintained in common. (*Hind.Th.* Vol. ii. p. 11.)

The division of one fire into three is ascribed by the Mahabharata and the rest to Pururavas. The commentator on the former specifies them as the Garhapatya, Dakshina, and Ahavaniya, which Sir Wm. Jones, (Manu., II. 231,) renders nuptial, ceremonial, and sacrificial fires; or rather, (1) household, that which is perpetually maintained by a householder; (2) a fire for sacrifices, placed to the south of the rest, and (3) a consecrated fire for oblations; forming the Tretagni, or triad of sacred fires, in opposition to the Laukika, or merely temporal ones.

It may be that the taking of fire from other than the established place was called Strange. The fire used by hindus for the funeral pile, ought to be obtained from the sacred fire but it is at present the common practice of the hindus of ordinary rank in the western provinces of India to procure fire from an outcast to light the funeral pile. On the eastern side of India, the fire used in the household sacrifices of their homes is obtained from the hearth-fire. That used in their incremation is from the lamp lit in the ceremonial when a person is moribund but the lamps of the temples are lit only by brahmins and taking fire from other than the altar would be "strange". A hindu, as indeed also a mahomedan does not "blow" out a lamp with his breath, the hindu believing that a god intervenes. The Chaldeans paid divine adorations to fire. In the Hebrew books, God is mentioned as having appeared in fire or encompassed with this element, as when he showed himself in the burning bush and descended on Mount Sinai, in the midst of flames, thunder and lightning. (Exod. iii. 2; xix. 18.) Fire is also a symbol of the deity, (Deut. iv. 24.) In this awful manner he showed himself to Isaiah. (Ch. vi. 4), to Ezekiel (Ch. i. 4.) The Psalmist describes the chariot of God as composed of flames. (Psalm xviii. 12—14.) And the second coming of Christ is represented as in the midst of consuming fire. (2, Thess. i. 8. See also Daniel vii. 10.) The wrath of God is compared to fire. (Psalm xviii. 8); and so are those effects of his displeasure, famine, war, and pestilence. (Psalm lxvi. 12; Jer. xlviii.) To this element the Lord is compared, (Mal. iii. 2), referring to his judgment upon the wicked, who are consumed like the dross of metals, and to the effects of his grace refining the righteous like pure gold. The influences of the Holy Ghost are also compared to fire. (Mal. iii. 11); in reference to the tongues or flames of fire that rested on the heads of the Apostles (Acts ii. 3); and to the work of regeneration on the human soul, illuminating, quickening, purifying, and inflaming with gratitude, love, and zeal. The angels of God are represented under the emblem of fire. (Ps. civ. 4): and a column of flame directed the marches of the Israelistish camp during the night seasons in the wilderness. (Exod. xiii. 21.) Fire anciently fell from heaven to consume the victims sacrificed to the Lord, and this was an indication of his regard and approbation. And this is thought to be the manner in which Jehovah signified his acceptance of Abel's sacrifice. Fire also fell upon the offering made by Moses. (Lev. ix. 24), on those of Manoah (Judg. xiii. 19, 20), on Solomon's (2. Chron. vii. 1), and on Elijah's (1 Kings xviii. 38.) The fire which descended from heaven, first upon the altar constructed by Moses in the tabernacle, and again on that erected by Solomon, at its consecration, was constantly fed and preserved by the priests, and was regarded as celestial or hallowed fire, first kindled by the Lord himself, to instruct mankind that the origin of all spiritual good is from above, and that we are not to warm ourselves with the sparks of our own kindling. (*Robinson's Travels in Palestine and Syria.* Vol. I. pp. 280—2.)

On the east side of the fortress of Gwalior where myriads of warriors have fattened the soil, phosphorescent lights at one time often appeared. Colonel Todd dared as bold a Rajput as ever lived to approach them; but he replied, men he would encounter, but not the spirits of those erst slain in battle. Such fires the northern nations believed to issue from the tombs of their heroes, and to guard their ashes; they called them Hauga Elldr, or 'the sepulchral fires,' and they were supposed more especially to surround tombs which contained hidden treasures. They are termed "Shahaba" by the rajputs. When the intrepid Scandianavian maiden observes that she is not afraid of the flame burning her, she is bolder than that bold rajput, for Sri-Kishen,

who, as above related, was shocked at the bare idea of going near the sepulchral lights, was one of three non-commissioned officers who afterwards led thirty-two firelocks to the attack, and defeat of 1,500 Pindaries. At present the Kasak or Kirghis do not spit on a fire, and in Khiva, Khokand, in many other parts of Africa and Asia and Europe, the custom continues of dancing round fire. In the whole of Central and Southern Asia to blow out a light is considered very wrong. Everywhere in hindoo India, there is believed to be a fire which does not burn a person, attributed to Siva or Mahadeva, written also Seo, or Siu, and annually, in the Dekkan, the fire worship of Mahadeva is performed, in which, the devotees run or jump through great fires, attributing their escape to the interposition of that hindu deity.

Fire is obtained in New Zealand by friction of the woods of the Melicytus ramiflorus of the Aralia polygama, and of the Kaikomako trees. The wood used to provide fire in Tahiti is that of the Hibiscus tiliaceus.—*Wilson's Hindu Theatre, the Toy Cart. Art* 112. *Colebrooke on the Religious Ceremonies of the Hindu, Asiatic Res.* XXI. 241. *Sonnerats Voyage* pp. 77—8. *Story of Nala* p. 102. *Robinson's Travels Palestine and Syria* Vol. I, p. 282. See Agni, Agnihotra; India. Inscriptions; Tripandra.

FIRE CLAY, Sang-i-dalam. Hind. A kind of clay, very common in many parts of India, from which bricks can be made that resist the action of great heat.

FIRE FLY, a little luminous beetle, a species of Lampyris. The lower part of its body has some apparatus for emitting a bright phosphorescent light. Usually it is emitted in flashes at intervals of a second, and it is interesting to guess where the creature in its flight will next show itself. But occasionally the light is continuous. See Ægiceras.

FIRE PLACES. These, in the Eastern and Southern parts of Asia, are usually the hearths, alluded to in Jeremiah xxxvi. 22. 'There was a fire on the hearth burning before him.' Hindoo houses have neither chimnies nor fire-places. In the cold weather, the rich burn wood in brass or earthen pans, placed in any part of the room; the indigent burn sticks on the floor. The hearth or fire-place is commonly taken to mean the livelihood, or means of supporting a family. If the family be scattered into, say three parties, the expression would be, I have three fire-places burning. Speaking of a family ruined and dispersed, the Persians say oojak-i-shan koor shood, "their fire-place is darkened."

FIREWOOD is the chief fuel used in the Indies, and the less valuable trees of each locality are cut. On the east coast of the peninsula the woods chiefly used are:—

Canthium parviflorum.	Randia dumetorun.
Hymenodyction excelsum.	Anisonema multiflora.
	Cassia auriculata.
Acacia speciosa.	Phyllanthus.
Gmelina asiatica.	Acacia leucophlæa.
Peltandra.	Maba buxifolia.
Vatica laccifera.	Dichrostachys cinerea.
Grewia rotundifolia.	

The trees furnishing the supply at Simla, are chiefly:—

Quercus incana.	Pinus excelsa.
Rhododendron arboreum.	Cedrus deodara,
Andromeda ovalifolia.	

with other jungle trees and stout underwood. At Kassowlee and Kanawar, the contractors supply principally "chir" (Pinus longifolia), which grows wild in the adjoining hill sides, and splits easily. The only forbidden wood is "behul" (Grewia oppositifolia), which emits an offensive smell in burning. The villagers use as fuel the withered stems of Euphorbia pentagona and thorny bushes.

In the Punjab, the woods used are

Alsine, sp.	Hippophae rhamnoides.
Artemisia sacrorum.	Juniperus communis.
Calligonum polygonoides	Juniperus excelsus.
Caragana pygmæa.	Periploca aphylla.
Crozophora tinctoria.	Rhazya stricta.
Ephedra Gerardiana.	Rosa Webbiana.
Eurotia ceratoides.	Tanacetum tomentosum.

Near the Punjab railway lines, Phulai (Acacia modesta) furnishes a hard wood which is perhaps the best fuel given by any wild tree. It is only found in quantity near Umritsur and Jullundur. Dhak or Pulas (Butea frondosa) has a wood too soft and light to furnish, unmixed, a really effective fuel. Jhand or kandi (Prosopis spicigera) covers very large areas in the central tract near Lahore, and grows more partially over many parts to the south. Its wood is open-grained and softish, and is very subject to the attacks of white ants, but it furnishes a fair fuel, and has hitherto been perhaps the chief source of supply for the locomotives in the Punjab. Next to it, as to quantity of fuel furnished, come the tamarisks, furas, lei, pilchi, &c., (Tamarix orientalis and Tamarix Indica) which from some miles south of Lahore southwards, cover hundreds of square miles of the low land. A tree of Kikkar or Sissoo, under tolerably favourable circumstances, attains a girth of about 30 inches in ten years; and gives about four maunds of dry fuel;

200 trees, yielding 800 maunds of dry fuel, might be grown on an acre in ten years. Zizyphus nummularia, the malla or beri, grows abundantly in the Punjab, but it is small for fuel. Various species of Salsolaceæ, abound in the more saline dry parts of the Doabs of the Punjab. West of the Bias, Karil, Capparis aphylla, a considerable shrub, is a common brick fuel in many places in the Punjab, as also is the jal, wan or pilu, Salvadora oleoides over-abundant south of Lahore. Along some of the rivers in the south the bahn (Populus Euphratica) is not uncommon, but its wood is very light. The smaller tamarisk T. Indica becomes fit for felling in 8 or 10 years. The "Kikkar" attains its maximum in 8 to 15 years. *Dr. Cleghorn's Report, p.* 14. *Cal. Rev. Feb.* 1868, *pp.* 266-7.

FIREWORKS.

Feux de artifice,	Fr.	Marchun	Malay.
Feurwerke,	Ger.	Rabok	„
Atishbazee,	Guz. Hind.		

In eastern countries the people have superb displays of pyrotechnic skill. The fireworks are of various forms, represent animate and inanimate things, such as trees, tigers, ships, elephants, men, sea-fights, eclipses of the sun and moon. They are manufactured in the principal cities.

FIRING. Pelling is the Tibetan corruption of the word Firingi, itself a corruption of Frank, the oriental word for European. *Prinsep's Tibet Tartary and Mongolia*, p. 65.

FIRKI TUGAR. Hind? Tabernæmontana.

FIRMAN. Pers. Turk. Royal letters are so called; literally, an order.

FIRNI. Hind. Rice boiled with milk.

FIROZAH. Hind. Turkis, turqu, hence Firoz-a-Rang, turquoise blue. It is found at Khojend in Mawar al nahr, or Trans Oxiana, at Shebavek, in Kirman, and in a mountain of Azerbijan, where the mine was discovered about fifty years before Ahmed ben Abd al Aziz, composed his Treatise on Jewels. He describes the mine at Nishapur as most celebrated from early ages for that particular kind of turquoise, entitled Abu Ishaki, which, says he, averts evil from those who wear it, conciliates the favour of princes, augments wealth, preserves the sight, ensures victory over an adversary and banishes all unpleasant dreams. The ancient sages, when first they beheld a new moon, immediately after fixed their eyes, says he, on the Firozeh. —*Ousley's Travels.* Vol. I. p. 211.

FIROZ KOHI, an Aimak tribe from the town of that name 63 miles from Teheran. They are of Persian origin, and their forefathers fought Timur bravely when that conqueror subjugated their country. After they were driven by him into the mountains south of Mazenderan, they there defended themselves most desperately; but they were eventually defeated and carried by him into Herat.—*Ferrier Journ*, p. 196. See Aimak.

FIR TREE.

FISCH-ANGEN. Ger. Fish hooks.

FISCH-KORMER, Ger. Cocculus Indicus.

FIRUZ or Perose, B. C. 458, the 7th of the Sassanian kings.

FISHER. On all the sea coasts of the South and East of Asia and on the great rivers, the people are fishers. Of those, along the coasts at Madras many became christians, early; indeed, from the Southern outskirt of the town at St. Thome to its northern village of Ennore, nearly all the fishermen are earnest christians of the Roman catholic persuasion. The Koli tribe of fishers, in Bombay are nearly all christians, though thay have occasionally wavered. There is something remarkable in the circumstance of the fisher races being amongst the earliest and most eager converts to christianity in India; so much so as to render it questionable whether it be only an accidental coincidence, or the result of some permanent and predisposing cause. The Parawa or fishermen of cape Comorin were the earliest proselytes of St. Francis Xavier, and they have still a pride in alluding to the fact that they were the first, as they have since been the most faithful and abiding, of his converts. It was by the fishermen of Manaar that he was invited to Ceylon in 1544, and notwithstanding the martyrdom inflicted by the rajah of Jaffna, and the persecution with which they were visited by the Dutch, that district and the adjacent boundary of the Wanny has, to the present day, been one of the strongholds of the Roman catholics in Ceylon. Again, it is amongst the Parawa or Fisher caste of the Singhalese that the Roman catholics have at all times been most successful in their efforts to christianize. *Tennent's Christianity in Ceylon p.* 10.

FISH, ARTIFICIAL HATCHING OF. In China the hatching of eggs by artificial heat is well known, and extensively practised, as is, also, the hatching of fish. The sale of spawn for this purpose forms an im-

portant branch of trade in China. The fisherman collects with care on the margin and surface of water, all the gelatinous matters that contain spawn of fish, which is then placed in an egg shell, which has been fresh emptied, through a small hole: the hole is then stopped, and the shell is placed under a setting fowl. In a few days, the Chinese break the shell in warm water (warmed by the sun); the young fish are then kept in water until they are large enough to be placed in a pond. This plan, in some measure, counteracts the great destruction of spawn by troll-nets, which have caused the extinction of many fisheries. Recently, Dr. Francis Day, a Madras Medical Officer has made great efforts to introduce ova of exotic fish into India and made recommendations for the protection of young fry. A few drops of a weak solution of permanganate of lime, added night and morning, sweetens water, and supplies oxygen, and thus diminishes the mortality in fish hatching.—*Intellectual Observer*, Vol. viii. *Bonynge America, page* 165. See FISHERIES.

FISHERIES OF EASTERN AND SOUTHERN ASIA. Of all the industrial pursuits of the sea, the whale fishery is the most valuable. The sperm whale is a warm water fish. The right whale delights in cold water. An immense number of log-books have been discussed at the National Observatory with the view of detecting the parts of the ocean on which the whales are to be found at the different seasons of the year. Charts showing the results have been published, and they form a part of the series of Maury's Wind and Current Charts. The fishery of the Sperm whale is largely followed in the South Sea, the Pacific and in all the South Sea ocean between Africa and America, but wholly by fishers from Europe and America. Maury remarks that it seems to be a physical law, that cold-water fish are more edible than those of warm-water. The places which are most favoured with good fish-markets, are the shores of North America, the east coast of China, with the west coasts of Europe and South America, and all of these are washed by cold waters, and therefore it may be inferred that their markets abound with the most excellent fish. The fisheries of Newfoundland and New England, over which nations have wrangled for centuries, are in the cold water from Davis's Strait. The fisheries of Japan and Eastern China, which almost, if not quite, rival these, are situated also in the cold water. Neither India, nor the east coast of Africa and South America, where the warm waters are, have been famed for its fish. Three thousand American vessels, it is said, are engaged in the Newfoundland and New England fisheries. If to these be added the Dutch, French, and English, perhaps, not less than six or eight thousand, of all sizes and flags, are engaged in this one pursuit. In the east and south of Asia the people by stake nets, bag-nets and hooks, in boats and in ships engaged in fishing are nevertheless very numerous. The pearl fisheries alone, in the Persian Gulf, employs a great collection of ships, and the pearl fisheries of China and Ceylon are also valuable. In Ceylon about 10,000 canoes and boats are employed in fishing.

Shark fishing, fishing for the Holothuria or sea-slug are extensively practised. In the four years 1857-8 to 1860-1, shark fins, to the value of £60,467 were exported from India to China and other places. There are many large boats with crews of twelve men each, constantly employed in the shark-fishery at Kurrachee. The value of the fins sent to Bombay varies from Rs. 13,000 to Rs. 18,000 a year. Of this a portion only passes directly into the hands of the fishermen, each boat earning perhaps Rs. 1,000 annually, or Rs. 100 for each man. From this falls to be deducted the cost of material and other charges. Shark-fins sell in China at about $32 per picul, or £6 per cwt. In the market of Macassar the ordinary price is from $15 to $16, or from £2-10s. to £3 per cwt. This trade was noticed by Dr. Royle (*on the production of Isinglass.—London*, 1842,) in 1842. It affords on some occasions to Bombay alone—taking fish-maws and shark-fins together,—as much as four lacs of rupees—£40,000, and furnishes the chief means of support to at least three thousand fishermen or, including their families to probably not less than fifteen thousand human beings. One boat will sometimes capture at a draught as many as a hundred sharks of different sizes: but sometimes they will be a week, sometimes a month, without securing a single fish. The fishermen are very averse to revealing the amount of their captures: inquiries of this sort are supposed by them to be made exclusively for the purpose of taxation. The great basking shark, or mhor, is always harpooned: it is found floating or asleep near the surface of the water, and is then struck with a harpoon eight feet long. The fish once struck is allowed to run till tired, and is then pulled in and beaten with clubs till stunned. A large hook is now hooked into its eyes or nostrils, or wherever it can be got most easily attached, —and by this the shark is towed inshore:

several boats are requisite for towing. The mhor is often forty, sometimes, sixty feet in length; the mouth is occasionally four feet wide. All other varieties of shark are caught in nets in something like the way in which herrings are caught in Europe. The net is made of strong English whip-cord, the mesh about six inches: they are generally six feet wide, and are from six to eight hundred fathoms,—from three quarters to nearly a mile, in length. On the one side are floats of wood, about four feet in length, at intervals of six feet; on the other, pieces of stone. The nets are sunk in deep water from eighty to one hundred and fifty feet, well out at sea: they are put in one day and taken out the next, so that they are down two or three times a week, according to the state of the weather and success of the fishing. The lesser sharks are occasionally found dead,—the larger ones much exhausted. On being taken home, the fins are cut off and dried on the sands in the sun: the flesh is cut up in long stripes and salted for food, and the liver is taken out and crushed down for oil. The head, backbone, and entrails, are left on the shore to rot, or thrown into the sea, where numberless little sharks are generally on the watch to eat up the remains of their kindred. The fishermen themselves are only concerned in the capture of the sharks: so soon as they are landed they are purchased by Bania merchants on whose account all the other operations are performed. The Bania collect them in large quantities, and transmit them to agents in Bombay, by whom they are sold for shipment to China. Not only are the fins of all the ordinary varieties of shark prepared for the market, but those also of the sawfish, of the cat-fish, and of some varieties of ray or skate —the latter, indeed, merges almost insensibly into the form of the shark. The cat-fish, known in India, by the same name as in Britain, has a head very like that of its European congener, from which it differs in all other respects most remarkably. Its skin is of a tawny yellowish brown, shading from dark brown on the back to dirty yellow on the belly: it is beautifully covered all over with spots, of the shape and size of those of the leopard, similarly arranged. The value of sharks' fins annually exported from Bombay amounts to betwixt a lakh and a half and two lakhs of rupees: the largest fishery at any given port is probably that of Kurrachee, which affords nearly one-tenth of the whole, but the shark-fishery is conducted all along the Bombay coast.

The fishermen along the Bombay coasts are divided into four great castes, over each of which a head man or jemadar presides. 1, Wayttree; 2, Son-koli; 3, Dongur-koli; 4, Thankur-koli. One great jemadar, or chief, rules supreme in the craft over all the fisher castes. (*Bombay, Monthly Times, from 11th to 24th May* 1850.)

The *Bombay fishing boat* is one of the swiftest and most elegant sea-going vessels of that coast. A complete set of models of the native vessels plying on the coast, at an estimated price of Rs. 15 each, or about Rs. 1,000 in all, was sent to the Exhibition of 1851. The mode of building is precisely the reverse of that pursued by Europeans who begin with drawing the lines, then lay down the keel, ribs, and frame, and finally applying the planking. In India drawn lines are dispensed with altogether:—having laid down the keel, the Indian shipbuilders fasten on the planking, leaving the ribs and frame to the last. The keel having been laid, and the stem and sternposts put in their places, they are fashioned in both sides with a grove. The lower edge of the plank next laid is made to conform in shape to this. The under grove is smeared over with red ochre and water, and the edge of the plank that follows is tried on from time to time till it takes a tinge everywhere, showing with what exactness it coincides. It is then steeped in water and bent over a fire of wood into the proper shape and applied to its place. When all is ready, the channel in the lower plank is filled up with cotton and tar. The two planks are now sewed together in the following manner; a pair of holes are bored in the upper and a corresponding pair in the lower plank, all along at intervals of a foot or two, according to the nature of the lines; a strong coir string is laced through this in the form of the letter X, the knot being inside. A stout wedge of wood is next driven through the strings outside, so as to bring the planks perfectly in contact. The planks being put sufficiently in their places, when gunwale high is attained, the timbers are put in; when the planks have been nailed to them, the sewing holes are filled up either with nails when opposite a timber, or with wooden pins the masts rake forward instead of back—the keel is hollow in the middle and not so long as the sternpost,—the forepart of the boat sharp, with hollow lines, the stern plump and round. The Bombay fishing-boats can beat the best of the English yachts.

There are three great fishing villages in Bombay island, at Worlee, Sewree, and Mahim. At Worlee, there was, in 1850, one pattimar, worth about rupees

3,000, employed in carrying cargo and in general business. There were 110 fishing-boats, worth about Rs. 350 each, and 45 canoes, worth from Rs. 40 to Rs. 60 each. At Sewree there were five large boats, worth about Rs. 1,000 each, employed in carrying bricks and tiles from Salsette to Bombay; one pattimar, worth about Rs. 3,000, employed in general trade; 25 fishing-boats, worth about Rs. 350 each; and 50 canoes. There were, besides, some 20 middling-sized boats, used in the transport of chunam and of black sand from Bellapore for building and other purposes. At Mahim and in the creek on Sion there are 7 fishing-boats, to 10 large chunam boats, 10 small, together with 25 canoes. The fishermen of Small Colaba own no more than 16 fishing-boats and 8 canoes. A pattimar employs from 15 to 20 men, a fishing-boat from 10 to 15, a canoe from 3 to 4. Canoes are chiefly employed in the coast-fishing and attending the men on the mudbanks, and in landing cargo when there is no depth of water sufficient for larger vessels. They are hollowed out of a single log, and are very serviceable, handsome-looking, well-finished craft. They are impelled either by paddles or sails: when the latter are employed, an outrigger is resorted to: they will bear a surprising stretch of canvas, and make their way rapidly through the water.

Hooks and lines are scarcely ever used on the western shores,—nets of various forms and sizes being almost solely employed in catching fish. The most important and extensively practised variety is the stake-net fishing,—and stakes are often to be found thirty and forty miles out at sea—wherever, indeed, a bank within half a day's sail of land presents itself: the fishermen are quite enterprising enough to extend their operations to any distance, but there is no use in their going further off than they can return with their fish to the market fresh. The fishing stakes vary from 50 to 150 feet in length: they are built up in the following manner of successive pieces of wood,—the lower being frequently the long straight trunk of the cocoanut or palmyra tree. As many as five or six pieces of wood, from eight to ten inches in diameter, are used in the construction of a single stake. They are scarfed across each other, the scarfing being from three to five feet: the pieces are fastened together by strong rectangular fillets of wood—Two or three boats are employed in towing the stake out to sea. Its point is made wedge-shaped—there is a hole near the point of the wedge, through which a rope is passed. The two ends of the rope are made fast to boats anchored at a considerable distance off: other boats now proceed and haul up the upper end of the stake till the point is found to descend by its own weight. When it has at once caught hold of the mud the rope is released from its lower end, and the boats to which it was attached employed in steadying the top in the direction of the run of the tide. At high water two boats are made fast, one on each side, to the top of the stake, which is forced by their weight ten or twelve feet into the mud. Stakes are thus put in successively, often to the extent of some miles at intervals of twenty feet from each other. Betwixt each pair is extended a long purse-net, the circumference of the mouth of which is about sixty feet, so that when attached to the stakes it exhibits an aperture twenty feet across, and ten feet perpendicularly—the upper edge being a little above high water. The purse is from 100 to 170 feet in length, terminating in a point. The meshes gradually diminish in size from the mouth to the further extremity, being about six inches at the former, and three-fourths of an inch at the latter. The fish are carried into this by the tide, and entrapped—boats are always in waiting at high and low water, to secure the capture and reverse the nets. In the creeks and shoals lines of stakes and nets, often several miles in length, are run along where the sludge is exposed at low water. The upper edge of these is considerably under high water, and mark the fish are in consequencee entrapped by them on the retirement of the tide: breaks are left at intervals to secure their admission. Close along shore, fishing grounds, about half an acre in area or so, and in a semi-circular form, are built. An aperture is left in the extremity of each of these, into which a net is placed as the tide begins to recede, and a considerable capture of the lesser sized fish secured. Such are the fixed implements of the fisherman. Of the moveable implements the most frequent is a conical net, of which the lower lip is loaded with pieces of lead and turned up inwards. The material of which it is made is fine twine and the meshes small. It is from eight to twelve feet in diameter, and is only used in-shore. The fisherman holds it by the top, while he gives it a quick twirl, something betwixt that given to the American lasso and common quoit. Throwing it to the distance of some yards, it spreads fully out as it reaches the water—when pulled down and collapsing by means of the lead, it closes at the mouth as it approaches the bottom. The fisherman now approaches and pulls it up by the apex, when the fish

are found enwrapped in it. Though this net sometimes attains a weight of sixty pounds, the dexterity with which it is thrown is wonderful. There are various spoon and pursenets of different shapes and sizes, and a bag of muslin on a hoop about three feet in diameter, this last being employed to catch the young prawns, and smallest sized fish, that would escape through any mesh however fine. There is also a long trail-net, with which the fishermen wade neck deep through the water, but the mode of using it does not appear to be in any way peculiar or interesting. The mud banks and shoals in the creeks abound in eels, sometimes reaching the length of two or three feet. The fishermen wade through the mud till they detect these by the bubbling up or disturbance of the water. They then strike them with a harpoon or spear, and about two inches each way, with a fine bamboo shaft eight or ten feet in length. Having pinned them against the ground they draw them out with a hook about the same size as the spear, also on a shaft. They are very dexterous in catching the little fish or crabs which lurk under the stones close by the shore, with their hands, without the use of any implements at all: the crabs when caught are immediately stripped of their claws, and so prevented from getting away. Of these there are a wonderful variety on the Bombay shores, many of them of the greatest beauty. The fisherman's mooring anchor is generally of stone, from four to five feet in length; four-sided and pyramidai—the apex cut off. At base it is from six to eight inches square, and from four to six at top. Through the top is a hole, through which a cable or hawser passes. Near the base are two holes at right angles to each other; through these, pieces of wood are thrust corresponding to the prongs or flukes of the anchor. The whole weighs from 80 to 150 lbs., according to the size of the vessel, and answers very well the purposes intended. These anchors are most commonly made of limestone, and are on the whole most suitable.

Bombay fishermen are a strong-made race of men, and are the only labourers in India amongst whom a great degree of obesity is observed,—every fourth or fifth fisherman to be met with being more less corpulent—some of them very much so indeed. They are much given to the use of intoxicating drinks, and are often to be met with in a state of inebriety. They regulate their affairs very much after the manner in which they are regulated by those of kindred professions in other parts of the world. A set of boats and nets belong to a dozen of fishermen, one often advancing the capital required to be contributed by the others; the capture is divided amongst them on their reaching the shore, and is immediately taken charge of and carried to market by the women, who carry their baskets, not, as in Britain on their backs, but on their heads. The men when so employed carry theirs in baskets swung at the opposite ends of a bamboo across the shoulders. The women who carry the fish to market are commonly followed by ten or a dozen crows, who constantly watch for anything that may escape, every now and then making a dash at the basket itself.

The mode of making ropes and nets is singularly simple: coir is the material used for the former, cotton or hemp for the latter. One man sits on the ground and lets out the yarn; another retires half bent, and spins it by means of a spindle,—the yarn being passed through a wooden hoop hung round his neck. He gives the spindle a jerk betwixt the palms of his hands, and keeps its motion up at a very considerable degree of speed indeed. When several piles of fine yarn are to be twisted together, a man with a spindle is placed at the end of each. The whole series are supported at intervals by frames of bamboo: a spinner at the further extremity twists all the strands into one, while a light piece of board is being passed along when the cords are meant to be hard plaited and strong, to keep them from running too rapidly together. In the case of ropes, after the single strands are laid together, the rope is made up by men twisting the larger strands by a stout piece of wood—a much stronger and longer piece being used for the entire rope, a man sitting by a board with holes through which the several strands pass, to see that all go properly together. To see forty or fifty fine powerful men busily employed in the evening in sewing a cord betwixt each of the cloths of a sail—the sails of a pattimar being often from seventy to ninety feet wide,—with the accompaniments of swarthy dames and children,—boats of the most picturesque forms,—palm trees or an old Mahratta fort in the distance, and fishing tackle every where around,—is frequently highly picturesque; the sight being much more pleasing than the smells which accompany the scene.

In the sea coasts of the South of India, Muræna maculata *Ham. Buch*: Ophiocephalus striatus Bloch; O. Marulius *Buch.* O. Gachna *Buch*, Wallago (Silurus) attu, Bloch, W. Malabarici, *Cuv. et Val*: Hemibagrus (Bagrus) punctatus, *Jerdon*, and Hypselobagrus (Silurus) cavasius, *Buch* are dried and exported to the interior. But O'

insidiatrix, *Bloch* Atherina, Forskalii, Ruppell, and species of Ambassis, Polynemus, Hemiramphus and Chætodon are also largely exported.

There is an import trade of fish into Ceylon, to the value of about £15,000. Fish are cured by smoking them as they do herrings in tiers, by damp rice straw. Semi-putrescent fish in some shape or other is a characteristic article of diet among all the races from the mountains of Sylhet to the islands of the Archipelago. On the Madras side where a boisterous surf beats for ever on the shore, the fishers use the catamaran and fishing lines, but nets are also used and when shoals visit the coast, great bag nets several hundred yards long are thrown from masulah boats.

The great Irawady river and the seas in which the Mergui and Eastern Archipelagos are enclosed abound in fish, and the Malays shoot their great stake nettings far into the ocean. The shallows between Penang and Province Wellesley are covered with such nets. The wealth of these Eastern rivers and seas is boundless, and we have seen a single Burman in a small canoe, in an hour in the morning capture seventy fish, each between one and two feet long. The fishermen supplying the markets of Penang and Singapore are principally natives of China. The fishing boats vary from one to three tons burden; they are of a slight make and calculated to ply at but short distances from the shore. They are pulled by oars and seldom carry sails. The nets are made of twine, tanned with mangrove bark. The bamboo fishing-stakes are clumsy contrivances. That they answer well enough in fine weather is more owing to the riches of the sea and their sheltered position, than to the ingenuity of the contrivance or the durability of the materials. In nautical skill, the Chinese fishermen of the Straits settlements are far behind the Malays. The fishmongers are also natives of China, but they form a class far superior to the fishermen. Their trade comprizes the branches of

Fresh Fish,	Sardines,
Dried Fish,	Shark's Fins,
Isinglass (Fish Maws),	Balachan,
Fish Roes,	Fish Manure, and
Red Fish,	Tripang.

Fresh fish.—The fishermen dispose of their boat loads to the fishmongers who assort the different kinds in heaps, over which sea water is continually poured, and from these the daily customers are supplied. Although comparatively few kinds of fishes appear on the tables of Europeans, the Malays and Chinese are less nice in their selection, and reject but very few kinds.

Dried fish.—The daily surplus fish are cured by the fishmongers. The process commences with a partial abrasion of the scales, after which the larger fishes are opened lengthwise and the intestines removed. Water is repeatedly poured over the fishes till blood and impurities have disappeared, when they are placed in casks in flat layers, between which is thrown a quantity of salt. In this state the fishes remain from 24 to 48 hours, when they are exposed to the sun, and frequently turned, till they are thoroughly dried. The smaller kinds are not opened nor are they all salted before drying in the sun. The little care bestowed upon the curing appears, however, to be sufficient for local consumption, and none of the settlements in the Straits export dried fish. The pikul of 133⅓ lbs. sells from 3 to 7 Spanish Dollars valued at 4s. 6d. The katty being 1½ lb. of which 100 go to the picul.

Isinglass, Fish maws, Fish-sounds, or *Air-Bladders*, (Palogpong ikan or ari ari ikan of the Malays, loo-pa of the Chinese) appear to have formed an article of exportation from the islands of the Indian Archipelago as early as they became visited by the Chinese. When these people commenced to settle in the Straits, they not only there collected what are called fishmaws but also from distant localities. Bombay, Ceylon, Madras, Bengal, Tenasserim and most of the Malayan Islands contribute to the annual supply, which is bought up by Chinese dealers at Penang, Malacca and Singapore. By them the maws are exported to China. This fact was noted by Mr. Crawfurd, but that the fish maws are isinglass, appears to have been the discovery of an anonymous correspondent in *Parbury's Oriental Herald* for January 1839. The personal exertions of Mr. McCelland have been mainly instrumental in adding isinglass to the articles of exportation from India to the European markets. Since 1842, Mr. W. T. Lewis, Assistant Resident Counsellor of Penang, has made some very successful attempts to improve the production of isinglass in Prince of Wales Island. But European merchants there appear unwilling to engage in this novel branch of commerce, as the supply from want of proper care is uncertain, and procurable but in comparatively small quantities. These, however, are not objections to the Chinese dealers, as they are sure of a profitable and quick return on their outlay. The fishes from which isinglass is obtained at Penang are,

Lates heptadactylus, (Ikan siyakup.)

Polynemus indicus, (Ikan kurow.)
Otolithus biauritus, (Ikan salampae.)
Otolithus ruber, (Jarang gigi.)
Otolithus argenteus, (Jarang gigi.)
Otolithus maculatus, (Jarang gigi.)

Fish Roes, *Red Fish*, and *Sardines* are condiments and the species of fish used in their preparation, are Alausa toli, (Ikan truboh,) Engraulis Brownii, (Bunga ayer or badah,) Dussumieria acuta (Tamban-bulat) and Clupeonia perforata, (Tamban-nepes or batuh.)

Shark's Fins.—The Chinese fishmongers of the Straits settlements obtain shark's fins from the same localities which supply them with fish maws. These fins are not exclusively selected from sharks (squali,) but equally from rays (raiæ). Quantities examined at Penang were composed of fins of the following genera: Stegostoma, Carcharias, Sphyrna, Pristis, Rhinobatus, Trygon, and Myliobatis. Of all fishes sharks and rays are the most valuable to Chinese. The flesh and entrails of all, not even the electric rays (torpedinidæ) excepted, are eaten either fresh or dried, the skin is used for polishing or converted into shagreen; gelatine is obtained from the larger fins, glue from the smaller. All, except the caudal fins, are cut at the root so as to leave as little flesh as possible. The root is dipped in wetted lime (Chunam) in the erroneous belief of preventing attacks of insects, and then the fins are dried in the sun. Those imported in the Straits Settlements are packed promiscuously in gunny bags, each containing from one half to one pikul. According to the value in the Chinese market, the fishmongers assort the fins in two kinds, "white" and "black." The white consist exclusively of the dorsal fins, which are on both sides of a uniform light colour and reputed to yield more gelatine than the other fins. In China the lovers of gelatinous soups pay from 30 to 40 Spanish Dollars per Pikul of white fins. The pectoral, ventral and anal fins pass under the denomination of black fins. The colour, however, varies according to the species from buff to grey or brown, and most of them are of two different colours, the upper surface being dark, the lower light. The black fins, for obvious reasons the most numerous, are supposed to yield a comparatively small quantity of gelatine and sell in China from 15 to 20 Spanish Dollars per pikul, Mr. W. T. Lewis communicated the annexed table, shewing the quantity of shark's fins imported into and exported during 10 years, from 1832 to 1842, from Penang to China.

Balachan,—is a condiment prepared from small fishes, of all descriptions, and shell fish. The ingredients are placed in a pit to undergo fermentation, and afterwards dried, pounded and preserved with spices. With the Malays, Siamese, Burmese and Cochin Chinese, Balachan has become a necessary of life, as it serves to season the daily food of these nations.

Fish Manure.—The smallest fishes, and all offal are employed in the spice plantations by the Chinese gardeners and agriculturists of Penang, who consider the fluid in which fishes have been salted very useful manure in cocoanut plantations. In addition to the preceding, there are two animal productions of the eastern seas, which also are considered fishes by the Chinese. They are the dried Holothurioideæ, called Tripang, Swala or Beche de mar, and the Cuttle fishes. Of both, large quantities are annually collected and dried for the market in China. The naked Cephalopods are not only eaten fresh, but one species, a Loligo, forms in its dried state a considerable article of traffic. The preparation consists in removing the ink-bag without laying open the mantle. After all impurities have been removed by water the mollusk is submitted to a slight pressure and ultimately exposed to the sun. Small bundles of one katty weight are tied up with slips of ratan, and enclosed in cases holding ten katties and upwards. The Pikul sells at the rate of 14 to 16 Spanish Dollars. (*Beng. As. Soc. Jour.* No. 208.) Along the Asiatic coasts, the high price

obtained for the superior and well manufactured isinglass affords inducements not to be expected elsewhere, but all the parts of fish, as the flesh, the roe, and the sounds, can be turned to account, much of the fish caught must be everywhere consumed for food, but considerable quantities are dried, and form articles of commerce, as do shark-fins and fish-maws. The sounds of many Indian fishes might, like sturgeons, yield isinglass, while fish-glue and fish-oil might be obtained from others. The natives of Asia are not unacquainted with the modes of preserving fish. The roe appears among their articles of Materia Medica under the name of Butarookh, and Mr. Crawfurd and Dr. Cantor inform us, that the roe of enormous size of a kind of Shad which frequents the great river of Siak in Sumatra, constitutes an article of commerce: while the Balachang of the Eastern Seas, the Gna-pi of the Burmans, consisting of small fish with prawns and shrimps, first fermented and then dried, gives rise to a considerable traffic, as no food is deemed palpatable without it, and its use extends to every country from China to Bengal. That prepared at Mergui is excellent, only inferior to anchovy paste, by being over powerful. In Java and Sumatra a preparation of small fish with red rice, having the appearance of anchovies, and the colour of red cabbage, is esteemed as a delicacy. It is the famed "red-fish" condiment of those regions. So in India, the preparation called Tamarind fish, is much prized as a relish, the acid of the tamarind being made use of for preserving fish cut in transverse slices: the demand for dried fish exists in every part of Asia, and isinglass is in request both in Europe and China. It might perhaps become an article of consumption even in India, as it is mentioned in their systems of Materia Medica by the name of ghurree-al-sumak and sureshum mahee, that is fish-glue, and is described as a good diet for patients in a decline. The Sele combines the advantages of fineness of flavour, with wholesomeness as food; while considerable in size, it is migratory in habit and enters the Bengal rivers in great shoals in the cold weather. Its swimming bladder is of value as an article of commerce, and its flesh, in a fresh state, is esteemed as food; this would become still more valuable if it could be properly cured. In China, the consumption of salted provisions is very general. There also, in consequence of the immense quantities of both sea and river fish which are daily caught, and the rapidly putrescent nature of that species of provision a considerable portion is cured with salt and dried in the sun, the haut gout which accompanies it being rather a recommendation to the taste of the Chinese. Indeed it is one of their most favorite, as well as general articles of food, and they even overcame their prejudice or indifference for whatever is foreign, on the occasion of salted Cod being introduced for two or three years in English ships, the somewhat decayed condition in which it reached China being said to have been anything but a drawback. This species of cargo, besides its disagreeable nature and the injurious effect which it might have on some delicate articles of shipment, was found during the voyage to breed a peculiar insect, which from the readiness with which it bored into the planks and timbers of a ship, was considered as dangerous, and accordingly the import was greatly discontinued.

Sir A. Burnes represents "the mariner of Cutch in the present day as truly, adventurous, putting to sea for a trifling reward, and stretching boldly across the ocean of Arabia, the Red Sea, and the Coasts of Zanzebar in Africa. The Sea vessels of Kurachee sail to Muscat, Bombay, and the Malabar Coast, and he describes the fishing-boats at the mouths of the Indus as good sea-boats, sailing very quickly, and as numerous, because the fisheries there are extensive, and form a source of commerce on the South-Eastern part of the Peninsula of India. In Ceylon as also in China, the Pearl fisheries are of considerable value. Dr. Cantor states that at the mouths of the Ganges, the fishermen have sea-going boats, which they build themselves. and that they are a superior description of Indian sailors, of much more industrious habits than the majority of the natives of India. Still further to the eastward, we see the Burmese and Siamese almost living in boats, and the Malays most formidable as pirates in the Indian Seas. Mr. Crawfurd represents the Eastern Islanders as expert fishermen, and that there is no art which they carry to such perfection as fishing, which the nature of their climate allows them to practise, with hardly any interruption, from one end of the year to the other; the fishing boats proceeding to sea with the land-breeze at an early hour of the morning, and returning with the sea-breeze a little after noon. The fisheries afford a most valuable branch of their commerce, as a great variety of their fish are dried in the sun, or salted and dried, and sent by the inhabitants of the coast in large quantities into the interior of the Islands, or transmitted to every part of the Archipelago.

Dr. Cantor has particularly called attention to the importance of attending to, and encouraging the Sunderbun sea fishery, which is carried on to a very small extent, chiefly because the distance to Calcutta is too great to allow of the carriage of fish in a fresh state. The only class of fishermen who have sea-built boats inhabit villages situated near the entrance of the Hoogly. Their chief and most profitable employment consists in attending with their boats, on the shipping entering and leaving the river for which they receive 16 rupees per diem. Whenever this employment fails, they resort to work with their nets, which they drag during high water along the coasts of the Sunderbuns. Two or three times are generally speaking sufficient to load a boat with fishes and shell-fish (a truly prodigious quantity being brought up in a few hauls). The larger portion of the prize which is not consumed or otherwise disposed of on the spot, is then preserved. This process consists simply in dividing the fish, taking out the viscera, and spreading them in the sun till they become sufficiently dried. The Polynemus suliah, or Saccolih, enters the mouths of the Ganges in shoals. The Kharrah, or Indian Mackerel, a species of Thynnus, is rather uncommon in that estuary, but it must be found in abundance off the Burmese coast, as from thence, great numbers in a dried state are annually imported into Bengal. The cartilaginous fishes, he states, abound in numbers and species, and are remarkable for their wide geographical distribution. The Sharks enter the rivers to a considerable distance from the sea. Shark skin, he says, is used by the native workmen for polishing wood and ivory; and Shark-fins are largely exported to China. Of the better known salt water fishes of a wider geographical distribution, such, for instance, as are valued as articles of food, at the three distant points, Calcutta, Madras and Bombay, the market of the first is the least rich in varieties in consequence of its greater distance from the sea. The abundance of the supply, however, makes up for what it wants in variety and the great demand for fish affords a livelihood to great numbers of fishermen, who every night spread their nets in the river and in the salt-water lake. The Lates nobilis, different species of Polynemus, and the Mugil corsula daily cover the tables of Europeans, who will more readily recognise these fishes under the names of the Begti or Cockup, Sudjeh, Tupsi (Mango fish), and the Indian Mullet. At the Sandheads may be found some of those delicious fishes, which are more familiar to the residents of Madras and Bombay; for instance, the Indian Soles, the Roll-fish, and, above all, the black and white Pomfrets, and the Bummalo, which latter, in a dried state, is known by the name of the Bombay duck. Of these, the Indian Mullet is the most widely distributed, being common in the Straits of Malacca, the Bay of Bengal, the Persian Gulf and the Red Sea also at the Cape of Good Hope. The bazaars in Calcutta, Dr. Cantor remarks, are always stocked with an ample supply of dry fish, which is consumed partly by the European and native shipping of that port and partly by the poorer classes of Bengal, and the Upper Provinces. Cargoes of this article are annually imported by the Burmese and Arabs. These dried fishes consist chiefly of the Bummalo, the above named Siluroid fish, which sells in Calcutta at the rate of four or five rupees a hundred, in Indian Mullet, the Sudjeh, the Begti and the Kharrah or Indian mackerel. The demand for dried fish exists all along the coasts of the Peninsula. At Bombay large quantities of the Bummalo, are comsumed and exported. At the mouths of the Indus, the fishery is extensive and some fish sounds are there procured, perhaps those of the Polynemus, but they may also be those of other fish; as the specimens of fishmaws are very different in form from the isinglass sent from Bengal. Dr. McClelland, in his paper, calls attention to the very important subject of increasing the supply of fish in the interior of India. Wherever there are any large pieces of water for the purposes of irrigation, as in the Peninsula of India, these he conceives might support quantities of fish, if proper kinds were selected, and pains taken to destroy the injurious animals, in the season when the water is sufficiently low for the purpose. He also suggests that at the different sanitaria which have been established in the mountains, it would be desirable and easily practicable to form rivaria, which would at all times yield a supply of fish. This might, as he suggests, be done by damming up a portion of some of the valleys through which the mountain streams pass. He also further recommends that the natives of India should turn their attention to the curing of fish in districts where they are abundant, and sending them to others where they are less so, and for consumption at seasons when fresh fish becomes scarce. The cold season, from November to February, when most fishes are taken, in short, the fishermen not having the means of curing their fish, have nothing to stimu-

late them to any exertion, beyond what can be consumed when fresh. Had the fisherman the means of preserving the result of his labors, his chief market would commence when the fishing season ends, and his industry would then become a permanent benefit to himself and to the country at large. Mr. Crawfurd, after stating that the fisheries of the Indian islands form the most valuable branch of their commerce, and that a great variety of the fish caught, are dried in the sun, proceeds to observe, that ordinary dried fish form no portion of the foreign exports of the Indian Islands but three singular modifications of it do, Fish-maws, Shark-fins, and Tripang, all of which are sent to China in large quantity. The Tripang, Swala, or Beche de Mar, often called Sea Slug, one of the tribe of Holothuria, is an unseemly looking molluscous animal, which constitutes, in quantity and value, one of the most considerable articles of the exports of the Indian Islands to China. There are fisheries of Tripang in every Island of the Indian Archipelago. from Sumatra to New Guinea, and upwards of not less than 8,000 cwt. are yearly sent to China from Macassar, the price ranging from 8 Spanish Dollars per picul to 20, and as high as 115, according to the quality. The same author states, that Shark-fins are exported to China from every maritime country, between the Arabian Gulf and the East Indian Islands. A picul of shark-fins usually sells in China as high as 32 Spanish Dollars, or £6 1s. per cwt. which high price makes it evident, that they are only articles of luxury for the use of the rich. In the market of Macassar the ordinary price is about 15 Spanish Dollars, or £2 16s. 8½d. per cwt. Of the three substances mentioned by Mr. Crawfurd as exported from the Indian Islands, one only remains to be noticed, and this is Fish-maws. But of this he merely says that it is a favourite article of the strange luxury of the inhabitants of that country, often bringing as high as 75 Spanish Dollars per picul or £14, 3s. 6d. per cwt. in the market of Canton. Raw dried split fish are abundantly cured (without salt) in Tibet; they are caught in the Yaru and great lakes of Ramchoo, Dobtah, and Yarbru, and are chiefly carp, and allied fish, which attain a large size.

It is one of the most remarkable facts in the Zoology of Asia, that no trout or salmon inhabit any of the rivers that débouche into the Indian Ocean (the so-called Himalayan trout is a species of carp). This widely distributed natural order of fish (Salmonidæ) is, however, found in the Oxus, and in all the rivers of Central Asia that flow north and west, and the Salmo orientalis, M'Clelland, ("*Calcutta Jour. Nat. Hist.*" iii, *page* 283), was caught by Mr. Griffith (*Journals page* 403) in the Bamian river (north of the HindooKoosh) which flows into theOxus, and whose waters are separated by one narrow mountain ridge from those of the feeders of the Indus. The central Himalayan rivers often rise in Tibet from lakes full of fish, but have none (at least during the rains) in that rapid part of their course from 10,000 to 14,000 feet of elevation: below that, fish abound, but, it is believed, invariably of different species from those found at the sources of the same rivers. The nature of the tropical ocean into which all the Himalayan rivers débouche, is no doubt the proximate cause of the absence of Salmonidæ. Sir John Richardson (Fishes of China Seas, &c., "in *Brit. Ass. Rep. &c.*") says that no species of the order has been found in the Chinese or eastern Asiatic seas. (*Hooker Him. Jour. vol.* ii. *page* 183. *Jo. Ind. Archipelago*).

There are no seas in the world more abounding in esculent fish than those of the Asiatic Archipelago, and a few of them are of excellent flavour. Fish constitutes the chief animal aliment of all the inhabitants, and everywhere of those of the sea-coast who are by profession fishermen. Among the best fisheries are those of the eastern coast of the Malay Peninsula, those of the entire Straits of Malacca, of the northern coast of Java, and of all the coasts of Borneo and Celebes, with those of the Philippine Islands. The taking of the mother-of-pearl oyster, the pearl-oyster in a few places, of the holothurion or tripang, and of the shell tortoise, form valuable branches of the Malayan fisheries. (*Crawfurd's Dictionary, page* 138.) In China, the various modes of catching and rearing fish exhibit the contrivance and skill of the Chinese quite as much as their agricultural operations. According to the Repository, at least one tenth of the population derive their food from the water, and necessity leads them to invent and try many ingenious ways of securing the finny tribes. Nets are woven of hempen thread, and boiled in a solution of gambier (Uncaria gambier) to preserve them from rotting. The smacks which swarm along the coast go out in pairs, partly that the crews may afford mutual relief and protection, but chiefly to join in dragging the net fastened to their boats. In the shallows of rivers, rows of heavy poles are driven down, and nets secured to them, which are examined and changed at every tide. Those who attend these nets, moreover, attach scoops or drag-nets to their boats, so loaded

that they will sink and gather the sole, ray, and other fish feeding near the bottom. Lifting nets, 20 feet square, are suspended from poles elevated and depressed by a hawser worked by a windlass on shore; the nets are baited with the whites of eggs spread on the meshes. Cormorants are trained in great numbers in the eastern provinces to capture fish, and are sometimes under such good order that they will disperse at a given signal, and return with their prey without the precaution of a neck-ring. A single boatman can easily oversee twelve or fifteen of these birds, and although hundreds may be out upon the water, each one knows its own master. If one seize a fish too heavy for it alone, another comes to his assistance, and the two carry it aboard. The birds themselves are fed on bean-curd, and eels or fish. They lay eggs when three years old, which are often hatched under barn-yard hens, and the chickens fed with eel's blood and hash. They do not fish during the summer months. The price of a pair varies from $ 5 to $ 8. Mussels are caught in small cylindrical basket traps, attached to a single rope, and floated with the tide near the bottom. The rearing of fish is an important pursuit, and the spawn is sometimes deposited in proper vessels, and placed in favorable positions for hatching. The Bulletin Universal for 1839 asserts that in some parts of China, the spawn so taken is carefully placed in an empty egg-shell, and the whole closed: the egg is then replaced in the nest, and after the hen has sat a few days upon it, reopened, and the spawn placed in vessels of water warmed by the sun, where it soon hatches. Shell-fish and mollusks, both fresh and salt are abundant in the Chinese market, but they have not been examined scientifically. Oysters of a good quality are common along the coast, and a species of Mactra, or sand clam, is fished up near Macao. The Pearl river affords two or three kinds of freshwater shell-fish, of the genus Mytilus, which are obtained by dredging. The prawns, shrimps, crab, crawfish, and other kinds of crustacea met with are not less abundant than palatable, one species of crawfish, as large, but not taking the place of the lobster called "lang hai," or dragon crab, cuttle-fish of three or four kinds, and the large king crab (Polyphemus), are all eaten by the Chinese, though not relished by others. The true cod has not been observed on the Chinese coast, but several species of Serranus (as Plectropoma susuki, Serranus shihpan, megachir, &c.) generally called "shippan" by the natives and garoupa by foreigners, are common about Macao, and considered the most delicate flavoured of any in the markets. Another common and delicious fish is the Polynemus tetradactylus or bynnicarp, usually called salmon by foreigners, isinglass is prepared from its skin. The pomfret, or "stangyu" of the Chinese (Stromateus argenteus), is a good pan-fish, but not so delicate as the sole-fish, many species of which abound in the shallows of the Bogue. Two or three species of mackerel, the Sciœna lucida, an ophiocephalus, the mullet, the white rice fish and a kind of shad, complete the list of good table fish found in the markets of Canton. (*Williams' Middle Kingdom, Vol.* ii. p. 110, 169, 270, and 272.) Immense quantities of fish says Mr. Fortune are daily caught in the Chinese rivers. Their mode of catching them is ingenious and amusing. One day he was going up a considerable distance in a boat, and set out a little before low water, that he might have the full benefit of the flow of the tide, and get as far up as possible before it turned. On the side of the river, a few miles above Ning-po, he observed some hundreds of small boats anchored, each containing two or three men; and the tide turning just as he passed, the whole fleet was instantly in motion, rowing and sculling up the river with the greatest rapidity. As soon as the men reached a favourable part of the stream they cast out their nets and began to make a loud noise, splashing with their oars and sculls with the intention, he supposed, of driving the fish into the nets. After remaining in this spot for about a quarter of an hour, all the boats set off again, farther up, for the next station, when the crew commenced again in the same noisy manner, and so on for a long way up the river, as long as the tide was flowing; they then returned with the ebb loaded with fishes for the next morning's market. There is another curious mode of catching fish, which he frequently saw in the northern Chinese provinces, fish abound in all the Chinese rivers and lakes of the north: indeed every little pond swarms with them and the fish catcher in these places is literally amphibious. He is to be seen perfectly naked, half-walking, half-swimming; now he raises his arms and hands above his head, and, bringing them down, strikes a sharp blow upon the water, making a loud and splashing noise. His feet are not idle; they warn him that a fish is at hand, and they are now feeling for him amongst the mud at the bottom of the pond. The next moment the fisherman has disappeared: he is now under water, and he remains so long that you think something has happened to him. There is, however, no cause of fear: a few seconds more and he

appears, rubbing his face and eyes with one hand, and in the other triumphantly holding up the fish which he has just captured. It is immediately placed safely in his basket, and the work goes on as before. The surface of the water is struck and splashed, in order to frighten the fish which are swimming amongst the feet of the Chinamen. Being frightened, they dive immediately to the bottom amongst the mud, where they are felt by the feet, and are soon taken by these expert divers. But the most singular of all the methods of catching fish in China is that of training and employing a large species of cormorant for this purpose, generally called the fishing cormorant. These are certainly wonderful birds. I have, he says, frequently met with them on the canals and lakes in the interior, and, had I not seen with my own eyes their extraordinary docility, I should have had great difficulty in bringing my mind to believe what authors have said about them. The first time I saw them was on a canal a few miles from Ning-po. I was then on my way to a celebrated temple in that quarter, where I intended to remain for some time, in order to make collections of objects of natural history in the neighbourhood. When the birds came in sight, I immediately made my boatmen take in our sail, and we remained stationary for sometime to observe their proceedings. There were two small boats, containing one man and about ten or twelve birds in each. The birds were standing perched on the sides of the little boat, and apparently had just arrived at the fishing ground, and were about to commence operations. They were now ordered out of the boats by their masters, and so well trained were they, that they went on the water immediately, scattered themselves over the canal, and began to look for fish. They have a beautiful sea-green eye, and, quick as lightning, they see and dive upon the finny tribe, which, once caught in the sharp-notched bill of the bird, never by any possibility can escape. The cormorant now rises to the surface with the fish in its bill, and the moment he is seen by the Chinaman he is called back to the boat. As docile as a dog, he swims after his master, and allows himself to be pulled into the San-pan, where he disgorges his prey, and again resumes his labours. And, what is more wonderful still, if one of the cormorants gets hold of a fish of large size, so large that he would have some difficutly in taking it to the boat, some of the others, seeing his dilemma, hasten to his assistance, and with their efforts united capture the animal and haul it to the boat. Sometimes a bird seemed to get lazy or playful, and swam about without attending to his business; and then the Chinaman, with a long bamboo, which he also used for propelling the boat, struck the water near where the bird was, without, however, hurting him, calling out to him at the same time in an angry tone. Immediately, like the truant school boy who neglects his lessons and is found out, the cormorant gives up his play and resumes his labours. A small string is put round the neck of the bird, to prevent him from swallowing the fish which he catches; and great care is taken that this string is placed and fastened so that it will not slip farther down upon his neck and choke him, which otherwise it would be very apt to do. Since I first saw these birds on the Ning-po canal I have had opportunities of inspecting them and their operations in many other parts of China, more particularly in the country between the towns of Hang-chow-foo and Shanghai. I also saw great numbers of them on the river Min, near Foo-chow-foo. They sell at a high price even amongst the Chinese themselves—I believe from six to eight dollars per pair, that is, from 30s. to 40s.:—"The fish-catching birds eat small fish, yellow eels and pulse-jelly. At 5 P. M. every day each bird will eat six taels (eight ounces) of eels or fish, and a catty of pulse jelly. They lay eggs after three years, and in the fourth or fifth month. Hens are used to incubate the eggs. When about to lay, their faces turn red, and then a good hen must be set upon the eggs. The date must be clearly written upon the shells of the eggs laid, and they will hatch in twenty-five days. When hatched, they take the young and put them upon cotton, spread upon some warm water, and feed them with eel's blood for five days. After five days they can be fed with eel's flesh chopped fine, and great care must be taken in watching them. When fishing, a straw tie must be put upon their necks, to prevent them from swallowing the fish when they catch them. In the eighth or ninth month of the year they will daily descend into the water at ten o'clock in the morning, and catch fish until five in the afternoon, when they will come on shore. They will continue to go on in this way until the third month, after which time they cannot fish until the eighth month comes round again. The male is easily known from the female, in being generally a larger bird, and in having a darker, and more glossy feather, but more particularly in the size of the head, the head of the male being large and that of the female small." Such are the habits of this extra

ordinary bird. As the months named in the note just quoted refer to the Chinese calendar, it follows that these birds do not fish in the summer months, but commence in autumn, about October, and end about May—periods agreeing nearly with the eighth and third month of the Chinese year. (*Fortune's Wanderings page* 104 to 113.)

Chinese fishermen when they take one of those huge Rhizostoma which abound on the coast, rub the animal with pulverized alum to give a degree of coherence to the gelatinous mass.

In Borneo in the enclosures of stakes, drag-nets, casting-nets, traps, placed so as to swing to each tide, and hook and line are largely used: prawns, shrimps, and small fish are taken with hand-nets in the fine season. The quantity of fish taken by these various contrivances is enormous. They are salted and dried, and sent into the interior of the country. The river fish in general are not so much esteemed as those taken at sea, though they also are frequently caught, principally by means of hooks and lines attached to the light wood called plye, already described. Pieces of the wood, cut into the shape of birds, may frequently be seen floating down with the tide, to each of which is attached, at the neck, a strong line supporting a baited hook. The proprietor is generally not far off, and, on the float bobbing under water, soon seizes it, and captures the fish which has taken the hook, but though large, cannot keep the light float under water. A fine fish called in Borneo 'ikan malang,' is the one most frequently caught in this manner. *Low's Sarawak, p.* 160. *Cal. Journ. Nat. During the past seventy years this branch of the Natural History of the East Indies, has received the attention of many learned Zoologists. The voluminous work by Baron Cuvier and M. Valenciennes, "Histoire Naturelle des Poissons" published in Paris in 1828 and following years, was of great value to science. A beautiful volume of much importance the Fauna Japonica, was published in 1847, by M. M. Ph. Fr. de Siebold, C. J. Temminck, H. Schlegel and W. de Haan, (Lugduni, Batavorum 1847.) Prior to that, in 1802, there had appeared Dr. Patrick Russell's book in two volumes, containing the descriptions and figures of 200 fishes collected at Vizagapatam on the coast of Coromandel. In 1841, there was issued at Berlin, the Systematische Beschreibung der Plagiostomen, by Dr. J. Müller and Dr. J. Henle which included several of the genera and species of the seas in the South and East of Asia. Dr. McLelland of the Bengal Army in 1842, in the Calcutta Journal of Natural History described the Fresh-water fishes which Dr. Griffith had collected, and in 1843 he described a collection made at Chusan and Ning-po. In 1851, Mr. J. W. Bennett published "A selection of rare and curious fishes found on the coast of Ceylon. Dr. Ruppell and M. Peters had described the fishes of the Red Sea and southwards to Mozambique and the fishes near the Cape were described by Dr. Smith, Dr. Day, in 1865, published his fishes of Malabar, the nineteen new species in which were lodged in the British Museum. For many years from 1845 to 1860 Dr. P. Bleeker in numerous contributions, on the fishes of the Eastern Archipelago, added greatly to the stock of knowledge of the fauna of the region from Penang to Japan. Mr. E. Blyth, so long the Curator of the Bengal Asiatic Society's Museum, in the Bengal Asiatic Society Journal, from time to time, published notices of fish, and Mr. T. C. Jerdon, a Medical Officer of the Madras Army in the Madras Literary Society's Journal, gave several contributions on the fresh water and on the salt water fishes of the Peninsula. But the most recent of all the writers on this branch of science is Dr. A. Gunther, who, in addition to all that he had written in the Proceedings of the Zoological Society, and other Journals, in the years 1860 to 1868, brought out seven volumes of a Catalogue of the fishes in the collection of the British Museum, and in 1866, conjointly with Lieut.-Colonel L. Playfair, published an illustrated volume on the

Fishes of Zanzibar, the Seychelles and Chagos Islands. From the continuity of the waters from Suez in the Red Sea and from the East Coast of Africa through the Indian Ocean, and Bay of Bengal, into the seas of the Archipelago, around Australia and into the Pacific and Polynesia it is probable that many of the fishes which are now only known as inhabiting a particular Sea, will be found throughout that line of ocean and that the great natural barriers will be found to be Cape Horn and the Cape of Good Hope on the South, to pass either of which capes, would throw the fish of the tropical seas into cold regions.

In 1822 there had appeared in a 4to volume, Dr. Hamilton's Account of the fishes found in the River Ganges and its branches, with a volume of Plates. Dr. McClelland has written on the Indian Cyprinidæ in the *As. Res.* xix. p. 217. Colonel Sykes wrote on the fishes of the Deckan in the transactions of the Zoological Society. "Fische aus Caschemir" were described by M. M. von Hugel and Heckel. The fishes of Japan were described by Dr. Sir John Richardson. In 1866, appeared Lt.-Colonel Playfair and Dr. A. Gunthers work on the fishes of Zanzibar. Dr. Kelaart of Ceylon, paid much attention to the Ichthyology of the Island, and Dr. Theodore Cantor furnished in the Bengal Asiatic Society's Journal a minute account of 307 fishes of the Malay Archipelago. Almost all of these authors confined their descriptions to the distinctive features of the fish, but Dr. Buist of Bombay, Sir John Bowring, Sir J. E. Tennant, Dr. Cantor, Dr. Mason and Mr. Bonynge have given a few interesting notices of their habits. The hindu races who worship in addition to the works of their own hands, so many varied products and so large a number of mammals and reptiles, do not, seemingly, worship fish. In their religion the *Matsya Avatara* is the Fish Incarnation of Vishnu, in which he preserves a king named Manu, with the seeds of all things, in an ark, during the deluge, which happened in order to kill *Somukasura* who had stolen the *Vedas*, and hidden them in the sea. A tank or pond with all its contents may, however, with the hindoos, be devoted to a deity, and Colonel Tod mentions that when, one day, he had thrown his net into a lake, which abounded with a variety of fish, his pastime was interrupted by a message from the regent, Zalim Sing: to tell Captain Tod that Kotah and all around it are at his disposal; but these fish belong to Kanya." On which, of course, he immediately desisted, and the fish were returned to the safe guard of the deity. In such sacred tanks fish will feed from the hand; and in the Mahanaddy, where it is three miles broad, he tells us, (*Travels p.* 9) fish will follow for miles for a little burnt rice. The amphibious snake-head fish (Ophiocephalus amphibeus) occurs in the fresh waters of Burmah, but the natives regard them with superstitious awe and do not eat them. They have a legend that they were formerly men, changed into fish for their sins, and the Pwo Karen of Tavoy say that if people eat them they will be transformed into lions. The Boura chang, a fish of Boutan, is believed by the natives to fall from heaven, from the circumstance of its being found after rain far from the water. In the neighbourhood of Tavoy are two small current-less basins in the Pagaya river at the foot of pagoda crowned precipices, one to two hundred feet high. The fish, a species of barbel, (Barbus Mortonius) are held sacred to the pagodas by the bud'dhists and come in shoals for rice thrown to them by passers bye, as fearless of man as the basking deer that drink their waters. Mr. Hodgson mentions a similar tameness amongst the large gold fish at Japan. No sooner did they see his little girl coming to the edge of the water, than they almost rose from their natural element to grasp and gasp, with open mouths, at the bread, biscuit, or cake which she was half afraid to offer them. (*Hodgson's Nagasaki, p.* 75). Professor Oldham, also, tells us that in the middle of the Irawadi, about thirty miles above the town of Tsengoo and opposite the small village of Thika-dan, on nearing the island, the head man in the boat called out tet-tet! tet-tet! saying he was calling the fish. On coming down to the boat again, Mr. Oldham found it surrounded on both sides with about fifty large fish, some three or four feet long; a kind of blunt-nosed broad-mouthed dog fish. In one group which he studied more than others there were ten. These were at one side of the boat, nearly half their bodies protruded vertically from the water, their mouths all gaping wide. The boatmen were feeding them with some of the rice prepared for their own dinners, by throwing little pellets down the throats of the fish. Each fish, as it got something to eat, sunk, and having swallowed the portion came back to the boat side for more. The men continued occasionally their cry of tet-tet-tet! and putting their hands over the gunwale of the boat, stroked down the fish on the back precisely as they would stroke a dog. This was kept up for nearly half an hour moving the boat slightly about, and invariably the fish came at call

and were fed as before. The only effect which the stroking down or patting on the back seemed to have, was to cause them to gape still wider for their food. The fish are found in the deep pool formed at the back of the island, by the two currents meeting round its sides, and the Phoongyi are in the habit of feeding them daily. It is regarded by the Burmans as quite a sight, which the people come from great distances to see, as well as to visit the pagoda, which is very ancient and much venerated. During an annual March festival, it is not unusual for the visitors to take the fish into their boats, and gild their backs with gold leaf, as they do in the ordinary way to pagodas, and Mr. Oldham observed remains of the gilding visible on one of the fish. He wished to take one of the fish away, but refrained as the people seem to regard the act as sacrilege. (*Mr. Oldham, in Yule's Embassy.*) In various parts of the world, however, fish can be sufficiently tamed to eat from the hand. In 1834, in the garden of a native gentleman in Calcutta, we found in a tank, numerous fish, said to be mullet, which eat parched rice out of the hand: and in a public garden in northern Germany we witnessed all ages of the community amusing themselves with feeding a number of large fish that eagerly crowded near to receive shares of the bread bestowed on them.

Sir J. E. Tennant discusses the various theories of that curious phenomenon, everywhere occurring after rains, in southern Asia, of fish found in fields, tanks, ponds and marshes, in which they had not been known to exist while the drought lasted. Sir John Bowring notices it in his Philippine islands, and Sir J. E. Tennant remarks that there are full grown fish in Ceylon, endowed with the singular faculty of being able to migrate over land in search of water, and of burying themselves in the mud, retaining their vitality until the return of the rainy season. Fish, up to a foot in length, are, everywhere in India, caught in fields, and it is a popular belief either that fish bury themselves during droughts in the soft damp under soils or that they are accidently so imbedded from one dry season to another; or that they fall in some water spout. But we have never heard of, nor seen, fish dug up in any of the agricultural or engineering operations so continuously going on in the Peninsula of India. In the instances which have, there, come under our own observations, the places where the people were busy catching fish, were at levels lower than the surrounding country, and often in the line of the drainage of tanks, and it seemed evident that in a sudden fall of rain a tank or pond had everflowed and swept the fish down into the lower country. Whatever be the explanation, people are, in India, seen catching fish by hands, nets and baskets, immediately after heavy rains and in a few days afterwards, busy with fishing rods and lines in parts of the country which for months previous had been cracked and burnt up by the intensity of the heat.

The fact of the imbedding of fish is however stated by trustworthy writers Mr. Bonynge says (*America* p. 165.) I have seen the natives in the North East of India, both to my surprise and amusement, dig fish out of the earth. The fish is called " earth fish," " Zeemen ka mutchee," (Earth-fish) of about five to seven inches in length, flat, and black in color, flesh hard, and in flavor somewhat like an eel."

Mr. Cameron mentions (*Cameron p.* 119.) that in a morning in Singapore he has passed where men and women were busy catching fish in ditches that the evening before were previously dry, heavy rains having fallen over night. And he believes that these fish imbed themselves as the waters dry up and lie caked there until the next wet day.

Sir John Bowring says in his Philippines (p. 26) that after rains the fields and marshes are filled with fish. Fish two palms long are often pulled up from among the paddy. As the waters dry all the fish retreat to any muddy recess and the Indians catch them with their hands or kill them with sticks. I have, he adds, seen many Indians fishing in the paddy grounds, and what becomes of the fish in the times of drought when no muddy recesses are to be found it is hard to say. This phenomenon was noticed by Pennant, who, says (*Pennant's Hindoostan, Vol. I. pp.* 102-3) that the phenomenon of small fish appearing in the rainy season, in places before dry, is as true as it is surprising. The natives begin to fish for them the tenth day after the first rains, and they make a common dish at the tables. Many are the modes of accounting for this annual appearance.

Dr. Buist, who from time published in the *Bombay Times* which he edited, many interesting points on Natural History, noticed several falls of fishes from the sky which Mr. Gosse and Sir James Emmerson Tennant (*Sketches* 362-4) have quoted. Dr. Buist writing in 1856, mentioned that in 1824, fishes fell at Meerut, on the men of Her Majesty's 14th Regiment, then out at drill, and were caught in numbers. In July 1826, live fish were seen to fall on the grass at Moradabad

during a storm. They were the common cyprinus, so prevalent in our Indian waters. On the 19th of February 1830, at noon, a heavy fall of fish occurred at the Nokulhatta factory, in the Dacca Zillah; depositions on the subject were obtained from nine different parties. The fish were all dead, most of them were large, some were fresh, others were rotten and mutilated. They were seen at first in the sky, like a flock of birds, descending rapidly to the ground; there was rain drizzling, but no storm. On the 16th and 17th of May, 1853, a fall of fish occurred in the zillah of Futtehpoor, about three miles north of the Jumna, after a violent storm of wind and rain. The fish were from lb. 1½ to lb. 3 in weight, and of the same species as those found in the tanks in the neighbourhood. They were all dead and dry. A fall of fish occurred at Allahabad, during a storm in May, 1835, they were of the chowla species, and were found, dead and dry, after the storm had passed over the district. On the 20th of September, 1839, after a smart shower of rain, a quantity of live fish, about three inches in length and all of the same kind, fell at the Sunderbunds, about 20 miles S. of Calcutta. On that occasion it was remarked that the fish did not fall here and there irregularly over the ground, but in a continuous straight line, not more than a span in breadth. About a week or ten days after the first burst of the monsoon, vast multitudes of fish, are observed on the low grounds round Bombay. But these appear to be derived from the adjacent pools and rivulets and not to have descended from the sky. Dr. Buist, was not aware that they occurred on the higher parts of the Island, and he had never seen them in casks for collecting rain water from the roofs of houses, nor on the awnings or decks of vessels in the harbour. During a tremendous deluge of rain at Kattywar, on the 25th of July, 1850, the ground around Rajkote was found literally covered with fish; some of them were found on the tops of haystacks, where probably they had been drifted by the storm. In the course of twenty-four successive hours twenty-seven inches of rain fell, thirty five fell in twenty-six hours, seven inches within one hour and a half, being the heaviest fall on record. At Poonah on the 3rd of August, 1852, after a very heavy fall of rain, multitudes of fish were caught on the ground in the cantonments, full half a mile from the nearest stream. Sir J. E. Tennant, when driving in the Cinnamon gardens near the port of Colombo, saw a violent but partial shower. On coming to the spot, he found a multitude of small silvery fish from 1½ to 2 inches in length, leaping on the gravel of the high road, numbers of which he collected and brought away and Mr. Whiting, a Civil Servant of Ceylon mentioned to Sir J. E. Tennant that he had been often told by the natives at Trincomalee that it sometimes rained fishes at that side of Ceylon. (*Tennant's Sketches of the Nat. Hist of Ceylon, p.* 362-4. *Phillip Henry Gosse F. R. S. Romance of Natural History, London,* 1861.)

Fish travel; not eels alone, which in all countries can move rapidly over moist land. Theophrastus (De piscibus) the contemporary of Aristotle, mentions fishes found in the Euphrates, which, in the dry seasons, leave the vacant channels and crawl over the ground, in search of water, moving along by fins and tail. Mention was made, above of the travelling powers of the Ophiocephalus amphibeus of Burmah. The Ophiocephalus striatus occurs in the Indian Peninsula, attains a length of upwards of 3 feet. O. gachua grows to one foot long, and Dr. Day believes that they breathe air direct from the atmosphere. Hartwig mentions that in several fish the gills communicate with a cellular labyrinth containing water, which keeps the gills moist; by this means the hassar of Guiana, the frog fish of Ceylon and the climbing perch of India are able to remain out of the water. The hassar throws itself forwards by the spring of its tail, and can move in that way nearly as fast as a man can leisurely walk. The pectoral fins of the frog fish supported by the bones of its carpus perform the office of feet. The climbing perch moves itself up trees by means of its ventral fins (*Hartwig.*)

Dr. Bowring says (Siam Vol. I. p. 10) that in ascending and descending the Meinam river, to and from Baukok, he was amused with the novel sight of fish leaving the river, gliding over the wet banks, and losing themselves among the trees of the jungle. Bishop Pallegoix (Siam I, 144) asserts that such fish will wander more than a league from the water. "Some years ago" he says, "a great drought had dried up all the ponds in the neighbourhood of Ayuthia: during the night, torrents of rain fell. Next day, going for a walk into the country, he was surprised at seeing the ponds almost full, and a quantity of fish leaping about! 'Whence have these fish come?' he inquired of a labourer: 'yesterday there was not one.' He replied "they were come under favour of the rain." In 1831, when fish were uncommonly cheap, the Bishop of Siam poured fifty cwt. into his ponds: but, in less than a month, nine-tenths escaped during a rain that fell in the night.

There are three species of this wandering fish, called Pla-xon, pla-duk, pla-mo. The first is voracious, and about the size of a carp; salted and dried, it can be preserved for a year: it is very abundant, and is exported to China, Singapore, and Java, and is a particularly wholesome and health-giving fish.—(*Bowring's Siam*, Vol. I. p. 10.) Sir J. E. Tennant thinks that the fish here alluded to by Sir John Bowring may be the Anabas scandens, *Cuv.* (Perca scandens *Daldorf*, Kavaya also Kawhyya *Singh.* Pannei eri *Tam.*) and Dr. Hamilton Buchanan says, it is most tenacious of life; he had known boatmen on the Ganges keep them for five or six days in an earthen pot without water and daily to use what they wanted, finding them as lively and fresh as when caught. The Platycephalus clavulatus, insidiator and P. carbunculus can all sustain life for some little time out of water.

Mr. Layard, (*Ann. Nat. Hist. Mag.* 1853) once encountered several of the Anabas, travelling along a dusty gravel road in the mid-day sun. Near the rocks of the Ceylon coast, are multitudes of a curious little fish (the Salarias alticus) which possesses the faculty of darting along the surface of the water and running up the wet stones and across the sand with the utmost ease and rapidity. (*Tennant*, ii, 493, *Gosse* 133.)

Mr. Gosse has seen a species of Antennarium running quickly to and fro on the surface of the great beds of floating sea weed in the gulf stream, progressing with the utmost facility by means of its pectorals and ventral fins, quite out of water. (*Gosse*, p. 122)

The lepidosiren of Africa and S. America, is placed midway between the reptiles and fishes, and has gills and true lungs. It has the habit on the approach of drought of burying itself several feet deep into the mud of the ponds in which it usually dwells. It does not appear to possess the power of travelling. The Hydrargyræ of Carolina leave the drying pools and seek the nearest water, in a straight line, though at a considerable distance: and Sir R. Schomburgh tells us that certain species of Dora (by the people, the Hassar) in Guiana, have the same habit and are occasionally met with in such numbers in their travels that the negroes fill baskets with them. If they fail in finding water. they are said to burrow in the soft mud, and pass the dry season in torpidity like the lepidosiren. (*Gosse* 122.)

In Ceylon the fish most frequently seen travelling is a perch called by the Singalese Kavaya or Kawhyya, and by the Tamil, Pannei-eri, or Sennal. It is closely allied to the Anabas scandens of Cuvier, the Perca scandens of Daldorf. It grows to about six in length, the head round and covered with scales, and the edges of the gill covers strongly denticulated. Aided by the apparatus in its head, this little creature issues boldly from its native pools and addresses itself to its toilesome march, generally at night or in the early morning, whilst the grass is still damp with the dew; but in its distress it is sometimes compelled to move by day, and Mr. E. L. Layard on one occasion encountered a number of them travelling along a dusty road under the midday sun.

Mr. Morris, the Government Agent of Trincomalie, writing to Sir J. E. Tennant on this subject in 1856, mentioned that he was lately on duty inspecting the bund of a large tank at Nade-cadua. He found numbers of fish struggling upwards through the grass in the rills formed by the trickling of the rain. There was scarcely water enough to cover them, but nevertheless they made rapid progress up the bank, and his followers collected about two bushels of them at a distance of forty yards from the tank. They were forcing their way up the knoll. They were chub, the same as are found in the mud after the tanks dry up. In a subsequent communication, in July 1857, Mr. Morris mentioned that as the tanks dry up the fish congregate in the little pools till at last you find them in thousands in the moistest parts of the beds, rolling in the blue mud which is at that time about the consistence of thick gruel. As the moisture further evaporates from the surface, they are left uncovered, and they crawl away in search of fresh pools. In one place he saw hundreds diverging in every direction, from the tank they had just abandoned to a distance of fifty or sixty yards, and still traveling onwards. His impression was that this migration takes place at night or before sunrise, for it was only early in the morning that he had seen them progressing. All in the act of migration had their gills expanded. Sir J. E. Tennant says (*Sketches* p. 354) that in Ceylon where the country is flat, and small tanks are extremely numerous, the natives are accustomed in the hot season to dig in the mud for fish. Mr. Whiting, the chief civil officer of the eastern province, informed him that, on two occasions, he was present accidentally when the villagers were so engaged, once at the tank of Malliativoe, within a few miles of Kottiar, near the bay of Trincomalie, and again at a tank between Ellendetorre and Armitivoe, on the bank of the Vergel river. The clay was firm, but moist

and as the men flung out lumps of it with a spade, it fell to pieces, disclosing fish from nine to twelve inches long, full grown and healthy, which jumped on the bank when exposed to the sun light.

The climbing fish of Ceylon is an Anabas, closely resembling the Perca scandens of Daldorf; but on minute examination it proves to be a species unknown in India, and hitherto found only in Borneo and China. It is the A. oligolepis of Bleeker. (*Tennant's Sketches of the Nat. Hist. of Ceylon*, p. 354.)

The Magura fish in the Columbo lake is said to grunt under water when disturbed, and Bishop Pallegoix, in his account of Siam, speaks of a fish resembling a sole, but of brilliant colouring with black spots, which the natives call dogs tongues; it attaches itself to boats and gives out a very sonorous and harmonious sound. (*Tenn.* 2, 470.)

The Chætodon rostratus looks for an insect on the foliage overhanging its pool, and suddenly shoots on it from below a drop of water which brings the insect down. The Javanese keep them for their amusement.

Chætodon prætextatus, Cantor, like other species of this and the neighbouring genera, expires immediately, when removed from its element. It appears to be allied to C. reticulatus and C. lunula, Cuv. and Val.

The Toxotes jaculator, Pallas, or archer fish appears to be the variety, described by M. M. Cuvier and Valenciennes from a drawing in the series, formerly in the late Colonel Farquhar's possession. The food of several examined, consisted of remains of crustacea. In the straits of Malacca this fish occurs, at all seasons, but not numerously. It is eaten by the Malays, who record its habits in the denomination: ikan signifying a fish, sumpitan a blow-pipe.

The gaudiest fish live among the coral reefs, such as species of the Chætodon, the Balistinæ and Glyphosodon. The Mesoprion annularis of the Indian Ocean, feeds on crustacea, and is distinguished for the beauty of its colours and the symmetry of its form.

The Gourami, a fish of the Mauritius, is esteemed of more delicate flavour than the salmon or turbot: but many other fish of these regions are highly prized for food, and several of the genera Arius, Otolithus, Umbrina, Lobotes and Polynemus, furnish isinglass in abundance. P. tetradactylus is valued both for food and for its large sounds.

The Trichopodus trichopterus, (Pallas,) like the rest of the family, is capable of sustaining life out of water, particularly if kept in wetted fresh leaves, or occasionally sprinkled with water. At Penang it is numerous in streamlets and ponds, where it is eaten by the poorest classes. The exquisite beauty of the metallic irridescent colours make these fishes acquisitions in garden tanks. Like Osphromenus olfax they are very pugnacious among themselves. A second species of Trichopodus has been discovered by Dr. Campbell, Superintendent of Darjeeling, in the rivers at the Sikim passes in the northern frontier of Bengal. Both at Penang and at Malacca, the Osphromenus olfax (Commerson) has been successfully naturalised though in the former place it is not numerous, but confined to a few ponds. They become tame so as to appear on the approach of their feeder, and will rise to flies, beetles, and certain flowers, particularly a large Hibiscus. Among themselves they are pugnacious. Many years ago several living ones were imported, and placed in a tank in the Calcutta Botanical Gardens, where they appeared to thrive. Little care, however, having been bestowed on their preservation, only a solitary one survived in 1841.

The various pomfrets, are much valued by Europeans. Stromateus niger, the black pomfret, is taken abundantly along the coasts of India, and is largely dried for export to the interior. It is at all seasons taken in abundance in the Straits of Malacca, where, however, it is considered inferior to Stromateus sinensis, "the white pomfret." In a dried state it is largely exported, and thus it appears in the bazaars of Hindustan, which are chiefly supplied from Bombay. S. sinensis is par excellence the "white pomfret" of the Straits Settlements and Madras, the "pample blanche" of Pondicherry. It is justly renowned for its flavour, but it requires to be used when freshly taken. In the Straits and on the Coromandel Coast it is abundant at all seasons. At the Sandheads in the Bay of Bengal, (21° N. L.) it occurs, but less numerously. Dr. Russell happened seldom to see this species and considered it very inferior to the "black" Stromateus niger, (*Bloch*) or his "white pomfret," by which he means Stromateus argenteus *(Bloch.)* (*Russell* p. 34.)

In the Straits Settlements, as well as at Madras, S. argenteus is, likewise, denominated the "white pomfret." In abundance and excellence it vies with S. sinensis.

Stromateus cinereus, *Bloch*, is abundant at Penang but probably from its inferior size it is considered somewhat inferior in quality. At the Sandheads it occurs rarely.

Alausa toli, *Cuv. and Val.* inhabits the Sea of Penang, Malayan Peninsula, Singapore,

Borneo, Java, Sumatra, Pondicherry, river Cauvery, and Bombay. Total length 1 foot 9 inch. Like A. ilisha in Bengal, the A. toli is, by the English of the Straits Settlements, denominated Shad or Sable-fish, and is equally valued for its flavour. Both are, however, somewhat oily, very rich and bony. Alausa toli is remarkable as forming in the Indian Archipelago a distinct and important branch of fishery, principally for the sake of its roe. It is the kind of "Shad" to which Mr. Crawfurd refers as frequenting the great river Siak in Sumatra, and of which the dried roe, of enormous size, constitutes an article of commerce. (Crawfurd, *Hist. Ind. Archipel*, III. 440.—Royle, *On the Production of Isinglass*, 76). A description of the fishing of this species is given by the late Mr. Moor in Notices of the Indian Archipelago, &c. p. 29. At Bukit Batu, [opposite to, and a little to the southward of, Malacca] a place on the main of Sumatra within the Strait formed by the island of Bankalis, exists an extensive fishery well known in this part of the world. The fish which is the object of it is called in the Malayan language "Trubu." The fish itself is sufficiently known in all the neighbouring seas but found with a roe only here, [That is to say, in shoals, for it is plentiful at Penang, Malacca and Singapore,] which makes it certain that it repairs to this favoured place for the purpose of spawning. The Trubu, about a cubit long, is taken in 3 and 4 fathoms water on a mud bank. About 300 boats are engaged at all seasons in the fishery with the exception of four days during dead neap tides. The roes are an article of trade seaways, and the dried fishes are sent into the interior of Sumatra. The Rajah of Siak draws a revenue from this fishery of 72,000 guilders yearly, receiving a certain duty upon the quantity taken. From the rate and amount of this duty it is ascertained that the quantity of fish caught yearly amounts to between fourteen and fifteen millions. It seems a little remarkable that the spirit of European monopoly never should have fastened upon so promising an object of gain. The fishery, from its peculiar nature, is probably quite inexhaustible, and might unquestionably be prodigiously improved by European skill and industry, and this too not only without detriment, but probably to the great improvement of the revenue of the native prince, as well as the essential benefit of the surrounding population" In the Malayan markets the roe is called "Telur ikan," the fish-roe "par excellence." Like the preparation of fermented fish and shell-fish, "Balachan," it is largely used by the Malays and Chinese to season and make their food palatable and it is no less a favourite relish with Europeans. W. T. Lewis, Esq., Resident Counsellor, Penang, who has observed the process of preparation in Sumatra, describes it as follows. The fresh roe is thoroughly salted, and next partially dried, so as to retain a slight moisture, in which state it is by hundreds closely placed in casks, and thus exported. In the Malayan Settlements the price is from 3 to 4 Spanish Dollars per hundred. The dealers there export considerable quantities to China, after having taken the precaution to repack the roes between layers of salt, and to sprinkle them with arrack. To dress them, they are soaked for about half an hour in water, and then fried. As the roe appears in commerce, it is of an elongated flat shape, measuring from 6 to 8 inches in length, about 2 in breadth, and $\frac{3}{4}$ of an inch in depth, of a deep amber colour. The single eggs are larger than those of A. ilisha.

The Engraulis brownii, (Gmelin) inhabits the sea and estuaries of the Malayan Peninsula and Islands, China sea, New Zealand, Madura, Java, Sumatra, Bombay, Coromandel, Bay of Bengal, Gangetic estuaries, Isle of France Australia, New York, Havanah, Jamaica, Vera Cruz, Martinique, Barbadoes, St. Christopher, Rio Janeiro. Total length: 6 inch.

In Java, Sumatra and the Straits of Malacca, large quantities are preserved both for home consumption and exportation to China and India. The delicious condiment is famed under the denomination of "Red-fish," (Ikan-merah of the Malays.) or "Malacca-fish," and is used as a relish. Mr. W. T. Lewis, Asst. Res. Counsellor, Penang, mentions that it is prepared at Bencoolen as follows. After the heads have been removed, the fishes (those of middling size are preferred), are cleansed, salted (in the proportion of one to eight parts of fish), and deposited in flat glazed earthen vessels. In the latter they are for three days submitted to pressure by means of stones placed on thin boards or dried plaintain leaves. The fishes are next freed from salt and saturated with vinegar of Cocoa Palm toddy, after which are added powdered ginger and black pepper (the latter mostly entire), and some brandy and powdered "Red rice." After having been kept for three days, a little more vinegar is added before placing the fishes in well closed jars or bottles. They should be kept four or five months before being used. The expense of a quart bottle of the condiment is about 30 cents, the selling price one Spanish

Dollar. "Red rice" is the variety of Oryza sativa called glutinosa (pulut, or bras sepulut of the Malays) steeped in an infusion of cochineal. In the Straits Settlements, red rice is imported from China, and sells at the rate of 10 cents. of a Dollar per lb. The Chinese settlers in the Straits prepare a similar red condiment with slices of Polynemus indicus and P. tetradactylus and also prawns.

Equula insidiatrix, (Bloch), this species is at all seasons very abundant in the Straits of Malacca, and numbers are dried and consumed by the natives.

Equula longimana, (Cantor,) is very abundant in the Straits of Malacca at all seasons, and quantities, both fresh and dried, are consumed by the natives.

Gazza equulæformis, (Ruppell,) in the Straits of Malacca, this species is very numerous at all seasons, and forms like the rest an article of food.

Clupeonia perforata, (Cantor,) inhabits the Sea of Penang, Malayan Peninsula, Singapore, and Sumatra. Total length : $5\frac{6}{8}$ inch. They are of delicate flavour and pass in the Settlements of the Straits under the denomination of 'Sardines,' in imitation of which they are sometimes preserved in oil. It has a resemblance to Alausa argyrochloris, Cuv. et Val. (vol. XX. p. 440).

The general form, the yellow dorsal fin with a small black spot, give it a certain resemblance to Meletta venenosa, Cuv. et Val. (vol. XX. p. 377). Some specimens of Clupeonia perforata, procured by Mr. W. T. Lewis, Assist. Resid. Councillor, Penang, were accompanied by the following account of a phænomenon witnessed by that gentleman during his official residence at Bencoolen. In 1822 great numbers of what was supposed to be this identical species, presented the unusual appearance of having red eyes. Many natives after having eaten these fishes, were suddenly attacked with violent vomiting, which in cases where remedies were not immediately applied, was known within an hour to terminate fatally. At the same time such of these fishes with the ordinary silvery eyes, were as formerly eaten with impunity. This phænomenon recurred at Bencoolen during the seasons of 1823 and 1825, but not of 1824. It was surmised that the poisonous fishes had fed on a gelatinous substance which at that season exudes from the beautifully coloured coral reefs on that part of the coast of Sumatra. It is, however, more probable that the poisonous fishes were shoals of Meletta venenosa, an inhabitant of the Seychelles and the neighbouring seas, which happened in those seasons to visit Sumatra. M. Valenciennes describes this fish as being poisonous, and producing effects as noted above. In the Straits of Malacca, Clupeonia perforata has never been known to produce bad effects.

Dussumiera acuta, Cuv. and Val. XX. 467. Pl. 606. the Tamban bulat of the Malays.

Head above, back and upper third of the sides deep glossy blue, bordered by a longitudinal band of pale copper-red ; the rest of the head and body shining silvery ; dorsal hyaline. Of this, single individuals occur at Penang at all seasons, but numbers from June to September. It is highly valued for its delicate flavour, and passes commonly as a 'Sardine.' The latter denomination it shares, however, with Clupeonia perforata, (vide supra,) with which it is also confounded by the Malays under the common name of Ikan tamban. Both species have been prepared as 'Sardines a huile.'

The Saurus nehereus, of Buchanan Hamilton, has the upper part of its head, back and sides light grey or dust-coloured, hemi-transparent like gelatine, with minute starlike black and brownish dots the anterior part of the abdomen is pale silvery bluish ; rest whitish ; cheeks and opercles pale silvery bluish, dotted like the body ; fins transparent, coloured like the body but more closely dotted, so as to appear pale blackish. It inhabits the Sea of the Malayan Peninsula and Islands, Chusan, Woosung, Canton, Madura, Java, Sumatra, Tenasserim, mouths of the Ganges, Vizagapatam, Bay of Bengal, Bombay, Malabar. The total length is 11 inch. The fish is of most voracious habits, gorging itself with its own species and other fishes of nearly its own size, and with Crustaeca (shrimps). It is frequently taken with the stomach and the jaws expanded with prey. It is very short-lived, more so than either S. trachinus or S. myops, and the whole body becomes at certain seasons brilliantly phosphorescent. In the Straits of Malacca it is at all times very numerous, although less so than it is at the Sandheads or in the mouths of the Ganges. Although very rich, it is a great delicacy immediately after it is taken. Salted and dried it is also highly valued, and in this state it occurs in commerce under the denomination of "Bombay Ducks," the "Bummaloh" of Bengal, and the Bamiah of Bombay, large quantities of which are annually exported from Bombay and the Malabar coast to all parts of India.

Hemiramphus russelli of Cuv. and Val. the Toda pendek of the Malays [Pendek, short.) The Malays thus denominate all the species of Hemiramphus, to distinguish them from those of Belone (Toda) of the Malays.

At Penang H. Russelli is numerous at all seasons, and larger individuals occur at irregular intervals. They appear at European tables under the appellation of "Guard-fish."

Plagusia potous, Cuvier. The Ikan ledah of the Malays, is of excellent flavour, and, like Plagusia trulla, passes at European tables under the denomination of "Sole." the species are all distinguished for their tenacity of life. The fishermen at Penang assert that some species of Plagusia shoal at certain seasons.

Hippocampus mannulus and H. comes, of the Penang seas, when drying assume the figure of a horse head and are known to all as the Sea-horse.

Of the Torpedinidæ, several genera and species occur, viz., Narcine Indica, Astrape dipterygia, Temera Hardwickii and Cysteocercus temeræ, Dr. Cantor says, large individuals of Narcine are at Penang of rare occurrence, but younger, from 3 to 6 inches in length, are taken at all seasons. In or out of water they may be handled with impunity. Several species of fishes introduced in a jar filled with sea-water and containing a large Narcine shewed no consequences from the contact, nor did they appear to avoid the Torpedo. The food of this and the other Malayan Torpedinidæ consists of Crustacea and Testacea.

Plotosus anguillaria, and Pl. albilabris both occur in the Seas of the Malay peninsula. At Penang, the latter species is less numerous than the former. Both are eaten by the poorer class of natives. The wounds of both are equally dreaded.

The species of Tetrodon are capable of inflating the abdomen, and in this state, when taken or handled, they emit a grating sound. They are also remarkable for tenacity of life, which they are capable of sustaining for several hours after having been taken out of their element. They have a peculiar disagreeable odour, resembling that of the Gobioidæ, which continues for several years in specimens preserved in spirits of wine. In the Malayan countries they are considered highly poisonous, and are even objected to as manure.

Batrachus grunniens, (Linne). The natives attribute poisonous qualities to these fishes, and reject them even as manure. The creaking sound they emit has been noted by Buchanan. They are capable of living a considerable time out of their element.

Cacodoxus argus, (Linn.) Is eaten by the natives, though many reject it on account of its reputed disgusting habits. In several which were examined in the estuaries of the Ganges, and at Penang, the stomach contained remains of small fishes and crustacea. According to Bennett, it is, in Ceylon, angled for on hooks baited with a kind of sea-weed ("Pendah,") of which this fish appears to be particularly fond.

Echenneis naucrates, (Linn.) Occurs at Malacca. The Malays consider this fish to be powerful manure for fruit trees. (Low, *Dissert. of Penang*, 179).

Raconda russelliana, Gray. At Penang individuals from 4 to 6 inches in length are numerous at all seasons, although less so than they are at the Sandheads and the mouth of the Ganges. The Bengal fishermen denominate the species "Potassah-Fessah" or "Phasah." "Fessah" or "Phasah," as Buchanan Hamilton observes, is, in Bengal, a generic term, particularly applied to Engraulis phasah (Buchan), and E. telarah, (Buch.) It is a heavy swimmer, and like the rest of the Clupeoidæ, expires immediately on leaving its element. It is chiefly consumed in a dried state.

Leuciscus rasbora, (Buchan. Ham.) Is numerous at Penang, in rivulets and in rice fields, when they are flooded.

Teuthis, (*Linne* 1766.) All the species of this genus are supposed by the Malays of the Straits to be highly poisonous, they are not eaten, but set aside among offal of fish to be used as manure.

The Arius genus of fishes, of the Ganges, Malay and Javanese seas, furnish isinglass. The Arius arius of Dr. Buchanan Hamilton, inhabits the Gangetic estuaries, near Pondicherry, and the estuaries near Penang, the Malay peninsula and Singapore. It is 1 foot and 10 inches long; forms an article of food, and more than any other of the siluridæ contributes to the isinglass of Indian commerce.

The Arius militaris. *Linn.* Is a foot and a half long, inhabits the Coromandel and Malabar coasts, the Ganges, Irawadi, and the seas and estuaries of the Malay peninsula. Its air vessel is preserved as isinglass.

The Arius truncatus Cuv. and Val. is under a foot in length. It occurs in the seas of Penang and the Malay Peninsula, but is so rare that it furnishes little of the isinglass of commerce.

The bodies of the genus Chanda (Chandi, Hind. silver) are more or less diaphonous. The Macropodus pugnax of Cantor occurs numerously at the foot of hills at Penang Like the rest of the family it is capable of living for sometime out of water. The Siamese inhabitants with whom this species is a great favourite, keep them in jars with

water, where the larvæ of musquitoes is their food, and denominate them "Pla kat," Pla, fish; kat, a fighter. The variety is noticed by Lieut-Col. Jas. Low, i. e., the fighting fish, although they live peaceably together. The real fish however, the exhibition of whose combats is a popular amusement with the Siamese, appears to be a variety of the present species, produced by artificial means, like the varieties of the golden carp of China, and Dr. Cantor names it Macropodus pugnax, Var. (Plate II. Fig. 4.) Pla-kat of the Siamese. When the fish is in a state of quiet with the fins at rest, the dull colours present nothing remarkable. But if two are brought within sight of each other, or if one see its own image in a looking glass, the little creature becomes suddenly excited, the raised fins and the whole body shine with metallic colours of dazzling beauty, while the projected gill membrane, waving like a black frill round the throat, adds something grotesque to the general appearance. In this state it makes repeated darts at its real or reflected antagonist. But both, when taken out of each other's sight instantly become quiet. This description was drawn up in 1840 at Singapore, where a gentleman had been presented with several by the king of Siam. They were kept singly in glasses with water, fed with larvæ of musquitoes, and had thus lived for many months. The Siamese are as infatuated with the combats of these fishes as Malays are with their cock fights, and stake considerable sums, and sometimes their own persons and their families. The license of exhibiting fish fights is farmed, and affords a considerable annual revenue to the king of Siam.

Sir J. E. Tennant tells us that in the hot springs of Kannea, in the vicinity of Trincomalie, the water flows at a temperature varying at different seasons from 85° to 115°. In the stream formed by these wells, M. Raynaud found and forwarded to Cuvier two fishes which he took from the water at a time when his thermometer indicated a temperature of 37° Reaumur, equal to 115° of Fahrenheit. The one was an Apogon, the other an Ambassis, and to each, from the heat of its habitat, he assigned the specific name of "thermalis."

A loach, Cobitis thermalis, and a carp, Nuria thermoicos, were also found in the hot springs of Kannea, at a heat 40° cent., 114° Fahrenheit, and a roach, Leuciscus thermalis, when the thermometer indicated 50° cent., 122° Fahr. Fish have been taken from a hot spring at Pooree when the thermometer stood at 112° Fahr., and as they belonged to a carnivorous genus, they must have found prey living in the same high temperature. (*Journ. Asiatic Soc. of Beng.* Vol. VI. p. 465.) Fishes have been observed in a hot spring at Manilla which raises the thermometer to 187°, and in another in Barbary, the usual temperature of which is 172°; and Humboldt and Bonpland, when travelling in South America, saw fishes thrown up alive from a volcano, in water that raised the temperature to 210°, being two degrees below the boiling point. *Patterson's Zoology Pt. II. p.* 211; *Yarrell's History of British Fishes, Vol. I. In p.* 16 *quoted in Tennant's Sketches of the Nat. Hist. of Ceylon, p.* 359, *Cantor in B As. S. J.*

tile, *C. & V.*, Caroline Islands.
cylindricus, *Gunth.*, Madagascar.
gymnopterus, *Bl.*, Ternate.

Erythrichthys schlegelii, *T. & S.*, Japan.
leucogrammicus, *Gunth.*, Sunda, Moluccas.

Pentaprion gerreoides, Batavia, Sunda.

Fam. 6. MULLIDÆ.

Upeneoides vittatus, *Gunth.*, Red Sea, Indian Seas.
tragula, *Gunth.*, Indian Archipelago, China.
sulphureus, *Bl.*, Red Sea, Archipelago, China.
moluccensis, *Bl.*, Amboyna.
bensasi, *Bl.*, Japan.
sundaicus, *Bl.*, Indian Archipelago.

Mulloides flavolineatus, *Lacép.*, Red Sea, China.
zeylonicus, *C., & V.*, Trincomalee, N. Guinea.
japonicus, *Gunth.*, Japan.

Upeneus barberinus, *C. & V.*, Red Sea, Indian Seas.
macronemus, *Gunth.*, Red Sea.
barberinoides, *Bl.*, Ceram.
indicus, *Gunth.*, Indian Seas.
spilurus, *Bl.*, Japan
pleurospilos. *Bl.*, Japan, Amboyna.
brandesii, *Bl.*, Banda-Neira, Mauritius.
malabaricus, *C. & V.*, Malabar, Philippine Islands.
trifasciatus, *C. & V.*, Indian Ocean to Polynesia.
cyclostoma, *Gunth.*, Red Sea, Indian Ocean, Indian Archipelago.
oxycephalus, *Bl*, Manado, Isle of France.
chrysopleuron, *Bl.*, Japan, China.
jansenii, *Bl.*, Manado, Amboyna.
dubius, *T. & S.*, Japan.
bilineatus, *C. & V.*, Amboyna.

Fam. 7. SPARIDÆ.

First Group. CANTHARINA.

Cantharus grandoculis, *C. & V.*, Seychelles.
cæruleus, *C. & V.*, Guam Sea, Mariannes.
maculatus, *C. & V.*, Indian Ocean.
lineolatus, *C. & V.*, Indian Ocean.

Box. One species from E. Indies.

Crenidens forskalii, *C. & V.*, A vegetable feeder, Red Sea, Mozambique.
Girella punctata, *Gray*, China, Japan.

Third Group. SARGINA.

Sargus capensis, *Smith*, Cape.
noct, *Ehrenb.*, Red Sea, Mediterranean.
auriventris, *Peters*, Mozambique.

Fourth Group. PAGRINA.

Lethrinus rostratus, *K. & v. H.*, Sunda, Moluccas.
amboinensis, *Bl.*, Amboyna.
nematacanthus, *Bl.*, Japan, Louisiade.
richardsonii, *Gunth.*, China Sea.
reticulatus, *C. & V.*, N. Guinea, Banda.
latifrons, *Rüpp.*, Red Sea, Indian Seas.
harak, *Rüpp.*, Red Sea, Indian Seas.
ramak, *Rüpp.*, Red Sea, Ceylon.
cocosenses, *Bl.*, Nova Selma, Kokos.
kallopterus, *Bl.*, Manado.
nebulosus, *C. & V.*, Red Sea, Seychelles, Mozambique.
opercularis, *C. & V.*, Batavia, Bantam, Samarang.
xanthotænia, *Bl.*, Java, Sumatra.
leutjanus, *Bl.*, Sumatra.
glyphodon, *Gunth.*, Louisiade Archipelago.
mahsena, *Gunth.*, Red Sea.
mahsenoides, *C. & V.*, Batavia, Amboyna, Philippines.
hæmatopterus, *T. & S.*, Japan.
latidens, *C. & V.*, N. Guinea.
Sphærodon grandoculis, *Rüpp.*, Red Sea.
heterodon, *Gunth.*, Halmaheira, Amboyna.
Pagrus laniarius, *C. & V.*, Cape.
unicolor, *C. & V.*, New Zealand, Australia, China.
major, *T. & S.*, Japan, China.
tumifrons, *T. & S.*, Japan Sea.
cardinalis, *Gunth.*, China, Japan.
filamentosus, *C. & V.*, Mauritius.
spinifer, *C. & V.*, Red Sea, Indian Seas.
Chrysophrys laticeps, *C. & V.*; cristiceps, *C. & V.*; and gibbiceps, *C. & V.*, Cape.
sarba, *C. & V.*, Red Sea, Isle of France, Moluccas.
haffara, *C. & V.*, Red Sea.
bifasciata, *C. & V.*, Red Sea, Indian Seas.
aries, *T. & S.*, China, Java.
hasta, *Gunth.*, Bay of Bengal, China, Japan.
calamara, *C. & V.*, Ind. Archipelago.
berda, *Rüpp.*, Red Sea.
australis, *Gunth.*, Australia.

Fifth Group. PIMELEPTERINA.

Pimelepterus fuscus, Cape, Red Sea.
waigiensis, *Q. & G.*, New Guinea, Java, Amboyna.
ternatensis, *Bl.*, Ternate.
tahmel, *Rüpp.*, Red Sea, Indian Ocean and Archipelago to New Guinea.

Fam. 8. SQUAMIPENNES.

First Group, CHÆTODONTINA.

Chætodon strigangulus, *Soland.*, From the Red Sea to Polynesia.
trifascialis, *Q. & G.*, Guam, Batoe.
setifer, *Bl.*, Red Sea, Indian Sea, Polynesia.
auriga, *Forsk.*, Red Sea.
ephippium, *C. & V.*, Moluccas, Polynesia.
semeion, *Bleek.*, Sea of Kokos.
biocellatus, *C. & V.*, Buru, Timor, Ooalan.
nesogallicus, *C. & V.*, Indian Ocean and Archipelago.
ocellatus, *Bl.*, East Indies.
modestus, *Schleg.*, Japan and China.
tallii, *Bleek.*, Sea of Banda-Neira.
unimaculatus, *Bl.*, Moluccas, Polynesia.
bennettii, *Bleek.*, Molucca Sea.
speculum, *K. & H.*, Molucca Sea.
quadrimaculatus, *Gray*, Sandwich Islands.
meyeri, *Schneid.*, Molucca Sea.
ornatissimus, *Soland.*, Moluccas, Polynesia.
fremblii, *Benn.*, Sandwich Islands.
falcula, *Bl.*, Sea of Batoe.
dizoster, *C. & V.*, Sea of Mauritius.
octofasciatus, *Gm.*, East Indian Seas.
ulietensis, *C. & V.*, Amboyna, Ternate, Ulietea.
humeralis, *Gthr.*, Sandwich Islands.
collaris, *Bl.*, Japan ?
prætextatus, *Cant.*, Sea of Pinang.
reticulatus, *C. & V.*, Polynesia.
kleinii, *Bl.*, Indian Ocean and Archipelago.
reinwardtii, *Gthr.*, Molucca Sea.
vittatus, *Schneid.*, Red Sea to Polynesia.
fasciatus, *Forsk.*, Red Sea, China.
pictus, *Forsk.*, Red Sea, Indian Ocean and Archipelago.
lunula, *Lacép.*, Indian Ocean and Archipelago, Polynesia.
vagabundus, *L.*, Red Sea to Polynesia.
guttatissimus, *Benn.*, Sea of Ceylon.
punctato-fasciatus, *Gr.*, Sea of Banda.
rafflesii, *Benn.*, Molucca Sea, New Ireland.
oxycephalus, *Bleek.*, Sea of Ternate.
mesoleucus, *Forsk.*, Red Sea.
dorsalis, *Reinw.*, Red Sea to Polynesia.
ocellicauda, *C. & V.*, Indian Ocean.
areus, *Schleg.*, Sea of Japan.
xanthurus, *Bleek.*, Sea of Amboyna.
lineolatus, *C. & V.*, Red Sea, Sea of Floris.
selene, *Bleek.*, Lawajong, Solor, Amboyna.
miliaris, *Q. & G.*, Sandwich Islands.
baronessa, Sunda and Moluccas.
larvatus, *Ehrenb.*, Red Sea.
tau-nigrum, *C. & V.*, Guam Sea.

blackburni, *Desjard.*, Mauritius.
nigripinnis, *Pet.*, Mozambique.
citrinellus, *Brouss.*, Moluccas, Polynesia.
xanthocephalus, *Benn.*, Ceylon Sea.
zoster, *Benn.*, Mauritius Sea.
chrysozonus, *K. & v. H.*, Moluccas, China.
oligacanthus, *Bleek.*, Indian Archipelago.
strigatus, *Langsd.*, China Sea and Japan.
polylepis, *Bleek.*, Amboyna Sea.
sexfasciatus, *Richards*, W. Australia.
Chelmo rostratus, *L.*, Indian Seas, Australia.
marginalis, *Rich.*, W. Coast of Australia.
longirostris. *Brouss.*, Mauritius, Polynesia.
Heniochus macrolepidotus, *L.*, Mauritius, E. Indian Seas, N. W. Coast of Australia.
monoceros, *C. & V.*, Mauritius Sea.
chrysostoma, *Parkins*, Archipelago.
varius, *C. & V.*, Moluccas.
Holacanthus annularis, *Bl.*, Indian Seas.
pseudannularis, *Bleek.*, Sea of Batavia.
arcuatus, *Gray.*, Sandwich island.
leucopleura, *Bleek.*, Lawajong, Solor, Amboyna.
lepidolepis, *Bleek.*, Sea of Batavia.
diacanthus, *Bodd.*, Indian Ocean, Archipelago.
melanospilos, *Bleek.*, Amboyna Sea.
bispinosus, *Gthr.*, Amboyna Sea.
sexstriatus, *K & v. H.*, Moluccas.
navarchus, *C. & V.*, Amboyna, Banda.
bi-color, *Bl.*, E. Indian Archipelago.
trimaculatus, *C. & V.*, Moluccas.
xanthometopon, *Bleek.*, Sumatra Sea.
xanthurus, *Benn.*, Ceylon Sea.
vrolikii, *Bleek.*, Ceram Sea and Amboyna.
nox, *Bleek.*, Amboyna Sea.
septentrionalis, Japan Sea.
imperator, *Bl.*, Indian Ocean, Archipelago.
nicobariensis, *Schn.*, Archipelago.
semicirculatus, *C. & V.*, Archipelago, Polynesia.
striatus, *Rüpp.*, Red Sea.
alternans, *C. & V.*, Sea of Madagascar.
cæruleus, *Ehrenb.*, Red Sea.
mesoleucus, *Bl.*, E. Indian Archipelago.
chrysocephalus, *Bleek*, Sea of Batavia.
melanosoma, *Bleek.*, Lawajong, Solor.
Scatophagus argus, *L.*, Indian Seas, China.
bougainvillii, *C. & V.*, East Indies.
ornatus, *C. & V.*, Rivers of Amboyna.
Ephippus orbis, *Bl.*, East Indian Seas.
Drepane punctata, *L.*, E. Indian Seas, N. W. Coast of Australia.

Second Group, SCORPIDINA.

Scorpis æquipinnis, *Rich.*, Australia.

Third Group, TOXOTINA.

Toxotes jaculator, *Pall.*, India, Polynesia.
microlepis, *Gthr.*, Siam.

Fam. 9. CIRRHITIDÆ.

Cirrhites forsteri, *Schneid.*, E. Coast of Africa, Cape Seas, to the Pacific.
punctatus, *C. & V.*, Indian Ocean.
arcatus, *Park.*, Mauritius to the Pacific.
amblycephalus, *Bleek.*, Sea of Sengi.
aprinus, *C. & V.* Sea of Timor.
fasciatus, *C. & V.* Coast of Pondicherry.
cinctus, *Gthr.*, Madagascar, Mauritius, and Sandwich island.
Cirrhitichthys oxyrhynchus, *Bleek.*, Goram.
graphidopterus, *Bleek.*, Sea of Amboyna.
maculatus, *Lacép.*, Red Sea and Mauritius to the Pacific.
oxycephalus, *Bleek.*, Sea of Amboyna.
aureus, *Schleg.*, China, Japan.
Oxycirrhites typus, *Bleek.*, Amboyna, Mauritius.
Chilodactylus macropterus, *Forst.*, Australia.
zonatus, *C. & V.*, China, Japan,
quadricornis, *Gthr.*, Japan.
gibbosus, *Banka.*, W. Australia.

Fam. 10. TRIGLIDÆ.

First Group, HETEROLEPIDINA.

Chirus hexagrammus, *Pall.*, Japan, Gulf of Georgia.
lagocephalus, *Pall.*, Kuriles.
octogrammus, *Pall.*, Kamtschatka, Kuriles.
Agrammus schlegelii, *Gthr.*, Sea of Japan.

Second Group, SCORPÆNINA.

Sebastes capensis, *Gm*, Cape Seas.
inermis, *C. & V.*. Japan, N. W. America.
pachycephalus, *Schleg.*, Japan, China.
ventricosus, *Schleg.*, Japan.
maculatus, *C. & V.*, Cape Seas.
bougainvillii, *C. & V.* Indian Ocean.
marmoratus, *C. & V.*, Japan, China.
strongensis, *C. & V.*, Archipelago, Polynesia.
longiceps, *Rich.*, China.
serrulatus, *Rich.*, China.
minutus, *C. & V.*, Polynesia.
polylepis, *Bleek.*, Amboyna, Sumatra.
Scorpæna picta, *K. & v. H.*, Archipelago.
polyprion, *Bleek.*, Indian Seas,
erythræa, *C. & V.*, Red Sea.
cardinalis, *Soland.*, Australia.
haplodactylus, *Bleek.*, Banda, Ceram.
panda, *Rich.*, W. Australia.
diabolus, *C. & V.*, Indian Ocean, Archipelago, Otaheiti.
nesogallica, *C. & V.*, Mauritius.
gibbosa, *Schneid.*, China, Amboyna.
cirrhosa, *Thumb.*, India, China, Japan Seas
chilioprista, *Rüpp.*, Red Sea.
laniaria, *C. & V.*, Guam Sea.
Pterois volitans, *L.*, E. Africa, Indian Seas, Australia.

lunulata, *Schleg.*, Japan.
kodipungi, *Bleek.*, India, Archipelago, Australia.
antennata, *Bl.*, Indian Ocean, Archipelago.
cincta, *Rüpp.*, Red Sea, Navigator and Pearl Island.
miles, *Benn.*, Red Sea, Indian Ocean.
zebra, *C. & V.*, Indian Ocean, Archipelago.
brachyptera, *C. & V.*, Ceram, Amboyna.
heterura, *Bleek.*, Amboyna.

Pteroidichthys amboinensis, *Bleek.*, Amboyna, N. Celebes.

Tænianotus triacanthus, *Lacép.*, Amboyna.

Apistus alatus, *C. & V.* Indian Seas.
israelitarum, *Ehrenb.*, Red Sea.

Enneapterygius pusillus, *Rüpp.*, Red Sea.

Pentaroge marmorata, *C. & V.*, Timor, Australia, Van Diemen's Land.

Tetraroge barbata, *C. & V.*, Moluccas.
amblycephalus, *Bleek.*, Sea of Padang.
rubripinnis, *Schleg.*, Sea of Japan.
macracanthus, *Bleek.*, Sea of Wahai, N. Ceram.
binotata, *Peters.*, Mozambique.
longispinis, *C. & V.*, Indian Seas.
crista-galli, *Gthr.*, Philippine Island.
tænianotus, *C. & V.*, Indian Seas.
dermacanthus, *Bleek.*, Wahai, N. Ceram.
echinata, *Cant.*, Pinang.

Prosopodasys trachinoides, *C. & V.*, Indian Seas.
dracæna, *C. & V.*, Malabar Coast.
depressifrons, *Rich.*, Japan, Java.
asperrimus, *Gthr.*, East Indies.
niger *C. & V.*, Pondicherry; Amboyna.
zollingeri, *Bleek.*, Indian Archipelago.
leucogaster, *Rich.*, China, Amboyna.
cottoides, *L.*, China, Borneo, Java, N. Zealand.

Aploactis aspera, *Rich.*, Japan, China.

Trichopleura mollis, *Rich.*, China Sea.

Amphiprionichthys apistus, *Bleek.*, Kokos.

Synancidium horridum, *L.*, India, Australia, St. Helena.
erosum, *Langsd.*, Japan.

Synanceia verrucosa, *Schneid.*, Red Sea, Indian Ocean, Archipelago, Polynesia.
asteroblepa, *Rich.*, New Guinea, Borneo.

Micropus maculatus, *Gray.*, Owaihi, Hao.
unipinna, *Gray.*, Pacific.

Minous monodactylus, *Schn.*, Indian Ocean, E. Indian Seas.
pusillus, *Schleg.*, Sea of Japan.
trachycephalus, *Bleek.*, Manado, Celebes.

Pelor filamentosum, *C. & V.*, Mauritius.
cuvieri *Gray.*, Seas of China and Sumatra.
maculatum, *C. & V.*, Sea of Waigiou.
didactylum, *Pall.*, New Ireland, Ceram.
japonicum, *C. & V.*, China, Japan.
aurantiacum, *Schleg.*, Sea of Japan.

Chorismodactylus multibarbis, *Rich.*, Seas of China and Madras.

Third Group. COTTINA.

Podabrus centropomus, *Rich.*, Island of Quelpart in the Straits of Korea.
cottoides, *Rich.*, Sea of China.

Centridermichthys fasciatus, *Heck.*, Japan, mouth of the Yangtsee-Kiang-Kew in north of China, Philippine Islands.

Hemilepidotus trachurus, *Pall.*, Kamtschatka, Kuriles.

Polycaulus elongatus, *C. & V.*, Indian Seas.

Platycephalus insidiator, *Forsk.*, Red Sea, Coasts of C. Africa, through Indian Seas to N. W. Australia.
grandispinis, *C. & V.*, India.
punctatus, *C. & V.*, Trincomalee, Batavia, Vanicolo.
quoyi, *Bleek.*, Ternate, Amboyna.
malabaricus, *C. & V.*, India.
japonicus, *Tiles.*, China and Japan.
guttatus, *Schleg.*, Japan.
isacanthus, *C. & V.*, Waigiou, Buru.
serratus, *C. & V.*, Trincomalee.
polyodon, *Bleek.*, Batavia.
malayanus, *Bleek.*, Padang.
tentaculatus, *Rüpp.*, Red Sea.
nematophthalmus, *Gthr.*, Australian Seas.
cirronasus, *Rich.*, Botany Bay.
tuberculatus, *C. & V.*, Trincomalee, Madras.
scaber, *Gm.*, Indian Ocean.
neglectus, *Trosch.*, Indian Seas.
suppositus, *Trosch.*, Indian Ocean.
bataviensis, *Bleek.*, Batavia.
pristis, *Peters.*, Mozambique.
macrolepis, *Bleek.*, Japan.
bobossok, *Bleek.*, Batavia.
pristiger, *C. & V.*, N. Guinea, Celebes, Ternate, Java.
celebicus, *Bleek.*, Manado, Celebes.
asper, *C. & V.*, Japan, China.
spinosus, *Schleg.*, Japan.

Hoplichthys langsdorffii, *C. & V.*, Japan, China.

Bembras japonicus, *C. & V.*, Sea of Japan.
curtus, *Schleg.*, Sea of Japan.

Prionotus japonicus, *Bleek.*, Sea of Japan.

Lepidotrigla papilio, *C. & V.*, Indian Ocean.
burgeri, *Schleg.*, Japan, Chinese Seas.

Trigla hemisticta, *Schleg.*, Sea of Japan.
pleuracanthica, *Rich.*, Sydney Cove.
kumu, *Less.*, New Zealand to China.

Fourth Group. CATAPHRACTI.

Agonus acipenserinus, *Tiles.*, Kamtschatka, N. W. America.
dodekaedrus, *Tiles.*, Kamtschatka.
rostratus, *Tiles.*, Kamtschatka, Kuriles.
stegophthalmus, *Tiles.*, Kuriles.
quadricornis, *C. & V.*, Kamtschatka.

Peristethus laticeps, *Schleg.*, Amboyna.
orientale, *Schleg.*, Japanese Sea.
moluccense, *Bleek.*, Moluccas.
rieffeli, *Kaup.*, East Indies.
Dactylopterus orientalis, *Lacép.*, Indian Ocean, Archipelago.
macracanthus, *Bleek.*, Moluccas.
chirophthalmus, *Bleek.*, Banda-Neira.

Fam. 11. TRACHINIDÆ.

First Group. URANOSCOPINA.

Uranoscopus cognatus, *Cant.*, Pinang.
affinis, *C. & V.*, Indian Ocean.
guttatus, *C. & V.*, Pondicherry.
bicinctus, *Schleg.*, Japan, China, Amboyna.
asper, *Schleg.*, China, Japan.
filibarbis, *C. & V.*, Indian Ocean.
Anema elongatum, *Schleg.*, Japan.
inerme, *C. & V.*, E. Indian Seas.

Second Group. TRICHININA.

Percis nebulosa, *C. & V.*, Mauritius, Sharks' Bay, New Holland, Depuch Island.
punctulata, *C. & V.*, Mauritius.
hexophthalma, *Ehr.*, Red Sea to Louisiade.
cylindrica, *Bl.*, Moluccas, Chinese Sea.
xanthozona, *Bleek.*, Batavia.
pulchella, *C. & V.*, Japan.
cancellata, *C. & V.*, India, Louisiade.
tetracanthus, *Lacép.*, Java, Amboyna, Feejee.
millepunctata, *Gthr.*, Ceylon Coast.
sexfasciata, *Schleg.*, Japan Sea.
Sillago sihama, *Forsk.*, Red Sea, Indian Seas.
japonica, *Schleg.*, Moluccas, Japan.
maculata, *Q. & G.*, Australia, Archipelago.
punctata, *C. & V.*, Australian Seas.
ciliata, *C. & V.*, Australian Seas.
macrolepis, *Bleek.*, Batavia, Bali.
chondropus, *Bleek.*, Moluccas.
domina, *C. & V.*, Bay of Bengal, Archipel.
Trichodon stelleri, *C. & V.*, Kamtschatka.
Latilus argentatus, *C. & V.*, Japan, China.
doliatus, *C. & V.*, Mauritius.

Fourth Group. PSEUDOCHROMIDES.

Opisthognathus nigromarginatus, *Rüpp.*, Red Sea, Coast of Pondicherry.
solorensis, *Bleek.*, Sea of Lawajong, Solor.
rosenbergii, *Bleek.*, Sea of Nias.
Pseudochromis olivaceus, *Rüpp.*, Red Sea.
fuscus, *M. & T.*, Archipelago.
xanthochir, *Bleek.*, Sea of Manado.
adustus, *M. & T.*, Philippine Island.
flavivertex, *Rüpp.*, Red Sea.
tapeinosoma, *Bleek*, Amboyna.
polyacanthus, *Bleek.*, Ternate.
Cichlops cyclophthalmus, *M. & T.*, Sunda.
melanotænia, *Bleek.*, Macassar.
spilopterus, *Bleek.*, Macassar.
Pseudoplesiops typus, *Bleek.*, Sea of Goram.

Fam. 12. SCIÆNIDÆ.

First Group. SCOMBRINA.

Umbrina dussumieri, *C. & V.*, East Indies.
amblycephalus, *Bleek.*, Amboyna.
russellii, *C. & V.*, Vizagapatam, India, China.
macroptera, *Bleek.*, Priaman, Sumatra.

Sciæna diacanthus, maculata, *Schneid.*, Tranquebar, Pondicherry, Malabar.
macrophthalmus, *Bleek.*, Batavia, Bantam, Samarang, Pasuruan.
sina, *C. & V.*, Pondicherry, Malabar, Japan.
dussumieri, *C. & V.*, Malabar, Pinang, Malayan Peninsula, Singapore, China.
trachycephalus, *Bleek.*, Rivers of Bandjermassing, Borneo.
hypostoma, *Bleek.*, Padang, Sumatra.
goldmanni, *Bleek.*, Batjan.
microdon, *Bleek.*, Batavia, Samarang, Surabaja.
vogleri, *Bleek.*, Sumatra.
borneonsis, *Bleek.*, Rivers Bandjermassing, Borneo.
brevidorsalis, *Gthr.*, East Indies.

Corvina cuja, *Buch. Ham.*, Ganges, Japan.
miles, *C. & V.*, Bombay Seas, Ceylon, Coromandel, Tenasserim, Pinang, Java.
coitor, *Buch. Ham.*, Ganges, Irrawadi.
polycladiscus, *Bleek.*, Rivers Bandjermassing, Borneo.
axillaris, *C. & V.*, Malabar.
carutta, *Bloch.*, Tranquebar, Pondicherry, Pinang.
plagiostoma, *Bleek.*, Sea of Madura.
belangerii, *C. & V.*, Malabar, Pinang, Malayan Peninsula, Singapore, Borneo.
lobata, *C. & V.*, Malabar.
semiluctuosa, *C. & V.*, Goa, Pondicherry, China.
albida, *C. & V.*, Malabar, Chinese Sea.
jubata, *Bleek.*, Rivers of Bandjermassing, Borneo.

Otolithus æquidens, *C. & V.*, Cape Seas.
ruber, *Schneid.*, Coromandel, Malabar, Malayan Peninsula.
argenteus, *K. & H.*, China, Japan, Ceylon, Malabar.
maculatus, *K. & H.*, Pinang, Malayan Peninsula, Singapore, Batavia.
bispinosus, *C. & V.*, Rangoon.
lateoides, *Bleek.*, Batavia.

Collichthys lucida, *Rich.*, Chinese Sea.
biaurita, *Cant.*, Chusan, Pinang, Malay Peninsula, Singapore, Borneo, Tenasserim.
pama, *Buch. Ham.*, Bay of Bengal.

Fam. 13. POLYNEMIDÆ.

Polynemus multifilis, *Schleg.*, Borneo rivers and seas.
paradiseus, *L.*, Indian Seas.
macronemus, *Bleek.*, Borneo.
melanochir, *C. & V.*, Batavia.
heptadactylus, *C. & V.*, Indian Seas.
multiradiatus, *Gthr.*, Chinese Sea.
hexanemus, *C. & V.*, Indian Seas.
xanthonemus, *C. & V.*, Coromandel.
sexfilis, *C. & V.*, Mauritius.
kuru, *Bleek.*, Ternate.
sextarius, *Bl.*, Indian Seas.
pfeifferæ, *Bleek.*, Sea of Priaman, Sumatra.
indicus, *Shaw*, Indian Seas, Australia.
tæniatus, *Gthr.*, Amboyna, Guatalcana.
plebejus, *L.*, Indian Seas, South Sea.
tetradactylus, *Shaw*, Indian Seas.
tridactylus, *Bleek.*, Batavia.

Fam. 14. SPHYRÆNIDÆ.

Sphyræna jello, *C. & V.*, Red Sea, Cape, Bay of Bengal, Pinang, Java, Amboyna.
forsteri, *C. & V.*, Batavia, Calcutta, New Guinea, Otaheite.
japonica, *C. & V.*, Japan.
commersonii, *C. & V.*, Java, Moluccas, Hindostan.
nigripinnis, *Schleg.*, Japan.
dussumieri, *C. & V.*, Indian Ocean, Mauritius.
obtusata, *C. & V.*, Red Sea, Mauritius, Bay of Bengal, Indian Ocean, Moluccas, Port Jackson.
langsar, *Bleek.*, Batavia, Batjan.
brachygnathus, *Bleek.*, Batavia, Batjan
flavicauda, *Rüpp.*, Red Sea.
agam, *Rüpp.*, Red Sea.

Fam. 15. TRICHIURIDÆ.

Trichiurus sāvala, *Cuv.*, Indian Seas.
japonicus, *Schleg.*, Japan.
muticus, *Gray*, China.
haumela, *Forsk.*, Indian Ocean, Archipelago.
lajor, *Bleek.*, Sea of Manado.
Thyrsites prometheoides, *Bleek.*, Amboyna.

Fam. 16. SCOMBRIDÆ.

First Group. SCOMBRINA.

Scomber pneumatophorus, *Dela R.*, Mediterranean, Cape of Good Hope, Atlantic.
janesaba *Bleek.*, Japan.
australasicus, *C. & V.*, Australia, Amboyna.
loo, *C. & V.*, Moluccas to Polynesia.
moluccensis, *Bleek.*, Amboyna.
chrysozonus, *Rüpp.*, Red Sea.
kanagurta, *Cuv.*, Red Sea, Indian Seas.
brachysoma, *Bleek.*, Batavia.
microlepidotus, *Rüpp.*, Red Sea, Pinang, China.
tapeinocephalus, *Bleek.*, Japan.
Thynnus affinis, *Cant.*, Pinang.
tonggol, *Bleek.*, Batavia.
thunnina, *C. & V.*, E. Indies, Mediterranean, Atlantic.
pelamys, *C. & V.*, Atlantic, Indian Ocean.
albacora, *Lowe.*, Atlantic.
pacificus, *C. & V.*, Indian Ocean.
bilineatus, *Rüpp.*, Red Sea.
Pelamys orientalis, *Schleg.*, Japan.
nuda, *Gthr*, Red Sea.
chilensis, *C. & V.*, Pacific.
Auxis rochei, *Risso.*, Mediterranean, Atlantic, Indian Archipelago.
tapeinosoma, *Bleek.*, Japan.
Cybium commersonii, *Lacép.*, E. Africa Indian Seas.
lineolatum, *C. & V.*, Indian Seas.
interruptum, *C. & V.*, Pondicherry.
guttatum, *Schneid.*, Indian Seas.
niphonium, *C. & V.*, Japan.
croockewitii, *Bleek.*, Banka.
flavo-brunneum, *Smith.*, Cape Seas.
sara, *Benn.*, Loo-choo.
Elacate nigra, *Bl.*, Indian Seas, America.
Echeneis albescens, *Schleg.*, China, Japan.
brachyptera, *Lowe.*, Madeira, N. America, Brazil, Japanese, China Seas, Sumatra.
scutata, *Gthr.*, Indian Ocean.

Second Group. NOMEINA.

Nomeus peronii, *C. & V.*, Java.
Ditrema læve, *Gthr.*, Sea of Japan.

Third Group. CYTTINA.

Zeus faber, *L.*, Mediterranean, Atlantic coast of Europe, Australian Seas.
japonicus, *C. & V.*, Japan.
capensis, *C. & V.*, Cape Seas.

Fourth Group. STROMATEINA.

Stromateus atous, *C. & V.*, Indian Seas.
cinereus, *Bl.*, Indian Seas.
argenteus, *Bl.*, Indian Seas.
niger, *Bl.*, Indian Seas.

Fifth Group. CORYPHÆNINA.

Coryphæna hippurus, *L.*, Mediterranean, Atlantic, Indian Ocean, Pacific.
scomberoides, *Lacép.*, Macassar, Pacific.
Brama-dussumieri, *C. & V.*, Indian Ocean.
orcini, *C. & V.*, Indian Ocean.
Poteraclis velifer, *Ball.*, Indian Ocean.
Schedophilus maculatus, *Gthr.*, China Seas.
Mene maculata, *Schneid.*, Indian Seas.

Fam. 17. CARANGIDÆ.

First Group. CARANGINA.

Carangichthys typus, *Bleek.*, Celebes.
Caranx rottleri, *Bl.*, Red Sea, Indian Seas.
macrosoma, *Bleek.*, Batavia.
muroadsi, *Schleg.*, Ternate.

kurra, *C. & V.*, Batavia, Red Sea, Coromandel.
kurroides, *Bleek.*, Amboyna.
kiliche, *C. & V.*, Pondicherry.
maruadsi, *Schleg.*, Japan, China.
crumenophthalmus, *Bl.*, W. Africa, Atlantic coasts of Tropical America, Red Sea, Indian Ocean, Polynesia.
hasseltii, *Bleek.*, Sunda, Moluccas, Red Sea.
torvus, *Jen.*, Seas of Otaheiti, Batavia.
gymnostethoides, *Bleek.*, Batavia.
novæ Guineæ, *C. & V.*, New Guinea.
boops, *C. & V.*, Batavia, Amboyna, Vanicolo.
lioglossus, *Gthr.*, Batavia, Sumatra.
djeddaba, *Forsk.*, Red Sea, Pondicherry, Pinang Sea.
calla, *C. & V.*, Red Sea, Indian Ocean, Archipelago.
macrurus, *Bleek.*, Batavia.
xanthurus, *K. & v. H.*, Seychelles to New Guinea.
malam, *Bleek.*, Batavia.
brevis, *Bleek.*, Batavia.
plagiotænia, *Bleek.*, Amboyna.
ire, *C. & V.*, Pondicherry, Madras.
præustus, *Benn.*, Batavia, Sumatra.
malabaricus, *Schneid.*, Red Sea, Indian Seas, Australia.
talamparoides, *Bleek.*, Seas of Sibogha, Sumatra, Ceylon.
equula, *Schleg.*, Japan.
hemigymnostethus, *Bleek.*, Batavia.
bajad, *Forsk.*, Red Sea, Batavia.
fulvoguttatus, *Forsk.*, Red Sea.
ferdau, *Forsk.*, Red Sea.
broekmeyeri, *Bleek.*, Java.
leptolepis, *C. & V.*, Archipelago, Australia.
helvolus, *Forst*, Red Sea, Atlantic.
uraspis, *Gthr.*, Amboyna.
speciosus, *Forsk*, Red Sea, India to N. Holland.
ruppellii, *Gthr.*, Red Sea.
melampygos, *C. & V.*, Mauritius, Polynesia.
jarra, *C. & V.*, Coromandel, Sumatra, Amboyna.
cynodon, *Bleek.*, Batavia.
sansum, *Forsk.*, Red Sea, Mauritius, Coromandel.
carangus, *Bl.*, Indian Ocean, Archipelago, W. Africa to Atlantic, America.
hippos, *L.*, Indian Seas, Pacific, Australia, Atlantic, America.
atropus, *Schneid.*, Indian Seas.
ophthalmotænia, *Bleek.*, Amboyna.
oblongus, *C. & V.*, Archipelago, Polynesia.
chrysophryoides, *Bleek.*, Batavia, Seychelles.
dinema, *Bleek.*, Batavia.
armatus, *Forsk.*, Red Sea, Indian Seas, N. Guinea.
ciliaris, *Bl.*, Red Sea, Indian Seas.
gallus, *L.*, Red Sea, Indian Seas.

Micropteryx chrysurus, *L.*, W. Africa, Atlantic, America, Coast of Condicherry.

Seriola dumerilii, *Risso.*, Mediterranean, Japan, China.
lalandii, *C. & V.*, Brazil, Atlantic, Cape of Good Hope, Japanese Sea.
quinqueradiata, *Schleg.*, Japan.
tapeinometopon, *Bleek.*, Lawajong, Solor.
nigro-fasciata, *Rüpp.*, Red Sea, Indian Ocean, Archipelago, Louisiade.
intermedia, *Schleg.*, Japan.
dussumieri, *C. & V.*, Gulf of Bengal.
gigas, *Gthr.*, Australia.

Seriolichthys bipinnulatus, *Q. & G.*, Batavia, Amboyna, Keeling Island, New Guinea.

Nauclerus compressus, *C. & V.*, Moluccas.
brachycentrus, *C. & V.*, Indian Ocean, Moluccas.

Porthmeus argenteus, *C. & V.*, Indian Ocean, Cape.

Chorinemus lysan, *Forsk.*, Red Sea, N. W. Australia.
tala, *C. & V.*, Malabar.
toloo, *C. & V.*, Red Sea, East Indies.
tol, *C. & V.*, Indian Seas.
sancti Petri, *C. & V.*, Indian Seas, Africa.
orientalis, *Schleg.*, Japan.

Trachynotus ovatus, *L.*, Indian Ocean, Archipelago to Australia, America to Africa.
baillonii, *Lacép.*
oblongus, *C. & V.*, Pondicherry, Java, Sumatra.
melo, *Rich.*, China, Japan.

Psettus argenteus, *L.*, Red Sea, Indian Seas, Australia, Polynesia.
falciformis, *Lacép.*, Red Sea, Vanicolo, China.

Platax vespertilio, *Bl.*, Africa, Indian Seas.
orbicularis, *Forsk.*, Red Sea, Archipelago, N. W. Australia.
boersii, *Bleek.*, Maccassar.
raynaldi, *C. & V.*, Ceylon, Pondicherry.
xanthopus, *Bleek.*, Batavia.
arthriticus, *Bell.*, Pinang, Batavia, Amboyna.
teira, *Forsk.*, Indian and Chinese Seas.

Zanclus cornutus, *L.*, Indian Ocean, Archipelago, Polynesia.

Psenes javanicus, *C. & V.*, Java, Amboyna.
leucurus, *C. & V.*, Indian Ocean, Port Jackson, Pacific.
guamensis, *C. & V.*, Guam.
anomalus, *Schleg.*, Japan.

Equula fasciata, *Lacép.*, Red Sea, Indian Ocean, Archipelago.

edentula, *Bl.*, Red Sea, India, Australia.
caballa, *C. & V.*, Red Sea, Indian Seas.
dussumieri, *C. & V.*, Indian Seas.
gerreoides, *Bleek.*, Batavia.
nuchalis, *Schleg.*, China, Japan.
bindoides, *Bleek.*, Archipelago.
splendens, *Cuv.*, Red Sea, Indian Seas.
daura, *Cuv.*, Indian Seas.
oblonga, *C. & V.*, Red Sea, Java, Timor.
lineolata, *C. & V.*, Indian Seas.
leuciscus, *Gthr.*, Amboyna.
rivulata, *Schleg.*, Japan.
insidiatrix, *Bl.*, Indian Seas.
interrupta, *C. & V.*, Indian Seas, N. W. Australia.
parviceps, *C. & V.*, Mauritius.
longimanus, *Cant.*, Malayan Peninsula.
Gazza minuta, *Bl.*, Indian Seas.
equulæformis, *Rüpp.*, Red Sea, Indian Seas.
argentaria, *Forsk.*, Sumatra, Tanna.
Lactarius delicatulus, *C. & V.*, Indian Seas.

Second Group. KURTINA.

Pempheris compressus, *White.*, Australia.
otaitensis, *C. & V.*, Archipelago, Polynesia.
mangula, *C. & V.*, Indian Ocean, Archipelago, Sea of Vanicolo.
molucca, *C. & V.*, India, China, Japan.
Kurtus indicus *Bl.*, Indian Seas.

Fam. 18. XIPHIIDÆ.

Histiophorus gladius, *L.*, Tropical Seas.
orientalis, *Schleg.*, Japan.
immaculatus, *Rüpp.*, Red Sea.
herschelii, Table Bay.

Fam 19. GOBIIDÆ.

First Group. GOBIINA.

Gobius nudiceps, *C. & V.*, Cape.
genivittatus, *Bleek.*, Otaheite.
oligolepis, *Bleek.*, Java, Madura, Sumatra.
cyclopterus, *C. & V.*, New Ireland.
oplopomus, *C. & V.*, Massuah, Red Sea.
lineatus, *Jenyns.*, Chatham Island.
ophthalmoporus, *Bleek.*, Amboyna.
obscurus, *Peters.*, Mozambique.
elegans, *K & v H.*, Pinang, Bombay, Java, New Guinea, Vanicola.
baliurus, *C. & V.*, Java, Amboyna, Celebes.
atherinoides, *Peters.*, Mozambique.
puntangoides, *Bleek.*, Archipelago.
hemigymnopomus, *Bl.*, Macassar, Biliton.
biocellatus, *C. & V.*, Pondicherry.
ornatus, *Rüpp.*, Red Sea, Archipelago, Philippine Island, N. W. Australia.
giuris, *B. H.*, East Indies.
viridi-punctatus, *C. & V.*, Coromandel, Bombay.
sublitus, *Cant.*, Pinang.
albo-punctatus, *C. & V.*, Red Sea, Indian Ocean, Feejee, Port Essington.
nebulo-punctatus, *C. & V.*, Red Sea, Mozambique, Trussan, W. Sumatra.
nox, *Bleek.*, Sumatra, Nias, Solar.
filosus, *C. & V.*, Mauritius.
apogonius, *Cant.*, Pinang.
sadanundio, *B. H.*, Hoogly, Calcutta.
criniger, *C. & V.*, Australia, N. Guinea, Archipelago, Pinang, Malabar.
cocosensis, *Bleek.*, Sea of New Selma.
polycynodon, *Bleek.*, Pasuruam.
reichii, *Bleek.*, Padang, Sumatra.
sumatranus, *Bleek.*, Padang, Sumatra.
phaiospilosoma, *Bleek.*, Java, Madura.
semidoliatus, *C. & V.*, Vanicolo, Red Sea.
hoevenii, *Bleek.*, Rivers of Sambas, Borneo.
tambujon, *Bleek.*, Rivers of Panimbang, Tjihiwong, Java, Bali.
javanicus, *Bleek.*, Rivers of S. Java, Booroo.
borneensis, *Bl.*, Bandjermassing, Borneo, Sumatra.
melanurus, *Bleek.*, Java, Biliton.
oxypterus, *Bleek.*, Lake Grati, Java.
echinocephalus, *Rüpp.*, Massuah, China.
bitelatus, *C. & V.*, Red Sea.
notacanthus, *Bleek.*, Goram.
caninoides, *Bl.* Amboyna, Celebes, Booroo.
ophthalmotænia, *Bl.* Selma, Celebes, China.
chinensis, *Osbeck.*, China, Java Rivers.
caninus, *C. & V.*, Archipelago, China.
venenatus, *C. & V.*, Pondicherry, Kurrachee.
cyanomus, *Bleek.*, Madura, Banka, Java.
chlorostigmatoides, *Bleek.*, Madura, Java, Borneo.
frenatus, *Gthr.*, Australia.
cyanoclavis, *Cant.*, Pinang.
brevirostris, *Gthr.*, China.
cauerensis, *Bleek.*, Caurer, Sumatra.
bontii, *Bleek.*, Rivers of Madura, Java.
phaiomelas, *Bleek.*, Madura, Java.
xanthosoma, *Bleek.*, Celebes, Booroo, Amboyna, Ceram, Goram.
baliuroides, *Bl.*, Sumanah, E. Madura.
gymnauchen, *Bleek.*, Rivers of Jeddo.
pleurostigma, *Bleek.*, Java.
gastrospilus, *Bleek.*, Batavia.
microphthalmus, *Gthr.*, Australia.
acutipinnis, *C. & V.*, Malabar.
spectabilis, *Gthr.*, East Indies.
signatus, *Pet.*, Mozambique.
polynema, *Bleek.*, China, Japan, Madras.
margariturus, *Richards.*, Macao.
temminckii, *Bleek.*, Java.
mystacinus, *C. & V.*, Java.
tentacularis, *C. & V.*, Java, Madura, Sumatra.
ophthalmonema, *Bleek.*, Ternate.
microlepis, *Bl.*, Pinang, Java, Madura, China.
papuensis, *C. & V.*, Australia, N. Guinea, Java.

belosso, *Bl.*, Rivers of Banten, Java, Nias.
æneo-fuscus, *Peters.*, Mozambique.
ocellaris, *Brouss.*, Mauritius, Otaheiti.
grammepomus, *Bleek.*, Java, Celebes, Borneo, Bali, Booroo, Amboyna, Sumatra, Batjan, Ceylon, Madras.
gymnopomus, *Bl.*, Seas of Priaman, Java.
brunneus, *Schleg.*, Nagasaki Bay.
xanthozona, *Bleek.*, Rivers of Java, Borneo.
sphinx, *C. & V.*, Guinea, Archipelago.
phalæna, *C. & V.*, Archipelago, Vanicolo.
semicinctus, *Benn.*, Mauritius.
albomaculatus, *Rüpp.*, Massuah.
decussatus, *Bleek.*, Rivers Nias, Celebes, Booroo.
bynoensis, *Richards.*, W. Australia, Philippines, Biliton, Java.
cæruleopunctatus, *Rüpp.*, Massuah.
cyanotænia, *Bleek.*, Batavia.
niveatus, *C. & V.*, Java.
cryptocentrus, *C. & V.*, Massuah, Red Sea.
russus, *Cant.*, Pinang.
voigtii, *Bleek.*, Celebes, Nias, Sumatra, N. Holland.
polyophthalmus, *Bleek.*, Batavia.
knutteli, *Bleek.*, China, Japan.
arabicus, *Gm.*, Red Sea.
fontanesii, *Bl.*, Bulucumba, Celebes, Amboyna.
gymnocephalus, *Bleek.*, Batavia.
petrophilus, *Bleek.*, Java, Bali, Sumatra, Timor, Goram.
stigmothonus, *Rich.*, Canton.
flavimanus, *Schleg.*, Nagasiki Bay.
hexanema, *Bleek.*, Nagasaki, Sea of Niphon.
ommaturus, *Rich.*, Yangtze Kiang, Canton, Amoy.
hasta, *Shchleg.*, Japan.
virgo, *Schleg.*, Nagasaki Bay.

Apocryptes lanceolatus, *Schn.*, Indian Seas.
dentatus, *C. & V.*, Pondicherry, Bengal.
borneensis, *Bleek.*, Bandjermassing Rivers.
bato, *Buch. Ham.*, Ganges, Hooghly, Calcutta.
serperaster, *Rich.*, China Seas.
rictuosus, *C. & V.*, Madras, Pondicherry.
macrolepis, *Bleek.*, Bandjermassing Rivers.
nexipinnis, *Cant.*, Pinang.
henlei, *Bleek.*, Java, Madura.
madurensis, *Bleek.*, Java, Madura.
glyphidodon, *Bleek.*, Batavia.
brachypterus, *Bleek.*, Lake Grati, Pasuan, Java.

Gobiosoma macrognathos, *Bl.*, River Jeddo.

Gobiodon citrinus, *Rüpp.*, Red Sea.
rivulatus, *Rüpp.*, Jubal Isld., Red Sea.
quinque-strigatus, *C. & V.*, Tongatabou, Solar, Booroo, Goram, Sumbawa.
ceramensis, *Bleek.*, China, Wahai, Borneo, Amboyna, Feejee.
histrio, *K., & v. H.*, Sunda, Friendship Isld.
heterospilos, *Bleek.*, Kajeli.
micropus, *Gthr.*, China.
erythrophaios, *Bleeker.*

Triænophorichthys trigonocephalus, *Gill.*, China.
barbatus, *Gthr.*, China.

Sicydium lagocephalum, *Kolr.*, Rivers of Mauritius, Bourbon.
laticeps *C. & V.* Bourbon Rivers.
stimpsoni, *Gill.*, Rivers Hilo, Hawaii.
xanthurum, *Bleek.*, Rivers Sumatra, Bali.
micrurum, *Bleek.*, Rivers Amboyna, Bali.
macrostetholepis, *Bl.* Rivers Sumatra, Aneiteum.
parvei, *Bl.*, Moluccas, Rivers Garut, W. Java.
cynocephalum, *C. & V.*, Archipelago.
microcephalum, *Bl.*, Rivers Banten, Java.
gymnauchen, *Bleek.*, Manado.
zosterophorum, *Bl.*, Rivers Boleling, Bali.
balinense, *Bleek.*, Rivers Boleling, Bali.

Lentipes concolor, *Gill.*, Rivers Hilo, Hawii.

Periophthalmus koelreuteri, *Schn.*, Red Sea, Seychelles to Australia, W. Pacific.
chrysospilos, *Bleek.*, Karang, Hadji, Banka.
schlosseri, *Pall.*, East Indies.

Boleophthalmus boddaertii, *Pall.*, East-Indies, China, Japan.
pectinirostris, *Gm.*, Pinang, China, Japan.
dussumieri, *C. & V.*, Bombay.
sculptus, *Gthr.*, India.
viridis, *Buch. Ham.*, East Indies.

Eleotris ophiocephalus, *K. & v. H.*, Seychelles, N. Ireland, Pinang, Archipelago, Philippines.
cantoris, *Gthr.*, Pinang, Amboyna, Ceram, Celebes, Nias.
porocephaloides, *Bleek.*, Rivers Priaman.
aporos, *Bleek.*, Gilolo, Ternate, Fejee, Borneo, Amboyna.
hoedtii, *Bl.*, Amboyna, Booroo, Timor, Nias.
macrolepidota, *Bl.*, East Indies.
madagascariensis, *C. & V.*, Madagascar.
mogurnda, *Richards.*, Port Essington.
gobioides, *C. & V.*, New Zealand.
obscura, *Schleg.*, Nagasaki, China.
oxycephala, *Schleg.*, China, Japan.
hasseltii, *Bl.*, Anjer, Java, Kajeli, Boeroe.
butis, *Buch. Ham.*, East Indies.
amboinensis, *Bl.*, Amboyna, Celebes, Booroo.
melanostigma, *Bleek.*, Java, Madura, Sumatra, Borneo.
caperata, *Cant.*, Rivers Bourbon, Benculen, Sumatra, Onalan.
leuciscus, *Bleek.*, Sumatra.
tænionotopterus, *Bleek.*, Rivers Bali.
cyanostigma, *Bleek.*, Sea of Booroo, Kokos.
fornasini, *Bianc.*, Mozambique.
gyrinoides, *Bl.*, Rivers of Priaman, Celebes.
marmorata, *Bleek.*, Siam, Bandjermassing, Borneo, Palembang, Sumatra.

canina, *Bleek.*, Madura, Java.
periophthalmus, *Bleek.*, Batavia.
fusca, *Schn.*, Madagascar, Mauritius, Polynesia.
melanosoma, *Bleek.*, Wahai, Sumatra, Booroo, Ceram.
belobrancha, *C. & V.*, Celebes, Batjan, Ceram.
tænioptera, *Bleek.*, Rivers Bali, Batjan.
sinensis, *Lac.* China, Java, Bintang, Oualan.
urophthalmus, *Bl.*, Rivers Bandjermassing.
urophthalmoides, *Bleek.*, Borneo, Sumatra.
siamensis, *Gthr.*, Siam.
macrodon, *Bleek.*, Calcutta.
muralis, *Q. & G.*, Archipelago, Philippines.
sexguttata *C. & V.*, Ceylon, Archipelago.
strigata, *C. & V.*, Java, Amboyna, Celebes, Booroo, Otaheite.
helsdingenii, *Bleek.*, Goram Sea.
heteroptera, *Bl.*, Bandjermassing Rivers.
microlepis, *Bleek.*, Banda, Nias.

Asterropteryx semipunctatus, *Rüpp.*, Massaua.

Second Group. AMBLYOPINA.

Amblyopus cæculus, *C. & V.*, Bengal, China.
gracilis, *C. & V*, Pondicherry, Surabaya.
brachygaster, *Gthr.*, East Indies.
hermannianus, *Lacép.*, Bengal, Hindostan, China.
tænia, *Gthr.*, East Indies.
urolepis, *Bleek.*, Rivers Palembang, Sumatra.

Third Group. TRYPAUCHENINA.

Trypauchen vagina, *Schn.*, Indian Seas.
microcephalus, *Bleek.*, Sungi-duri, Borneo.

Trypauchenichthys typus, *Bleek.*, Sungi-duri.

Fourth Group. CALLIONYMINA.

Platypetra aspro, *K. & v. H.*, Wanderer Bay.

Callionymus curvicornis, *C. & V.*, Bourbon, China, Japan.
hugueneii, *Bleek.*, Nagasaki Sea.
lunatus, *Schleg.*, Japan.
hindsii, *Richards.*, Pacific.
sagitta, *Pall.*, Bourbon, East Indies.
attivelis, *Schleg.*, Bay of Ohomura.
calauropomus, *Richards.*, N. W. Australia.
filamentosus, *C. & V.*, Celebes, Amboyna.
schaapii, *Bleek.*, Banka Sea.
longecaudatus, *Schleg.*, China, Japan, Ceram, Amboyna, Celebes.
simplicicornis, *C. & V.*, Sea of Guam.
goramensis, *Bleek.*, Goram Sea.
lineolatus, *C. & V.*, Bourbon. Pondicherry, Madras.
ocellatus, *Pall.*, Archipelago.
marmoratus, *Pet.*, Mozambique.
opercularis, *C. & V.*, River Arian-Coupant.
opercularioides, *Bleek.*, Padang, Sumatra, Batjan.

Vulsus dactylopus, *Benn.*, Amboyna, Celebes.
Luciogobius guttatus, *Gill.*, Japan.
Oxymetepon typus, *Bleek.*, Sea of Timor.

Fam. 21. OXUDERCIDÆ.

Oxuderces dentatus, *Valenc.*, Macao.

Fam. 22. BATRACHIDÆ.

Batrachus grunniens, *Bl.*, Amboyna, India, Ganges.
trispinosus, *Gthr.*, Bombay, Singapore, Pinang.
dussumieri, *C. & V.*, Malabar.
dubius, *White.*, Australia.
diemensis, *Lesueur.*, Australia, Timor, Ceram, Banka.

Fam. 23. PEDICULATI.

Lophius setigerus, *Wahl.*, China, Japan.
Antennarius marmoratus, *Gthr.*, six varieties, pictus, raninus, gibbus, marmoratus, Atlantic, Indian Oceans.
hispidus, *Schn.*, Indian Seas.
pinniceps, *Commers.*, Indian Seas.
tridens, *Schleg.*, China, Japan.
moluccenesis, *Bleek.*, Amboyna, Goram Sea.
coccineus, *Less.*, Mauritius.
lindgreeni, *Bleek.*, Banka Sea.
urophthalmus, *Bleek.*, Singapore, Riou, Australia.
commersonii, *Lacép.*, Indian Ocean.
horridus, *Bleek.*, Archipelago.
melas, *Bleek.*, Amboyna.
nummifer, *Cuv.*, Indian Seas, Red Sea.
notophthalmus, *Bleek.*, Archipelago.
biocellatus, *Cuv.*, Atlantic, Amboyna.
caudimaculatus, *Rüpp.*, Red Sea.
chironectes, *Lacép.*, Banda Neira, Amboyna.
polyophthalmus, *Bl.*, Banda Neira, Goram.
phymatodes, *Bleek.*, Amboyna.
leprosus, *Bleek.*, Amboyna.
bigibbus, *Lacép.*, Mauritius, Madagascar to New Ireland, Sandwich Islands.
Halieutæa stellata, *Wahl.*, China, Japan.

Fam. 24. BLENNIIDÆ.

Blennius semifasciatus, *Rüpp.*, Red Sea.
cornifer, *Rüpp.*, Djetta, Red Sea.
sinensis, *Gthr.*, China Sea.
Petroscirtes tapeinosoma, *Bleek.*, Amboyna.
rhinorhynchus, *Bleek.*, Celebes, Amboyna, Ceram, Goram.
amblyrhynchus, *Bleek.*, Amboyna.
tæniatus. *Q. & G.*, Amboyna, Goram, N. Guinea Guam.
filamentosus, *C. & V.*, N. Guinea, Amboyna.
punctatus, *C. & V.*, Bombay. Australia.
kallosoma, *Bleek.*, Sea of Biliton.
elongatus, *Peters.*, Mozambique.

variabilis, *Cant.*, Mozambique, Pinang, Port Jackson.
breviceps, *C. & V.* Bay of Bengal.
ancylodon, *Rüpp.*, Massaua, Red Sea.
polyodon, *Bleek.*, Java, Celebes, Amboyna.
solorensis, *Bleek.*, Lawajong, Solor.
anema, *Bleek.*, Amboyna, Banda, Batjan, Booroo, China.
grammistes, *Bleek, C. & V.*, Java.
temminckii, *Bleek.*, Canda, Goram, Celebes, Ternate, Amboyna.
bankanensis, *Bl.*, Banka, Amboyna, Nias.
mitratus, *Rüpp.*, Red Sea, Banda Neira, Amboyna.
barbatus, *Peters.*, Mozambique.
thepassii, *Bleek.*, Ternate.
anolis, *C. & V.*, Port Jackson.
Salarias flavo-umbrinus, *Rüpp.*, Red Sea.
oryx, *Ehrenb.*, Red Sea.
tridactylus, *Schneid.*, Archipelago.
nitidus, *Gthr.*, Chinese Seas.
amboinensis, *Bleek.*, Amboyna.
rivulatus, *Rüpp.*, Red Sea.
fasciatus, *Bl.*, Red Sea, Indian Ocean, Archipelago, Polynesia.
fuscus, *Rüpp.*, Red Sea, Archipelago.
nigro-vittatus, *Rüpp.*, Massaua, Red Sea.
cyclops, *Rüpp.*, Red Sea.
ceramensis, *Bleek.*, Celebes, Booroo, Ceram.
frenatus, *C. & V.*, Malabar.
scbæ, *C. & V.*, Ternate, Amboyna, Goram,
castaneus, *C. & V.*, Mauritius.
marmoratus, *Benn.*, Ceylon, Sandwich Isld.
arenatus, *Bleek.*, Sumatra, Cocos, Mauritius.
vermiculatus, *C. & V.*, Seychelles, Sunda Sea.
celebicus, *Bleek.*, Batu, Celebes, Booroo, Amboyna.
guttatus, *C. & V.*, Vanicolo.
interruptus, *Bleek.*, Kajeli, Buru.
chrysospilos, *Bleek.*, Amboyna.
gibbifrons, *Q. & G.*, Sumatra, Sandwich Island.
periophthalmus, *C. & V.*, Ticopir, Archip.
dussumieri, *C. & V.*, Malabar, Port Essington.
sumatranus, *Bleek.*, Archipelago.
hendriksii, *Bleek.*, W. Biliton.
edentulus, *Schn.*, Polynesia, Archipelago.
goesii, *Bleek.*, Doreh, New Guinea.
æquipinnis, *Gthr.*, Amboyna.
diproctopterus, *Bl.*, Sea of Kajeli, Buru.
lineatus, *C. & V.*, Java.
quadricornis, *C. & V.*, Indian Ocean, Chinese Sea, Keeling Isld.
melanocephalus, *Bleek.*, Archipelago.
fronto, *Gthr.*, Moluccas.
bellus, *Gthr.*, Chinese Sea.
oortii, *Bl.*, Sumatra, Moluccas.
bilitonensis, *Bleek.*, Biliton.
cyanostigma, *Bleek.*, Archipelago.
hasseltii, *Bl.*, Java, Sumatra, Cocos, Feejee.
unicolor, *Rüpp.*, Massana, Red Sea.
Clinus nematopterus, *Gthr.*, China.
Cristiceps xanthosoma, *Bl.*, Java.
roseus, *Gthr.*, Australia, N. Guinea.
Tripterygium trigloides, *Bleek*, Biliton.
Dictyosoma temminckii, *Bl.*, Simabara Bay.
Gunellichthys pleurotænia, *Bl.*, Manado Sea.
Stichæus hexagrammus, *Schleg.*, Simabara Bay, Japan.
Centronotus nebulosus, *Schleg.*, Japan, California, Gulf of Georgia, Vancooverld.
roseus, *Pall.*, Kuriles.
Pholidichthys leucotænia, *Bleek.*, Kajeli Sea, Boeroe.
Andamia expansa, *Blyth.*, Andamans.

Fam. 26. COMEPHORIDÆ.

Comephorus baikalensis, *Lacép.*, Lake Baikal.

Fam. 27. TRACHYPTERIDÆ.

Regalecus russellii, *Shaw.*, Vizagapatam.

Fam. 28. SOPHOTIDÆ.

Sophotes cepedianus, *Japan.*

Fam. 29. TEUTHIDIDÆ.

Teuthis javus, *L.*, Indian Seas, Australia.
canaliculata, *Mungo Park.*, Sumatra.
concatenata, *C. & V.*, Indian Seas.
corallina, *C. & V.*, Seychelles, Moluccas.
vermiculata, *K. & v. H.*, Mauritius, N. Guinea.
labyrinthodes, *Bleek.*, Batavia.
sutor, *C. & V.*, Seychelles, Malabar.
margaritifera, *C. & V.*, Archipelago.
tumifrons, *C. & V.*, Sharks Bay, Australia.
dorsalis, *C. & V.*, Pinang, Java.
oramin, *Bl.*, *Schn.*, Tranquebar.
albopunctata, *Schleg.*, Archipelago, Japan, China.
hexagonata, *Bleek.*, Java, Sumbawa, Kokos.
guttata, *Bl.*, Archipelago.
stellata, *Forsk.*, Red Sea, Ceylon.
notostista, *Richards.*, Port Essington.
fuscescens, *Houtt.*, Nagasaki.
lurida, *Ehrenb.*, Red Sea.
nebulosa, *Q. & G.*, Ceylon.
marmorata *Q. & G.*, Marianes, Archipelago.
lineata, *C. & V.*, Vanicolo, N. Guinea.
sigana, *Forsk.*, Red Sea.
tetrazona, *Bleek.*, Manado.
doliata, *Cuv.*, Booroo, Ternate, Vanicola, Timor.
puella, *Schleg.*, Archipelago.
virgata, *C. & V.*, Java, Philippines, China.
vulpina, *Schleg.*, Celebes, Ternate, Amboyna, N. Guinea.

Fam. 30. ACRONURIDÆ.

Acanthurus triostegus, *L.*, Mauritius to Polynesia, N. Zealand.
guttatus, *Forst.*, Otaheiti, N. Hebrides, Mauritius.

bipunctatus, *Gthr.*, China, Feejee Island.
doroensis, *C. & V.*, Dorey Harbour, N. Guinea.
chrysosoma, *Bleek.*, Kajeli Sea.
rubropunctatus, *Rupp.*, Red Sea.
lineatus, *L.*, Archipelago, Polynesia.
striatus, *Q. & G.*, Marianes.
sohal, *Forsk.*, Red Sea.
undulatus, *C. & V.*, Indian Ocean.
dussumieri, *C. & V.*, Mauritius.
grammoptilus, *Richards.*, Port Essington.
bleekeri, *Gthr.*, Archipelago.
lineolatus, *C. & V.*, Banda, Amboyna.
olivaceus, *Bl., Schn.*, Polynesia, Celebes, Amboyna, Goram.
tennentii, *Gthr.*, Ceylon.
gahm, *Forsk.*, Red Sea, Mauritius, Celebes.
nummifer, *C. & V.*, Waigiou.
glaucopareius, *C. & V.*, Polynesia, Amboyna.
celebicus, *Bleek.*, Maccassar, Ternate.
fuscus, *Steindachner.*, Amboyna.
leucosternon, *Benn.*, Mauritius, Ceylon, Batoe.
achilles, *Shaw.*, China Sea.
fraterculus, *C. & V.*, East Indies.
hepatus, *L.*, Mauritius, N. Guinea.
strigosus, *Ben.*, Sandwich Island, N. Guinea.
ctenodon, *C. & V.*, Ceylon, Archipelago, N. Guinea, N. Hebrides and Carolines.
goramensis, *Bleek.*, Goram Sea.
xanthurus, *Blyth.*, Ceylon.
gemmatus, *C. & V.*, Mauritius.
velifer, *Bl.*, Batoe Sea.
ruppellii, *Benn.*, Africa, Red Sea, N. Guinea.
suillus, *C. & V.*, Mauritius.

Acronurus orbicularis, *C. & V.*, Guam Island.
melanurus, *C. & V.*, Indian Seas.

Prionurus scalprum, *Langsd.*, Japan.

Naseus unicornis, *Forsk.*, Red Sea, Japan, Polynesia.
brachycentron, *C. & V.*, Waigiou.
tripeltes, *C. & V.*, Malay, Archipelago.
brevirostris, *C. & V.*, Mauritius to Polynesia.
olivaceus, *Soland.*, Otaheiti, Philippines.
annulatus, *Q. & G.*, Archipelago, Polynesia.
tuberosus, *Lacép.*, Mauritius to Polynesia.
lituratus, *Forst.*, Red Sea to Polynesia.
hexacanthus, *Bleek.*, Amboyna, Batu.
tapeinosoma, *Bleek.*, Amboyna.
thynnoides, *C. & V.*, N. Guinea Amboyna.

Keris anginosus, *C. & V.*, Amboyna, Ceram, Kokos, Celebes.
amboinensis, *Bleek.*, Archipelago.

Fam. 31. HOPLOGNATHIDÆ.

Hoplognathus fasciatus, *Schleg.*, Japan.
punctatus, *Schleg.*, China, Japan.

Fam. 32. MALACANTHIDÆ.

Malacanthus latovittatus, *Lacép.*, Mauritius, N. Guinea.
hoedtii, *Bleek.*, Louisiade, N. Guinea, Mauritius.

Fam. 33. NANDIDÆ.

First Group. PLESIOPINA.

Plesiops nigricans, *Rüpp.*, Red Sea.
cæruleo-lineatus, *Rupp.*, Red Sea, Archipelago, Australia.
corallicola, *K. & v. H.*, Archipelago, Feejee, Tongu Island.
oxycephalus, *Bleek.*, Batoe, Amboyna.

Second Group. NANDINA.

Badis buchanani, *Bleek.*, Ganges, India.
dario, *B. H.*, Bengal, Behar.
Nandus marmoratus, *C. & V.*, Bengal.
nebulosus, *Bleek.*, Rivers Blitong, Banka, Borneo.
Catopra fasciata, *Bleek.*, Rivers Bornoo, Sumatra, Banka.
nandoides, *Bleek.*, Rivers, Java, Sumatra-
grootii, *Bleek.*, Rivers Bilitong, Banka.

Fam. 35. LABYRINTHICI.

Anabas scandens, *Dald.*, East Indies, Ganges, Calcutta.
macrocephalus, *Bleek.*, Java, Sumatra, Borneo, Pintang, Philippine Island.
oligolepis, *Bleek.*, Bandjermassing, Ceylon, China.
microcephalus, *Bleek.*, Amboyna.
Helostoma temminckii, *K. & v. H.*, Java, Sumatra, Borneo.
Polyacanthus hasseltii, *C. & V.*, Java, Sumatra, Borneo.
einthovenii, *Bleek.*, Rivers of Sambas, Sumatra.
helfrichii, *Bleek.*, Bandjermassing Rivers.
opercularis, *L.*, China, Chusan.
signatus, *Gthr.*, Ceylon.
cupanus, *C. & V.*, River Arian-Coopang, Pondicherry.
deissneri, *Bleek.*, Baturussak Rivers, Island of Bawean.
Macropus viridi-auratus, *Lacép.*, China, Cochinchina.
Osphromenus olfax, *Commers.*, Java, Madura, Sumatra, Borneo, Pinang, Malacca, Mauritius, Cayenne.
trichopterus, *Pall.*, Pinang, Malay Peninsula.
siamensis, *Gthr.*, Siam.
microlepis, *Gthr.*, Cambojia.

striatus, *Bleek.*, Siam.
Trichogaster fasciatus, *Schn.*, Bengal, Hindostan.
unicolor, *C. & V.*, Calcutta.
Betta trifasciata, *Bleek.*, Banka, Biliton.
pugnax, *Cant.*, Pinang, Malay Peninsula, Archipelago.

Fam. 36. LUCIOCEPHALIDÆ.

Luciocephalus pulcher, *Gray.*, Biliton, Borneo, Rivers Banks.

Fam. 37. ATHERINIDÆ.

First Group. ATHERININA.

Atherina forskalii, *Rüpp.*, Red Sea, Pinang.
bleekeri, *Gthr.*, Japan.
afra, *Peters.*, Mozambique.
valenciennesii, *Bleek.*, Padang, Batavia, Singapore.
pinguis, *Lacép.*, Africa, Bombay, Australia.
lacunosa, *Forst.*, Archipelago, Waigiou.
duodecimalis, *Bleek.*, Archipelago.
endrachtensis, *Q. & G.*, N. Holland, N. Guinea.
brachyptera, *Bleek.*, Banda Neira.

Fam. 38. MUGILIDÆ.

Mugil cephalotus, *Cuv.*, Red Sea, Pondicherry, China, Japan.
hæmatochilus, *Schleg.*, Japan, China.
subviridis, *C. & V.*, Malabar, Madras.
nepalensis, *Gthr.*, Nepal.
sundanensis, *Bleek.*, Archipelago.
strongylocephalus, *Rich.*, Chinese Sea.
parsia, *Buch. Ham.*, Bengal.
belanak, *Bleek.*, Rivers of Archipelago.
planiceps, *C. & V.*, Ceylon, Bengal, Hindustan, China.
longimanus, *Gthr.*, Archipelago.
kelaartii, *Gthr.*, Ceylon, Philipines.
engeli, *Bleek.*, Java, Sumatra, Bali.
cantoris, *Bleek.*, River Hoogly.
affinis, *Gthr.*, Amoy, China.
ophuysenii, *Bleek.*, Sumatra.
cunnesius, *C. & V.*, Red Sea, Indian Seas.
speigleri, *Bleek.*, Java, Borneo, Halmaheira.
waigiensis, *Q. & G.*, Red Sea, Indian Ocean, Archipelago, Australia, Polynesia.
suppositus, *Gthr.*, Pinang River.
axillaris, *Bleek.*, Archipelago, Guinea, Mauritius.
bleekerii, *Gthr.*, Banka Rivers.
ceylonensis, *Gthr.*, Ceylon.
troschelii, *Bleek.*, Java, Sumatra, Borneo, Ceylon.
borneensis, *Bleek.*, Archipelago.
oligolepis, *Bleek.*, Borneo, Sumbawa.
decem-radiatus, *Gthr.*, Batavia, Timor.
labiosus, *C. & V.*, Red Sea, Timor, Sumatra.
nigro-strigatus, *Gthr.*, Borneo, St. Vincent's.
heterochilus, *Bleek.*, Batjan, Celebes, Ceram, Java.
crenilabis, *Forsk.*, Red Sea.
macrochilus, *Bleek.*, Kokos Island, Java.
ruppellii, *Gthr.*, Red Sea.
corsula, *Buch, Ham.*, Ganges.
Agonostoma plicatile, *C. & V.*, Celebes, Aneiteum, Comera Island.
oxyrhynchum, *C. & V.*, Celebes, Batjan, Sumatra.
telfairii, *Benn.*, Mauritius, Comoro Island.
dobuloides, *C. & V.*, Mauritius.

Fam. 39. OPHIOCEPHALIDÆ.

Ophiocephalus punctatus, *Bl.*, Ceylon.
gachua. *Buch. Ham.*, Indian Archipelago.
kelaartii, *Gthr.*, Ceylon.
rhodotænia. *Bleek.*, Sambas Rivers, Borneo.
mystax, *Bleek.*, Banka Rivers.
melanosoma, *Bleek.*, Borneo, Banka, Nias.
melanopterus, *Bleek.*, River Kapnas, Borneo.
cyanospilos, *Bleek.*, Rivers Telork, Sumatra.
striatus, *Bl.*, East Indies.
polylepis, *Bleek.*, Rivers of Solok, Sumatra.
bankanensis, *Bl.*, Banka, Borneo.
lucius, *K. & v. H.*, Archipelago.
siamenses, *Gthr.*, Siam.
barca, *Buch. Ham.*, Bengal.
nigricans, *C. & V.*, East Indies.
grandinosus, *C. & V.*, China, Maissour.
marulius, *Buch. Ham.*, Bengal, Hindostan, Ceylon.
pseudomarulius, *Gthr.*, India.
marulioides, *Bleek.*, Sambas, Borneo.
pleurophthalmus, *Bleek.*, Bandjermassing Rivers, Palembang, Sumatra.
argus, *Cant.*, China, Chusan.
maculatus, *Lacép.*, China.
micropeltes, *K. & v. H.*, Siam, Archipelago.
Channa orientalis, *Schn.*, Ceylon.

Fam. 40. TRICHONOTIDÆ.

Trichonotus setigerus, *Schn.*, Celebes, Ceram.

Fam. 41. CEPOLIDÆ.

Cepola schlegelii, *Bleek.*, Japan.
abbreviata, *C. & V.*, Moluccas, Pinang, China.
krusensternii, *Schleg.*, Sea of Nagasaki.
mesoprion, *Bleek.*, Sea of Nagasaki.
marginata, *C & V.*, Sea of Japan.
limbata, *C. & V.*, Japan.

Fam 42. GOBIESOCIDÆ.

Cotylis fimbriata, *M. & T.*, Red Sea, Indian Ocean.

Fam 44. CENTRISCIDÆ.

Amphisile scutata, *L.*, India & China Seas.
punctulata, *Bianc.*, Red Sea, Mozambique.
strigata, *Gthr.*, Java, Banda.

Fam 45. FISTULARIDÆ.

Fistularia serrata, *Bl.*, Mozambique, China, N. Holland.
Aulostoma Chinense, *L.*, Mozambique to Pacific.
Rhynchobdella aculeata, *Bl.*, East Indies.

Fam. 46. MASTACEMBELIDÆ.

Mastacembelus pancalus, *Buch. Ham.*, Bengal.
zebrinus, *Blyth.*, Maulmein
aleppensis, *Schn.*, River Kowik, Affghanistan.
unicolor, *K. & v. H.*, Java.
erythrotænia, *Bleek.*, Borneo Rivers.
argus, *Gthr.*, Siam.
armatus, *Lacép.*, Ceylon, Bengal, Chusan.
maculatus, *Reinv.*, Bilitong, Java, Sumatra.

ORDER II. ACANTHOPTERYGII PHARYNGOGNATHI.

Fam. I. POMACENTRIDÆ.

Numerous in the tropical parts of the Indian and Pacific Oceans, several in the tropical Atlantic, a few extending N. to Mediterranean and Japan, to S. Australia and E. to America. They feed chiefly on small marine animals, and those with compressed teeth appear to feed on the small Zoophytes or even on marine plants, covering the coral-banks round which the Pomacentridæ and Choctodontidæ abound.

Amphiprion bifasciatus, *Bl.*, *Schn.*, Archipelago, N. Guinea.
intermedius, *Schleg.*, Moluccas.
trifasciatus, *C. & V.*, Moluccas.
sebæ, *Bleek.*, Batavia, Sumatra.
clarkii, *Benn.*, Mozambique to China.
xanthurus, *C. & V.*, Ile of France, Batavia.
chrysogaster, *C. & V.*, Mauritius, Bourbon.
fusciventer, *Benn.*, Mauritius.
percula. *Lacép.*, China to Australia.
bicinctus, *Rüpp.*, Red Sea.
melanopus, *Bl.*, Amboyna.
tricolor, *Gthr.*, Port Essington.
rosenbergii, *Bleek.*, Doreh, (N. Guinea).
perideraion, *Bleek.*, Groot Oby, Amboyna.
akallopisos, *Bleek.*, Sea of Priaman.
ephippium, *Bl.*, Indian Ocean, Archipelago.
Premnas biaculeatus, *Bl.*, Archipelago.
Dascyllus aruanus, *L.*, E. Africa to Polynesia.
trimaculatus, *Rüpp.*, E. Africa to Archipelago.
marginatus, *Rüpp.*, Red Sea.
xanthosoma, *Bleek.*, Archipelago.
cyanurus, *Rüpp.*, Massaua.
polyacanthus, *Bleek.*, Sangi, Batjan, Amboyna.
Lepidozygus tapeinosoma, *Blkr.*, Ternate.
Pomacentrus annulatus, *Peters.*, Mozambique.
nematopterus, *Bleek.*, Archipelago.
bifasciatus, *Bleek.*, Floris, Ternate, Booroo.
albofasciatus, *Schleg.*, Archipelago.
fasciatus, *C. & V.*, Archipelago.
trimaculatus, *C. & V.*, Archipelago, China.
chrysopœcilus, *K. & v. H.*, Archipelago.
notophthalmus, *Bleek.*, Archipelago.
violascens, *Bleek.*, Nias, Sumbava.
cyanomus, *Bleek.*, Java, Nias.
polynema, *Bleek.*, Priaman.
cyanostigma, *Rüpp.*, Massaua.
tæniurus, *Bleek.*, Biliton, Amboyna.
simsiang, *Bleek.*, Batavia.
pavo, *Bl.*, Moluccas, Mozambique.
prosopotænia, *Bleek.*, Singapore, Molucca Sea.
cæruleus, *Q. & G.*, Ile of France.
melanotus, *Bleek.*, Manado.
melanopterus, *Bleek.*, Archipelago Rivers.
trilineatus, *Ehrenb.*, Red Sea, Mozambique, Moluccas.
tæniometopen, *Bleek.*, Archipelago.
bankanensis, *Bleek.*, Archipelago, China.
rhodonotus, *Bleek.*
scolopsis, *Q. & G.*, Ile of France, Archipelago, Polynesia.
dorsalis, *Gill.*, Japan, China.
chrysurus, *Brouss.*, Amboyna.
punctatus. *Q. & G.*, Red Sea, Ile of France, Bola Bola.
cyanospilus, *Blkr.*, Archipelago.
moluccensis, *Blkr.*, Archipelago.
interorbitalis, *Gthr.*, Archipelago.
littoralis, *K. & v. H.*, Mauritius Archipelago, Polynesia, Australia, India.
Glyphidodon cœlestinus, *Soland.*, Red Sea to Polynesia.
schlegelii, *Bleek.*, Celebes, Ternate, Goram.
septemfasciatus, *C. & V.*, Mauritius to Philippines and China.
bengalensis, *C. & V.*, Indian Seas.
affinis, *Gthr.*, Chinese Sea.
sordidus, *Forsk.*, Indian Seas.
breviceps, *Schleg.*, Sumatra.
trifasciatus, *Bleek.*, Archipelago.
albofasciatus, *Hambr.*, Poulolaut, Borneo.
xanthozona, *Bleek.*, Archipelago.
oxyodon, *Bleek.*, Celebes.
sparoides, *C. & V.*, Mauritius, Mozambique.
bonang, *Blkr.*, Java, Sumatra.
sculptus, *Peters.*, Mozambique.
melas, *K. & v. H.*, Red Sea, Archipelago, N. Hebrides.

aureus, *K. & v. H.*, Java, Celebes, Amboyna.
leucogaster, *Blkr.*, Java, Amboyna, Banda.
ternatensis, *Bleek.*, Ternate.
batjanensis, *Bleek.*, Batjan, Booroo.
xanthurus, *Blkr.*, Flores, Sangi, Amboyna, Ceram.
melanopus, *Blkr.*, Java.
xanthonotus, *Blkr.*, Bawean.
behnii, *Blkr.*, Java.
leucozona, *Blkr.*, Java.
lacrymatus, *Q. & G.*, Java, Sangi, Ternate and Guam.
floridulentus, *Gthr.*
antjerius, *K. & v. H.*, From Africa to Archipelago and Polynesia.
plagiometopon, *Blkr.*, Singapore, Java.
unimaculatus, *C. & V.*, Archipelago.
uniocellatus, *Q. & G.*, Timor, Vanicolo, Fiji.
assimilis, *Gthr.*, Batjan, Amboyna, Goram, Borneo, Philippines.
azureus, *Q. & G.*, Timor, Friendly Ids.
dispar, *Gthr.*
amboinensis, *Bleek.*, Amboyna.
limbatus, *C. & V.*, Bourbon.

Parma microlepis, *Gthr.*, N. S. Wales
squamipinnis, *Gthr.*, Australia.

Heliastes axillaris, *Benn.*, Mauritius.
cinerascens, *C. & V.*, Moluccas.
xanthochir, *Bleek.*, Archipelago.
analis, *C. & V.*, Amboyna.
cæruleus *C. & V.*, N. Guinea, Ulea, Moluccas.
frenatus, *C. & V.*, Guam.
xanthurus, *Bleek.*, Banda Neira.
notatus, *Schleg.*, China, Japan.
lepidurus, *C. & V.*, Guinea, Archipelago.
ternatensis, *Bleek.*, Ternate, Booroo, Goram.

Fam. 2. LABRIDÆ.

Marine fishes of temperate and tropical regions. Feeding chiefly on mollusca. The Scarina are herbivorous as well as carnivorous.

Second Group. CHŒROPINA.

Choerops macrodon, *Lacép.*, Archipelago, N. Australia.
ommopterus, *Richards.*, China, Australia, Moluccas.
leucozona, *Bleek.*, Biliton.
anchorago, *Bl.*, Amboyna.
japonicus, *C. & V.*, Japan, China.
oligacanthus, *Bleek.*, Archipelago.
cyanodon, *Richards.*, Australia.
rubescens, *Gthr.*, Australia, Houtman's Abrothos, 'Rockfish' of the Colonists.

Third Group. JULIDINA.

Xiphochilus, *Bleek.*, Indian Ocean, Archipelago.
typus, *Bleek.*, Nias.
robustus, *Gthr.*, Mauritius.
Semicossyphus, *Gthr.*, Japan, California.
reticulatus, *C. & V.*, Japan.
Trochocopus opercularis, *Guich*, Mauritius.
Pteragogus opercularis *Pet.*, Mozambique.
tæniops, *Pet.*, Mozambique.
Cossyphus mesothorax, *Bl.*, Moluccas.
axillaris, *Benn.*, Mauritius, Madagascar, Ulea, Hebrides.
leucostictieus, *Benn.*, Mauritius.
diana, *Lacép.*, Mozambique, Mauritius, Sumatra, Batjan, Amboyna.
macrurus, *Lacép.*, Mauritius.
bilunulatus, *Lacép.*, Ile of France, Amboyna.
atrolumbus, *C. & V.*, Mauritius.
anthioides, *Benn.*, Amboyna.
opercularis, *Bourbon?* Madagascar?
unimaculatis, *Gthr.*, Australia.
gouldii, *Richards.*, Australia.
Labrichthys celidota. *Forst.*, N. Zealand, Australia.
rubiginosa, *Schleg.*, China, Japan.
luculenta, *Rich.*, Australia, Norfolk Isld.
cyanotænia, *Bleek*, Floris.
parila, *Richards.*, Australia.
gymnogenis, *Gthr.*, Australia.
unilineata, *Guich.*, Guam.
Labroides dimidiatus, *C. & V.*, Red Sea, Amboyna, Goram.
paradiseus, *Bleek*, Archipelago.
quadrilineatus, *Rüpp.*, Red Sea.
xanthurus, *Bleek.*, Amboyna.
Duymæria aurigaria, *Richards.*, China.
flagellifera, *C. & V.*, Japan.
spilogaster, *Bleek*, Nagasaki.
filamentosa, *Pet.*, Mozambique.
enneacanthus, *Bleek.*, Amboyna.
nematoptera, *Bleek.*, Banda Neira.
Cirrhilabrus temminckii, *Bleek.*, Japan.
solorensis, *Bleek.*, Solor, Banda.
cyanopleura, *Bleek.*, Batavia.
Cheilinus trilobatus, *Lacép.*, Africa to China, N. Hebrides.
mossambicus, *Gthr.*, Mozambique.
ceramensis, *Bleek.*, Archipelago, N. Hebrides.
punctatus, *Benn.*, Mauritius, Mozambique.
chloruris. *Bl.*, Ceylon, N. Hebrides.
oxycephalus, *Bleek.*, Batoe, Floris, Batjan, Amboyna.
undulatus, *Rüpp.*, Red Sea, Batavia.
fasciatus, *Bl.*, Red Sea, Indian Seas.
quinquecinctus, *Rüpp.*, Red Sea.
lunulatus, *Forsk.*, Red Sea.
mentalis, *Rüpp.*, Massaua.

lacrymans, *C. & V.*, Java.
orientalis, *Gthr.*, Batjan.
arenatus, *C. & V.*, Mauritius, Java.
celebicus, *Bleek.*, Archipelago.
oxyrhynchus, *Bleek.*, Archipelago.
hoevenii, *Bleek.*, Amboyna.

Pseudocheilinus hexatænia, *Bleek.*, Amboyna, Goram.

Epibulus insidiator, *Pall.*, Indian Ocean, Archipelago.

Anampses cæruleo-punctatus, *Rüpp.*, Red Sea, Mauritius.
meleagris, *C. & V.*, Mauritius, Amboyna.
melanurus, *Bleek.*, Amboyna.
twistii, *Bleek.*, Amboyna.
amboinensis, *Bleek.*, Amboyna.
diadematus, *Rüpp.*, Red Sea, Mauritius.
viridis, *C. & V.*, Mauritius.
geographicus, *C. & V.*, Amboyna.
pterophthalmus, *Bleek.*, Amboyna.

subasper, *Gthr.*, Pacific Ocean.
Scopelosaurus hoedti, *Blkr.*, Amboyna.

Fam. 7. SALMONIDÆ.

First Group. SALMONINA.

First Sub-generic Group. SALMONES.

XII. Trout from rivers of the Hindoo Koosh.

Salmo orientalis. M'Cli., Griffith (Calcutt. Journ. Nat. Hist. ii. p. 585, and iii. p. 283) mentions a trout found on the northern declivities of the Hindoo Koosh, and in the Bamean River, one of the tributaries of the Oxus, 11,000 feet above the level of the sea. This species appears to be the southernmost in Central Asia, and the nearest to the Indian region. There are no Salmonoids in Afghanistan or any of the countries to the south of the Hindoo Koosh. M'Clelland named this fish Salmo orientalis, which name cannot be retained, if the fish should prove to be a distinct species as it was given to another fish by Pallas.

Salmo purpuratus, *Pall.*, Pacific, Asia, America.

Second Sub-generic group. SALVELINI.

Oncorhynchus orientalis, *Suck.*, Kamtschatka.
sanguinolentus, *Pall.*, Kamtschatka.
lagocephalus, *Pall.*, Pacific, Bay of Okhotsk.
Brachymystax coregonoides, *Pall.*, Lake Baikal, Pacific.
Plecoglossus altivelis, *Schl.*, Japan, Formosa.
Hypomesus olidus, *Pall.*, California, Vancouver Island, Asia.
chenensis, *Basil.*

Second Group. SALANGINA.

Salanx chinensis, *Osbeck.*, China.
microdon, *Blkr.*, Jeddo Rivers.

Fam. 10. MORMYRIDÆ.

Mormyrus mucupe, *Ptrs.*, Mozambique.
longirostris, *Ptrs.*, Mozambique.
macrolepidotus, *Ptrs.*, Africa, River Rovuma.

catostoma, *Gthr*, Rovuma River.

Fam. 14. SCOMBRESOCIDÆ.

Belone incisa, *C. & V.*, Indian Ocean.
platura, *Ripp.*, Red Sea, Mauritius, East Indies.
melanotus, *Blkr.*, Archipelago.
schismatorhynchus, *Bl.*, Red Sea, Ind. Ocean.
annulata, *C. & V.*, Ind Ocean, Friendly Id.
melanostigma, *C. & V.*, Red Sea.
ferox, *Gthr.*, Wales
robusta, *Gthr.*, Red Sea.
liuroides, *Blkr.*, Archipelago.
natalensis, *Gthr.*, Africa.
caudimaculata, *Cuv.*, Indian Ocean, Australia, Amboyna.
strongylurus. *Blkr.*, India, China.
macrolepis, *Blkr.*, Nias.
urvillii, *C. & V.*, Vanicolo.
capensis, *Gthr.*, Cape of Good Hope,
anastomella, *C. & V.*, China, Japan.
liurus, *Blkr.*, Archipelago.
cancila, *B. H.*, Indian Ocean.
canciloides, *Blkr.*, Rivers of Borneo.
Scombresox saira, *Brevoort.*, Japan
Hemirhamphus intermedius, *Cant.*, China, Australia, N Zealand.
balinensis, *Blkr.*. Bali.
unifasciatus, *Rauz.*, Atlantic, America, Panama, Indian Ocean.
gaimardi, *Blkr.*, Archipelago, New Guinea.
georgii, *C. & V.*, Ind. Ocean, Archipelago.
cantoris, *Blkr.*, China, Archipelago.
sajori, *Schleg.*, Nagasaki.
melanurus, *C. & V.*, China, Celebes.
sinensis, *Gthr.*, China.
calabaricus, *Gthr.*, Africa.
dussumierii, *C. & V.*, Indian Ocean.
laticeps, *Gthr.*, Feejee Island.
russelli, *C. & V.*, Pinang, Malayan Peninsula, Coromandel.
gernaerti, *C. & V.*, China.
marginatus, *Forsk.*, Red Sea, Indian Ocean, Archipelago.
commersonii, *Cuv.*, Red Sea, Indian Ocean.
fasciatus, *Blkr.*, Solor Sea.
limbatus, *C. & V.*, Indian Ocean.
phaiosoma, *Blkr.*, Biliton Rivers.
pogonognathus, *Bl.*, Banka, Biliton Rivers.
amblyurus, *Blkr.*, Archipelago, Siam.
buffonis, *C. & V.*, Archipelago.
dispar, *C. & V.*, East Indies.
brevirostris, *Gthr.*, Archipelago.
fluviatilis, *Blkr.*, Rivers of Java.
brachynotopterus, *Blkr.*, River Hoogly.
sumatranus, *Blkr.*, Sumatra.
longirostris, *Cuv.*, Pondicherry.
cuspidatus, *C. & V.*, Indian Ocean.
Exoccetus micropterus, *C. & V.*, India, Australia.
monocirrhus, *Rich.*, China.
brevipinnis, *C. & V.*, Ireland.
rostratus, *Gthr.*, Sandwich Island.
brachypterus, *Rich.*, Otaheiti, China.
mento, *C. & V.*, Indian Seas.
evolans, *L.*, Mediterranean, Dimerara.
obtusirostris, *Gthr.*, New Orleans, India, Tropical and Sub-tropical Seas.
solandri, *C. & V.*, Indian Ocean, Seychelles.
furcatus, *Mitch.*, Atlantic, Indian Ocean.
speculiger, *C. & V.*, Indian Ocean, Australia.
katoptron, *Blkr.*, Sumatra.
arcticeps, *Gthr.*, China.
nigricans, *Benn.*, Atlantic, Indian, Pacific, Java.
altipinnis, *C. & V.*, Indian Ocean.
pœcilopterus, *C. & V.*, Archipelago, Formosa.
spilopterus, *C. & V.*, Celebes, Carolines.
oxycephalus, *Blkr.*, Archipelago.
brachysoma, *Blkr.*, Indian, Pacific Oceans, Zanzibar.
oligolepis, *Blkr.*, Archipelago.
opisthopus, *Blkr.*, Archipelago.
brachycephalus, *Gthr.*, China.
nigripinnis, *C. & V.*, Indian, Australia.

Fam. 15. CYPRINODONTIDÆ.

First Group. CYPRINODONTIDÆ CARNIVORÆ.

Cyprinodon cypris, *Lacép.*, Syria, Bagdad.
sophiæ, *Heck.*, Persia, Syria.
punctatus, *Heck.*, Nemek-Deria.
mento, *Heckr.*, Mosul.
Haplochilus panchax, *B. H.*, East Indies, Ganges, Pinang.
latipes, *Schleg.*, Japan.
javanicus, *Blkr.*, Java.
cyanophthalmus, *Blyth.*, Calcutta.
homalonotus, *Dum.*, Noss-Be, Madagascar.
playfairii, *Gthr.*, Seychelles.

Fam. 17. CYPRINIDÆ.

First Group. CATOSTOMINA.

Sclerognathus asiaticus, *Blkr.* China.

Second Group. CYPRININA.

Cyprinus carpio, *L.*, China, Formosa, Japan, Java, Amoy.
fossicola, *Richards*, China.
Carassius auratus, Nilsson, China, Japan, Formosa, India.
Catla buchanani, *C. & V.*, Bengal, Assam.
Cirrhina mrigala, *H. B.*, Bengal, Hindostan.
leschenaultii, *C. &. V.*, India.
chinensis, *Gthr.*, China.
anisura, *M'Clell.*, Bengal.
diochilus, *M'Clell.*, Assam, Cachar.

Dangila ocellata, *Hackel.*, Sumatra, Borneo.
tæniata, *Gthr.*, Sumatra, Borneo.
cuvieri, *C. & V.*, Java, Sumatra, Borneo.
kuhlii, *C. & V.*, Batavia.
sumatrana, *Blkr.*, Sumatra, Philippines.
festiva, *Heck.*, Borneo.
Osteochilus melanopleurus, *Blkr.*, Sumatra, Borneo, Siam.
borneensis, *Blkr.*, Borneo.
hasseltii, *C. & V.*, Java, Sumatra, Borneo.
kappenii, *Blkr.*, Borneo.
kuhlii, *Blkr.*, Sumatra.
schlegelii, *Blkr.*, Sumatra, Borneo, Siam.
waandersii, *Blkr.*, Banka.
microcephalus, *Blkr.*, Java, Sumatra.
brachynotopterus, *Blkr.*, Sumatra.
vittatus, *C. & V.*, Java, Sumatra, Borneo.
triporus, *Blkr.*, Sumatra, Borneo.
kahajanensis, *Blkr.*, Borneo, Sumatra.
oligolepis, *Blkr.*, Banka.
spilurus, *Blkr.*, Borneo.
Labeo mesops, *Gthr.*, Africa.
nandina, *Ham. Buch.*, Bengal, Irawaddy.
macronotus, *M'Clell.* Bengal, Assam.
chrysophekadion, *Bl.*, Java, Sumatra, Siam.
fimbriatus, *Bloch.*, Madras.
leschenaulti, *C. & V.*, E. Ind. Continent.
calbasu, *Ham. Buch.*, Bengal.
parcellus, *Heck.*, Bombay.
rohita, *Ham. Bech.*, E. Indian Continent.
rouxii, *C. & V.*, Bombay.
kontius, *Jerdon*, Bowany River.
morala, *Ham. Bech.*, Bengal.
erythropterus, *v. Hass.*, Java.
diplostomus, *Heck.*, Cashmere.
rienorhynchus, *M'Clell.* Himalaya Rivers.
falcatus, *Gray*, India.
pangusia, *Ham. Buch.*, Kosi, Cachar.
pleurotænia, *Blkr.*, Sumatra, Java.
dussumieri, *C. & V.*, India, Ceylon.
chalybeatus, *C. & V.*, Rangoon.
microlepidotus, *C. & V.*, Bengal, Nepal.
Barynotus microlepis, *Gthr.*, Borneo, Sumatra.
Tylognathus striolatus, *Gthr.*, Poona.
ariza, *Ham. Buch.*, India.
boga, *Ham. Buch.*, Bengal.
nanus, *Heck.*, Damascus.
falcifer, *C. & V.*, Java, Sumatra.
schwanefeldi, *Blkr.*, Java, Sumatra.
lehat, *Blkr.*, Java.
hispidus, *C. & V.*, Java.
heterorhynchus, *Blkr.*, Sumatra, Java.
Discognathus lamta, *Ham. Buch.*, Assam, Cachar, Nepal, Cossye River, Ganges, Gwalior, Deckan, Malabar.
macrochir, *Gthr.* Assam.
nasutus, *M'Clell.*, Khassyah.
variabilis, *Heck.*, Rivers of Syria, Tigris.
Crossochilus latius, *H. B.*, Bengal, Nepal, Assam.
gohama, *Ham. Buch.*, Bengal.
rostratus, *Gthr.*, Cossye River.
barbatulus, *Heck.*, Cashmere.
oblongus, *C. & V.*, Java, Sumatra.
cobitis, *Blkr.*, Java, Sumatra.
langii, *Blkr.*, Sumatra.
sada, *Ham. Buch.*, Brahmaputra.
reba, *Ham. Buch.*, East-Indian Continent, Siam, Cachar, Calcutta, Ganges, Cossye River, Chenab, Seharunpore, Loodianah, R. Cavery, Nilgherries, Ceylon.
Epalzeorhynchus callopterus, *Blkr.* Sumatra, Borneo.
Capoeta damascina, *C. & V.*, Syria, Palestine, Asia-Minor.
fratercula, *Heck*, Damascus.
amir, *Heck.*, River Araxes.
umbla, *Heck.*, River Tigris.
trutta, *Heck.*, Syria, Tigris.
gracilis, *Keyserl*, Persia.
heratensis, *Keyserl.*, Herat.
micracanthus. *Gthr.*, Bhotan, Punakha.
syriaca, *C. & V.*, Abraham's River.
aculeata, *C. & V.*, Persia.
macrolepis. *Heck.*, Araxes.
Barbus esocinus. *Heck.*, Tigris.
xanthopterus. *Heck.*, Tigris.
scheich, *Heck.*, Tigris.
barbulus. *Heck.*, Kara-Anatsch, Persia.
perniciosus. *Heck.*, Damascus.
serra, *Ptrs.*, Cape.
burchelli, *Smith.*, Cape Colony.
spilopholis, *M'Clell.*, Bengal.
beavani, *Gthr.*, Cossye River.
clavatus, *M'Clell.* Sikkim.
paradoxus, *Gthr.*, Formosa.
grypus, *Heck.*, Tigris.
kotschyi, *Heck.*, Tigris.
enoplus, *Blkr.*, Java, Sumatra.
armatus, *C. & V.*, Java, Sumatra.
repasson, *Blkr.*, Sumatra.
macularius, *Blyth.*, Sitang River.
immaculatus, *M'Clell.* Bengal.
chrysopoma, *C. & V.* India, Cuttalai River, Poona.
pinnauratus, *Day*, Cochin.
spilurus, *Gthr.*, Ceylon.
laoensis, *Gthr.*, Cochin-China.
balleroides, *C. & V.* Habitat.
sarana, *Ham. Buch.*, Bengal, Assam.
rubripinnis, *C. & V.*, Java.
bramoides, *C. & V.*, Java, Borneo.
erythropterus, *Blkr.*, Java, Borneo.
javanicus, *Blkr.*, Java, Sumatra.
altus, *Gthr.*, Siam.
gonionotus, *Blkr.*, Java, Siam.
huguenini, *Blkr.*, Sumatra.
pleurotænia, *Blkr.*, Ceylon.
obtusirostris, *C. & V.*, Java, Sumatra, Borneo.
russellii, *Gthr.*, India, Indus.

polydori, *C. & V.*, Bombay.
platysoma, *Blkr.*, Java.
fasciatus, *Blkr.*, Sumatra, Banka, Borneo.
maculatus, *C. & V.*, Archipelago.
microps, *Gthr.*, Archipelago.
goniosoma, *Blkr.*, Sumatra.
tetrazona, *Blkr.*, Borneo.
lateristriga, *C. & V.*, Archipelago.
amblyrhynchus, *Blkr.*, Java.
micropogon, *C. & V.*, Mysore.
conirostris, *Gthr.*, Nilgherries.
dubius, *Day*, Bowany.
chilinoides, *M'Clell.*, Himalayas.
deauratus, *C. & V.*, Cavery.
spinulosus. *M'Clell.*, Sikkim.
gobioformis, *Kner.*, Java, Asia.
hexastichus, *M'Clell.*, Rivers of Himalaya.
soro, *C. & V.*, Java, Sumatra.
mosal, *Ham. Buch.*, Himalayas, Hindoo-Koosh.
macrocephalus, *M'Clell*, Assam.
macrolepis, *Huck.*, Kashmeer.
tambra, *C. & V.*, Java.
douronensis, *C. & V.*, Sumatra, Java, Borneo.
longispinis, *Gthr.*, Ceylon.
tambroides, *Blkr.*, Java, Sumatra.
arulius, *Jerdon.*, Travancore, Nilgherries.
schlegelii, *Gthr.*, Japan, Formosa.
cetopsis, *Knr.*, Shanghai.
kolus, *Sykes.*, Poona.
homogenes, *Gthr.*, Japan.
homozonus, *Gthr.*, Japan.
aphya, *Gthr.*, Java.
siaja, *Blkr.*, Sumatra, Borneo.
deventeri, *Blkr.*, Java.
heteronema, *Blkr.*, Borneo.
hampal, *Blkr.*, Java, Borneo, Sumatra, Malaya.
ampalong, *Blkr.*, Borneo, Sumatra.
fasciolatus, *Gthr.*, China.
sumatranus, *Blkr.*, Sumatra.
luteus, *Heck.*, Orontes, Tigris.
liacanthus, *Blkr.*, Java, Madras.
dorsalis, *Jerdon.*, Madras.
tetraspilus, *Gthr.*, Ceylon.
thermalis, *C. & V.*, Ceylon, Cachar.
chola, *Ham. Buch.*, Bengal, Assam.
sophoroides, *Gthr.*, Assam, Bengal.
amphibius, *C. & V.*, Bombay.
layardi, *Gthr.*, Ceylon.
brevis, *Blkr.*, Curabaya, Gombong, (Java.)
filamentosus, *C. & V.*, Ceylon, Cochin.
denisonii, *Day*, Malabar.
hamiltonii, *Day*, India.
bimaculatus, *Blkr.*, Ceylon.
oligolepis, *Blkr.*, Sumatra.
afer, *Peters.*, Cape.
bulu, *Blkr.*, Borneo., Siam, Sumatra.
waandersii, *Blkr.*, Java.
lawak, *Blkr.*, Java.
melanopterus, *Bl.*, Sumatra, Siam, Borneo.
apogon, *C. & V.*, Sumatra, Java, Borneo, Banka.
janthochir, *Blkr.*, Borneo.
proctozysron, *Blkr.*, Siam.
duvaucelii, *C. & V.*, Bengal.
sophore, *Ham. Buch.*, Bengal, Himalaya.
chrysopterus, *M'Clell.*, Bramaputra, Peshawar.
ticto, *H. B.*, Bengal, Assam, Himalaya.
conchonis, *Ham. Buch.*, Ganges.
terio, *Ham. Buch.*, Bengal.
puntio, *Ham. Buch.*, Bengal.
titius, *Ham. Buch.*, Bengal, Bramaputra, Assam.
phutunio, *Ham. Buch.*, Bengal.
gelius, *Ham. Buch.*, Bengal, Hooghly.
cumingii, *Gthr.*, Ceylon.
nigro-fasciatus, *Gthr.*, Ceylon.
vittatus, *Day*, Malabar.
modestus, *Kenr.*, Madras.
cosuatis, *Ham. Buch.*, Bengal.
pyrrhopterus, *M'Clell.*, Assam.

Thynnichthys thynnoides, *Blkr.*, Borneo, Sumatra.
polylepis, *Blkr.*, Borneo, Sumatra.

Barbichtys, lævis, *C. & V.*, Java, Sumatra, Borneo.

Amblyrhynchichthys truncatus, *Blkr.*, Borneo, Sumatra.

Albulichthys albuloides, *Blkr.*, Sumatra, Borneo.

Oreinus plagiostomus, *Heck.*, Cashmere, Afghanistan.
sinuatus, *Heck.*, Cashmere, Punjab.
richardsonii, *Gray*, Nepal.

Schizothorax planifrons, *Heck.*, Cashmere.
micropogon, *Heck.*, Cashmere.
hügelii, *Heck.*, Cashmere.
curvifrons, *Heck.*, Cashmere.
niger, *Heck.*, Cashmere.
intermedius, *M'Clell.*, Afghanistan.
nasus, *Heck.*, Cashmere.
longipinnis, *Heck.*, Cashmere.
esocinus, *Heck.*, Cashmere, Afghanistan.
hodgsonii, *Gthr.*, Nepal.
ritchianus, *M'Clell.*, Afghanistan.
barbatus, *M'Clell.*, Cabul.
microlepis, *Kerserl*, Anardareh.

Ptychobarbus cornirostris, *Steindachner.*, Hanle, (Tibet.)

Schizopygopsis stolickæ, *Steindachn.*, Tibet.

Diptychus maculatus, *Steindachn.*, Himalayas, Tibet.

Pseudogobio brevirostris, *Gthr.*, Formosa.
esocinus, *Schleg.*, Japan.
sinensis, *Kner.*, Shanghai.
variegatus, *Schleg.*, Japan.

Bungia nigrescens, *Keyserl.*, Herat.

Pseudorasbora parva, *Schleg.*, Japan, China.

Third Group. RHOTEICHTHYINA.

Rhoteichthys microlepis, *Blkr.*, Borneo, Sumatra.

Fourth Group. LEPTOBARBINA.

Leptobarbus hoevenii, *Blkr.*, Sumatra, Borneo.

Fifth Group. RASBORINA.

Rasbora cephalotænia, *Blkr.*, Borneo, Banka, Biliton.
daniconius, *H. B.*, India, Archipelago.
lateristriata, *Van. Hass.*, Java, Sumatra, Borneo.
kallochroma, *Blkr.*, Borneo, Banka.
argyrotænia, *Blkr.*, Archipelago.
leptosoma, *Blkr.*, Sumatra.
buchanani, *Blkr.*, Assam, Bengal, Pinang.
sumatrana, *Blkr.*, Sumatra.
bankanensis, *Blkr.*, Banka.
nilgherriensis, *Day*, Nilgherries.
zanzibarensis, *Gthr.*, Rovuma.
elanga, *H. B.*, Assam, Bengal.
Luciosoma setigerum, *C. & V.*, Java, Sumatra.
spilopleura, *Blkr.*, Sumatra.
trinema, *Blkr.*, Sumatra, Borneo.
Nuria danrica, *H. B.*, India, Ceylon.
Aphyocypris chinensis, *Gthr.*, Chikiang.
Amblypharyngodon-mola, *H. B.*, Bengal, Assam.
pellucidus, *M'Clell.*, Bengal, Assam, Tennasserim.
melettinus, *C. & V.*, Bombay, Malabar, Ceylon.

Sixth Group. SEMIPLOTINA.

Cyprinion macrostomus, *Heck.* Tigris, Aleppo.
kais, *Heck.*, Tigris, Aleppo.
tenuiradius, *Heck.*, Araxes, Kara-Agatsch.
Semiplotus m'clellandii, *Blkr.*, Assam.

Seventh Group. XENOCYPRIDINA.

Xenocypris argentea, *Gthr.*, China.
Paracanthobrama guichenoti, *Blkr.*, China.
Mystacoleucus padangensis, *Blkr.*, Sumatra.

Eighth Group. LEUCISCINA.

Leuciscus lepidus, *Heck.*, Tigris.
coreensis, *C. & V.*, China.
rosetta, *C. & V.*, China.
fintella, *C. & V.*, China.
chevanella, *C. & V.*, China.
jesella, *C. & V.*, China.
cupreus, *C. & V.*, China.
æneus, *C. & V.*, China.
vandella, *C. & V.*, China.
piceus, *Rich.*, China.
plenus, *Rich.*, China.
homospilotus, *Rich.*, China.
æthiops *Basil. Rich.*, China.
Ctenopharyngodon idellus, *C. & V.*, China.

Ninth Group. RHODEENA.

Achilognathus himantegus, *Gthr.*, Formosa.
limbatus, *Schl.*, Japan.
intermedius, *Schl.*, Japan.
melanogaster, *Blkr.*, Japan.
imberbis, *Gthr.*, China.
rhombeus, *Schl.*, Japan.
Rhodeus sinensis, *Gthr.*, China.
ocellatus, *Kenr.*, China.
Pseudoperilampus typus, *Blkr.*, Japan.

Tenth Group. DANIONINA.

Danio dangila, *H. B.*, Behar.
lineolatus, *Blyth.*, Sikkim.
micronema, *Blkr.*, Ceylon, India, Nilgherries, N. India.
alburnus, *Heck.*, Bombay.
malabaricus, *Jerdon*, Malabar.
nilgherriensis, *Day*, Nilgherries.
canarensis, *Jerdon*, Canara.
devario, *H. B.*, Bengal.
Pteropsarion bakeri, *Day*, Travancore.
æquipinnatus, *M'Clell*, Assam.
Aspidoparia sardina, *Heck.*, Assam, Bengal.
morar, *H. B.* Yamuna, Hista, Brahmaputra.
jaya, *H. B.*, Behar.
Barilius tileo, *H. B.*, Ganges, Brahmaputra.
radiolatus, *Gthr*, India, Malva.
bendelisis, *Buch.*, Mysore, Ganges.
cocsa, *H. B.*, India, Simla, Nepal.
alburnus, *Gthr.*, Nepal, Himalayas.
morarensis, *Gthr.*, Gwalior.
bicirratus, *M'Clell.* Khyber, Cabul.
barna, *H. B.*, Ganges, Bramaputra, Jumna.
barila, *H. B.*, Bengal.
gatensis, *C. & V.*, India.
rugosus, *Day*, Nilgherries.
rerio, *H. B.*, Bengal.
zambezensis, *Ptrs.*, Zambezi.
sardella, *Gthr.*, Africa.
Bola goha, *H. B.* Bengal, Assam.
salmoides, *Blyth.*
Schacra cirrhata, *M'Clell.* Bengal, Assam.
Opsariichthys uncirostris, *Schleg.*, Japan.
sieboldii, *Schl.*, Japan.
temminckii *Schl*, Japan.
pachycephalus, *Gthr.*, Formosa.
platypus, *Schl.*, Japan, Formosa.
Squaliobarbus curriculus, *Rich.*, China.
Ochetobius elongatus, *Kenr.*, Shanghai.

Eleventh Group. HYPOPHTHALMICHTHYINA.

Hypophthalmichthys molitrix, *C. & V.*, China.
nobilis, *Gray*, China.

Twelfth Group. ABRAMIDINA.

Aspius vorax, *Leske*, Tigris.
spilurus, *Gthr.*, China.

Alburnus caudimacula, *Heck.*, Kner, Kara.
capito, *Heck.*, Kurdistan.
iblis, *Heck.*, Persia.
scheitan, *Heck.*, Araxes.
megacephalus, *Heck.*, Araxes.
mossulensis, *Heck.*, Tigris.

Rasborichthys helfrichii, *Blkr.*, Borneo.
Elopichthys bambusa, *Richards*, China.
Acanthobrama arrhada, *Hecka.*, Tigris.
centisquama, *Heck.*, Damascus.

Osteobrama cotio, *H. B.*, Bengal, Dekkan, Godavery.
rapax, *Gthr.*, India.
alfrediana, *C. & V.*, Nepal, Bengal, Assam, Tennasserim.
agilbii, *Sykes.*, India.
microlepis, *Blyth.*, Maulmein.

Chanodichthys mongolicus, *Basil.*, Mongolia, Mantschuria.
macrops, *Gthr.*, Formosa.
terminalis, *Rich.*, China.
bramula, *C. & V.*, China.
pekinensis, *Basil.*, Peking.
leucisculus, *Basil.*, China.
Smiliogaster belangerii, *C. & V.*, Bengal.
Culter recurviceps, *Richards.*, China.
brevicauda, *Gthr.*, Formosa.
Eustira ceylonensis, *Gthr.*, Ceylon.
Chela gora, *H. B.*, Bengal, Assam.
bacaila, *H. B.*, Bengal, Soan, Cossya, Cachar, Assam, Maulmein.
clupeoides, *Bloch.*, Tranquebar, Mysore.
phulo, *H. B.*, Bengal.
novacula, *Val.*, India.
diffusa, *Jerdon*, Cavery.
argentea, *Day*, Nilgherries.
laubuca, *H. B.*, Bengal, Hooghly.
acinaces, *C. & V.*, Mysore.
anomalurus, *V. H.*, Java, Sumatra, Borneo.
hypophthalmus, *Blkr.*, Sumatra.
siamensis, *Gthr.*, Siam.
megalolepis, *Gthr.*, Java, Sumatra, Borneo.
paralaubuca, *Gthr.*, Bankok.
sardinella, *C. & V.*, Irawaddi.
macrochir, *C. & V.*, Sumatra, Borneo, Java.
Pseudolaubuca sinensis, *Blkr.*, China.
Cachius atpar, *H. B.*, Bengal, India.

Thirteenth Group. HOMALOPTERINA.

Homaloptera maculata, *Gay*, Boutan, Kassayah, Assam.
brucei, *Gray*, India.
pavonina, *C. & V.*, Java, Sumatra.
gymnogaster, *Blkr.*, Sumatra.
zollingeri, *Blkr.*, Java, Sumatra.
ophiolepis, *Blkr.*, Java, Sumatra.
wassinkii, *Blkr.*, Java, Sumatra.
lineolata, *C. & V.*, Cohin-China.
Psilorhynchus sucatio, *H. B.*, Bengal.
balitora, *H. B.*, Bengal, Assam.

Fourteenth Group. COBITIDINA.

Misgurnus anguillicaudatus, *Cantor*, China, Japan, Chusan, Formosa.
dichachrous, *Blkr.*, Jeddo.
polynema, *Blkr.*, Jeddo.
lateralis, *Gthr.*, Bengal.
Nemachilus pavonaceus, *Van. Hass.*, Assam.
semizonatus, *Blyth.*, Tennassirim.
rubidipinnis, *Blyth.*, Tennasserim.
urophthalmus, *Gthr.*, Ceylon.
botia, *H. B.*, Bengal.
fasciatus, Ket. *V. H.*, Java Su-matra, Borneo.
montanus, *M'Clell.*, Simla.
beavani, *Gthr.*, Bengal.
rupecola, *M'Clell.*, Himalayas.
subfuscus, *M'Clell.*, Assam.
nudus, *Blkr.*, Mongolia.
denisonii, *Day*, Nilgherries.
notostigma, *Blkr.*, Ceylon.
triangularis, *Day*, Travancore.
semiarmatus, *Day*, Nilgherries.
striatus, *Day*, Wynaad.
savona, *H. B.*, Bengal.
panthera, *Heck.*, Damascus.
marmoratus, *Heck.*, Cashmere.
ladacensis, *Gthr.*, Tibet.
microps, *Steindachn.*, Tibet.
tenuicauda, *Steind.*, Tibet, Ladak.
spilopterus, *C. & V.*, China, Assam.
butanensis, *M'Clell.*, Butan.
monoceros, *M'Clell.*, Assam.
frenatus, *Heck.*, Tigris.
stolickæ, *Steind.*, Tsumureri.
griffithii, *Gthr.*, Assam.
turio, *H. B.*, Hindostan.
corica, *H. B.*, Bengal, Assam.
guentheri, *Day.*, Nilgherries.
Cobitis guttata, *M'Clell.*, Vicinity of Joornath.
phoxochila, *M'Clell.*, Mishmee.
tænia, L., Europe, Japan.
guntea, *H. B.*, Assam, Bengal.
gongota, *H. B.*, Assam, Bengal.
Lepidocephalichthys hasseltii, *C. & V.*, Java.
thermalis, *C. & V.*, Ceylon, India.
balgara, *H. B.*, Kosi, Assam.
Acanthopsis chœrorhynchus, *Blkr.*, Sumatra, Tennasserim.
dialyzona, *Van. Hass.*, Java, Borneo.
Botia dario, *H. B.*, Bengal, Assam.
almorhæ, *Gray*, India.
rostrata, *Gthr.*, Assam, Bengal.
macracanthus, *Blkr.*, Sumatra, Borneo.
modesta, *Blkr.*, Siam.
curta, *Schleg.*, Japan.
hymenophysa, *Schleg.*, Java, Sumatra, Borneo, Siam.
Oreonectes platycephalus, *Gthr.*, China.
Acanthopthalmus pangia, *H. B.*, Bengal, Java, Sumatra.

kuhlii, *C. & V.*, Java, Sumatra.
Apua fusca, *Byth.*

Fam. 18. GONORHYNCHIDÆ.

Gonorhynchus greyi, *Rich.*, Cape, Australia, Zealand, Japan.

Fam. 20. OSTEOGLOSSIDÆ.

Osteoglossum formosum, *Mull. Schl.*, Borneo, Banka, Sumatra.

Fam. 21. CLUPEIDÆ.

First Group. ENGRAULINA.

Engraulis zollingeri, *Blkr.*, *Bali*, Sumbawa, Celebes.
encrasicholoides, *Blkr.*, Archipelago, Siam.
commersonianus, *Lacép.*, India, Archipelago, Australia.
tri, *Blkr.*, Java, Banka, Borneo.
brownii, *Gm.*, Ceylon
japonica, *Houttuyn*, Japan, China.
russellii, *Blkr.*, Indies.
perfasciatus, *Poey.*, San-Domingo, Cuba.
heterolopus, *Rüpp.*, Red Sea, Archipelago, Surinam.
boelama, *Forsk.*, Red Sea, Indian Ocean.
rhinoryhnchus, *Blkr.*, Java, Borneo.
polynemoides, *Gthr.*, Madagascar.
malabaricus, *Bl.*, Malabar.
hamiltonii, *Gray*, India, China.
mystacoides, *Blkr.*, India, Amoy, China, Archipelago.
purava, *H. B.*, India.
mystax, *Bl., Schn.*, India, Bombay, Java, Madras.
setirostris, *Brouss.*, Indian Ocean, Pacific.
crocodilus, *Blkr.*, Borneo.
melanochir, *Blkr.*, Archipelago, Siam.
taty, *C. & V.*, Bengal, Archipelago.
telaru, *H. B.*, Bengal, Cachar.
breviceps, *Cant.*, Pinang, Borneo.
Coilia ramcarati, *H. B.*, Hindostan, Borneo.
quadrifilis, *Gthr.*, Pinang, Malaya, Singapore.
dussumieri, *C. & V.*, India.
borneensis, *Blkr.*, Sumatra, Borneo.
quadragesimalis, *C. & V.*, Ganges.
clupeoides, *Lacép.*, China.
lindmani, *Blkr.*, Sumatra.
grayi, *Rich.*, China.
nasus, *Schl.*, China, Japan.
macrognathus, *Blkr.*, Borneo.

Second Group. CHATOESSINA.

Chatoessus nasus, *Bl.*, India, Cochin, Java, Amboyna.
punctatus, *Schl.*, China, Japan.
maculatus, *Rich.*, China, Formosa.
chanpole, *H. B.*, Bengal.
chacunda, *H. B.*, India, Cochin, Ganges, Siam, Borneo.

Third Group. CLUPEINA.

Clupea argyrotænia, *Bl.*, Java, Banka, Pinang.
brachysoma, *Blkr.*, Java.
perforata, *Cant.*, Archipelago.
albella, *C. & V.*, Pondicherry.
sirm, *Forsk.*, Red Sea, Indian Ocean, Archipelago.
clupeoides, *Blkr.*, Macassar, Batavia.
tempany, *Blkr.*, Archipelago.
atricauda, *Gthr.*, Ceram, Amboyna.
moluccensis, *Blkr.*, Molucca, Ceylon.
fimbriata, *C. & V.*, Indian Ocean, Pinang, Madras.
longiceps, *C. & V.*, Pondicherry.
nymphæa, *Rich.*, China.
dispilonotus, *Blkr.*, Banka.
jussieui, *Lacép.*, Mauritius.
melanosticta, *Schl.*, China, Japan.
lemuru, *Blkr.*, Java.
hypselosoma, *Blkr.*, Amboyna.
sagax, *Jaynyns.*, America, Japan, Zealand.
Indica, *Gray.*, Bengal, Assam.
palasah, *C. & V.*, Bengal, India.
ilisha, *H. B.*, Indian Ocean, Archipelago.
reevesii, *Rich.*, China.
toli, *C. & V.*, Archipelago.
chapra, *Gray*, Bengal.
macrura, *K. & v. H.*, Java, Sumatra, Singapore.
platygaster, *Gthr.*, Sumatra.
scombrina, *C. & V.*, India, Ceylon.
melanura, *C. & V.*, Indian Ocean, Archipelago.
venenosa, *C. & V.*, Indian Ocean, Zanzibar.
lile, *C. & V.*, Malabar.
kowal, *Rüpp.*, Red Sea, Indian Ocean, China.
zunasi, *Blkr.*, Japan.

Clupeoides hypselosoma, *Blkr.*, Borneo.
borneensis, *Blkr.*, Borneo.
pseudopterus, *Blkr.*, Borneo.
Clupeichthys goniognathus, *Blkr.*, Sumatra.

Pellona ditchoa, *C. & V.*, Indian Ocean.
hoevenii, *Blkr.*, Archipelago.
motius, *H. B.*, India.
brachysoma, *Blkr.*, Java, Sumatra.
elongata, *Benn.*, India, China, Sumatra, Archipelago, Japan.
dussumieri, *C. & V.*, India.
xanthoptera, *Blkr.*, Borneo.
macrogaster, *Blkr.*, Borneo.
novacula, *Blkr.*, Java, Rangoon.
leschenaultii, *C. & V.*, Pondicherry.
pristigastroides, *Blkr.*, Java, Borneo.
amblyuroptera, *Blkr.*, Java, Sumatra, Siam.

Pristigaster tartoor, *C. & V.*, India.
macrognathus, *Blkr.*, Archipelago.
macrops, *Gthr.*, Panama.
russellianus, *Gray*, Bay of Bengal, Malaya.

Fourth Group. DUSSUMIFRIINA.

Spratelloides delicatulus, Indian Ocean, Archipelago, Australia.
gracilis, *Schleg.*, Japan, Celebes, Ternate.
Dussumieria acuta, *C. & V.*, India.
elopsoides, *Blkr.*, India, China.
Etrumeus micropus, *Schleg.*, Japan.

Fifth Group. ALBULINA.

Albula conorhynchus, *Bl., & Schn.* Archipelago, Pinang, Singapore, Ceylon, Natal, Zanzibar, Red Sea.

Sixth Group. ELOPINA.

Elops saurus, *L.*, Tropical, Subtropical, Zanzibar, Africa, Djedda, Pinang, China.
Megalops cyprinoides, *Brouss.*, Zanzibar, Madras, Bengal, Pinang, Sumatra, Java, Amboyna, Archipelago.

Seventh Group. CHANINA.

Chanos salmoneus, *Forst.*, Indian Ocean, Pacific Ocean, Red Sea, Zanzibar, Seychelles, Ceylon.

Fam. 22. CHIROCENTRIDÆ.

Chirocentrus dorab, *Forsk*, Indian Ocean, Archipelago, China, Japan.

Fam. 24. NOTOPTERIDÆ.

Notopterus chitala, *H. B.*, India, Archipelago.
borneensis, *Blkr.*, Borneo, Sumatra.
kapirat, *Lacép.*, India.
afer, *Gthr.*, Africa.

Fam. ANGUILLIDÆ.

Anguilla johannæ, *Gthr.*,
labiata, *Pet.*,
amblodon, *Gthr.*,
virescens, *Pet.*, Mozambique.
macrophthalma, *Pet.*, Mozambique.
mossambica, *Pet.*, Mozambique.
marmorata, *Q. & G.*, Reunion.
japonica, *Sieb*, Japan.

Fam. CONGRIDÆ.

Conger altipinnis, *Kp.*
talabon *Cuv.*, Archipelago.
bagio, *Cant.*, Mozambique.
cinereus, *Rüpp.*, Mozamb.
vulgaris, *Sieb.*, Japan.
anago, *Sieb.*, Japan.
urolophus, *Sieb.*, Japan.
uropterus, *Sieb.*, Japan.
hamo, *Sieb* , Japan.

Fam. MURÆNIDÆ.

Muræna chlorostigma, *Kp.*
thyrsoidæa, *Richards*, Pinang, China.
tessellata, *Richards.*
sathete, *B. H.*, Pinang, Ganges.
isingleena, *Richards.*
isinglecnoides, *Kp.*
picta, *Ahl.*
nubila, *Richards.*,
flavimarginata, *Rüpp.*
nudivomer, *Gthr.*
variegata, *Forst*, Mozamb.
zebra, *Shaw*, Mozambique.
diplodon, *Pet.*, Mozambique.
fascigula, *Pet.*, Mozambique.
helena, *L.*, Madagascar.
cancellata, *Kp.*, Madagascar.
tile, *Buch, Ham.*, Reunion.
grisea, *Commers*, Reunion.
bullata, *Richards*, Reunion.
mauritiana, *Kp.*, Reunion.
guttata, *Kp.*, Reunion.
moringua, *Kp.*, Reunion.
unicolor, *Rüpp.*, Reunion.
kidako, *Sieb.*, Japan.
albimarginata, *Sieb* , Japan.
pardalis. *Sieb.*, Japan.
minor, *Sieb.*, Japan.

Fam. OPHIURIDÆ.

Ophiurus marginatus, *Pet*
baccidens, *Canton*, Straits.
maculosus, *Cuv.*, Madag.
boro, *B. H.*, Bay of Bengal.
grandoculis, *Canton*, Pinang.
cancrivomer, *Richards*, Maur.
breviceps, *Canton*, Pinang.
Ophisurus serpens, *Sieb* , Japan.
porphyreus, *Sieb.*, Japan.
Sphagebranchus brevirostris, *Pet.*, Mozamb.

Fam. LEPTOCEPHALIDÆ.

Leptocephalus marginatus, *Q. & G*
dentex, *Cant.*
capensis, *Lal.*

V.—ORDER PLECTOGNATHI.

Fam. OSTRACIONIDÆ.

Ostracion turritus, *Forsk.*
cornutus, *Linne.*, Straits, China, Archip.
arcus, *Schn.*
tesserula, *Canton.*, Penang.
immaculatus, *Sieb.*, Japan.
stictonosus, *Sieb.*, Japan.
brevicornis, *Sieb.*, Japan.
fornasini, *Blance.*
nasus, *Block.*, Malaya.
tetragonus, *L.*
punctatus, *Lacép.*
bombifrons, *Hollard.*
quadricornis, *L.*, Reunion.
triqueter, *L.*, Reunion.
concatenatus, *Schn.*, Reunion.

Fam. GYMNODONTIDÆ.

Diodon reticulatus, *Will.*

triedricus, *Cuv.*, Penang.
tigrinus, *Sieb.*, Japan.
novem-maculatus, *Sieb.*, Japan.
antennatus, *Cuv.*, Mozamb.
sexmaculatus, *Cuv.*, Maur.
hystrix, *L.*, Reunion.
orbicularis, *Schn.*, Reunion.

Tetrodon honkenii, *Rüpp.*
immaculatus, *Lacép.*, Madras, Penang.
argenteus, *Lacép.*
simulans, *Cantor.*, Penang, Singapore.
lunaris, *Schn.*
inermis, *Sieb.*, Japan.
vermicularis, *Sieb* , Japan.
stictonotus, *Sieb.*, Japan.
firmamentum, *Sieb.*, Japan.
pardalis, *Sieb.*, Japan.
porphyreus, *Sieb.*, Japan.
rubripes, *Sieb.*, Japan.
xanthopterus, *Sieb.*, Japan.
rivulatus, *Sieb.*, Japan.
grammatocephalus, *Sieb.*, Japan.
lineatus, *Sieb.*, Japan.
carduus, *Cantor.*, Penang.
lineatus, *Bl.*
testudineus, *Lin.*, Indian Ocean, Penang.
laterna, *Richards.*
bondarus, *Cantor.*, Vizagapatam, Penang.
stellatus, *Lacép.*
lunaris, *Cuv.*, Bengal Bay, Archipelago.
nigropunctatus, *Schn.*
oblongus, *Bloch.*, Indian Ocean, Penang.
immaculatus, *Lacép.*
dissutidens, *Cant.*, Coromandel, Penang.
valentyni, *Bllkr.*
naritus, *Richards.*, Penang, Borneo.
margaritatus, *Rüpp.*
pœcilonotus, *Schleg.*, Mozamb.
bernieri, *Kp.*, Madagascar.
lagocephalus, *Bibr.*, Reunion.
hispidus, *Bibr.*, Reunion.
Triodon bursarius, *Reinw.*, Reunion.

Fam. BALISTIDÆ.

Erythrodon niger, *Lacép.*
Balistes cærulescens, *Rüpp.*
frenatus, *Lacép.*
armatus, *Lacép.*
aculeatus, *L.*
lineatus, *Schn.*
rectangulus, *Schn.*
stellatus, *Lacép.*
viridescens, *Lacép.*
niger, *Osbeck.*
conspicillum, *Cuv.*, Madag. to Archip.
forcipatus, *Gr.*, Mozambique.
flavimarginatus, *Rüpp.*, Mozambique.
bursa, *Sonn.*, Mauritius.
vetula, *L.*, Madagascar.
Monacanthus isogramma, *Bllkr.*
tomentosa, *L.*, Indian Ocean, Penang.
pardalis, *Rüpp.*
cirrhifer, *Sieb.*, Japan.
oblongus, *Sieb.*, Japan.
geographicus, *Peron.*, Straits.
fronticinctus, *Gthr.*,
pencilligerus, *Peron.*, Straits.
hystrix, *Cuv.*, Mauritius.
frenatus, *Pet.*, Mozambique.

Aleuteres monoceros, *Osbeck.*
nasicornis, *Schleg.*
scriptus, *Osbeck.*
lævis, *Cuv.*, Reunion.
cinerea, *Sieb.*, Japan.
nasicornis, *Sieb.*, Japan.
Triacanthus brevirostris, *Sieb.*, Japan.
anomalus, *Sieb.*, Japan.

VI.—ORDER. LOPHOBRANCHII.

Solenostoma cyanopterum, *Bllkr.*
Pegasus draco, *L.*
Hippocampus mannulus, *Cant.*, E. Africa, Pinang.
comes, *Cantor*, Penang.
hystrix, *Kp.*
punctulatus, *Kp.*
guttulatus, *Cuv.*
monikei, *Bllkr.*
subcoronatus, *Gthr.*
longirostris, *Sieb.*, Japan.
brevirostris, *Sieb.*, Japan.
gracillimus, *Sieb.*, Japan.
coronatus, *Sieb.*, Japan.

Syngnathus biaculeatus, *Bl.*
penicillus, *Cantor*, Penang.
fasciatus, *Gray.*
biaculeatus, *Bloch.*, Straits to Archipelago.
zanzibarensis, *Gthr.*
mossambicus, *Pet.*
hæmatopterus, *Bllkr.*, Zanzibar.
goudoti, *Kp.*, Madagascar.
laterna, *Bllkr.*, Mauritius.
lineatus, *Bllkr.*, Mozambique.
millepunctatus, *Kp.*, Madag.
liaspis, *Kp.*, Madagascar.
brachyrhynchus, *Kp.*, Reun.
pelagicus, *L.*, Reunion.
serratus, *Sieb.*, Japan.
tenuirostris, *Sieb.*, Japan.

VII.—ORDER. CHONDROPTERYGII.

Ginglymostoma brevicaudatum, *Gthr.*
concolor, *Rüpp.*, Africa to Straits.

Stegostoma fasciautum, *M. & H.*

Carcharias acutus, *Rüpp.*, E. Africa to Archipelago.
zambezensis, *Pet.*, Mozamb.
japonicus, *Sieb.*, Japan.
melanopterus. *Q. & G.*, Red Sea to Polynesia.
sorrab, *Val.*, Madagascar.

Zygæna malleus, *Shaw.*
tudes, *Cuv.*
blochii, *Valen.*, Bengal Bay, Archipelago.
Alopias vulpes, *Bonap.*, Mauritius.
Hexanchus griseus, *Raf.*, Reunion.
Acanthias vulgaris, *Riss.* Reunion.
Scymnus brasiliensis, *Cuv.*, Mauritius.
Lemurgus labordii, *Q. & G.*, Mauritius.
Pristis antiquorum, *Lath.*
semisagittatus, *Shaw.*, Bengal Bay, Straits.
peroteti, *C. & H.*
Rhinobatus schlegelii, *M. & H.*
lœvis, *Sieb.*, Japan.
ligonifer, *Cantor.*, Straits.
Raja asterias, *Rond.*, Mauritius.
kenojei, *Sieb.*, Japan.
Urogymnus asperrimus, *M. & H.*, Seych.

Fam. TORPEDINIDÆ.

Torpedo marmorata, *Rudol.*, Maur.
fuscomaculata, *Pet.*
japonica, *Sieb.*, Japan.

Fam. TRIGONISIDÆ.

Rachinotus Africanus, *Bloch.*, Penang.
Trygon uarnak, *Forsk.*
kuhlii, *Sieb.*, Japan.
akajei, *Sieb.*, Japan.
zugei, *Sieb.*, Japan.
pastinaca, *L.*
Tæniura lymna, *Forsk.*, E. Africa to Polynesia.
meyeni, *M. & H.*, Reunion.

Fam. MYLIOBATIDIDÆ.

Myliobatis aquila, *C.*, *Dum.*, Reunion.
Ætobatis narinari, *C. & H.*, Reunion.
Cephaloptera kuhlii, *M. & H.*
japonica, *Sieb.*, Japan.

Drs. Gunther's Catalogue of the Fishes in the British Museum, Cantor, Fishes of the Straits Settlements in Bengal, Asiatic Soc. Journ. and Playfair and Dr. Gunther fishes of Zanzibar, Siebold Fishes of Japan.

I. ACANTHOPTERYGII
II. ACANTHOPTERYGII PHARYNGOGNATHI.
III. ANACANTHINI

THE SUB-C

SUB-CLASS I.—Teleostei.

ORDER I.—Acanthopterygii.

FAM. I.—Gasterosteidæ.

Gen 11—Gasterosteus

FAM. 2.—Berycidæ. p. 165.

Gen 1 Monocentris, 1 Hoplostethus, 2 Trachichthys, 1 Anoplogaster, 9 Myripristis, 1 Heterophthalmus, 5 Beryx, 2 Polymixia, 26 Holocentrum, 2 Rhynchichthys.

FAM. 3.—Percidæ. p. 166.

FIRST GROUP.—Percina.

Gen 3 Perca, 5 Percichthys, 2 Paralabrax, 8 Labrax, 2 Lates, 1 Cmdon, 2 Psammoperca, 1 Percalabrax, 3 Acerina, 1 Perçarina, 6 Lucioperca, 2 Pileoma, 3 Bolcosoma, 2 Aspro, 1 Etelis, 1 Centropomus, 1 Niphon, 1 Enoplosus.

SECOND GROUP.—Serranina.

Gen. 1 Aphon, 1 Apsilus, 15 Centropristis, 1 Callanthias, 13 Anthias, 1 Anyperodon, 1 Prionodes, 135 Serranus, 27 Plectropoma, 1 Trachypoma 1 Polyprion, 1 Pogonoperca, 1 Grammistes, 3 Rhypticus, 1 Aulacocephalus, 1 Diplophon, 1 Myriodon, 19 Genyoroge, 45 Mesoprion, 1 Glaucosoma

THIRD GROUP.—Pentaceratina.

Gen. 3 Pentaceros, 1 Oreosoma

FOURTH GROUP.—Priacanthina. p. 167.

Gen. 15 Priacanthus

FIFTH GROUP.—Apogonina. p. 168.

Gen. 19 Ambassis, 1 Microichthys, 58 Apogon, 9 Apogonichthys, 5 Chilodipterus, 1 Scombrops, 1 Pomatomus, 1 Acropoma.

SIXTH GROUP.—Grystina.

Gen. 2 Oligorus, 1 Grystes, 3 Arripis, 1 Huro, 1 Percilia, 1 Lembus, 12 Centrarchus, 8 Bryttus, 1 Pomotis, 1 Anoplus, 1 Odontonectes, 11 Dules.

FAM. 4.—Aphredoderidæ.

Gen 1 Aphredoderus Sayanus.

FAM. 5.—Pristipomatidæ p. 169.

Gen. 16 Therapon, 3 Helotes, 1 Macquaria, 34 Pristipoma, 1 Conodon, 14 Hæmulon, 2 Hapalogenys, 31 Diagramma, 1 Hyperoglyphe, 1 Lobotes, 2 Datnioides, 20 Gerres, 21 Scolopsis, 6 Heterognathodon, 13 Dentex, 19 Synagris, 1 Pristipomoides, 9 Pentapus, 1 Chætopterus, 2 Aphareus, 3 Mæna, 7 Smaris, 12 Cæsio, 4 Erythrichthys, 1 Pentaprion, 1 Polycentrus.

FAM. 6.—Mullidæ. p 170.

Gen 7 Upeneoides, 1 Upeneichthys, 2 Mullus, 5 Mulloides, 19 Upeneus.

FAM. 7.—Sparidæ.

FIRST GROUP.—Cantharina.

Gen 9 Cantharus, 3 Box, 1 Scatharus, 1 Oblata, 1 Cronidens, 1 Pachymetopon, 1 Dipterodon, 1 Proteracanthus, 4 Girella, 1 Doydixodon, 2 Tephræops, 1 Gymnocrotaphus.

SECOND GROUP.—Haplodactylina.

Gen. 5 Haplodactylus.

THIRD GROUP.—Sargina. p. 171.

Gen. 17 Sargus, 1 Charax.

FOURTH GROUP.—Pagrina.

Gen. 22 Lethrinus, 2 Sphærodon, 12 Pagrus, 7 Pagellus, 18 Chrysophrys

FIFTH GROUP.—Pimelepterina.

Gen 6 Pimelepterus, 1 Boridia.

FAM. 8.—Squamipinnes.

FIRST GROUP.—Chætodontina.

Gen 67 Chætodon, 5 Chelmo, 4 Heniochus, 36 Holacanthus, 1 Pomacanthus, 5 Scatophagus, 4 Ephippus, 1 Drepane, 1 Hypsinotus.

SECOND GROUP.—Scorpidina.

Gen. 3 Scorpis, 1 Atypus.

THIRD GROUP.—Toxotina.

Gen Toxotes.

FAM. 9.—Cirrhitidæ.

Gen 7 Cirrhites, 5 Cirrhitichthys, 1 Oxycirrhites, 3 Chironemus, 14 Chilodactylus, 1 Mendosoma, 1 Nemadactylus, 2 Latris

FAM. 10.—Triglidæ. p. 172.

FIRST GROUP.—Heterolepidina.

Gen 8 Chirus, 2 Ophidion, 1 Agrammus, 1 Zanclepis.

SECOND GROUP.—Scorpænina.

Gen 25 Sebastes, 21 Scorpæna, 1 Glyptauchen, 9 Pterois, 1 Pteroidichthys, 1 Tæniamotus, 4 Centropogon, 2 Apistus, 1 Enneapterygius, 1 Pentaroge, 10 Tetraroge, 7 Agriopus, 8 Prosopodasys, 3 Aploactis, 1 Trichopleura, 1 Hemitripterus, 1 Amphiprionichthys, 2 Synancidium, 2 Synanceia, 2 Micropus, 3 Minous, 6 Pelor, 1 Chorismodactylus

THIRD GROUP.—Cottina. p. 173.

Gen 2 Podabrus, 2 Blepsias, 1 Nautichthys, 1 Scorpænichthys, 26 Cottus, 10 Centridermichthys, 1 Icelus, 1 Triglops, 2 Hemilepidotus, 2 Artedius, 1 Ptyonotus, 1 Polycaulus, 29 Platycephalus, 1 Hoplichthys, 2 Bembras, 8 Prionotus, 6 Lepidotrigla, 14 Trigla.

FOURTH GROUP.—Cataphracti.

Gen 10 Agonus, 2 Aspidophoroides, 6 Peristethus, 4 Dactylopterus, 1 Cephalacanthus

FAM. 11.—Trachinidæ. p 174.

FIRST GROUP.—Uranoscopina.

Gen 10 Uranoscopus, 1 Agnus, 3 Anema, 1 Cathetostoma, 1 Leptoscopus

SECOND GROUP.—Trachinina.

Gen. 5 Trachinus, 13 Percis, 3 Aphritis, 8 Sillago, 2 Elegmus, 1 Epicopus, 1 Percophis, 1 Chæmichthys 3 Bovichthys, 1 Trichodon 1 Homalopomus

THIRD GROUP.—Pinguipedina.

Gen 3 Pinguipes, 5 Latilus

FOURTH GROUP.—Pseudochromides.

Gen. 5 Opisthognathus, 7 Pseudochromis, 3 Cichlops, 1 Pseudoplesiops, 9 Notothenia, 1 Harpagifer, 1 Heterostichus.

FAM. 12.—Sciænidæ.

Gen. 4 Larimus, 2 Pogonias, 2 Micropogon, 15 Umbrina, 3 Eques, 3 Pachyurus, 25 Sciæna, 22 Corvina, 17 Otolithus, 2 Ancylodon, 3 Colichthys, 1 Nebris, 2 Lonchurus

FAM. 13.—Polynemidæ. p, 175.

Gen 21 Polynemus, 1 Pentanemus, 1 Galeoides

FAM. 14.—Sphyrænidæ.

Gen. 15 Sphyræna.

FAM. 15.—Trichiuridæ.

Gen 1 Aphanopus, 1 Lepidopus, 6 Trichiurus, 1 Epinnula, 1 Dicrotus, 6 Thyrsites, 2 Gempylus.

FAM. 16.—Scombridæ

FIRST GROUP.—Scombrina.

Gen. 12 Scomber, 13 Thynnus, 5 Pelamys, 12 Auxis, 9 Cybium, 1 Nauclates, 1 Elacate, 10 Echeneis, 1 Hypsiptera

SECOND GROUP.—Nomeina.

Gen 1 Gasterochisma, 2 Nomeus, 2 Cubiceps, 1 Neptomenus, 1 Platystethus, 1 Ditrema

THIRD GROUP.—Cyttina.

Gen. 6 Zeus, 2 Cyttus, ... Oreosoma.

FOURTH GROUP.—Stromateina.

Gen. 9 Stromateus, 3 Centrolophus

FIFTH GROUP.—Coryphænina.

Gen. 6 Coryphæna, 4 Brama, 1 Taractes, 4 Pteraclis, 3 Schedophilus, 1 Diana, 1 Ausonia, 1 Meneo, 1 Lampris.

FAM. 17.—Carangidæ.

FIRST GROUP.—Carangina

Gen. 1 Trachurus, 1 Caranginchthys, 70 Caranx, 2 Argyreiosus, 1 Micropteryx, 12 Seriola, 3 Seriolella, 1 Seriolichthys, 6 Naucrerus, 1 Porthmeus, 9 Chorinemus, 5 Lichia 1 Temnodon, 9 Trachynotus, 1 Pammelas, 1 Paropsis, 3 Psettus, 7 Platax, 2 Zanclus, 5 Psenes, 1 Capros, 1 Antigonia, 17 Equula, 3 Gazza, 1 Lactarius.

SECOND GROUP.—Kurtina.

Gen 6 Pempheris, 1 Kurtus

FAM. 18.—Xiphiidæ.

1 Xiphias, 6 Histiophorus.

FAM. 19.—Gobiidæ p. 177.

FIRST GROUP.—Gobiina.

Gen. 152 Gobius, 2 Euctenogobius, 2 Latrunculus, 10 Apocryptes, 1 Evorthodus, 6 Gobiosoma, 7 Gobiodon, 2 Trænophorichthys, 1 Tridentiger, 1 Benthophilus, 13 Sicydium, 1 Lentipes, 3 Periophthalmus, 5 Boleophthalmus, 48 Electris, 1 Asteropteryx.

SECOND GROUP.—Amblyopina.

Gen 8 Amblyopus

THIRD GROUP.—Trypauchenina.

Gen 2 Trypauchen, 1 Trypauchenichthys.

FOURTH-GROUP.—Callionymina

Gen 1 Platyptera, 22 Callionymus, 1 Vulsus, 1 Luciogobius, 1 Oxymetopon.

FAM. 20.—Discoboli

FIRST GROUP.—Cyclopterina.

Gen 3 Cyclopterus.

SECOND GROUP.—Liparidina.

Gen 8 Liparis.

FAM. 21.—Oxudercidæ. p. 179.

Gen 1 Oxuderces.

FAM. 22.—Batrachidæ.

Gen 9 Batrachus, 1 Thalassophryne, 2 Porichthys.

FAM. 23.—Pediculati.

Gen. 3 Lophius, 2 Brachionichthys, 1 Saccarius, 29 Antennarius, 1 Chaunax, 2 Malthe, 1 Halieutæa, 1 Ceratias

FAM. 24.—Blenniidæ

Gen 2 Anarrhichas 1 Anarrhichthys, 38 Blennius, 3 Chasmodes, 26 Petroscirtes, 50 Salarias, 1 Blennophis, 2 Neoclinus, 1 Cebidichthys, 2 Myxodes, 1 Heterostichus 22 Clinus, 5 Cristiceps, 2 Auchenopterus, 8 Tripterygium, 2 Dactyloscopus, 1 Myxodagnus, 1 Dictyosoma, 1 Gunellichthys, 9 Stichæus, 1 Bleumops, 8 Centronotus, 1 Anoplarchus, 1 Apodichthys, 1 Xiphidion, 1 Cryptacanthodes. 2 Pataecus, 1 Pholidichthys 1 Andamia, 1 Genyperus, 2 Zoarces, 1 Nemophis, 1 Pseudoblennius.

FAM 25.—Acanthoclinidæ.

Gen 1 Acanthoclinus

FAM 26.—Comephoridæ p 180.

Gen Comephorus

FAM. 27.—Trachypteridæ.

Gen. 9 Trachypterus, 1 Stylophorus, 6 Regalecus.

FAM. 28.—Lophotidæ.

Gen 1 Lophotus

FAM 29.—Teuthididæ.

Gen. 29 Teuthis.

FAM 30.—Acronuridæ.

Gen 44 Acanthurus, 4 Acronurus, 3 Prionurus, 11 Naseus, 2 Keris.

FAM. 31.—Hoplognathidæ p. 181.

Gen 3 Hoplognathus

FAM. 32.—Malacanthidæ.

Gen 3 Malacanthus

FAM 33.—Nandidæ

FIRST GROUP.—Plesiopina.

Gen 5 Plesiops, 1 Trachinops

SECOND GROUP.—Nandina.

Gen 2 Badis, 3 Nandus, 3 Catopia

THIRD GROUP.—Acharnina.

Gen 1 Acharnes.

FAM 34.—Polycentridæ.

Gen. 2 Polycentrus, 1 Monocirrhus

FAM 35.—Labyrinthici.

Gen 1 Spirobranchus, 2 Ctenopoma, 4 Anabas, 1 Helostoma, 7 Polyacanthus, 1 Macropus, 5 Osphromenus, 2 Trichogaster, 2 Betta

FAM 36.—Luciocephalidæ. p. 182.

Gen 1 Luciocephalus.

FAM. 37.—Atherinidæ

FIRST GROUP.—Atherinina.

Gen 23 Atherina, 15 Atherinichthys

SECOND GROUP.—Tetragonurina.

Gen. 1 Tetragonurus.

FAM. 38.—Mugilidæ.

Gen. 66 Mugil, 9 Agonostoma, 4 Myxus,

FAM. 39.—Ophiocephalidæ.

Gen. 25 Ophiocephalus, 1 Channa

FAM 40.—Trichonotidæ.

Gen. 1 Trichonotus, 1 Hemerocoetes.

FAM. 41.—Cepolidæ.

Gen. 7 Cepola.

FAM 42.—Gobiesocidæ.

Gen. 1 Chorisochismus, 3 Sicyases, 1 Cotylis, 7 Gobiesox, 1 Diplocrepis, 2 Crepidogaster, 1 Trachelochismus, 4 Lepadogaster, 1 Leptopterygius.

FAM. 43.—Psychrolutidæ.

Gen 1 Psychrolutes

FAM. 44.—Centriscidæ. p. 183.

Gen. 4 Centriscus, 3 Amphisile

FAM. 45.—Fistularidæ.

Gen. 2 Fistularia, 2 Aulostoma

FAM. 46.—Mastacembelidæ.

Gen. 1 Rhynchobdella, 8 Mastacembelus.

FAM 47.—Notacanthi.

Gen. 5 Notacanthus.

ORDER, II.—Acanthopterygii Pharyngognathi. p. 183.

FAM 1.—Pomacentridæ

Gen 17 Amphiprion, 1 Premnas, 8 Dascyllus, 4 Lepidozygus, 44 Pomacentrus, 52 Glyphidodon, 1 Parma, 16 Heliastes.

FAM 2.—Labridæ. p. 184.

FIRST GROUP.—Labrina

Gen 9 Labrus, 13 Crenilabrus, 1 Lachnolaimus, 1 Tautoga, 1 Malacopterus, 4 Ctenolabrus, 2 Acantholabrus, 3 Centrolabrus.

SECOND GROUP.—Choeropina.

Gen. 8 Choerops.

PISCES OR FISHES;

INDEX

TO

CLASSES, ORDERS, FAMILIES AND GENERA.

Order

IV. PHYSOSTOMI.
V PLECTOGNATHI.
VI. LOPHOBRANCHII.
VII. CHONDROPTERYGII.

THIRD GROUP.—Julidina.

Gen. 2 Xiphochilus, 2 Semicossyphus, 3 Trochococ-is, 1 Decodon, 2 Pteragogus, 18 Cossyphus, 1 Clepticus, 14 Labrichthys, 4 Labroides, 7 Duymæria, Cirrhilabrus, 1 Doratonotus, 21 Cheilinus, 1 Pseudocheilinus, 1 Epibulus, 10 Anampses, 4 Hemigymnus, Stethojulis, 58 Platyglossus, 2 Leptojulis, 2 Pseudojulis, 25 Navacula, 27 Julis, 6 Gomphosus, 1 Cheilio, 23 Coris, 2 Cymolutes.

FOURTH GROUP —Pseudodacina. p. 186,

Gen 1 Pseudodax.

FIFTH GROUP.—Scarina.

Gen. 11 Scarus, 2 Scarichthys, 9 Callyodon, Callyodontichthys, 64 Pseudoscarus

SIXTH GROUP —Odacina.

Gen 6 Odax, 1 Coridodax, 1 Olisthærops, 1 Siphognathus.

FAM. 3 —Embiotocidæ.

Gen. 16 Ditrema, 1 Hysterocarpus

FAM. 4.—Gerridæ,

Gen 28 Gerres

FAM 5.—Chromides. p. 187,

Gen 2 Etroplus, 15 Chromis, 2 Sarotherodon, Hemichromis, 17 Acara, 1 Therapis, 26 Heros, 1 Memauta, 1 Petenia, 2 Uaru, 1 Hygrogonus, 4 Cichla, Cremicichla, 3 Chætobranchus, 2 Mesops, 7 Satanoperca, 1 Geophagus, 1 Symphysodon, 1 Pterophyllum.

ORDER III.—Anacanthini,

A. Anacanthini Gadoidei.

FAM. 1,—Gadopsidæ,

Gen. 1 Gadopsis

FAM. 2 —Lycodidæ.

Gen 9 Lycodes, 4 Gymnelis, 1 Uronectes.

FAM 3 —Gadidæ.

Gen. 18 Gadus, 2 Gadiculus, 1 Mora, 1 Halargyreus, Strinsia, 3 Merluccius, 4 Lotella, 1 Physiculus, Uraleptus, 1 Pseudophycis, 6 Phycis, 2 Læmonema, Halaporphyrus, 1 Lota, 3 Molva, 1 Hypsiptera, Couchia, 5 Motella, 1 Raniceps, 1 Bregmaceros, Brosmus

FAM. 4.—Ophidiidæ.

FIRST GROUP —Brotulina.

Gen. 4 Brotula, 2 Lucifuga, 2 Strembo, 1 Xiphidius, 2 Dinematichthys, 1 Bythites, 1 Pteridium, Brotulophis

SECOND GROUP.—Ophidiina,

Gen 6 Ophidium, 3 Genypterus,

THIRD GROUP —Fierasferina,

Gen 9 Fierasfer, 1 Encheliophis.

FOURTH GROUP.—Ammodytina,

Gen 6 Ammodytes, 1 Bleekeria.

FIFTH GROUP —Congrogadina,

Gen 2 Congrogadus, 1 Haliophis.

FAM 5.—Macruridæ.

Gen 8 Macrurus, 3 Coryphænoides, 1 Malacocephalus

FAM. 6 —Ateleopodidæ,

Gen. 1 Ateleopus, 1 Xenocephalus

B. Anacanthini Pleuronectoidei.

FAM 7 —Pleuronectidæ.

Gen 1 Psettodes, 2 Hippoglossus, 2 Hippoglossina, 1 Tephritis, 7 Rhombus, 1 Phrynorhombus, Arnoglossus, 1 Citharus, 1 Brachypleura, 1 Samaris, Psettichthys, 2 Citharichthys, 3 Hemirhombus, Pseudorhombus, 1 Paralichthys, 13 Rhombodictys, 22 Pleuronectes, 5 Parophrys, 1 Psammodiscus, 1 Ammotretis, 3 Rhombosolea, 1 Peltorhamphus, Solea, 2 Pardachirus, 1 Liachirus, 9 Synaptura, Æsopia, 2 Gymnachirus, 1 Soleotalpa, ... Apionichirus, 1 Ammoplenrops, 1 Aphoristia, 3 Plagusia, Cynoglossus

ORDER IV.—Physostomi. p. 188.

FAM. I —Siluridæ.

FIRST SUB-FAMILY.

Siluridæ Homalopteræ,

1ST GROUP —Clarina.

Gen. 19 Clarias, 6 Heterobranchus

2ND GROUP —Plotosina

Gen 3 Plotosus, 3 Copidoglanis, 3 Cnidoglanis.

3RD GROUP.—Chacina.

Gen. 3 Chaca,

SECOND SUB-FAMILY.

Siluridæ Heteropteræ,

4TH GROUP —Silurina.

Gen 4 Pseudeutropius, 6 Silurus, 3 Silurichthys, Wallago, 1 Belodontichthys, 1 Eutropiichthys, Cryptopterus, 1 Ompok, 5 Schilbe, 6 Eutropius, 2 Hemisilurus, 1 Silurianodon, 2 Adia, 1 Schilbichthys, 1 Laia, 6 Pseudeutropius, 7 Pangasius, Helicophagus, 1 Silondia.

THIRD SUB-FAMILY.

Siluridæ Anomalopteræ,

5TH GROUP—Hypophthalmina,

Gen 1 Helogenes, 4 Hypophthalmus.

FOURTH SUB-FAMILY.

Siluridæ Proteropteræ.

SIXTH GROUP.—Bagrina p. 189.

Gen 2 Bagrus, 6 Chrysichthys, 1 Clarotes, 19 Macrones, 4 Pseudobagrus, 5 Liocassis 3 Bagroides, 1 Bagrichthys, 5 Rita, 6 Acrochordonichthys, 3 Akysis, 1 Olyra, 1 Branchosteus 13 Amiurus, Hopladelus, 4 Notuius

SEVENTH GROUP.—Pimelodina.

Gen. 1 Soluhim, 11 Platystoma, 1 Hemisorubim, 1 Platystomatichthys, 1 Phractocephalus, 2 Pinamutana, 1 Platynematichthys, 3 Piratinga, 2 Sciades, 42 Pimelodus, 1 Pirinampus, 1 Conorhynchus, 1 Notoglanis, 3 Callophysus, 1 Auchenaspis

EIGHTH GROUP —Ariina,

Gen 68 Arius, 1 Galeichthys, 1 Genidens, 3 Hemipimelodus, 1 Ketengus, 4 Ælurichthys, 1 Paradiplomystax, 1 Diplomystax, 3 Osteogeniosus, 1 Batrachocephalus

NINTH GROUP,—Bagarina

Gen 1 Bagarius, 1 Euglyptosternum, 8 Glyptosternum 3 Hara, 3 Amblycops

FIFTH SUB-FAMILY —Siluridæ Stenobranchiæ.

TENTH GROUP —Doradina, p, 190

Gen 4 Agamosus, 1 Tetranematichthys, 1 Euanemus, 9 Auchenipterus, 2 Centromochlus, 2 Trachelyopterus, 3 Cotopsis, 1 Asterophysus, 13 Doras, 7 Oxydoras, 3 Rhinodoras, 12 Synodontis

ELEVENTH GROUP.—Rhinoglanina,

Gen 1 Rhinoglanis, 1 Mochocus, 1 Callomystax,

TWELFTH GROUP —Malapterurina.

Gen 3 Malapterurus

SIXTH SUB-FAMILY —Siluridæ Proteropodes.

THIRTEENTH GROUP.—Hypostomatina.

Gen 2 Arges, 2 Stygogenes, 1 Brontes, 1 Astroblepus, 11 Callichthys, 15 Plecostomus, 3 Liposarcus, 25 Chætostomus, 4 Pterygoplichthys, 1 Rineloplis, 2 Acanthicus, 17 Loricaria, 4 Acestra, 1 Sisor, 1 Erethistes, 1 Pseudecheneis, 2 Exostoma

FOURTEENTH GROUP —Asprodinina.

Gen 2 Bunocephalus, 1 Bunocephalichthys, 6 Aspredo.

SEVENTH SUB-FAMILY.—Siluridæ Opisthopteræ

FIFTEENTH GROUP —Nematogenyina.

Gen 2 Heptapterus, 1 Nematogenys.

SIXTEENTH GROUP —Trichomycterina

Gen 7 Trichomycterus, 1 Eremophilus, 1 Parodon,

EIGHTH SUB-FAMILY.—Siluridæ Branchicolæ.

SEVENTEENTH GROUP —Stegophilina.

Gen. 1 Stegophilus, 2 Vandellia

FAM. 2.—Characinidæ,

FIRST GROUP —Erythrinina,

Gen. 4 Macrodon, 5 Erythrinus, 1 Lebiasina, 1 Pyrrhulina, 4 Corynopoma

SECOND GROUP —Curimatina.

Gen 15 Curmatus, 12 Prochilodus, 2 Cænotropus, 8 Hemiodus, 1 Saccodon, 1 Parodon

THIRD GROUP.—Citharinina.

Gen Citharinus

FOURH GROUP —Anostomatina,

Gen 8 Anostomus, 2 Rhytiodus, 14, Leporinus

FIFTH GROUP.—Tetragonopterina.

Gen. 2 Piabucina, 4 Alestes, 5 Brachycalostes, 33 Tetragonopterus, 1 Scissor, 1 Pseudochalceus, 2 Chirodon, 1 Chalceus, 10 Brycon, 4 Chalcinopsis Bryconops, 1 Creagratus, 4 Chalcinus, 3 Gastropelecus, 2 Piabucina, 1 Agoniates,

SIXTH GROUP —Hydrocyonina

Gen 7 Anacyrtus, 1 Hystricodon, 3 Salminus, 3 Hydrocyon, 1 Sarcodaces, 1 Oligosarcus, 7 Xiphorhamphus, 5 Xiphostoma, 3 Cynodon

SEVENTH GROUP,—Distichodontina.

Gen. 7 Distichodus

EIGHTH GROUP.—Ichthyborina,

Gen 2 Ichthyborus.

NINTH GROUP.—Crenuchina,

Gen 1 Crenuchus

TENTH GROUP —Serrasalmonina

Gen 1 Mylesinus, 13 Serrasalmo, 18 Myletes, 1 Catoprion.

FAM 3 —Haplochitonidæ.

Gen 2 Haplochiton, 1 Prototroctes

FAM. 4.— Sternoptychidæ.

FIRST GROUP —Sternoptychina.

Gen. 4 Argyropelecus, 1 Sternoptyx.

SECOND GROUP —Coccina,

Gen 1 Cocca, 4 Maurolicus.

THIRD GROUP —Chauliodontina.

Gen. 1 Gonostoma, 1 Chauliodus

FAM 5 —Scopelidæ.

FIRST GROUP.—Saurina.

Gen 9 Saurus, 5 Saurida, 1 Harpodon, 2 Aulopus 1 Chlorophthalmus, 22 Scopelus, 1 Scopelosaurus, 1 Odontostomus

SECOND GROUP.—Paralepidina.

Gen. 3 Paralepis, 1 Sudis.

THIRD GROUP.—Alepidosaurina

Gen. 3 Alepidosaurus.

FAM. 6.—Stomiatidæ

FIRST GROUP.—Astronesthina.

Gen, 3 Astronesthes

SECOND GROUP —Stomiatina

Gen. 3 Stomias, 1 Echiostoma, 1 Malacosteus

FAM 7.—Salmonidæ p. 190,

FIRST GROUP —Salmonina.

FIRST SUB-GENERIC GROUP.—Salmones.

Gen. 52 Salmo

SECOND SUB-GENERIC GROUP.—Salvelini.

Gen. 31 Salmo, 8 Oncorhynchus, 1 Brachymystax, 2 Luciotrutta, 1 Plecoglossus, 3 Osmerus, 1 Thaleichthys, 1 Hypomesus, 1 Mallotus, 1 Retropinna, 41 Coregonus, 6 Thymallus, 4 Argentina, 2 Microstoma.

SECOND GROUP.—Salangina,

Gen. 3 Salanx.

FAM. 8.—Percopsidæ.

Gen 1 Percopsis.

FAM. 9.—Galaxidæ.

Gen. 12 Galaxias.

FAM. 10 —Mormyridæ. p. 190.

Gen. 19 Mormyrus, 2 Hyperopisus, 4 Mormyrops.

FAM. 11.—Gymnarchidæ.

Gen 1 Gymnarchus

FAM. 12.—Esocidæ,

Gen 7 Esox,

FAM. 13.—Umbridæ.

Gen 2 Umbra

FAM. 14.—Scombresocidæ p. 191.

Gen 46 Belone, 5 Scombresox, 40 Hemirhamphus, 1 Arrhamphus, 44 Exocœtus.

FAM. 15.—Cyprinodontidæ. p. 191.

FIRST GROUP.—C. Carnivoræ.

Gen 11 Cyprinodon, 1 Fitzroya, 1 Characodon 1 Tellia, 1 Limnurgus. 1 Lucania, 18 Haplochilus, 17 Fundulus, 3 Rivulus, 6 Orestias, 1 Jenynsia, 2 Poeciliopsis, 1 Belonesox, 8 Gambusia, 3 Anableps.

SECOND GROUP —C. Limnophagæ.

Gen 16 Poecilia, 3 Molliensia, 1 Platypœcilus 10 Girardinus.

FAM. 16.—Heteropygii.

Gen 1 Amblyopsis, 1 Chologaster.

FAM. 17 —Cyprinidæ. p. 191,

FIRST GROUP.—Catostomina.

Gen 16 Catostomus, 2 Moxostoma, 5 Sclerognathus, 1 Carpiodes

SECOND GROUP.—Cyprinina. p. 191.

Gen. 3 Cyprinus, 2 Carassius, 1 Catla, 5 Cirrhina, 6 Dangila, 14 Osteochilus, 27 Labeo, 2 Barynotus, 10 Tylognathus, 2 Abrostomus, 4 Discognathus, 9 Crossochilus, 7 Gymnostomus, [illegible] 13 Capoeta, 163 Barbus, 2 [illegible] bichthys 1 Amblyrhynchichthys, 1 Albulichthys, 3 Oreinus, 13 Schizothorax, 1 Psychobarbus, 1 Gymnocypris, 1 Schizopygopsis, 1 Diptychus, 1 Aulopyge, 2 Gobio, 4 Pseudogobio, 9 Ceratichthys, 1 Bungia, 2 Pimephales, 1 Hyborhynchus, 2 Campostoma, 3 Hybognathus, 1 Erimyzba, 1 Pseudorasbora, 1 Cochlognathus, 2 Exoglossum, 6 Rhinichthys

THIRD GROUP.—Rhoteichthyina. p. 194.

Gen 1 Rhoteichthys.

FOURTH GROUP.—Leptobarbina.

Gen 1 Leptobarbus

FIFTH GROUP.—Rasborina.

Gen 12 Rasbora, 3 Luciosoma, 2 Nuria, 1 Aphyocypris, 3 Amblypharyngodon.

SIXTH GROUP.—Semiplotina.

Gen. 3 Cyprinion, 1 Semiplotus.

SEVENTH GROUP.—Xenocypridina.

Gen. 1 Xenocypris, 1 Parachanthobrama, 1 Mystacoleucus.

EIGHTH GROUP.—Leuciscina.

Gen. 84 Leuciscus, 1 Ctenopharyngodon, 1 Mylopharodon, 2 Paraphoxinus, 1 Meda, 1 Graodus, 1 Tinca, 8 Leucosomus, 7 Chondrostoma, 1 Orthodon, 1 Acrochilus.

NINTH GROUP.—Rhodeina.

Gen 6 Achilognathus, 3 Rhodeus, 1 Pseudoperilampus.

TENTH GROUP.—Danionina.

Gen 8 Danio, 2 Pteropsarion, 3 Aspidoparia, 15 Barilius, 1 Bola, 1 Schacra, 5 Opsarichthys, 1 Squalobarbus, 1 Ochetobius.

ELEVENTH GROUP —Hypophthalmichthyina.

Gen 2 Hypophthalmichthys.

TWELFTH GROUP —Abramidina.

Gen 16 Abramis, 3 Aspius, 15 Alburnus, 1 Leucaspius, 1 Rasborichthys, 1 Elopichthys, 2 Pelotrophus, 3 Acanthobrama, 5 Osteobrama, 6 Chanodichthys, 1 Smilogaster, 2 Culter, 1 Pelecus, 1 Eustira, 16 Chela, 1 Pseudolaubuca, 1 Cachius

THIRTEENTH GROUP. —Homalopterina. p. 195.

Gen 8 Homaloptera, 2 Psilorhynchus

FOURTEENTH GROUP —Cobitidina

Gen 5 Misgurnus, 37 Nemachilus, 3 Cobitis, 3 Lepidocephalichthys, 2 Acanthopsis, 7 Botia, 1 Oreonectes, 1 Lepidocephalus, 2 Acanthophthalmus, 1 Apua, 1 Apteronotus.

FAM. Kneriidæ.

Gen. 2 Kneria

FAM 18.—Gonorhynchidæ. p. 196

Gen. 1 Gonorhynchus.

FAM. 19.—Hyodontidæ.

Gen. 1 Hyodon

FAM. 20.—Osteoglossidæ.

Gen 3 Osteoglossum, 1 Arapaima, 1 Heterotis,

FAM 21.—Clupeidæ

FIRST GROUP.—Engraulina.

Gen. 2 Cetengraulis, 37 Engraulis, 10 Coilia.

SECOND GROUP.—Chatoessina.

Gen. 12 Chatoessus.

THIRD GROUP.—Clupeina.

Gen 61 Clupea, 3 Clupeoides, 1 Pellonula, 1 Clupeichthys, 14 Pellona, 7 Pristigaster, 1 Chirocentrodon

FOURTH GROUP.—Dussumieriina. p. 197.

Gen 3 Spratelloides, 2 Dussumieria, 2 Etrumeus.

FIFTH GROUP.—Albulina p. 197.

Gen. 1 Albula

SIXTH GROUP.—Elopina.

Gen 2 Elops, 2 Megalops.

SEVENTH GROUP.—Chanina. p. 197.

Gen. 2 Chanos.

FAM. 22.—Chirocentridæ. p 197.

Gen 1 Chirocentrus.

FAM. 23.—Alepocephalidæ,

Gen. 1 Alepocephalus.

FAM. 24.—Notopteridæ. p. 197.

Gen 5 Notopterus

FAM. 25.—Halosauridæ.

2 Torpedo

FAM. Trigonidæ.

1 Rachinotus, 2 Trygon, 2 Tæniura.

FAM. Myliobatidæ.

Myliobatis, 1 Stiobatis, 1 Cephaloptera.

FISH HOOKS.

Hamecous,	Fr	Kail, kai, panching,	Malay
Fischangeln,	Ger.	Galamu,	Tel.
Gal,	Hind.		

Fish-hooks are used in all countries but in the S. and E. of Asia, nets, traps, and stakes are the generally adopted modes for catching fish.

FISHING-NET FLOATS. Several light porous woods, such as Gyrocarpus Jacquini, Salmalia Malabarica; and the fruit of the Baobab are used as floats for fishing nets.

FISH-INSECTS. Species of Lepisma, found in books, pretty little silvery creatures L niveo-fasciata, Templeton, and L. niger Temp. occur in Ceylon. The genus was called "Lepisma" by Fabricus, from its, fish-like scales. It has six legs, filiform antennæ, and the abdomen terminated by three elongated setæ, two of which are placed nearly at right angles to the central one. Linnæus states that the European species, was brought in sugar-ships from America. The Chelifer found in Ceylon, has been brought thither from Europe — *Tenn. Sk. Nat. Hist. of Ceyl.* p. 476.

FISHMAWS.

Fish Sounds,	Eng.	Poota (large),	
Air bladder,	„	Sozili (small),	Guz Hind.
Swims,	„	Lupa lupa,	Malay.

A term applied in oriental commerce to the air-bladder, sounds, or swims of certain large fishes, found in the Indian Ocean, Bay of Bengal, the seas of the Archipelago, and the great estuaries. It is an article of luxury with the Chinese; and forms an important article of export from all the coasts. Small quantities of the superior kind are occasionally sent to England, from which it is supposed isinglass is made. There are two kinds of fishmaws, distinguished in Bombay by the terms Poota and Sozeelee, the difference consisting merely in the size—the latter being about one-fourth the size of the former. They are used as an article of luxury among the Chinese, when properly dried they are fit for the market; they are of yellowish tinge and are cured by stretching them in the sun. If they become damp, they soon decay and are then worthless. They are chiefly brought to China in junks from the Indian Islands. At Singapore and in China the price is from $ 35 to 70 per pecul. This article, together with birds'-nests, biche-de-mar, and shark's fins are all consumed by the Chinese, for their supposed strengthening and restorative properties. In the four years 1857-58 to 1860-61 their export from British India was as per statement,

year.	cwt.	tons.	value. £.
1857-58	8,952	448	9,026
1858-59	1,872	92	8,468
1859-60	.....	.. ..	7,447
1860-61	.. ..	.....	6,401

See Air-bladder : Isinglass.

FISH OILS. The manufacture of Fish Oil is practised all along the western coast. The extreme cheapness of cocoanut, castor, and other vegetable oils, interferes with the productiveness of animal oils. The great source of supply is the shark and the skate: the livers of these are cut out, and thrown into a vat or old canoe, or other receptacle, and trodden on with the feet till the oil is expressed. It is then drawn off, and stowed away: boiling does not seem to be resorted to, as there is little or no muscular fibre, such as that of the blubber, to be got rid of, or aqueous particles to be dispelled. The amount of oil manufactured at each fishing-village will in all likelihood be found very nearly proportioned to the value of the trade in sharks' fins. The oil from the variety of skate called "Wagli" by the natives of the Bombay coast, seems to have a strong resemblance to the cod liver oil now so much in demand for medicinal uses. On the Malabar Coast, especially off Vingorla, the seas literally swarm with a variety of the sardine: a coarse ill-smelling kind of oil, which sells for from six to twelve annas a maund, is manufactured from these—the natives employ it for smearing their boats. At present it is prepared chiefly on the Western Coast of India, although some is now made at Madras. The liver of the white shark is that generally used. The mode of preparing the best cod liver oil, is thus described as it is equally applicable to "Fish liver." The proper season for preparing cod liver oil is early in January when the livers are plump, firm, large, white, and full of oil—the livers are sometimes found diseased, and such as are specifically lighter than water, should be rejected. Good livers should cut smooth, and not tear, when cut none of the substance should flow out in a half liquid state. The quantity of oil produced by livers depends much upon the time of the year. In the beginning of January 1000 livers were found by experiment to yield 37 Imperial gallons, and at the end of February an equal number only gave 23 gallons of oil. In the beginning of January 1000 livers of average size weighed 900 lbs. whilst in the last day of March the same

number weighed only 575 lbs. The oil at these different seasons was equally pale, and the livers equally white, although much smaller and more flabby in the latter season. To prepare the oil—Wash the livers very carefully, first removing the gall bladders which adhere to them, and infuse them in rain or other water free from salt. Place them over the fire and never allow the heat to exceed 120 or 130°. On this head especial care must be taken, a higher degree of heat although yielding a larger product, communicates a rank, fishy taste and smell and heightens the color of the oil, thereby rendering it disgusting to the patient.—*M. E. J. R. of* 1855.

FISH ROE.

Mutchi ke unde,	Duk.	Chapa janna,	Tel.
Mn Cheuney,	Tam.		

Fish roe is sold in every bazaar of the South and East of Asia, and the Fish roe of Siam is a great article of trade. See Fisheries, p. 130: Fish p. 162.

FISH SALTED

Khari mutchi,	Duk	(Dry) Kareivadu also upumin kandam,	Tam.
Khara Machi,	Hind.	(„) Upu karri-vadu or genduchipa,	Tel
Budu,	Malay.		

Salt fish is obtained in every bazaar of India, and is used as a condiment with the vegetable diet.

FISH SOUNDS. See Isinglass. Fish Maws. Air bladder.

FISH SKINS are used occasionally in India for covering scabbards. The Goldi, on taking a large fish, remove the skin and beat it with a mallet to remove the scales, and until the thick, oily corium become supple. In a dress of this kind they defy snow, mist and rain. *Latham's Nationalities of Europe*, Vol I., p. 271.

FISH TRAPS. In the Archipelago, fish traps are made of basket-work, which are baited with small fry, and afterwards sunk by means of stones, their position being indicated by long bamboo fishing-buoys. These traps are left in the sea all night, and are raised in the morning for the purpose of taking out the fish.—*Earl* p. 37.

FISTULANA. See Tubicolidæ.

FITAN, *Hind.*, a pelican.

FITCH, or VETCH. See Tare.

FITCH. An Englishman who, with his companions, travelled all over Hindostan. They went in 1583, via Aleppo and Baghdad, on a commercial mission, with introductory letters from Elizabeth to Akbar. See Leedes.

FITRASALYUN. Hind. Prangos pabularia.

FIUMARA. It. In Italy, a hill water course, which rolls a torrent after rain, and is either partially or wholly dry during the drought season. It corresponds to the Indian "Nullah." *Burton's Meccah.*

FIVE. Panch, Hind. Panj, Pers, is a number of frequent occurrence amongst hindus. Panch-salar, or kansali, the five artizans; Pancha-janya and Pancha kshiti in the Veda, five families according to Lassen. Panchayat, a jury of five. The Punch liquor and Punch of Punch and Judy are said to be from Panch, five.

FIVE ISLANDS, also called Babuyan, a circular chain of islands fronting the coast of Cagayan. See Babuyan.

FIXED AIR. Eng. Carbonic Acid.

FLACOURTIACEÆ, a natural order of plants of which the genera Flacourtia and Phoberos, containing eighteen species, occur in the South and E. of Asia. The berries of F. cataphracta of the N. E. of India are edible. F. ramontchi a tree of Madagascar has been introduced into India. F obcordata is a shrub of Chittagong. F. cordata of Silhet, F. rotundifolia of the Peninsula and F. Campbelliana of Sumatra. *Voigt.*

Panceyala,	„	Talisha,	Sans.
Panayala; Panijala,	Duk.	Talishapatri,	Tam.
Talisputri,	Hind.	Talisapatri,	Tel.

A tree of Assam, Monghyr and Nepal, grown as a fruit tree in gardens at Kotah and affords a popular medicine in Behar. The small leaves and shoots resemble rhubarb in flavour, and are used as a gentle astringent in the dose of half a drachm in powder. An infusion of the bark in cold water is also employed as a remedy in hoarseness. The young shoots and leaves are considered astringent and stomachic.—*O'Shaughnessy*, p. 207, *Eng. Cye. Voigt. Gen. Med. Top.*

FLACOURTIA INERMIS, *Roxb.*

Lovi Lovi, Singh

This tree grows in Ceylon, in Silhet, in both the peninsulas of India and in the Moluccas. It has minute greenish flowers. In the Moluccas, it is extensively cultivated for the sake of its fruit which makes excellent tarts, though too sour to be eaten raw. *Roxb.* iii, 833, *Voigt* 84.

FLACOURTIA MONTANA, *Graham.*

Ram tambut,	Mahr.	Uttuck,	Mahr.

A tree common in forests above and below the Bombay ghats, but does not, in as far as Dr. Gibson had seen, extend inland. The wood is rather strong and close-grain-

ed, but the girth is never such as to render it sufficient for general purposes of carpentry or building.—*Dr. Gibson.*

FLACOURTIA SAPIDA, *Roxb-, W & A., W. Ic.*

Boolnch,	Beng.	Oogoorassa,	Singh.
Bowchee,	of Bombay	Swadoo kuntuka,	Sans.
Bincha,	Duk.	Pedda kanaregu,	Tel.
Kuke,	Hind.	Pedda canrow,	,,
Kangu,	of Ravi.	Nakka neredu,	,,

A small sized tree or large shrub, growing to an elevation of 1,500 to 3,000 feet in the central province of Ceylon, grows also, in Peninsular India, on the Godavery, in Ganjam and Gumsur, extreme height 15 feet, circumference 1 foot, and height from ground to the intersection of the first branch, 5 feet, also in Bengal and northwards to Dehra Dhoon. It yields a very hard close-grained wood which does not warp, and is worthy of attention. This wood is burnt when libations are offered for a person who has died on an inauspicious day. It is found as a large shrub along the lower hills of the N. W. Himalaya, sometimes to 3,500 feet, in the Salt Range, and on the skirts of the Suliman Range, &c The timber is there occasionally employed for ploughs, but is too small for most purposes. It is straight and close-grained, and is used for combs and in turning. The fruit is eaten —*Roxb.* iii., 835, *Voigt* 83, *Dr. J. L. Stewart, Thw.* 17.

FLACOURTIA SEPIARIA, *Roxb., W. & A. Rh.*

The flax plant, Linum usitatissimum, is scarcely at all grown in the peninsula of India and not at all in Burmah, and, except for the seed and for a little fibre, and in a few localities, may be said to be not raised in any part of India for external commerce. This seems a change from the former state of agriculture for flax is mentioned by Strabo as one of the staples of the N. W. part of India. A small quantity of Riga seeds, which had been imported experimentally by Dr. Jameson, was distributed amongst the peasants, with instructions as to the mode of cultivation; an agent of great practical experience was deputed to examine and report upon the qualifications of different districts for the growth of flax, and a staff of natives were trained by him to act as scutchers. In 1856, two tons of flax produced under his superintendence in the district of Goojranwalla, were sent to England, and were sold for £92. 2*s.* 2*d.* realising a net profit of 47 per cent. In 1857, eight cwt. of flax, grown at Jeddura, a tract of country in the Kangra district, bordering on the River Beas, were sent to Britain, and were valued at from £55 to £60 a ton. In consequence of the success of these experiments, an Association, called the 'Indian Flax Company', was established in Belfast, and an agent was sent out to buy up flax produce. In 1863 he made the district of Sealkote his head quarters, but owing to various circumstances, their operations were brought to a close. Up to this, flax had always been sown in the Punjab as a field crop, but raised only for its oil seed, and as the plants are only 18 to 24 inches high, they are useless for textile purpose. Flax is prepared by steeping the plant,

number weighed only 575 lbs. The oil at these different seasons was equally pale, and the livers equally white, although much smaller and more flabby in the latter season. To prepare the oil—Wash the livers very carefully, first removing the gall bladders which adhere to them, and infuse them in rain or other water free from salt. Place them over the fire and never allow the heat to exceed 120 or 130°. On this head especial care must be taken, a higher degree of heat although yielding a larger product, communicates a rank, fishy taste and smell and heightens the color of the oil, thereby rendering it disgusting to the patient.—*M. E. J. R. of* 1856.

FISH ROE.

Machi ke unde,	Duk.	Chapa jamma,	Tel.
Min Cheenay,	Tam.		

Fish roe is sold in every bazaar of the South and East of Asia, and the Fish roe of Siam is a great article of trade. See Fisheries, p. 130: Fish p. 162.

FISH SALTED.

Khari muchi,	Duk.	(Dry) Karevadu also	
Khara Machi,	Hind.	upumin kandam,	Tam.
Budu,	Malay.	(„) Upu karri-vadu	
		or gendudchipa,	Tel.

Salt fish is obtained in every bazaar of India, and is used as a condiment with the vegetable diet.

FISH SOUNDS. See Isinglass. Fish Maws. Air bladder

FISH SKINS are used occasionally in India for covering scabbards. The Goldi, on taking a large fish, remove the skin and beat it with a mallet to remove the scales, and until the thick, oily corium become supple. In a dress of this kind they defy snow, mist and rain. *Latham's Nationalities of Europe*, Vol. I., p. 271.

FISH TRAPS. In the Archipelago, fish traps are made of basket-work, which are baited with small fry, and afterwards sunk by means of stones, their position being indicated by long bamboo fishing-buoys. These traps are left in the sea all night, and are raised in the morning for the purpose of taking out the fish.—*Hart* p. 37.

FISTULANA. See Tubicolidæ.

FITAN, *Hind.*, a pelican.

FITCH, or VETCH. See Tare.

FITCH. An Englishman who, with his companions, travelled all over Hindostan. They went in 1583, via Aleppo and Baghdad, on a commercial mission, with introductory letters from Elizabeth to Akbar. See Leedes.

FITRASALYUN. Hind. Prangos pabularia.

FIUMARA. It. In Italy, a hill water course, which rolls a torrent after rain, and is either partially or wholly dry during the drought season. It corresponds to the Indian "Nullah." *Burton's Meccah.*

FIVE. Panch, Hind. Panj, Pers, is a number of frequent occurrence amongst hindus. Panch-salar, or kansali, the five artizans; Pancha-janya and Pancha kshiti in the Veda, five families according to Lassen. Panchayat, a jury of five. The Punch liquor and Punch of Punch and Judy are said to be from Panch, five.

FIVE ISLANDS, also called Babuyan, a circular chain of islands fronting the coast of Cagayan. See Babuyan.

FIXED AIR. Eng. Carbonic Acid.

FLACOURTIACEÆ, a natural order of plants of which the genera Flacourtia and Phoberos, containing eighteen species, occur in the South and E. of Asia. The berries of F. cataphracta of the N. E. of India are edible. F. ramontchi a tree of Madagascar has been introduced into India. F obcordata is a shrub of Chittagong. F. cordata of Silhet, F. rotundifolia of the Peninsula and F. Campbelliana of Sumatra. *Voigt.*

The flax plant, Linum usitatissimum, is scarcely at all grown in the peninsula of India and not at all in Burmah, and, except for the seed and for a little fibre, and in a few localities, may be said to be not raised in any part of India for external commerce. This seems a change from the former state of agriculture for flax is mentioned by Strabo as one of the staples of the N. W. part of India. A small quantity of Riga seeds, which had been imported experimentally by Dr. Jameson, was distributed amongst the peasants, with instructions as to the mode of cultivation; an agent of great practical experience was deputed to examine and report upon the qualifications of different districts for the growth of flax, and a staff of natives were trained by him to act as scutchers. In 1856, two tons of flax produced under his superintendence in the district of Goojranwalla, were sent to England, and were sold for £92. 2*s.* 2*d.* realising a net profit of 47 per cent. In 1857, eight cwt. of flax, grown at Jeddura, a tract of country in the Kangra district, bordering on the River Beas, were sent to Britain, and were valued at from £55 to £60 a ton. In consequence of the success of these experiments, an Association, called the 'Indian Flax Company', was established in Belfast, and an agent was sent out to buy up flax produce. In 1863 he made the district of Sealkote his head quarters, but owing to various circumstances, their operations were brought to a close. Up to this, flax had always been sown in the Punjab as a field crop, but raised only for its oil seed, and as the plants are only 18 to 24 inches high, they are useless for textile purpose. Flax is prepared by steeping the plant,

stripping off the bark, and then beating so as to separate the fibres from which linen and cambric are prepared,—cambric differing from linen in fineness and in being made from the fibre of plants which have been more thickly sown. Linen cloth is a good conductor of heat and is cool, but is chilly when the body is exposed to cold or is perspiring.

The Burmese are acquainted with linen from their books in which it is frequently mentioned. The lake or tank near king Wathandria's hermitage, is described as being covered with water lilies, that appear like garments made of thread of flax bark; and linen garments are mentioned among those which priests are permitted to wear.—*Dr. J. L. Stewart, Mr. Powell, McCulloch.* p. 581. *Proc. Madr. Govt.* 28*th February* 1862, *Royle, Mat. Med.* 283.

Lin,	Fr.	Iniano,	,,
Graine de Lin,	,,	Linhaca,	Port
Lein saat.	Ger.	Semja lenja,	Rus.
Linsome,	It.	Linaza,	Sp.

This seed is, in India, produced for its oil.

FLEA, Eng.

Paros,	Heb.	Ee,	Tam.
Pisu,	Hind.	Begalu,	Tel

This insect, which was one of the plagues that fell on Egypt, is very common in all the S. E. of Asia, and at certain seasons in some parts of the peninsula they occur in great numbers; the natives say they breed in the rocky ground. At Ahmednugger, Nassik, Secunderabad and Bangalore in some years they are innumerable, but they are little troublesome, their bite is insignificant.

FLEA-BANE, ASH COLORED, Eng. Vernonia cinerea, Less.

FLEA-BANE, PURPLE.

Kali-ziri,	Duk. Guz.	Caattu siragam,	Tam.
Buckchi,	Hind.	Adivi jilakara,	Tel.
Kana-iraka,	Sans.		

A small dark-coloured, and extremely bitter seed, procurable in all Indian bazaars, considered powerfully anthelmintic, and also used as an ingredient of a compound powder prescribed in snake bites by native practitioners. An infusion of seed is also given for coughs, and against flatulency. The Inula Pulicaria, or Fleabane, a common road side plant in Britain, strewed or burned in any place, destroys gnats and fleas; and the same properties are attributed to the common Ox-eye daisy of Britain. Flies fleas and musquitoes, avoid rooms in which branches of penny royal have been suspended. —*Ainslie.* See Bane: Fly.

FLEDERMAUSER. Ger. a bat; one of the Cheiroptera.

FLEECE OF HAIR. See Jat, Panjab.

FLESH COLOURED TREFOIL. Trifolium incarnatum.

FLEUR DE FARINE, Fr. Flour.

FLEUR DE MUSCADE. Fr. Mace.

FLY. In the Hebrew Scriptures, are several Hebrew words which, in the English version, have been translated fly, viz., Oreb, Zebub, Deburrah, Tsira, Sarabim, Bak, Cinnim. The Orov or Orob, Hebrew, a swarm or assemblage is translated in Psalms cv, 31, swarm of flies, but in Exodus viii, v. 21 also Psalms lxxviii, v. 45, is supposed to allude to the mosquito.

The Hebrew Zenon of Ecc. x. v. 1, and Isaiah vii, v. 10 is not identified. Flies are undoubtedly very troublesome in tropical Asia, at some seasons, but an infusion of quassia sweetened with sugar placed on a plate, destroys them. The eye-fly, a minute insect which comes at seasons inside houses, and clusters in myriads on any hanging thread, can be destroyed instantaneously in masses, by forming a cone of paper like a grocery packet and, setting fire to its edges, bringing it under the thread where they cluster; their wings are singed as they try to escape out of the burning circle. In Italy large bundles of a common viscous plant (Erigeron viscosum Lin.) dipped in milk hung up in all the rooms, attract all the flies. Glossina morsitans, the Tsetse fly of Africa, whose bite is fatal to the horse, the bullock and cow, is supposed to be the same as the Tsalt salya or Zimb, of Abyssinia, mentioned by Bruce. See Bane. Fleabane; Zimb.

FLINDERSIA AUSTRALIS. This tree is a native of Australia, and its wood is said to be not inferior to mahogany. See Cedar.

FLINDERSIA AMBOINENSIS. This is a native of the islands of Hitu and Ceram. The spiny part of the fruit is formed into rasps. It was on this account called by Rumphius, Arbor radulifera.

FLINT, Eng.

Pierre a fusil,	Fr	Chakmak,	Hind.
Feuerstein,	Ger.	Batu-api,	Malay.
Chakmak,	Guz.	Chakimuki kallu,	Tam.
Hala-mish,	Heb.	,, rai,	Tel.

This mineral is composed almost entirely of silica. It is almost all imported from Britain, being exceedingly rare in India. It is used, when calcined and ground, in pottery; also for gun-flints, for which purpose the yellowish-gray flints are preferred. In India the calcedonic quartzes are used instead of flint.—*Waterston*, quoted by Faulkner.

FLIOR, Rus. Crape.

FLITTERGOLD. Ger. Orsidue.

FLITTER-MICE, Bats. See Cheiroptera.

FLOATING ISLANDS, occur in the lake of Cashmir. One occurs in lake Derwentwater in England.

FLOATS are much used for rafting timber and they are formed of many vegetable substances. The saccharum sara reeds are much employed, also the bamboo, and the fruit of the baobab.

FLOHR, Ger. Crape.

FLOODS, of these, tradition mentions several. The Hellenic tradition is known as the flood of Deucalion son of Prometheus who built the Ark which rested on Parnassus, in Thessaly. A similar legend of Asia minor was connected with the deluge of Iconium and was localised at Olympus the highest peak of Western Asia. Both these are doubtless connected with the flood of Noah, related by Moses, no account of which is known to the Egyptians nor to the Chinese, who had gone westwards and eastwards prior to its occurrence. Missionaries in China, however, have attributed the inundations alluded to as stopped in the reign of Yu, the founder of the first Chinese dynasty, B. C. 2207 to the flood of Noah. The flood of Noah, is supposed to have occurred in the year of the world 1656, that is about B. C. 2328 or B. C. 2344. The Aryan hindu tradition of the great flood is distinct, but is involved in their mythical religion. Their Matsya or Fish Avatar, is the history of that event disguised in oriental fiction. River and Sea Floods are of very frequent occurrence in India and China. Dr. Buist gave an account of that of 1849 in Edin Phil. Jl. 1851 : Bl. As. Trans. 1851. The Ganges once rose 45 feet above the usual level; swept away Burree Bund, and laid a town four feet under water, and an account of it appeared in the Agra Ukhbar, August 30, 1839; As. Jl. 1839, and a description of that at Agra in the As. Jl. 1838. Inundations at Hussingabad were mentioned in As. Jl. April 1839. In 1841 the Indus seemed to have been for some time ponded back, when a terrific flood swept over Attock, and all the country around. Dr. Falconer gave an account of it in Bl. As, Trans. 1843, vol. x., and Dr. Jameson, Ibid. vol. xii. A hill was supposed to have been tumbled into the river by an earthquake so high up as never to have been heard of; but, it was subsequently known to have occurred from the giving way of a glacier: the body of a woman dressed in sheep-skins was thrown ashore at Attock, and supposed to be a Thibetan: 10,000 lives were said to have been lost.—As. Jl. 1841, vol. xxxv. 196, 264. Captain Abbott gave an account of it from lips of natives in the Bl. As. Trans., 1841, vol. x p. 230. From hundreds of villages and towns including Khyrabad and Attock, thousands of human beings and cattle were swept away. In the Hazara country, artillery guns with many hundreds of infantry and cavalry were lost, a whole camp, with troops and followers were carried down the river. A flood occurred in the delta of the Ganges in October 8, 1831 when 50,000 lives were lost: near Balasore 17,474 people drowned; in 1832, 2,000 in the same neighbourhood.—As. Jl. 1833, vol xiii. A flood occurred at Coringa, December 1839. A hurricane sea-wave or wave caused by an earthquake rose 8 feet above the level of Coringa village; the inundation covered 30 miles of country and above 7,000 people were drowned; £100,000 worth of property destroyed on shore; at sea 70 vessels were lost, with about 700 lives. In 1867 a great sea wave in a cyclone broke along the coast at Masulipatam and caused enormous loss of life and property. In China, near Canton, 18,000 were drowned in November 1833. —Ibid, 1834, vol xiv. 259. On the Taptee, at Surat, in August 6, 1837; 500 houses were said to have been destroyed, the loss estimated at betwixt thirty and forty lakhs of Rupees (£300,000 to £400,000); and a lakh and a half (£15,000) was subscribed at Bombay to supply the sufferers with grain. Floods occurred on the coast of Canara, and Malabar, in August 1818.

Even the ordinary rain floods are eminently disastrous. A correspondent of the Englishman returning on one occasion from Kishnghur found the whole country under water. After travelling three miles of the way on an elephant he found it impossible to proceed, the road, being quite under water, and not a vestige of it to be seen. He got into a fishing dinghy and was rowed straight across country, nothing to be seen out of water, but the villages which looked like islands in a sea, the very parapets of the bridges in the road under water, and but for the trees at the roadside, nothing could indicate that such a thing was there. All the crops gone. After the flood which occurred in 1856, the planters lent a great deal of money to the ryots without interest, to enable them to buy cattle. *Edye in Lond. As. Trans.* 1835, *vol.* ii. 342.—*Dr. Buist's Catalogue.* See Glaciers.

FLOR, Sp. Flour.

FLORA the South and East of Asia flora has been largelydescribed by some of the most eminent of the botanists of the world, whose names will be seen under the article botany. But the most complete general view given

of the plants of this South Eastern region, is by Drs. J. D. Hooker and T. Thomson in their Flora Indica, the long cessation of which is, for these countries, a public calamity. India contains representatives of every natural family on the globe, a very few small American, Australian, and S. African orders being the chief exceptions. In India, the number of peculiar families largely represented in it is very limited, the Aurantiaceæ, Dipteraceæ, Balsamineæ, Ebenaceæ, Jasmineæ and Cyrtandraceæ are the only orders which are largely developed in India, and sparingly elsewhere, and of these few contain one hundred Indian species. The total number of Indian species are estimated at 12 to 15,000.

The species are much scattered. It is believed that nowhere in India could more than 2,000 flowering plants be found in a radius of ten miles, and there is in India an almost complete absence of absolutely local plants: the plains of India are everywhere poor in species and such as abound in individuals are usually of a weedy character, indeed there are few other countries in which the vegetation of the more accessible parts presents so little beauty or such short seasons of bloom. The great number of 222 British plants extend into India. Many North African and Arabian forms occur. Several Australian species are found in the Malayan peninsula. Many of the Himalaya, Nilgherries, Khasya and Ceylon species are found in the Malay peninsula and in Java. Gaultheria nummularia extends from the N. W. Himalaya to the Java mountains, and common to India and Java, are Sedgwickia cerasifolia, *Griff.* Marlea, Cardiopteris lobata, several oaks and chesnuts, Antidesmeæ, a willow, and Myrica. The Chinese type is abundant in the temperate region of the Himalaya and plants of N. America, west of the rocky mountains also occur.

The perennially humid forests are everywhere characterized by the prevalence of ferns and at elevations below 5,000 to 7,000 feet, by the immense number of epiphytal Orchidaceæ, Orontiaceæ and Scitamineæ, and in smaller numbers, Zingiberaceæ, Xyrideæ, palms, Pandaneæ, Urticaceæ, Araliaceæ, Apocyneæ, shrubby Rubiaceæ, Aurantaceæ, Garcinaceæ, Anonaceæ, nutmegs and Dipterocarpeæ. An immense proportion of annual plants which vegetate on the last rainy seasons in the plains and ascend the lofty mountains are uniformly distributed throughout India. Of these the most conspicuous are Gramineæ, Cyperaceæ, a vast number of small Leguminosæ, and Scrophularineæ, Compositæ, some Labiatæ, Amaranthaceæ, Convolvulaceæ and Acanthaceæ.

The winter months of the colder northern countries have a corresponding cold season in India, during which ex-tropical cereals, wheat, barley and more rarely oats with various kinds of pulse are cultivated, and many wild plants appear, very many cyperaceæ, grasses, and such aquatics as Myriophyllum, Potamogeton, Vallisneria, Zannichellia, Lemna and others. The mountainous regions of Afghanistan are rich in Himalayan forms and contain an immense number of European and Persian plants which find their eastern limits within the British Himalaya, and many plants are found in those mountainous regions common to Europe and the Himalaya. Nepal, Bhotan, East Tibet and the Khassia mountains present a flora which has much in common, and in a geographico-botanical point of view, is one of the most important regions in India, if not in all Asia. In the Himalaya, the genera Rhododendron, Monotropa, Pedicularis, Corydalis, Nepeta, Carex, Spiræa, Primula, Cerasus, Lonicera, Viburnum and Saussurea, attain their maximum of development.

On the Himalaya and on the isolated mountain ranges of the Peninsula of India, on the heights of Ceylon, and on the volcanic cones of Java, many plants occur, either identically the same or representing each other, and at the same time representing plants of Europe not found in the intervening hot lowlands. A list of the genera collected on the loftier peaks of Java, raises a picture of a collection made on a hill in Europe. Still more striking is the fact that Southern Australian forms, are clearly represented by plants growing on the summits of the mountains of Borneo. Some of these Australian forms, extend along the heights of the Peninsula of Malacca, and are thinly scattered on the one hand over India, and on the other as far north as Japan. Along the Himalaya, at points 900 miles apart, glaciers have left the marks of their former low descent; and in Sikkim, Dr. Hooker saw maize growing in gigantic ancient morasses, Plants on the Himalaya, and Neilgherries, Ceylon and the Khassya mountains, and in the Malay peninsula, and the moister and more equal parts of India, are identical with those of Java. The genus Calamus, Orchids, Araceæ, Zingiberaceæ and Ferns are especially abundant, the genus Grammatophyllum, the wonderful Nepenthaceæ, or pitcher plants, of which solitary species occur in Madagascar, Ceylon, the Seychelles, Celebes and the Moluccas.—*Darwin* on the *Origin of Species*, 3d. Ed. pp. 403. 405. *Wallace*, i. p. 138. *Hooker and Thomson Flora Indica.*

FLORA COCHIN-CHINENSIS, a botanical work by Fra Loureiro, a priest of Rome.

FLOR DE FARINE, Port. Flour.

FLORES, called also Endie or Mangerye, an extensive Island, of the Archipelago, 201 miles long from E. to W. and from 42 to 45 miles broad. It is so named from the Portugese word 'flor,' a flower but is called Ende and Mangerye, from its chief south and west ports. Its chief trade at Ende is with Sumba or Sandalwood Island; the Mangerai port trades with the Bugi and Malay. The coast is occupied by the Malay or brown race, but in the interior is a people with frizzled hair, and a similar frizzled hair people live in the mountainous parts of Solor, Pintar, Lombata and Ombay. On the south coast of Floris is a tribe called Rakka who are reported to be cannibals, accustomed to eat their enemies and their own relatives who die.

Captain Keppel says that the natives captured from the island used to be much esteemed by the Celebes pirates, as slaves, and he gives the following translation from a Dutch journal:—"On the island of Flores, there lives a race called, on the south coast, Rakka, who not only devour their enemies, but with whom custom requires that the son shall cut the body of his deceased father in pieces, and sell the flesh to the inhabitants at the high price of its weight in gold. This flesh is greedily eaten by the people as a great delicacy. If the father was heavy and of great size, the son considers himself particularly fortunate. The population of Endore on the same island is also very greedy of human flesh. But these cannibals confine themselves to the heart, which, with incredible dexterity, they extract from the body, by giving a blow under the left shoulder-blade. It is then cut into very small pieces, eaten completely raw by the bystanders, who belong to the same race." Captain Keppel adds I am not able to corroborate this.—*Horsburgh. Bikmore* iii. *Keppel's Ind. Arch. Vol.* ii., p. 149. See India, p. 352.

FLORES DE CASSIA, Port. Cassia buds.

FLORES STRAIT, is bounded on its west side by the eastern part of the island of Flores, and on the east side of the island of Salor and Adenara or Sabraon.—*Horsburgh.*

FLORIKIN. Birds of the bustard tribe, species of which occur in many parts of India, and to the N. W. towards Afghanistan. They are, like the bustard, speckled, greyish coloured birds; the males have plumes and they change their plumage in the breeding season. They have been noticed at some length under the word bustard. The origin of the word Florikin is obscure. It is sometimes written Florican, also Floreycan, but the little bustard of Europe is said once to have been called the Flanderkin, which may be the source of the name. The species of Florikin are now arranged by ornithologists under the genus Sypheotides.

Sypheotides bengalensis, Gmel. The Bengal Florikin.

Otis deliciosa, Gray.	O. Himalayana, Vig.
Charras, or Charaj or Charas, Hind.	Dabar of Nepal.
	Bengal Florikin. Eng.

In the breeding season, the whole head, which is very fully crested, the neck, breast and lower parts and thigh coverts are of deep glassy black, the plumes of the breast elongated, forming a full breast tuft and the feathers of the neck in front also lengthened, back a rich olive buff, with zigzag markings, and a black dash in the centre of each feather. It is 24 to 27 inches long. It is found throughout lower Bengal, North of the Ganges, North easterly to the foot of the Himalaya, into Dacca, Assam, Tipperah, Sylhet, Assam, North westerly into the valley of the Jumna, Rajputanah, the Cis-Sutlej states, and parts of the Punjab. It frequents large tracts of moderately high grass. The sexes live apart but near each other.

Sypheotides auritus. Latham. The Lesser Florikin, Otis fulva, Sykes.

Khar-tilar of Bheels, near Mhow,	Chulla Charz, Hind.
	Likh, of Hindustan „
Kan-noul, Can.	Tan Mohr, Mah.
Charaz, also Charas, Hind of S. India.	Warrogoo Koli, Tam.
	Niala nemiki, Tel.

The Bheel name means "grass partridge," and it gets its Tamil name from being usually found in the Warroogoo (Paspalum frumentaceum) fields. The lesser Florikin, also called the common Florikin and black Florikin, is 19 to 21 inches long. In winter dress, the male closely resembles the female, but has always some white on the shoulder of the wing, when in full breeding plumage, the male in its head, neck, ear tufts, medial wing coverts, and all its lower plumage is deep black, the chin alone being white, the rest of the plumage fulvous. The different character of the plumage in the two seasons has led some to write on this bird under two names. It is found throughout India, from the extreme south to the foot of the Himalaya and frequents long grass in preference to any other shelter. *Jerd. Birds of India, Vol.* ii.

FLOS LAURI CASSIA. Cassia buds.

FLOS REGINÆ. Retz. Syn. of Lagerstræmia reginæ.—*Roxb.*

FLOUR. The farina of wheat is almost the only meal used as food in British India,

though rice flour is somewhat in use; but, in the Archipelago, that from the Sago tree is very extensively consumed. There were samples of seven varieties of flour made from roots in Pasuruan, and called Kiring, Katella Jawi, Sago, Arrow-root, Katella Blanda, Temu-lawak and Temu-gedring, either used medicinally or as delicacies for invalids.—*Journal of the Indian Archipelago*, Nos. VI—XII. *June, December* 1853, p. 287.

FLOUR OF WHEAT.

Bloem,	Dut.	Flor de farine,	Port.
Fleur de farine,	Fr.	Godhuma pishta,	Sans.

Semmel-mehl,	„	Flor,	Sp.
Atta,	Guz. Hind.	Godamba mavu,	Tam.
Fiore,	It.	Godumapindi,	Tel.
Farina,	Lat.		
Tapung; pulur; lumat	Malay.		

Meal of wheat, flour. When sifted myda is the finer part or wheaten flour; and soojee the coarser. In India, the unsorted wheaten flour, the atta, does not readily leaven into wheaten bread, for which the sifted sooji, the "semolina" of Italy, is solely used. The natives who use wheat use the atta or unsorted flour and the maida where obtainable.—*Mrs. Hervey's Adventures of a Lady in Tartary*, Vol. I. p. 62. *M'Culloch*, p. 582.

FLOWERS are very largely used, by mahomedans, hindus, bud'hists and the followers of Confucius in their worship of the deity, or of their idols, or in their offerings for the dead. Flowers do not seem to have been similarly employed at any time by the Hebrew race, and in Acts xiv, 13, when the priests of Jupiter came to Paul with an ox for sacrifice and with garlands, is the only mention of them that occurs. 'They brought oxen and garlands, &c.' At the time of worship, the hindu priest places a garland of flowers upon the idol. Whether Paul and Silas were to be the objects of worship, to receive the garlands, or the oxen intended to be slaughtered, in either case, the practice would be conformable to that of the hindus. Though so largely used in the south and east of Asia, the Aryan hindu does not seem to care for flowers as beautiful objects of nature: he could not sing—

"In summer, autumn, winter or spring,
"A flower to me is the loveliest thing
"That hath its birth
"On this chequered earth,"

though western poets delight to dwell on the love that eastern races have for the natural flowers. Hindu ladies sometimes wear a little mirror, called chury, of polished metal, in a ring on the thumb, and amongst hindus the lotos is the emblem of female beauty. In a tale, it is mentioned that Krishna, who had concealed his passion from the parents of a damsel whom he secretly visited, unfortunately chanced to find her in the midst of her relations; how great his distress! He was averse to departing without expressing his passion, words were debarred, both were embarrassed, love prompted:—

"He, with salute of deference due,
A lotos to his forehead prest;—
She rais'd her mirror to his view,
And turn'd it inward to her breast."

The flowers of the Calotropis gigantea, Jasminum sambac, Michelia champaca, Mesua ferrea, form the ornaments with which Kama the hindu god of love ornaments his arrows:

'He with five flowerets tips the ruthless darts;
'Which through five senses pierce enraptured hearts,
'Strong Chumpa, rich in odorous gold;
'Warm Amer, nursed in heavenly mould,
'Dry Nag-keser, in silver smiling;
'Hot kittikam, our sense beguiling,
'And last, to kindle fierce the scorching flame,
'Love shaft, which gods bright Vela name.'

Clitorea ternatea is sacred to Durga; Jonesia asoca is a sacred plant. The flax plant is sacred to Siva. Baka, a kidney shaped flower is sacred to Vishnu. The flowers, of Mimusops elengi, are favourites for garlands. The Chrysanthemum Indicum are favourite garland flowers, Datura fastuosa, is sacred to Siva. Christians in India largely use the flowers of the Tagetes erectum on Christmas days. Hibiscus rosa-sinensis is sacred to Kali, Jasminium pubescens, is sacred to Vishnu: Nerium odorum to Siva, Nelumbium speciosum, the Indian lotus, is sacred to Brahma, Vishnu, Siva and their consorts, Saraswati, Lakshmi and Durga; Nyctanthes arbor-tristis is sacred to Siva. The budd'hists make great offerings of flowers at their temples, but are not used by the Budd'hist priest for decking the person. The mahomedans use them largely for laying over the tombs of their departed. The following is a list of popular flowers cultivated at Madras

Ageratum.	Collinsia.	Gloxinia.	Myrtle.
Aster.	Chrysanthemum.	Heliotrope.	Nasturtium.
Allamanda.	Convolvulus.	Hibiscus.	Nemophila.
Antirrhinum.	Coreopsis.	Honeysuckle	Œnothera.
Aphelandra.	Dahlia.	Holyhocks.	Passiflora.
Balsam.	Daisy.	Ipomea.	Pansy.
Begonia.	Delphinium.	Jasminum.	Petrea.
Bignonia.	Epiphyllum.	Juniperus.	Petunia
Brugmansia	Eranthemum.	Justicia.	Phlox.
Bulbs.	Fuchsia.	Lobelia.	Poivrea.
Cactus.	Gardenia.	Lophospermum.	Portulaca.
Campanula.	Geranium.	Marigold.	Thunbergia.
Carnation.	Gloriosa.	Maurandya.	Verbena.
Cereus.		Mimosa.	Violet.
Cockscomb.		Mignonette.	

Hardy Eastern Monachism, D. L. Richardson.

We may add the fragrant smelling Lawsonia spinosa; the beautiful purple and fragrant Bigonia chelonoides, which is a pagoda flower; the sweet smelling Millingtonia hortensis, the Cork tree; and the Justicia picta, a shrub admired for its beautiful, variegated, green and white leaves.—*Jaffrey Ains. Mat. Med. p.* 165.

FLOWER BATTEN. A very hard, fine, close-grained, heavy, Ceylon-wood. Its polished surface shows a pleasing mottled pattern.

FLOWERY CASSIA, Cassia florida.

FLOYERKIN see Florikin.—Bustard.

FLUGGEA. A genus of plants of the Nat. Ord. Euphorbiaceæ. F. leucopyrus is a small tree in many parts of India; F. retusa, grows on the banks of the Jumna; and F. virosa grows on the Jumna and westward to the Siwalik hills and the Salt range.

FLUGGEA VIROSA. *Roxb.*

Phyllanthus virosus *Roxb.* iii. 657.

Girk,	Hind.	Bata	of Sutlej.
Perei pastawane	Trans. Indus.	Vanuthi	,,

Occurs on the Jumna, on the Siwalik, Salt range and Trans-Indus. The wood is close-grained and strong Its fruit is edible by man and beast: its bark is astringent and is used to intoxicate fish.—*Dr. J. L. Stewart, Roxb.* iii, 659. *Voigt. O'Shaughnessy*, p. 552.

FLUOR SPAR, Derbyshire Spar, Native Fluoride of Calcium, is a mineral found in great beauty and abundance in Derbyshire and other places. A small specimen of bluish crystal of fluor spar, was found in the northern part of Province Amherst. As the mineral is often found in connection with lead, it is probable they will be found together in several Indian provinces—*Mason, Waterston, Faulkner.* See Lead.

FLY-CATCHERS. A family of birds with large gapes which subsist on flies, and small insects. See Aves; Birds; Muscicapidæ.

FLYING-CATS. A name given to the flying mammals of the genus Galeopithecus.

FLYING-FISH, Eng.

Jerad ul Bahr, Arab.

The flying-fish are species of the genus Exocetus, belonging to the Abdominal Malacopterygii, forming part of the family Exocideæ. Their pectoral fins are very long, nearly equal to the length of the body. The fish to escape its enemies rises into the air and the pectoral fins vibrate while wet, and re-vibrate as often as they pass through a crest wave, wetting the fins afresh. There are many species. Exocetus volitans. *Linn.*; E. solitarius; E. evolans; E. exiliens; E. mesogaster and others. The E. volitans is usually 10 or 12 inches long, but attains to 15 or 20 inches at greatest. They are captured by torch light in the West Indies.

At the Island of St. Helena they are captured from fifteen to twenty inches long, are used there, as in the West Indies, for food, being very sweet and of delicate flavour. The Solitary Flying-fish (Exocetus solitarius) is so named from not being seen in large flocks like the others; and it appears to have other specific differences. When watching these fishes closely, as they passed under the stern of the ship, Dr. Bennett remarked that the extension of both the pectoral and ventral fins was effected with an audible rustling noise, and only a vibratory motion was perceptible afterwards; nor was there any expansion and contraction of those organs during flight, after the first effort. Had there been any percussion of the pectoral fins, it would have been distinctly visible owing to the proximity of the fish, indeed, to produce percussion of the fins, it would be requisite to have an elaborate muscular apparatus; and as, on dissection, such is not found, the theory of that action of the fins may be considered unsupported by facts. It was also remarked that the fish, when keeping in a direct line of flight, proceeded for a great distance; but when this was deviated from, and it turned round (which action was apparently performed by the tail, not by the pectoral fins) it only proceeded about the length of a yard and dropped into the water. The greatest length of time he has seen them fly has been thirty-two seconds, and their longest flight from 200 to 250 yards. The Flying-fish has a steady flight, resembling that of some birds; but when pursued by enemies, or frightened by the passage of a ship through the water, it loses this graceful style of volition, its flight becomes hurried, irregular, stiff and awkward—a kind of scrambling pace—and it frequently drops into the water and again renews its flight in the same unsteady manner. When a large shoal of them emerged at the same time from the sea, it was perceived that some of them dropped immediately, others passed over a distance of twenty yards and fell, while the rest continued a steady flight of 170 to 200 yards and passed out of sight. Their long pectoral fins or wings have the rays united by a fine delicate membrane, flexible and transparent; the colour of this membrane varies; and some have the ventral fins so large as to appear to have four wings.—*Collingwood; Gatherings of a Naturalist in Australia, by G. Bennett, M. D.*

FLYING FOX. A term by which Europeans in India designate the genus Galeopithecus of mammals. See Galeopithecus. Mammalia.

FLYING GURNARD. Trigla volitans of the Mediterranean, Atlantic and (west ?) Indian seas, a singularly beautiful species raises itself into the air by means of its large pectoral fins. See Dactylopterus.

FLYING LEMUR. A term by which Europeans in India designate the genus Galeopithecus of mammals. See Galeopithecus. Mammalia.

FLYING SQUID, Loligo sagittatus.

FO. The Chinese name for a Budd'ha, for Sakya muni, and proceeding Budd'has. One Fo is said to have gone from India to China, B. C. 1200.—See Adam's Peak; Buddha, Kwang-yin.

FODDER for CATTLE, in India is very various, the root of the hariali grass, Cynodon dactylon, the stalk of the joar (Sorghum vulgare) cut into small pieces, the straw of several grasses, Paspalum scrobiculatum, Pencillaria spicata: Panicum italicum, P. frumentaceum, P. miliare and Eleusine ægyptiaca. Buffaloes are also fond of Kans, Saccharum (Imperata) spontaneum and its varieties. The pasture grasses in Hurriana are celebrated for the herds of cattle which graze on them. The Hurriana grasses belong to the genera Acrcahne, Andropogon; Cenchrus chaetaria: Chloris; Dactyloctenium, and Eleusine. The leaves and fruit of many trees are used. Dr. J. L. Stewart names 64 trees which furnish fodder in the Punjab.

FO-E. Chin. Budd' ha, Fo.

FOELY. Dut. Mace.

FŒNICULUM PANMORII. Roxb.

Anethum panmori, Roxb., ii. 94.

Panmuhori,	Beng. Hind	Shohi kire,	Tam.
Mudhoorika,	Sans.	Pedda jila karra,	Tel.

Cultivated in many parts of India, and its fruit, the Indian fennel seeds, are used medicinally in India as a warm aromatic and carminative.—*Beng. Disp.* 208. *Eng. Cyc. Voigt. Roxb.* ii. 94.

FŒNICULUM VULGARE.

Anethum fœniculum. L.

Fennel,	Eng.	Sonf,	Hind.
Adas,	Jav.		

Root.

Bekh-i-karafsh, Pers.

Cultivated in the plains of the Punjab as a pot-herb. *Dr. J. L. Stewart, M. D.*

FENJENGISHT. Arab. Vitex negundo.

FŒTID STERCULIA, Sterculia fetida. See Avenues.

FO-HI, the Great, Brilliant (Tai Hao), in Chinese history, a king who cultivated astronomy and religion. Fo-hi is the first named sovereign of the Chinese, but the date of his reign is not ascertained. Yu, the Great, is the first monarch of whose reality there is no doubt, and his accession occurred about 2,000 years before the christian era. Husbandry and silk weaving were the earliest of the arts cultivated by this people; the former was introduced by Shinnong, the immediate successor of Fo-hi, and silk weaving by an empress, and to both of these the Chinese perform annual sacrifices on their festival days. Husbandry is still highly honored, and, annually, at a grand festival in honour of the spring, the emperor ploughs and sows a field. The Egyptians, Persians, and Greeks held games and festivals mingled with religious ceremonies at seed sowing, as hindus now do and in England formerly the festival of Plough Monday was held, during which the plough light was set up before the image of the patron saint of the village.—*Elliot.*

FOIL. In the arts, metals, rolled and beaten out into thin leaves, and large quantities of gold, silver, tin and brass foils are used in India, Burmah and China, for ornamental work in their temples and in ornaments. In jewellery, foils are manufactured by painting a sheet of silver foil with the required colour mixed in a transparent varnish and placed beneath a stone or gem. *King.* See Brass. Gem. Jewellery.

FOIN. Fr. Hay.

FO-KWE-KI, a budd'hist work. See Sakya Muni.

FOLIA MALABATHRI, F. tamalapathri and F. Indica, of Dioscorides and Pliny, supposed to be Cinnamomum tamala, or C. nitidum *Nees*, also thought by some to be the leaves of the piper betel. The learned of Europe have investigated this at length.

FO-LING. A root so called by the Chinese, comes from the rhubarb region and formerly well known in the European Materia Medica under the name Radix China.—*Yule, Cathay* p. *I. OCXVI.*

FOLLIS, a copper coin, appears to be the same as the Ar. fals. plural falus, formerly known in Spain, as the name of a small coin, foluz.—*Yule, Cathay II. p.* 481.

FOOD.

Taam,	Ar.	Ukl-o-Taam,	Pers.
Khana,	Hind.	Adhar,	Sansc.
Khana-pina	,,	Choram,	Tam.
Razaq,	Pers.	Bhojnam,	Tel.
Khuraq,	,,		

The food of man is obtained from the vegetable and animal kingdoms, but in by far the greatest proportion from plants.

The human frame, of flesh and bone and blood, when chemically analysed, yields the following elementary substances,

Carbon.	Phosphorus.	Iron.	Chlorine.
Hydrogen.	Potassium.	Manganese.	Fluorine,
Nitrogen.	Sodium.	Aluminum.	and
Oxygen.	Calcium.	Copper.	Silicon.
Sulphur.	Magnesium.		

Few or none of these ultimate elements occur in the human body in their pure form, but are variously combined into compounds with very different physical properties and chemical relations.

Carbon, hydrogen, oxygen and nitrogen are called organic elements, because no animal cell and no vegetable cell can grow unless the whole of these elements exist. The substances belonging to this group which enter into the food of man, are cellulose, starch, sugar and oil. Cellulose, forming the external membrane of the cells of all plants, is found in all food derived from the animal kingdom. Though similar in composition to starch, it differs from starch in being insoluble though, as they feed largely on it, it must be extensively taken up into the system of herbivorous and other of the lower animals, and must be similarly adapted by the human stomach, though with some difficulty, as carrots, turnips, radishes, uncooked vegetables &c., are not readily digested; cellulose can be converted into starch by sulphuric acid. Substances yielding starch, enter very largely into the diet of man and of the lower animals, and, with man, starch is generally partaken of in the form of flour, either of grains, of roots, and root-stocks, of the stems and in the seeds of plants. There are few or no vegetables that are eaten that do not contain starch. It is found in turnips, carrots, potatoes, cabbages, parsnips, beans, peas, wheat, barley, oats and the rest of the cerealia: in all seeds and fruits, but, as with the sago, Portland sago, tapioca, cassava, the various arrowroots, potato-starch, sago-starch, &c, it is first, before being used, separated from the other vegetable elements. Starch has the property of combining with water at a temperature of 180° and forming a gelatinous mass, in which state it seems more digestible. The carrot, turnip, parsnip, cabbage, and Jerusalem artichoke, owe their dietetic value to the starch which they contain, as also the roots of the Arum maculatum, Orchis mascula, inuline from the Inula helenium, Lichen starch, found in almost all kinds of Algæ and in the sea weeds. One of these sea weeds the Plocaria tenax or, Chinese moss, is known in all the eastern seas.

Sugar is soluble in water, is of a sweet taste, and can be converted into alcohol, and it exists in plants dissolved in the water which they naturally contain. It is taken into the animal system to maintain the animal heat and persons and animals get fat on it. Cane sugar consists of carbon 12 atoms, hydrogen and oxygen each 9 and water 2: and sugar is obtained also from beet, the maple, the birch the various palms, from the Caryota urens, Phœnix sylvestris and cocoanut, but it exists in milk, the grape, in the fruits and other sweet parts of plants, and in the stems of all grasses.

The alcohol obtained from these by fermentation, in the form of spirits, wines and beers is largely used as an article of diet. Although resembling sugar in composition, its effects on the animal system are very different. It acts on the nervous system as a stimulant and narcotic, it is very valuable in medicine, and also, of great value to people in health, exhausted by long continued mental or bodily labour. In excess, alcoholic substances are injurious; but amongst the earliest discoveries of every race has been the art of producing intoxicating stimulants. In India, boasting of an ancient civilization, opium, hemp and the many preparations from it, its charras resin, and bhang, the various palm-wines, the beers from millets, and ardent spirits from cereals, and from palm-wines and sugars, have been used from time immemorial, As Mr. Cornish observes, (page 15) the effect of those articles in moderation, is probably rather beneficial than otherwise. Opium eating and ganjah smoking are both occasionally carried to excess, and the consequences, in injury to the nervous tissues of the body, are very similar to those resulting from the excessive use of ardent spirits. The moderate use of all these agents, however, appears to prevent undue waste of tissue in the body, and to render the frame less susceptible to the action of those impalpable but pestiferous poisons which are so prevalent in the soil and atmosphere of tropical countries. The craving for the use of these things undoubtedly arises out of some urgent necessity in man's nature, and the amount to which they are used in Southern and Eastern Asia, is, perhaps, greater than in any part of Europe. With a rapidly increasing population in all parts of the world, the production of food is obviously an object of the first importance to all classes, and the vegetable substances, from which man derives his principal sustenance, necessarily occupy the main attention of the culti-

vator, while the products form a most important staple of domestic and foreign commerce. The following lists of cereal grains and pulses, will give the names of the food plants cultivated in the Madras Presidency.

Botanical	*English Name*	*Hindustance*	*Tamil Name.*
Hordeum hexasticlon ...	Barley, ...	Jow, ...	.....
Triticum aestivum, ..	Wheat, ...	Gihoon, ...	Godoomay.
Eleusine corocana, ...	Raggy, ...	Natchnee ragee, ...	... Kavaru.
Oryza sativa..	Common rice, varieties, Black Paddy, Red do.	Chawl, ...	Areesee.
Setaria italica	Italian millet.	Kala-kangnee	Tenney.
S. Germanica,	Germanmillet	Kora kang.	
Panicum miliaceum, ...	Common do.	Sawee cheena warree, ...	Varugoo.
Pencillaria spicata, ..	Spiked millet.	Bajree, ...	Cumboo.
Sorghum vulgare, ...	Great millet, .	Jowaree, ..	Cholum.
Zea mays, ...	Indian corn, .	Mukka Jowaree; Boota, .	Muka cholum.

Pulses cultivated in Madras as food for man or beast.

Medicago sativa, ...	Lucern.	..	..
Trigonella fœnum graecum, ...	Fenugreek, ...	Maitee or meetee ki bajee, ...	Vendium.
Psoralea corylifolia, ..	Hazel-leaved psoralea ...	Bawurcheen...	Karpooga Arisee.
Cicer arietinum, ...	Chick pea		
Ervum lens, ..	Bengal gram, Lentil, ...	Chenna, ... Mussoor, ..	Cadalei. Mussoorpurpoo.
Pisum sativum, ...	Common pea,	Buttani, ...	Puttani.
Phaseolus vulgaris, ..	French bean..	Bakla, ...	Frenchbeansoo.
Phaseolus lunatus, ..	Duffan bean.	. .	...
—— radiatus, .	Green gram...	Haree moong.	Putcha payroo.
—— mungo. .	Moong or monash, ..	Mash, ...	Oolandoo.

—— sinensis.	Chinese dolichos, ...	Suffeed lobeh.	...
Lablab vulgaris, ...	Bullar, ...	Saim ki-puttee, ...	Motchay cottay.
„ „ var.	....	Suffed „ ...	Vellay mochay.
Psophocarpus tetragonolobus, ...	Winged pea...	Pankke mutur.	...
Canavalia gladiata, ...	Sword bean..	Lal kudsumbah, ...	Segapoo Thumbetten
Cajanus indicus, ...	Pigeon pea ..	Toor dhal, ...	Thovaray purpoo.
„ var.	Dholl, ..	Lal-Toor, ...	SegopooThovaray.
„ „	....	Pad ka toor.	Malay „

Plants cultivated for food, in Pegu.

Esculent Vegetables.

Solanum melongena, brinjal. Khayan.

Solanum lycopersica, tomato or love apple. Thayan-myai-bone.

Amarantus polygamus, green Bajee for vegetable curry.

Amaranthus atropurpureus, purple ditto.

Ocymum vilosum, mint for ditto. Penzeing.

Hibiscus sabdariffa, red sorrel or roselle for curry. Chin-boung.

Hibiscus longifolius, another variety for ditto. Kazoon-o-u.

Batatas edulis, sweet potatoe. Myouk-nee.

Dioscorea purpurea, purple yam.

Dioscorea glabra, the smooth ditto.

Dioscorea rubella, the red ditto.

Dioscorea anguina, the snake ditto.

Jatropha manihot, the Cassava yam.

Hedysarum tuberosum, the Batraj ditto.

Arachis hypogea, the earth nut. Myai-bai.

Dolichos catjang, long or French bean.

Dolichos lablab, the Indian ditto.

Raphanus sativa, or radish Moue-lah.

Trichosanthes anguina, the snake gourd. Pailiu-moay.

Momordica charantia, or small gourd. Kyet-bin-ga.

Luffa pentandra, the five cornered gourd. Tha-boot.

Luffa decandra, the ten cornered gourd. Tha-boot-khawai.

Lagenaria vulgaris, the cuddoo or bottle gourd. Boo-shin-sway.

Lagenaria pipo, the pumpkin.

Lagenaria melo-pipo, or squash.

Arum furfaraceum, scaly yam.

Cucumis usitata, large cucumber. Tha-khwa-gyee.

Cucumis sativus, common ditto. Tha-khwa.

Cucumis citrullis, or water melon. Hpayai.

Allium cepa, the onion Kyet-thoon.

Capsicum purpureum, red pepper. Gua-yoke.

Capsicum minimum, small or bird's eye pepper.

Andropogon esculentum, or lemon grass.

Cannabis sativa, or bang. Baing.

Nicotiana tobacco. Hsai.

Piper betel, Koon.

Oil Seeds.

Sinapis dichotoma. Moung-ngyeen.

Sesamum muralis. Huan.

Grains and Pulses.

Phaseolus mungo, green gram. Pai.

Eleusine corocana.

Zea mays, or Indian corn. Pyoun-boo.

Oryza sativa, or rice of numerous kinds. Htson.

The bread stuffs of commerce consist of the nutritious cereal grains, the tuberous rooted plants and the farinæ yielded by trees. Amongst these are wheat, barley, oats, rice, maize, millet, Guinea corn, the sago of palms, of the plantain and banana; the bread fruit tree; the edible root crops and starch producing plants, which are a somewhat extensive class, the chief of which, however, are the common potato, yams, coco or eddoe, sweet potato, the bitter and sweet cassava or manioc, the arrowroot and other plants yielding starch in more or less purity. Wheat and wheat flour, maize, and rice, form very important articles of commerce, and are largely cultivated in various countries for home consumption and export, a

portion being consumed in the arts—as starch for stiffening linens, &c., and for other purposes not coming under the term of food. The kind of bread in common use in a country, depends partly on the taste of the inhabitants, but more on the sort of grain suitable for its soil. The Chinese use little bread and that little is generally of wheat-flour. Cakes of wheat-flour, prepared on the girdle, are common article of diet amongst the races of northern and central India. Further south, on the table lands of the Peninsula, the natives of India use unleavened cakes made of the great millet, Sorghum vulgare, thespiked millet, Pencillaria spicata; and the very poor of the people use the hard Raggy, Eleusine corocana, in the form of cakes or porredge. Barley is occasionally used to the westward. Cakes made of the flour of the Indian corn, the Zea-mays are rather less nutritous than those made from wheat, but more fattening, in consequence of the greater quantity of oil contained in it. Along the sea-board, however, of all the south and east of Asia, in the deltas and valleys of the great rivers, the Indus, the Ganges, the Bramaputra, in all Bengal, all Burmah, in the delta, and valley of the Irawadi, in all the sea board and near the great rivers of China, rice is the great article of diet, boiled and eaten alone, or with a little animal food, or with condiments made into curry, or chutni; or made into the cakes which are sold through the bazaars under the familiar name of "appa" or hoppers. In the interior of India, on the table lands, other grains and pulses are used, such as wheat, the various millets, and Indian corn, and in northern India, the pulses, chick-pea, the lentil and dhals are all in extensive use; but the well-to-do people prefer rice, which is more and more used as increasing prosperity enables them to obtain it and the people speak of using it once or twice a day to indicate the dearness or cheapness of food. The facility with which it can be cooked, the little cost of cooking it and its lightness in digestion are all great recommendations to use it:—the cleaning, grinding and cooking of the harder grains costing much time and money. Rice flour is scarcely ever made into fermented bread, although it is said to be occasionally mixed with wheat flour, for that purpose. The superiority of wheat to all other farinaceous plants, in the manufacture of bread, is very great. Its essential constituents are starch, also called farina or fecula, gluten, and a little sugar and albumen. It is occasionally adulterated with alum, which is added to whiten the flour, and to enable it to retain a larger quantity of water. Salt is also employed in the adulteration of wheaten bread, to whiten the flour and enable it to hold more water, and carbonate of magnesia is improperly used to obtain the same result. In eastern and southern Asia, the ordinary wood bread, the well known sago, is made from the starch granules contained in the pith of several species of palms. In the Archipelago, sago flour and prepared sago are largely used as an article of diet, alike for the robust labourer and for the invalid, and is extensively exported for the use of the sick, and the nursery. Amongst the Arabs burgoul consists of wheat boiled with leaven, and then dried in the sun. The dried wheat is preserved for a year, and boiled with butter and oil. Leavened bread is called khuzb.

The seeds of all the Gramineæ, those of the darnel alone excepted, are capable by cultivation of becoming alimentary. The value of grains, generally speaking, is directly as the size of the caryopsis, and inversely as the thickness of the pericarp. When the grain abounds in perisperm it is heavy, when the envelope is thick the grain is, on the contrary, light, thus:—

100	seeds of wheat weighed .	450	grains.
100	,, barley, ...	335	,,
100	,, rye, ...	260	,,
100	,, oats, ...	250	,,

The chemical composition of the grain influences materially the quality of the resulting bread. If the gluten be absent, no fermentation takes place in the dough; if the gluten be in excess the bread is heavy and acid. Wheat flour may be considered the type of all that is suitable for alimentary purposes, and in the degree of deviation from this standard consists the inferiority of the other grains. It is very largely used by the races occupying Hindustan, Rajputanah, the N. W. Provinces of India, in the Panjab and in Afghanistan, but almost wholly in the form of unleavened cakes or chupatti, prepared on the girdle, for most of the hindu people of India, as a rule are prohibited by their religion from partaking of food prepared by others, many of them even of food of which others have seen the preparation; and as the stricter mahomedans object to use leavened bread, from the use of the toddies or fermented palm wines as a leaven, unfermented bread or porredge of flour, water, with perhaps the addition of salt, are alone employed. As a leaven for bread the substances employed are yeast in Europe, and the palm wines or toddies in Eastern and Southern Asia. And the substitutes for these are sesqui-carbonate of ammonia; carbonate of soda and hydro-

chloric acid; or carbonate of soda and tartaric acid.

Several calculations have been made to ascertain the available supply of food for India. Sir Arthur Cotton estimates that two acres of rice land will feed seven people for a year, and Mr. Fischer, the manager of the Shevagunga estate, considers that a family of five will consume under 6 lbs. of grain, per diem. (*Robinson's Travel's Vol. II. p.* 132. *Tomlinson. Hassal.—Statisque des Cereales de la France par Moreau de Jonnes, quoted by Simmonds*, p 217.)

It is estimated that in the Madras Presidency, 15 millions of acres of dry land and $5\frac{1}{2}$ millions of wet land are devoted to the production of food grains. Also that an acre of the best rice land will yield from 1,080 Madras measures in the southern districts to 1,200 measures in Godavery and Kurnool, i. e., from 30 to 33 cwt.; and the worst rice land in those two districts varies from 300 to 533 measures, i. e. from 8 to 14 cwt. Probably therefore, 20 cwt. of paddy or rice in the husk, or 10 cwt. of cleaned rice may be taken as a good average of produce of irrigated land. and 190 measures or about five cwt. that of dry land, whether it be devoted to ragi, cumboo, cholum or any other of the unirrigated crops which form the food staple of the poorer classes: one acre of wet land will thus produce as much food as two acres of dry land, and 55 millions cwt. of rice and 75 million cwt. of dry grains is the estimated amount of produce in the Madras Presidency, which has a population of 26,539,052 souls. This allows about 5 cwt, per soul per annum. Mr. Dalyell estimates the annual yield at 129 million cwt. or lb. $1\frac{1}{2}$ daily for each person, whereas, he considers that a family of five can subsist on 7 lbs, per day and three acres of superior land, supposing one acre to be irrigated, or 4 acres of unirrigated land would support such a family for a year. The Madras Presidency, with a long sea board, both imports and exports, largely, food articles, the exports exceeding the import five or six times; and perhaps one-third of the population occasionally use animal substances, as additions to their vegetable diet.

Animals of every class, quadrupeds, birds, fishes, reptiles, insects and their larvæ are used by man as food, and are acknowledged to contain a very large amount of alimentary substances, and these are classed as the nutritious proteinaceous or nitrogenous articles of diet. There are few living creatures in the south and east of Asia, which some one or other of its multitudinous races do not use as food: the horse, the bullock, the tiger, and all the cat-tribe, the dog, birds of all kinds, birds of prey excepted, almost every fish, frogs, snakes, ants, beetles and their larvæ, crustacea and molluscs of every kind, and the bodies of animals that have been killed or have died are all utilized The hindu brahmin and rajput and vesya, as a rule, will not eat animal food, and no hindu can eat the cow without ceasing to be of the four hindu castes, but all sudra hindus eat goats, fowls, mutton, and the servile pariah races eat nearly all quadrupeds, many birds and reptiles. The majority of northern brahmins may, and do eat animal food, generally mutton or fish; though priests, while officiating as such, perhaps do not. For although most priests are brahmins, all brahmins are not priests; as, amongst the Jews, the tribe of Levi furnished the priesthood, so among hindus, it is furnished from that of brahmins. (*Ann. Ind. Adm. vol.* xii., *pp.* 11, 244, 268, 288, 300. *Hunter's Rural Life in Bengal.*)

The use of animal food is not absolutely forbidden to the followers of Buddha, and all the followers of this faith in Burmah use enormous quantities of fish, reptiles and crustacea: even the more strict of them, though they may refuse to take life for food, eagerly use flesh when they can get animals killed for them, or find them dead from accident or disease, and the cow, buffalo, tiger and horse are all eaten in Burmah, tiger-flesh selling for five annas ($7\frac{1}{2}d.$) a pound. Perhaps, no race in the world so largely utilize vegetable and animal substances as the Burmese and Chinese, the great rivers which intersect the country and the extended sea board providing a large supply of fish and crustacea.

The great staff of life in China is rice, which is either eaten dry, or mixed with water, so as to resemble a soup. Out of rice they make their chief intoxicating liquor, which, when good, is something like strong whisky, both in its colourless appearance and its smoky flavour. Vegetables are largely consumed, such as the sweet potato, yams, millet, peas, beans, turnips, carrots, &c. Of their fruits, the orange, lichee, loquat and mango are much in use. Their favourite drink is tea and the favourite animal food of the poor, is pork, the taste for which is national. There is a maxim prevalent among them, that "a scholar does not quit his books nor a poor man his pigs." The flesh of the bullock, sheep, deer, dog, cat, wild cat, rat, and horse is eaten, but compared with that of swine, it is a rarity. Fish are eaten in great abundance, either fresh, dried, or salted, and they rear great quantities of ducks and various species of fowl for the table. The

comprehensive principle on which Chinese diet is regulated, is to eat everything which can possibly give nourishment. The luxuries consumed by the very rich consist of the edible bird's nest, the bech de mer or sea slug; shark fins, fish maws, cow sinews, points of stag antlers, buffalo hides, which afford the gelatinous food considered so restorative. Amongst their delicacies also are dishes made of the larvæ of the sphinx moth, and of a grub bred in the sugar cane. In China, the various modes of catching and rearing fish exhibit the contrivance and skill of the Chinese, quite as much as their agricultural operations. According to the Repository, at least one-tenth of the population derive their food from the water, and necessity leads them to invent and try many ingenious ways of securing the finny tribes. Great bag nets and stake nets are in use, also hand nets with a diameter of 30 feet which they throw with a swing over head and they teach cormorants to fish and bring the prey to the boat. When Chinese fishermen take one of those huge Rhizostoma, which abound on the coast, they rub the animal with pulverized alum to give a degree of coherence to the gelatinous mass. Many of the dher, pariah, mhar and chuckler or leather workers of India eat greedily of creatures that have died of disease. It is said that, in S. Africa, eating the flesh of animals that have died of peripneumonia, causes in the eater a malignant pustule and that the virus is neither destroyed by boiling nor roasting. But, after minute inquiries throughout India, no injury seems to result from such food. In a recent year, 1863, when many horned cattle died throughout Burmah, of what is supposed to be the rinderpest ailment, there was a considerable amount of sickness and death from a typhoid fever, but whether eating diseased animals was the cause, was not ascertained.

Of the nutritious, proteinaceous or nitrogenous articles of diet, it may be added that the substance called protein is the basis. Protein is the first element that appears in the development of the vegetable cell. It is consequently universally present in plants. It also constitutes the chief material of the tissues of animals; In the vegetable and animal kingdoms it assumes various forms and is called albumen, fibrine and caseine according to its physical and animal properties. Herbivorous and graminiferous animals derive this constituent directly from the vegetable kingdom: the carnivora obtain it indirectly from the plants, through the animals that they eat. Man obtains his supply of protein from both sources.

The fat of animals, ghee or clarified butter and the sesamum oil are almost the sole oleaginous or fatty substances used in the S. and E. Asia for food Pure butter is rarely used. These consist of carbon 11, hydrogen 10, and oxygen 1, and their value in the animal economy is as heat producers, for which they are superior to sugar or starch. The oleaginous principle, however, seems also to aid in the developement of the proteinaceous tissues, and to act as a kind of preparation for their growth. In disease, oils are of undoubted value.

Many tables have been published showing the chemical composition of the various substances used as food by man. Perhaps those by Dy. Inspector General Mayer, of the Madras Army, Dr. Lyon Playfair and Dr. Watson are the most valuable, and the following may be found of use.

Table of Composition of Food in 100 *parts.*

Food.	Quantity of Nitrogenous Flesh-forming ingredients.	Quantity of non-Azotised Heat-giving Principles.	Quantity of Mineral Matter.	Quantity of Carbon.
Milk	4·50	7·90	0·60	6·94
Butcher's Meat, free from bone... ...	22·30	14·30	0·50	21·56
Bacon, Pork	8·36	62·50	0·50	53·92
Fish	14·00	7·00	1·00	9·15
Flour	17·00	66·00	0·70	45·50
Barley Meal	14·00	68·50	2·00	40·50
Oatmeal	13·60	70·30	3·30	44·10
Indian Meal	10·71	72·25	1·04	36 41
Lentils	28·22	40 08	0·00	
Raggy	18·12	80·25	1·03	
Cholum "Sorghum vulgare"... ..	15·53	83·67	1 26	
Cumboo "Pencillaria spicata" ...	13·92	83·27	5·73	
Peas	23·40	60·00	2 50	35·70
Rice	5·43	84·65	0·52	36·00
Potatoes	1·41	22·10	1·00	12·20
Carrots	1·48	11·61	0·81	5·40
Turnip	1·64	10·00	1·62	5·20
Parsnips	2·10	17·70	0·80	8·63
Mangel Wurzel	1·60	12·26	1·14	5·50
Cabbage	1·75	4·05	2·20	2·65
Cocoa (nibs)	9·56	85·76	2·70	68·56
Sugar	0·00	100·00	0·00	42·58
Suet, Fat, Butter... ...	0·00	100·00	0·00	79·00
Bread	6·83	48·65	1·51	25·19
Cheese	31·02	25·30	4·90	36·80
Beer	0·85	9·17	0·20	4·33

The table also shows the relative quantities of nitrogenous matter contained in the various cereals and pulses. The abundance of this element renders them so suitable for forming an article of diet together with substances abounding in carbonaceous or starchy matter.

Name.	Nitrogenous matter. In 100 parts; varies in specimens from different parts of India, from	Starchy matter.	Fatty or oily matter.
Gram, "Cicer arietinum"	18 05 to 21·23	60·11 to 63·62	4 11 to 4·95
Arhar, "Cajanus indicus"	19·83 to 20 38	61·90 to 64·32	1·32 to 1·86
Mattar, "Pisum sativum"	21·80 to 25 20	58·38 to 62·19	1·10 to 1 12
Lentils, masur. "Ervum lens"	24·57 to 26·18	59·34 to 59 96	1 00 to 1 92
Chural, "Lathyrus sativus"	31 50	54·26	0 95
Lablab vulgaris	22·45 to 24·55	60·52 to 60 81	0 81 to 2·15
Rawan, "Dolichos sinensis"	24·00	59·02	1 41
Kulthi, "Dolichos uniflorus"	23 03 to 23·47	61·02 to 61·85	0·76 to 0 87
Guwar, "Cyamopsis psoraloides"	29·80	53·89	1·40
Bhut, "Soja hispida"	37 74 to 41 54	29 54 to 31·08	12·31 to 18·90
Urd, "Phaseolus radiatus"	22 48	62·15	1 46
Mung, "Phaseolus mungo"	23·54 to 24 70	59 38 to 60·36	1·11 to 1·48
Moth, "Phaseolus aconitifolius" ...	23·80	60 78	0·64

Many of the ancient customs noticed in the Scriptures find illustrations in modern Eastern life. With regard to unclean and forbidden animals, mahomedans follow generally the law of Moses, and only use animals that chew the cud and divide the hoof. They do not eat shrimps. Brahmins do not use the onion, saying it so resembles flesh, neither are the fruit of the Moringa pterygosperma, or Sura kai or the radish, articles of diet with them, and sugar from the palmyra tree wine is also avoided by them. Hindus eat off metal, usually brass, dishes, for the facility of purifying them by fire, but many are now using glazed China-ware which they purify with ashes. In a large entertainment, however, leaf platters are used, made of the leaves of the banyan, the pulas (Butea frondosa) or the plantain leaf. The pig which many races avoid, is used by the Naidu hindus of the Indian peninsula and by all the aboriginal races and humbler christians; most hindus avoid crabs, but many eat shrimps. Eggs are eaten by almost all hindus, and all hindus partake freely of milk, which the Burman and Chinese never touch. Hindus and buddhists often make food offerings to the deity. With the Burmans the act of offering is the merit, and the quantities of food presented at the temple at Prome and the great Showay Dagon at Rangoon is enormous, it is simply all thrown over the wall down the slope of the rock. Hindus make sacrificial offerings to the deity, the elements of sacrifice being a lamp, frankincense, camphor and sandalwood, which are burnt, and they eat the sacrificial offering, whatever it be. Food is often presented by hindus to the Pitri or manes of their ancestors, many of the races of Northern India, who follow brahminism, cook within a sacred circle, and a stranger stepping within it makes all unclean. Many Vaishnava hindus, will not permit a stranger to cast a look on the food they cook, nor even to look on them while eating, and every hindu above the rank of a labouring man eats his food dressed in a silk cloth.

It is mentioned when describing the meal in Genesis xliii. 32, that they set one for him by himself, and for them by themselves, and for the Egyptians by themselves: because the Egyptians might not eat food with the Hebrews; for that is an abomination to the Egyptians and, so, amongst the hindus, different castes will not even eat food cooked in the same earthen vessel, if a person of another caste touch a cooking vessel, it is thrown away; similarly, in Genesis, xliii. 34. it is mentioned of Joseph that he sent messes into them from before him, and, this is still the method among the hindoos, the dishes are not placed on the table but messes are sent to each individual by the master of the feast, or by his substitute. Feasting is everywhere in the East, a great social duty, in the manner described, 1 Kings, i. 9. Food is eaten with the hands as in Matt. xxvi. 23, and after meals, hand washing as 2 Kings iii. 11 and Matt. xv. 2, Mark vii. 5, Luke xi. 38 *Eng. Cyc.*, *Powell Hand-book* p. 243. *Crawfurd, Dict. Dr. Cornish on dietary Ward on the Hindus M. E. J. R., Fortunes' Residence in Chin.*

FOOFUL. Arab. Pers. Betel-nut.

FOO-CHOW-FOO in L. 26° 7′ N. & L. 119° 15′ E. is the capital of the Chinese province of Foo-keen. It stands on the

banks of the river Min, about thirty-eight miles from the sea, seven miles to the westward is Pagoda Island, on which is a lofty building, or pagoda, from which the island derives its name, where the river Min again unites with a branch from which it has been separated a few miles above the city of Foo-chow-foo. Mountains from 1,500 to 2,800 feet in height form a semicircle, five miles distant from the city; the plains, at the base of these mountains, are planted in paddy fields, orchards, and groves. The walls of the city enclose a space exceeding $8\frac{1}{2}$ miles; they are turreted, *Sirr's Chinese i.*, 160.

FOO-KEEN, a Chinese district, lies on the coast, and is bounded on the North-East by Che-kean, on the North-West by Ke-an-se, and on the South-West by Kwan tung: its surface is estimated about fifty-seven thousand square miles, and its population is about fifteen millions. Foo-keen is the principal black tea district of China, the renowned hills of Bohea are distant one hundred and fifty two miles from Foo-chow-foo, the capital of Foo Keen. *Sirr's China and Chinese*, Vol. I p. 164.

FOONG-HANG, the Chinese phœnix, a head ornament worn by Chinese ladies composed of gold and jewels, the wings hovering and the beak of the bird hanging over the forehead on an elastic spring.

FOOT. The foot, in most oriental countries is deemed the humblest part of the body. It is alluded to in 1st Kings ix. 9, where the Hebrews are mentioned to "have taken hold of other gods." When a person claims the protection of another, he casts himself down before him, and lays hold of his feet: and this expression is commonly used, though a person may not prostrate himself, "I have taken hold of your feet." "I will not leave your foot." When a person is called into the Burman monarch's presence, he is said to go to the golden feet, and a son writing to his parents will add that he kisses the feet of his mother.

FOOT-BALL, is a favourite game with the Burmese and Papuans. The ball is woven of ratan, hollow and elastic. The player keeps it dancing a little while on his foot, then occasionally on his arm, or thigh, till suddenly he gives it a good blow with the hollow of his foot and sends it flying into the air. Another player runs to meet it, and at its first bound catches it on his foot, and plays in his turn. Four or five can play together, and the game needs agility, skill and practice. With the Malay people,—the players stand in a circle, larger or smaller according to the number engaged, a ball made of split rattans, hollow and about 6 inches in diameter, is thrown up by one, the person to whom it approaches receives it on the instep of his foot, and throws it into the air towards his nearest playmate, who in like manner sends it on to the next, and so on: with expert players it is thus sent round from one to another, an extraordinary number of times without falling—sometimes one player will himself, particularly when there are many on-lookers, keep the ball in constant motion, receiving it in the fall, now on his foot, now on his knee, elbow, head, shoulder, &c. The ball is a perfect sphere, and is so light, it may be thrown almost with full force against any fragile object, without causing injury. The introduction of this plaything into Europe would be a great matter in households.—*Jour. Ind. Arch. Vol.* V. *No.* 11.

FOO-TOO, one of the Chusan Archipelago, an island 3 miles long and 1 mile broad.

FORATH. Ar. River Euphrates, in Arabic and Persian, Forat or Forath, (plural afrat) in the Hebrew language, Perath or Prath, means to fructify or to fertilize.

FORBES, Dr. Duncan, LL D., educated at Perth and St. Andrew's University, was for a short time at the Calcutta Academy, but settled in England, where he was a teacher of Persian and Hindustani, afterwards Professor of Oriental Languages at Kings College.

FORDONIA. See Hydridæ.

FORE-FINGER, pointing it, is denounced in Isaiah lviii. 9. See Sundhyá.

FORESTS OF INDIA. Drs. Royle, Wallich and McClelland, for many years, continuously, brought to notice the necessity for attention to the forests of India and Burmah. A vast extent of forest land in Oude, situated on the east side of the Kowreala river, was described by Dr. Royle, as holding out the prospect of very valuable supplies by the year 1850, provided that means were adopted for preventing wanton destruction, and of allowing the young plants to grow up, and supply the place of those which are cut down; Dr. Wallich drew attention to the forests then occupying the Islands of the Gogra, commonly called Chandnee Choke. He represented them as in every way deserving of being preserved for the use of Government, and protected from destructive depredation. The Sissoo and Sal forests of the Deyra Doon were also recommended to be preserved, being as important for the stations in the north-west of India, as the forests of Oude and Gorukpore are for those in the south. The Western Coast

of the peninsula of India, the country above the ghauts in Canara, the Animully and Pulney hills, have long been famous for their forests, especially those of Malabar for teak, of which the timber has always been remarkable for its superiority to that of other places, and with which the dock-yards and ordnance department have been long supplied. The quantity, however, has diminished, from the forests being partially exhausted, and pains not having been taken to keep up a supply. Also, long ago, teak was pointed out by Dr. Roxburgh as abounding on the mountainous parts of the Coromandel coast and on the banks of the Godavery, above Rajamundry, and plantations were established at several places in the interior of the Bengal Presidency. A new supply of teak was, however, laid open, on the acquisition of the territories along the east coast of the Bay of Bengal. The forests to the eastward of the Saluen river, in Martaban, when visited by Dr. Wallich, were very favourably reported on, for the supply of splendid bamboos as well as of teak, for the extent of the forests, the size of timber, and the facility of procuring it. Subsequently, Dr. McClelland reported in the forests of Pegu and Tenasserim, eighty-five species of soft white wood, many of them however valuable, either for their fruit, gums, oil-seed or spices; others, for their close and compact structures, are employed in the manufacture of small ware, as a species of Nauclea used for making combs, and two species of Erythrina yield the light charcoal employed in the manufacture of gunpowder. These light woods useless as timber, belong to the families Urticaceæ (including more than twenty species of Ficus,) and Sterculiaceæ, Laurineæ, Rubiaceæ, Myristicaceæ, Anonaceæ, Spondiaceæ and Bignoniaceæ, with odd species from other families. Of the remaining white woods, twenty-five in number, valuable for their strength and closeness of grain, seventeen of them are fit for house-building, and eight, from the hardness and fineness of their grain, render them valuable as fancy woods for cabinet making. He found twenty-five red-colored woods, seven of which, from their strength and solidity, are adapted for the various purposes of house-building; seven, from the elegance of their grain and colour, are suited to the various purposes for which mahogany is used, and eleven are suited to the finer purposes of fancy cabinet work. Yellow woods, three in number, hard and fine grained, suited to fancy purposes. There are twelve dark-brown woods, all valuable, eleven of them adapted for house-building, and probably for ship-building, and one for special purposes requiring great strength and hardness. Black woods consist of four different kinds, all of which are valuable for their strength and hardness. There are seven varieties of light-brown wood, colored wood, embracing all the timber of most value in the Province, exclusive of teak.—

FORESTS OF INDIA.

In 1850, the British Association at Edinburgh appointed a committee to report on the probable effects of the destruction of Tropical forests and the Report was presented the following year, 1851, at their meeting at Ipswich. A year afterwards, Forest Conservancy establishments were sanctioned for the Madras Presidency and for British Burmah. By Act VII. of 1864, the Government of India issued forest rules and penalties. The gross revenue derived from the Indian forests was in 1862-4 £304,443 and in 1864-5 £351,757, but deducting the cost of conservancy, the nett revenue was £113,949 in 1863-4 and £140,820 in 1864-5. In British Sikkim, are 105,004 acres of forest and there are also forests in Assam, Dacca, Chittagong, Cuttack, Palemow and the Rajmahal hills. Under Act No. VII an order was issued prohibiting felling of forests at an elevation of 6000 feet or upwards. In British Sikkim and the Dooars of Bhootan are large tracts of Sal (Vatica robusta). The higher slopes of the Darjeling district above 6,000 feet, have been reserved, plantations of temperate and sub-tropical trees have been formed, and several thousand mahogany trees were planted in the Terai with what result is not known. The forest tracts of the N. W. Provinces, are in Kumaon, Gurhwal, Meerut, Rohilcund, Ghorukpore and Jhansi. In Kamaon and Garhwal, the total area surveyed was 406,134 acres, of which more than nine tenths were covered with the cheer or stone pine. The Government forests in Goruckpore cover an area of 127,527 acres, 116,384 of which are occupied by sal trees, with an average of 25 to the acre. About 400,000 acres of Gurhwal and Kumaon are covered by the Pinus longifolia, bearing about fifteen trees to the acre. The northern limit of indigenous teak is in Bundlecund. It has been planted in the Punjab, but in that dry climate it is poor and stunted. The Oudh forests are in three divisions. The first or "Kheirigurh division" lies between the rivers Sohali and Mohana. The area is 263 square miles of which 149 square miles produce Sal, but the trees here in 1868-9, were not large enough to produce logs of timber. In the second or "Baraitch division," the countries between the river Kauriali and Girwa, is

partly covered with Sissoo forest and partly with a dense jungle of a variety of trees. The forest area is 170 square miles of which 100 produce sal. Eight trees are reserved, viz., Shorea robusta; Dalbergia sissoo; Cedrela toona; Diospyros, Melanoxylon, Conocarpus latifolia, Terminalia tomentosa, Acacia catechu, and Nauclea cordifolia, Sissoo, toon and ebony. The forests on the banks of the five rivers of the Punjab are of great value, and the deodar forests of the rajahs of Chamba and Bussahir are available for the Indian Government. Wood is the only material at present generally available in India for fuel. The northern limit of the Sal is on the banks of the Beas in the Kangra valley. The aspect of Coorg presents an entire forest, the long and narrow valleys, cultivated within it, serve but to render the vast woods more striking. The whole of the eastern boundary presents a remarkable line of demarcation, exhibiting an almost uninterrupted and impervious wood from the Burmagherry hill till reaching the Cavery, this space is wholly uninhabited. Advancing westwards the wood decreases in density as the country improves in cultivation and becomes gradually thinner till reaching the western ghat, the immediate summits of which, naturally bare of wood, are clothed with a luxuriant herbage. In the Central Provinces 2,880, square miles of forest tracts have been reserved 11,000 sq. miles remain unreserved and there are 10,000 sq. miles of timber tracts belonging to private individuals.—*Royle's Productive Resources of India. McClelland. Cleghorn in Year Book of Facts p.* 203 *of* 1868. *Annals Ind. Admin.*

FORGHANA. Has been a great hive of nations, whence issued the Asi, the Jut, or Yeut, who peopled the shores of the Baltic and preceded the Goths of Attila and Alaric. See Farghana.

FORSTER, an early traveller from India to Europe. He proceeded by land from Bengal to the Caspian Sea, and from thence by the ordinary route on the Volga, &c., to Petersburgh, in the year 1784. He avoided the country of the Sikhs. *Rennell's Memoirs*, p. 148.

FORGET ME NOT.—Myosotis palustris. Quamoclit vulgare.

FORKS. The point where two rivers meet and unite in one stream. Each branch is called a "fork." *Burton's, City of the Saints*, p. 89.

FORMAGGIO also CACIO. It. Cheese.

FORMICA, a genus of insects belonging to the family Formicidæ. It is distinguished by having the foot-stalk of the abdomen composed of a single joint, the mandibles triangular, and denticulated at the edge. The females are destitute of a sting. This genus comprises about a dozen British species, the largest of which is the Hill-ant or Horse-ant, F. rufa. The neuters in this species are about one-third of an inch long, of a black colour, with the thorax, abdominal scale, and a large part of the head, red. It makes its large conical nest in the open ground in woods, &c., amassing together large quantities of sticks, straws, &c.

Dr. Jerdon notices F. ammon; angusticollis; assimilis; carinata; cinerascens; compressa; hastata; indificans; longipes; nana; phyllophila; reluceus; rufo-glauca; sexspinosa; smaragdina; timida; vagans; velox; stricta; and sylvicola.

FORMICA INDEFESSA. An exotic species, is described by Colonel Sykes as being an extraordinary instance of the operations of instinct in so low a form of animal life. The fondness of these insects for sweet substances is very great, and their attacks on such things were resisted in every possible manner. But Col. Sykes observed an ant upon the wall about a foot above the level of the sweets; it fell, but instead of passing between the wall and the table and alighting upon the ground it fell upon the table. Others followed its example with similar success; and it was no longer a matter for doubt as to how they continued to swarm in such numbers about their favourite food, however carefully guarded.—*Eng. Cyc.*

FORMICA SMARAGDINA. Fab.

Dimiya, Singh.

This large red ant is well known in Malabar and the wooded parts of India, is employed in the North-West Provinces to destroy the nests of wasps that have established themselves in a house. In this case they are said to destroy all the wasps, but become so infuriated that their own indiscriminate attacks are nearly as bad as those of their foes. *Dr. Jerdon in M. L. S. J., Colonel Sykes. Eng. Encyc.* See Ants.

FORMICIDÆ. An extensive family of Hymenopterous insects, belonging to the section "Aculeata," and to the sub-section "Heterogyna" of Latreille, comprising the Linnæan genus Formica, or the numerous tribes of ants. The family is distinguished by the wingless state of their abortive females, by the great length of the basal joint of the antennæ in the females and the neuters, in which they are elbowed at the extremity of this joint, and by the first or the first and second joints of the abdomen being knotted; the upper lip of the neuters is large, horny

and perpendicular, falling between the jaws; the eyes are rounded, or oval and entire; the form of these organs varying greatly in many of the species. In their structural character the Formicidæ resembles the Tiphiæ and Daryli belonging to the section of the Sand-Wasps. The neuters are smaller than the males, and these are smaller than the females; the abdomen in the first and last of these sexes is composed of six segments, in the male of seven. The females and neuters are furnished with a sting in many of the species. Those species which have stings emit an irritating fluid into the wounds which they make, while the stingless species discharge a red transparent fluid on to the skin, causing painful blisters. The various genera of this family, according to Latreillie, are:—Formica, Polyergus, Ponera, Myrmica, and Atta. This last genus differs from Myrmica only in having very short palpi; the head of the workers is generally very thick. Acephalota is the Visiting Ant of the West Indies.

The *3rd Tribe Formicites*. The last family containing those ants that have no sting, and the abdominal pedicle is of one knot only. It comprises two genera, Polyergus and Formica.

See Ant; Formica; Polyergus; Ponera; Myrmica and Atta.

FORMIC ACID. See Gums and Resins.

FORMOSA CAMPHOR. See Camphor.

FORMOSA OR PAHAN ISLAND, called also Ty-oan, is about 210 miles in length from N. N. E. to S. S. W. with high land in the interior, but low towards the sea. It was known to the Chinese, A.D., 1431. When first made known to Europe, its men were described as tall, corpulent and bamboo yellow, going naked in summer. It was held by the Dutch for a short time. According to Latham the western coast of Formosa is occupied to a great extent by recent settlers from China; but the interior is inhabited by several rude tribes, whose language differs from the known Formosa. Malay words occur in the language of Formosa, which however belongs to a state intermediate between the monotonic and the inflectional. Formosa is part of a chain which lies along the Asiatic continent and forms a distinct and well defined ethnic and geographic group which includes all the Japanese and Aino islands from Formosa to Kamtschatka, and Mr. Logan proposed to call it Aino-Japanesia. Aralia papyrifera in Formosa does not exceed 6 feet high.—See *Archipelago, Supp. ii, Ind. pp.* 318, 319, 320, 358. *Japan* 410, *Loo-choo*

FORMOSA PHEASANT, is the Emplocamus Swainhoii.

FORSKAL, PETER. A traveller and botanist, a native of Denmark or Sweden, who travelled in Arabia and Egypt, and wrote the Flora Ægyptiaca, Arabica, and other works.

FORSTEN. A Dutch naturalist, spent two years in N. Celebes, about the year 1840.

FORT GEORGE. The fortress of Bombay.—See Bombay.

FORT GLOUCESTER. A fortification now in ruins, on the left bank of the Hooghly river, about 15 miles below Calcutta.

FORT GOLCONDA. A fortress on a rocky hill on the left bank of the Seena river, five miles west of the city of Hyderabad in the Dekhan, its builder is not known. It consists of an enceinte, with bastions and a citadel. After a siege of seven months, it fell by treachery in the end of September 1687.

FORT ST. DAVID A place in the Carnatic at Behoor; between it and Pondicherry, Major Lawrence, in August 1752, entirely defeated the French army.

FORT ST. GEORGE. The fortress at Madras. It is built on the principle of Vauban.

FORT VICTORIA. The name given to Bancoot, after its surrender to Commodore James, on the 8th April 1756.

FORTRESSES See Gul-i-gulab.

FORTUNE, ROBERT. A scientific horticulturist who collected many rare plants in China, in the middle of the 19th century. His first voyage was made in 1842, in the capacity of botanical collector to the Horticultural Society of London. During a four years' wanderings in the Celestial Empire, he discovered several new plants—useful and ornamental—which now add to the beauty of many an English garden. His mission was altogether so successful that he was only allowed a short rest in his native country, when he was deputed by the Court of Directors, in 1848, to proceed a second time to China, for the purpose of obtaining the finest varieties of the tea plant, as well as native manufacturers and implements for the Government Tea Plantations in the Himalaya. He brought the important objects of his mission to a successful termination. Upwards of twenty thousand tea plants, eight first-rate manufacturers, and a large supply of implements were procured from the finest tea districts of China and conveyed in safety to the Himalaya. This journey occupied altogether about three years, and Mr. Fortune returned to England at the end of 1851.

He was deputed again by the East India Company at the end of 1852, for the purpose of adding to the collections already found, and of procuring more tea-makers. He was occupied in this undertaking for nearly three years; and the result of his mission was considered very satisfactory. His fourth voyage was made in the service of the United States Government, to procure a very large supply of tea plants, for trial in some parts of the American Union, and other choice productions desirable to introduce.

FORT WILLIAM. The fortress of Calcutta. It was constructed by Lord Clive.

FOSSILS. Are very abundant in Southern Asia, all along the sea board where they are tertiary: west of Pondicherry; and near Trichinopoly; Hyderabad and the central provinces; in the valley of the Nerbudda, in all the coal tracts, in the Siwalik hills, and in Burma.

Of those found in Burmah by Mr. Oldham, during his companionship with the Embassy, he notes the following:

	Specimens
Jaws and Teeth.	
Elephant, tusk and lower jaw... ...	3
Mastodon, lower jaw, and molar tooth..	2
Rhinoceros, tooth	1
Tapir ? lower jaw	1
Deer	1
Sus ? or Merycopotamus, portion of cranium.	1
Gavial fragments	
Bones.	
Pachydermata	35
Ruminants	10
Crocodile...	24
Tortoise	21
„ large	17
Undistinguished	16

Sir Proby T. Cautley, carried on extensive researches in conjunction with Dr. Falconer, in the fossil remains in the Siwalik hills. He presented to the British Museum, an extensive collection of fossil mammalia from the Punjaub Siwalik, duplicates of which are in the Museum at the East India House. At Cutchavelly, north of Trincomalie is a bed of calcareous clay in which recent shells and crustaceans, principally machophthalmus and Scylla are found, in a semi-fossilised state. The breccia at Jaffna and the arenaceous strata in the western coast of Manaar and the neighbourhood of Galle, also contain recent shells. These petrifactions, when powdered, are used by the Arabs as a specific for diseases of the eye. The saligramma which the Saiva and Vaishnava hindu worship, are fossil, water worn, ammonites found, in part of the Gunduk river in northern India. The bin-lung, rori and choolia stones found in the whirlpools of the Nerbudda and Chumbul rivers are not fossils, merely stones rounded by attrition. A species of Echinus is found fossil in the Lagari hills, Imam Bakhsh khan and Derah Ghazi khan, and the curious trilinear markings on it are compared by the people to the impression of a birds foot, to which accordingly they attribute the origin of these fossils. The natives have a story with regard to the larger fossils of the Mazari hills, that they are the petrified clothes of fifty betrothed virgins, who were once, while bathing, surprised by their future husbands; they prayed heaven to grant them a covering; in answer to this the earth swallowed them up, and their clothes became stones. In the Punjab, a fossil encriuite is used in medicine, under the name of Sang-i-yahudi, or Jew's stone: and the "sangcha" a nummulite from Dera Ghazi khan, and "sang-i-shadnaj" another nummulite are also used in medicine.—*Oldham in Yule's Embassy*, p. 343. *Hand Book of Punjab*, See Geology, Saligramma, Simiadæ Hot Springs, Lignite; Elephant; Felis.

FOSSIL COPAL occurs along with lignite in the tertiary beds of the Malabar Coast near Travancore. It was first found in the Blue Clay at Highgate, near London; it occurs also at Wochlow in Moravia. It occurs in irregular pieces or small nodular masses. Its colour is yellowish or dull brown; nearly opaque. Lustre resinous. Fracture conchoidal. Specific gravity 1·046. When heated it yields an aromatic odour, and melts into a limpid fluid; it burns with a yellow flame and much smoke. When strongly heated in contact with the air, it is totally dissipated.—*Eng. Cyc.* See Copal.

FOSTAT, or Mafr-ul-atik, in Egypt although greatly decayed, may still be considered as a town of the middle size. It has a custom-house, where the duties on goods from upper Egypt are paid.—*Niebuhr's Travel's*, Vol. I. p. 64.

FOTHERGILLIA INVOLUCRATA. *Falc.*

Kilar,	HIND.	Chob-i-Pau,	PERS.
Pishor,	„		

In Kashmir, forms whole tracts of low jungle. It is the Chob-i-pau, from which Mr. Vigne made a flute. He tells us that this grows also in Ladak and Kadak. In general form it resembles a ground ash or gigantic hazel, ten or twelve feet high with branches about 2½ inches in diameter, and its fruit in clusters of small nuts. Wood very hard, resembling, but darker than, box. Messrs. Rudall and Rose formed the portion brought

to England by Mr. Vigne, into a finely toned flute. It makes excellent tent pegs. It is very common in the straths and mountain sides at the western end of Kashmir, and grows at elevations from 4,400 to 5,500 feet. *Vigne, Falconar, Cleghorn.*

FOU-CHIN-FOO. A Chinese town on the Min river, a place of great trade.

FOUJDAR, HIND. PERS. A person in military employ, in the native states of India, but differing greatly in grades of rank. In Rajputanah, the foujdar is a leader of the vassals.

FOUJDARI ADALAT. A Court of military and criminal law, Courts of "Sudr and Foujdari Adalut" existed at Calcutta, Madras and Bombay until the establishment of the High Court of Judicature.

FOULAD, GUZ. HIND. PERS. Steel, properly fulad.

FOURCROYA CANTALA,
